Arbustiva. (L. *arbutivus*, planted with trees; from *arbutum*, a plantation, and in the plural, shrubs.) An old term for plants of a shrubby nature.

Arbustum. (L. *arbutum*, a place where trees are planted; in plural, trees or shrubs.) A plant the woody stem of which does not attain three times the height of a man, and is ramified almost from the base.

Arbutan. (L. *arbutus*, the wild strawberry tree.) Pertaining to the arbutus.

Arbuthnot, John. A Scotch physician, born at Montrose in 1668, died in London 1736. He wrote on aliments and on the influence of air on the human body. He was the author of many works in general literature, among which was the 'History of John Bull,' a satire on the campaigns of Marlborough, since which time this pseudonym of Englishmen has been preserved.

Arbutin. $C_{24}H_{32}O_{11}$. An indifferent bitter, neutral principle, crystallisable in acicular prisms, obtained from the *Arctostaphylos uva-ursi*. It dissolves readily in alcohol and hot water, but with difficulty in cold water and ether. On boiling with dilute sulphuric acid arbutin is resolved into hydroquinone and glycoses.

Arbutina. $C_{12}H_{16}O_7$. A glycoside obtained from the leaves of the *Arctostaphylos uva-ursi*.

Arbutinum. Arbutin, the bitter principle of the *Arctostaphylos uva-ursi*.

Arbutus. (L. *arbutus*, the wild strawberry tree; akin to *arbor*, because in Italy the tree is abundant.) A Genus of the Nat. Order *Ericaceae*. Shrubs with alternate and generally evergreen leaves; flowers in terminal, panicle racemes; sepals five; corolla hypogynous, urceolate, five-toothed; stamens ten; anthers deflexed, opening by two pores; fruit fleshy, five-celled, many seeded.

Also, the *Arbutus unedo*.

A. alpina. Linn. (L. *alpinus*, belonging to the Alps.) The *Arctostaphylos alpina*.

A. andrachne. Linn. (*Ἀνδράχνη*, a wild strawberry tree.) The strawberry bay. The bark and leaves are astringent. A narcotic wine is made from the fruit in Corsica, and the fruit itself, although austere, is eaten.

A. buxifolia. Stok. (L. *buxus*, the box tree; *folium*, a leaf.) The *Arctostaphylos uva-ursi*.

A. commun. The *A. unedo*.

A. filiformis. Lamb. (L. *filum*, a thread; *forma*, shape.) The *Thalerocarpus corymbifolia*.

A. integrifolia. Lamb. (L. *integer*, entire; *folium*, a leaf.) Hab. Crete. A species the berries of which are esculent.

A. mucronata. Linn. (L. *mucronatus*, pointed.) The *Pernettya mucronata*.

A. papyracea. (L. *papyraceus*, made of papyrus.) A synonym of *A. unedo*.

A. trailing. A name of the *Arbutus unedo*, and also of the *Epigaea repens*.

A. unedo. Linn. (L. *unedo*, the strawberry tree. F. *arboisier*; G. *Erdbeerbaum*.) The strawberry tree. Bark rugged; leaves oblong-lanceolate, acute, doubly serrate, smooth, shining; panicles drooping, many flowered; fruit globose, mucronate. Leaves astringent, used in decoction; fruit eatable, some say narcotic; made into wine in Corsica.

A. uva-ursi. The *Arctostaphylos uva-ursi*.

Arc. (L. *arcus*, a bow. G. *Bogen*.) A part of a circle or of a curved line.

A. indicator. An apparatus for measuring the development of an internode of a growing plant during short periods of time. It consists essentially of a thin but strong thread of silk fixed by one end to the upper portion of the internode, passing vertically over an easily moveable pulley, and moving an index fixed to the

ARCA ARCANORUM—ARCHE.

face of the pulley, the index moving over a graduated segment of a circle.

A., metallic. See *Metallic arc*.

A., volta'ic. The luminous arch which passes from one charcoal terminal of a voltaic battery to the other when they are slightly separated.

Ar'ca arcano'rum. (L. *arca*, a place for keeping anything; *arcenum*, a secret.) Old term for the *Mercurius philosophorum*.

A. cor'dis. (L. *cor*, the heart.) The pericardium.

Ar'eathon. France, not far from Bordeaux, on a large lagoon opening into the Bay of Biscay. A winter residence among pine trees, to the balsamic odour of which it owes its chief reputation as a cure place for phthisis and bronchial affections. There is a good deal of rain, but it soon dries up.

Ar'cade. Arc shells. A family of the Group *Asiphiata*, Class *Lamelibranchiata*, Subkingdom *Mollusca*. Shell thick, equivalved, with an external ligament and a well-developed hinge, with interlapping teeth; mantle open; branchiae filamentous; foot large.

Ar'ceus, or Aroë. A Spanish surgeon, born at Fregenal in the Province of Badajoz, 1493, died 1573. From him the Balsam of Aroesus derived its name. He wrote a treatise on wounds and on fevers.

A. bal'sam of. An ointment, consisting of 2 parts of mutton suet, 1 of hog's lard, 1½ each of turpentine and resin; mixed with heat, strained, and stirred till cold.

Ar'canite. (L. *arcanus*, hidden.) A form of potassium sulphate occurring in crusts and powdery efflorescences.

Ar'can'ite. A synonym of red ochre.

Ar'can'son. (Fr.) The common name of the resin of *Pinus pinaster*.

Ar'ca'num. (L. *arcanum*, a secret; from *arce*, to shut up. F. *arcano*; G. *Geheimnis*, *Geheimniss*.) "A thing secret and incorporeal, which can only be known by experience, for it is the virtue of everything, which operates a thousand times more than the thing itself" (Buland). A term for a nostrum, or medicine, the composition of which is concealed.

A. al'bum. (L. *albus*, white.) A name for the *Pulsis Viennensis albus virgineus*.

A. be'chicum. (Βηχικός, belonging to a cough.) Name given to a solution of liver of sulphur and sugar in water.

A. coral'linum. (Κοράλλιον, coral.) Term for an old preparation made by digesting nitric oxide of mercury in a solution of potash, washing it, and burning spirit of wine upon it; used to induce salivation, and as an escharotic.

A. du'plex. (L. *duplex*, double.) Same as *A. duplicatum*.

A. du'plicat'um. (L. *duplicatus*, doubled.) A synonym of *Potassium sulphate*.

A. du'plicat'um cathol'icum. (Καθολικός, general.) Old name for an amulet composed of the root of colchicum and plantain; recommended as a preservative against pestilential diseases.

A. du'plicat'um depura'tum. (L. *de*, from; *puro*, to purify.) A synonym of *Kali sulphuricum*, G. Ph.

A. holsat'icum. A synonym of *Potassium sulphate*.

A. holsteinien'se. A synonym of *Potassium sulphate*.

A. Jovia'le. (L. *Jovialis*, pertaining to

Jupiter; an old name for tin.) Same as *A. Jovis*.

A. Jov'is. An amalgam of tin and quicksilver digested in nitre; formerly employed as a sudorific in doses of 3–8 grains.

A. Indeman'ni. Ancient term for the oxide of zinc.

A. materia'le. (L. *materialis*, belonging to matter.) An extract of, or one supposed to be allied to, the material substance of a body.

A. specif'icum. (L. *specificus*, of a particular kind.) An extract of the interior nature of the body.

A. tar'tari. A synonym of *Potassium acetate*.

A. tar'tari dul'ce. (L. *dulcis*, sweet.) A synonym of *Potassium acetate*.

A. vita. (L. *vita*, life.) The *Elter vita*.

Ar'cate. (L. *arce*, to bend like a bow. G. *bogenförmig*, *gebogen*.) Arched, bow-shaped.

Ar'co-bois. (Fr.) The *Cytinus laburnum*.

Ar'ceau. (Fr.) Same as *Archetta*.

Ar'ceion. (Αρκειον, the burdock.) A name of the *Arcetium lappæ*.

Ar'cell. The *Parmelia caperata*.

A. cork'er. The *Parmelia omphalodes*.

Ar'ceuthida. (Αρκευθίς, the juniper-berry. F. *arceuthide*.) Name by Desvaux for a spherical fruit composed of many fleshy scales, which do not separate till maturity, as of *Juniperus communis* (Jourdan), apparently an error for *Arcouthida*.

Ar'ceuthos. (Αρκευθος, a juniper bush.) Old name for the juniper tree and fruit. (Quincy.)

Arch. (L. *arce*, a bow. F. *arc*; L. and S. *arco*; G. *Bogen*.) A bending in the form of a bent bow. Any arc, or any part of the periphery or circumference of a circle.

A., alve'olar. See *Alveolar arch*.

A., anastomotic. (Αναστομικός, to bring to a mouth. F. *arceades anastomotiques*.) The union of two blood-vessels in a curved line, as those of the mesentery.

A., aor'tic. See *Aorta, arch of*.

A., cru'ral. (L. *cruralis*, belonging to the leg.) See *Crural arch*.

A., cu'ital. The arciform termination of the anterior cubital artery, one of the two branches of the brachial, at the knee in the horse and many other mammals.

A., den'tal. See *Dental arches*.

A., diastal'tic. See *Diastaltic arch*.

A., fem'oral. (L. *femur*, the thigh.) A synonym of *Crural arch*.

A., glute'al. (Γλουτέ, the buttock.) See *Gluteal arch*.

A., hæ'mal. (Αἷμα, blood.) See *Hæmal arch*.

A., in'guinal. (L. *inguinalis*; from *inguen*, the groin.) A synonym of *Crural arch*.

A., ma'lar. (L. *malæ*, the cheek bone.) The *Zygomatic arch*.

A., na'sal. (L. *nasus*, the nose.) See *Nasal arch*.

A., neu'ral. See *Neural arch*.

A., of Fallo'pian. A synonym of the *Crural arch*.

A. of the aor'ta. See *Aorta, arch of*.

A. of the co'lon. A synonym of the transverse colon.

A. of the pa'late. A term applied to the horizontal or palate plates of the palate bone.

ARCHAEOLOGY—ARCHEGONIUM.

A. of the pubis. See *Pubic arch*.
A. of vertebra. The two processes which spring from each side of the posterior surface of the body of a vertebra, and, curving round, meet in the middle line behind; they, with the body, form the foramen. At its springing the arch is narrow and rounded, and is called the pedicle; the further part is broad and flat, and is called the lamina.

A., orbital. (L. *orbita*, a track.) See *Orbital arch*.

A., palmar. (L. *palma*, the palm of the hand.) See *Palmar arch*.

A., pectoral. See *Pectoral arch*.

A., pelvic. See *Pelvic arch*.

A., plantar. (L. *planta*, the sole of the foot.) See *Plantar arch*.

A., posterior carpal. See *Carpal arch, posterior*.

A., pubic. (F. *arcade pubienne*.) The *Subpubic arch*.

A., radial. (F. *arcade radiale*.) A synonym of the deep palmar arch.

A., scapulo-clavicular. The supporting arch of the upper limb, consisting of the clavicle and the scapula.

A., senile. See *Arcus senilis*.

A., sesamoidæan. (F. *arcade sesamoidienne*.) An anastomotic arch formed by the branches of the posterior cubital artery of the horse and other mammals.

A., subpubic. See *Subpubic arch*.

A., superciliary. (L. *supercilium*, an eyebrow.) See *Superciliary arch*.

A., supraorbital. (L. *supra*, above; *orbita*, a track, the orbit.) See *Supraorbital arch*.

A., temporal. The *Zygomatic arch*.

A., zygomatic. (Ζύγωμα, a bar.) See *Zygomatic arch*.

Archæology. (Ἀρχαίος, ancient; λόγος, a discourse.) The history of ancient things. The consideration of the practice of the ancients.

Archæopteryg'ides. (Ἀρχαίος, ancient; πτερυγ', a wing.) A synonym of *Saurura*.

Archæopteryx. (Same etymon.) A Genus of the Subclass *Saurura*, Class *Aves*. An extinct bird from the oolitic lithographic slate of Solenhofen, characterised by having a tail longer than the body, consisting of about twenty vertebrae, and clothed with lateral feathers. The metacarpals are four, not ankylosed. The first and second digits are clawed. The ilium is elongated.

Archæostomatous. (Ἀρχαίος, primitive, ancient; στόμα, mouth.) Those animal forms in which, according to Prof. Huxley, the orifice of invagination of the wall of an embryo, at the stage when it consists only of a single layer of cells, persists as a mouth.

Archæus. (Ἀρχαίος, ancient; pristine.) Applied by Hippocrates, l. i, *de Morb.* xxxiii, 6; l. *de Steril.* xxiv, 20, either to the whole of ancient medicine, or to the natural state before disease entered the world; or, specially, the natural situation or seat of any member, or bone. It is sometimes, but improperly, used for *Archæus*, which see.

A. celestis. (L. *celestis*, heavenly.) The name by which, according to Paracelsus, the alchemists designated the Nostoc.

Archag'athos. A Peloponnesian, who settled in Rome about B.C. 219, and who was be-

lieved to have been the first person who practised medicine there as a distinct profession.

Archambault, Theophile. A French physician, born at Tours 1806, died 1863. He wrote chiefly on mental diseases.

Archangel. The name is derived probably from its flowering about the Archangel St. Michael's Day, 8th of May, in the old style. The *Angelica archangelica*.

A., purple. The *Lamium orvala*.

A., red. The *Lamium purpureum*, or the *Stachys sylvatica*.

A., spotted. The *Lamium maculatum*.

A., white. The *Lamium album*.

A., yellow. The *Lamium galeobdalon*.

Archangel, New. Situated in Sitka Island, North-west Coast of America. Thermal sulphurous mineral waters of a temp. of upwards of 67° C. (152.6° F.) (Dunglison.)

Archangel'ica. (Ἀρχάγγελος, an archangel.) The *Angelica archangelica*.

Also, an old name of the *Lamium album*.

A. atropurpurea. (L. *ater*, black; *purpureus*, purple.) A native of the United States, and known under the name of masterwort. See *Angelica atropurpurea*.

A. officinalis. Hoffm. (F. *angelique des jardins*; G. *Angelikwurzel*, *Brustwurz*; Dutch *Tamme*, *Engelwortel*; Dan. *Ovanne*; Turk. *Me-laik*.) Nat. Ord. *Umbelliferae*. Garden angelica. The whole plant, but especially the root, is fragrant, bitter, and pungent. Used by the Laplanders as medicine, in coughs, hoarseness, and pectoral disorders. The flowers, boiled in milk, they use to promote perspiration in catarrhal fevers, and to strengthen the stomach and bowels in diarrhoea. The *Angelica archangelica*, which see.

A. triquina'ta. (L. *tres*, three; *quinque*, five.) A synonym of *A. atropurpurea*.

Arche. (Ἀρχή, the beginning.) Term for the earliest stage of a disease.

Archebiology. (Ἀρχή; βίος, life; λόγος, an account.) An account of the earliest forms of life.

Archebiosis. (Ἀρχή, the beginning; βίωσις, life.) A term which has been proposed to express the doctrine of the origin of living things from non-living matter by the gradual but sole action of forces which belong to matter as such.

Archeptoma. (Ἀρχός, the anus; ἐκπτώμα, a dislocation.) Prolapsus of the anus.

Archeones. (Ἀρχε, an inseparable prefix, meaning first; γίνομαι, to be born.) Firstborn; original. Applied to acute disorders.

Archeogenesis. (Ἀρχή, the beginning; γένεσις, generation.) The doctrine of the origin of living from non-living matter.

Archegonial. (*Archegonium*.) Pertaining to an archegonium.

A. receptacle. A term applied to several archegonia grouped together.

Archegonium. (Ἀρχίγονος, first of a race.) A term applied to the female organ of mosses, Hepaticæ and vascular Cryptogams. Speaking broadly, it is always composed of a cellular sac containing a single female cell (germ or embryonal cell), naked. This, after fusion with an antherozoid, produces a new asexual individual, which itself carries special cells destined to produce a sexual individual. In mosses the archegonia are often surrounded by paraphyses.

ARCHEGOSAURIA—ARCHIBLASTIC.

Archegosaur'ia. (Ἀρχηγός, primary; σαύρα, a lizard.) A Suborder of the Order *Labyrinthodonta*. Extinct amphibians with a divided tooth-bearing vomer, temporal fossa with an osseous roof, short free ribs, and unossified vertebrae.

Archel. The same as *Archil*.

A., auvergne. The *Lecanora parella*.

A., ground. The *Lecanora parella*.

Archell, canary. A term for the *Archella* weeds of the Canary Islands, usually species of *Roccella*.

Archelogy. (Ἀρχή, the beginning; λόγος, a discourse.) A treatise on the fundamental principles of the science of man.

Archemy. Same as *Archimia*.

Arche'na. Spain, Prov. of Murcia. Two springs of sulphuretted water, of a temperature of 64·8° C. (130·64° F.), and containing in 1000 parts sodium chloride 1·4871, magnesium chloride ·2553, sodium sulphate ·1212, hydrogen sulphide, and free carbonic acid. The water is used as a bath and to drink; it produces reddening of skin and perspiration, and excites the genital organs. Its great reputation is in cases of secondary or tertiary syphilis; it is also used in chronic skin diseases, in chronic rheumatism, and in chronic mercurial or lead poisoning. Season, April—June, September and October.

Archen'as. The *Juniperus communis*.

Archencephala. (Ἀρχω, to over-rule; ἐγκέφαλος, the brain.) The fourth and highest Subclass of the Class *Mammalia*. A term applied by Owen to the Genus *Homo*, which he regards as a distinct order, on account of the great development and functional activity of the brain; distinguished by the greater folding of the cerebral hemispheres, and by their extension over the olfactory lobes and the cerebellum. These characters extend to the higher *Quadrumania* also, and so invalidate the proposed distinction.

Archen'da. Name used by Prosp. Alpinus, *de Med. Egypt.* iii, 18, p. 113, b, for powder of the leaves of *alcanna*, *Lawsonia inermis*, mixed into a paste with water, used by the Egyptians to correct the fetid odour of the feet, and to tinge the hands and feet with a golden colour. Also, called *Henna*.

Archende. The Egyptian name of powdered *henna*, or *alcanna*, *Lawsonia inermis*.

Archen'teron. (Ἀρχε, a prefix signifying arch, chief; ἔντερον, a bowel. G. *Urdarm*.) The primitive alimentary canal, formed as a cavity in the Planula, bounded by a special layer of cells—the enteric cell layer; and not formed by the oral ingrowth—stomodæum, or by the anal ingrowth—proctodæum.

Archcs, aortic. See *Aortic arches*.

A., axillary. See *Axillary arches*.

A., branchial. (L. *arcus branchialis*. F. *arcs branchiales*; I. *archi branchiali*; G. *Kiembogen*.) A term applied to those parts of the parietes of the neck of the embryo which occupy the interspaces of the branchial fissures. The branchial arches are four in number, and appear towards the close of the first month of pregnancy. They correspond to the gills of fishes.

A., neu'ral. See *Neural arches*.

A. of Corti. The rods of Corti. See *Corti, organ of*.

A. of pal'ate. See *Palate, arches of*.

A. of skull, lat'eral infe'rior. A term applied to the bones of the head which enclose

the upper part of the visceral cavity, as represented by the nose, mouth, and pharynx.

A. of skull, lat'eral supe'rior. A term applied to those parts of the bones of the head which enclose the cerebrum, cerebellum, and medulla oblongata.

A., vis'ceral. See *Visceral arches*.

Archetto. (I., from L. *arculus*, a little bow. F. *arceau*; G. *Schutzbogen*.) An instrument composed of bent pieces of wood or iron, which can be placed over an injured limb, and serves to protect it from the pressure of the bed-clothes. Palmer states that by an edict of the Grand Duke of Tuscany, mothers and nurses were compelled to adopt, in sleeping with infants, the precaution of guarding the latter with the archetto.

Archetype. (Ἀρχε, a prefix signifying chief; τύπος, type. G. *Urbild, Vorbild*.) A term applied in Comparative Anatomy to an abstract idea of the essential form, either of the whole animal, or of one of its systems of organs, and to which, as to a standard, other animals or systems of organs can be compared.

Archeus. (Ἀρχω, to be first. F. *arche*; I. *archo*; S. *arque*; G. *Archäus, allgemeine Lebenskraft*.) A word invented by Basil Valentin, and afterwards adopted by Paracelsus and Van Helmont, to designate an imaginary entity, which served to explain the different phenomena of the living economy. According to Van Helmont, the archeus is an immaterial principle, existing in the semen before fecundation, and presiding over all the phenomena of the organised body. According to him, this principle is not the same as the intelligent mind, although he attributes to it an intelligence, and that of a very high degree. In addition to the principal archeus, which has its seat at the upper extremity of the stomach, he allowed the existence of many other secondary ones charged to execute the orders of the chief one.

Archexos'tis. The same as *Bryonia alba*.

Archiamphias'ter. (Ἀρχι, a prefix signifying chief; ἀμφί, on both sides; ἀστέρ, a star. F. *amphias tre de rebut*; G. *Karyolytic figur*.) Two poles encircled with well-defined radial lines, found in the ovum of various *Annulata* and *Mollusca*, which result or proceed from the germinal vesicle, and gradually approach the surface of the ovarian egg, where at the time of deposit one pole becomes visible as a white stellate figure, which last marks the place where the mouth forms at a later period. The remains of the archiamphias ter are converted into the female pronucleus.

Archia'ter. (Ἀρχι, chief; λατρός, a physician. F. *archiatre*. G. *Öberarzt*.) Ancient term, used by Hier. Mercurialis, for the physician of any prince, emperor, or king; also, by C. Hoffmannus, for the chief among the physicians of any college. It was afterwards conferred on a number of physicians who formed a college, the president or head of which was called *Comes archiatrorum*. The physicians to the kings of France, from Clovis to Charles V, were called *archiatres*.

Archiblast. (Ἀρχή, the beginning; βλαστός, a bud. F. *germe principale*; G. *Keimscheibe, Hauptkeim*.) Term applied by His to the epiblast.

Archiblas'tic. (Ἀρχή, the beginning; βλαστός, a bud.) One of the simplest types of development, that which, according to Haeckel is

ARCHIBLASTULA—ARCHOCYSTOCOLPOSTRINX.

strictly palingenetic; it is that form of primitive egg segmentation in which the cleavage spheres are equi-formal, and which results in a simple two-cell-layered gastrula form, with or without apical orifices. The Amphioxus, some Ascidiæ and Brachiopoda, Echinoderms generally, some Molluscs and certain corals, Medusæ and sponges, are examples of this type of development. The series of forms or stages of development are the Archimonerula, Archioctula, Archimorula, Archiblastula, and Archigastrula.

Archiblastula. (Ἀρχι; *blastula*, a diminutive from *βλαστός*, a bud.) The fourth stage of the archiblastic type of development, according to Haeckel, in which, by accumulation of fluid in its centre, the mulberry-like archimorula has become a fluid-holding vesicle, with an enclosing layer of cells in one row.

Archibugiate, acqua delle. A synonym of *Aqua vulneraria*.

Archioctula. (Ἀρχι; chief; *cytula*, a diminutive from *κύτος*, a hollow.) The second stage of the archiblastic type of development, according to Haeckel, in which the ovum has now obtained a newly formed nucleus.

Archidiaceæ. A family of Mosses belonging to the *Cleistocarpæ* or *Phascoidææ*. Small organisms with whip-like branches at the upper part of the stem. Archegonium lateral; no spore sac or columella; spores large, at most 20 in number, enclosed in and filling the membrane of their mother-cell.

Archigastrula. (Ἀρχι; *gastrula*, a diminutive from *γαστήρ*, the belly.) The fifth and last stage of the archiblastic type of development, according to Haeckel, in which the single cell-layer of the archiblastula has become a double layer; the two primary germ-layers and the cavity open externally by the archistom.

Archigenes. A celebrated physician of the sect of Eclectics, who practised in Rome during the time of Trajan. He wrote on the pulse.

Archigenus. Same etymon and meaning as *Archigenes*.

Archigony. (Ἀρχι, the beginning; *γένος*, offspring.) The doctrine of the first commencement of creation. The primordial production of inorganic and organic nature.

Archil. Common name for the plant *Roccella tinctoria*, and other species.

More commonly applied to the red colouring matter obtained from the lichens; usually called *Orechil*.

Archill. A synonym of *Orechil*.

A. annary. The *Roccella tinctoria*.

Archimagia. (Ἀρχι; chief; *μαγία*, the theology of the Magians, magic science.) Alchemical name given to the most sublime part of alchemy, or that which treated of making gold and silver.

Archimedes. A celebrated mathematician, born at Syracuse about B.C. 287; killed at the capture of that city by Marcellus B.C. 212.

A's prin'ciple. See *A's theorem*.

A's the'orem. The principle thus expressed:—That a body when immersed in a fluid loses a portion of its weight equal to the weight of the fluid which it displaces.

Archim'ia. (Ἀρχι; cause or origin, chief; *χυσία*, a melting or fusion. F. *archimie*.) An alchemical term, nearly resembling *Alchemia*, from which, however, it is different, inasmuch

as it was applied specially to the art of the transmutation of imperfect metals into the more perfect.

Archimonerula. (Ἀρχι; chief; *monerula*, a diminutive of *monera*; from *μόνηρ*, single.) The first stage of the archiblastic type of development, according to Haeckel, in which the fertilised ovum has lost the germinal vesicle.

Archimorula. (Ἀρχι; *morula*, a diminutive formed from *μόρον*, the black mulberry.) The third stage of the archiblastic type of development, according to Haeckel, in which there is a spherical agglomeration of equi-formal cleavage cells.

Archinephron. (Ἀρχι, the beginning; *νεφρός*, the kidney. G. *Urniero*.) A term applied by Ray Lankester to the primitive kidney of vertebrates before differentiation of the Mullerian and Wolfian ducts.

Archingey. France, near St. Jean d'Angely. Mineral waters containing carbonates of lime and iron, chloride of sodium, and some bitumen. (Dunglison.)

Archiot officinarum. (L. *officina*, a shop.) A synonym of *Arnotta* or *Anotta*.

Archipin. A name of a gum resin obtained from the *Bursera gummifera*.

Archipterygium. (Ἀρχι, a beginning, origin; *πτερυξ*, a wing, a fin.) The primitive or archetypal limb shaft. Huxley considers that the archipterygium of vertebrates consists of a central-jointed axis made of a succession of mesomeres, each having appended to it laterally a diverging pair of parameres, each mesomere, with its lateral paramere, making up a pteromere.

Archiscolex. (Ἀρχι, beginning, head; *σκόληξ*, a worm.) The hypothetical ancestor from which, according to Haeckel, the whole phylum of Vermes took their origin.

Archisperms. (Ἀρχι, the beginning; *σπέρμα*, a seed.) A term synonymous with *Gymnosperms*, indicating the antiquity of the Coniferae.

Archistom. (Ἀρχι; *στόμα*, a mouth. G. *Urmund*.) The primitive mouth or blastopore. It is the orifice of invagination in the Gastrula individual, which ultimately closes up in the majority of cases.

Architectura apoplectica. (L. *architectura*, architecture; *apoplecticus*, apoplectic.) A term for the apoplectic constitution.

Archit'is. (Ἀρχι, the rectum, or anus.) Inflammation of the rectum.

Architroch. (Ἀρχι, the beginning; *τροχός*, a wheel.) Term applied by Ray Lankester to the primitive circle of vibratile cilia found in some larvæ of Echinoderms and worms, which by a nipping-in may be converted into an 8-shaped double circle, and finally into two distinct circlelets—the cephalotroch and branchiotroch.

Architrochophor. (Ἀρχι; *τροχός*, a wheel, a hoop; *φορέω*, to bear.) Term applied by Ray Lankester to any organism provided with an architroch.

Archilulidæ. (Ἀρχι, beginning; *λουλος*, the centipede.) An extinct family of the Order *Myriapoda*.

Archocoele. (Ἀρχός, the anus; *κήλη*, a tumour. G. *Mastdarmbruch*.) Prolapse or hernia of the anus.

Archocystocolposyrinx. (Ἀρχός; *κύστις*, a bag; *κόλπος*, the womb; *σyrinx*, a pipe. G. *Mastdarm-Harnblase-Mutterrohr*.)

ARCHOCYSTOSYRINX—ARCTOMYINÆ.

denfstetl.) Fistula of the anus, urinary bladder, and vagina.

Archocystosyrinx. (Ἀρχός; κύστις; σῦριξ. *G. Mastdarm-Harnblasenfstetl.*) Fistula of the anus and urinary bladder.

Archometrum. (Ἀρχός; μέτρον, a measure. *G. Mastdarmmesser.*) Name by Howship for an instrument for measuring the anus.

Archoptoma. (Ἀρχός, the anus, or rectum; πτώμα, a fall; from πίπτω, to fall.) Old term for prolapsus ani. (Quincy.)

Archoptosis. (Ἀρχός; πτώσις, a falling. *G. Mastdarmvorfall.*) The progress of *Archoptoma*.

Archorrhægia. (Ἀρχός, rectum; ῥήγνυμι, to break forth. *G. Afterblutfluss.*) Hæmorrhage from the rectum.

Archorrhœa. (Ἀρχός; ῥοία, a flow; from ῥίω, to flow. *G. Afterausfluss.*) Discharge of fluid or blood from the rectum.

Archos. (Ἀρχός, the fundament.) Ancient name for the anus; also, for the rectum.

Archostegma. (Ἀρχός; στεγνός, to curve closely, to render costive.) A contracting of the anus, or stricture of the rectum.

Archostegnosis. (Ἀρχός; στεγνός, a making close. *G. Mastdarmverschengung.*) Stricture of the rectum.

Archostenosis. (Ἀρχός, rectum; στενός, a being straightened.) Stricture of the rectum

Archostenota. Same as *Archostegnomia*.

Archostenotis. Same as *Archostegnosis*.

Archosyrinx. (Ἀρχός, the anus; σῦριξ, a pipe. *G. Mastdarmfstetl.*) Fistula in ano.

Also (*G. Klysterspritze*), a clyster or injection pipe.

Archus. Same as *Archos*.

Archyle. (Ἀρχή, the beginning; ἔλη, matter. *F. archyle*; *G. Grundstoff, Vorstoff.*) Primitive matter; the essence of matter. (Littre and Robin.)

Arciform. (L. *arciformis*; from *arcus*, a bow; *forma*, form.) Bow-shaped. As a general term, applicable to the majority of curves, or to anything like a bow.

A. d'bres. These are of nervous tissue, and may be traced from the brain to the spinal cord, i.e. through the medulla oblongata. They pass from the pyramidal to the restiform bodies, and, so doing, form a curve below the extremity of the olivary bodies on each side. They do not pass down into the spinal column, but curve upwards to the cerebellum. When the arciform fibres are largely developed the lower part of the groove, which defines the outline of the olivary bodies, is, in its lower part, partially interrupted.

Arction. (Ἀρκίον, the burdock.) A synonym of *Arctium lappa*.

Arco. Austria; in the Tyrol, near Lago di Garda. Lately brought into notice as a winter cure place for phthisis. It is nearly 300 feet above sea-level, and has a still air and equable temperature in the winter; it is beautifully situated, with great facilities for exercise.

Arcolini. An Italian physician of the fifteenth century. He wrote a treatise on practical medicine.

Arctation. (L. *arcto*, to draw close together. *F. arctation*; *G. Engc.*) Old term, used by P. Zacchias, *Quæst. Medico-Leg.* iii, 1, q. 8,

n. 27, for a preternatural straightening or tightness of the female genitals, or of the vulva.

Also, a straightness or narrowing of other openings or canals, or passages, as of the calibre of an artery.

Formerly applied by Lindenus, *Ær*, iv, § 25, in the same manner as constipation, but particularly, constipated bowels, from the presence of inflammation.

Also, the closing together of divided parts by suture.

Arction. The *Arctium lappa*.

Arctisca. (Ἀρκτος, a bear.) Water bears. An Order of the Class *Arachnida*. Small, vermiform animals, with eight short, indistinctly three-jointed feet; mouth suctorial, with rudimentary lateral jaws; body not divided.

Arctium. A Genus of the Tribe *Cynareæ*, Nat Order *Compositæ*. Leaves alternate; heads solitary, racemed, or corymbose, not rayed; involucre globose; bracts many, imbricate, with stiff, spreading, hooked tips; pappus short, pilose, distinct.

A. bardana, Willd. A synonym of *A. tomentosum*.

A. lappa, L. (*F. bardane, glouteron*; *S. lampazo*; *I. lappola*; *G. Hopfenklette*; *Dan. agerborre*; *Arab. arathera*.) The burdock. A biennial plant, growing to the height of three feet, with large cordiform leaves, deep-green above, woolly beneath; flowers reddish-violet, in terminal panicles; pappus short, pilose, distinct; bracts subulate, hooked, longer than the florets, forming a bur. The roots, leaves, and seeds are used. The root is long, the size of the thumb, yellowish outside, white within, and with an unpleasant odour. It contains inuline, nitrate and carbonate of potash, and a waxy or oleaginous greenish substance, soluble in ether, which constitutes the basis of a secret remedy against baldness. The sudorific action of the root has led to its employment in cutaneous diseases, in the itch, and in rheumatism. The decoction of the leaves is said to be very effective in allaying pruritus, and useful in cases of old ulcers, and for patches of tinea. The seeds have been used as diuretics in calculous and venereal complaints. The plant is still used in Loiret (France) against the bite of serpents.

A. majus, Schk. (L. *major*, greater.) The *A. lappa*.

A. minus, Schk. (L. *minor*, less.) The smaller burdock, known by its cottony heads, placed in racemes; has the same properties as the *A. lappa*.

A. tomentosum. (L. *tomentum*, a stuffing for cushions.) This species, which has a very large root, is recognised by a cottony down, similar to a spider's web, which covers the involucral scales. It has the same properties as the other species.

Arctoidæa. (Ἀρκτος, a bear.) A Sub-order of the Order *Carnivora*, Class *Mammalia*. Plantigrade or subplantigrade carnivores, with no bony septum in the tympanic cavity; the paroccipital, which is remote from the prominent mastoid, does not touch the tympanic, the lower lip of the tubular portion of which is prolonged. The curved penial bone is not grooved; Cowper's glands and the cæcum are absent, and the prostate is small (Macalister). The Order includes the bears, racoons, kinkajous, ailurids, weasels, otters, badgers, and rats.

Arctomyinæ. (Ἀρκτος, a bear; *μῦς*, a

ARCTOPHYLLUM—ARCUS.

mouse.) The marmosets. A Subfamily of the Family *Sciuridae*, Section *Sciuromorpha*, Suborder *Simplicidentati*, Order *Rodentia*. Incisors not compressed, limbs without a patagium, tarsi short.

Arctophyllum. (ἄρκτος, a bear; φύλλον, a leaf.) A synonym, used in Apuleius, of the *Anthriscus cerefolium*.

A. officinalis. (L. *officina*, a shop.) A synonym of *Arctostaphylos uva-ursi*.

Arctopitheci. (ἄρκτος; πίθηκος, an ape.) A Suborder of Order *Primates*, Class *Mammalia*. The marmosets or outitis. Squirrel-like, gregarious, arboreal, thick-furred South American monkeys, with long, furred, but not prehensile, tails, large hair-clad ears, and broad septum between the wide nostrils. No cheek pouches. Fore limbs shorter than the hinder. The pollex is not opposable. Dentition i. $\frac{3}{1}$, c. $\frac{1}{1}$ p. $\frac{1}{1}$, m. $\frac{3}{1}$.

Arctopium sulphuricum. A salt of an alkaloid obtained by making an incision into the root of *Arctopus echinatus*. The sulphate presents the form of small, scaly, white crystals, which are astringent in taste, and which in half-grain doses produce coagulation or inspissation of the saliva within the mouth.

Arctopus. A Genus of the Nat. Order *Umbelliferae*.

A. echinatus. (L. *echinatus*, prickly.) A native of the Cape of Good Hope, where it is known to the Boers as Platdoorn. It is demulcent and diuretic, resembling sarsaparilla. The decoction of the root is prescribed in gonorrhoea, in lepra, and in all kinds of chronic cutaneous affections.

Arctoscorodon. (ἄρκτος, a bear; σκόροδον, garlic.) A synonym of the *Ullmia ursinum*.

Arctostaphylos. (ἄρκτος; σταφυλή, a bunch of grapes.) A Genus of the Nat. Order *Eriacaceae*. This genus differs from *Arbutus* in the drupe with five to ten distinct one-seeded stones; the corolla is urceolate, with a revolute limb; anthers with two spurs at the back.

A. alpina. (L. *alpinus*, belonging to the Alps.) A trailing species, with white flowers, the berries of which are used as food.

A. pungens. Kunth. (L. *pungens*, stinging, pungent.) A Mexican species used as a diuretic.

A. uva-ursi. Spreng. (L. *uva*, a grape; *ursus*, a bear. F. *busserole*; G. *Bärentrauben*.) A small procumbent evergreen shrub, only differing from *Arbutus* by the loculi of its ovary, which are usually 6 in number, containing only a single anatropal ovule. The leaves are dark green, $\frac{1}{4}$ —1 inch in length by $\frac{1}{4}$ — $\frac{1}{2}$ of an inch in breadth, obovate, rounded at the end, gradually narrowed into a short petiole. They are entire, with the margin a little reflexed, and in the young state slightly pubescent, otherwise the whole leaf is smooth, glabrous, and coriaceous; the upper surface shining, deeply impressed with a network of veins; the under minutely reticulated with dark veins. The leaves have a very astringent taste, and, when powdered, a tea-like smell. The decoction contains *gallic* and *tannic acids*, *arbutin*, *ericoitin*, and *ursone*. The leaves are sometimes adulterated with those of the *Vaccinium vitis-idaea*. They are chiefly used in the form of decoction, as an astringent tonic in affections of the bladder, accompanied with mucopurulent discharge.

Arctura. (L. *arcto*, to contract. F.

arcture.) Old term for inflammation of the finger or toe, from an incurvation and pressure of its nail.

A. ungulum. (L. *unguis*, a nail.) Narrowness and constriction of the nails, with ingrowing.

Arctuvin. A substance obtained, along with glucose, from arbutin by boiling with sulphuric acid. It is believed to be the same as *Hydroquinone*, obtained from quinic acid.

Arcualis. (L. *arcuo*, to bend like a bow.) Bowed, or bent like a bow; curved.

A. ossa. (L. *os*, a bone.) A synonym of the parietal bones.

A. sutura. (L. *sutura*, a seam.) A synonym of the coronal suture.

Arcuate. (L. *arcuatus*; from *arca*, a bow. F. *arqué*; G. *bogenförmig*, *gekrümmt*, *gewölbt*.) Arched, curved, bent like a bow.

A. ligaments. Two fibrous bands on each side of the spine; the internal (lig. arcuatum internum), which is the strongest, is connected internally to the tendinous part of the pillar of the diaphragm, and externally to the transverse process of the first or second lumbar vertebra, arching over the psoas muscle; the external (lig. arcuatum externum), which is the broadest, extends from the transverse process of the first lumbar vertebra internally to the last rib, arching over the quadratus lumborum. Some fibres of the diaphragm arise from these ligaments.

Arcuate-areolate. (L. *arcuo*, to bend; *areola*, a small open place.) Term applied in Botany to a surface presenting spaces bounded by curves.

Arcuation. (L. *arcuo*, to bend like a bow. F. *arcuation*; I. *marcamento*; G. *Bogenkrümmung*.) Old term, used by Avicenna, *l. iii, f. 21, tr. 2, c. 12*, for a globosity anteriorly, when accompanied by a curvature of the sternum.

Also, curvature of the bones generally.

Arcuatus. (L. *arcuo*, to bend like a bow. F. *arqué*; G. *bogenförmig*.) Bent or curved like a bow; bowed.

A. morbus. (So termed from *arcus*, a bow; because resembling in colour, to some extent, the rainbow; *morbus*, disease.) Old name for icterus, or jaundice; also called *morbus arcuatus*.

Arcueil. France; one league south of Paris. The water contains calcium carbonate and sulphate, sodium chloride, and some deliquescent salts. (Dunglison.)

Arcula. (L. *arcula*, dim. of *arca*, a chest. G. *Kästchen*, *Schachtel*.) A little chest. Formerly applied to the orbit, or socket, of the eye. (Quincy.)

A. cordis. (L. *cor*, the heart.) The pericardium.

Arcule. (L. *arcula*, a little chest.) The orbits.

Arculus. (L. *arcuo*, to bend like a bow.) An arched frame to prevent the contact of the bed-clothes with the diseased part.

Arcus. (L. *arcus*, a bow, an arch. G. *Bogen*, *Krümmung*, *Wölbung*.) A bow, arc, or arch. The periphery of any part of a circle.

In Botany, a term applied in the case of ferns with anastomosing nervures to the arch formed along the mesoneurium by the anastomosis of two nervures starting from opposite points and meeting each other. This arch never carries spores, but it frequently gives origin to fertile nervilli.

ARCYRIACEÆ.

A. adipo'sus. (*L. adeps*, fat.) A synonym of *A. senilis*.

A. arte'ris subcla'vis. (*G. Achsel-schlagen aderbogen*.) The arch formed by the subclavian artery.

A. atlan'tis ante'rius. (*Atlas*, the bone of that name; *L. anterior*, that which is foremost.) The anterior arch of the atlas.

A. atlan'tis poste'rius. (*Atlas*; *L. posterior*, that which is hindmost.) The posterior arch of the atlas.

A. axilla'ris. (*L. axilla*, the armpit. *G. Achselbogen*.) That part of the axillary fascia which is formed by the union of the fascia covering the pectoralis major with that covering the pectoralis minor, and which presents a concave border looking towards the arm.

A. brachia'lis. (*Brachium*, the arm. *G. Armbogen*.) The arch formed at the posterior border of the axilla by the junction of the axillary fascia with that covering the latissimus dorsi. Its concavity is directed forwards.

A. carpi dorsa'lis. (*Karpós*, the wrist; *L. dorsum*, the back.) The dorsal carpal arch formed by the union of two arteries, one from the radial and the other from the ulna.

A. crura'lis. (*L. cruralis*, belonging to the thigh. *G. Schenkelbogen*, *äusseres Leistenband*.) See *Crural arch*.

A. crura'lis profun'dus. (*L. cruralis*; *profundus*, deep.) See *Crural arch*, deep.

A. denta'lis. (*L. dentalis*, belonging to the teeth. *G. Zahnbogen*.) The dental arch, consisting on each side of the alveolar process of the inferior maxillary bone, the gum, and the teeth.

A. dorsa'lis hu'meri posti'cus. (*L. dorsum*, the back; *humerus*, the upper arm bone; *posticus*, hinder.) The anastomosis situated immediately above the olecranon fossa, between the anastomosis of the brachial artery and the superior profunda of the same vessel.

A. glos'so-palati'nus. (*Γλῶσσα*, the tongue; *L. palatus*, the palate.) The same as *A. palatinus anterior*.

A. mala'ris. (*L. mala*, a cheek. *G. Wangenbogen*, *Jochbogen*.) The same as the *A. zygomaticus*.

A. medulla'ris. (*L. medulla*, marrow.) A synonym of the *Fornix*.

A. nervi hypoglos'si. (*Ἵπός*, below; *γλῶσσα*, the tongue.) The curve or loop formed by the hypoglossal nerve as it crosses the carotid artery.

A. palati'nus ante'rior. (*L. palatinus*, belonging to the palate; *anterior*, foremost. *G. vordere Gaumenbogen*.) The anterior pillar of the fauces formed by the palato-glossus muscle and the mucous membrane covering it.

A. palati'nus poste'rior. (*L. palatinus*; *posterior*, hindmost. *G. hintere Gaumenbogen*.) The posterior pillar of the fauces, formed by the palato-pharyngeus muscle and the mucous membrane covering it.

A. palatoglos'sus. (*L. palatus*, the palate; *γλῶσσα*, the tongue.) The *A. palatinus anterior*.

A. palatopharynge'us. (*L. palatus*; *φάρυγξ*, the gullet.) The same as *A. palatinus posterior*.

A. palma'ris contrac'tus. (*L. palma'ris*, belonging to the palm; *contractus*, from *con-traho*, to draw together.) A term for contraction of the palmar fascia.

A. pharyngo-palati'nus. (*Φάρυγξ*, the gullet.) The same as *A. palatinus posterior*.

A. planta'ris profun'dus. (*L. plantaris*, belonging to the sole of the foot; *profundus*, deep. *G. Sohlenbogen*.) The deep plantar arch.

A. poplite'us. (*L. poples*, the ham of the knee. *G. bogenförmiges Kniegelenkband*.) Ligamentum popliteum arcuatum. A thickening of the fascia connected with the upper edge of the tendon of the popliteus muscle, and situated at the outer part of the posterior surface of the knee-joint.

A. pu'bis. (*Os pubis*, the pubic bone. *G. Schambogen*, *Schamwinkel*.) The *A. subpubicus*.

A. seni'lis. (*L. senilis*, belonging to old people.) The senile arch; a term for a peculiar arched, or circular, opaque appearance on the eyes of old persons, round the margin of the cornea, caused by fatty degeneration of the corneal tissue. It is believed to indicate the tendency of other structures to undergo a similar change, and especially it has been supposed to point to cardiac degeneration; but it is probable that this is by no means universally true. The condition does not generally interfere with the healing process.

A. subpu'bicus. The arch formed below the symphysis pubis by the two rami of the pubic bones, and the ascending rami of the ischia.

A. supercilia'ris. (*L. supercilium*, an eyebrow. *G. Augenbrauenbogen*.) A ridge on the frontal bone running in a curved direction upwards and outwards from the glabella.

A. superficia'lis vo'lae. (*L. superficialis*, belonging to the surface; *vola*, the hollow of the palm. *G. oberflächliche Hohlhandbogen*.) The superficial palmar arch.

A. tar'seus infe'rior. (*Ταρσός*, any broad, flat surface; *L. inferior*, lower.) The ultimate branch of the inferior palpebral artery running along the border of the lower eyelid.

A. tar'seus supe'rior. (*Ταρσός*; *superior*, upper.) The ultimate branch of the superior palpebral artery running along the border of the upper lid just below the tarsal cartilage.

A. tendine'us fas'ciae pel'vis. The tendinous fascia of the pelvis. The line corresponding to the division of the pelvic fascia into the recto-vesical and obturator fascia.

A. tonsilla'ris. (*L. tonsilla*, the tonsils.) The isthmus faucium.

A. vertebra'les. (*L. verto*, to turn.) The arches of the vertebrae.

A. viscera'lis. See *Fisceral arches*.

A. vola'ris profun'dus. (*L. volaris*, belonging to the palm of the hand; *profundus*, deep. *G. tiefe Hohlhandbogen*.) The deep palmar arch.

A. vola'ris subli'mis. (*L. volaris*; *sublimis*, high. *G. oberflächliche Hohlhandbogen*.) The superficial palmar arch.

A. zygomatic'us. (*Ζύγωμα*, a bar. *G. Wangenbogen*, *Jochbogen*.) The arch formed by the zygomatic processes of the malar and temporal bones.

Arcoyria'ceæ. A Family of the Order *Calonemæ*, Section *Tricophoræ*, Subdivision *Lamphosporæ*, Division *Endosporæ*, of the Class *Myxomycetes*, characterised by having the sporangia of a regular shape, stipitate, dehiscing by a circular fissure, the upper portion evanescent, the lower springing from an immediate prolongation of the stem, in the form of a drinking-glass; capillitium of numerous arms, either grown to

ARCYTHOPHYTUM—AREA.

the receptacle or fixed in the midst of the closed tubes of the stem.

Arcythophytum. (Ἀρκευθος, the juniper bush; φυτόν, a plant.) Name by Necker for a plant which bears fruit like that of Juniperus.

Arda. (Ἀρδα, dirt.) Excrement.

Ardales. Spain. Mineral waters; known also as those of *Carratraca*.

Ardalos. (Ἀρδαλος, dirt.) Excrement.

Ardas. (Ἀρδα, dirt.) Same as *Sordes*.

Ardea. Linn. (L. *ardea*, the heron; akin to ἰπιδίος, a heron.) A Genus of the Family *Ardeidae*, Order *Grallae*, Class *Aves*. The herons. Body slender; bill long; neck very long; head with a nuchal crest.

A. ciconia. (L. *ciconia*, a stork.) The stork, *Ciconia alba*.

A. cinerea. (L. *cinereus*, resembling ashes. F. *héron*; I. *aghirone*; G. *Reiher*.) The heron, the fat of which was formerly supposed to allay the pain of gout, to remove nebulae from the eyes, and to correct dulness of hearing, when applied within the ears, according to Aldrovandus, *Ornithol.* i. 20, c. 8, seqq. *Bruserinus, de Re Cibaria*. i. xv, c. 66. *Schröderus*, l. 5, c. 2, n. 47. The flesh was supposed to be hurtful to piles.

Ardeidae. (G. *Reihers*.) A Family of the Order *Grallatores*, Class *Aves*, or a Family of the Order *Pelargomorpha*, Subclass *Carinatae*, including the herons, storks, and flamingoes. Beak long, hard, and conical, pointed or flattened; neck and legs long, the latter with warty surface and transverse plates or shields.

Ardeides. See *Ardeidae*.

Ardeides. (Ἀρδεις, to sprinkle.) A term applied in Botany to the small dust-like apothecia of such lichens as *Arthonia*.

Ardent. (L. *ardens*; part. of *ardeo*, to burn. F. *ardent*; I. *ardente*; S. *ardiente*; G. *brennend, feurig*.) Heated to an extreme degree; burning hot.

A. continued fever. The febris perniciosa, the malignant or typhoid fever of the tropics.

A. eyes. (F. *yeux ardents*.) Congestion of the conjunctival vessels.

A. fever. (F. *fièvre ardente*.) An old term for an acute fever with much heat of skin.

Or, severe and long-continued cases of febricula.

A. spirit. (F. *esprit ardent*.) Distilled spirit or alcohol.

A. urine. High-coloured urine, with much uric acid, and giving a burning sensation when passed.

Ardeais hibernica. (L. *Hibernicus*, relating to Ireland; F. *ardoise*, slate. G. *Schieferstein*.) A kind of slate drank, when powdered, in spruce beer for the cure of contusions.

Ardisia. Swartz. A Genus of the Tribe *Ardisiaceae*, Nat. Order *Myrsinaceae*.

A. humilis. Vahl. (L. *humilis*, lowly.) Ceylon, Badulam. A small tree the fruit of which, made into syrup, forms a cooling drink.

Ardisia coccinea. A Tribe of the Nat. Order *Myrsinaceae*, having a free ovary and one-seeded fruit.

Ardor. (L. *ardor*; from *ardeo*, to burn. F. *ardent*; I. *ardore*; S. *ardor*; G. *Brand, Feuer, Begierde*.) Violent heat. Applied to an intense or morbidly increased sensation of heat.

A. febrilis. (L. *febris*, fever.) Feverish or febrile heat.

A. stomachi. (Στόμαχος, the stomach. F. *ardeur d'estomac*; G. *Sodbrennen*.) Same as *Ardor ventriculi*.

A. urinae. (L. *urina*, the urine. F. *ardeur d'urine*.) Term for a sensation of heat in the inflamed urethra when passing water, as if the urine were scalding hot.

A. venereus. (L. *venereus*, belonging to sexual love.) The heat or periodical sexual desire of animals.

Also, a term for excessive sexual desire.

A. ventriculi. (L. *ventriculus*, the stomach.) Heat of the stomach. A term for *Heartburn*.

Ardrossan. Scotland; on the Firth of Clyde. Climate somewhat damp. A sea-bathing place, with a chalybeate spring.

Ardruka. The vernacular Indian name of *Zingiber officinale*.

Ardrukum. The Sanscrit name of *Zingiber officinale*.

Arduini, or Arduino, Giacomo, an Italian botanist of the end of the 18th and beginning of the 19th century, obtained sugar from Sorghum in 1810.

A. Luigi. Born in Padua, the son of the foregoing, also a botanist; died 1833.

A. Pietro. Grandson of Giacomo Arduini. A botanist devoted to economic botany.

Arduinus. A celebrated Italian physician and philosopher in the beginning of the fifteenth century. He wrote on poisons.

A're. (L. *area*, an open space.) A French measure of surface containing 100 square metres, or 119·6 square yards.

A'rea. (L. *area*, any open void place. G. *Platz, Fläche, Hofraum*.) The space within, or the internal capacity of, any given boundary or limit of what shape or figure soever.

Also (G. *Glatz des Kopfes*), a bald place; used sometimes as a synonym of *Alopecia*, and sometimes as a synonym of *Alopecia areata*.

A. celsa. A synonym of *Alopecia areata*.

A. diffusa. (L. *diffuso*, to disappear.) Diffuent area. Bald patches, of no special figure, occurring in the beard as well as on the scalp.

A. germinativa. (L. *germino*, to sprout forth. F. *tache embryonnaire*; I. *macchia embrionale*; G. *Fruchthof*.) The germinative area. A name given to an opaque spot in which the embryo appears, on the blastodermic vesicle, on the side opposite to the insertion of the mesometrium.

A. opaca. (L. *opacus*, shaded. F. *tache obscure*; G. *dunkler Fruchthof*.) The opaque area. A term for a dull circle immediately surrounding the area pellucida, formed out of the area germinativa by the latter becoming clear in the centre.

A. pellucida. (L. *pellucidus*, transparent. F. *tache claire*; I. *area trasparente*; G. *heller Fruchthof*.) The pellucid or clear area; situated and arising in manner explained in the preceding term.

A. serpens. (L. *serpo*, to creep.) Serpentine area. Baldness commencing on the occiput and winding in a line, of an inch or so in width, to each ear, and sometimes to the forehead; it occurs chiefly in children.

A. unit of. The area of a square, the dimension of one side of which is the unit of length, this being in England one yard.

AREALU—AREFACTION.

A. vasculosa. (L. *vasculum*, a small vessel.) The vascular area; it commences in that part of the area opaca nearest to the area pellucida, in the mesoblast of which blood-vessels first make their appearance, and gradually extends in size.

A. vitellina. (L. *vitellus*, the yolk of an egg.) The space outside the *A. vasculosa*.

Arealu. The Malay name of the *Uro-stigma religiosum*.

Areca, Linn. (*Ἀράχω*, to assist; because it is used to help digestion. G. *Katechupalme*, *Arekapalme*.) A Genus of the Nat. Order *Palma-cee*. Leaves pinnate; flowers monœcious; petals imbricated in the female, valvate in the male; ovary three-celled; fruit a fibrous drupe; spathes two, membranous or fibrous.

A. alba, Bory. (L. *albus*, white. F. *chou-palmiste*.) Hab. Reunion. The terminal bud is eatable.

A. America'na. The *Areca oleracea*.

A. catechu, Linn. (Tam. *Paak-marum*, or *Cimooghoo*; Tel. *Poka Chettai*; Duk. *Supari*; Mal. *Adaka*, or *Cavooghoo*; Beng. *Gooa*.) The areca or betel-nut palm. A palm, 40 or 50 feet high and 20 inches in circumference, growing in India and the Malay Archipelago. Leaflets broadly linear, plaited, acuminate; the upper confluent, wedge-shaped, præmorse; fruit ovate. It affords a nut like the nutmeg, but larger and harder, from which two kinds of catechu are extracted, one called by the Tamus *Cuttacambo*; the other *Casheutti*; in Telooquo, *Kansee*; and in Dukhami, *Bharab-cutta* and *Acha-cutta*. *Cuttacambo* is chewed with the betel leaf. The ripe nuts, as well as young nuts, in a raw state, are used by all classes of Indians. See *A. nut*.

A. Dicksoni, Roxb. A Malabar species supplying a nut, which is eaten instead of that of the *A. catechu*.

A. fau'fel, Gaertn. A synonym of *A. catechu*.

A. globulifera, Lam. (L. *globulus*, a little ball; *fero*, to bear.) A Moluccas species supplying catechu.

A. indica. (L. *indicus*, Indian.) The *A. catechu*.

A. laxa, Ham. (L. *laxus*, loose.) An Andaman species supplying catechu.

A. Madagascariensis. (F. *arecque singe*.) A species which supplies an oil, which is used externally in gout and rheumatism.

A. nagen'sis, Griff. A Bengal species supplying catechu.

A. nut. (L. *nucis Arece*, *Betel*; F. *sémece* or *noix d'arec*; G. *Arekanüsse*, *Betelnüsse*.) The fruit of the areca palm is small and ovoid, of the size of a small hen's egg, slightly pointed at its upper end, and crowned with the remains of the stigmas. The exterior consists of a thick pericarp, at first fleshy, but when quite mature, composed of fine stringy fibres, running lengthwise, with much coarser ones beneath them. This fibrous coat is consolidated into a thin crustaceous shell or endocarp, which surrounds the solitary seed. The latter has the shape of a very short, rounded cone, scarcely an inch in height; it is depressed at the centre of the base, and has frequently a tuft of fibres on one side of the depression, indicating its connection with the pericarp. The testa, which seems to be partially adherent to the endocarp, is obscurely defined and inseparable from the nucleus. Its surface is conspicuously marked with

a network of veins, running chiefly from the hilum. When a seed is split open these veins are seen to extend downwards into the white albumen, reaching almost to its centre, giving the seed a strong resemblance, both in structure and appearance, to a nutmeg. The embryo, which is small and conical, is seated at the base of the seed. Areca nuts are dense and ponderous, and very difficult to break or cut. They have when freshly broken a weak cheesy odour, and taste slightly astringent. The brown tissue which runs into the albumen is composed of cells, which assume a rich red if moistened with caustic lye, and a dingy green with ferric chloride. Hanbury and Flückiger obtained 14 per cent. of a crystalline fatty matter, melting at 39° C. (102½° F.), by exhausting the seeds with ether, which, after saponification, appeared to consist chiefly of lauric and myristic acids. Further exhaustion of the seeds with alcohol yielded 14.77 per cent. of tannic matter, and water then removed some mucilage. Areca nut may be given in powder, in the dose of 4 to 6 drachms, in milk, for the expulsion of the tapeworm, after a fast of 12 hours. It is also said to be effective against lumbrici. The dense charcoal obtained by burning areca nuts in a close vessel is sold as a dentifrice. As a masticatory, areca nut has been used from time immemorial in India. It is chewed with a little lime and a leaf of the betel pepper, generally when the nut is in a young state, but also when rendered tender by boiling, and sometimes combined with aromatics, as camphor or cardamom, and is considered to strengthen the gums, sweeten the breath, and improve the tone of the digestive organs. The dry expanded petioles serve as ready-made splints. In doses of 10–15 grains they check diarrhœa.

A. oleracea, Linn. (L. *oleraceus*, herb-like. F. *arec d'Amérique*.) The cabbage-tree palm, growing, beautiful and very lofty, in South America and both Indies. Leaflets linear, fine pointed, bifid; spadix covered with dry, ragged, white, deciduous, downy scales. The medulla or pith forms an inferior kind of sagu; the young buds are used as cabbage, and the fruit affords oil.

A. palm. The *A. catechu*.

A. ru'bra, Bory. (L. *ruber*, red. F. *palmiste rouge*.) The terminal bud, when boiled, is eaten as food.

Arechavale'ta. Spain, Province of Guipuzcoa. A sulphur water, of a temp. of 22° C. (71.6° F.), from nine springs, containing calcium, sodium and magnesium sulphate, some calcium carbonate and sodium chloride, with free carbonic acid and hydrogen sulphide. It is diuretic, and is recommended for cutaneous diseases and syphilis. Given internally, and employed in the form of baths. Season, June to September.

Arecin. Name for the red, insoluble colouring matter of the fruit of *Areca catechu*.

Arecin'es, Mart. A Tribe of the Nat. Ord. *Palma-cee*. Ovary with 3, 2, or rarely 1 loculus, formed of 3 or 2 carpels; ovules usually solitary, rarely 2 in each loculus, erect or laterally suspended; fruit bacciform or slightly drupaceous; stamens hypogynous; flowers sessile.

Arefaction. (L. *arefacio*, to make dry. F. *aréfaction*; I. *aréfazione*; S. *arefaccion*; G. *Austrocknung*, *Dörren*.) Term formerly used for exsiccation, but somewhat stronger in its meaning, being a certain mode of preparation of

AREGON—AREOLA.

watery medicinal substances, by which they may be reduced to dust or powder.

Aregon. (Ἀργών, to aid; from its virtues.) Old term for a certain resolvent ointment.

Aegre'sa. The *Bryonia acrobiculata*.

Arella'no. An Italian physician of the sixteenth century. He wrote on plague.

Are'maros. Arabic name for cinnabar.

Are'na. (L. *arena*, sand, the dried up thing; from *areo*, to be dry; perhaps from Arab. *harar*, to dry up. F. *sable*; G. *Sand*.) Sand. Applied to sand or gravel deposited from the urine.

Are'na'ceous. (L. *arena*. G. *sandig*, *sandartig*.) Applied to a mineral, or other substance, which has the appearance of sand.

Are'na'men. An old name for the Armenian bole. (Quincy.)

Are'na'ria. (L. *arenarius*, pertaining to sand. G. *Sandkraut*.) A Genus of the Nat. Order *Caryophyllaceae*. Annual or perennial herbs. Flowers in dichotomous cymes; sepals five; petals five; stamens ten, sometimes five, inserted on the disc, which is annular, or composed of interstaminal glands; ovary one-celled; styles 3—4; seeds compressed; embryo annular.

Old name for the herb coronopus or crow's-foot, so called because it grows in sandy places.

A. peploides, L. The sea sandwort, sea purslane, or sea chickweed, which has been used as an application to whitlows. A creeping, fleshy plant; leaves ovate, recurved; flowers polygamous, axillary; sepals obtuse; disc glandular; capsule globose. Used as a pickle.

Are'na'rious. (L. *arena*. F. *arénnaire*.) Applied to a plant that grows in sand, or in sandy and arid soils.

Are'na'tion. (L. *arena*, sand. F. *arénation*; I. *arenazione*; S. *arenacion*; G. *Sandbad*.) Old name, used by Andr. Baccius, *de Therm.* ii, 17, p. 118, for an external remedy in dropsy, consisting in the application, by immersion or otherwise, of hot sand to the body, legs, and feet.

Are'ndi. The Hindu and Bengalee name of the *Ricinus communis*.

Arendran'te gum. (Fr.) A resinous substance stated to be produced by a tree of Madagascar, named by Flacourt *Arindranto*. Bory regards it as a kind of gum animé.

Are'ng palm. The *Arenga saccharifera*.

Are'nga. A Genus of the Nat. Ord. *Palmaceae*. The male flowers have a convex receptacle; a perianth with two trimerous verticilli; petals longer than sepals, with valvate aestivation; stamens indefinite; anthers bilocular, introrse; female flowers with three uniovulated loculi; fruit with persistent pericarp; seeds with horny albumen, and excentric embryo.

A. farinifera, Labill. (L. *farina*, meal; *fero*, to bear.) A species yielding sago.

A. saccharifera, Labill. (F. *palmier d'aree*, *palmier condier loutar*.) A native of the Moluccas and the Philippine Isles. A kind of sago is obtained from the pith, cordage is made from the petioles of the leaves, and when the spadices are incised a juice is obtained, which yields a sugar named Gaulhitam. This, after fermentation, supplies a wine named Vin de Sagüere. The green fruit preserved in sugar is regarded as stomachic, tonic, and useful in disease of the chest. The fresh juice inflames the mucous membranes and produces great irritation of the

skin, and has been used as a weapon of defence. It has been termed Eau infernale.

Arenic'ola. (L. *arena*; *colo*, to inhabit. F. *arénicole*; G. *sandbewohnend*.) Applied by Cuvier and Latreille to a Section of *Scarabæides* that dig deep holes in the earth or sand.

Areni'ferous. (L. *arena*; *fero*, to bear. G. *sandtragend*.) Accidentally bearing or containing sand.

Areni'fodi'na. (L. *arena*; *fodina*, a pit; from *fodeo*, to dig. G. *Sandgrube*.) A sand pit.

Areni'form. (L. *arena*; *forma*, likeness. F. *aréniforme*; G. *sandformig*.) Resembling sand.

Arenilith'ic. (L. *arena*; *lithos*, a stone.) Belonging to sandstone.

Areno'sa uri'na. (L. *arenosus*, sandy; *urina*, urine.) Urine containing a deposit, generally called sand.

Are'nose. (L. *arena*. F. *sablonneux*; G. *sandig*, *sandvoll*.) Having, or full of, sand; sandy.

Aren'tes. (L. *areo*, to be dry.) A kind of ancient cupping glasses.

Are'nula. (Dim. of *arena*. G. *Sandkorn*.) Fine sand.

Arenula'ceous. (L. *arenula*, fine sand.) Applied to small worms that resemble grains of sand.

Are'ola. (L. *areola*, dim. of *area*, an open void space. F. *aréole*; I. *areola del capezzolo*; G. *Warzenhof*, *Warzenkreis*.) A little circle. The halo or small reddish, or brownish, circle round the nipple of females. The skin of the areola is thin, and contains some twelve to twenty rounded eminences, caused by small glands, with branched ducts. In pregnancy the areola becomes much darker from deposit of pigment, especially in dark women, it increases in size, and the glands project more; about the fifth month there occurs a secondary areola in some women, especially in those who are dark complexioned, very faint in colour, and immediately surrounding the original one.

Applied (F. *areole inflammatoire*; G. *Entzündungshof*) to the margin of pustules in certain eruptive diseases; it is then also called the halo.

Another term for the cytotlast, or cell-nucleus in plants.

In Histology, the spaces existing between the fibres of connective or fibrous tissue, or the spaces between vessels.

In Botany, a circular spot on the surface of an organ, such, for example, as is seen at the base of the corolla in *Helianthemum guttatum*, and in many seeds.

A. apicilla'ris. (Mod. L. *apiculus*; dim. of *apex*, a point.) An areola exhibited by the upper part of the pericarp which carries the other floral organs.

A. basilla'ris. (Báσις, a step, a base.) A term applied by Cassini to the inferior part of the pericarp in Synantheræ which rests on the clinanthus.

A. embryona'lis. (Ἐμβρυον, the fruit of the womb before birth. G. *Keimhof*.) The part of the grass seed where the embryo or germ lies, indicated by a depression on the outside.

A. ovarifera. (*Ovarium*; L. *fero*, to bear.) The surfaces of the clinanthus which correspond to the basilar areole of the pericarps.

A. papilla'ris. (L. *papilla*, the nipple.) The halo or circular reddish or brownish space around the female nipple. See *Areola*.

AREOLÆ—ARGAND BURNER.

A., secondary. An additional circle, of faint reddish or brownish colour, described under *Areola*.

A. umbilicalis. (L. *umbilicus*, the navel.) The dark pigmentation immediately around the umbilicus; it is to be seen in most persons; it becomes darker in pregnancy and in Addison's disease.

Areolæ. (Same etymon.) Plural of *Areola*.

A., primary. Spaces found in cartilage which is undergoing ossification, and formed by the absorption of the lineally arranged cartilage cells. The spaces are bounded by newly deposited bone spicules.

A., secondary. Spaces found in growing bone by the absorption of spiculae of bone separating the primary areolæ.

Areolar. (L. *areola*, a little space. F. *aréolaire*.) Having areolæ; sometimes used as synonymous with cellular.

A. cancer. (F. *cancer areolaire*) A synonym of *Colloid cancer*.

A. cavities of bone. (F. *cavités aréolaires des os*.) The cancelli of bone.

A. cavities of the spleen. (F. *cavités aréolaires de la rate*.) The spaces formed by the trabeculae of the spleen, which contain the pulp.

A. exhalations. (L. *exhalo*, to breathe out, to exhale.) An old term for such fluids as the aqueous and vitreous humours of the eye and the serous fluid found in the joints and among the meshes of areolar tissue.

A. hyperplasia. See *Hyperplasia*, *areolar*.

A. tissue. (F. *tissu aréolaire*.) A term applied to that form of connective tissue which is found beneath the skin, the mucous and serous membranes, and between the various organs of the body, connecting, insulating, and supporting them. It accompanies the blood-vessels and lymphatics, forms investing sheaths for nerves and muscles, and dipping into their structure divides them into finer and still finer fasciculi. It is apparently composed of fine wavy fibres, united into sheets and bundles, which decussate at various angles. These fibres imperfectly surround spaces which often contain fat cells, and they are mingled with elastic fibres, which may be rendered conspicuous by the addition of acetic acid, when the areolar tissue swells up and becomes transparent, whilst the elastic tissue remains unaltered, and is often seen to wind spirally round the fasciculi of areolar tissue. By some the fibrillation of areolar tissue is believed to be artificial. Scattered through the tissue are numerous corpuscles and cells, some of which are proper to the tissue itself, whilst others are wandering white corpuscles. On boiling it is converted into gelatin. It is easily regenerated. The areolæ, if they are not the commencement of the lymphatics, are in close relation with them, since subcutaneous injections of toxic agents are rapidly absorbed, and constitute one method of administering remedies.

A. tumour. A term given to the softer fibrous tumours. See *Fibroma*.

Areolate. (L. *arola*. F. *aréolé*; G. *felderig*.) Applied to a leaf marked with inequalities or slight wrinkles.

Also, applied by Kirby to the wings of insects when divided into areolæ, as the Diptera.

Areolus. (L. *areola*, a small open place.)

The mosaic-like spaces presented by the thallus of some lichens; a small space bounded by the outline of the cellules of the leaf in mosses. (Cooke.)

Areometer. ('Αραιός, thin, light; μέτρον, a measure. F. *aréomètre*.) A name for an instrument for determining the specific gravity or the strength of alcoholic liquids; literally a measure of lightness, or rarity, so called because the more alcohol contained in the liquid the less will be its specific gravity.

Areometric. (Same etymon.) Pertaining to areometry.

A. method. The process of determining the sp. gr. of a solid by weighing it in a liquid.

Areometry. (Same etymon. F. *aréométrie*.) The process for determination of the specific gravity of liquids.

Areotic. ('Αραιωτικός, rarefying; from αραιός, thin. F. *arétique*.) Rarefying. Term applied to remedies supposed to rarefy the humours.

Arēs. (Arab.) A Paracelsian word, meant to signify a principle or power which gives form and substance to all things in nature, so that they wear or are arrayed in their own proper, and not another, nature.

Arēs'ta bo'vis. See *Arresta bovis*.

Arētēs'us. A Greek physician of about the first century; he is generally called the Capadocian. He wrote an important work on the signs and treatment of acute and chronic diseases.

Ar'ete. ('Αρετή, excellence, especially of manly qualities.) Mental or corporeal vigour.

Arethusa. A Genus of the Nat. Order *Orchidaceæ*.

A. bulbo'sa. (L. *bulbosus*, bulbous.) It is employed in the United States in toothache and bringing tumours to a head.

Arethuseæ. A Tribe of the Nat. Order *Orchidaceæ*. Anthers terminal, lying under cover of the helmet of the gynostegium; pollen-masses unstalked, mealy, or granular.

Ar'etos. ('Αρετή, excellence.) A species of moth mullain, so called from its good qualities. (Turton.)

Arez'zo. Italy. In the neighbourhood of this town rise five alkaline chalybeate springs—*Acqua della Chiusa dei Monaci*, *Acqua della Chiusa d'Alliotti*, *Acqua del Vingore*, *Acqua del Casino dei Falciai*, and *Acqua della Villa della Casella*. They contain, in 25 ounces, sodium carbonate 5 grains, calcium and magnesium carbonate 7, and 1 grain each of sodium chloride and iron carbonate, with carbonic acid, nitrogen, and oxygen.

Ar'far. (Arab.) An old name for arsenic. (Ruland and Johnson.)

Argal. (F. *tartre brut*; G. *Weinstein*.) Arabic name for crude tartar in a crystalline form as it is taken from the inside of wine vessels, and termed red or white according to the colour of the wine from which it was deposited; also called *Argol*.

A., red. Argal obtained from casks of red wine and stained by the colouring matter of the grape skins.

A., white. Argal obtained from casks of white wine, and so uncoloured.

Argali. The *Ovis ammon*, or wild sheep, of Central Asia, which yields a valuable kind of wool.

Argand burner. A mode of burning

ARGANIA—ARGENTI.

oil, spirit, or gas, by means of a tubular wick; named after the inventor.

Argania. A Genus of the Nat. Order *Sapotaceae*.

A. eleodendron. (Ελαειον, oil; δένδρον, a tree.) A native of Madagascar; it furnishes an oil, argan oil, which is serviceable for all ordinary purposes.

A. sideroxylon. Röm. (Σιδήρος, iron; ξύλον, wood.) A North African species, the seeds of which supply an oil, which serves for food and for lighting.

Argas, Latr. A Genus of the Family *Ixodidae*, Order *Acarida*. Body buckler-shaped, oval; maxillary palpi with four cylindrical joints; no suckers to feet.

A. americana. A species found on cattle in Texas.

A. chinche. A species found in Columbia, which is a very troublesome parasite of the dwellers there.

A. persicus. Fisch. (L. *persicus*, Persian. *F. argas de Pers, punaise de Miana*.) Common in the town of Miana in Persia, whence its name. Head indistinct; body blood-red in colour, with elevated white spots on the dorsum; eight legs. It is parasitic on the camel, and attacks man; its punctures are very painful, and are said occasionally to produce death.

A. reflexus, Latr. (L. *reflexus*, part. of *reflecto*, to bend back.) Body marked with tortuous furrows. A parasite of the pigeon, and occasionally found on man.

Argol. The *Cynanchum oleosum*, or *Solenostemma argel*.

A. leaves. The leaves of the *Solenostemma argel*. They are sometimes used to adulterate Alexandrian senna, from which they are distinguished by being thicker, greyer, more wrinkled, and bitter to the taste.

Argema. (Αργεμα; from ἀργός, shining, bright. F. *argéma*.) Name for a small ulcer, with clear base, situated on the margin of the cornea. Whiteness of the cornea.

Argemon. (Αργεμον.) Same as *Argema*.

Argemone, Tourn. (Αργεμώνη. F. *argémone*.) A Genus of the Nat. Order *Papaveraceae*. Petals four to six; stigmas four to seven, radiating, concave; capsule obovate, opening by valves at the point.

Dioscorides describes two plants under this name, one of which has been identified with *Papaver argemone*, and the other with *Geum urbanum*. They were both used in diseases of the eyes, and the latter in the bites of venomous snakes, and in dysentery (Dioscor. l. ii, c. 208). (Waring.)

A. Mexicana. (Tam. *Bramadandoo*; Duk. *Poringia-datura*, or *Peela*; Beng. *Buro-shial-kanta*; Hind. *Bherbaud*. F. *argémone de Mexique*, *pavot épineux*; S. *Figo del Inferno*; G. *Teufels-frige*, *Stachelmohn*; L. *papaver spinosum*.) The yellow thistle, or prickly poppy, which grows wild in Mexico and the Antilles, and is naturalised in the south of Europe. It is also naturalised throughout India, and in Senegal. Leaves sessile, repand, sinuated, spiny, variegated with white; flowers yellow. It contains a yellow, acid juice; its seeds are emetic and purgative, and when smoked with tobacco its flowers are narcotic; an infusion of the leaves, and also the juice, are used in ophthalmia, and in chancre. In doses of 30 drops on sugar it rapidly relieves

gastralgia, and the bruised root relieves the pain of the sting of the scorpion. Used in the West Indies as a substitute for ipecacuanha. An oil expressed from the seeds has been recommended for use, instead of castor oil, as a mild and painless aperient, in half-drachm doses. The yellow latex of the stem, leaves, and capsules, are said to contain morphia.

Argen'son. France, Dauphiné. A chalybeate spring; used in cases of obstruction.

Argen'tal. (L. *argentum*, silver.) Pertaining to silver.

Argen'tan. A term for German or nickel silver.

Argen'tate. (L. *argentum*, silver.) A combination of ammoniac with argentic oxide, which in that case plays the part of an acid.

Also, having the appearance, colour, or lustre of silver.

A. of ammo'nia. Term for the substance otherwise called fulminating silver, or *Ammonio-silver oxide*, which see.

Argen'teous. (L. *argentum*. F. *argenti*.) Silvery. A term applied in Botany to leaves which are covered with a dense, white, silky down.

Argente'ria. (L. *argentum*.) The *Potentilla anserina*, so called from its silvery appearance.

Argen'ti ammo'nio-chlori'dum. 2AgCl+3NH₃. Silver chloride and ammonia. Formed by saturating solution of ammonia, by the aid of heat, with silver chloride, and allowing the liquid to cool in a closed vessel. It crystallises in unstable cubes. Has been recommended in syphilitic affections, in doses of a fourteenth of a grain.

A. ammo'nio-ni'tras. See *Ammonio-nitrate of silver*, solution of.

A. chlori'dum. (F. *muriate* or *chlorure d'argent*; G. *Chlorsilber*, *salzsäures Silber*, or *Silber muriat*.) AgCl. Silver chloride. Obtained by precipitating silver nitrate with common salt, or with hydrochloric acid. Insoluble in water, and therefore tasteless. It is regarded as a tonic, and is given in chronic diarrhoea, and in various forms of neurosis, especially in epilepsy. The dose is one to three grains, given two or three times in pill form; or it may be used as a salve in syphilitic affections, and in chronic spasm of the orbicularis palpebrarum, 1 part being mingled with from 10 to 25 parts of lard.

A. cyan'i'dum. U.S. Ph. AgCN. Two ounces of nitrate of silver dissolved in a pint of distilled water are placed in a tubulated glass receiver, to which is attached a tubulated retort, containing two ounces of ferrocyanide of potassium dissolved in ten ounces of distilled water, to this is added a troy ounce and a half of sulphuric acid mixed with four ounces of distilled water. Six ounces is distilled, or the distillation is continued till a precipitate of silver cyanide is no longer formed in the receiver; the precipitate is washed in distilled water and dried. It may be made by adding cyanide of potassium to a solution of nitrate of silver. It is a curdy-white precipitate, or dry powder, tasteless, insoluble in water and dilute nitric acid, soluble in ammonia. It is used in the preparation of hydrocyanic acid.

A. cyanure'tum. A synonym of *A. cyanidum*.

A. iodi'dum. (G. *Iodsilber*.) AgI. Silver iodide. Obtained by precipitating a solution of silver nitrate with potassium iodide. A yellow powder, insoluble in water and ammonia. It

ARGENTI.

forms a yellow liquid at a dull red heat, changes by increase of temperature to a reddish-brown fluid, which, on cooling, solidifies into a yellow, soft mass. It is abnormal in its behaviour with heat, contracting when heated from -10° C. (14° F.) to 70° C. (158° F.), and expanding on cooling. It has been used, in the same manner as nitrate of silver, in whooping-cough, gastralgia, dysmenorrhœa, and epilepsy. It is said not to produce argyria.

A. nitratus, B. Ph. (F. *nitrate d'argent*; G. *salpetersaures Silber*.) AgNO_3 . Nitrate of silver. The directions for making it are—add $2\frac{1}{2}$ fl. oz. of nitric acid and 5 oz. of distilled water to 3 oz. of refined silver, and heat gently, decant from any precipitate into a porcelain dish, evaporate, and set aside to crystallise; dry the crystals. To obtain the nitrate in rods, fuse the crystals in a platinum or porcelain vessel, and pour the melted salt into a mould; preserve in well-stoppered vessel. The crystals form colourless tabular crystals, the primary form of which is that of a right rhombic prism; they are soluble in distilled water and in rectified spirit. The solution gives a curdy white precipitate with hydrochloric acid, which darkens with exposure to light, and is soluble in liquor ammoniæ. A small fragment heated on charcoal with a blow-pipe first melts and then deflagrates, leaving behind a dull white metallic coating. Ten grains dissolved in 2 drachms of distilled water give, with hydrochloric acid, a precipitate, which, when washed and dried, weighs 8.44 grains.

Silver nitrate is applied both externally and internally. When lightly applied externally silver nitrate in the solid form whitens the skin, the part touched, after a short time and on exposure to the light, turning black; in a few days the epidermis exfoliates. It has a similar action on excoriated and ulcerated surfaces. Its solutions coagulate the secretions of such surfaces, and promote healing. When rubbed firmly on the skin it produces a sensation of burning, causes vesication, and a kind of eschar is ultimately formed. It thus effects the removal of warts, condylomata, and polypi. Its powerful action in coagulating albuminous substances has been taken advantage of to arrest chronic purulent discharge, as of gonorrhœa, and to destroy various poisonous agents, as those of syphilis, snake-bite, dissection wound, and the bite of a mad dog, and to prevent the entrance of such poisons into the system; also to promote the cure of fistulous passage, fissures of the mouth, anus, and tongue. Troublesome bleeding from a leech-bite may be stopped by the pressure of a point of the nitrate on the bleeding spot. The spread of erysipelas over the skin may be arrested in some instances by drawing a broad circle around the part affected with the solid nitrate, and the inflammation consecutive upon frostbites may be considerably reduced by rubbing the whole surface of the frostbitten part with it. It has been employed in the same way with advantage in cases of chronic arthritis, rheumatism, and in pneumonia. It is largely used, both in substance and in solution, in affections of the eye; the solid nitrate, either pure or mitigated, being chiefly employed to arrest the profuse secretion of purulent ophthalmia, and to effect the cure of ptyectenule and ulcers; and the solutions, in strengths varying from 1 to 10 grains to the ounce of distilled water, being employed in cases of conjunctivitis, blepharitis, and other slight

inflammatory diseases. In Aural Surgery, it is used in cases of otorrhœa, polypi, and contractions of the Eustachian tube. The pitting of smallpox is said to be prevented by opening each vesicle as soon as formed, i.e. about the 4th or 5th day, and applying a solution, containing 20 grains to the ounce of the salt, to the raw surface beneath, or the skin generally may be painted with the solution. It has been used in cases of erythema, herpes labialis, eczema, and pruritus, and in threatened bedsores. When only weak solutions are required nitrous ether is the best solvent for the nitrate, as it dissolves the fatty secretion of the skin. The nitrate has a strong metallic taste, and has been applied to the gums in scorbutic affections, to the tongue in cases of fissure and epithelial cancer, to aphthæ of the mucous membrane of the tongue and cheeks, to the inflamed or hypertrophied tonsils and uvula, to the pharynx and larynx in cases of whooping-cough, of diphtheritis, and of croup. The solution has been applied in the form of spray, or with a brush or probang, to the chronically inflamed larynx in phthisis, and to the trachea in asthma, bronchitis, and phthisis.

Taken internally it has been recommended in the vomiting of pregnancy, in cardialgia, and in chronic inflammation of the stomach; and in ulcerations, blennorrhœa, and acute and chronic diarrhœa of the intestines; also in epilepsy and various forms of neurosis.

It must be administered with care, and its use must not be continued for too long a time, since, after the administration of 200 or 300 grains, the parts of the skin exposed to the light have been observed to assume a dark grey or brown aspect (Argyria), which is irremediable.

In doses of a few grains it is an irritant and corrosive poison, producing vomiting and convulsions. After death the surface is generally of a blue tint, and there is often a blue line round the gums; the œsophagus, stomach, and intestines are red and inflamed or present white corroded patches, or there may be black patches. The treatment recommended is the administration of solution of common salt, to produce an insoluble chloride, also emetics and white of egg.

It may be recognised by the following tests:—When mixed with sodium carbonate and heated on charcoal with the blow-pipe, a hard, white, malleable metallic bead is produced, without any incrustation. Hydrogen sulphide gives a black precipitate, Ag_2S , insoluble in ammonium sulphide, but soluble in warm nitric acid. The caustic alkalis give a brown precipitate, Ag_2O , soluble in excess of ammonia, but not in potash or soda. Hydrochloric acid and any soluble chloride give a white precipitate, AgCl , which turns slate colour after exposure to the light, soluble in ammonia, in hyposulphite of soda, and in potassium cyanide, but insoluble in boiling nitric acid. The chloride, when heated, becomes a horny mass. Iodide and bromide of potassium give yellow precipitates, which are not easily soluble in ammonia. (Tidy.)

A. nitratus fusa, U.S. Ph. (L. *fusus*, part. of *fundo*, to pour out. *Lapis infernalis*; F. *pierre infernal*; G. *geschmolzenes salpetersaures Silber*, *Hollenstein*.) Melt nitrate of silver in a porcelain capsule until frothing ceases, then pour into suitable silver moulds. For properties, see *A. nitratus*.

A. oxidum, B. Ph. (G. *silberoxyd*.) Ag_2O . Oxide of silver, or argentic oxide. The directions for preparing this are—dissolve $\frac{1}{2}$ an

ARGENTIA EXTERNA—ARGENTUM.

ounce of silver nitrate in 4 ounces of distilled water, and pour the solution into 3½ pints of solution of lime, agitate the mixture and set aside, collect the deposit on a filter, and wash it with 6 ounces of distilled water, dry at a heat not exceeding 100° C. (212° F.), and keep in a well-stoppered bottle. It is an olive-brown or, when long kept, greyish powder, which at a low red heat gives off oxygen, and is reduced to the metallic state. It dissolves completely in nitric acid, without the evolution of any gas; 29 grains heated to redness yield 27 grains of metallic silver. The oxide is used internally for the same purposes as nitrate of silver, than which it is much less likely to produce argyria. Dose, ½—2 grains.

Argentia externa. (*L. argentum; externa*, outward.) A silvery lamina investing the outer surface of the cup-like cartilage of the eyes of Cephalopoda.

A. interna. (*L. internus*, inner.) A silvery lamina lining the internal surface of the cup-like cartilage of the eyes of Cephalopoda.

Argentio. (*L. argentum*, silver. *F. argentique; G. silberig.*) Applied by Berzelius to the first degree of oxidation of silver, or oxydum argentium; to oxyalts that have this oxide for their base; to halosalts with a base of silver, and to sulphosalts corresponding to oxyalts in their composition, or sales argentici.

A. oxide. Ag₂O. Also called silver hemi-oxide and oxide of silver. See *Argenti oxidum*.

Argentico-ammonio. (*F. argentico-ammonique.*) Term applied by Berzelius to double salts resulting from combination of an argentic with an ammoniac salt.

A.-cal'cio. Same as *Argentico-ammonio*, with a calcic instead of an ammoniac salt.

A.-plumb'cio. Same as *Argentico-ammonio*, with a plumbic instead of an ammoniac salt.

A.-potas'sio. Same as *Argentico-ammonio*, with a potassic instead of an ammoniac salt.

A.-so'dio. Same as *Argentico-ammonio*, with a sodic instead of an ammoniac salt.

A.-stront'cio. Same as *Argentico-ammonio*, with a strontic instead of an ammoniac salt.

Argentio'ro. Italy; near Cape Sarsari, in Sardinia. A cold mineral spring containing sulphate of alumina.

Argentiferous. (*L. argentum; fero*, to bear. *F. argentifere; G. silberhaltig.*) Containing silver.

Argentilla vulgaris. (*L. argentum; vulgaris*, common.) The *Potentilla anserina*.

Argentina. (*L. argentum*, silver. *F. argentine.*) A name for the plant *Potentilla anserina*, silverweed, or wild tansy.

A. vulgaris. (*L. vulgaris*, common.) The *Potentilla anserina*.

Argentine. (*L. argentum. G. silberfarben.*) Having the appearance, or shining colour, and especially the clear sound of silver when struck.

A. flowers of antimony. See *Antimony, argentine flowers of*.

Argentite. (*L. argentum*, silver.) Native sulphuret of silver. It is of a leaden-grey colour, and slightly lustrous.

Argentous oxide. Ag₂O. A name of *Silver tetroxide*.

Argentum. (Akin to Sans. *rajatam*, silver, from the root *ráj*, to shine; some have derived it from *ápyós*, white, from its colour. *F. argent; L. argenti; S. platu; G. Silber.*)

Silver; a metal which is found native, as also in combination with gold, copper, lead, mercury, arsenic, cobalt, sulphur. The pharmacopoeial name (U.S.A.) for silver which is used only in the state of oxide and nitrate. See *Silver*.

A. acet'icium. Ag. (*F. acetate d'argent; G. essigsäures Silber, Silberessigsalz.*) Silver acetate. See *Acetate of silver*.

A. aëra'tum. (*L. aer*, air.) A synonym of *A. carbonicum*, or *Silver carbonate*.

A. bromat'um. (*G. Brom Silber.*) Silver bromide. Obtained by precipitating solution of silver nitrate with potassium bromide. A white substance, becoming grey on exposure to light, insoluble in water, soluble in concentrated solution of potassium bromide in water. Dose, the same as of silver chloride; used in severe forms of neurosis.

A. calcina'tum. (*F. oxide d'argent; G. Silberoxyd.*) Calcined silver; oxide of silver. See *Argenti oxidum*.

A. carbon'icium. (*F. carbonate d'argent; G. Kohlensäures Silber, Lustsaures Silber.*) See *Silver carbonate*.

A. chlora'tum. A synonym of *Argenti chloridum*.

A. chlora'tum ammonia'tum. (*G. Chlorsilber-Ammoniak, or Silbersalmiak.*) Silver and ammonium chloride. A crystalline powder, smelling of ammonia, obtained by dissolving silver chloride in boiling liquor ammoniac. Dose, same as silver nitrate.

A. chlora'tum Rademacheri. Rademacher's silver chloride. A substance prepared in the same way as *A. chloratum*, except that the precipitated silver chloride is digested with dilute spirit of wine.

A. chrom'icum. (*F. chromate d'argent; G. chromsäures Silber.*) See *Silver chromate*.

A. cor'neum. (*L. corneus*, horny. *F. argent corné.*) A synonym of *Argenti chloridum*.

A. cyana'tum. (*F. cyanure d'argent; G. Cyansilber, or blausäures Silber.*) Silver cyanide. See *Argenti cyanidum*.

A. cyanogena'tum. Same as *Argenti cyanidum*.

A. divi'sum. (*L. divisum*, from *divido*, to divide, to separate.) Metallic silver in a very fine state of division. It has been recommended in syphilis.

A. folia'tum. (*L. foliatus*, leaved. *F. argent en feuilles, argent battu; G. Blattsilber, Silberblätter, geschlagenes Silber.*) Silver leaf; used for covering pills.

A. fugiti'vum. (*L. fugitivus*, fleeing away.) Fugitive or mobile silver. A synonym of *Mercury*.

A. ful'minans. (*L. fulmino*, to lighten. *F. fulminate d'argent, ammoniure d'argent; G. Silber oxydammonium, Knallsilber.*) Ammonio-silver oxide. See *Fulminating silver*.

A. fulmin'icium. (*L. fulmino*, to lighten.) A synonym of *Fulminating silver*.

A. fu'sum. (*L. fusus; part. of fundo*, to pour out.) A synonym of *Mercury*.

A. fu'sum mitiga'tum. (*L. fusus; mitigo*, to render mild.) A synonym of *A. nitricum cum kali nitrico*.

A. hydrago'rum Boylei. A synonym of *Argenti nitras*.

A. hydrocyan'icium. A synonym of *Argenti cyanidum*.

A. hyposulfuro'sum. (*G. unterschwefligsäures Silber.*) AgNaS₂O₃. Silver sodium

ARGES—ARGILLA.

theosulphate or hyposulphite. Made by adding a solution of sodium hyposulphate to one of silver chloride or nitrate. It is slightly soluble in water, and has a sweet taste. It has been used in epilepsy, paralysis agitans, and other neuroses.

A. ioda'tum. See *Argenti iodidum*.

A. liq'uidum. (L. *liquidus*, fluid.) A synonym of *Mercury*.

A. metal'licum. (Μίταλλον, a metal.) Metallic silver.

A. mob'ile. (L. *mobilis*, easily moved.) A synonym of *Mercury*.

A. mortuum. (L. *mortuus*, dead.) A term for metallic silver, in contradistinction to argentum vivum, mercury.

A. muriat'icum. A synonym of *Argenti chloridum*.

A. muriat'icum ammonia'tum. A synonym of *Argenti ammonio-chloridum*.

A. na'trico-hyposulfuro'sum. (G. *unterschwefelsaures Silberoxyd Natron*.) A substance obtained by dissolving silver oxide in solution of sodium hyposulphite. It forms crystals of sweetish taste, which are soluble in water, and the solution in the proportion of 1 part to 50 or 100 of water has been recommended for subcutaneous injection, as being preferable to solutions of silver nitrate.

A. nitra'tum. Nitrated silver. A synonym of *Argenti nitras*.

A. ni'tri. A synonym of *Argenti nitras*.

A. ni'tricum. (F. *nitrate d'argent*; G. *Salpetersaures Silber*.) A synonym of *Argenti nitras*.

A. ni'tricum crystallisa'tum. G. Ph. (F. *nitrate d'argent cristallisé*; G. *krystallisirte salpetersaures Silber*.) Silver nitrate in crystals.

A. ni'tricum cum ka'li ni'trico. G. Ph. (G. *salpeterhaltiger Hüllenstein*.) Mitigated silver nitrate. A preparation made by melting and mixing 2 parts of potassium nitrate with 1 part of silver nitrate. It is chiefly used in ophthalmic surgery, as an application to the conjunctiva of the lids in chronic blepharitis.

A. ni'tricum fu'sum. (L. *fusus*, part of *fundo*, to pour out. F. *nitrate d'argent fondu*, *argent nitrique fondu*, *lune caustique*; G. *geschmolzenes Silber nitrat*, *Silberutzein hollischer Feuerstein*.) Lunar caustic. Fused silver nitrate. See *Argenti nitras fusa*.

A. ni'tricum fu'sum mitiga'tum. (L. *fusus*; *mitigo*, to render mild.) A synonym of *A. nitricum cum kali nitrico*.

A. ni'tricum oxyda'tum crystallisa'tum. A synonym of *Argenti nitras*.

A. oxyda'tum. (G. *Silberoxyd*.) Silver oxide. See *Argenti oxidum*.

A. oxyda'tum aceta'tum. A synonym of *Acetate of silver*.

A. oxyda'tum ace'ticum. A synonym of *Acetate of silver*.

A. oxyda'tum ni'tricum. A synonym of *Argenti nitras*.

A. oxyda'tum ni'tricum fu'sum. A synonym of *Argenti nitras fusa*.

A. præcipita'tum. (L. *præcipitatus*, part of *præcipito*, to throw down.) Silver obtained by the reduction of silver chloride. Obviously inert. One part of silver chloride is mixed with a zinc rod with four parts of dilute sulphuric acid until the chloride is converted into a black powder, which is washed in solution of ammonia,

then in dilute nitromuriatic acid, and lastly, in pure water, and dried.

A. purifica'tum. B. Ph. (L. *purificatus*, part of *purifico*, to purify.) Refined silver. Pure metallic silver which, if ammonia be added in excess to a solution of the metal in nitric acid, exhibits in the resulting fluid neither colour nor turbidity.

A. pu'rūm divi'sum. (L. *purus*, pure; *divisus*, part of *divido*, to divide.) Silver obtained by the reduction of silver chloride.

A. repurga'tum. (L. *repurgo*, to clean again.) Refined silver.

A. sali'tum. (L. *salitus*, part of *salio*, to salt.) A synonym of *Argenti chloridum*.

A. subulfuro'sum. A synonym of *A. hyposulfurosum*.

A. sulphur'icum. Ag. SO₂. (G. *schwefelsaures Silber*.) Silver sulphate. It has been recommended as a remedy in epilepsy. See *Silver sulphate*.

A. vi'vum. (L. *vivus*, living. F. *argent vif*; G. *lebendiges Silber*, *Quecksilber*.) A synonym of *Mercury*.

A. vi'vum purifica'tum. (L. *purificatus*; from *purifico*, to make clear.) Another name for the *Hydargyrum purificatum*.

A. zootri'cum. (Ζῷον, an animal.) A synonym of *Silver cyanide*.

Arges. (Ἄργης.) A serpent considered by Hippocrates to be excessively venomous.

Arg'hol. See *Cynanchum arg'hol*.

Arg'il. (F. *argile*; I. *argilla*; S. *arcilla*; G. *Thon*.) An old name for alumina.

Also, a name of a whitish earth, soft and unctuous to the feel, composed principally of silica and alumina, but often containing calcium carbonate, and coloured by iron oxide. Argillaceous earths were formerly employed in medicine. See *Terra*.

Argilla. (Ἀργίλος, potter's earth. F. *argile*, or *argille*; G. *Thonerde*.) Alumina.

In G. Ph. described as a coherent, friable, whitish, faded-looking earth, which is somewhat tenacious when damp, falls to pieces in water, and consists for the most part of pure clay.

A. ace'tica. A synonym of *Aluminium acetate*.

A. al'ba. (L. *albus*, white.) A synonym of *Bolus alba*.

A. bo'lus fla'va. (Βῶλος, a clod of earth. L. *flavus*, golden or reddish yellow.) A synonym of an old preparation called *Terra lemnia*.

A. bo'lus ru'bra. (Βῶλος. L. *ruber*, red.) A synonym of *Bolus, Armenian*.

A. ferrugin'ea. (L. *ferrugineus*, impregnated with iron.) A synonym of *Bolus, Armenian*.

A. ferrugin'ea ru'bra. (L. *ferrugineus*, impregnated with iron; *ruber*, red.) A synonym of *Bolus, Armenian*.

A. hydra'ta. A synonym of *Alumina hydrata*.

A. hydrochlo'rica. A synonym of *Aluminium chloride*.

A. incarna'ta. (Low L. *incarnatus*, flesh-coloured.) A synonym of *Bolus, Armenian*.

A. ka'li sulphur'ica. A synonym of *Potassium alum*.

A. muriat'ica. A synonym of *Aluminium chloride*.

A. ni'trica. A synonym of *Aluminium nitrate*.

A. och'rea ru'bra. (L. *ochra*, a kind of

ARGILLACEOUS—ARGYRIC.

earth that colours yellow; *ruber*, red.) A synonym of *Bole*, *Armenian*.

A. pallida. (*L. pallidus*, pale.) A synonym of *Bole*, *white*.

A. plumosa. (*L. plumosus*, full of feathers.) A synonym of *Asbestos*.

A. pumex. (*L. pumex*, pumice stone.) A synonym of *Pumice stone*.

A. pura. (*L. purus*, pure.) A synonym of *Alumen exsiccatum*, and also of *Alumina hydrata*, *G. Ph.*

A. rubra. (*L. ruber*, red.) A synonym of *Armenian bole*.

A. sulfurica. A synonym of *Aluminii sulphas*.

A. sulphurica alcalisata. Alkalised sulphurated argil. A synonym of *Alum*.

A. sulphurica usta. (*L. ustus*, part of uro, to burn.) A synonym of *Alumen exsiccatum*.

A. vitriolata. Vitriolated or sulphated argil. A term for *alum*.

Argillaeeus. (*Ἀργίλλος*, *G. thonhaltig*, *thonreich*.) Belonging to, or of the nature of, clay or alumina.

A. earth. A synonym of *Alumina*.

Argillae acet. Acetate of argilla. A synonym of *Aluminium acetate*.

A. sulphas. Sulphate of argilla. A synonym of *Common alum*.

A. supersulphas alcalisatum. Supersulphate of argilla alkalised. A synonym of *Common alum*.

Argillicolous. (*Ἀργίλλος*; *L. colo*, to inhabit. *G. thonbewohnend*.) Living in argil or clay.

Argilliferous. (*Ἀργίλλος*; *L. fero*, to bear. *G. thonhaltig*.) Containing argil or clay.

Argilliform. (*Ἀργίλλος*; *L. forma*, likeness. *G. thonformig*.) Resembling argil or clay.

Argillitic. (*Ἀργίλλος*.) Pertaining to argil or clay.

Argillo-arenaeeus. (*Ἀργίλλος*; *L. arena*, sand. *G. thonsandartig*.) Formed of argil and sand.

A.-arenosus. (*L. arenosus*, sandy. *F. argillosabuleux*; *G. thonsartig*.) Applied by Brongniart to a group of rocks containing clay and sand.

A.-ferrugineus. (*G. thonrostartig*.) Containing clay and oxide of iron.

A.-gypseus. (*G. thongypartig*.) Containing clay and gypsum.

Argilloid. (*Ἀργίλλος*, *G. thonähnlich*.) Resembling argil; applied to rocks the chief bulk of which presents the aspect or properties of certain argils or clays.

Argillolithie. (*Ἀργίλλος*; *λίθος*, a stone.) Formed of hardened argil.

Argillous. (*F. argilleux*; *G. thonig*, *thonartig*.) Similar to *Argillaceus*.

Argistatus. (*Ἀργός*, shining, white.) Incorporated with white wax. (Turton.)

Argol. Same as *Argal*.

Argonautidae. A Family of the Section *Oclopoda*, Order *Dibranchiata*, Class *Cephalopoda*. Eight arms with sessile suckers; female with a calcareous, external, one-chambered shell.

Argoor. An article of the Indian *Materia Medica*, probably cinnabar. (Waring.)

Arguel. The same as *Argel*.

Argulinidae. A Family of the Order *Siphonostomata*, of the Subclass *Copepoda*. The

body is flattened; cephalothorax and abdomen fused; post-abdomen small; eyes two, aggregate; two pairs of maxillipedes. Females with no egg-sacs; front antennae hook-like, the second jointed; abdominal feet only cleft at the tip; liver multiramous; proboscis protrusible, with two annular poison glands; front maxillipedes forming suckers (*Argulus*) or hooks (*Gyropeltis*). (*Macalister*.)

Argulus. Müll. A Genus of the Family *Argulidae*, Suborder *Branchiura*, Order *Copepoda*. First pair of legs transformed into large suckers; last four pairs bifid, and furnished with ciliated filiform processes; mouth with a perforating apparatus.

A. foliaceus. Linn. (*L. foliaceus*, leaf-like.) Carapace greenish. Parasitic on the carp and other fishes.

Argumentum integritatis. (*L. argumentum*, proof, argument; *integritas*, innocence.) The hymen. (Dunglison.)

Argyranthemous. (*Ἀργυρος*, silver; *ἄθος*, a flower.) Having shining white flowers.

Argyranthous. (*Ἀργυρος*, silver; *ἄθος*, a flower. *F. argyranthem*; *G. silberblumig*.) Having flowers of a shining white.

Argyreia. A Genus of the Nat. Order *Convolvulaceae*.

A. bracteata. Choisy. Hab. Madras. Twining shrubs. Leaves on long petioles, cordate-ovate, shining green above, silky and hirsute below; sepals hairy; peduncles axillary, terminally two- or three-branched, each bearing a flower with three bracts and the base of the calyx, and a bractless sessile flower in the axilla. A decoction of the leaves is used by natives of India as a fomentation in cases of scrofulous enlargements of the joints, the boiled leaves at the same time as a poultice.

A. Malabarica. Choisy. Hab. Mysore, Malabar. Leaves acute, slightly hairy; peduncles many flowered at the apex; outer sepals villous, hoary; root cathartic. Used externally in erysipelas; leaves beaten up with butter are applied to abscesses.

A. speciosa. Sweet. (*L. speciosus*, handsome.) Hab. Malabar. Leaves glabrous and thickly nerved above, silky beneath; peduncles umbellately capitate. Leaves are used in poultice, and as a rubefacient and stimulant application in skin diseases.

Argyria. (*Ἀργυρος*, silver.) Discoloration of the skin, mucous membranes, and other parts of the body, with silver, in consequence of its prolonged internal administration. Neumann found that, with the exception of the epithelial lining of the glands and their contents, the outer coat of the hair, and the rete, all layers of the skin composed of connective tissue and containing vessels presented a deposit of silver in a granular form. The silver is probably deposited in the form of finely divided metal or of oxide; the greatest quantity found was only .061 per cent. in the dried kidney. Blistering, potash and soap baths, the internal use of iodide of potassium, have been recommended, with little good effect; two cases have been reported of gradual fading of the stain during the administration of iodide of potassium and the use of mercurial vapour baths for the cure of syphilis.

Argyriasis. Same etymon and meaning as *Argyria*.

Argyric. (Same etymon. *F. argyrique*.) Pertaining to silver.

A. salta. (*F. sels argyriques*.) Silver salts.

ARGYRIDES—ARICYMON.

Argyrides. (Ἀργυρος, silver.) Name by Ampère for a genus of simple bodies, comprising bismuth, mercury, silver, and lead; by Beudant for a family of minerals, having silver for their type.

Argyritis. (Ἀργυρίτης, belonging to silver, silver ore; from ἄργυρος, silver. G. *Silberglätte*.) Old term, used by Pliny, l. 33, H. N. c. 6, for lithargic or semivitrified oxide of lead, separated in the process of extracting silver from its ores; so called because it is a mixture of lead and silver, or from its colour only, because white like silver, as Dioscorides states, v, 102.

A. terra. Term formerly given to earth taken from silver mines, having small particles of that metal mixed with it.

Argyrochæta. (Ἀργυρος, silver; χαίτη, long hair.) The feverfew, *Chrysanthemum parthenium*.

Argyrocoma. (Ἀργυρος, silver; κόμη, hair.) Name for a Subgenus of *Gnaphalium*, or cud-weed, the species of which have white silvery flowers.

Also, a name of the *Gnaphalium muricatum*.

Argyrodamas. (Ἀργυρος, silver; δάμας, unconquerable.) Old term for a kind of talc-like silver, unaffected by fire, supposed to act as a mechanical destructive when swallowed, by its sharp laminae penetrating the coats of the stomach and intestines; according to Andr. Cæsalpinus, *Art. Med.* iii, c. 32, and P. Zacehias, *Quest. Medico-Leg.* ii, 2, q. 4, n. 24.

Argyrogonia. (Ἀργυρος, silver; γονία, a bringing forth of fruit.) An alchemical term for the argentic seed concocted from silver, first perfectly dissolved, or the argentic tincture, of a white colour, by which silver might be generated, or rather, by which base metals might be made to appear like silver.

Argyrolibanos. (Ἀργυρος, silver; λίβανος, the frankincense tree.) Old name for the white olibanum.

Argyrolithos. (Ἀργυρος, silver; λίθος, a stone.) Old name for a kind of talc of the appearance of silver. (Quincy.)

Argyrolithus. Same as *Argyrolithos*.

Argyrophora antidotos. (Ἀργυρος; φορέω, to bear; ἀντίδοτος, a remedy.) Old name for a medicine consisting of opium, various gums, aromatics, &c.; it was recommended in all diseases of the head, and in other cases. It was named the money-bringing antidote, from its high price.

Argyrophthalmus. (Ἀργυρος; ὀφθαλμός, the eye. G. *silberaugig*.) Having the eyes of a silvery white.

Argyrophyllous. (Ἀργυρος; φύλλον, a leaf. G. *silberblattrig*.) Having leaves covered with close down or soft hair, whitish and shining.

Argyropoëia. (Ἀργυρος, silver; ποιέω, to make. F. *argyropie*; G. *Silberverfertigung*, *Silberrackerkunst*.) An alchemical term for the art of making silver by transmutation of the baser metals into the more valuable one.

Also, applied to the separation of silver from its ores.

Argyropygus. (Ἀργυρος; πύγξ, the rump. G. *silberrumpfig*.) Having the extremity of the abdomen white.

Argyrostigma. (Ἀργυρος; στίγμα, a spot. G. *silberfleckig*.) Applied to plants having flowers marked here and there with white spots, as *Begonia argyrostigma*.

Argyrostomus. (Ἀργυρος; στόμα, a mouth. G. *silbermundig*.) Having the mouth of a silver white, as *Musca argyrostoma*.

Argyrotrophe'ma. (Ἀργυροτροφήμα; from ἄργυρος, silver; τροφή, food.) Term, used by Galen, de *Succor. bon. et vit.* c. 13, for a kind of food prepared from milk for attempting the heat of the body.

Argyrus. (Ἀργυρος, silver; from ἀργός, white.) Old name for the metal argentum, or silver.

Arha'gea. A Suborder of the Order *Nemeritæda*, Class *Turbellaria*, characterised by having rudimental or no cephalic grooves.

Arheumatic. Devoid of rheumatic pains; having no rheumatism.

Arhi'za. (A, neg.; ῥίζα, a root. G. *Wurzellos*.) A term applied to plants that have no root. See *Arrhiza*.

Arhizoblastous. (A, neg.; ῥίζα, a root; βλαστός, a sprout.) Applied by Willdenow to embryos that have no root.

Arhu'ka. The vernacular name in India of the *Cajanus indicus*.

Arhynchotæni'adæ. (A, neg.; ῥύγχος, a snout; ταινία, a tapeworm.) A term proposed for those tapeworms which have no proboscisiform head.

Arhyncootæ'nia. (Same etymon.) A Genus of the Family *Tæniadæ*, Order *Cestoda*.

A. critica. A tapeworm infesting the *Hydrax capensis*, which in its cestode form has been called *Cænurus serialis*.

Arhynctia. (A, neg.; ῥύγχος, a snout.) Absence of the frontal proboscis in animals or of the face in man; there is often fusion of the eyes into a single globe.

Arhythmic. (A, priv.; ῥυθμός, measured motion.) Without rhythm or regularity; applied to the state of the pulse.

Arhythmous. The same as *Arhythmic*.

Ar'ituber. The root of the arum.

Aria. Old name for the white bean-tree, *Cratægus aria*.

Aria-bepou. The Malay name of the *Azadirachta indica*.

Arians. See *Aryans*.

Ari'ca bark. (*Arica*, a port of Peru.) The bark of the *Cinchona pubescens*, var. *Pelleteriana*, of Weddell; originally so called from the port at which it was shipped. Now known as Cusco bark.

Aricia. Same as *Aricin*.

Aric'idæ. A Family of the Suborder *Sedentaria*, Order *Polychæta*, Class *Annelida*. Body composed of numerous segments; head with only small feelers or none; the oral segment with bristle-bearing eminences. The two-branched or two-rowed bristle eminences often extend with the short branchiæ to the middle of the back. Bristles simple.

Aric'in. (*Arica*. F. *aricine*; G. *Aricin*.) $C_{22}H_{26}N_2O_4$. An organic base obtained by Pelletier from a species of cinchona, *Cinchona pubescens*, var. *Pelleteriana*, coming from Arica in Peru. It crystallises in white prisms; rather astringent than bitter; soluble in chloroform easily, and also in alcohol and ether. It melts at 188° F., but is not volatile. It forms an uncrystallisable neutral salt with sulphuric acid, and an intense green colour with nitric acid. According to Hesse, it is only a more or less pure cinchonidine.

Aricymon. (Ἀρικόμων, prolific; from

ARID—ARIOBARZANIOS.

ἀρῖ, *ineret*; *κύω*, to be pregnant.) Ancient term for a woman who readily and frequently conceives. Hippocrates, *de Superfæt.* x, 10, 11.

Ar'id. (*L. aridus*, dry. *F. aride*; *I. arido*; *G. trocken, dürr.*) Dry.

Aride'na. (*L. aridus*, dry.) Leanness.

Aridifolie'ce. (*L. aridus*, dry; *folium*, a leaf. *F. aridifoliis.*) Applied by Agardh to plants having leaves generally dry, as *Epacrideæ*, *Erioseæ*.

Arid'itas. (*L. aridus*, dry. *F. ariditè*; *G. Dürre, Trockenheit.*) Dryness.

A. corp'oris. (*L. corpus*, the body. *Ἐνπαρῖα.*) Term, used by Galen, *Def. Med.*, for marasmus; dryness of the body. Also formerly applied to the tongue, as a symptom of fever.

Arid'ity. (Same etymon. *F. ariditè*; *I. aridezza*; *S. aride*; *G. Dürre.*) Dryness.

Aridura. (*L. aridus*, to be dried up. *F. aridure*; *I. aridezza*; *S. aridura*; *G. Darreucht.*) Old term for a wasting or leanness, as that attending consumption or hectic fever. Applied particularly to the wasting of a limb or member, according to Hartmannus, in *Prac. Chymiatric. part. poster. c.* 183, and so distinct from atrophica, or a general wasting of the body.

A. cor'dis. (*L. cor*, the heart.) Atrophy of the heart.

A. he'patis. (*L. hepar*, the liver.) Atrophy of the liver.

Ar'igous. (*A. neg.*; *ἄριος*, cold.) Without cold or rigor.

Ar'ika. A kind of koumiss or spirit distilled from mare's milk in Tartary.

Ar'ikelu. The Telugu name of *Paspalum scrobiculatum*.

Ar'il. See *Arillus*.

Ar'il'ary. (*F. arillaire*; *G. samen-deckig.*) The arilla of some *Passiflorææ*, much divided and in form of a pulposus membrane, is termed arillary tunic.

Ar'il'ate. (*Arillus. F. arillè.*) Having arilli.

Ar'il'li myris'ticæ. Mace; the arillus of the nutmeg.

A. myris'ticæ moscha'tæ. The arillus of the nutmeg tree, *Myristica moschata*.

Ar'il'iform. (*Arillus*; *L. forma*, shape.) Resembling an arillus, as in the substance termed arnetto.

Ar'il'ode. Term applied to an arillus springing from the margin of the micropyle. See *Arillus micropylaris*.

Ar'il'us. (Low *L. arillus*, a raisin. *F. arille*; *G. Samenmantel, Samendecke.*) A thickening of the funiculus or of certain regions of the seed or placenta, which, gradually extending upwards, forms an additional investment of the seed outside the testa.

In the nutmeg, the arillus, which is the substance termed mace, commences by a thickening on the right and left sides of the base of the ovule between the hilum and the micropyle; it extends gradually around the hilum and then ascends to the right and left towards the exostome. A very similar form of arillus is observed in *Maranta*, *Thalia*, *Stromanthe*, and *Calathea*.

In *Bureavia*, which has an arillus that, when mature, resembles mace, the first appearance of the organ consists of an outgrowth of cells forming flattened hairs that take origin from around the micropyle, the sides of the hilum, and the funiculus.

In *Phyllanthus* and in *Oxalis* the primine thickens throughout, and thus is constituted a general arillus. If instead of a thickening of the funiculus or coats of the seed the cells form hairs or filaments, an arillus is formed, which may be localised, like the pilose arillus of *Wrightea* and *Kixia* of *Alstonia*, the *Hibiscus*, and the *Gossypium*.

A kind of arillus, formed by a large cellular growth or crust situated at the level of the chalaza, seen in *Cheledonium* and some other *Papaveraceæ*, is termed arille du raphé by M. Baillon, and strophioles by other authors.

M. Baillon has suggested that the terms true and false arillus, Arillode, Caruncula, Strophiole, and the like, should be abolished, and that instead all forms of arillus, whether arising from the funiculus, the raphé, the chalaza, the hilum, or the micropyle, or from several of these regions coincidentally, should be distinguished as either generalised or localised arilli, according to whether they form a partial or a complete investment of the seed; and further descriptions may be given of the form, consistence, and degree of development that may be present.

A., false. A synonym of *Arillode*.

A. funicula'ris. (*L. funiculus*, a slender rope. *F. arille funiculare.*) An arillus springing from the funiculus. Thus, in *Nymphaea* it commences by an annular thickening of the funiculus just above the hilum, which, rapidly enlarging by the growth of new cells, covers the summit of the ovule and conceals the micropyle, though without contracting any adhesion to the seminal integuments.

A. micropyla'ris. (*Micropyle. F. arille micropylaire.*) An arillus consisting of a thickening of the exostome. Thus, in *Ricinus*, a collar forms a little before the opening of the flower around the exostome, which is formed by a thickening of that membrane. The rest of the primine is reduced to a thin membrane. The thickening forms three lobes, two large and one small, between which is the micropyle. This is the organ sometimes called an arillode, and by M. Planchon the caruncle. In other *Euphorbiaceæ* its size and form undergo much variation; in *Cluytia* it becomes palmate; in *Manihot* and *Curcas* it is biarticulated and folded like a fan; in *Hyænanche* it forms a narrow, straight tongue, with serrated borders; and in *Acalypha* it resembles a Phrygian cap. By the growth of the seed, and its own development, the micropylar arillus of *Euphorbiaceæ* may change its position, and ultimately come into close relation with the hilum.

A. myris'ticæ. The arillus of the nutmeg. A synonym of *Mace*.

A. umbilica'lis. (*L. umbilicus*, the navel. *F. arille umbilical.*) An arillus springing from the hilum. Thus, in *Buxus*, the arillus is an outgrowth from the seminal integuments immediately around the hilum, and it forms two small lips, which contract no adhesions to the seed, and are soon arrested in their growth.

Ar'imara. The *Strychnos cogens*, Benth.

Arimathe'a. Palestine; a place near Jerusalem, where the Jews show the tomb of Christ. Here is a highly saline and bitter spring, which enjoys a great repute in the neighbourhood as a vermifuge.

Ariobarza'nios. (*Ariobarzanes*, king of Cappadocia.) Name formerly given to a discutient plaster composed of cerussa, turpentine,

ARIOBARZANIUS—ARISTOLOCHIA.

frankincense, &c., according to Paulus Ægineta, iii, 23; vii, 17.

Ariobarzanius. Same as *Ariobarzanius*.

Art'on, Pér. A Genus of the Family *Limacina*, Suborder *Pulmonata*, Order *Gastropoda*. Rudimentary shell fragile; genital orifice in front of the middle of the dorsal shield and below the respiratory orifice; a caudal gland and a mucous orifice at the extremity of the back.

A. empirico'rum. (G. *Nachtschnecke*.) The slug. A common animal in gardens and woods throughout Europe. The body is destitute of a shell, elongated, slimy, two or three inches long, half an inch broad, black, brown, greenish, or orange coloured, with flattened foot and arched and rugose back; head not distinctly separated from the body, provided with four feelers, the two longest bearing eyes. At the fore part of the dorsum is a shield, partly hardened by the deposit of calcareous granules, which covers the pulmonary cavity and the sexual aperture. The sexual organs are destitute of a gland sac and stylet. A mucous sac opens at the posterior extremity of the body. It was formerly used in medicine for the same purposes as the snail.

Aris'ema. A Genus of the Nat. Order *Araceæ*.

A. atro'rubens. (L. *ater*, black; *rubens*, red.) A synonym of *Arum triphyllum*.

A. pytho'nium. The juice is caustic.

A. triphy'llum. Schott. (Τρίς, thrice; φύλλον, a leaf.) A synonym of *Arum triphyllum*.

A. u'tile. (L. *utilis*, useful.) Hab. India. A species with a tuber yielding a fæcula like arrow-root.

Aris'arum. (Ἀρίσaron.) The herb monkshood, so called from its likeness to the arum.

Arish'ta. The Hindoo name of the *Azadirachta indica*.

Aris'sec. The Tamul name of *Oryza sativa*.

Aris'ta. (L. *arista*. F. *arête*; G. *Granne*.) The beard or sharp point issuing from the husk of grasses; the awn. A bristle-like process surmounting any organ. It is commonly applied to the prolongation of the median nervure of the paleæ of grasses, and sometimes also to one of the lateral nervures.

Aristolook'heea. The Arabic name of *Aristolochia longa*.

Aristalthæ'a. (Ἀριστος, best; ἀλθεῖα, marshmallow.) Ancient name for the plant *Althea officinalis*, or marshmallow.

Aristar'chi, antid'otus Paul'ina. Term for an ancient medicine, much extolled by Aëtius in various diseases, composed of opium, castor, styrax, galbanum, and aromatics, mixed up with honey; also called *Confectio archigenis*.

Arist'ate. (L. *arista*, the awn, or sharp point of the husk of grasses. F. *aristé*; G. *be-grannt*.) Having an awn, or long rigid spine; awned; bearded.

Aristiferous. (L. *arista*; *fero*, to bear. G. *grannentragend*.) Awned.

Aristion'is machinamen'tum. (L. *machinamentum*, a machine.) Name for a former apparatus for reducing dislocations, invented by Aristion.

Aristoloch'ia. Linn. (Ἀριστολοχία; from ἀριστος, the best; λοχία, childbirth; or

λόχια, the discharge after childbirth; because it was highly esteemed as promoting childbirth, or the lochial discharge. F. *aristoloche*; G. *Osterluzei*, *Schlangenwurz*.) The plant birthwort. A Genus of the Nat. Order *Aristolochiaceæ*. Calyx tubular, oblique, inflated at the base, hairy inside; anthers six, rarely five or seven, adnate to the style; capsule six-celled, many-seeded, inferior.

A. anguio'ida. Linn. (L. *anguis*, a snake; *cædo*, to kill.) Leaves cordate, acuminate; stipules cordate, solitary, amplexicauline; calyx erect, with a lanceolate tip. Hab. Mexico. The snake-killing birthwort, the juice of its root so stupefying serpents that they may be handled with impunity; also, esteemed a preventive of the venomous effects of the bite of serpents. It is said to be antiperiodic and emmenagogue.

A. antihyster'ica. The rhizomes imported from Rio Grande do Sul, run in a horizontal direction, are often six inches long and from one third to one half inch thick, knotted; the cortex corky, but thinner than the rather solid pale brown wood. It contains cerin, a hard and a soft resin, gum, starch, ethereal oils, and salts. An antispasmodic.

A. arbore'scens. Linn. (L. *arboreo*, to grow to a tree.) A species with cordate-lanceolate leaves. The juice of the stem and leaves is said to be poisonous, and the root to be emmenagogue.

A. barba'ta. (L. *barbatus*, bearded.) Hab. Venezuela. An aromatic and antispasmodic, like the genus.

A. biloba'ta. Linn. The bilobed aristolochia; used as the other species. It has been used as an emmenagogue and expectorant; a decoction of the leaves is used in itch.

A. bœ'tica. Linn. (L. *Bætiens*, belonging to the Bætia, a river of Spain, which gave its name to a district now forming Andalusia and a part of Granada.) A species said to be poisonous to snakes.

A. bractea'ta. Linn. (Mod. L. *bracteatus*, having bracts. Tam. *Addalinapalay*; Tel. *Gadidagudapa*; Hind. and Duk. *Kera-mar*.) Stem trailing; leaves alternate, petioled, kidney-shaped, curled at the margins, glaucous below; flowers axillary, solitary, peduncled, drooping. A nauseously bitter plant, given by native Indian practitioners as an anthelmintic, antispasmodic, antiperiodic, and oxytocic. The fresh leaves, bruised and mixed with castor oil, are considered a valuable remedy in obstinate psora.

A. cauda'ta. Jacq. (L. *cauda*, a tail.) Probably the same as *A. bilobata*.

A. ca'va. (L. *cavus*, hollow.) A synonym of *Fumaria bulbosa*.

A. clemati'tis. Linn. (F. *aristoloche des vignes*, *aristoloche clematite*; G. *Osterluzi*.) The common clematis-like or climbing birthwort. A native of the South of Europe. Leaves roundish-cordate, glaucous beneath; stem erect, simple, angled; flowers clustered, axillary; lip narrow, acute; root long, vertical, twisted, angular, annulated, and from one quarter to one half inch thick, strongly scented, and of acrid taste. The transverse section exhibits a thin cortex containing yellow oil cells; vascular bundles wedge-shaped, separated by white medullary rays; medulla slender. The parenchyma contains starch. The rhizome contains an ethereal oil, clematidin, and aristolochic acid. Formerly used as an emmenagogue and oxytocic.

ARISTOLOCHIA.

A. cordifolia, Mutis. (L. *cor*, the heart; *folium*, a leaf.) Used as the root, especially as an antidote to the bites of poisonous serpents.

A. cretica. (L. *Creticus*, Cretan.) A synonym of *A. clematitis*.

A. cymbifera. (L. *cymba*, a boat; *fero*, to bear.) Rhizome twisted, as long as six inches, one eighth to one half inch thick, branched, knotted; cortex thick, mealy, white internally; medullary rays white. Properties similar to *A. serpentaria*. It supplies the chief part of *Guaco bark*.

A. fabacea. (L. *fabaceus*, relating to a bean.) The *Fumaria bulbosa*.

A. foetida. (L. *foetidus*, stinking.) Hab. Mexico. Used in decoction as an application to foul ulcers.

A. fragrantissima, Ruiz. (L. superl. of *fragrans*, sweet-scented.) Called in Peru star reed; is highly esteemed as a remedy against dysenteries, malignant inflammatory fevers, colds, and rheumatic pains.

A. frutescens. (L. *frutex*, a shrub.) A synonym of *A. siphon*.

A. galeata. (L. *galeatus*, helmeted.) A species with properties similar to those of *A. serpentaria*.

A. geminiflora, Kunth. (L. *geminus*, twin-born; *flos*, a flower.) A species supplying some part of the *Guaco bark*.

A. grandiflora. (L. *grandis*, large; *flos*, a flower.) A West Indian species, whose flowers have a very fetid smell, and whose root is poisonous. Used in dropsy, dyspepsia, and paralysis.

A. hastata, Nuttall. (L. *hastatus*, armed with a spade.) Hab. North America. Leaves hastate, acute, somewhat cordate; lip of the corolla ovate. A doubtful species. Found along with the roots of the official *A. serpentaria*.

A. hirsuta, Muhlenberg. (L. *hirsutus*, hairy.) Stems jointed, flexuose, pubescent; leaves roundish-cordate, pubescent; peduncles solitary, hairy, with three or four leafy, hairy bracts, and one flower with a hairy corolla; root like, and with similar properties to, *A. serpentaria*.

A. indica. (L. *indicus*, Indian. Hind., Duk., and Beng. *Isharmul*; Tam. *Perumarindu*; Tel. *Ishcaraveru*; Mal. *Karalekam*.) Indian birthwort. An antidote to snake-bites. Given in white leprosy. Supposed by the Hindoos to possess emmenagogue and antarthritic virtues; it is very bitter.

A. labiosa. (L. *labiosus*, having large lips.) A species having similar properties to *A. serpentaria*.

A. longica. (L. *longus*, long. F. *aristolochae longue*.) The long-rooted birthwort. Hab. South Europe. A species indigenous to the South of Europe. The tubers are 2.5—4 cm. thick, 8—15 cm. long, more or less flattened, dense, and hard; externally pale brown, slightly wrinkled; internally yellowish white, with radially arranged, darker coloured, vascular bundles, separated by bright medullary rays. They contain much starch; taste at first disagreeably sweet, then persistently bitter and slightly acid. The root only is in use, having a slightly aromatic smell, and warm bitterish taste, with slight pungency; sometimes given in gout.

A. macrophylla, Lam. (Μακρός, long; φύλλον, a leaf.) A synonym of *A. siphon*.
A. macrura, Gomez. (Μακρός, long; οπί, a tail.) Rhizome spongy, one third to two

thirds of an inch thick, with thick, spongy, dark brown cortex, which is usually thicker than the dark brown soft wood. Properties as *A. serpentaria*.

A. maxima, De Cand. (L. *maximus*, very great.) A species which supplies some part of *Guaco bark*.

A. medicamentaria. (L. *medicamentum*, a drug.) Old term for medicines which promote the lochial discharge.

A. odoratissima, Linn. (L. *odoratus*, sweet smelling.) A species found among commercial *Guaco*.

A. officinalis, Nees. (L. *officina*, a shop.) A synonym of *A. serpentaria*.

A. parviflora. A plant having the properties of the species and reputed to be anguicidal.

A. pistolochia. (L. *pistolochia*, a plant facilitating parturition; probably from *πιστώω*, to make trustworthy; λόγια, childbirth. F. *aristolochie crinellee*, a. *petite*.) Hab. Europe. Roots consist of fine yellowish-brown fibres attached to a central stem; they have a pleasant aromatic smell and a bitter and rather acid taste. Used as a stimulant, tonic, diaphoretic, and diuretic.

A. polyrrhizos auricularibus foliis. (Πολύς, many; ῥίζα, a root; L. *auricula*, the ear; *folium*, a leaf.) The *A. hastata*.

A. pseudoserpentaria. (Ψευδής, false.) A name proposed by Guibourt for the plant producing the false serpentry of Virginia. It is by many believed to be *A. serpentaria*.

A. punctata, Lam. (L. *punctum*, a point.) The *A. cymbifera*.

A. reticulata, Nuttall. (L. *reticulatus*, net-like.) A native of Texas, Louisiana and Arkansas, from which is obtained Red River snake-root. Stems villous; petioles villous; leaves round or oblong, cordate, obtuse, reticulate, villous, especially on the very prominent veins; flowers small, purplish, densely pubescent; roots slender, fibrous, proceeding from a central caudex. Supplies some of the commercial serpentry root under the name of Red River or Texas serpentry.

A. ringens. (L. *ringor*, to open wide the mouth.) A species with similar properties to *A. serpentaria*.

A. rotunda. (L. *rotundus*, round. F. *aristolochie ronde*.) Hab. South Europe. A native of South Europe. The tubers of this species are spheroidal, often nodulated, 4—8 cm. thick, yellow internally. Bitter acid roots, which are stimulant and tonic; used in amenorrhoea and in gout.

A. sagittata, Muhl. (L. *sagittatus*, provided with arrows; here meaning arrow-shaped.) A synonym of *A. hastata*.

A. sempervirens, Linn. (L. *semper*, always; *virere*, to be green.) Hab. Arabia. A reputed anguicidal species with the other qualities of the genus.

A. serpentaria. (L. *serpens*, a serpent. F. *serpentinaire de virginie viperine*; G. *Schlangen-osterluzzi*.) Hab. United States. A perennial herb, about a foot high, with simple or slightly branched flexuose stems; leaves varying much in shape; flowers small, solitary, dull purple. The root or radix serpentariae of commerce includes the rhizome, and is knotted, contorted, scarcely one inch in length by one eighth of an inch in thickness, bearing on its upper side the short bases of the stems of previous years, and giving off from the under numerous slender matted branching

ARISTOLOCHIACEÆ—ARLANC.

roots 2—4 inches long. The drug has a dull brown hue, an aromatic odour, and a bitterish aromatic taste. Virginian snake root contains about half per cent. of essential oil, and the same amount of resin.

It is employed in the form of infusion or tincture, frequently in combination with cinchona bark, as a stimulating tonic and diaphoretic. It is said to arrest the progress of severe typhus, to promote the eruption of exanthematous diseases, to be useful in ague, and in some cases to act as an antispasmodic and anodyne. It checks vomiting, especially in bilious cases.

A. si'pho, L'Herit. Hab. North America. A decoction is used in foul ulcers.

A. solida. A synonym of *Corydalis solida*.

A. ten'uis. (L. *tenuis*, slender.) The *A. clematidis*.

A. tomento'sa, Sims. (L. *tomentum*, a stuffing for cushions.) Hab. United States. A climbing species, with a thick creeping root. Properties as the official serpentine root.

A. trifida. (L. *trifidus*, three-cleft.) A synonym of *A. trilobata*.

A. triloba'ta. (F. *aristoloche trilobée*.) The three-lobed birthwort, every part of which is diuretic.

A. turbacensis. (Turbaco, in Mexico, where it has been found.) Used as an antidote to snake bites.

A. unda'ta. (L. *undatus*, in the form of waves.) A synonym of *A. sempervirens*.

A. vulga'ris. (L. *vulgaris*, common.) The *A. clematidis*.

A. vulga'ris rotun'da. (L. *vulgaris*, common; *rotundus*, round.) A synonym of *Fumaria bulbosa*.

Aristolochia'ceæ. (Same etymon. G. *Osterluzeigerwüchse*.) A Nat. Order of dicotyledonous plants almost intermediate between Exogens and Endogens. They are epigynous with monochlamydeous flowers; stamens 6—12, rarely 18—36, in one or two whorls; anthers extrorse; receptacle concave; 3—6 celled inferior ovaries; indefinite ovules; embryo small, lying in a large quantity of albumen; leaves alternate, simple; flowers usually axillary. The prevailing quality of the Order is that of an aromatic stimulant.

Aristolochia'ceous. (Same etymon.) Having characters similar to the *Aristolochiaceæ*.

Aristolochi'æ ra'dix. (*Aristolochia*; L. *radix*, a root.) Belg. Ph. The root of the *Aristolochia rotunda*.

Aristolochi'ic. (Same etymon as *Aristolochia*. F. *aristolochique*.) Applied to remedies for the lochia.

Also, pertaining to the *Aristolochia*.

A. acid. A volatile acid obtained from the roots of *A. clematidis* and other species of *Aristolochia*.

Aristolochi'e'æ. Same as *Aristolochiaceæ*.

Aristolochi'in. An amorphous, bitter principle contained in Virginian snake root, which is precipitated by neutral acetate of lead and by tannic acid.

Ariston. (Ἀριστον, a morning meal.) Old term, often used by Hippocrates, de *Vet. Med.*, for dinner, or a repast or refreshment at noon.

A. mag'num. (L. *magnus*, great.) Term used by the ancients for certain compound medicines against phthisis, pain of the belly, and

mixed fevers; they contained sulphur, opium, euphorbium, aromatics, stimulants, &c., according to Avicenna, v, *summ.* i, tr. 1.

A. par'vum. (L. *parvus*, small.) Same as *A. magnum*.

Aristophane'i'on. An emollient plaster used by the Greeks, composed of pitch, apocyma, wax, opoponax, and vinegar. It was invented by Aristophanes. (Gorræus.)

Aristophan'eum. Same as *Aristophaneion*.

Aristote'lia. A Genus of the Nat. Order *Tiliaceæ*.

A. glandulo'sa. (L. *glandulosus*, full of kernels or glands.) A synonym of *A. maqui*.

A. ma'qui, L'Her. Hab. Chili. Fruit edible; from it a fermented drink is made, which is given in malignant fevers.

A. racemo'sa. (L. *racemosus*, full of clusters.) Mako-mako. Hab. New Zealand. Fruit edible.

Aristotle. Born at Stagira, in Macedonia, B.C. 384; died at Chalcis, in Eubœa, B.C. 322. His works embrace metaphysics, philosophy, and natural science. He divided animals—*Zoa*, into sanguineous—*ἑναιμα*, and asanguineous—*ἀναιμα*; the former into quadrupeds—*τετράποδα*; birds—*ὄρνιθες*; and fishes—*ἰχθύες*. Quadrupeds were further subdivided into viviparous—*ῥωτόκα*, mammals; and oviparous—*ὠτόκα*, reptiles. The asanguineous were divided into those with soft parts outside—*μαλᾶκια*, mollusca; and those with soft parts in the inside—*μαλακόστρακα*, crustacea; *ὀστρακόδερμα*, testacea; and *ἔντομα*, insects.

A.'s lan'tern. A term for the dentary apparatus of Echinus. It consists of five long, calcareous, rod-like teeth, which perforate a similar number of wedge-shaped, hollow, calcareous pieces, united by strong transverse muscular fibres.

Arist'ous. (L. *arista*, an awn. G. *grannenreich*.) Having awns.

Arist'rios. An old name for the astragalus, or ankle-bone. (Hooper.)

Arist'ulate. (Dim. of *arista*, the beard of corn. F. *aristulé*; G. *kleingrannig*.) Having a very small arista.

Aristum. Same as *Ariston*.

Arithmomant'ia. (Ἀριθμός, number; *μαντεία*, divination.) Divination by numbers.

Ar'ittie. One of the Telugu names of the *Musa paradisiaca*.

Ar'ka. The vernacular name of the *Calotropis gigantea*.

Arkan'sas, min'eral wa'ters of. Five miles from the Washita or Ouahita river, and about twenty miles north of the Louisiana railway. Temp. from 33·8°—65·5° C. (93°—150° F.) Employed in rheumatism and cutaneous affections. There are more than fifty springs. (Dunglison.)

Arkel'on. (Ἀρκελον.) The burdock, *Arctium lappa*.

Ark'mutt. The Bombay name of the *Phaseolus vulgaris*.

Ark'onas. The Youanee name of the *Juniperus communis*.

Aria'da. Arabic for calcined realgar, much praised by Paracelsus for malignant ulcers.

Aria'dar. Same as *Arlada*.

Arlano. France; Department Puy-de-dôme. Mild ferruginous waters containing a small quantity of sodium carbonate.

ARLES-SUR-BAINS—ARMIGÈNE.

Arles-sur-Bains. See *Amelie-les-Bains*.

A.-sur-Tech. Same as *Amelie-les-Bains*. **Arm.** (Sax. *arm*, *earn*; G. *Arm*; L. *armis*; ἀρμός, a joint; from ἄρω, radical form of ἀρπίσκειν, to join.) That portion of the upper extremity from the shoulder to the wrist, consisting of the os humeri or os brachii, the radius, and ulna, their coverings, nerves, and vessels; divided by the elbow-joint into the upper arm and forearm.

A., aponeurosis of. See *Aponeurosis of arm*.

A. of the lever. That part of the bar forming the lever which stretches on each side of the fulcrum to the extremity. On the relative length of each arm of the lever depends the value of the power; in other words, the power is to the weight in the inverse ratio of the arms.

A. presentation. See *Presentation of arm*.

Arma. An Italian physician of the sixteenth century. He wrote on dropsy, pleurisy, and diseases of the kidney.

Arma. (L. *armus*, armour.) Properly signifying bucklers or shields, but also offensive or defensive weapons.

One of the seven Linnean species of fulora of plants.

Also, the penis.

A. penis. (L. *penis*.) The penis.

Armadillo. (G. *Ringelassel*.) A Genus of the Family *Oniscidae*, Tribe *Euisopoda*, Suborder *Isopoda*. Body convex; capable of rolling up into a ball.

Also, the *Dasytus*, an edentate mammal, which is used as food.

A. officinalis. Pill-millepede, brought chiefly from Italy, is sometimes prescribed on the Continent as a diuretic, lithontriptic, an antiscrofulous remedy, and in jaundice. It is one of several species of millepedes whose virtues rest on credulity; they are sold in France under the name of *Cloportes préparés*.

A. vulgaris. (L. *vulgaris*, common.) The *A. officinalis*.

Armajolo. Italy. A sulphur spring containing sodium chloride 6 grs., calcium carbonate 10, magnesium carbonate 3-5, and a little iron oxide, in 25 ounces. Used in kidney and bladder diseases, and nervous affections.

Armaia. The wild rue. (Quincy.)

Arma'gol. (Arab.) An old name for coral. (Quincy.)

Armamentarium. (L. *armamentarium*, an arsenal. G. *Waffenvorrath*.) A stock or store of weapons, or means, as medicines and instruments.

A. chirurgicum. (Χειρουργικός, belonging to surgery.) A collection of surgical instruments.

A. portabile. (L. *portabilis*, that which can be carried.) A case of surgical instruments.

Armarium. Same as *Armamentarium*.

A. unguentum. (L. *unguentum*, an ointment.) Term for an ancient ointment which was fancied to cure wounds, if only the weapon by which they were inflicted were smeared with it; it was made from the *uncta* of the human skull, human fat, blood, mummy, linseed oil, turpentine, and Armenian bole. The Emperor Maximilian, to whom Paracelsus presented the prescription, regarded it as a great treasure.

Armatæ. (F. *armé*; G. *bewaffnet*.)

Having arms; armed. Applied, in Botany, by Debach to a Tribe of *Ammonæa* having many rows of spines.

Also, applied to fishes having the body covered with a strong cuirass.

Armatory unguent. See *Armarium unguentum*.

Armatura. (L. *armatura*, equipment.) Armour. An old term for the amnion. (Quincy.)

Armature. (Same etymon.) A term applied to bristles, prickles, and such like covering, to a plant or animal, or organ of one.

Also, the piece of soft iron, also called keeper, which is placed in contact with the poles of a magnet to prevent the loss of magnetism which would otherwise take place. An armature acts by becoming a temporary magnet, having opposite polarity to the magnet.

Armé. (Αρμή; from ἄρω; radical form of ἀρπίσκειν, to adapt, to join.) A junction of the lips of a wound; also, the joining of the sutures of the head.

Arméd bougie. See *Bougie, armed*.

Armeniacæ. (*Armenia*, from which it was brought.) A Genus of the Suborder *Drupacæ*, Nat. Order *Rosacæ*.

A. brigantia. A native of Dauphine; cultivated near Briançon (Brigantia). The seeds of this tree yield on expression a fixed oil commonly called huile de Marmotte, which is used instead of olive or almond oil.

A. epirotica. (Ἠπειρωτικός, of Epirus.) The apricot, *Prunus armeniaca*.

A. malum. (L. *malum*, an apple.) The apricot, *Prunus armeniaca*.

A. vulgaris. (L. *vulgaris*, common.) The apricot, *Prunus armeniaca*.

Armenian bole. Name of a pale red-coloured earth, used for the removal of aphthæ from the mouths of children, and as a component of tooth-powders; the *Bolus Armenia*.

A. stone. See *Armenius lapis*.

Armenites, Armenius lapis. Malachite.

Armenius la'pis. (L. *lapis*, a stone.) The Armenian stone, a variety of the blue carbonate of copper, malachite, principally brought from Armenia. It was formerly esteemed as a dispeller of melancholy, and cordial; it was also given in epilepsy.

Armentum album. Carbonate of lead. (Anthon.)

Armeria. (From *Armorica*, the country from whence it was brought; or from Wm. Armerius, who first described it.) The sweet-william.

Armeria. Willd. (Same etymon. G. *Strandnelke*.) A Genus of the Nat. Order *Plumbaginacæ*, with a naked membranous calyx and distinct feathery styles.

A. maritima. (L. *maritimus*, belonging to the sea.) A synonym of *A. vulgaris*.

A. vulgaris. Willd. (L. *vulgaris*, common.) Thrift, sea-pink. Pubescent; leaves linear; scapes dwarf, villous. Flowers used as a diuretic, leaves as a tonic and astringent.

Armerius. A synonym of *Armeria*.

Armicipita. (L. *arma*, armour; *caput*, the head.) Applied by Latreille to a Tribe of *Clupeides*, having the head defended by osseous pieces or calcareous scales.

Armigènes. (L. *arma*; *gena*, the cheek. F. *armigène*.) Applied by Ficinus and Carus to a Tribe, by Latreille and Eichwald to a Family, of fishes, having the cheeks shielded.

ARMIGERUS—ARNICA.

Armig'erus. (L. *arma*; *gero*, to bear. F. *armigère*; G. *armtragedn*.) Applied to *Purpura armigera* with long tubercles; to *Aquila armigera* having strong claws.

Armilla. (L. *armilla*, a bracelet; from *armus*, the arm; or from *arma*, armour. G. *Armband*.) A bracelet worn on the arm or wrist.

A. membran'osa ma'nus. (L. *membranaceus*, of skin; *manus*, the hand.) Applied by P. Barbette, *Chirurg.* v, 1, to the annular ligament of the carpus.

Armilla'ris. (L. *armilla*. F. *armillaire*; G. *armbandig*.) Applied to an artificial sphere composed of circles that represent the orbs of celestial bodies, of which the solar system is composed.

Applied to *Jacquinia armillaris*, its branches surrounded by verticillated leaves, resembling rings or bracelets.

Armillate. (L. *armilla*. F. *armillé*; G. *armbandig*.) Like a bracelet, or having bracelets.

Armipes. (L. *arma*, armour; *pes*, a foot. F. *armipède*; G. *waffenfüssig*.) Having spinous feet. In *Musca armipes* each anterior thigh of the male bears a spine.

Armoise. (Fr.) The *Artemisia vulgaris*.

Armonia'cum sal. Same as *Ammoniacum sal*.

Armoracia. (Pliny, xix, 5, says that in the Pontic language it is called *Armon*, or from *Armorica*, Brittany, the country from which it was brought. F. *Rai fort*, *cranson*, *cochlearia de Bretagne*, *montarde des moines*, *des capucins*, or *des Allemands*, *radis de cheval*; I. *rafano rusticano*, or *seltaggio*, *ramol accio*; S. *rabano Marvico*; G. *Meerrettig*; Dut. *meeradys*; Dan. *peberrod*; Port. *rabao de cavalleo*; Ar. *fidgel*; Ch. *lo-pé-tsé*; Swed. *pepparrot*; Jap. *daikou*; Pol. *chrzan*; Russ. *chren*; Turk. *jabani turup*.) The horseradish; the pharmacopœical name (L. Ph., U.S. Ph., A. Ph.) for the root of the *Cochlearia armoracia*.

A. rivinl. The *Cochlearia armoracia*.

A. rustica'na. (L. *rusticanus*, pertaining to the country.) The horseradish, *Cochlearia armoracia*.

A. sati'va. (L. *sativus*, that which is planted.) The cultivated horseradish, *Cochlearia armoracia*.

Armoraciae ra'dix. B. Ph., U.S. Ph. Horseradish root; the fresh root of *Cochlearia armoracia*. A long, fusiform, fleshy root; very white internally, with a pungent taste and smell. Its active principle is a volatile oil, perhaps identical with that of mustard; it also contains a bitter resin, sugar, gum, starch, and salts. It is supposed that the volatile oil does not exist in the natural root, but that an albuminoid matter, myrosine, and potassium myronate, both present in the root, when brought into contact along with water, react on each other to form the oil, in the same way as the volatile oil of mustard is formed. It is used as a condiment, and in medicine as a gastric stimulant and a diuretic. It is given in anasarca, in chronic rheumatism and hoarseness.

Arm'pit. The pit of the arm under the shoulder; the axilla.

A. glands. A series of excretory glands, with large ducts, opening in the armpit or axilla of some animals, as the iguana.

Arm'us. (From Heb. *arom*, naked; or from

ἀρμός, a joint, or commissure, from *ἄρω*, to fit; for it is properly the joining of the arm with the shoulder, the ancients having called the shoulders and arms *Armos*.) A shoulder or arm.

A. sum'mus. (L. *summus*, uppermost.) The acromion process.

Armu'theus la'pis. Another term for the *Armenius lapis*, of which it is said to be a corruption, according to Aëtius, *Sermom.* ii, 47.

Army itch. A term which has been given to a skin eruption in soldiers, accompanied by great itching, and believed by some to be a special disease. Tilbury Fox was of opinion that badly treated itch, phtheiriasis, and pruritic rash, consequent on perverted innervation of the skin, make up the item, army itch.

Arn. The alder, *Alnus glutinosa*.

Arnabo. Old term for lead. (Quincy.)

Arnaldia. Old term for a malignant chronic disease, said to have been formerly prevalent in England; but neither as to the etymology, nor as to the special disease meant, is anything certain known, but it is said to have been attended by falling off of the hair, and has been supposed to be a milder form of syphilis.

Arnatto. The same as *Annotto*.

Arnaud. A noted physician, astrologer, and alchemist, who was born probably about 1250, and died in 1313. France, Spain, and Italy each claim him, and his name is spelt in many ways, as Arnaldus, Rainaldus, Reginaldus. He is often described as of Villa Nova or Nova Villa. He was a great Arabic, Greek, and Hebrew scholar, and entered freely into theological disputes. He has been credited, but probably erroneously, with the discovery of sulphuric, nitric, and hydrochloric acids. His works are very numerous, and include the 'Speculum Medicinæ,' a 'Commentary on Galen,' numerous writings on sanitary matters, and instructions, not only as to the treatment, but as to the prevention, of disease.

Arne'bia. A Genus of the Nat. Order *Boraginaceæ*.

A. peren'nis. (L. *perennis*, perpetual.)

A species used as *A. tinctoria*.

A. tinctor'ia. Forsk. (L. *tinctorius*, belonging to dyeing.) A species used in France as a substitute for *Anchusa tinctoria*.

A. tin'gens. De Cand. (L. *tingo*, to colour.) A species used as *A. tinctoria*.

Arnedil'lo. Spain; in Castille. A salt water, of temp. 53° C. (127.4° F.), containing sodium chloride 50 grs., sodium sulphate 14, and calcium sulphate 16, in 16 ounces. Used in liver and spleen diseases, rheumatism, and old paralysis.

Arnemann. A German physician born 1763 at Lüneburg; died 1807. He wrote on reparation of injuries, and venereal diseases, as well as general treatises on medicine, surgery, and obstetrics.

Arnica. (By some it is derived from *ἀρνός*, a lamb, from the resemblance of its leaf to the soft coat of a lamb; by others from *ἀρνήν*, male, or *ἀρνήν*, strong; and by some it is believed to be a corruption of *παραμυκή*, a plant supposed to be yarrow. G. *Wohlteilekraut*.) A Genus of the Nat. Order *Compositæ*. Pappus hairy; florets of the ray ♀, of the disc ♂; stigmas clavate; bracts forming a cylindrical involucre; receptacle naked; achænia wingless, striated.

A. angustifolia. (L. *angustus*, narrow; *folium*, a leaf.) A variety of *A. montana*, with

ARNICÆ FLORES—AROMADENDRON.

narrow, almost linear leaves, found in high Asiatic and American latitudes.

A. mollis. (*L. mollis*, soft.) A species having properties similar to *A. montana*.

A. montana. (*L. montanus*, belonging to a mountain. *F. arnique*, or *belone des montagnes*; *G. Wohlverlei*; *Dut. volkruid*.) A Genus of the Nat. Order *Compositæ*. Leopard's bane. A perennial herbaceous plant; root fibrous, brown without, whitish within; stem 12 to 16 inches in height, cylindrical, pubescent, supporting two or three flowers; leaves forming a rosette on the ground, small, sessile, oval, and entire; in addition there are two opposite to each other about the middle of the stem. The flowers are large, radiate, orange coloured. The involucre is pubescent. Hab. Europe and North America. The flowers, leaves, and roots are used in medicine. The taste is bitter and acrid. Small doses cause increased frequency of the pulse, heat of the skin, and secretion of urine; the muscles quiver. Large doses are followed by yawning, headache, frequent defecation, rapid respiration. Horses and cows exhibit great dullness for several hours; dogs vomit. Post-mortem examination showed that the vessels of the thoracic and abdominal viscera were congested. The only British preparation is the tincture of the root. It is used externally in bruises, and internally, in doses of ʒj to ʒij, as a stimulant in debilitated states of the system. Care is required in its external use, as it is liable to produce inflammation of the skin. The French, Americans, and Germans employ the powder and infusion or extract of the flowers—and the Germans the leaves also—as a nervine tonic and excitant in intermittent typhoid and typhus fevers, and pulmonary catarrh, as well as in infantile paralysis and vesical atony.

A. nudicaulis. (*L. nudus*, naked; *caulis*, a stem.) A species with properties similar to the *A. montana*.

A. opodeldoc. White soap 4 parts, rectified spirit 10, tincture of arnica 5, camphor one part. Dissolve by heat and strain. (Squire.)

A. planensis. A synonym of *A. montana*.

A. scorpioides. (*Σκορπιειδής*, scorpion-like.) The *Aronicum scorpioides*.

A. spuria. (*L. spurius*, false.) The *Inula dysenterica*.

A. sueden'sis. (*Suedensis*, Swedish.) The *Inula dysenterica*.

ARNICÆ FLORES. (*L. flos*, a flower. *F. fleurs d'arnique*; *G. Wohlverleiblüthen*.) The flowers of the *Arnica montana*. They are large, orange yellow, with a greenish calyx; florets of the ray 15–20, ligulate, hairy at the base, female; florets of the disc tubular, with a five-lobed margin. They have an aromatic smell, and a sharply aromatic, bitter taste. They contain an ethereal oil, resin, and *Arnicin*. When powdered they are used as a sternutatory. See *Arnica montana*.

A. folia. (*L. folium*, a leaf. *G. Wohlverleiblätter*.) The leaves of *Arnica montana*. Used in tincture. See *Arnica montana*.

A. radix. *B. Ph.*, *U.S. Ph.* (*L. radix*, a root. *G. Wohlverleihwurzel*.) The root of *Arnica montana*. It is a woody, brownish, cylindrical, contorted rhizome, 1–3 inches long, rough with the scars of the leaves, ending abruptly and sending out many fibres; it has a peppery taste and a peculiar odour. It contains gallic acid, gum,

albumen, yellow colouring matter, and a bitter principle—*Arnicin*, which see; also, *Arnica montana*.

Arnicin. (*F. arnicine*; *G. Arnicin*.) A solid, slightly bitter, brownish, resinous alkaline, but not acrid, substance, extracted from the flowers of *Arnica montana*. It has the odour of castor, and is slightly soluble in water, but much more so in alcohol and ether. Its formula is said to be $C_{35}H_{54}O_7$.

Another substance, which has received the same name, has been obtained from both flowers and root. It is amorphous, yellow, acrid to the taste, and has had assigned to it the formula $C_{20}H_{30}O_4$. It is believed to be a glucoside.

Arnoglossum. (*Ἀρνόγλωσσον*; from *ἄρνος*, a lamb; *γλῶσσα*, a tongue.) Ancient name for the Plantago, or plantain, from the likeness of its leaves to a lamb's tongue.

Arnold. A German anatomist of the present day; born 1826.

A.'s ganglion. A synonym of the *Otic ganglion*.

A.'s nerve. The auricular branch of the *vagus*.

Arnophyllum. A synonym of *Arnica*.

Arnott, J. An English physician of the nineteenth century.

A.'s bed. An arrangement by which water, covered by a waterproof substance, is retained in a wooden trough. It is used to prevent bed-sores from pressure.

A.'s dilator. An air-tight cylinder of oiled silk, lined by the gut of some animal, which, having been passed through a stricture, can be distended with air or water, and thus made to exert a dilating action.

A.'s method of local anæsthesia. A mode of producing anæsthesia of the skin and superficial structures by means of a freezing mixture of ice and salt applied in a bag.

Arnotto. The native name in Tropical America of the arilliform organ which covers the seeds of the *Bixa orellana*, and which is used to tint and prepare chocolate. It is regarded as the best remedy against the acrid poison found in the fresh roots of the Manioc. See, for further detail, *Annotto*.

A. tree. The *Bixa orellana*.

Arnstadt. Germany; in Schwarzburg. An iodine and bromine strong salt bath, lying in a hill-surrounded valley, nearly 1000 feet above sea-level. Sixteen ounces contain sodium chloride 1723 grs., calcium chloride 49·5, magnesium chloride 39, magnesium bromide 39, magnesium iodide 17. Used in scrofula and syphilis, in liver and uterine enlargements and fibroids.

Arnut. The earth nut, *Bunium bulbocastaneum*.

Arceira. The *Schinus arceira*.

Archo. Arabic for *Argentum vivum*, or quicksilver. (Ruland.)

Aroidæ. (*Ἄρον*, the arum; *ειδός*, likeness.) A synonym of *Aracea*.

Aroma. (*Ἀρωμα*, spice. *G. Gewürz*, *Wohlgeruch*.) Term for the fragrant principle of plants, and substances derived from them. An odour.

A. germanicum. Elecampane.

A. philosophorum. (*Φιλόσοφος*, a philosopher.) An old remedy consisting of chloride of iron and ammonia. Made by roasting hæmatite and sal ammoniac together.

Aromaden-dron. (*Ἀρωμα*, a spice;

AROMATIC—ARRENOTOKY.

δένδρον, a tree.) A Genus of the Nat. Order *Magnoliaceae*.

A. elegans. (*L. elegans*, elegant.) A species growing in Java. Used as an aromatic, febrifuge, and emmenagogue.

Aromatic. (*Ἀρωμα. G. gewürzhaft.*) Odoriferous; having an agreeable smell, as spices and such substances have. Applied to a Class of plants (*Aromaticæ*) in some natural arrangements.

A. acids. Acids derived from benzene and its homologues.

A. group. A term given to benzene and its homologues, together with the alcohols, acids, and bases derived from them. They are so called on account of the aromatic odour of many of them.

A. sugar. A substitute for the *Pulvis aromaticus*, prepared by subjecting eight ounces of the freshly prepared powder to percolation with strong alcohol, mixing the percolate with eight ounces of sugar, and evaporating at a low heat.

A. vinegar. Oils of cloves, lavender, rosemary, and calamus, dissolved in strong acetic acid. Used as a stimulating scent in threatened fainting.

A. waters. A term for such of the distilled waters of the Pharmacopœia as are prepared from seeds or other aromatic substances.

A. wine. See *Wine, aromatic*.

Aromatica nux. The nutmeg.

Aromatics. (Same etymon.) Medicinal substances which owe their properties to a stimulating essential oil. Such are canella, cinnamon, ginger, clove, vanilla, musk, and such like.

Aromaticum lignum. The *Canella alba*. (Quincy.)

A. rosatum. Rose-spice. An old aromatic powder containing roses.

Aromaticus cortex. The aromatic bark; a name for *Canella alba*.

Aromatites. (*Ἀρωμα*, spice.) Ancient term for a wine prepared with various spices; also, for a bituminous stone found in Arabia and Egypt.

Aromatopola. (*Ἀρωμα*, an odour; *πωλέω*, to sell.) A druggist; a vendor of drugs and spiceries.

Arum. (*Ἀρουν.*) The *Arum*.

Arum aou. The resin of the *Iceia heptophylla*.

Arona'na. The *Radix Waikouri*. (Anthon.)

Aronia. (*G. Felsenmispel.*) The Neapolitan medlar.

Aronicum. A Genus of the Nat. Order *Compositæ*.

A. scorpioides. (*Σκορπιοειδής*, scorpion-like. *G. Schwindelkraut.*) Creeping leopard's bane. Roots aromatic. Used for giddiness.

Aronis tuber. (*L. tuber*, a swelling.) The root of the *Arum*.

Aroo. The Persian name of the *Amygdala persica*.

Aroona-chitraca. The Sanskrit name of the *Plumbago rosea*.

Aroos. The Egyptian name of *Oryza sativa*.

Aroosukpus-purdah. The Fars name of the *Puneceria coagulans*.

Aroph. (*Aroma philosophorum.*) Alchemical term applied to the flowers prepared by sublimation of the *Lapis hæmatites* with sal am-

moniacum, in equal portions, to which great virtues were attributed in quartan ague, plica polonica, and hypochondriasis, according to Fr. Hoffmannus, *Clav. Schröd.* p. 179; also, to a mixture of saffron, with bread and wine, placed in a close vessel for some days in horse-dung, and then distilled, according to Helmontius, *de Lithiasi*, vii, 14; viii, 23; also, to a medicine for mitigating the action or operation of the kidneys, according to Paracelsus; also, a term for the Mandragora. (Ruland, Johnson, and Dornæus.)

A. Paracelsi. A term for *Ferrum ammoniatum*.

Arp. Switzerland; near Leuk, in the Rhone Valley. A sulphur spring. Used in skin diseases.

Arquat'us morbus. (*L. arguatus*, arched; *morbus*, a disease.) See *Arcuatus morbus*.

Arquebuse'de wa'ter. (*F. argu-busse*, an old form of gun.) Distilled water for application to bruises; originally to gunshot wounds. A name of *Aqua vulneraria*.

Arra chitta. An Indian leguminous plant, the juice of which is given by the natives in acute dysentery. (Waring.)

Arracacha. A Genus of the Nat. Order *Umbellifera*.

A. esculenta. (*L. esculentus*, eatable.) Cultivated in South America on account of its edible roots.

Ar'acan hemp. (*Aracan* or *Arakan*, a province of British Burmah, where it is grown.) A kind of fine jute, used for making surgical bandages and dressing.

Arrache. The *Atriplex*. (Quincy.)

Arrack. (*Arab. arak*, sweet.) The spirit distilled from palm wine, *Toddy*, the fermented juice drawn from the unexpanded flower spathes of various palms, especially *Borassus flabelliformis* and *Cocos nucifera*.

Also, applied by the Dutch to the spirit distilled from an infusion or wash of rice.

Arrag'onite. (*Arragon* in Spain, where it is found.) One of the dimorphic forms of crystallised calcium carbonate, the other being calc-spar. It is a right rhombic prism, and contains one to three per cent. of strontia.

Arraphon. See *Arrhaphon*.

Arrect. (*L. arrigo*, to set up. *G. aufgerichtet.*) Upright; directed upwards.

Arrectio. (*L. arrigo*, to set up.) Erection.

Arrectores pilo'rum. (*L. arrigo*, to erect; *pilus*, a hair. *G. Haarbalgmusk.*) Small slips of unstriated muscle inserted into the hair follicles, and causing the hairs to rise under the influence of cold and of certain mental emotions, producing the condition termed goose-skin or cutis anserina, and tending to squeeze out the secretion of the sebaceous glands. Each arrector is strap-shaped, and arises by several pointed processes from adjoining hairs, and from immediately beneath the epithelium of the sebaceous glands. It terminates by several similar processes above.

Arrenot'okous. (*Ἀρρουν*, a male; *τόκος*, birth; from *τίκτω*, to bring forth.) A term proposed by Leukart and v. Siebold to denote parthenogenetic females which produce male young only.

Arrenot'oky. (*Ἀρρουν*, a male; *τόκος*, birth.) That form of parthenogenesis in which the unimpregnated females produce only males,

ARREPTIO—ARROWROOT.

as is the case amongst the saw flies, as the *Nematus ventricosus*.

Arreptio. (L. *arripio*, to seize.) Insanity.

Arrest. (L. *ad*, to; *resto*, to stop behind, to withstand. F. *arrê*; I. *arresto*.) Detention, delay.

A. of development. That condition in which any organ fails to grow to its natural size and proportions, or to present the complexity possessed by the same organ in the same individual or in the same species. Thus in veronica amongst plants the young flower presents a pentamerous calyx, corolla, and androecium; but in the adult there are only four stamens, the fifth being small and imperfectly developed, existing only as a fleshy scale.

Arres'ta bovis. (L. *ad*; *resto*; *bos*, an ox. F. *arête boeuf*.) The herb rest-harrow, *Ononis spinosa*; so called because its roots impede the harrow, and the ox dragging it.

Arrested. (L. *ad*, to; *resto*, to stop.) Hindered, restrained.

A. cleavage. The imperfect division of a cartilaginous tract into segments in certain generalised forms, which segments appear distinct in higher or more specialised types. A good example is found in the shoulder girdle of the skate, osseous fish, and lizard, as compared with the bird and mammal; and the pelvis of birds and mammals generally, as compared with the shoulder girdle.

A. head. This word is applied in midwifery when the head of the child is hindered or delayed, but not impacted, in the pelvic cavity, a distinction which has been held to be of the greatest importance in reference to the propriety of having recourse to instrumental aid.

Arrhabon. See *Arrhaphon*.

Arrhaphon. (*Ἀρραφον*, without seam; from *ἀ*, priv.; *ῥάφω*, to sew.) Term applied by Melchior Sebisius, in *Exerc. Med.* p. 132, to a cranium deficient in sutures, which he assigned as a cause of incurable cephalalgia.

Arrhaphum. Same as *Arrhaphon*.

Arrhenoto'cia. (*Ἀρρηνοτομία*, male; *τόκος*, birth.) The faculty possessed by the queen bee, previous to copulation, of laying eggs, which develop into male bees only.

Arreumatic. Same as *Arheumatic*.

Arrhi'za. (A. neg.; *ῥίζα*, a root.) Plants without roots.

Arrhi'zæa. (Same etymon.) A synonym of *Cryptogæmia*.

Arrhizoblas'tes. (A. neg.; *ῥίζα*, a root; *βλαστός*, a sprout.) Term applied by Willdenow to plants the embryo of which he considered to be destitute of a radicle, as in the case of some parasitical dicotyledonous plants and some aquatic plants.

Arrhizoblas'tous. (Same etymon.) Possessing an embryo with no radicle.

Arrhi'zous. (A. neg.; *ῥίζα*, a root.) Term applied to plants without roots.

Arrhos'a. (*Ἀρρῳα*; from *ἀ*, neg.; *ῥοία*, a flux, or flowing. G. *Unflüssigkeit*) Old term, used by Hippocrates, *de Loc. in Hom.*, although it does not occur there in Linden's edition, but will be found in that of Foësius, p. 423, *segg. de Morb. Mul.*, for the retention or suppression of a natural discharge, as the menses.

Arrhos'tema. (*Ἀρρῳστία*, to be sickly.) Disease.

Arrhos'tia. (*Ἀρρῳστία*. G. *Schwachheit*.) Debility; infirmity; ill health.

Arrhyth'mous. See *Arrhythmous*.

Arriba. The *Geoffræa vermicifuga*.

Arroche. (F., from L. *ad*, near to; *ripa*, a bank; in Walloon, *araws*.) Term employed in the Capitulaires of Charlemagne to indicate plants growing on the borders of rivers.

Also, a term for the *Atriplex hortensis*.

Arrope. A brown syrupy liquid obtained by boiling down sherry, and used as a colouring ingredient in the manufacture of wine. (Dun-glison.)

Arrow, caustic. A pointed rod, composed of zinc chloride or other caustic mixed with flour, gum, or other material, inserted into tumours to effect their destruction.

A.-head. Common name for the plant *Sagittaria sagittifolia*.

A.-leaf. Same as *Arrow-head*.

A.-pot'son. A synonym of *Curare*.

A.-weed. The *Sagittaria sagittifolia*.

A.-wood. A name of some species of *Euonymus*, and of the *Viburnum dentatum*.

Arrowroot. (The word is said by some to be derived from the reputation of the tubers in the treatment of wounds from poisoned arrows; by others it is derived from *ara-ruta*, a native phrase, said to mean mealy root. G. *Pfeilwurzel*.) A kind of starch obtained from the *Maranta arundinacea*, and other tuberous-rooted plants. It is obtained by digging up the rhizome after the plant has attained complete maturity, which in Georgia is at the beginning of winter, cleansing, and then grinding or rasping them. The pulp is washed on fine sieves, and the starch which passes through the sieves allowed to settle. The rhizomes yield about a fifth of their weight of starch. Arrowroot is a brilliant white, tasteless powder, without smell, the particles more or less aggregated into lumps, which seldom exceed a pea in size. When pressed it emits a slight crackling sound. Like other forms of starch, it is composed of granules which, under the microscope, appear subspherical or broadly and irregularly egg-shaped. When seen in water they show a distinct stratification in the form of fine concentric rings around a small star-like hilum placed at the larger end. They begin to tumefy in water at 70° C. (158° F.) Their sp. gr. is 1.504 or 1.565 after being dried at 100° C. (212° F.) The size of the granules varies, but they are most commonly 0.0010 inch in length and 0.0008 in breadth. Arrowroot is prepared for food by mixing a little with cold water or milk, then adding boiling water or milk, and stirring vigorously; sugar and lemon juice, spice, or wine, or brandy, are added as taste or occasion may require. It is also made into puddings and biscuits. It is a popular remedy for diarrhoea. See *A., Bermuda*.

A.-African. The produce of the *Maranta arundinacea*.

A.-Antilles. The same as *A., Bermuda*.

A.-s'rum. Also called Portland arrowroot; the produce of the *Arum maculatum*. Granules small, angular, and faceted, not unlike those of maize.

A.-Bermu'da. The produce of *Maranta arundinacea*. It is the kind most highly esteemed in commerce. The granule is uneven in outline, with well-marked concentric lines, and often with beak-like projections; the hilum is crucial, or three-limbed.

A.-Brazil'ian. The produce of *Manihot utilisima*.

A.-Brit'ish. The same as *A., potato*.

ARRHYTHMIA—ARSENATE.

A., Calcutta. The same as *A., East Indian*.

A., canna. Tous les mois. The produce of unascertained species of *Canna*. The granules are large, ovoid, with an even outline, and strongly marked concentric rings reaching less than half round; hilum distinct.

A., common. A synonym of *Potato starch*.

A., curcuma. East Indian arrowroot, obtained from *Curcuma angustifolia*, *C. leucorrhiza*, and other species. The granules are large and oblong, with an even outline, and prominent concentric half rings; hilum indistinct at the smaller end.

A., East Indian. (Hind. *Tikor*; Mal. *Kooa-Koghei*; Tam. *Koamao*.) The product chiefly of *Curcuma angustifolia* and *C. leucorrhiza*, but also of the *Maranta arundinacea* and *M. indica*.

A., English. A synonym of *Potato starch*.

A., Florida. A variety obtained from the *Zamia integrifolia* and *Z. pumila*.

A., Jamaica. The produce of *Maranta arundinacea*.

A., maize. The product of *Zea mais*; also called *Corn flour*.

A., Malabar. The same as *A., East Indian*.

A., manihot. The product of *Manihot utilisima*; also called Brazilian arrowroot. The granules are well marked, very like those of Tahiti arrowroot, but smaller, and having a fissured hilum.

A., maranta. The starch of the *Maranta arundinacea*; usually called simply *Arrowroot*.

A., Natal. The product of *Maranta arundinacea*.

A., Otahiti. The same as *A., Tahiti*.

A., Portland. The product of the *Arum maculatum*.

A., potato. Starch obtained from the potato, *Solanum tuberosum*. The granules are large, pyriform, even in outline, with concentric rings reaching more than half round, and having a distinct hilum at the smaller end.

A., rice. The product of *Oriza sativa*. Known also as *Rice flour*.

A., Sierra Leone. The produce of *Maranta arundinacea*.

A., Tacca. The same as *A., Tahiti*.

A., Tahiti. The produce of *Tacca pinnatifida*, a plant growing in Madagascar. The granules are like those of sago, but smaller, with few and indistinct concentric rings and circular, sometimes stellately fissured, hilum.

A., Talcabua. A variety the produce of an *Alstroemeria*.

A., Tavouloa. The same as *Arrowroot, Tahiti*.

A., Travancore. Chiefly derived from *Curcuma angustifolia* and *C. rubescens*, but in part from *Maranta arundinacea*.

A., West Indian. The produce of *Maranta arundinacea*.

Arrhythmia. See *Arythmia*.

Ars. (L. *ars*, probably akin to *ἄρω*, the radical form of *ἀραιόσχω*, to join.) The practical application of skill or science.

A. cabalística. The cabalistic art. See *Kabbala*.

A. chymiatrica. (Χημία, chemistry;

τεχνία, medical treatment.) The art of curing disease by chemical means.

A. clysmatica nova. (Κλύσμος, a clyster; L. *novus*, new.) A term for the injection of medicinal or nutrient substances into the veins.

A. coquina'ria. (L. *coquo*, to cook.) The art of cooking.

A. cosmetica. (Κοσμητικός, skilled in decorating; from *κοσμία*, to adorn.) The art of preparing cosmetics; preparations supposed to beautify the skin.

A. culina'ria. (L. *culinarius*, pertaining to the kitchen.) The art of cooking.

A. empirica. (Εμπειρικός, experienced.) The art of medicine as founded on experience or experiment.

A. formulas medicinas concinnan'di. (L. *formula*, a rule; *medicinus*, medical; *concinnus*, to arrange appropriately.) The art of writing prescriptions.

A. hermetica. (Ερμής, Hermes or Mercury, the god, among other things, of magic and science.) A term for chemistry.

A. hydiatrica. (Υδρίας, of the water; *τεχνία*, medical treatment.) The treatment of disease by water according to the system called hydropathy.

A. infuso'ria. (L. *infusus*, part. of *infundo*, to pour into.) The art of introducing medicines into the body by injection into the veins.

A. Machao'nia. (Μαχάων, the son of Æsculapius, the earliest surgeon.) The art of medicine.

A. mago'rum. (L. *magus*, a learned man and magician.) The art of chemistry.

A. maiou'tica. (Μαιευτικός, skilled in midwifery.) The art of obstetrics.

A. medica. (L. *medicus*, healing.) The art of medicine.

A. obstetricia. (L. *obstetricus*, belonging to a midwife.) The art of midwifery.

A. sanan'di. (L. *sano*, to heal.) The art of healing; medicine.

A. separato'ria. (L. *separator*, he that separates; from *separo*, to disjoin.) The art of chemistry.

A. signa'ta. (L. *signatus*, shut up, guarded.) The cabalistic art. See *Kabbala*.

A. spagy'rica. (Σπάω, to draw out; *ἀγείρω*, to bring together.) A term for chemistry. See *Spagyria*.

A. sphyr'mica. (Σφυγμικός, relating to the pulse.) The art of recognising and appreciating the conditions of the pulse.

A. veterina'ria. (L. *veterinarius*, relating to beasts of burden.) The veterinary art; farriery.

A. zolatri'ca. (Ζῷον, an animal; *τεχνικός*, skilled in medicine.) The veterinary art.

Arsag. Ancient term for arsenic. (Quincy.)

Arsal'tos. A term for asphalt.

Arsa'neck. An old name for sublimed arsenic. See *Filum arsenicale*. (Quincy.)

Arsa'tum. A synonym of nymphomania.

Arsel'ia. A synonym of *Argemone*, probably in consequence of the acidity of its juice, which was used in cases of ophthalmia, *arsa* signifying fire in the ancient language of Italy.

Arsenate. A salt of arsenic acid. The arsenates are isomorphous with the corresponding phosphates; silver nitrate throws down a reddish-brown precipitate, and hydrogen sulphide gives a

ARSENDIMETHYL—ARSENIC.

yellow colour; arsenates, when heated before the blow-pipe on charcoal, give off a smell of garlic.

Arsendimethyl. A synonym of *Caodyl*.

Arsenias. An *Arsenate*, or *Arsenate*.

A. ammoniacus. The *Ammonia arsenias*.
A. bihydricus ka'licus. A synonym of *Potassium arsenite*.

A. ferrius. (L. *ferrum*, iron.) The *Ferri arsenias*.

A. ferro'sus. (L. *ferrum*, iron.) The *Ferri arsenias*.

A. hydricus bina'tricus. Sodium arsenite.

A. lixiv'ise. (L. *lixivia*, lye.) Potassium arsenite.

A. potas'sicus. A synonym of *Potassium arsenite*.

A. so'dae siccatus, Belg. Ph. (L. *siccus*, to dry.) Sodium arsenite.

A. so'dicus. The *Sodii arsenias*.

A. so'dicus a'qua solut'us. (L. *aqua*, water; *solutus*, dissolved.) The *Liquor sodii arsenitis*.

Arseniasia. (*Arsenic*. F. *arseniase*, *arsenicasse*; G. *Arsenikkrankheit*.) Term for disease the effect of arsenic. See *Arsenic*, poisoning by.

Arseniate. Term for a combination of arsenic acid with a base. Now usually called *Arsenate*.

A. of ammo'nia. See *Ammonia arsenias*.
A. of antimony. See *Antimony*, arseniate of.

A. of iron. See *Ferri arsenias*.

A. of pot'ash. Potassium arsenite.

A. of potas'se. Potassium arsenite.

A. of protoxide of potas'sium. Potassium arsenite. See also *Liquor arsenicalis*.

A. of quini'ne. See *Quinia arsenias*.

A. of so'da. See *Sodii arsenias*.

Arsenic. (Ἀρσενικόν, yellow orpiment; from ἄρσεν, or ἄρρη, masculine, vigorous; or ἄρρηκτος, masculine, in its power as a poison. F. *arsenic*; I. *arsenico*; G. *Arsenik*; Ar. *sarnick*; Turk. *sirnack*.) Symb. As; comb. prop. 74.9; vapour dens. 149.8; sp. gr. at 14° C. (57.2° F.) 5.727; sp. heat .083. A metal plentifully met with in nature, generally in union with sulphur, or with other metals, or with oxygen. Arsenic has a steel-grey lustrous colour; it is brittle, crystalline, and volatilises without fusion, with an odour of garlic, to a lemon-yellow vapour when no air is present; heated with air it oxidises to arsenious oxide; it obtains a blackish grey coating of oxide in moist air at an ordinary temperature, but does not tarnish in pure water. Itself and its compounds are poisonous. Arsenic is ranked by some amongst the pentad metals, by others amongst the triad group of non-metallic elements represented by nitrogen.

Also, the common name for arsenious acid.

For its medicinal properties, see *Arsenious acid*.

A. a'cid. (F. *acide arsenique*; G. *Arsensäure*.) $AsO(OH)_3$. Formed by warming arsenic trioxide in nitric acid; it is then a thick acid liquid of sp. gr. 2.0, which deposits, when cooled, transparent crystals having the formula $2AsO(OH)_3 + H_2O$; when heated to 100° C. (212° F.) these crystals melt and give off their water of crystallisation, leaving trihydric arsenate or orthoarsenic acid, H_3AsO_4 . If the liquid commercial arsenic acid be heated to 180° C. (356° F.), it

deposits crystals of dihydric arsenate or pyroarsenic acid, $H_4As_2O_7$; heated still further, to 200° C. (392° F.) and upwards, monohydric arsenate or metarsenic acid, $HAsO_3$, is left. It is reduced by the action either of a sulphite or of sulphurous acid to arsenious acid. It is used as an oxidising agent in the preparation of aniline colours. It is to this substance that the poisonous effects of magenta-dyed socks and gloves is due. Its salts are called arsenates. It is escharotic and poisonous.

A. anhydride. A synonym of *A. pentoxide*.

A. bloom. Arsenious acid, in native crystals, found in association with, and arising from, the oxidation of metallic arsenic.

A. bromide. See *A. tribromide*.

A. disulphide. (L. *arsenicum rubrum*; F. *arsenic rouge*, *arsenic sulfuri rouge*, *risigale rouge*, *rubine d'arsenic*, *orpiment rouge*, *sand-arague*; I. *solfuro rosso d'arsenico*; G. *rother Arsenik*, *rother geschwefelter Arsenik*, *Schwefelrubin*, *zweifach Schwefelarsen*, *unterarseniges Sulfid*.) As_2S_2 . Red arsenic. This sulphide occurs native as realgar. It may be formed by heating arsenical and common pyrites in such proportion that the mixture contains 15 per cent. of arsenic and 27 of sulphur. It is orange red, fusible, and volatile. It enters into the formation of white fire. It is a sulphur acid, and unites with other metallic sulphides to form sulphur salts, called hyposulpharsenites. It is used as a pigment and in tanning.

A. flowers of. Sublimed arsenious acid.

A. glass. Arsenic trioxide or arsenious acid in a vitreous mass, obtained by heating the crude arsenious acid in an iron vessel with a conical head.

A. iodide. See *Arsenici iodidum*.

A. oil of. Chloride of arsenic.

A. oxide of. A term for *Arsenious acid*.

A. oxide. A term for *A. pentoxide*.

A. pentasulphide. As_2S_5 . Obtained by fusing the trisulphide in the proper proportion with sulphur. It is a yellow, fusible, sublimable substance, and has similar properties to *A. trisulphide*.

A. pentoxide. As_2O_5 . Prepared by treating the trioxide with an oxidising agent in the presence of water. It is a white porous substance of sp. gr. 3.734, soluble in water, and deliquescent in moist air with formation of arsenic acid; when heated it melts and decomposes into arsenic trioxide and oxygen.

A. phosphide. AsP . A brownish-red powder, formed when dry arseniuretted hydrogen is passed into phosphorous trichloride.

A. poisoning by. The symptoms of poisoning with arsenious acid may commence immediately, or may be delayed to the fourth day, but are usually apparent in the course of from two to five hours. They are those of an intense irritant, as pain, vomiting, diarrhoea, dysuria, cramps, convulsions, and collapse, terminating fatally in about nine or ten hours, though death may be almost immediate or delayed for long periods. One or two grains may prove fatal. The treatment may consist of the administration of hot milk and water, with sulphate of zinc; milk and eggs; sugar and magnesia; hydrated peroxide of iron, prepared by adding ammonia to the tincture of the perchloride of iron, collecting and washing the precipitate; and lastly, nitrate of potash to stimulate the

ARSENICAL—ARSENICI.

kidneys. The post-mortem appearances are those of intense inflammation in the alimentary tract, with remarkable preservation of the parts affected.

Two grains have destroyed life; from two to three grains are looked on as a fatal dose; the average duration of life after taking the poison is twenty-four hours.

In poisoning by small and repeated doses there is often an eczematous eruption, great irritation of the conjunctiva and photophobia, exfoliation of the cuticle, and loss of the hair; local paralysis, with more or less anæsthesia, is not uncommon; salivation, jaundice, and dysuria have been noticed.

In cases of poisoning from the inhalation of dust charged with arsenic, as in certain trades, and where the walls of rooms have been covered with paper containing arsenic, there have been noticed conjunctival irritation, dryness and irritation of throat and nostrils, cough, loss of appetite, dysenteric relaxation of bowels, abdominal pains, emaciation, and great debility.

A., red. Realgar, or arsenic disulphide.

A., red sulphuret of. A term for realgar, or arsenic disulphide.

A. sesquioxide. Arsenious acid.

A., tersulphuret of. Arsenic trisulphide.

A. tribromide. AsBr_3 ; vapour density 57.8. Powdered arsenic is added to a solution of one part of bromine or carbon disulphide until the solution becomes colourless; as the carbon disulphide evaporates, colourless deliquescent crystals of arsenic tribromide are formed. A solution is prepared for medicinal purposes by boiling a drachm each of arsenious acid and potassium carbonate in half a pint of distilled water, adding water to make twelve ounces, and then two drachms of pure bromine; in time the solution is colourless. It has been given with success in epilepsy and other neurotic diseases, in doses of one to two drops in water once or twice a day.

A. trichloride. AsCl_3 ; vapour density 90.5. It may be obtained by passing dry chlorine over heated arsenic, or by heating 40 parts of arsenic trioxide with 100 parts of water to 100°C . (212°F .), adding fused chloride of sodium, and distilling over the trichloride. It is a colourless oily liquid, of sp. gr. 2.205 at 0°C . (32°F .), giving off white fumes. It is very poisonous, and has been used as a caustic in cancer and venereal warts.

A. triiodide. AsI_3 . See *Arsenici iodidum*.

A. trioxide. As_2O_3 ; vapour density 197.7. The substance usually known as *Arsenious acid*.

A. trisulphide. (*L. aurum pigmentum, arsenicum persulfuratum*; *F. deutosulfure d'arsenic, orpiment, orpin, arsenic jaune naturel*; *I. solfuro giallo d'arsenico*; *G. gelber natürlicher geschwefelter Arsenic, Apermant, Orpement, Goldgelb, Königsgelb, Schwefelgelb, gelbes Schwefelarsen, Rauschgelb.*) As_2S_3 . Yellow arsenic; orpiment. This compound occurs native, and may be formed by mixture of the two substances in proper proportions and the application of heat, or by precipitating a solution of arsenious acid with hydrogen sulphide. It is golden yellow, crystalline, fusible, and volatile. It is a sulphur acid, and unites with other metallic sulphides to form sulphur salts, called sulpharsenites. Used as a dye, and as a depilatory.

A., white. A synonym of *Arsenious acid*.
A., white oxide of. A term for *Arsenious acid*.

A., yellow. *Arsenic trisulphide*.

A., yellow sulphuret of. *Arsenic trisulphide*.

Arsenical. (*Arsenicum, arsenic. G. arsenikalisch.*) Of, or belonging to, arsenious acid or arsenic.

A. caustic. Name for a kind of caustic formerly used in the treatment of cancer. It was composed of one part of arsenious acid to two of levigated sulphuret of antimony, melted together in a crucible.

A. cigarettes. A sheet of bibulous paper is soaked in a solution of twenty grains of arsenite of potassium in half an ounce of distilled water, dried, divided into twenty parts, and each rolled into the shape of a cigarette. Five or six puffs from the lighted cigarette are slowly inhaled once a day. Recommended in asthma, aphonia, and bronchial dilatation.

A. green. A pigment composed of copper arsenide, or of copper and arsenic acetate.

A. oedema. (*Oίδημα*; from *oídō*, to swell.) Swelling of the eyelids and face from arsenical poisoning. It is quickly produced by the inhalation of arseniuretted hydrogen gas.

A. paste. Cinnabar 70 parts, dragon's blood 22, arsenious acid 8; mixed into a paste with saliva and applied to cancerous sores for their destruction.

Arsenious acid 2 parts, sulphate of morphia 1, creasote sufficient to make a stiff mass; a piece of the size of a pin's head, spread on cotton wool, is placed in a carious tooth to destroy its sensibility before stopping.

A. pyrites. (*Πυρίτης*, a mineral which strikes fire.) Iron pyrites containing arsenic.

A. rash. The prolonged administration of arsenic may produce a papular eruption of the face, neck, and hands, from hyperæmia of the follicles, and also an erythematous condition of the face, with conjunctival irritation; it is also said to produce pityriasis rubra and herpes zoster. When locally applied, as in socks or gloves coloured with an anilin dye, it produces severe eczema, and in those who work in Scheele's green and such colours, obstinate ulceration of skin.

A. salt. Arsenite of potassium, or of sodium.

A. salt, Mac'quers. Potassium arsenite.

A. solution. A term for the *Liquor arsenicalis*.

Arsenicalis liquor. The arsenical solution, or arsenical liquor. A preparation which accords with the formula of Dr. Fowler of Stafford, who first introduced it, in imitation of a celebrated popular remedy for intermittent fever, called the tasteless ague drop. See *Liquor arsenicalis*.

Arsenicate. (*Arsenic.*) To impregnate with arsenic.

Arsenici album oxidum venale. (*L. albus, white; venalis, for sale.*) The name of commercial arsenious acid, or sublimed oxide of arsenic.

A. hydriodas. A name of *A. iodidum*.

A. iodidum. U.S. Ph. AsI_3 ; vapour density 227.3. Arsenic triiodide. Sixty grains of arsenic, in fine powder, are rubbed in a mortar with three hundred of iodine, then heated in a small flask till liquefaction occurs, poured on to a slab, broken into pieces when cold, and kept in

ARSENICIASIS—ARSENIOUS.

a well-stoppered bottle. It is an orange-red, crystalline solid, soluble in water, and volatilizable by heat. When obtained from a solution it occurs in bright red hexagonal tables. It has been used externally and internally in lepra, impetigo, and cancer. Dose, one eighth of a grain three times a day; externally, three grains to an ounce of lard.

A. iodure'tum. The same as *A. iodidum*.

A. oxy'dum al'bum sublima'tum. Sublimed arsenious acid.

A. teriodi'dum. See *A. iodidum*.

Arsenic'iasis. Same as *Arseniasis*.

Arsenic'idium. Same as *Arseniasis*.

Arsenicoph'agy. (*L. arsenicum*; *φαγνν*, to eat. *F. arsenicophagia*; *G. Arsenikesand.*) The eating of arsenic. This practice is common amongst the peasants of the mountains of Austria, Styria, and especially at Salzburg and in the Tyrol. By degrees they are capable of taking two or three grains for a dose. It is consumed partly for the purpose of becoming fat and fresh coloured, partly to facilitate the respiration in the ascent of mountains; it is said to be aphrodisiac. The sudden discontinuance of the use of arsenic is followed by symptoms similar to those of a slight degree of poisoning, as languor, malaise, anxiety, anorexia, vomiting of glairy matter in the morning, pyrosis, typhalism, constipation, respiratory troubles, hoarseness of voice. It is given to animals also for the purpose of fattening them and improving their condition.

Arsenic'ium. The pharmacopoeial name (*U.S.A.*) of arsenic. See *Arsenic*.

A. al'bum. (*L. albus*, white. *G. weisser Arsenik*.) The pharmacopoeial (*E.*) name of arsenious acid.

A. al'bum calcina'tum Bergman'ni. (*L. albus*, white; *calx*, lime.) A synonym of *Arsenious acid*.

A. al'bum pulvera'tum. (*L. albus*, white; *pulveratus*, part. of *pulvero*, to reduce to powder.) A synonym of *Arsenious acid*.

A. al'bum sublima'tum. (*L. albus*, white; *sublimo*, to lift up on high.) Arsenious acid purified by sublimation.

A. broma'tum. The same as *Arsenic bromide*.

A. citri'num. (*L. citrus*, the citron. *G. gelber Arsenik*.) A synonym of *Arsenic trisulphide*.

A. citri'num facti'tium. (*L. citrus*, the citron; *factitius*, made by art.) A synonym of *Arsenic trisulphide*.

A. citri'num nati'vum. (*L. citrus*, the citron; *nativus*, native.) A synonym of *Arsenic trisulphide*.

A. cum antimo'nio. A synonym of *Arsenical caustic*.

A. sa'vum. (*L. flavus*, golden yellow.) A synonym of *Arsenic trisulphide*.

A. Grex'il. A synonym of *Arsenious acid*.

A. gris'eum. (*Mod. L. griseus*, from *F. gris*, grey. *G. regulinisches Arsen*.) A synonym of metallic arsenic.

A. ioda'tum. The same as *Arsenici iodidum*.

A. ioda'tum liq'uidum. (*L. liquidus*, fluid.) A solution of iodide of arsenic.

A. lu'teum. (*L. luteus*, golden yellow.) A synonym of *Arsenic trisulphide*.

A. nati'vum poro'sum. (*L. nativus*,

natural; *porus*, a passage.) A synonym of metallic arsenic.

A. ni'grum. (*L. niger*, black.) A synonym of metallic arsenic.

A. oxyda'tum. A synonym of *Arsenious acid*.

A. oxyda'tum al'bum. (*L. albus*, white.) A synonym of *Arsenious acid*.

A. persulphura'tum. (*L. per*, intens.; *sulfuratus*, impregnated with sulphur.) A synonym of *Arsenic trisulphide*.

A. potass'icum. A term for potassium arsenite. See *Liquor arsenicalis*.

A. pulverisa'tum. (*L. pulverizo*, to reduce to dust.) A synonym of *Arsenious acid*.

A. rex. (*L. rex*, a king.) An old name given to arsenic when it was believed to be a semi-metal.

A. ru'brum. (*L. ruber*, red. *G. rother Arsenik*.) A synonym of *Arsenic disulphide*.

A. ru'brum cru'dum. (*L. ruber*, red; *crudus*, raw.) A synonym of *Arsenic disulphide*, or *Realgar*.

A. ru'brum facti'tium. (*L. ruber*, red; *factitius*, made by art.) A synonym of *Arsenic disulphide*.

A. ru'brum nati'vum. (*L. ruber*, red; *nativus*, native.) A synonym of *Realgar*, native arsenic disulphide.

A. sandaracha. A synonym of crude *Arsenic disulphide*.

A. sulphura'tum citri'num. (*L. sulfuratus*, impregnated with sulphur; *citrus*, the citron.) A synonym of *Arsenic trisulphide*.

A. sulphura'tum sa'vum. (*L. sulfuratus*, impregnated with sulphur; *flavus*, golden yellow.) A synonym of *Arsenic trisulphide*.

A. sulphura'tum ru'brum. (*L. sulfuratus*, impregnated with sulphur; *ruber*, red.) A synonym of *Arsenic disulphide*.

A. testa'ceum. (*L. testaceus*, consisting of tiles.) A synonym of *Metallic arsenic*.

A. veterum. (*L. vetus*, aged.) A synonym of *Arsenic trisulphide*.

Arsenide. A compound of arsenic with a metal.

Arsenikan'ton. A name of the *Mentha pulegium*.

Arseniophthi'sis. (*L. arsenicum*; *phthisis*. *F. arseniophthisis*; *G. Arsenicaldarre*.) Wasting, the result of poisoning by arsenic. See *Arsenic poisoning by*.

Arsenious. (*L. arsenicum*, arsenic. *F. arsenieux*.) Of, or belonging to, arsenic; having, or full of, arsenic.

A. ac'id. (*F. acide arsenieux*; *G. arsenige Säure*.) The *Acidum arsenicum* of the London Pharmacopoeia; the *Arsenicum album* (*E. Ph.*), or sesquioxide of arsenic; the *Arsenici album oxidum venale* (*D. Ph.*), or sublimed oxide of arsenic; rats'-bane; arsenic.

It is prepared on a large scale by roasting arsenical pyrites and other arsenic-holding ores. The vapours are condensed in the form of crude flowers of arsenic, and are purified by further sublimation. It is a white crystalline powder, or, when condensed in an iron vessel, a vitreous block; it has no smell, a sweetish metallic taste; of sp. gr. 3.738; slightly soluble in water, from which it crystallises in regular octahedra. It sublimes at 193° C. (380° F.), and condenses in brilliant octahedra, and occasionally in prismatic needles. It is an active escharotic, and as such

ARSENIS—ARTEDIAN BONES.

has been used for the destruction of cancers, and of the nerves of carious teeth. When taken internally it is rapidly absorbed, and is eliminated by the kidneys and liver, and, in some measure also, by the alimentary canal, the skin, and some of the secretions, as the tears. The system may become habituated to its use in large doses (see *Arsenicophagy*.) In large doses it is a powerful irritant poison (see *Arsenic, poisoning by*). Its chief use is in chronic skin diseases; it is a valuable antiperiodic in chronic cases of ague, and the results of malarial poisoning; it has been given with advantage in chorea, asthma, and gastrodynia, and has been recommended in whooping-cough, rheumatoid arthritis, and as an addition to chalybeates. Dose, one twentieth of a grain to one eighth, in solution or pill, immediately after a meal.

The tests for arsenious acid are the garlic odour it emits when volatilised; the octahedral form of its crystals and their volatility; the appearance of a dark volatilisable metallic ring, when it is heated with a reducing substance (charcoal and sodium carbonate); the occurrence of a yellow film when a little ammonium sulphide is added to the suspected powder and evaporated to dryness. See Hume's, Marsh's, Reinsch's, and Scheele's tests.

The substance above, and in all medical books, thus described, is arsenic trioxide, As_2O_3 ; arsenious acid, $As(OH)_3$, not having been prepared in a pure state, but existing in the aqueous solution of arsenic trioxide; its salts are called arsenites.

A. anhydride. A synonym of *Arsenic trioxide*, the substance usually known as *Arsenious acid*.

A. oxide. A term for *Arsenic trioxide*.

Arsenitis. (Mod. Lat.) Arsenite.

A. potas'sae. Potassium arsenite.

A. potas'sae aquosus. (L. *aquosus*, watery.) The *Liquor arsenicalis*.

A. potas'sae liquidus. (L. *liquidus*, fluid.) The *Liquor arsenicalis*.

A. potas'sicus aqua solutus. (L. *aqua*, water; *solutus*, dissolved.) The *Liquor arsenicalis*.

Arsenite. Term for a combination of arsenious acid with a base.

A. of copper. See *Copper arsenite*.

A. of pot'ash. See *Potassium arsenite*.

A. of quinine. Prepared by boiling arsenious acid 64 grains, and potassium carbonate 32 grains, in four fluid ounces of water until dissolved, filling up the deficiency by evaporation; five drachms of this solution is mixed with a solution in boiling water of two scruples of sulphate of quinine. The precipitate is washed on a filter and dried. Recommended in chronic skin diseases, in doses of a third of a grain two or three times a day.

A. of strychnia. $C_{12}H_{22}N_2O_4AsO_3$. Prepared by adding a solution of sulphate of strychnia to one of potassium arsenite. It is in white cubic crystals, soluble in water and alcohol. It has been used in intermittent fevers.

Arsen'uret. Applied to a combination of arsenic with a metal; now called *Arsenide*.

Arsen'uret'ted by hydrogen. AsH_3 . A very poisonous gaseous compound. It is inflammable, and may easily be detected in other gases by Marsh's test. See *Hydrogen arsenide*.

Arsine. AsH_3 . Hydrogen arsenide, usually called arseniuretted hydrogen.

Ar'smart. A common name for the *Polygonum hydropiper*.

Artabotrys. (*Aptos*, a loaf of bread; *βότρυς*, a bunch of grapes.) A Genus of the Nat. Order *Anonaceae*. Shrubs often climbing, inhabiting the warm regions of Africa and Asia. Leaves alternate, generally smooth; flowers solitary or grouped in cymes, supported on peduncles, which are frequently bent, like a crozier, hermaphrodite, regular; sepals three; petals six, in two rows; stamens 00, extrorse; carpels 00, each containing two or many anatropal ovules. Fruit a berry, with one or many seeds.

A. intermedia. (L. *intermedius*, that which is between.) This plant yields a volatile oil, employed in Japan as a perfume, under the name of Minjac-Kenangan.

A. odoratissima. (L. *odoratissimus*, very fragrant.) A shrub inhabiting the Eastern Archipelago. In Java its leaves are regarded as a valuable remedy in cholera. The flowers are exceedingly aromatic.

A. suaveolens. (L. *suaveolens*, sweet-smelling.) The aromatic leaves of this plant are employed to make an infusion which is considered to be efficacious in cholera.

Artaneck. A term for arsenious acid.

Artanita. The *Cyclamen hederifolium*.

Artanthe. Miguel. (*Aptos*, bread; or *ἀπτάω*, to fasten to; *ἄνθη*, a flower. G. *Maticopflanze*.) A Genus of the Nat. Order *Piperaceae*. Spikes solitary, opposite the leaves; flowers hermaphrodite; style absent; bracts peltate or cucullate.

A. adunc'a. Miguel. (L. *aduncus*, bent towards one.) Hab. Panama. A substitute for the true matico, *A. elongata*, from which it is known by the larger and more pointed leaves, which are also less rugous below, more fibrous, and less easy to pulverise. The bark is rufescent.

A. crocata. (L. *crocatius*, saffron-yellow.) Used in tropical America as pepper.

A. elongata. Miguel. (L. *elongo*, to lengthen.) Matico. Leaves almost sessile, alternate, acuminate, rugose above, pubescent and areolar beneath, by means of prominent veins. It supplies *Matico*.

A. eucalyptifolia. (*Eucalyptus* tree; L. *folium*, a leaf.) Hab. Brazil. Used in colic and flatulence.

A. lanceofo'lia. (L. *lancea*, a lance; *folium*, a leaf.) A synonym of *Piper lanceofo'lium*.

A. trichostach'ya. (Θρίξ, a hair; στάχυς, an ear of corn.) Used in tropical America as pepper.

Artan'thic ac'id. A crystallisable acid obtained from matico.

Artate. (L. *artatus*, part. of *arto*, to compress. G. *dichtgedrängt, zusammengedrückt, eng*.) Compressed, narrow.

Arte'di. Swedish botanist and ichthyologist; born 1705; died 1735. Studied the Umbelliferae, and first used the words involucreum and involucrellum.

Arte'dia. A Genus of the Nat. Order *Umbelliferae*.

A. squama'ta. Linn. (L. *squamatus*, scaly.) Leaves diuretic and stomachic; used cooked or raw.

Arted'ian bones. (*Artedi*, named from him.) Tendinous ossifications between the myotomes, as occurs in the herring.

ARTEIJO—ARTEMISIA.

Arteijo. Spain, Prov. of Corunna. Here are saline waters, containing sodium and magnesium chloride, and hydrogen sulphide gas; temp. 30° C. (86° F.) They are recommended in cutaneous diseases. Season, July—September.

Artelsheim. Germany. Mineral waters recommended in hysteria, gout, and palsy. (Dunlison.)

Artemid'ium. The Dittany of Crete, *Origanum dictamnus*.

Artemisia. (Ἀρτεμίσια, the goddess of the chase, the Roman Diana, perhaps because it was used in diseases of women. G. Beiffus.) A Genus of the Nat. Order Compositae. Pappus ♀; florets few, all tubular, of the disc ♂, of the ray in one row; bracts forming a roundish, imbricated head; receptacle naked or hairy; achænia obovate, with a small epigynous disc.

The plants of this genus are for the most part warm aromatic bitters, and have a tonic and sialogogue action; anthelmintic and emmenagogue properties are also ascribed to them. From the *A. absinthium* the liquor termed *Absinthe* is made. The soft lanuginous substance of the leaves of *A. chinensis* and *moza*, and their beaten tops, form an inflammable substance called *Moxa*, employed to produce eschars. Tarragon is used to flavour vinegar, and as a pickle.

A. abrotanum. (Ἀβρότανον, southern-wood. F. *aurone male, citronelle*; G. *Stabwurz, Eckerwurz*.) Southernwood. Leaves downy beneath, bipinnate, with very narrow segments; flower heads hoary; receptacle naked. Fragrant, strong smell, and acrid bitter taste. Used as a tonic and vermifuge, and on the Continent for making beer.

A. abrotanum. Linn. Same as *A. abrotanum*.

A. absinthium. Linn. (F. *absinthe grande, aluyne, armoise amere, herbe sainte*; I. *assenzio maggiore, a. volgare*; S. *ajejo*; G. *Wermuth, Beiffus*; Dutch *alsem*; Arab. *afsantin*.) Wormwood. Leaves hoary, 2—3 pinnatifid, with lanceolate obtuse segments; receptacle hairy; flowers yellow, of aromatic smell and bitter taste. It supplies, on distillation, a green volatile oil, the base of the liqueur absinthe. Wormwood has been used in dyspepsia, intestinal worms, and intermittent fevers.

A. a'fra. (L. *Afer*, an African.) Hab. South Africa. A species which has been used in dyspepsia and jaundice; and in decoction as a collyrium.

A. alba. (L. *albus*, white.) A synonym of the *A. santonica*.

A. argentea. A plant growing on the high plateaux of Algeria, and much employed by the natives, under the name of El Chikh, as a tonic, aperient, and vermifuge.

A. balsamifera. Willd. A synonym of *A. pontica*.

A. biennis. (L. *biennis*, lasting two years.) Hab. United States. Same properties as *A. absinthium*.

A. botrys. (Βότρυς, a cluster of grapes.) A synonym of *Chenopodium ambrosioides*.

A. campestris. (L. *campestris*, belonging to a level field. F. *aurone de champs*.) Used as an anthelmintic, an astringent, and a discutient.

A. camphorata. An anthelmintic similar to the *A. caerulea*.

A. canadensis. Canadian wormwood. Has anthelmintic and bitter properties.

A. caudata. (L. *cauda*, a tail.) Hab. United States. Has the properties of the genus.

A. chenopodium. (Χην, a goose; ποῦς, a foot.) A synonym of *Chenopodium botrys*.

A. chinensis. A species which has been said to yield the moxa of China.

A. cina. Berg. A plant growing in Turkestan, believed by Willkomm to be the mother-plant of *santonica*, or wormseed.

A. caerulea. (L. *caeruleus*, dark blue.) A Mediterranean plant, the flowering heads of which are the anthelmintic known as *Semen seriphi*, or Barbotine.

A. contra. (L. *contra*, against. F. *semen-cine, barbotine*; G. *Zittwersamen*.) Hab. Persia, Asia Minor. Probably the *A. sieberi*.

A. dracunculus. (L. *dracunculus*, a small serpent, tarragon. F. *estragon*; G. *Dragun, Estragon, Kaisersalat*.) Tarragon, a pot-herb, cultivated in large quantities at Grasse, in France. A fragrant oil is obtained from it by distillation. It is said to be emmenagogue, sudorific, and stomachic.

A. eriantha. Fen. (Επίον, wool; άνθος, a flower.) The *A. spicata*.

A. gallica. (F. *sanguieris, or sanguerite*.) A plant used as an anthelmintic.

A. glacialis. (L. *glacialis*, icy. F. *genipi vrai*.) Mountain wormwood. Stomachic.

A. glomerata. (L. *glomeratus*, rolled together.) The *A. sieberi*.

A. Gmelin's. Stechm. A species furnishing in part *Semen contra*.

A. grandiflora. Hoffm. (L. *grandis*, great; *flor*, a flower.) The *A. rupestris*.

A. inculta. Del. (L. *incultus*, uncultivated.) The *A. lercheana*.

A. indica. (Hind. *majdari mastaru*; Tam. *machipattiri*; Mal. *tiru-nitri-pacha*; Beng. *mastau*.) Indian southernwood. Said to be a powerful deobetrant and antispasmodic; used in nervous and spasmodic affections, and as a fomentation in phagedenic ulceration.

A. judaica. Linn. (L. *judaicus*, Jewish.) One of the species supplying *Semen contra*.

A. latifolia. (L. *latus*, broad; *folium*, a leaf.) The *A. chinensis*.

A. leptophylla. (Λεπτός, delicate; φύλλον, a leaf.) A synonym of *A. pontica*.

A. lercheana. One of the species entering into the composition of the *Semen contra*, or *Semen cina*.

A. maderaspatana. A synonym of *A. moza*; and also of *Grangea maderaspatana*.

A. maritima. (L. *maritimus*, belonging to the sea. F. *absinthe maritime*; I. *assenzio marino*; G. *Meerbeiffus*.) Wormseed; sea wormwood. A low shrubby aromatic plant, with small erect ovoid flower-heads, having oblong obtuse involucreal scales, the interior scales being scarious. The stem in its upper half is a fastigate thyrsoid panicle, crowded with flower-heads. Properties the same as *A. absinthium*.

A. maritima, var. stechmarina. Yields *santonica*. (Brown.)

A. mexicana. Hab. Mexico. Leaves tonic and anthelmintic.

A. monogyna. Waldst. (Μόνος, single; γυνή, a female.) A species forming part of the *Semen contra* of Russia.

A. moza. De Cand. Moxa weed. Hab. China. Leaves downy, bipinnatifid, with linear-lanceolate, obtuse segments; heads middle-sized,

ARTEMISIÆ—ARTERIA.

globose, in racemose panicles. The easily separable down of the leaves is used to form the variety of actual cautery called *Moxa*.

An oil, called Ngai oil, is distilled in China from the plant, which is gathered on the fifth day of the fifth month. It is used externally in rheumatic and neuralgic pains, and internally as a carminative, stomachic, astringent, and resolvent.

A. mutellina. (F. *genipi blanc*.) An Alpine plant, used in the manufacture of the bitter aromatic liqueur known as *Crème d'Absinthe*.

A. paniculata, Lam. (L. *panicula*, a tuft.) Used as a substitute for *A. abrotanum*.

A. pauciflora, Stechm. (L. *paucus*, few; *flos*, a flower.) One of the species supplying *Semen contra* or *Semen cinæ* of Russia.

A. pontica. (L. *Ponticus*, belonging to the Pontus or Black Sea. F. *absinthe petite*; I. *assenzio minore*; G. *Edelwurmtheifuss*.) The Roman wormwood. Bitter stomachic.

A. proceræ. (L. *procerus*, tall.) Used as *A. abrotanum*.

A. ramosa, Smith. (L. *ramosus*, branched.) A species supplying the chief part of the *Semen contra* of Barbary.

A. romanum. (L. *Romanus*, Roman.) The *A. ponticum*.

A. rubra. (L. *ruber*, red.) The *A. santonica*.

A. rupes tris. (L. *rupes*, a cliff.) Tonic and vermifuge.

A. santonica. The Tartarian southernwood, or wormseed plant. A source of *Semen contra*.

A. santonicum. The same as *A. santonica*.

A. Sieberi. A species producing the *Semen contra* or *Semen cinæ*.

A. sinensis. Same as *A. chinensis*.

A. spicata, Jacq. (L. *spica*, to point. F. *genipi noir*.) An Alpine species, used in the manufacture of the bitter aromatic liqueur named *Crème d'Absinthe*.

A. tenuifolia. (L. *tenuis*, slender; *folium*, a leaf.) The *A. pontica*.

A. Vahlia, na. The flower-heads of this species, which inhabits the north-east of Persia, furnish one of the kinds of wormseed called *Semen cinæ levanticum* or *Semen cinæ in grannis*.

A. vallesiaca. A tonic and stomachic.

A. vulgaris. (L. *vulgaris*, common. F. *armoise vulgaire*.) The mugwort. The flowering heads are said to be actively emmenagogue; and the root is used in epilepsy and chorea.

Artemisiæ. (F. *artémisiae*.) Applied by H. Cassini to a Group of *Anthemideæ chrysanthemæ*; by Lessing to a Subtribe of *Senecionides*, having the *Artemisia* for their type.

Artemisin. (F. *artémisine*; G. *artemisin*.) The bitter principle of *Artemisia*.

Artemonium. (Ἀρτεμώνιον.) Old name for a collyrium formerly in use, described by Galen, *de C.M. sec. Loc. iv*, 7.

Artereuryisma. (Ἀρτηρία, an artery; εὔρος, wide.) A synonym of *Aneurysm*.

Arteria. (Ἀρτηρία, the trachea; as if ἀρτηρία, from ἀρῆ, air or spirit; τήριω, to keep or preserve; the plural ἀρτηρίαι, arteriæ, the bronchial tubes, was the designation given only to those more hard canals or vessels which enter the lungs, which, being found empty after death, were supposed to be filled with vital spirit; but they were afterwards called by the name,

τράχηαι ἀρτηρίαι, arteriæ asperæ, from the cartilaginous structure of the larger branches, and the simple term, ἀρτηρία, arteria, was transferred, because they were found empty of blood after death, to pulsating blood-vessels, which alone are called arteries at this day; according to some, ἀρτηρία is derived from ἀρτάν, to suspend, as applied to the relation between the trachea and lungs; a somewhat improbable suggestion is that ἀρτηρία is, as if ἀρτηρία, from ἀλλομαι, to leap; because the heart's pulsation is felt throughout the arteries, causing them, as it were, to leap. F. *artère*; I. *arteria*; G. *Pulsader, Schlagader*.) Term for that class of blood-vessels by which the blood is conveyed from the heart towards the various organs and members of the body; an artery. See *Artery*.

A. abdominalis. (L. *abdomen*, the lower part of the belly.) The deep circumflex iliac artery.

A. abdominalis externa. (L. *externus*, outward.) The superficial epigastric artery.

A. abdominalis subcutanea. (L. *sub*, under; *cutis*, the skin.) The superficial epigastric artery.

A. acetabuli. (L. *acetabulum*, the socket of the hip-joint. G. *Hüftgelenkast*.) The external terminal branch of the obturator artery, which enters the hip-joint through the incisura acetabuli, and is distributed chiefly to the ligamentum teres.

A. acromialis. (Ἀκρώμιον, from ἀκρος, the summit; ὤμος, the shoulder.) See *Acromial artery*.

A. ad octem abdominis. (L. *ad*, to; *cutis*, skin; *abdomen*, the lower part of the belly.) The superficial epigastric artery.

A. alveolaris inferior. (L. *alveolus*, a small hollow; *inferior*, lower.) The internal maxillary artery.

A. alveolaris superior. (L. *alveolus*; *superior*, above.) The alveolar branch of the internal maxillary artery.

A. anastomotica genu magna. (Ἀναστομώ, to furnish with a mouth; L. *genu*, the knee; *magnus*, great.) The *Anastomotie artery of the thigh*.

A. anastomotica transversa. (Ἀναστομώ; L. *transversus*, turned across.) A branch of the peroneal artery which establishes a communication with the posterior tibial artery.

A. angularis narium. (L. *angularis*, having angles; *nares*, the nostrils.) The angular artery.

A. anon'yma. (Ἄν, neg.; ὄνομα, a name.) The innominate artery.

A. anon'yma il'aca. (L. *ilia*, the groin.) The common iliac artery.

A. aorta. See *Aorta*.

A. aorta ascendens. (L. *aorta*; *ascendens*, from *ascendo*, to mount up.) The ascending portion of the arch of the aorta.

A. aorta descendens abdominalis. (L. *aorta*; *descendens*, part. from *descendo*, to descend; *abdominalis*, pertaining to the abdomen.) The abdominal aorta.

A. aorta descendens thoracica. (L. *thoracicus*, pertaining to the chest.) The descending part of the arch of the aorta and the thoracic aorta.

A. appendic'alis. (L. *appendix*, an appendage.) A synonym of the *A. appendicularis*.

A. appendicularis. (L. *appendicula*, a small appendage.) The branch of the ilio-colic

ARTERIA.

artery which supplies the appendix vermiformis cæci.

A. articula'ris capit'ali s'ub'al'se pro'pria. (L. *articularis*, pertaining to a joint; *capitulum*, a small head; *fibula*; *proprius*, proper.) A branch of the anterior tibial artery supplying the parts in the neighbourhood of the head of the fibula; also called superior peroneal artery.

A. articula'ris ge'nu azygos. (L. *articularis*; *genu*, the knee; *azygos*, not paired.) The azygos articular artery.

A. articula'ris ge'nu inferior exter'na. (L. *articularis*; *genu*, the knee; *inferior*, below; *externus*, on the outer side.) The inferior external articular artery of the knee.

A. articula'ris ge'nu inferior inter'na. (L. *internus*, internal.) The inferior internal articular artery of the knee.

A. articula'ris ge'nu latera'lis. (L. *lateralis*, lateral.) The superior external articular artery of the knee.

A. articula'ris ge'nu me'dia. (L. *medius*, in the middle.) The azygos articular artery of the knee.

A. articula'ris ge'nu media'lis. (L. *medialis*, middle.) The superior internal articular artery of the knee.

A. articula'ris ge'nu profun'da. (L. *profundus*, deep.) The superior internal articular artery of the knee.

A. articula'ris ge'nu recur'rens. (L. *recurro*, to run backwards.) The recurrent branch artery of the anterior tibial artery.

A. articula'ris ge'nu superficia'lis. (L. *superficialis*, on the surface.) The anastomotica magna artery.

A. articula'ris ge'nu super'ior exter'na. (L. *superior*, above; *externus*, on the outside.) The superior external articular artery of the knee.

A. articula'ris ge'nu super'ior inter'na. (L. *internus*, internal.) The superior internal articular artery of the knee.

A. articula'ris ge'nu supre'ma. (L. *supremus*, very high.) The anastomotica magna artery.

A. as'pera. (L. *asperus*, rough.) The rough artery. An old term for the trachea or windpipe; because of the inequalities or roughness of its surface, caused by the cartilaginous rings entering into its formation.

A. audit'iva inter'na. (L. *auditus*, hearing; *internus*, internal.) The internal auditory artery.

A. auricula'ris ante'rior. (L. *auricula*, the external ear; *anterior*, in front.) The anterior auricular artery. A branch of the superficial temporal artery.

A. auricula'ris cordis dex'tra. (L. *auricula*, the auricle; *cor*, the heart; *dexter*, right.) The right coronary artery of the heart.

A. auricula'ris cordis sinis'tra. (L. *auricula*; *cor*; *sinister*, left.) The left coronary artery of the heart.

A. auricula'ris poste'rior. (L. *auricula*; *posterior*, behind.) The posterior auricular artery.

A. auricula'ris profun'da. (L. *auricula*; *profundus*, deep.) A small branch given off from the internal maxillary artery in the first part of its course. It runs up behind the articulation of the lower jaw, and is distributed to the external auditory meatus.

A. axilla'ris. (L. *axilla*, from *ala*, a wing.) The axillary artery.

A. basila'ris. (L. *basis*, a pedestal.) The basilar artery.

A. brachia'lis. (L. *brachialis*, pertaining to the arm.) The brachial artery.

A. bronchia'lis. (Ἐρῶν, the bronchial tubes.) The bronchial artery.

A. bucca'lis. (L. *bucca*, the cheek.) The buccal artery.

A. buccinato'ria. (L. *buccinator*, the muscle of that name.) The buccal artery.

A. bulb'na. (L. *bulbus*, a bulb.) The artery of the bulb of the penis.

A. bulb'o-caverno'sa. (L. *bulbus*; *cavernosus*, full of cavities.) The artery of the bulb of the penis.

A. bulb'o-urethra'lis. (L. *bulbus*, a bulb; *urethra*, the urethra. G. *Harnröhrenarterie*.) The urethral artery. A small branch of the artery to the bulb, which runs forward in the groove between the corpus cavernosum and spongiosum of each side to the glans penis.

A. bulb'o'sa. (L. *bulbus*, a bulb.) The artery of the bulb of the penis.

A. capsula'ris. (L. *capsula*, a small chest. G. *Kapselarterie*.) A branch of the arteria centralis retinae, which, until near the close of fetal life, runs forward through the vitreous humour to the posterior capsule of the lens.

Also, term applied to the branch of the aorta distributed to the supra-renal capsule of each side.

A. caro'tis cerebra'lis. (Ἐρῶν, the carotids; from *καρῶν*, to stupefy; *cerebrum*, the brain.) A synonym of the internal carotid artery.

A. caro'tis exter'na. (Ἐρῶν, the carotids; *externus*, external.) The external carotid artery.

A. caro'tis facia'lis. (Ἐρῶν, the carotids; *facies*, the face.) The external carotid artery.

A. caro'tis inter'na. (Ἐρῶν, the carotids; *internus*, internal.) The internal carotid artery.

A. car'pea dorsa'lis radia'lis. (Ἐρῶν, the wrist; *L. dorsum*, the back; *radius*, the bone of that name.) The posterior carpal branch of the radial artery.

A. car'pea dorsa'lis ulna'ris. (Ἐρῶν; *L. dorsum*; *ulna*, the bone of that name.) The posterior carpal branch of the ulnar artery.

A. centra'lis reti'næ. (L. *centralis*, in the middle; *retina*. G. *Netzhautarterie*.) A branch of the ophthalmic artery, which perforates the optic nerve about a quarter of an inch before its entrance into the globe of the eye, and, reaching the retina, ramifies in it: in the fœtus a branch, *A. capsularis*, runs to the posterior surface of the lens; this is absorbed before birth.

A. cerebra'lis. (L. *cerebrum*, the brain.) A synonym of the internal carotid artery.

A. cervica'lis. (L. *cervix*, the neck.) The Basilar artery.

A. chorio'dea. (Choroid plexus. G. *adernetzschlagader*.) A small branch of the internal carotid artery, distributed to the tela chorioidea of the lateral ventricles of the brain.

A. chorio'dea poste'rior. A branch of the posterior cerebral artery, which, passing over the corpora quadrigemina, enters the tela chorioidea.

A. circumflexa il'i exter'na. (L. *circumflexus*, bent round; *ilium*, the bone; *externus*, outer.) The external circumflex iliac artery.

ARTERIA.

A. circumflexa scap'ulae. (L. *circumflexus*, from *circumflecto*, to bend round; *scapula*, the shoulder-blade.) The dorsal branch of the subscapular artery.

A. collatera'lis exter'na. (L. *collatero*, to admit on both sides; *externus*, outward.) The superior profunda artery of the arm.

A. collatera'lis inter'na. (L. *collatero*; *internus*, inward.) The inferior profunda artery of the arm.

A. collatera'lis mag'na. (L. *collatero*; *magnus*, great.) The superior profunda artery of the arm.

A. collatera'lis me'dia. (L. *collatero*; *medius*, that is in the middle.) Term applied to the lower part, or continuation, of the superior profunda artery of the arm.

A. collatera'lis profun'da. (L. *collatero*; *profundus*, deep.) The lower part of the superior profunda artery of the arm.

A. collatera'lis radia'lis. (L. *collatero*; *radius*, the bone of that name.) The lower part of the superior profunda artery of the arm.

A. collatera'lis ulna'ris. (L. *collatero*; *ulna*, the bone of that name.) The inferior profunda artery of the arm.

A. communicans Willis'ii. (L. *communio*, to unite; *Willis*.) A name applied to the posterior communicating artery of the circle of Willis.

A. corona'ria malleola'ris. (L. *coronarius*; *malleolus*. G. *querer Verbindungsarterie*.) The communicating branch of the peroneal artery.

A. corona'ria ventriculi dex'tra. (L. *coronarius*, pertaining to a wreath; *ventriculus*, dim. of *venter*, the belly; *dexter*, on the right side.) The pyloric artery of the stomach.

A. corona'ria ventriculi sinis'tra inferior. (L. *ventriculus*; *sinister*, the left; *inferior*, lower.) The gastro-epiploica sinistra artery.

A. corona'ria ventriculi sinis'tra superior. (L. *coronarius*; *ventriculus*; *sinister*, the left; *superior*, upper.) The pyloric artery of the stomach.

A. corporis callo'si. (Corpus callosum, a part of the brain.) The anterior cerebral artery.

A. costa'lis ante'rior. (L. *costa*, a rib; *anterior*, in front.) Branches given off from the internal mammary artery, and running backward in the intercostal spaces.

A. costa'lis infe'rior. (L. *costa*, a rib; *inferior*, below.) The anterior branch of the intercostal arteries.

A. costa'lis poste'rior. (L. *costa*; *posterior*, behind.) The posterior branch of each intercostal artery.

A. costa'lis supe'rior. (L. *costa*; *superior*, comp. of *superus*, above.) The superior intercostal artery.

A. costalis supre'ma. (L. *costa*; *supremus*, superlative of *superus*, above.) The superior intercostal artery.

A. cras'sa. (L. *crassus*, thick.) The norta.

A. crista'e pu'bis. (L. *crista*, a crest; *pubes*, the bone of that name. G. *Schambeinarterie*.) A branch of the epigastric artery distributed to the posterior surface of the pubes. It anastomoses with the branches of the obturator

artery, and sometimes constitutes the origin of that vessel.

A. crura'lis. (L. *cruralis*, of, or belonging to, the leg.) The femoral artery.

A. crura'lis ili'aca. (L. *cruralis*; *ilias* the groin.) The external iliac artery.

A. cubita'lis. (L. *cubitalis*, pertaining to the elbow.) The ulnar artery.

A. cu'biti exter'na. (L. *cubitus*, the elbow, the forearm; *externus*, outward.) The radial artery.

A. diaphragmaticae infe'rior. (L. *diaphragma*, the midriff; *inferior*, below.) The inferior phrenic artery.

A. diaphragmaticae supe'rior. (L. *diaphragma*; *superior*, above.) The superior phrenic artery.

A. dorsa'lis clitor'idis. (L. *dorsum*, the back; *clitoris*, the clitoris. G. *Klitorisarterie*.) The dorsal artery of the clitoris.

A. dorsa'lis digiti mini'mi pro'pria. (L. *dorsalis*, belonging to the back; *digitus*, a toe; *minimus*, least; *proprius*, peculiar. G. *Rüchenarterie der kleinen Zehe*.) A branch given off from the outermost of the interosseous branches of the dorsal artery of the foot, which runs along the outer border of the little toe, and forms its external collateral branch.

A. dorsa'lis metacar'pi. (L. *dorsum*, the back; *metacarpus*.) The metacarpal or first dorsal interosseous branch of the radial artery.

A. dorsa'lis na'sal. (L. *dorsum*, the back; *nasus*, the nose. G. *Nasenrückenarterie*.) The nasal branch of the ophthalmic artery.

A. dorsa'lis scap'ulae infe'rior. (L. *dorsum*, the back; *scapula*, the shoulder-blade; *inferior*, below.) The dorsal scapular branch of the subscapular artery.

A. duodena'lis infe'rior. (L. *duodenum*, the intestine of that name; *inferior*, below.) The pancreatico-duodenalis artery.

A. durae ma'tris me'dia ma'xima. (Dura mater, the cerebral membrane of that name; *medius*, middle; *maximus*, very large.) The middle meningeal artery.

A. emul'gens. (L. *emulgeo*, to milk out.) The renal artery.

A. encephal'ica. (Εγκέφαλος, within the head.) The internal carotid artery.

A. epigas'trica infe'rior. (Επιγαστρικός, upon the belly; *inferior*, below.) The deep epigastric artery.

A. epigas'trica infe'rior exter'na. (Επιγαστρικός; L. *inferior*; *externus*, on the outside.) The superficial epigastric artery.

A. epigas'trica infe'rior inter'na. (Επιγαστρικός; L. *inferior*; *internus*, within.) The deep epigastric artery.

A. facia'lis ante'rior. (L. *facies*, the face; *anterior*, foremost.) The facial artery.

A. facia'lis exter'na. (L. *facies*; *externus*, outward.) The facial artery.

A. facia'lis poste'rior. (L. *facies*; *posterior*, behind.) The transverse facial artery.

A. facia'lis profun'da. (L. *facies*; *profundus*, deep.) The internal maxillary artery.

A. facia'lis transver'sa. (L. *facies*, the face; *transversus*, lying across.) The transverse facial artery.

A. femora'lis commu'nis. (L. *femur*, the thigh; *communis*, common.) The femoral artery.

A. femora'lis profun'da. (L. *femur*, the

ARTERIA.

thigh; *profundus*, deep.) The profunda femoris artery.

A. femoralis superficialis. (L. *femur*; *superficialis*, pertaining to the surface.) The femoral artery.

A. fibularis. (L. *fibula*, the bone of that name.) The peroneal artery.

A. fibularis superior. (L. *fibula*; *superior*, above. G. *obere Wadenbeinarterie*.) A small branch of the anterior tibial artery distributed to the head of the fibula.

A. fossee Sylvii. (L. *fossa*, a ditch; *Sylvius*, the name of an anatomist.) The middle cerebral artery.

A. funicularis. (L. *funiculus*, a slender cord.) The cremasteric artery.

A. funicularis spermaticus. (L. *funiculus*, a slender cord; *spermaticus*, pertaining to seed.) The cremasteric artery.

A. gastrica inferior dextra. (Γαστήρ, the belly; L. *inferior*, lower; *dexter*, on the right hand.) The gastro-epiploica dextra artery.

A. gastrica inferior sinistra. (Γαστήρ; *inferior*, lower; *sinister*, on the left hand.) The gastro-epiploica sinistra artery.

A. gastrica superior. (Γαστήρ; L. *superior*, upper.) The coronary artery of the stomach.

A. gastrica superior dextra. (Γαστήρ; *superior*, upper; *dexter*, on the right hand.) The pyloric artery of the stomach.

A. gastrica superior sinistra. (Γαστήρ; *superior*, upper; *sinister*, on the left.) The coronary artery of the stomach.

A. gastrocnemius. (Γαστήρ; *κνήμη*, the leg.) The deep branch of the sural artery.

A. hæmorrhoidalis inferior. (Αίμα, blood; *pius*, to flow; *inferior*, lower.) The inferior hæmorrhoidal artery.

A. hæmorrhoidalis interna. (Αίμα, blood; *pius*, to flow; *internus*, within.) The superior hæmorrhoidal artery.

A. hepatica dextra. (Ήπατικός, of the liver; L. *dexter*, on the right.) The right hepatic artery.

A. hepatica media. (Ήπατικός; L. *medius*, that is in the middle.) One or more small branches of the hepatic artery distributed to the posterior and inferior surface of the liver.

A. hepatica propria. (Ήπατικός; L. *proprius*, special.) The hepatic artery.

A. hepatica sinistra. (Ήπατικός; L. *sinister*, left.) The left hepatic artery.

A. humeralis. (L. *humerus*, the shoulder. G. *Schulterast*.) The descending or humeral branch of the acromial thoracic artery. It runs with the cephalic vein in the interval between the deltoid and pectoralis major muscles, to which it is distributed.

A. ilææ. (L. *ilia*, the flanks.) The iliac branch of the ilio-colic artery.

A. ilæo-cælica. (L. *ilia*, the flanks; *κῶλον*, the colon.) The ilio-colic artery.

A. ilæa anterior. (L. *ilia*, the flanks; *anterior*, foremost.) The external iliac artery.

A. ilæa communis. (L. *communis*, common.) The common iliac artery.

A. ilæa externa. (L. *externus*, outward.) The external iliac artery.

A. ilæa interna. (L. *internus*, inward.) The internal iliac artery.

A. ilæa parva. (L. *parvus*, small.) The ilio-lumbar artery.

A. ilæa posterior. (L. *posterior*, hinder.) The gluteal artery.

A. ilæa primitiva. (L. *primitivus*, first of its kind.) The common iliac artery.

A. ilæo-lumbalis. (L. *lumbus*, the loin.) The ilio-lumbar artery.

A. infra-scapularis. (L. *infra*, below; *scapula*, the shoulder-blade.) The descending branch of the subcapular artery distributed to the subcapularis, serratus magnus, teres major, and latissimus dorsi muscles.

A. innominata. (L. *innominatus*, unnamed.) The nameless artery; applied to the first branch of the aorta, dividing into the right carotid and right subclavian arteries. See *Innominate artery*.

A. intercostalis prima. (L. *primus*, first.) The superior intercostal artery.

A. intercostalis suprema. (L. *supremus*, highest.) The superior intercostal artery.

A. intermetacarpeæ volares. (L. *inter*, between; *metacarpus*; *vola*, the palm.) The palmar interosseous branches of the deep palmar arch.

A. intermetatarsæ dorsalis prima. (L. *inter*, between; *metatarsus*; *dorsalis*, belonging to the back; *primus*, first.) The first dorsal interosseous artery.

A. interosæ antibrachii communis. (L. *inter*, between; *os*, a bone; *antibrachium*, the forearm; *communis*, common.) The common interosseous artery of the forearm.

A. interosæ antibrachii externa. (L. *inter*, between; *os*, a bone; *antibrachium*, the forearm; *externus*, outward.) The posterior interosseous artery of the forearm.

A. interosæ antibrachii interna. (L. *interosæus*; *antibrachium*; *internus*, inward.) The anterior interosseous artery of the forearm.

A. interosæ antibrachii posterior. (L. *interosæus*; *antibrachium*; *posterior*, hinder.) The posterior interosseous artery of the forearm.

A. interosæ antibrachii superficialis. (L. *interosæus*; *antibrachium*; *superficialis*, pertaining to the surface.) The comes nervi mediani branch of the anterior interosseous artery of the forearm.

A. interosæ dorsalis manus prima. (L. *interosæus*; *dorsum*, the back; *manus*, the hand; *primus*, first.) The metacarpal artery of the hand, which is a branch of the radial, and gives off the dorsal arteries of the thumb and index fingers.

A. interosæ dorsalis pedis prima. (L. *interosæus*; *dorsum*; *pes*, the foot; *primus*, first. G. *Rückenarterie der grossen Zehe*.) The first dorsal interosseous artery of the foot, which is a branch of the metatarsal artery, and supplies the dorsum of the great toe, and the external dorsal artery of the second toe.

A. ischiadicæ. (L. *ischadicus*, that has gout in the hip.) The sciatic artery.

A. jejuna. (L. *Jejunum*, the intestine of that name.) The upper branch of the superior mesenteric artery supplying the jejunum.

A. jugularis. (L. *jugulum*, the throat.) The carotid artery.

A. labialis inferior. (L. *labium*, a lip; *inferior*, lower.) The inferior coronary artery of the lips.

A. labialis pudendi anterior. (L. *pudenda*, the privy parts; *anterior*, foremost.)

ARTERIA.

The analogous artery to that supplying the scrotum in man; it supplies the labia majora in women.

A. labialis pudendi posterior. (L. *labium*; *pudendi*; *posterior*, next.) The artery supplying the posterior part of the scrotum in man, and of the labia majora in women.

A. magna. (L. *magnus*, great.) The great artery. A term for the aorta, being the chief trunk from which the whole arteries (with the exception of the pulmonary) of the body spring.

A. mamma'ria exter'na. (L. *mamma*, the breast; *externus*, outward.) The long thoracic or external mammary artery.

A. maxilla'ris exter'na. (L. *maxillaris*, relating to the jaw; *externus*, outward.) The facial artery.

A. maxilla'ris inter'na. (L. *maxillaris*; *internus*, inward.) The internal maxillary artery.

A. maxima. (L. *maximus*, very great.) The aorta.

A. me'dia anastomot'ica. (L. *medius*, middle; *anastomot'ic*.) The middle colic artery.

A. mediastini'se. (L. *mediastinus*, belonging to the middle.) The mediastinal artery.

A. medull'ae spina'lis ante'rior. (L. *medulla*, marrow; *spinalis*, belonging to the spine; *anterior*, front. G. *vordere Rückenmarkarterie*.) The anterior spinal artery.

A. medull'ae spina'lis poste'rior. (L. *medulla*; *spinalis*; *posterior*, hinder.) The posterior spinal artery.

A. meninge'a accessoria. (Μήνυξ, a membrane; L. *accedo*, to approach.) The small meningeal artery.

A. meninge'a anti'ca. (L. *anticus*, foremost.) A branch of the anterior ethmoidal artery.

A. meninge'a mag'na. (L. *magnus*, great.) The middle meningeal artery.

A. meninge'a me'dia. (L. *medius*, middle.) The middle meningeal artery.

A. menta'lis. (L. *mentum*, the chin.) The terminal branch of the inferior dental artery; it anastomoses with the submental and inferior mental arteries.

A. mesara'ica. (Μέσος, middle; ἀραιός, thin, as of the small intestine.) The inferior mesenteric artery.

A. metacar'pea dorsa'lis ulna'ris. (L. *ulna*, the elbow.) The dorsal carpal branch of the ulnar artery.

A. metacar'pea vola'ris radia'lis profun'da. (L. *profundus*, deep.) The deep palmar branch of the radial artery. The deep palmar arch.

A. metacar'pea vola'ris subli'mis. (L. *sublimis*, high.) The superficial palmar arch.

A. metacar'pea vola'ris ulna'ris profun'da. (L. *profundus*, deep.) The deep palmar branch of the ulnar artery.

A. metacar'pea vola'ris ulna'ris subli'mis. (L. *sublimis*, high.) The branch of the ulnar artery forming the superficial palmar arch.

A. metatar'sea dorsa'lis fibula'ris. (L. *fibula*, the bone of that name.) The branch of the metatarsal artery to the little toe.

A. metatar'sea prima. (L. *primus*, first.) The dorsal artery of the great toe, or first dorsal interosseous artery.

A. muscula'ris fem'oris. (L. *musculus*,

a muscle; *femur*, the thigh.) The profunda of the thigh, or deep femoral artery.

A. muscula'ris profun'da fem'oris. (L. *musculus*, a muscle; *profundus*, deep; *femur*, the thigh.) The profunda artery of the thigh.

A. musculo-phren'ica. (L. *musculus*, a muscle; *phrēnes*, the midriff, the diaphragm.) The branch of the internal mammary supplying the diaphragm. It is given off about the sixth intercostal space.

A. nasa'lis ante'rior. (L. *nasus*, the nose; *anterior*, foremost.) The nasal branch of the ophthalmic artery.

A. nasa'lis exter'na. (L. *externus*, outward.) The alar branch of the facial artery supplying the ala and dorsum of the nose.

A. nasa'lis latera'lis. (L. *lateralis*, pertaining to the side.) The alar branch of the facial artery supplying the ala and dorsum of the nose.

A. nasa'lis poste'rior. (L. *posterior*, hinder.) The sphenopalatine artery.

A. nutrit'ia fem'oris. (L. *nutritius*, one that nourishes; *femur*, the thigh.) The nutritious artery of the femur. It is a branch of the third perforating artery.

A. nutrit'ia fem'oris infe'rior. (L. *inferior*, lower.) The inferior nutritious artery of the femur. It is a branch of the third perforating artery.

A. nutrit'ia fem'oris mag'na. (L. *magnus*, large.) The great or inferior nutritious artery of the femur.

A. nutrit'ia fem'oris supe'rior. (L. *superior*, higher.) A nutritive branch for the femur, given off from the first perforating artery.

A. nutrit'ia fibulae. (L. *fibula*, the bone of that name.) The nutritious artery of the fibula. It is given off from the peroneal artery, and, entering the fibula, runs downward.

A. nutrit'ia humeri. (L. *humerus*, the bone of that name.) The nutritive branch of the brachial artery of the arm which supplies the humerus, entering the bone about the middle. It runs downward.

A. nutrit'ia ilii. (L. *ilium*, the bone of that name.) The nutritious artery of the ilium. It is given off from the gluteal artery just at the point where the gluteal leaves the pelvis.

A. nutrit'ia mag'na humeri. (L. *magnus*, great; *humerus*, the bone of that name.) The nutritious artery of the humerus.

A. nutrit'ia mag'na tibiae. (L. *tibia*, the shin-bone.) The nutritious artery of the tibia. It is a branch of the posterior tibial artery given off near its origin, and runs downward.

A. nutrit'ia radii. (L. *radius*, the bone of that name.) The nutritious artery of the radius. It is a branch of the anterior interosseous artery.

A. nutrit'ia tibiae. (L. *tibia*, the shin-bone.) The nutritious artery of the tibia. It is a branch of the posterior tibial artery near its origin.

A. nutrit'ia ulnae. (L. *ulna*, the bone of that name.) The nutritious artery of the ulna. It is a branch of the anterior interosseous artery.

A. palati'na ma'jor. (L. *palatum*, the palate; *major*, greater.) A branch of the descending palatine artery supplying the hard palate near the inferior palatine foramen.

A. palati'na supe'rior. (L. *superior*, higher.) The descending palatine artery.

ARTERIA.

A. palma'ris. (L. *palmaris*, belonging to the palm.) The anterior interosseous artery.

A. ped'faca. (L. *pes*, a foot.) The dorsal artery of the foot.

A. ped'ia. (L. *pes*, the foot.) The dorsal artery of the foot.

A. pel'vica. (L. *pelvis*, a basin, the pelvis.) The internal iliac artery.

A. pe'n'is. (L. *penis*, the male organ.) The terminal branch of the internal pudic artery.

A. perforans antibrachii inferior. (L. *perforo*, to bore through; *ante*, before; *brachium*, the arm; *inferior*, the lower.) A branch of the anterior interosseous artery, which perforates the interosseous ligament near the upper border of the pronator quadratus muscle.

A. perforans antibrachii superior. (L. *superior*, upper.) The posterior interosseous artery.

A. perforans femoris pri'ma. (L. *femur*, the thigh; *primus*, first.) The first perforating artery of the profunda femoris artery.

A. pericard'aco-phren'ica. (Περικαρδι'ος, the membrane about the heart; L. *phrenicus*, relating to the diaphragm.) The omes nervi phrenici artery.

A. perone'a ant'ica. (Περώνη, the fibula; L. *anticus*, foremost.) The perforating branch of the peroneal artery.

A. perone'a perforans. (L. *perforo*, to bore through.) The anterior peroneal artery.

A. perone'a supe'rior. (L. *superior*, higher. G. *obere Wadenbeinarterie*.) A branch of the anterior tibial artery near its origin, supplying the parts near the head of the fibula.

A. pharynge'a infe'rior. (L. *pharyngus*, relating to the throat; *inferior*, lower.) The ascending pharyngeal artery.

A. pharynge'a supe'ria. (L. *supremus*, highest.) A branch of the sphenopalatine artery running parallel with the vidian, and supplying the soft parts.

A. pharyngo-basilla'ris. (L. *pharyngus*, relating to the throat; *basilaris*, relating to the base.) The ascending pharyngeal artery.

A. pharyngo-meningea. (Μηνυγξ, membrane.) The ascending pharyngeal artery.

A. pharyngo-pala'tina. (Φάρυγξ, the throat. L. *palatum*, the palate.) The inferior palatine artery.

A. planta'ris media'lis. (L. *plantaris*, relating to the sole of the foot; *medialis*, middle.) The internal plantar artery.

A. planta'ris profun'da. (L. *plantaris*; *profundus*, deep. G. *tiefe Sohlenarterie*.) The first posterior perforating branch of the interosseous branch of the dorsal artery of the foot.

A. prepa'ran'tes. (L. *preparo*, to prepare.) The spermatic arteries.

A. princeps pollicis. (L. *pollex*, the thumb. G. *Hauptarterie des Daumens*.) A branch of the radial artery just as it is about to turn into the palm; it passes in front of the abductor indicis and between the metacarpal bone of the thumb and its superjacent muscles to the space between the two ends of the flexor brevis pollicis, where it divides into two branches, which run on each side of the palmar aspect of the thumb, and join in an arch at its extremity.

A. profun'da bra'chii. (L. *profundus*, deep; *brachium*, the arm.) The superior profunda branch of the brachial artery.

A. profun'da cer'ebr'i. (L. *profundus*,

deep; *cerebrum*, the brain.) The posterior cerebral artery.

A. profun'da clitor'idis. (Κλειτορι'ς, the clitoris.) The deeper of the two terminal branches of the pudic artery in the female supplying the clitoris, and analogous to the artery of the corpus cavernosum in the male.

A. profun'da lin'guae. (L. *profundus*, deep; *lingua*, the tongue.) The ranine artery.

A. profun'da pe'n'is. (L. *penis*, the male organ. G. *tiefe Ruthenarterie*.) The artery of the corpus cavernosum.

A. profun'da vo'l'a. (L. *profundus*, deep; *vola*, the palm. G. *tiefe Hohlhandarterie*.) The terminal branch of the radial artery forming the deep palmar arch.

A. profundis'sima il'li. (L. *profundissima*, the lowest; *ilium*, the bone of that name.) A branch of the deep branch of the gluteal artery, supplying the hip-joint.

A. puden'da commu'n'is. (L. *pudenda*, the privy parts; *communis*, common.) The internal pudic artery.

A. puden'da exte'r'na. (L. *externus*, outward.) The external pudic artery.

A. puden'da inte'r'na. (L. *internus*, inward.) The internal pudic artery.

A. pu'dica. (L. *pudicus*, from *pudeo*, to be ashamed.) The internal pudic artery.

A. pulmona'lis. (L. *pulmo*, a lung.) The pulmonary artery.

A. ra'dio-palma'ris. (L. *radius*, the bone of that name; *palmaris*, belonging to the palm.) The superficial volar artery.

A. re'no-capsula'ris. (L. *ren*, the kidney; *capsularis*, capsular. G. *Nebenniereneschlagader*.) The supra-renal or capsular artery.

A. sa'cra latera'lis. (L. *sacrum*, the bone of that name; *lateralis*, relating to the side.) The lateral sacral artery.

A. sacra'lis me'dia. (L. *sacrum*; *medius*, middle.) The middle sacral artery.

A. scro'ta'lis ante'rior. (L. *scrotum*; *anterior*, in front.) The terminal branch in man of the deep division of the external pudic artery.

A. sep'ti'na'tium poste'rior. (L. *septum*, a fence; *naris*, a nostril; *posterior*, hinder.) A branch of the sphenopalatine branch of the internal maxillary artery; it runs along the septum nasi, and, entering the incisor foramen, inosculates with the descending palatine artery.

A. sigmoide'a. (Sigmoid flexure of colon.) The sigmoid artery.

A. si'nus caverno'si. (L. *sinus*, a gulf; *cavernosus*, full of cavities.) One or more branches of the internal carotid artery given off whilst it is in the cavernous sinus, and supplying its walls, the Gasserian ganglion, and the crura cerebri.

A. sperma'tica deferentia'lis. (L. *spermaticus*, relating to seed; *defero*, to carry away.) The artery of the vas deferens.

A. sperma'tica exte'r'na. (L. *spermaticus*, belonging to seed; *externus*, outer.) The cremasteric artery.

A. sperma'tica inte'r'na. (L. *internus*, inner.) The spermatic artery.

A. sphe'no-spino'sa. The middle meningeal artery; so called because it enters the skull through the spinous foramen of the sphenoid bone.

A. spino'sa. (L. *spinosus*, the foramen so called.) The middle meningeal artery.

A. spira'lis. (Σπείρα, anything wound round.) The superior profunda of the arm.

ARTERIA.

A. stape'dia. (*Stapes*, the bone of that name.) A branch of the stylomastoid artery, which passes through a triangular opening in the Fallopiian canal, penetrates the membrana obturatoria of the stapes, and is distributed on the promontory, and often anastomoses with the artery accompanying Jacobson's nerve.

A. sterna'lis. (*Στήνιον*, the breast.) The internal mammary artery.

A. subcuta'nea ma'lae. (*L. sub*, under; *cutis*, the skin; *mala*, the jaw.) The terminal branch of the deep temporal artery.

A. supraco'sta'lis. (*L. supra*, above; *costa*, a rib.) The collateral intercostal artery.

A. supramaxilla'ris. (*L. supra*, above; *maxillaris*, belonging to the jaw.) The superior dental artery.

A. supratar'sea. (*L. supra*; *ταρσός*, the flat of the foot.) The metatarsal branch of the dorsalis pedis artery.

A. supratar'sea exter'na. (*L. externus*, outer.) The external tarsal artery.

A. Sylvia'na. (*Sylvius*.) The middle cerebral artery.

A. tar'sea exter'na ante'rior. (*Tap'se*, a broad flat surface, so the sole of the foot; *L. externus*, outward; *anterior*, in front.) The metatarsal artery.

A. tar'sea exter'na poste'rior. (*L. posterior*, hinder.) The tarsal artery.

A. tar'sea inter'na. (*L. internus*, inner. *G. innere Fusswurzelarterie*.) A small branch arising from the inner side of the dorsal artery of the foot opposite the tarsal artery, and supplying the fore part of the inner side of the tarsus.

A. tar'sea latera'lis poste'rior. (*L. lateralis*, belonging to the side; *posterior*, hinder. *G. hintere aussere Fusswurzelarterie*.) The tarsal branch of the dorsal artery of the foot.

A. tempora'lis me'dia. (*L. temporalis*, belonging to the temples; *medius*, middle.) The middle temporal artery.

A. tempora'lis profun'da ante'rior. (*L. profundus*, deep; *anterior*, in front.) The anterior branch of the deep temporal artery.

A. tempora'lis profun'da poste'rior. (*L. posterior*, hinder.) The posterior branch of the deep temporal artery.

A. tempora'lis superficia'lis. (*L. temporalis*, relating to the temples; *superficialis*, belonging to the surface.) The temporal artery.

A. tempora'lis superficia'lis ante'rior. (*L. anterior*, in front.) The anterior temporal artery.

A. tempora'lis superficia'lis poste'rior. (*L. posterior*, behind.) The posterior temporal artery.

A. testicu'lar'is. (*L. testiculus*, a testicle. *G. Hodenarterie*.) A branch of the spermatic artery, which anastomoses with the artery of the vas deferens and supplies the testicle.

A. thorac'ica acromia'lis. (*L. thorax*, the breast; *acromion*.) The acromial thoracic artery.

A. thorac'ica ala'ris. (*L. thorax*, the breast; *ala*, the armpit.) The alar thoracic artery.

A. thorac'ica axilla'ris. (*L. axilla*, the armpit.) The alar thoracic artery.

A. thorac'ica humera'lis. (*L. humerus*, the arm.) The acromial thoracic artery.

A. thorac'ica humera'ria. (*L. humerus*, the shoulder.) The acromial thoracic artery.

A. thorac'ica infe'rior. (*L. inferior*, lower.) The long thoracic artery.

A. thorac'ica inter'na. (*L. internus*, inner.) The internal mammary artery.

A. thorac'ica long'a. (*L. longus*, long.) The long thoracic artery.

A. thorac'ica ma'jor. (*L. major*, greater.) The long thoracic artery.

A. thorac'ica mi'nor. (*L. minor*, less.) The short thoracic artery.

A. thorac'ica pri'ma. (*L. primus*, first.) The short thoracic artery.

A. thorac'ica secu'nda. (*L. secundus*, second.) The acromial thoracic artery.

A. thorac'ica supre'ma. (*L. supremus*, highest.) The short thoracic artery.

A. thorac'ica ter'tia. (*L. tertius*, third.) The long thoracic artery.

A. thorac'ico-humera'ria. (*L. humerus*, the arm. *G. Brustschulterschlagader*.) The descending branch of the *A. thoracico-acromialis*; it lies beneath the cephalic vein in the interval between the deltoid and pectoralis major muscles, both of which it supplies.

The term has also been used as a synonym of the *Acromial-thoracic artery* itself.

A. thyreoidea adscen'dens. (*Thyroid body*; *L. adscendo*, to mount up) The inferior thyroid artery.

A. thyroidea ima. (*Thyroid body*; *L. imus*, the lowest.) An artery occasionally found supplying the thyroid body. It arises from the innominate, or from the right common carotid, or from the aorta; in rare instances from the right internal mammary, or from the right subclavian. It runs along the front of the trachea.

A. transver'sa carpi dorsa'lis. (*L. transversus*, turned across; *καρπός*, the wrist; *L. dorsum*, the back.) The posterior radial carpal artery.

A. transver'sa carpi vola'ris. (*L. vola*, the palm.) The anterior carpal radial artery.

A. transver'sa facie'i. (*L. facies*, the countenance.) The transverse facial artery.

A. transver'sa'lis cervi'cis. (*L. cervix*, the neck.) The transverse cervical artery.

A. uteri'na hypoga'strica. (*L. uterus*, the womb; *ὑπό*, under; *γαστήρ*, the belly.) The uterine artery.

A. u'tero-ovar'ica. (*L. uterus*, the womb; *ovarium*. *G. Eierstocksarterie*.) The ovarian branch, in the female, of the artery corresponding to the spermatic artery of the male.

A. vas'ta poste'rior. (*L. vastus*, immense; *posterior*, hindmost.) The profunda artery of the thigh.

A. veno'sa. (*L. venosus*, venous.) Name anciently given to each of the trunks of the pulmonary vein.

A. vola'ris dig'iti quin'ti. (*L. vola*, the palm; *digitus*, a finger; *quintus*, fifth.) A branch of the deep palmar arch supplying the ulnar side of the little finger.

A. vola'ris in'dicis. (*L. index*, the forefinger.) The radialis indicis artery.

A. vola'ris ma'nus ulna'ris. (*L. vola*, the palm; *manus*, the hand; *ulna*, the bone of that name.) The superficial palmar arch.

Arteri'aca. (*Ἀρτηριακός*, from *ἀρτηρία*, the name originally given only to those harder canals which enter the lungs; wherefore, those medicaments which were used for loss of voice and diseases of the *arteriæ asperæ*, as the trachea

ARTERIÆ.

and bronchial tubes were subsequently called, were termed arteriæ. *F. arteriæque.*) Of, or belonging to, the arteria aspera, trachea, or windpipe; a term applied to medicines used against disorders of the voice, or diseases of the windpipe.

Arteriæ adiposæ. (*L. arteria*, an artery; *adeps*, fat.) The branches of the diaphragmatic, capsular, renal, and other arteries which supply the fat around the kidneys.

Also, applied to the small branches of the coronary arteries of the heart distributed to the fat occupying the auriculo-ventricular and interventricular furrows.

A. anonymsæ iliacæ. (*Ἀνώνυμος*, without name; *L. ilia*, the flanks.) A synonym of the common iliac arteries.

A. antibrachii. (*L. ante*, in front; *brachium*, the arm.) A term applied to the arteries supplying the forearm and hand.

A. apoplecticsæ. (*Ἀποπληκτικός*, apoplectic.) The carotid arteries.

A. atrabiliaris. (*L. ater*, black; *bilis*, the bile. *G. Nebennierenschlagader.*) The aortic supra-renal arteries.

A. bronchiales superiores. (*Βρόγχις*, the bronchial tubes; *L. superior*, upper. *G. obere Luftröhrenschlagader.*) The superior bronchial arteries, which are small branches given off from the concavity of the arch of the aorta, and distributed to the bronchi.

A. capitales. (*L. capitalis*, relating to life, or to the head.) The carotid arteries.

A. circumflexæ genu. (*L. circumflexus*, bent round; *genu*, the knee.) A term applied to the articular branches of the knee-joint collectively.

A. collaterales colli. (*L. collatero*, to admit on both sides; *collum*, the neck.) Rathke's term for the vertebral arteries of birds, which arise from near the base of the elongated common carotid artery.

A. collaterales genu. (*L. genu*, the knee.) A term applied to the articular branches of the knee collectively.

A. digitales communis plantares. (*L. digitalis*, pertaining to the fingers; *communis*, common; *planta*, the sole.) The plantar interosseous arteries.

A. digitales communes volares. (*L. vola*, the palm of hand or sole of foot.) The palmar interosseous arteries.

A. digitales dorsales manus. (*L. manus*, the hand.) The dorsal branches of the interosseous arteries of the hand.

A. digitales dorsales pedis. (*L. pes*, the foot.) The dorsal branches of the interosseous arteries of the foot.

A. digitales plantares propriæ. (*L. planta*, the sole; *proprius*, special.) The plantar interosseous arteries.

A. digitales volares propriæ. (*L. digitus*, a finger; *vola*, the palm; *proprius*, special.) The palmar interosseous arteries.

A. gemellæ suræ. (*L. gemellus*, a twin; *sura*, the calf of the leg.) The sural arteries.

A. intercostales aorticsæ. (*L. inter*, between; *costa*, a rib; *aorta*.) The aortic intercostal arteries.

A. intercostales inferiores. (*L. inferior*, lower.) The aortic intercostal arteries.

A. intercostales posteriores. (*L. posterior*, hinder.) The aortic intercostal arteries.

A. intermetacarpeæ dorsales. (*L. inter*, between; *metacarpal* bones; *dorsum*, the back.) The dorsal interossei arteries.

A. intermetatarsæ dorsales. (*L. inter*, between; *metatarsal* bones; *dorsum*, the back.) The dorsal interossei arteries.

A. interossee metacarpi dorsales. (*L. inter*, between; *os*, a bone; *metacarpal* bones; *dorsum*, the back.) The interosseous branches of the dorsal metacarpal arteries.

A. interossee metatarsi dorsales. (*Metatarsal* bones.) The dorsal interosseous arteries of the metatarsal artery.

A. interossee plantares. (*L. inter*, between; *os*, a bone; *plantaris*, relating to the sole of the foot.) The plantar interossei arteries.

A. interossee volares. (*L. vola*, the palm.) The palmar interossei arteries.

A. intestinales. (*L. intestinus*, a gut.) The branches of the superior mesenteric artery supplying the small intestine.

A. lethargicsæ. (*Ἀθηργικός*, drowsy.) The carotid arteries.

A. lumbares imæ. (*L. lumbaris*, relating to the loins; *imus*, lowest.) The fifth lumbar arteries.

A. lumbares quintæ. (*L. quintus*, fifth.) The fifth lumbar arteries.

A. malleolares anteriores. (*Malleolus*; *L. anterior*, foremost. *G. vordere Knochelarterie.*) The external and internal malleolar branches of the anterior tibial artery.

A. malleolares laterales. (*L. lateralis*, relating to the side.) The external malleolar branches of the anterior tibial artery.

A. malleolares mediales. (*L. medialis*, middle.) The internal malleolar branches of the anterior tibial artery.

A. malleolares posteriores. (*L. posterior*, next to. *G. hintere Knochelarterie.*) Branches of the peroneal artery supplying the inner malleolus.

A. metacarpeæ dorsales radiales. (*Metacarpus*; *L. dorsum*, the back; *radius*, a staff.) Term applied by Henle to the dorsal arteries of the thumb and forefinger.

A. metacarpi volares. (*L. vola*, the palm.) Term applied to a few small recurrent branches given off from the concavity of the deep palmar arch.

A. œsophageæ inferiores. (*L. œsophagus*, the gullet; *inferior*, lower.) Branches of the coronary artery of the stomach supplying the lower part of the œsophagus.

A. perforantes arcus plantaris. (*L. arcus*, a bow. *G. durchbohenden Arterien.*) Branches given off from the anterior extremities of the interosseous arteries, or from the posterior extremities of the digital arteries, which perforate the interosseous spaces to join the dorsal arteries of the toes.

A. perforantes femoris. (*L. perforo*, to bore through; *femur*, the thigh.) The perforating arteries of the thigh.

A. pericardiæ posteriores. (*Περί*, around; *καρδία*, the heart; *L. posterior*, next to. *G. Herzhautleiste.*) The posterior pericardiac branches of the aorta.

A. phrenicæ magnæ. (*Φρίξ*, the diaphragm; *L. magnus*, great.) The inferior phrenic arteries.

A. phrenicæ posteriores. (*L. pos-*

ARTERIIAGRA—ARTERIOGRAPHY.

terior, hinder.) The posterior mediastinal arteries.

A. phren'ice superio'res. (L. *superior*, upper.) Small branches of the posterior mediastinal arteries distributed to the diaphragm.

A. pro'pria rena'les. (L. *proprius*, proper; *renalis*, belonging to the kidney.) The branches of the renal artery which penetrate the columns of Bertini, the cortical substance intervening between the pyramids of Malpighi, and traversing this, reach the bases of the pyramids and form arches, from which the interlobular arteries are given off.

A. receptac'uli. (L. *receptaculum*, a reservoir.) Branches given off by the carotid artery as it lies in the cavernous sinus, which supply the sella turcica, the walls of the sinus and the nerves traversing it, as well as the Gasserian ganglion and the pituitary body.

A. rec'tæ. (L. *rectus*, straight.) The *vasa recta* of the kidney.

A. scrota'les. (L. *scrotalis*, relating to the scrotum.) The terminal branches of the superficial perineal artery.

A. somnif'erae. (L. *somnus*, sleep; *foro*, to bear.) The carotid arteries.

A. sopora'les. (L. *sopor*, sleep.) The carotid arteries.

A. suprarena'les aort'icæ. (L. *supra*, above; *ren*, the kidney; *aorta*.) The suprarenal arteries.

A. suprarena'les inferio'res. (L. *inferior*, lower.) Small branches of the renal artery supplying the adrenals.

A. suprarena'les mediæ. (L. *medius*, middle.) The supra-renal arteries.

A. veno'sæ. (L. *venosus*, venous.) A synonym of the *Pulmonary veins*.

A. ves'ico-vagina'les. (L. *vesica*, the bladder; *vaginalis*, relating to the vagina.) Branches of the inferior and superior vesicle arteries, in the female, supplying the vagina.

A. vola'res car'pi. (L. *vola*, the palm; *καρπός*, the wrist. G. *Handwurzeläste*.) The carpal branches of the deep palmar arch.

Arteria'gra. (Ἀρτηρία; ἄγρυ, a seizure. F. *artériagrie*; G. *Schlagaderschmerz*.) Pain of the arteries.

Arte'rial. (L. *arteria*, an artery.) Of, or belonging to, an artery, or to the arteries.

A. arch'es. The same as *Aortic arches*.

A. blood. See *Blood, arterial*.

A. bru'it. (F. *bruit*, noise.) See *A. sounds*.

A. circle of Wil'is. See *Willis, circle of*.

A. constitu'tion. A term for a plethoric habit of body.

A. diastolic mur'mur. A term proposed by Dr. Gemmell for an arterial murmur produced by pressure with the stethoscope, inasmuch as it is coincident in time with the expansion, diastole, or pulse of the artery in which it is heard.

A. duct. See *Ductus arteriosus*.

A. mur'mur. See *Murmur, arterial*.

A. pyæ'mia. A term proposed for those cases of purulent infection, in which the blood contamination is the result of special inflammation of the cardiac valves.

A. sounds. Two distinct sounds heard on auscultation of the larger arteries, and usually produced by transmission of the cardiac sounds;

according to some, the sounds may be the result of vibrations, the result of friction of the blood on the arterial walls, or, at least, the first sound in part.

A. sys'tem. The whole series of arteries from the aorta to the termination of the remote branches in the capillaries.

A. systole. (Συστολή, a contraction.) The active return of the artery to its natural dimension after being distended by the blood forced into it by the cardiac systole.

A. ten'sion. The same as *A. systole*.

The expression is also applied to the pressure of blood from within on the arterial tube.

A. tone. (Τόνος, tone.) The condition of permanent contraction of an artery, which is natural to it in a healthy state, and which is lost, giving place to dilatation, when the vaso-motor nerve-fibres are divided.

A. to'nus. The same as *A. tone*.

A. var'ix. A synonym of *Circoid aneurysm*.

A. veta. (F. *veins artérielles*.) The pulmonary artery.

Arterialisa'tion. (Same etymon.) The oxidation of the blood.

Arterioec'tasis. (Ἀρτηρία; ἑκτασις, extension. F. *artériectasie*; G. *Schlagadererweiterung*, *Arterienauddehnung*.) Dilatation of an artery; aneurysm.

Arterioec'topy. (Ἀρτηρία; ἑκτοπισμός, away from a place. F. *artériectopie*; G. *abnorme Lage einer Arterie*.) An abnormal situation of an artery.

Arterieurys'ma. (Ἀρτηρία; εὐρύς, wide. G. *Schlagaderausdehnung*.) Same as *Aneurysm*.

Arteri'tis. Same as *Arteritis*.

Arterioar'ctia. (L. *arteria*, an artery; *arcto*, to contract.) Piörty's term for *Arteriostenosis*.

Arterio-cap'illary fibro'sis. A term applied by Sir W. Gull and Dr. Sutton to a deposit of hyalin-fibroid material in the fibrous walls of the small arteries and capillaries. This condition of the general arteries and capillaries of the body is seen in cases of granular kidney, and constitutes, according to them, the essence and cause of the disease. This view is not universally accepted.

Arteriochal'asis. (Ἀρτηρία; χαλασις, a slackening.) Dilatation of an artery.

Arteriodial'ysis. (Ἀρτηρία; διάλυσις, a separating. F. *artériodialyse*; G. *das Aufschwinden einer Arterie*.) A shrinking or wasting of an artery.

Also, a synonym of *False aneurysm*.

Arteriodias'tasis. (Ἀρτηρία; διάστασις, a standing aloof. F. *artériodiasiose*.) The separation of two arteries that normally should be together.

Also, the retraction or separation from each other of the two ends of a divided artery.

Arteriodiplotopies'mus. (Ἀρτηρία; διπλός, double; πιεσμός, a squeezing. F. *artériodiplopième*; G. *die Doppelcompression einer verwundeten Arterie*.) A double compression of a wounded artery, in order to form a small space in which the blood may become coagulated.

Arteriod'omum. (Ἀρτηρία; δομήν, to overpower. F. *artériodomie*; G. *Arteriodom*.) An artery-compressing forceps.

Arteriog'raphy. (Ἀρτηρία; γράφω,

ARTERIOID-ARTERITIS.

to write. F. and G. *artériographie*.) A description of the arteries.

Arterioïd. (*Ἀρτηρία*; εἰδός, likeness. F. *artériode*; G. *schlagaderähnlich*.) Resembling an artery.

Arterioïa. (Dim. of *arteria*, an artery. F. *artériole*; G. *ein kleine Pulsader*.) A minute artery; an arteriole.

A. auriculæ ris cordis dex'tra. (*Ἀρτηρία*; L. *cor*, the heart; *dexter*, on the right side. G. *rechten Kranzarterie*.) The right coronary artery of the heart.

A. auriculæ ris cordis sinis'tra. (*Ἀρτηρία*; L. *cor*, the heart; *sinister*, on the left. G. *linken Kranzarterie*.) The left coronary artery of the heart.

Arterioles rectæ. (L. *rectus*, straight.) The *vasa recta* of the kidney.

Arteriole. (Same etymon as *Arteriola*.) A small or ultimate artery.

Arteriolog'y. (*Ἀρτηρία*; λόγος, a discourse. F. and G. *arteriologie*.) A treatise on the arteries.

Arteriomalacia. (*Ἀρτηρία*; μαλακία, softness. F. *artériomalacie*, *arteriomalacose*; G. *Erweichung der Arterienhäute*.) Softening of the arteries.

Arteriomalaco'sis. Same etymon and meaning as *Arteriomalacia*.

Arteriopal'mus. (*Ἀρτηρία*; παλμός, palpitation. F. *artériopalmus*.) Vehement pulsation of the arteries, or palpitation.

Arterioperis'sia. (*Ἀρτηρία*; περισσία, beyond the regular number, extraordinary. F. *artériopériosis*; *Schlagaderüberucherung*.) Engorgement of the arteries.

Arteriophlebotomy. (*Ἀρτηρία*, artery; φλέψ, a vein; τμήνω, to cut.) Bleeding by scarification, as in cupping and the use of leeches.

Arteriopier'ster. (*Ἀρτηρία*; πιεστήρ, a squeezer. F. *artériopiestère*; G. *Arterien-drücker*.) An artery squeezer or compressor.

Arteriopituitous. (L. *arteria*; pituita, phlegm.) Term applied to the vessels which are distributed to the mucous membrane of the nose. (Dunglison.)

Arteriopla'nia. (*Ἀρτηρία*; πλανάνω, to wander. F. *artérioplastic*.) Excessive elongation or displacement of the arteries.

Arteriopleg'mus. Same as *Angiopleg'mus*.

Arterioplo'cæ. Same as *Angioplo'cæ*.

Arteriorrh'ex'is. (*Ἀρτηρία*; ρήξις, a breaking or bursting. F. *artériorrhæxis*; G. *Schlagaderzerreissung*.) Rupture of an artery.

Arterioscenograph'ia. (*Ἀρτηρία*; σκηνographia. F. and G. *arterioscenographie*.) Scenography of the arteries.

Arteriosclero'sis. (*Ἀρτηρία*; σκληρόσις, hard.) Hardening of the walls of an artery from hypertrophy of connective tissue; said to be the result of a migration of leucocytes, through the endothelium of the vessel, into the spaces between the striated lamellæ of the tunica intima, and their conversion into spindle-shaped and stellate cells.

Arterios'ity. (*Ἀρτηρία*.) The retention of arterial characters by blood traversing veins.

Arteriosten'o'sis. (*Ἀρτηρία*; στένωσις, a being straightened. F. *artériosténose*; G. *Schlagaderverengung*.) Contraction of the arteries.

Arteriosteogen'es'is. (*Ἀρτηρία*;

οστίον, a bone; γένεσις, generation.) Same as *Arterios'osis*.

Arteriosto'sis. (*Ἀρτηρία*; οστίον. F. *artériostose*; G. *Schlagaderverknöcherung*.) Ossification of the arteries.

Arteriostrep'sis. (*Ἀρτηρία*; στρέψις, a turning round. F. *torsion des artères*; G. *Drehen der Schlagadern*.) Torsion of the arteries.

Arterio'sus. (L. *arteria*, an artery.) Having numerous arteries, full of arteries, or of the nature of an artery.

A. ductus. See *Ductus arteriosus*.

Arteriothlim'ma. (*Ἀρτηρία*; θλίμμα, that which is pressed out. F. *artériothlimme*.) Injury from pressure or bruising of the arteries.

Arteriothlip'sis. (*Ἀρτηρία*; θλίψις, a pressure. F. *artériothlipsis*.) Pressure, a bruising, or grazing of an artery.

Arteriotome. (*Ἀρτηρία*; τομή, a cutting.) A lancet.

Arteriotomy. (*Ἀρτηρία*, an artery; τομή, from τμήνω, to cut. G. *Schlagaderöffnung*.) Term for the operation of cutting into, dividing, or opening an artery.

Arteriotrep'sis. (*Ἀρτηρία*; τρέψις, a turning.) Torsion of the arteries.

Arteriove'nous. (L. *arteria*, an artery; *vena*, a vein.) That which concerns the mutual relations or connections of an artery and a vein.

A. an'eury'sm. See *Aneurysm*, *arteriovenous*.

A. mur'mur. A whirring murmur having a continuous base of sound, with intermittent increase, occurring in places where there is a communication between a large artery and a vein, such as to permit a current of blood from the former to the latter.

Arterit'is. (*Ἀρτηρία*, an artery. F. *artérite*; L. *arteritide*; G. *Schlagaderentzündung*.) Inflammation of an artery. This may either be acute or chronic. Acute inflammation affects either the *Tunica intima*, or the *T. adventitia*, or, very rarely, the *T. media*. Inflammation of the internal coat is usually produced by direct irritation, as by the action of mechanical or chemical agents, such as a wound, the presence of chalky fragments of degenerated semilunar valves and emboli. The membrane loses its polish and transparency, the endothelial cells becoming detached, and it separates in shreds from the middle coat; the inflammatory process with suppuration may spread to the outer coat.

Chronic inflammation is sometimes designated *arterio-sclerosis*, and leads to atheromatous changes.

In the earlier stage the arterial walls are stiffer and less elastic than natural. On section they present unusually round orifices, and appear to be somewhat dilated. The endothelial cell-layer remains unchanged, but beneath it and in the tunica intima hyperplastic nuclear- and cell-formation occurs, raising the intima into nodules, and these subsequently pass into fatty degeneration, giving the coat at this point a yellowish hue. Deposit of lime, salts, or calcareous degeneration occurs coincidently with the fatty metamorphosis, and parts of the wall of the vessel become almost bony, though no true bone is ever formed. Mingled with the fattily degenerated tissue and lime salts is cholesterolin, the whole forming the atheromatous patch. The endothelial cells usually become detached, and the atheromatous material is more or less com-

ARTERIOPERECTASIS—ARTHONOID.

pletely swept away by the blood current, leaving an atheromatous ulcer, from the edges of which calcareous laminae project, that again lead to the formation of thrombi.

Inflammation of the outer coat, sometimes termed ex- or periarteritis, results from direct injury, or from the spread of inflammation to it from other parts. The vessels of the adventitia become injected, it swells by exudation and proliferation of cells, and suppuration occurs in it. The lumen of the vessel is constricted, and after some time the tunica media undergoes fatty degeneration, and the intima becomes friable; an abscess may form and burst internally or externally. If the circulation continue through the vessel, it now again begins to dilate, and usually is the seat of a thrombosis. Subsequently, the thrombosis may become organised and lead to the obliteration of the artery, or it may suppurate, or portions of it may become detached and lead to embolism elsewhere, or to pyæmia.

Chronic arteritis occurs most frequently in the aorta, the splenic, crural, cerebral, and coronary arteries. It is rare before 30 years of age, is often a consequence of abuse of alcohol, and is associated with gout.

By interfering with the due supply of blood to parts it leads to spontaneous gangrene; by rendering the walls of arteries more rigid, and thus requiring that more force should be exerted to maintain the circulation, it induces hypertrophy of the left ventricle, and lastly, by weakening the walls of the vessels, it predisposes them to dilatation and aneurism.

The treatment in acute cases consists in rest and local depletion; in chronic it must be essentially symptomatic, and be directed to arresting the progress of the disease by the adoption of a wholesome regimen.

A., acute. See under *Arteritis*.

A., chronic. See under *Arteritis*.

A. deformans. (*L. de forma*, to disfigure.)

A term applied by Virchow to those conditions of the arteries, especially of the aorta, which produce crumpling or irregularity of the walls, and which, usually called atheromatous, are regarded by him as a result of chronic inflammation.

A., diffuse. A variety formerly described, in which the inner coat of the artery was reddened and softened; it is now considered to be a pyæmic or septicæmic condition.

A., embolic. (*Embolism*.) The same as *A., plastic*.

A., erysipelatous. The same as *A., diffuse*.

A. obliterativa. (*L. oblitero*, to obliterate.) A form of disease of the arteries consisting in a development of connective tissue, rich in cells, within the inner coats of small arteries, which gradually diminishes the lumen, and at last closes the canal of the artery.

A., plastic. (*Πλαστικός*, fit for moulding.) That form in which the internal coat, in consequence of inflammatory change, becomes coated with fibrin, and a clot forms. It is seen as a result of ligature of an artery.

A., subacute. The same as *A., chronic*.

A., umbilical. (*Umbilicus*.) Inflammation of the umbilical artery in the tied remains of the cord in new-born children. It is said to be most frequent during epidemics of puerperal fever. Serious results, such as embolic inflammations of internal organs, may ensue.

Arterioperectasis. (*Ἀρτηρία; ὑπέρ*,

above; *ἵκτασις*, extension. *F. artériyperectasis*; *G. Schlagaderausdehnung*.) Too great extension of an artery.

Artery. (For etymon see *Arteria*.) The membranous, elastic pulsating tubes, or canals, which convey the blood in its course from the heart, by numerous ramifications, to every part of the body, diminishing in size as they proceed, and terminating in a network of vessels interposed between them and the veins, the capillary vessels. They are usually enclosed by, and loosely connected with, a sheath of connective tissue. Thin sections of arteries, variously prepared, show that they are composed of three layers, an outer, middle, and inner layer.

The *outer layer*, tunica adventitia, is composed of loose connective tissue, with much elastic, and not unfrequently in the aorta some muscular, tissue intermingled with it. The inner part of the adventitia sometimes presents quite a strong and well-defined layer of longitudinally arranged elastic fibres, as in the basilar artery. Blood-vessels, vasa vasorum, and nerves ramify in the adventitia.

The *middle layer*, tunica media, constitutes the greater part of the thickness of the arterial wall in medium-sized arteries. It is composed of one or several layers of circularly running unstriated muscular fibres, separated, when there are several layers, by networks or laminae of elastic tissue, most abundant at its inner and outer surfaces. In the larger arteries the elastic tissue gradually augments in quantity, till at length in the aorta it is almost as abundant as the muscular tissue, some of which last is disposed longitudinally. No vessels enter this layer.

The *internal layer*, tunica intima, is composed of a series of flat, elongated, nucleated cells, with sinuous borders, arranged with their long diameter parallel to that of the vessel, a subepithelial layer of connective tissue, with branched corpuscles, and a fibroid coat of elastic tissue, in which a few nuclei are scattered.

A. forceps. A forceps possessing a spring-catch; designed for taking and keeping hold of an artery, so as to dispense with, or liberate the hands of, an assistant.

Artetisous. (*L. artus*, a limb.) Old term applied to one who has suffered the loss of any limb. (Dornæus, Ruland, and Johnson.)

Arthanita. A name for the herb *Cyclamen europæum*, or sow-bread; also, for an ointment prepared from the cyclamen, which was rubbed into the abdomen as a purgative.

Arthanitic acid. (*Arthanita*.) A synonym of *Cyclamin*.

Arthanitin. (*F. arthanitin*; *G. Arthanitin*.) $C_{20}H_{31}O_{10}$. A glucoside contained in the tubers of the *Cyclamen europæum*. It forms white odourless crystals, having a very acrid taste. It is readily soluble in water and alcohol, but insoluble in ether, chloroform, and carbon bisulphide. It is an irritant poison, and is mentioned by Professor de Luca as a substitute for curare, and as a remedy for tetanus.

Also, called *Cyclamin*.

Arthereticus. (*Ἀρθρον*, a joint.) Synonymous with *Arthriticus*.

Arthetica. A name for the *Teucrium chamaepitys*.

Also, used as a synonym of *Arthritis*.

Also, remedies for the gout.

Arthonoid. Applied to apothecia resembling those of the lichen named *Arthonia*.

ARTHRÆMIA—ARTHRITIS.

Arthræ'mia. (Ἀρθρον, a limb or joint; αἷμα, blood. F. *arthrémie*.) Engorgement of blood in a joint. Congestion of a joint.

Arthra'gra. (Ἀρθρον; ἄγρα, a seizure.) A term for gout.

A. anom'ala. (Ἀνώμαλος, irregular.) Irregular or anomalous gout.

A. genu'ina. (L. *genuinus*, natural.) Ordinary or regular gout.

A. legiti'ma. (L. *legitimus*, belonging to law.) True gout.

A. norma'lis. (L. *normalis*, made according to the square.) True gout.

A. vera. (L. *verus*, true.) True gout.

Arthragro'sis. (Ἀρθραγρα. F. *arthragrose*; G. *Gicht*, *Gichtkrankheit*.) The progress of gout.

Arthral'gia. (Ἀρθρον, a joint; ἄλγος, pain. F. *arthralgie*; I. *artralgia*; G. *Glieder-schmerz*, *Gelenkneuralgie*.) Pain in the joints; gout.

Also, same as *Arthritis*.

Also, neuralgia of a joint.

A. hyster'ica. Hysterical joint-pain. Pain in a joint occurring in hysterical persons, generally with cutaneous hyperæsthesia, and sometimes swelling.

A. saturn'ina. (L. *Saturnus*, Saturn, a name for lead.) Pain in a joint and its neighbouring muscles, especially the flexors, with recurrent cramps occurring in persons the subjects of lead-poisoning. Opium, potassium iodide, and baths of sulphide of potassium, are employed.

Arthral'gic. (Same etymon.) That which relates to arthralgia.

Arthrapobrochis'mus. (Ἀρθρον; ἀρροχίζω, to bind tight. F. *arthrapobrochisme*; G. *Abbinden eines Gliedes*.) Subligation or firm bandaging of a joint.

Arthraposphinx'is. (Ἀρθρον; ἀρροσφύγξις, a squeezing tight.) Same as preceding.

Arthraposte'ma. (Ἀρθρον; ἀπόστημα, an abscess. F. *arthrapostème*; G. *Gelenkabscess*.) Abscess of a joint.

Arthrecta'sia. (Ἀρθρον; ἑκτασις, extension. F. *arthrectasie*; G. *Gelenkausehnung*.) Dilatation or distension of a joint.

Arthrecta'sis. Same as *Arthrectasia*.

Arthrelco'sis. (Ἀρθρον; ἑλκωσις, an ulceration. F. *arthrelcose*; G. *Gelenkverschwärung*.) Ulceration of a joint.

Arthrembole'sis. (Ἀρθρον; ἐμβάλλω, to throw in.) The reduction of a dislocated joint, or a fractured bone.

Arthrem'bolum. Same as *Arthrembolus*.

Arthrem'bolus. (Ἀρθρον, a joint; ἐμβάλλω, to impel. G. *Gliedenrichter*.) Name, used by Jac. Sponius, in *Aph. Nov. Hippocrat. s. iii, in not. 7*, of an instrument anciently used for reducing luxated bones.

Arthrempye'sis. (Ἀρθρον; ἐμπύσις, suppuration. F. *arthrempyse*; G. *Gelenkeiterung*.) Suppuration of a joint.

Arthren'tasis. (Ἀρθρα, the limbs; ἵστας, a stretching tight. F. *arthrentase*; G. *die Krümmung der Glieder*.) Term for gouty contraction of the limbs.

Arthret'ica. The same as *Arthetica*.

Arthric. (Ἀρθρον. F. *arthrique*; G. *Gelenke betreffend*.) Belonging to the joints; applied to diseases affecting them.

Arthrid'ium. (Ἀρθρίδιον, dim. of ἄρθρον, a joint.) A small joint.

Arthrit'ia. (Ἀρθρίτις, gout.) Gout.

Arthritic. (Ἀρθρίτις, gout, inflammation of a joint, or gout. G. *gichtisch*.) Of, or belonging to, the disease arthritis, or to gout, or to the joints.

A. cal'culus. (L. *calculus*, a small stone.) A gouty concretion; a chalk stone.

A. coxa'lgia. See *Coxalgia*, *arthritic*.

A. fe'ver. (F. *fièvre arthritique*.) The symptomatic fever accompanying an attack of gout.

A. insan'ity. A term applied to certain cases of insanity, in which rheumatism or gout is supposed to be the cause of the mental disturbance.

A. iri'tis. A form of iritis, said to be due to gout. See *Iritis*, *arthritic*.

A. ophthal'mia. (Ὠφθαλμία, a disease of the eye with secretion.) A synonym of acute inflammatory glaucoma.

A. paina. (F. *douleurs arthritiques*.) The pains of gout.

A. ring. The zone of injected blood-vessels, seen in iritis, surrounding the margin of the cornea.

Arthrit'ica. The same as *Arthetica*.

Arthrit'ious ver'us. (Ἀρθρίτις, gout; L. *verus*, true.) Gout.

Arthritide. A cutaneous affection indicative of gouty diathesis. (Bazin.)

Arthritifuga. (Ἀρθρίτις; *fugo*, to drive away.) Remedies for expelling or curing gout.

Arthrit'is. (Ἀρθρίτις, from ἄρθρον, a joint. F. *Arthrite*; G. *Gliederrissen*, *Gicht*, *Gelenkentzündung*.) A term for inflammation of a joint; also, for rheumatism in a joint, and for gout.

At present, arthritis is taken to signify inflammation of all or most of the structures entering into the formation of a joint, synovial membrane, fibrous capsule, ligaments, cartilage, and bone, in any one of which it may commence. It may be caused by a bruise, sprain, wound, or fracture; it may occur in the course of pyæmia, gonorrhœa, or of albuminuria, and as a consequence of uterine phlebitis following labour or abortion; it is often strumous. The joint is hot, sometimes red, very painful, often uniformly swollen, generally doughy to the feel, and slightly flexed; nocturnal startings are very painful; and there is high fever and often great distress. Displacement of the bones is a common result from softening of ligaments and contraction of muscles. The disease may subside or suppuration may end in death. In advanced cases there is usually destruction of cartilage. Total rest is essential to the successful treatment; suppuration may necessitate the removal of the limb. There is more or less stiffness or ankylosis on recovery.

A. aber'rans. (L. *aberro*, to wander away.) Wandering gout; attacking internal organs.

A. acu'ta. (L. *acutus*, sharp, severe.) Ordinary acute gout.

A. arthro'dyn'ia. (Ἀρθρον, a joint; ὀδύνη, pain.) A term applied to chronic rheumatism of the joints, or to rheumatoid arthritis.

A. asthen'ica. (Ἀσθενικός, weakly.) Atonic gout.

A. aton'ica. (Ἀττικός, feeble.) Atonic gout.

ARTHRITIS—ARTHROCAË.

A. atyp'ica. (L. *a*, neg.; *typicus*, belonging to a regular form.) Atonic gout.

A. blennorrhag'ica. (Βλίννα, mucus; ῥήγνυμι, to flow.) Term applied to an inflammation of one of the larger joints supervening in the course of severe blennorrhagia. Suppuration rarely occurs, and the disease is rare in women. It usually terminates by resolution. Rest, the topical and general employment of opium, vesication, and the application of tincture of iodine, are usually recommended.

A. chron'ica. (Χρόνος, time.) A synonym of *A. rheumatica chronica*.

A. deformans. (L. *deformo*, to disfigure. F. *arthrite chronique sèche*, *rhumatisme noueux*; G. *Knoten-gicht*, *rheumatische Gicht*, *gichtischer Rheumatismus*.) A progressive inflammatory disease of the joints, due to trophic disturbance of all the structures entering into them, but especially of the cartilage, which becomes fibrillated, and then breaks down, leading to out-growths of bone, which produce great deformity of the joint, impairment of motion, and persistent shortening of muscles. It chiefly affects old people. For further account see *Rheumatoid arthritis*, to cases of which, where the deformity is a prominent feature, this term is applied.

A. diaphragmat'ica. (Διάφραγμα, a partition wall, the diaphragm.) A synonym of *Angina pectoris*.

A. erratic'a. (L. *erraticus*, wandering about.) Wandering or erratic gout.

A. hydrarth'ros. (Υῶδωρ, water; ἄρθρον, a joint.) Effusion of fluid into a joint, the result of synovitis.

A. inflammato'ria. (L. *inflammatio*, inflammation.) Acute gout.

A. juven'ilis. (L. *juvenilis*, belonging to youth.) A term which has been applied to acute rheumatism.

A. maxilla'ris. (L. *maxillaris*, belonging to the jaw.) Rheumatic inflammation of the joint of the lower jaw.

A. nodo'sa. (L. *nodosus*, full of knots.) A synonym of *A. deformans*.

Also, a synonym of gout, in which there is a nodular deposit of chalk stones.

A. pau'perum. (L. *pauper*, poor.) A term applied to those cases of rheumatoid arthritis where the disease commences in the fingers, probably from overstrain.

A. plane'tica. (Πλανητικός, wandering.) Term for wandering or erratic gout.

A. poda'gra. (Ποδάγρα, gout in the feet.) Acute gout.

A. regula'ris. (L. *regularis*, regular.) Normal acute gout.

A. retrogra'da. (L. *retrogradus*, going back.) Retrocedent or metastatic gout.

A. rheumat'ica. Rheumatic arthritis; a term for rheumatoid arthritis.

A. rheumat'ica chron'ica. See *Rheumatoid arthritis*.

A. rheumatis'mus. (Ρευματισμός, a defluxion.) Acute rheumatism.

A. rheumatoid'es. (Rheumatism; ἔλδος, likeness.) See *Rheumatoid arthritis*.

A. sic'ca. (L. *siccus*, dry.) A synonym of *A. deformans*.

A. typ'ica. (L. *typicus*, belonging to a particular form.) Normal acute gout.

A. urat'ica. (Uric acid.) Gout, so called from the excess of uric acid present in this dis-

ease, and from the frequent deposits of urates about the joints.

A. urethra'lis. (Οὐρήθρα, the urethra.) Arthritis supervening upon severe inflammation of the urethra, from gonorrhoea or from mechanical injury to this canal. It affects usually one of the larger joints, and suppuration is not infrequent. Leeches, vesicatories, acupuncture, and rest, have been recommended.

A. ur'ica. Inflammation of joints associated with disorder of the renal secretion, otherwise gout. It includes the various forms of gouty inflammation of the joints, known under the names of podagra, gonagra, omagra, chiraagra, ischiagra, and rachisagra.

A. va'ga. (L. *vagus*, wandering.) Gouty attacks shifting from one joint to another.

A. ve'ra. (L. *verus*, true.) A synonym of gout.

A. viscera'lis. (L. *visceralis*, from *viscera*, the bowels.) Inflammation of internal organs, alternating with gouty inflammation of the joints.

Arthrit'is, cervic'al. (L. *cervix*, the neck.) Inflammation of the joints of the cervical vertebrae.

A., fung'ous. A term applied to those cases of chronic arthritis in which there is a fungus-like degeneration of articular cartilage.

A., strum'ous, chron'ic. Chronic joint-inflammation occurring in a strumous person, often called white swelling, from the even, white, semi-elastic swelling of the joint, obliterating all prominences; the limb wastes, suppuration occurs in and around the joint, hectic weakness, and death occurs from exhaustion or tubercular deposit in the lungs or other organs. The disease probably begins in inflammation of the synovial folds, which gradually spreads over the whole membrane; the folds are said to grow, to become attached to the cartilage, and then to become the centre of destructive change, which gradually spreads to the bones; concomitantly the other structures of the joint, ligaments and capsule, become swollen and softened, with large increase of cell growth, ending in suppuration. The treatment recommended is entire rest by means of splints and compressing plasters, and counter-irritation, good diet, fresh or sea air, tonics, and cod-liver oil. Destruction of tissue may necessitate amputation or excision. Recovery seldom takes place without more or less ankylosis.

A., subdiarthro'dial. (L. *sub*, under; *diarthrosis*.) According to Littré and Robin, a white swelling, in which the medulla, being inflamed, has given origin to fleshy sprouts, lying between the bone and the articular cartilage, and lifting up the latter.

A., traum'atic. (Τραυματικός, belonging to a wound.) Inflammation of a joint from a wound; the disease commences as synovitis, and if unchecked spreads to the other tissues of the joint. Rest and antiseptic treatment are usually employed; if suppuration occurs the joint is to be opened, and generally a drainage tube is inserted and the antiseptic treatment followed. If the injury be extensive amputation may be needed.

Arthrit'olith. (Ἀρθρίτης, gout; λίθος, a stone.) See *Arthrolith*.

Arthr'ium. (Ἀρθρον. F. *arthrion*; G. *Gelenkchen*.) Name by Kirby for a very small joint at the base of the last articulation of the feet in most tetramerous and trimerous *Coleoptera*.

Arthrocaë. (Ἀρθρον, a joint; καός, evil or disease. G. *Winddorn*.) A term for an

ARTHROCACIA—ARTHROPERISSIA.

ulcerated condition or caries of the cavity of a bone.

Also, used as synonymous with *Spina ventosa* by Dr. Cullen.

A. coxarum. (L. *coxa*, the hip.) Hip-joint disease.

Arthroca'cia. (Ἀρθρον; κακός, evil. F. *arthrocacia*; G. *Arthrokakie*.) Name by Rust for a chronic disease of the joints, particularly luxation from internal causes.

Arthrocaecolo'gia. (Arthroca'cia; λόγος, a discourse. F. *arthrocacologie*; G. *Arthrokakologie*.) A treatise on diseases of the joints.

Arthrocarcino'ma. (Ἀρθρον; carcino'ma. F. *arthrocarcinome*; G. *Gelenkkrebs*.) A carcinomatous joint.

Arthrocele. (Ἀρθρον; κήλη, a tumour. F. *arthrocele*; G. *Gelenkgeschwulst*.) A tumour of a joint.

Arthroechr'i'asis. (Ἀρθρον; κερχ'asis, a grain of millet. F. *arthroechr'asis*; G. *die Kirsensfichte der Gelenke*.) An eruption over a joint.

Arthroceph'ala. (Ἀρθρον; κεφαλή, a head. F. *arthrocephale*; G. *gelenkkopf*.) Applied by Duméril to a Family of *Crustacea* having the head distinct from, and jointed with, the body.

Arthrocerat'ia. (Ἀρθρον; κέρα, a horn. F. *arthrocerat*; G. *gelenkhornig*.) Applied by Robineau-Desvoidy to nine pieces of the vertebrae of *Articulata* which are developed above, and consist in a pair of articulated appendages forming the palpi, antennae, halteres, and often a part of the wings.

Arthrochondrit'is. (Ἀρθρον; chondrit'is. F. *arthrochondrite*; G. *die Entzündung der Gelenknorpel*.) Inflammation of the cartilages of a joint.

Arthroco'ci. (Ἀρθρον, a joint; κόκκος, a kernel.) The product of the growth in an acid fluid of plastide-particles, called micrococci, into cells, like *Torula* or yeast-cells, which further develop into arthroco'ci (Hallier). By growth in the longitudinal direction, accompanied by the formation of septa at intervals, arthroco'ci are said to be capable of developing into distinct fungi of the *Oidium* type.

Arthro'des. (Ἀρθρον. F. *arthreuz*; G. *gelenkartig, gelenkartig*.) Having, or pertaining to, a joint.

Arthro'dia. (Ἀρθρώδια, from ἀρθρώω, to fasten by a joint. F. *arthrodie*; I. *artrodia*; G. *Kugelgelenk*.) Term for an articulation admitting of gliding motion; a variety of the Class *Diarthrosis*. In arthrodial joints the surfaces are either plane or slightly concave and convex; the motion is limited by the ligaments of the joints, or by the process of the bone. Such are the articular processes of the vertebrae, the radio-carpal, carpal, metacarpal, inferior radio-ulnar, superior tibio-fibular, tarsal and tarso-metatarsal, temporo-maxillary, acromio-clavicular, and sterno-clavicular joints.

Arthrodi'e'æ. (Same etymon. F. *arthrodie*.) Applied by Bory to an Order of *Phytozoa*, composed of articulated filaments.

Arthro'dium. (Same etymon. F. *arthrodium*; G. *ein kleines Gelenk*.) A little joint.

Also, the same as *Arthrodia*.

Arthrodyn'ia. (Ἀρθρον, a joint; δόδυνη, pain. G. *Gelenkschmerz*.) Term for the sensation of pain in a joint, or chronic rheumatism.

A. podag'rica. (Ποδάγρυ, gout in the feet.) Gout.

Arthroëcta'sia. See *Arthrectasia*.

Arthroëdema. (Ἀρθρον; œdema. F. *arthrodème*; G. *Gelenkwassersucht*.) Œdema of a joint.

Arthroempye'sis. (Ἀρθρον; ἐμπύσις, suppuration.) Suppuration in a joint.

Arthrogas'tra. (Ἀρθρον, a joint; γαστήρ, stomach.) An Order of the Class *Arachnoidea*. The abdomen is sessile and segmented; mandibular palpi developed as pincers.

Arthrog'raphy. (Ἀρθρον, a joint; γράφω, to write. F. *arthrographie*; G. *Gelenklehre*.) A description of the joints.

Arthrogrypo'sis. (Ἀρθρον, a joint; γρυπώσμαι, to become bent.) Distortion of the joints from muscular action.

Arthrohe'mia. Piorry's form of spelling *arthremia*.

Arthrohy'drin. (Ἀρθρον, a joint; ὕδωρ, water.) The fluid of joints; synovia.

Arthrolepro'sis. (Ἀρθρον; λέπρωσις, becoming leprosy. F. *arthroleprose*; G. *Gelenkleprose*.) Leprosy of the joints.

Arthrolith. (Ἀρθρον, a joint; λίθος, a stone.) A loose calcified cartilage, or mass of lymph, in a joint.

Arthrolo'bium. A Genus of the Nat. Order *Fabacea*.

A. scorpiol'des. The leaves are capable of being employed as vesicatories.

Arthrol'o'gy. (Ἀρθρον, a joint; λόγος, a discourse. F. *arthrologie*; G. *Bänderlehre*.) A description of the anatomy of the joints.

Arthrom'bolé. (Ἀρθρον, a joint; βάλλω, to place, fix, or build.) A term for the reduction of a dislocation, or for coaptation of the parts of a fracture.

Arthromening'i'tis. (Ἀρθρον; μὴνιγξ, a membrane. F. *arthromeningite*; G. *Entzündung der Gelenkhäute*.) Inflammation of the membranes of a joint; synovitis.

A. croup'o'sa. Croupous synovitis; joint-inflammation with fibrinous deposit.

A. purulen'ta. Purulent synovitis.

Arthronal'gia. (Ἀρθρον, a joint; ἄλγος, pain.) Same as *Arthrodynia*, *Arthralgia*.

Arthron'cus. (Ἀρθρον, a joint; ὄγκος, a mass, or eminence.) A term for the distinct cartilaginous body (one or more) which sometimes forms within the knee-joint.

According to some (G. *Gelenkgeschwulst*), swelling of a joint.

Arthronema. (Ἀρθρον; νῆμα, a thread. G. *Gliederfaden*.) A filament with nodules or joints.

Arthronempye'sis. The same as *Arthroempyesis*.

Arthroparal'y'sis. (Ἀρθρον; παράλυσις. F. *arthroparalysie*; G. *Gliederlähmung*.) Paralysis of the limbs.

Arthropath'i'a. (Ἀρθρον, a joint; πάθος, a disease. G. *Gelenkleiden*.) Name given to an affection of the shoulder-joint, commencing, without appreciable cause, with violent pain and swelling of the brachial portion, chiefly affecting the humerus and its envelopes.

A. hyster'ica. Painfulness of a joint without apparent organic change, occurring in an hysterical person.

Arthroperisphinx'is. See *Arthroposphinxis*.

Arthroperis'sia. (Ἀρθρον; περισσεια,

ARTHROPHLOGOSIS—AETHROZOA.

abundance. *F. arthropriasis*; *G. Übersahl der Glieder*.) The state of having supernumerary limbs or joints.

Arthroplogosis. (ἄρθρον, a joint; φλόγωσις, from φλογέω, to inflame or burn. *G. Gelenkentzündung*.) Another term for inflammation of a joint.

A. synovialis. (*Synovia*.) Synovitis.

Arthrophyma. (ἄρθρον; φύμα, a tumour.) An old term for white swelling of a joint.

A. adenochochondrium. (ἄδην, a gland; χόνδρος, cartilage. *G. weisse Gelenkgeschwulst*.) White swelling of a joint, inasmuch as it affects both glands and cartilage.

Arthroplastic. (ἄρθρον; πλάσσω, to form. *F. arthroplastique*.) Relating to *Arthroplasty*.

Arthroplast'y. (ἄρθρον, a joint; πλάσσω, to form. *F. arthroplastique*; *G. künstliche Gelenkbildung*.) The formation of an artificial joint to remedy ankylosis.

Arthropoda. (ἄρθρον, a joint; ποὺς, a foot.) A Subkingdom of the *Invertebrata*, defined by Macalister as symmetrical, usually dioecious, non-ciliated schizocoelous persons, of a limited specifically constant number of often heteronomous metameres or somites, each usually with a pair of ventrally articulated, hollow-jointed organs as feelers, jaws, or limbs. The body consists of head, thorax, and abdomen; the first contains not fewer than four united somites, bearing the sense organs preorally; the second bears the locomotory limbs; the third contains the vegetative and reproductive organs. The heart when present, is dorsal, tubular, often segmented, and the circulation is more or less lacunary. Breathing effected by the surface, gills, or tracheæ. Digestion absent in some parasitic crustaceans; mouth usually anterior, ventral; anus terminal, occasionally apocytous; intestine seldom tortuous; the surface of the body presents a firm chitinous investment, with or without an interstitial calcareous deposit, pierced by many pore canals. Muscles colourless, transversely striated, metamERICALLY divided. There is a pharyngeal nerve ring with an epipharyngeal brain ganglion, and a hypopharyngeal pair of ganglia with complex commissures, from which a double gangliated ventral cord extends backwards. The upper surface of the ganglia is motor, the lower sensory. Some have a separate sympathetic system and a vagus nerve attached to the pharyngeal ring. The ova undergo partial cleavage. The germ divides into two layers. Parthenogenesis occurs in several cases; metagenesis in one of the Cecidomyiide. In most cases the young undergo either progressive or retrogressive metamorphosis.

Arthropomata. (ἄρθρον, a joint; πομα, a lid.) An Order of the Class *Brachiopoda*, Subkingdom *Mollusca*. Shell calcareous, furnished with a hinge; valves held together by teeth; alimentary canal terminating in a cul-de-sac.

Arthropo'sis. (ἄρθρον, a joint; πύον, pus. *F. arthropose*; *G. Gelenkvereiterung, Gelenkgeschwür, Eitergelenk*.) Term for a collection of pus in a joint; but also applied to other affections of the joints in which suppuration was supposed to have taken place, and also to lumbar abscess.

Arthrorrhagia. (ἄρθρον; ῥήγνυμι, to burst forth. *F. arthrorrhagie*; *G. Gelenkblut-*

fluss.) A sudden discharge—by custom understood to be of blood—from a joint.

Arthrorrheuma. (ἄρθρον; rheuma, for rheumatism. *F. arthrorrheumatisms*; *G. Gliederreumatismus, Gelenkrheuma*.) Acute rheumatism in the joints.

Arthrorrheumatis'mus. Same as *Arthrorrheuma*.

Arthro'sia. (ἄρθρωση, to fasten by a joint.) A generic name for articular inflammation, according to Good.

A. acuta. (*L. acutus*, severe.) Acute rheumatism.

A. chron'ica. (Χρόνος, time.) Chronic rheumatism.

A. hydarth'rus. (Υδωρ, water; ἄρθρον, a joint.) Serous effusion into a joint.

A. poda'gra. (Ποδάγρα, gout in the feet.) Acute gout.

Arthro'sis. (ἄρθρωση, to fasten by a joint. *G. Einlenkung*.) Term for articulation or connection by joints.

Arthrospongo'sis. (ἄρθρον; spongos, *F. arthrospongose*; *G. Gliedschwammung*.) The formation of fungus in a joint.

Arthrospon'gus. (ἄρθρον; σπώγγος, sponge. *G. Gliedschwamm*.) The disease of the joint, especially of the knee, formerly known as white swelling.

Arthrospheres. (ἄρθρον; σπόρος, seed.) Term applied in Botany to spores united in the form of a chain or rosary.

Arthrosp'orous. (ἄρθρον, a joint; σπόρος, seed.) A term applied to plants like *Fungi* which develop from a jointed mycelium, or the spores of which develop by fission, the segments remaining attached.

Arthrosteno'sis. (ἄρθρον; στένωσις, a being straightened. *F. arthrosténose*; *G. Gelenkverengerung*.) Contraction of a limb.

Arthrostrophyma. (ἄρθρον; osteophyma. *F. arthrostrophyme*.) An osseous tumour in a joint.

Arthroster'e'sis. (ἄρθρον; στέρησις, deprivation. *F. arthrostérèse*.) The removal or absence of one or more limbs.

Arthrosterig'mata. (ἄρθρον, a joint; στερίγμα, a prop.) A term in Botany applied to the jointed sterigmata of *Fungi*.

Arthros'traca. (ἄρθρον, a joint; δεικτρον, an egg-shell.) A synonym of *Ecdriophthalmata*.

Arthrosym'physis. (ἄρθρον; σύμφυσις, a growing together. *F. arthrosymphyses*; *G. Gelenkverwachsung*.) Adhesion of limbs, as the fingers or toes.

Arthrosyr'inx. (ἄρθρον; σύριγξ, a pipe. *F. fistule articulaire*; *G. Gelenkfistel*.) Fistula in a joint.

Arthrotomy. (ἄρθρον, a joint; τομή, a cutting.) The resection or excision of joints.

Arthrot'phi. (ἄρθρον; τώφης. *G. Gelenk-Tophi*.) Concretions around the joints in gout, or other diseases.

Arthrotrau'ma. (ἄρθρον; τραύμα, a wound. *F. arthrotrauma*; *G. Gelenkwunde*.) A wound of a joint.

Arthrotr'opia. (ἄρθρον; τροπή, a turning. *F. arthrotröpie*; *G. Glieddrehen*.) Torsion of the limbs.

Arthroxero'sis. (ἄρθρον; ξήρωσις, a drying up.) A synonym of *Arthritis deformans*.

Arthrozo'a. (ἄρθρον; ζῷον, an animal. *F. arthrozoaire*; *G. Gliedertiere*.) Applied by

ARTHRYPERPETHIA—ARTICULATED.

Herm. Burmeister to a Family containing *An-nulata*, *Malacostraca*, and *Insecta*.

Arthryperpathia. (*Ἀρθρον; ὥρις*, in excess; *πάθος*, disease. *F. arthryperpathie.*) Term by Piorry for an excessively severe affection of the joints, as arthritis, hip-joint disease.

Arthryposphixis. See *Arthraposphixis*.

Artia. Old term, used by some for *Arteria*, but by others applied to the *Arteria aspera*, or windpipe, according to Castellus.

Artiad. (*ἄριος*, complete, even, as of numbers.) A term applied to chemical elements, the equivalency of which is expressed by an even number, as dyads, tetrads, hexads.

Artichaut sauvage. (Fr.) See *Carlina acanthifolia*.

Artichoke. (Said to be derived from *Ar-ardischoeki*, earth thorn. *F. artichaut*; *I. carciofo*, *carciofano*; *S. artichoka*; *G. Artischocke.*) The common name of the plant *Cynara scolymus*. The unexpanded flower-head furnishes a well-known vegetable of delicate flavour, the disc and the fleshy bases of the scales being the parts eaten.

A., French. See *Cynara scolymus*.

A., Jers'salem. (*I. girasole*, sunflower; of which the word Jerusalem is said to be a corruption.) The common name for the plant *Helianthus tuberosus*, the tubers of which are used as food. According to an analysis given by Pavy, 100 parts contain—Nitrogenous matter 3.1, sugar 14.7, inuline 1.9, pectic acid .9, pectine .4, cellulose 1.5, fatty matter .2, mineral matter 1.3, water 76.

Artico'ca. Same as *Articocalus*.

Articoc'alus. (*ἄριος*, perfect; *κόκκος*, the kernel of the pine cone.) Name for the *Cynara scolymus*, or artichoke.

Articulamen'tum. The deep layer of the lateral area of the anterior and posterior semicircular valves of Polyplacophora. (Mac-alister.)

Articular. (*L. articularis*, pertaining to the joints. *F. articulaire.*) Of, or belonging to, an articulation or joint.

A. arteries of arm. The circumflex arteries of the arm.

A. arteries of knee. See *Knee-joint, arteries of*.

A. arteries of hip. See *Hip-joint, arteries of*.

A. bone. A bone constituting the proper centre of the proximal or articular part of the free lower jaw. It can only exist when the mandibular arch is segmented into a pier and free arch, as in the oviparous Vertebrata generally. In mammals this segmentation does not take place, as the primary rod is arrested to form the malleus, and is not segmented. Their lower jaw answers to the superficial "dentary" bone of the Ovipara, and is articulated to another superficial bone, viz. the squamosal.

A. capsule. (*L. capsula*, dim. of *capsa*, a box. *F. capsule articulaire.*) A synonym of *Occlusor ligament*.

A. cartilage. See *Cartilage, articular*.

A. facet'te. (*F.* dim. of *face*, face, aspect. *F. facette articulaire.*) The more or less rounded or flattened surface of a bone which touches a similar part of another bone in a joint.

A. leaves. (*F. feuilles articulaires.*) Leaves which spring from the nodes or articulations of a stem or branch.

A. pro'cess. (*F. apophyse articulaire*; *G. Gelenkfortsatz.*) A process, also called zygo-physis, situate near the junction of the pedicle and lamina of a vertebra, one above and one below, on each side. The free surface of each, covered with cartilage, articulates with that of the adjoining vertebra; that of the superior is directed backwards, that of the inferior forwards. The articular processes of the atlas and axis do not correspond in situation to those of the other vertebrae, but are situate at the junction of the pedicles with the bodies of the vertebrae. The articular processes of the sacral vertebrae become united to each other, except in early life, and those of the three lower occygeal vertebrae are wanting.

Articula'ris. (Same etymon.) Relating to a joint.

A. ge'nu. (*L. genu*, the knee.) The sub-orureus muscle.

A. morbus. (*L. morbus*, a disease.) Another term for arthritis, or gout.

A. ve'na. (*L. vena*, a vein.) A name for the vein accompanying the posterior circumflex artery; also called subhumeralis; it arises from the basilic, then passes transversely round the neck of the humerus, and ramifies on the scapula.

Articula'ta. (*L. articulus*, a joint.) The third great division of the four into which Cuvier divided the animal kingdom. The nervous system consists of two long cords with a series of ganglionic enlargements, the first of which is the brain, and is situated on the oesophagus, the rest along the body; the external envelope is divided into a number of rings, it may be hard or soft, and it gives attachment to the muscles; the body may have attached to it articulated limbs; the jaws, when present, are lateral. It consists of four classes—Hexapoda, Arachnida, Crustacea, and Annelida.

Also, a Suborder of the Order *Brachiata* or *Crinoidea*, Class *Crinoidea*, Subkingdom *Echinodermata*. Calyx not entirely formed of coronal pieces; no parabasals; the arch of the membranous calyx furnished with grooves and ambulacral tubes.

Also, one of the Subdivisions of cyclostomatous *Polyzoa*, in which the colonies are vertical and jointed.

Also, one of the Divisions of the *Brachiopoda*, in which the valves of the shell are united by teeth along the hinge-line, the lobes of the mantle are not completely free, and the digestive canal is provided with a distinct anus.

Also, a synonym of *Arthropoda*.

Articulate. (*L. articulatus*, distinct, part. of *articulo*, to divide into joints.) Divided into joints, distinct.

A. sounds. The vocal elements of which speech is formed; they are divided into vowel sounds and consonant sounds.

A. speech. It is conceivable that communication might be carried on by vocal sounds of the same pitch and intensity by the individual sounds being made of various lengths; but by articulate speech is meant the employment of words pronounced by various movements of the lips and tongue. The co-ordinating centre for the movements required to produce these sounds is situate in the medulla oblongata, for in it are the origins of the pneumogastric, spinal accessory, hypoglossal, and facial nerves.

Articulated. (Same etymon. *F. articulé*; *G. gegliedert.*) Jointed. The term is

ARTICULATIO—ARTIFICIAL.

applied in Botany to a part when it is capable of separating into definite portions. Thus, a stem is said to be articulated when it breaks across without difficulty at each node, and a foliar or floral organ is articulated when it separates at the point of its attachment to the stem or axis.

Applied in Geology to columns of basalt and other rocks which, being separable into blocks, appear jointed.

Articula'tio. (L. *articulus*, a joint.) A joint.

A. artifi'cialis. (L. *artificialis*, artificial.) A false joint, as from non-union of a fractured bone.

A. atlan'to-epistroph'ica. (*Atlas*; *ἄτλας*, upon; *στρόφις*, to turn.) The articulation between the atlas and the axis.

A. cox'ae. (L. *coxa*, the hip.) The hip-joint.

A. no'tha. (L. *nothus*, spurious.) A false joint.

Articula'tion. (L. *articulus*, a joint. F. *articulation*; G. *Gelenk*, *Gliederung*.) A joint. The connection between two bones or cartilages; according to the mode in which this connection is accomplished, articulations are divided into three classes, named *Synarthrosis*, *Amphiarthrosis*, and *Diarthrosis*.

Applied also to the artificial connection, or fastening together, of the various bones of the skeleton, one to another, in their natural situation.

Also, a term for the distinct utterance of syllables or words, by the organs of speech.

In Botany, the term is applied to the point when, at a certain period, a separation between two organs takes place. Thus, an articulation frequently occurs between the petiole of a leaf and the branch, or between the peduncles of the floral organs and the axis. In the former case there is sometimes a layer of soft transparent cells, which has been called the "couche separatrice," through which the rupture takes place.

A. defect of. See *Alalia* and *Stammering*.

A. false. A false joint, as when a fractured bone does not unite, or a dislocated bone is not replaced.

Articula'tus. (L. *articulus*, a joint.) Having knots or joints.

A. cau'lis. (L. *caulis*, a stem.) A stem having nodes.

A. dehiscen'tia. (L. *dehisco*, to split open.) Bursting transversely.

A. foli'um. (L. *folium*, a leaf.) A leaf which articulates with the stem.

A. fruc'tus. (L. *fructus*, fruit.) A fruit transversely divided into nodes.

Artic'uli. (L. pl. of *articulus*, a member.) Members, divisions. The joints of the cirrhi of Crinoids.

A. digito'rum ma'nus. (L. *digitus*, a finger; *manus*, the hand.) The phalanges of the fingers.

A. digito'rum pe'dis. (L. *digitus*; *pes*, a foot.) The phalanges of the toes.

Articuloden'tate. (L. *articulus*; *dentatus*, toothed. G. *gegliedert-gezahnt*.) Jointed and toothed. Used in Botany.

Articulo mort'is. (L. *articulus*, a moment; *mors*, death.) Between life and death; in the act of dying.

Articulo-spina'lis. (L. *articulus*; *spinalis*, belonging to the spine.) The semi-spinalis colli muscle.

Artic'ulus. (L. *articulus*. F. *article*; G. *Glied*.) A joint.

Term applied in Botany to a series of parts which collectively constitute an organ, but which at a certain period separate from each other. Thus, in the Papilionaceae, the several parts of the fruit which contain a seed and separate from each other at maturity are called articuli.

Applied to that part of the stalk which extends between two knots or joints; also, a knot or joint.

In Mycology, the term designates a cell issuing like a branch from another cell, from which it is separated by a dissepiment.

A. no'thus. (*Nóthos*, spurious.) A false joint.

A. no'vus. (L. *novus*, new.) A false joint.

A. preternatura'lis. (L. *præter*, beyond; *naturalis*, natural.) A false joint.

A. spu'rius. (L. *spurius*, false.) A false joint.

Artifi'cial. (L. *artificialis*, artificial; from *artificium*, a handicraft. F. *artificiel*; G. *künstlich*.) Produced by art.

A. anus. (L. *anus*, the fundament.)

Term for an opening made in the parietes of the abdomen, by disease, accident, or operation, through which the feces are, in whole or in part, discharged during life. Also, an opening made in the natural situation in cases of imperforate anus in infants. See also *Colotomy*.

A. eye. A shell made of glass and tinted, used to conceal the loss of an eye.

A. joint. Applied to that condition in which the broken ends of a fractured bone do not unite by a consolidation of osseous matter, but become rounded and smooth, and connected by a fibrous ligamentous substance; also termed a false joint.

A. limb. A mechanical contrivance, in imitation of the appearance and action of one or other of the limbs, for use when the natural member, or part of it, has been removed.

A. membra'na tym'pani. See *Membrana tympani*, *artificial*.

A. meth'od. This term is applied in Botany to systems of classification, which, like those of Linnæus, are founded on the condition of a single or of a small number of organs, and which enable a plant to be readily recognised without a comprehensive knowledge of its relations.

A. pu'pil. Name for the result of operation for removing obstructions to the light caused by adhesions or permanent contraction of the iris. See *Iridectomy*, *Iridodesis*, *Iridodialysis*, *Corsetomy*, *Corectomia*, and *Coredialysis*.

A. respira'tion. (L. *respiratio*, breathing back.) The aeration of the blood of an asphyxiated person by artificial means. This may be effected either by the injection of air into the lungs in a rhythmical manner, by means of bellows or syringes, or by insufflation from the lungs of another, the mouth being applied to that of the asphyxiated person, and the nostrils closed by pressure; in all of which cases the escape of the air is effected by the natural elasticity of the parietes of the chest and of the lungs. Double-acting bellows have been used to substitute the inspiratory and expiratory acts. Artificial respiration may also be effected by imitating the expansion and contraction of the chest by certain positions or movements.

Ancient method.—The method of artificial respiration formerly employed was the alternate compression and relaxation of the walls of the

ARTOCARPEE—ARUM.

seed erect or pendulous, with little or no albumen; embryo straight, with a superior radicle. Exclusively tropical plants.

Artocarpæe. The same as *Artocarpacea*.

Artocarpus. (Ἄρτος, bread; κάπρος, fruit. *F. arbre à pain*; *G. Brodfruchtbaum*.) A Genus of the Nat. Order *Artocarpaceae*. Male flowers in catkins; females naked, becoming a rounded fleshy fruit.

A. bengalensis. Systematic name of a species, the fruit of which is pickled in salt, and used in cookery.

A. brasilien'sis. A species growing in Brazil, similar in use to the *A. integrifolia*.

A. communis. (*L. communis*, common.) The *A. incisa*.

A. heterophylla. Lam. (Ἐτερος, different; φύλλον, a leaf.) Fruit and seeds esculent. Probably the same as *A. integrifolia*.

A. hirsuta. (*L. hirsutus*, shaggy.) The Anjeli of Malabar. It produces an edible fruit, which, if used too freely, brings on diarrhoea, for which the bark or root of the tree is given.

A. incisa. Willd. (*L. incusus*, notched. *F. arbre à pain*.) The bread-fruit tree, about the size of a small oak. Hab. South Sea Islands, and transported thence to the W. Indies, and S. America. The fruit, contained in a round catkin, varying in size from a child's to a man's head, is gathered when of full growth, baked in an oven, and, on removing the rind, the internal portion is found to resemble bread crumbs, and is used as food. In the South Sea Islands the juice is employed as glue, the wood as timber, and the bark for making a coarse kind of cloth.

A. integrifolia. Willd. (*L. integer*, entire; *folium*, a leaf. *F. jacquier*; *Tam. Pila*; *Tel. panasa*; *Duk. phunus*; *Mal. pilavoo*; *Beng. kantai*.) The Indian Jack or Jaca tree, the fruit of which, larger than that of the *A. incisa*, but of inferior flavour, is largely eaten by the natives in Ceylon, Southern India, and Asia. The inner wood is also employed to dye the robes of the priests of Buddha of a yellow colour.

A. jaca. The *A. integrifolia*.

Artocreas. (Ἄρτος, bread; κρέας, flesh. *G. Fleischbrod*, *Fleischpastele*.) Bread-meat, or a kind of pasty, made of bread and various meats boiled together.

Artogala. (Ἄρτος, bread; γάλα, milk.) A poultice made of bread and milk.

Also, a cooling food made of bread and milk.

Artomelli. (Ἄρτος, bread; μέλι, honey. *G. Honigteig*.) Old name for a cataplasm made of bread and honey.

Artopoeopora. (Ἀρτοποιός, a baker; ψώρα, the itch. *G. Buckerkrutze*.) Baker's itch; usually a form of eczema, or lichen agrius.

Artopitcus. (Ἄρτος, bread; ὄπτειν, to toast.) Toasted bread.

Artorhizæ. (Ἄρτος, bread; ῥίζα, root.) A term employed by Endlicher as a synonym of the *Dioscoreaceae* and the *Taccaceae*.

Artus. (*L. artus*, a joint; in the plural, limbs. *G. Glied*.) An articulation; a limb.

Artyma. (Ἄρτυμα, a condiment.) A preserve or conserve, a condiment, an aroma.

Aru-aru. The name applied by the Aruac, Arowaka, or Aroaqui Indians to the fecula of the mandioc.

Arum. (Ἄρον, the cuckoo-pint; *F. gouet*; *S. ara*; *G. Arouncurz*.) A Genus of the Nat. Order *Araceae*. Spathe convolute; spadix naked

at the point; male flowers placed above, female below, separated by cirrhi; anthers sessile; ovary one-celled.

A. americanum de'toe fo'ilia. (*L. beta*, the beet; *folium*, a leaf.) The American beet-leaved arum. A synonym of *Dracontium fatidum*.

A. atrovirens. (*L. ater*, black; *rubens*, reddish.) The *A. triphyllum*.

A. campanulatum. (New *L. campana*, a bell.) A species producing an edible corm.

A. colocasia. (Κολοκασία, the Greek name of the plant. *F. colocase Egypte*.) A plant cultivated in the E. Indies, Syria, Egypt, and S. Europe, the leaves and root of which, boiled in water, are much used as food.

A. Dioscorides. (*Dioscorides*, an early Greek physician.) The turio of this plant was anciently used, when fresh, as an active purgative.

A. draconium. (*L. draco*, a kind of serpent.) The plant *Dracontium pertusum*.

A. dracunculus. Linn. (*L. dracunculus*, a small serpent. *F. serpenteaire commune*; *G. gemeines Schlangenkraut*.) The plant dragon's-wort, and many-leaved Arum; it is extremely acrid, with properties as *A. maculatum*.

A. esculentum. Linn. (*L. esculentus*, fit for eating. *F. chou carabie*.) A species used as a pot-herb in the West Indies. The fresh leaves and root are very acrid, but lose this when boiled.

A. hederaceum. (*L. hederaceus*, ivy-like. *F. herbe à méchants*.) A climbing plant, the juice of which is poisonous and caustic. It is probably a *Philodendron*.

A. indicum. (*L. indicus*, Indian.) A species cultivated in India for the sake of its esculent stems and pendulous tubers.

A. italicum. (*L. italicus*, Italian.) The turio of this plant was formerly used for the same purposes and under the same name as the turio of *A. vulgare*.

A. macrorrhizon. (Μακρός, large; ῥίζα, a root.) A synonym of *A. montanum*.

A. maculatum. Linn. (*L. maculo*, to spot. *F. gouet*, *pied de veau*; *G. gemeines Arouncurz*.) The plant wake-robin, or common arum, or cuckoo-pint. Leaves hastate sagittate; spadix straight, club-shaped. The corm is ovoid, with little smell and an acrid taste; the acidity is destroyed by torrefaction and fermentation. From it a starch is made, called Portland or arum arrowroot, or sago; the corms are pounded, the pulp washed, and the water strained, until all acidity is removed; the starch is then allowed to settle, and is dried (see *Arrowroot*, *arum*). Several cases of poisoning have been recorded. There is great pain and swelling of the tongue and throat, vomiting, diarrhoea, a feeble pulse, sometimes convulsions, coma, and, it may be, death. Fresh butter, melted, has been advised to be given, and, after free vomiting, strong coffee.

A. montanum. (*L. montanus*, belonging to a mountain. *Tel. konda-rakis*.) The root is employed to poison tigers in India, but after long boiling becomes innocuous and a wholesome food.

A. moschatum. (Μόσχος, musk.) An old name of black pepper.

A. musciflorum. Linn. (*L. musca*, a fly; *voro*, to devour.) A poisonous species with a cadaverous odour.

A. ringens. (*L. ringens*; part. of *ringor*, to open wide the mouth.) The *A. triphyllum*.

ARYTENOIDEUS—ASARALEs.

which the term is chiefly applied, are in their natural position, they appear somewhat like the pipe, or mouth, of an ancient pitcher. *F. arytenoideus*; *G. Giesskannenformig.*) Resembling, or shaped like, the mouth of a pitcher.

A. cartilages. (*F. cartilages arytenoideus*; *G. arytenoideische Knorpel, Giessbeckenknorpel.*) Two cartilages of the larynx, which, in their natural situation, resemble the mouth of a pitcher. They are three-sided pyramidal bodies, with their base on the upper margin of the posterior part of the cricoid cartilage, and their recurved apex free. Each is 5"—6" high, 3" wide, and 1" thick; the posterior face, broad, triangular, and concave from above to below, lodges the arytenoid muscle; the anterior face, rough and convex, gives attachment to the thyro-arytenoid muscle and the superior or false vocal cord; the internal face, the narrowest, slightly convex, is covered by mucous membrane, and is parallel with that of the other cartilage; the base is slightly concave and articulates with the cricoid cartilage; its short, rounded, external angle gives insertion to the posterior and lateral crico-arytenoid muscles, and to its pointed anterior angle the true vocal cord is attached. The apex is curved backwards and inwards, and to the summit are articulated the cartilages of Santorini. Their function is to regulate the tension of the chordæ vocales through the action of the muscles.

A. glands. (*F. glandes arytenoïdiennes.*) Numerous muciparous glands lying in front of the arytenoid cartilages, in the hind margin of the aryteno-epiglottidean fold.

A. muscle. (*F. muscle arytenoïdien.*) A thick band of transverse fibres stretching between the posterior concave surfaces of each arytenoid cartilage and filling up the interspace. It draws together the arytenoid cartilages and depresses their summits.

Arytenoideus. (*Arytenoid cartilage.*) Of, or belonging to, the arytenoid cartilages.

A. major. (*L. major, greater.*) The Arytenoid muscle.

A. minor. (*L. minor, less.*) The *A. obliquus*.

A. obliquus. (*L. obliquus, slanting. F. arytenoïdien croisé.*) Two slender bundles of muscular fibre, placed in an oppositely oblique position on the arytenoid muscle; now considered part of the aryteno-epiglottidean muscles.

A. transversus. (*L. transversus, lying across. F. arytenoïdien erat.*) The Arytenoid muscle.

Arythmia. (*A, neg.; ῥυθμός, measured motion.*) Irregularity, specially of the pulse.

Arythmic. (Same etymon.) Irregular.

As. An old term for the weight libra, or a pound, divided into twelve ounces, or equal parts.

Asa, Arab. (Heb. *ṭṭḥn*, to heal.) An old term signifying a healer; also spelt *Asa*. (Quincy.)

A. dulcis. (*L. dulcis, sweet.*) The sweet healer; an old term for benzoinum, or gum benzoin; Schröderus, iv, cl. n. 372.

A. foetida. (*L. foetidus, stinking.*) The fetid or stinking healer; Schröderus, iv, cl. n. 377. See *Assafetida*.

Asab. (Arab.) The disease borzail, when it affects males. See *Borzail*.

Asaba hermes. (Heb. *אֲסָבָה הֶרְמֵס*.)

Arab. *azaba*, yellow.) The meadow saffron, so named either from hermes, or from its colour.

Asaba-ul-feteyat. Arabic for *Ocimum basilicum*, common sweet basil.

Asabatus. See *Assabatus*.

Asa'bon. (Heb. *ṭṭḥn*. Arab. *asephon*.) Old term for sapo, or soap. (Ruland.)

Asses'tus. Lime, or limestone. (Castellus.)

Asafetida. A synonym of *Assafetida*.

Assafetida. See *Assafetida*.

A. Disgunien'sis. (*Disgun*, a town in the Persian province of Laristan, where it grows.) A shrub, according to Kämpfer, which supplies assafetida.

Asa'gen. (Arab.) The *Sanguis draconis*, or dragon's blood.

Asagi. (Heb. *ṭṭḥn*. Arab. *asak*.) Arabic for vitriol. (Ruland.)

Asagrea. (Called after Dr. Asa Gray.) A Genus of the Nat. Order *Melanthaceae*.

A. officinalis. Lind. (*L. officina*, a shop.) *Sabadilla*. Flowers racemose, naked; sepals and petals narrow, coloured with a honey spot at the base; stamens perigynous, alternately shorter; anthers bursting vertically; follicles 3, acuminate, papery; seeds winged. An alpine Mexican plant, yielding the coadilla seeds of commerce. The dried fruit is imported from Vera Cruz and Mexico. An acrid, drastic, emetico-cathartic; used in chronic rheumatism, paralysis, and neuralgia; also, as an anthelmintic and for pediculi. Dose, 4—6 grains. The substance called *Veratrum* is obtained from the seed.

Asagraya. The same as *Asagrea*.

Asamar. Arabic for *Ærugo aris*, or verdigris. (Quincy.)

Asamaz. Term for vitriol. (Ruland and Johnson.)

Asanon. Prepared *Sal ammoniacum*.

Asape'ix. The Brazilian name of the *Bæhmeria caudata*.

Asapes. (*Ἀσάπης*, not liable to rot; from *ἀ*, neg.; *σῆπωμαι*, to rot, to corrupt.) Term applied to the sputa, or to other excreta, which are not liable to putrefaction, or, according to some, which do not result from digestion.

Asaphatum. Arabic term for a kind of serpigo or impetigo, or intercutaneous itch, generated in the pores like worms, which, on the skin being compressed, come out like worms with black heads. (Dornaeus, Ruland, and Johnson.) Doubtless what are now called *Comedones*.

Asaphia. (*Ἀσάφεια*; from *ἀ*, neg.; *σαφής*, clear. *G. Undeutlichkeit*.) Ancient term for an indistinctness of voice, whether depending on defect of speech, or on disease of a nervous kind; also, a state of partial delirium. It has been applied to defect from malformation of the soft palate.

Asa'prize. Brazilian name of the *Bæhmeria caudata*. Nat. Order *Urticaceae*. Said to be antihæmorrhoidal. (Littre and Robin.)

Asarabacca. (From a confusion between the two plants *Asarum* and *Baccharis*, which so came to be united under one name.) A synonym of *Asarum canadense*, *A. europæum*, and *Isula dysenterica*.

A. officinarum. (*L. officina*, a workshop.) The *Asarum europæum*.

Asarabica. A term applied to the root of *Asarum europæum*. (Birdwood.)

Asaral alliance. The same as *Asarales*.

Asarales. (*Asarum*.) According to

ASARATH—ASCARICIDA ANTHELMINTICA.

Lindley, an Alliance of epigynous Exogens, having monochlamydeous flowers, and a small embryo lying in a large quantity of albumen. The Natural Orders of *Asarales* are *Santalaceae*, *Loranthaceae*, and *Aristolochiaceae*.

Asarath. The name in Turkey of the *Cannabis sativa*.

Asaricis. (Ἀσαρκία; from ἀ, neg.; σάρξ, flesh. *F. asaricis*; *G. Fleischmangel*, *Magerkeit*.) Want of flesh, or leanness; emaciation.

Asaricon. (Same etymon.) Leannees.

Asarion. (*F. asarino*; *G. Haselwurzcampbor*.) $C_9H_{10}O_2$, or $C_{10}H_{12}O_2$. A white, crystallisable, solid, volatile, aromatic, camphor-like substance, obtained from the *Asarum europæum*. It is soluble in alcohol, ether, and volatile oils; softens to a waxy consistence at 26° C. (80° F.), melts at 65-68° C. (150° F.).

Also, by some, applied to a bitter, nauseous principle found in the same plant.

Asarinææ. (*Asarum*.) A synonym of *Aristolochiaceae*.

Asarite. A yellowish, acrid, thick, volatile essential oil, obtained from the *Asarum europæum*.

Asarites. (Ἀσαρίτης.) A diuretic wine containing three ounces of asarum to six pounds of strong sweet wine.

Asaron. Same as the camphorous *Asarin*.

Asaroon. Arab. for *Asarum europæum*, or *Asarabacca*.

Asarum. (A, neg.; στέφα, a chaplet, because it was rejected from garlands by the ancients; according to some, from ἀσάρω, causing nausea. *F. asaret*; *G. Haselwurcz*.) A Genus of the Nat. Order *Aristolochiaceae*. Perianth campanulate, 3-cleft, superior; stamens 12, arising from the apex of the germ; stigma rayed, 6-lobed; capsule 6-celled.

The official name, U.S. Ph., for the root of *Asarum canadense*.

A. arifolium. Michx. (*Arum*, the plant of that name; *folium*, a leaf. *F. asaret à feuilles d'aron*.) A species having the same properties as *A. europæum*.

A. camphor. A synonym of *Asaron*.

A. canadense. Willd. (*F. asaret du Canada*.) Wild ginger, Canada snake-root. Hab. North America. Stem very short, dividing into two long, hairy leaf stalks, each bearing a pubescent, reniform leaf; in the angle is a single flower on a pendulous peduncle, with a brownish purple calyx, and no corolla. The dried root is in contorted pieces, the thickness of a straw, wrinkled, brownish without, whitish within, aromatic and bitterish in taste; it contains a volatile oil or camphor, *Asarin*, and a bitter resin. Warm aromatic stimulant and diaphoretic. It has been used in dropsy. Dose, 20—30 grains.

A. carolinianum. Carolina asarabacca; the *A. canadense*.

A. europæum. (*F. cabaret*, *oreillette*, *nard sauvage*.) Hab. Woods of Europe. Stamens 12, horned, distinct from each other and from the style; calyx campanulate, 3-lobed; leaves reniform, obtuse, hairy, in pairs. The leaves, and particularly the root, are emetic and cathartic, and were employed, before the introduction of ipecacuan, for the purposes to which it is applied; the leaves are still used as a sternutatory; also called *Nardus montana*, or *rustica*, or *sylvestris*.

A. grandifolium. (*L. grandis*, great; *fls*, a flower.) The *A. arifolium*.

A. hypocistis. (Ἵποκιστίς, from ὑπό, upon; κίστος, the cistus plant.) The *Cytinus hypocistis*.

A. latifolium. (*L. latus*, broad; *folium*, a leaf.) The *A. canadense*.

A. officinale. (*L. officina*, a workshop.) The *A. europæum*.

A. villosum. (*L. villosus*, hairy.) The *A. canadense*.

A. virginicum. Willd. Used for the same purposes as *A. canadense*.

A. vulgare. (*L. vulgaris*, common.) The *A. europæum*.

Asbestinum. A term for asbestos.

Asbestoid. (Ἀσβεστός; ἰδω, likeness. *F. asbestoide*; *G. asbestähnlich*.) Resembling asbestos.

Asbestos. (Ἀσβεστός, inextinguishable; from ἀ, neg.; σβίννυμι, to quench. *F. asbeste*; *L. asbesto*; *G. Asbest, Bergasche, Federasbest*.) A term for certain fine fibrous varieties of several of the hornblende family, as actinolite, augite, and tremolite, found in connection with serpentine; also, called *Amianthus* and *Byssolites*. There are many varieties in texture and substance; in some the fibres are long, parallel, and compact; in others they are loose and silky.

The asbestos of Dioscorides was calx viva, or quicklime.

Those who work much with asbestos, especially the finer and more silky varieties, suffer from great redness and itching of the skin. Asbestos is used as a felting material, to make gloves for holding heated substances, and as a support for beakers over lamps.

A. com'mon. A dense variety, with little flexibility.

A. elastic. A felted fibrous form; also called mountain cork.

A. ligniform. (*L. lignum*, wood; *forma*, form.) A dense, woody-looking, brown variety; also called mountain wood.

A. scall. (Ἀσβεστός, inveterate.) Eczema of the scalp. (Dunglison.)

Asbestos. See *Asbestos*.

Asbiree. Arab. for *Myrtus communis*.

Asbolious. (Ἀσβόλιον, soot. *G. russig*.) Of, or pertaining to, soot; so chimney-sweepers' cancer is carcinoma asbolious.

Asbolin. (Same etymon.) An azotised fixed oil, obtained from soot by sulphuric ether, which dissolves it. It is slightly soluble in water.

Ascaïn. France; a few miles south of Biarritz, near St. Jean de Luz. A cold chalybeate spring.

Ascalabotes. (Ἀσκαλαβώτης, a spotted lizard.) A Family of the Suborder *Crasalingsues*, Order *Scuria*, distinguished by their biconcave vertebrae. The Genus *Geecho* forms the type.

Ascalonia. (*Ascalon*, a city of Palestine, from which it was first brought.) Term employed by Pliny to indicate the *Allium ascalonicum*, or shallot.

Ascalonitas. Term employed in the Capitularies of Charlemagne to indicate the *Allium ascalonicum*, or shallot.

Ascardamycetus. (Ἀσκαρδάμυκτος, not blinking; from ἀ, neg.; σκαρδάμωσεν, to blink.) One who is incapable of closing his eyes, or who stares with wide-open eyes; lagophthalmus.

Ascaricida anthelmin'tica. (*As-*

ASCARICIDE—ASCARIS

aria; *cedo*, to kill; *to*, against; *to*, a worm. The *Veronius* *to* *to* *to*.

A. indica. (*L. indica*, Indian.) The *Veronius* *to* *to* *to*.

Ascaricide. (*Ascaris*; *cedo*, to kill.) A destroyer of ascarides.

Ascaridaria. (*Ascaris*.) Applied by Bianchini to a section of *Microceras* that resemble ascarides in the general form of their body, and, according to him, belong indubitably to the class of apodous worms.

Ascaridæ. (*Ascaris*. G. Spulerer.) A Family of the Order Nematoda, Class Nematelmintha, Subkingdom Vermes. They are moderately compressed, and present at their anterior extremity three sucker-like projections, the so-called lips, which enclose a tubular or prismatic oral cavity. One of the lips is dorsal, the two others are ventral, and in close apposition. The outer wall of the dorsal lip has two, whilst the other lips have a single, tactile papilla. The oral cavity is lined with a cuticle, occasionally preventing chitinous outgrowths. A powerful central apparatus is often contained in the bulb formed by the posterior extremity of the pharynx. The lateral ridges of the body not unfrequently form lamellæ, especially near the head and the male genital aperture. The tail of the male is curved towards the belly, and usually possesses two moderately developed spicula. The vulva is in front of the middle of the body, and leads into a bifid uterus of considerable length, the two arms of which in the larger species are directed backwards. The development and life-history of the Ascaridæ are so diversified that it is difficult to make any general statements, but in many cases there is an intermediate host; there are others which develop directly, and others which in their early period lead a free life in the Rhabditis form.

Ascaridiasis. (*Ascaris*.) Disease consisting in being infested by ascarides.

Ascaridii. Same as *Ascaridaria*.

Ascaridocnæmus. (*Ascaris*; *cnæmus*, an itching. F. *ascaridocnæmus*.) Excessive itching from the presence of ascarides, as in the anus, or vulva.

Ascaris. (*Ascaris*; from *ἀσκαρῖς*, *ascari*, to leap; from their irritating motion.) A Genus of the Family *Ascaridæ*. White or yellowish worms, of cylindrical form, with four opaque, longitudinal lines placed opposite to each other, and corresponding to the divisions of the muscular mass. Skin leathery, transversely striated. Head with three distinct valves, which are split internally, and are armed with microscopic dentations. Mouth opening between the lips, and continuous with a muscular oesophagus, which has a triangular lumen. Stomach indistinctly marked off from the oesophagus; intestine sometimes possessing a cæcum or pyloric appendage. The tail in both sexes presents the form of a short cone. The male is shorter than the female, and has the tail recurved, naked, or provided with two lateral membranous alæ, or with two series of papillæ, rarely with a sucker; two more or less curved spicula. Female with straighter and longer tail; vulva situated in front of the middle, or even of the junction of the middle with the anterior third; vagina simple; uterus simple at first, but dividing into two or more long filiform cornua rolled round the intestine, and forming the oviduct and ovary. Ova elliptical or globular, covered with a hard shell,

hatching sometimes in the body of the mother. The embryo is short-tailed, and instead of the valves and lips at the fore part of the body presents a conical dental process.

A. acanthocaudata. (*L. acanthus*, a thorny shrub; *cauda*, tail.) Found in *Lota melos*.

A. acuta. (*L. acuta*, a point.) Found in the intestines and abdomen of *Belone acus*. The larva of this species is the same as the *Trichinus cyprinorum* of Diesing.

A. acuta. (*L. acutus*; from *acuo*, to make sharp.) Found in the intestines of *Rhombus barbatus*.

A. acutissima. (Same etymon.) Found in the cæcum of *Sciurus vulgaris*.

A. adipsa. (*L. adipsa*, fat.) Found in the abdominal cavity of *Esox lucius*.

A. adansoni. (*L. adansoni*, hooked.) Found in the stomach and intestines of *Alopius vulgatus*.

A. agilis. (*L. agilis*, that which is easy to move.) Found in *Crocodilus vulgaris*.

A. alata. (*L. alatus*, winged.) Two females have once been found by Bellingham in the intestine of man, and perhaps also previously by J. V. Thompson. Female 88 mm. in length; anterior extremity infested, with two semitransparent membranous wings, 3 mm. long, larger behind; tail conical, marked by a black spot. Cobbold believes he has proved it to be identical with *A. mystax*.

A. alaudæ. (*L. alauda*, the lark.) Found in *Anthus arboreus*.

A. albulæ. (*L. albulus*, dim. whitish.) Found in *Coregonus albula*.

A. aliena. (*L. aliena*, to make one person another.) Found in *Nasus socialis*.

A. ammodontæ. (*Ἀμμοδόντης*, sand-creeper.) Found in *Fipera ammodontæ*.

A. anatis cygnoides. (*L. anas*, a duck; *cygnus*, a swan.) Found in *Anas cygnoides*.

A. angulata. (*L. angulo*, to make angular.) Found in the intestines of *Lophius piscatorius*.

A. angulivalvis. (*L. angulus*, bent, crooked; *valva*, the leaves of a folding-door.) Found in the intestine of *Balanoptera rostrata*.

A. angusticollis. (*L. angustus*, narrow; *collis*, the neck.) Found in *Buteo vulgaris*.

A. anoura. (*ἄν*, neg.; *οὐρά*, a tail.) Found in *Constrictor bivittatus*.

A. anterospiralis. (*L. anterior*, foremost; *spira*, a coil.) Found in the stomach of the *Felis concolor*.

A. ardeæ. (*L. ardea*, the heron.) Found in the peritoneum of *Ardea cinerea*.

A. argentina. (*L. argentum*, silver.) Found in the abdomen of *Scopelus Humboldtii*.

A. aspidophori. (*Ἀσπιδόφορος*, shield-bearing.) Found in the intestines of *Aspidophorus europæus*.

A. astrophidis tigridis major. (*Ἀστροφίδης*, without twisting; *L. tigris*, a tiger; *major*, greater.) Found in the intestines of *Python tigris*.

A. astrophidis tigridis minor. (*Ἀστροφίδης*; *L. tigris*; *minor*, less.) Found in *Python tigris*.

A. atherinæ. (*Ἀθρίνη*, a kind of smelt.) Found in the intestines of *Atherina nepetius*.

A. attenuata. (*L. attenuatus*, part of *attenuo*, to make thin.) Found in the intestine of *Python tigris*.

A. aucta. (*L. auctus*, enlarged, abun-

ASCARIS.

dant.) Found in the intestine of *Zoares viviparus*.

A. auricula'ta. (L. *auricula*, the outer ear.) Found in the intestine of *Ophiomorphus miliaris*.

A. barbatulæ. (L. *barbatulus*, having a small beard.) Found in the intestine of *Cobitis barbatula*.

A. bicolor. (L. *bicolor*, of two colours.) Found in *Trichechus rosmarus*.

A. biuncinata'ta. (L. *bis*, twice; *uncinatus*, furnished with hooks, barbed.) Found in the stomach of *Zeus faber*.

A. Boddaertii. Found in the intestine of *Herpetodryas Boddaertii*.

A. boe'pis. (Boëpis, ox-eyed, large eyed.) Found in the peritoneum of *Box vulgaris*.

A. bra'mæ. Found in the stomach of *Brama Rayi*.

A. canis lagop'odia. (L. *canis*, a dog; *lagopus*, hare's foot.) Found in the intestine of *Canis lagopus*.

A. capsula'ria. (L. *capsula*, a small box.) Found in the intestines, and encapsuled in the peritoneum, of *Clupea harengus*.

A. castoris. (L. *castor*, beaver.) Found in the intestine of *Castor fiber*.

A. centrisc'ci. (Κεντρικός, a kind of fish.) Found in the peritoneum of *Centriscus scolopax*.

A. cephalop'tera. (Κεφαλή, the head; πτέρηξ, wing.) Found in the intestine of *Viperæ radii*.

A. charr'arli. (Χαραδριός, probably the golden plover.) Found under the skin of *Ægialites fluviatilis*, and in the intestine of *Ægialites hiaticula*.

A. chelonæ. (Χελώνη, a tortoise.) Found in tubercles in the œsophagus of *Chelone mydas*.

A. ciconiæ albæ. (L. *ciconia*, a stork; *albus*, white.) Found in the stomach and proventriculus of *Ciconia alba*.

A. circumflex'a. (L. *circumflexus*, part. of *circumflecto*, to bend about.) Found in the stomach and duodenum of *Felis pardus*.

A. clava'ta. (L. *clavatus*, part. of *clavo*, to nail.) Found in the intestine of *Gadus aglefinus*.

A. clu'peæ. (L. *clupea*, a shad.) Found in the intestine of *Clupea sprattus* and *Clupea harengus*.

A. clu'peæ'rum. (L. *clupea*, a shad.) Found in the abdomen of *Clupea harengus*.

A. colla'ris. (L. *collare*, a band for the neck.) Found in the intestine of *Rhombus maximus*.

A. columna'ris. (L. *columnaris*, rising in the form of a pillar.) Found in the intestines of *Mephitis chinga*.

A. com'par. (L. *compar*, like, or equal to, another.) Found in the intestine of *Tetrao urogallus*.

A. comos'oma. (Κῶνος, a pine-cone; σῶμα, the body.) A term applied by Joërdens to the larva of the common house fly, *Musca domestica*, by mistake.

A. constrict'a. (L. part. from *constringo*, to bind together.) Found in the peritoneum of *Gadus lucus*.

A. cornu'yi. Found in the vulturine pinato, *Humida vulturina*.

A. cornu'cis. (L. *cornix*, a crow.) Found in the stomach and intestines of *Corvus cornix*.

A. cor'vi fragil'egl. (L. *corvus*, a raven;

fragilegus, fruit gathering.) Found in the intestine of *Corvus fragilegi*.

A. cor'vi glanda'rii. (L. *corvus*; *glandarius*, of, or belonging to, an acorn or gland.) Found in the intestine of *Garrulus glandarius*.

A. crassicauda. (L. *crassus*, thick; *cauda*, a tail.) Found in the intestine of *Crenilabrus tinca*.

A. crena'ta. (L. *crena*, a notch.) Found in the intestine of *Sturnus vulgaris*.

A. crista'ta. (L. *cristatus*, tufted, crested.) Found in the intestine of *Eos lucius*.

A. cuneiformis. (L. *cuneus*, a wedge; *forma*, form.) Found in the intestine of *Gobius fluviatilis*.

A. cuspid'a. (Part. of *cuspido*, to make pointed.) Found in the intestine of *Cercopithecus sabæus*.

A. cyclopte'ri. (Κύκλος, a circle; πτερόν, a wing.) Found in the intestine of *Cyclopterus lumpus*.

A. cynes'di. Found in the peritoneum of *Labrus cynadus*.

A. cyprini erythrophthal'mi. (Κυπρίνος, a kind of carp; ἐρυθρός, red; ὀφθαλμός, the eye.) Found in the intestine of *Scardinius erythrophthalmus*.

A. denta'ta. (L. *dentatus*, toothed.) Found in the intestine of *Aspro vulgaris*, and of *Squalius ophalus*.

A. depress'a. (L. *depressus*, part. of *deprimo*, to depress.) Found in the intestine of *Vultur cinereus*.

A. dispar. (L. *dispar*, unequal.) Found in the intestine of the goose.

A. ecauda'ta. (L. *e*, without; *caudatus*, tailed.) Found in the peritoneum and intestine of *Conger vulgaris*.

A. echina'ta. (L. *echinatus*, beset with prickles.) Found in the intestine of *Platydaelytus guttatus*.

A. elonga'ta. (L. *elongatus*, part. of *elongo*, to lengthen.) Found in the intestine of *Atelas beelzebuth*.

A. emberiz'æ. Found in the intestine of *Emberiza hortulana*.

A. ensicauda'ta. (L. *ensis*, a sword; *caudatus*, tailed.) Found in the intestine of *Salicaria turdides*, and of *Turdus iliacus*, *T. merula*, *T. musicus*, and other Turdi.

A. eutom'eles. (Ευτός, within; μέλας, black.) Found in the lungs of *Rana helicina*.

A. fa'bræ. (L. *faber*, a smith.) Found in the stomach of *Zeus faber*.

A. ferox. (L. *ferox*, wild.) Found in the intestine of *Hyraz capensis* and *H. syriacus*.

A. fila'ria. (L. *filus*, a thread.) Found in the abdomen of *Python tigris*.

A. fissila'bium. (L. *fissus*, part. of *findo*, to split; *labium*, a lip.) Found in the intestine of *Sturnus vulgaris*.

A. fecun'da. (L. *fecundus*, fertile.) Found in the large intestine of *Trachycephalus occipitalis*.

A. fulig'inæ. (L. *fuligo*, soot; *gula*, gullet.) Found in the intestine of *Fuligula cristata*.

A. ga'di aglefini. (Γάδος, a kind of fish.) Found in the fauces of *Gadus aglefinus*.

A. ga'di merlang'i. (Γάδος; *F. merlang*, a whiting.) Found in the abdomen of *Merlangus vulgaris*.

A. ga'di minu'ti. (Γάδος; L. *minutus*, part. of *minuo*, to lessen.) Found in the abdominal cavity of *Gadus minutus*.

ASCARIS.

A. gasterostei. (Γαστήρ, the belly; οστέον, a bone.) Found in the intestine of *Gasterosteus aculeatus*.

A. gibbosus. (L. gibbosus, hunch-backed.) Found in the intestine of *Gallus gallinaceus*.

A. glareolus. (L. glareus, gravel.) Found in the caecum of *Glareola austriaca*.

A. gracilicollis. (L. gracilicollis, to become slender.) Found in the peritoneum and intestine of *Engraulis melanocephalus*.

A. granulosa. (L. granulum, a small grain.) Found in the oesophagus and stomach of *Hydropotes aquila*.

A. gulo. (L. gulo, a glutton.) Found in the jejunum of *Gulo arcticus*.

A. halicoridis. (ἅλιος, the sea; κόρις, a bug.) The males measured $2\frac{1}{2}$ ", the females 4" to 5", in length (Owen). Found in the heart of *Rhynchostomus stelleri*.

A. helicoma. (L. helix, ivy; from ἑλξ, wound, twisted.) Found in the stomach of *Oreodilus acutus*.

A. heloptis. (L. helops, the sword-fish, or the sturgeon.) Found in the intestine of *Asipenser stellatus*.

A. heteroptera. (ἑτερος, different; πτερόν, a wing.) Found in the intestine of *Ibis albidus*.

A. heteroura. (ἑτερος, different; οὐρά, a tail.) Found in the intestine of *Hemantopus melanopterus*.

A. hippocampi. (ἵππος, a monster with horse's body and fish's tail.) Found in the intestine of *Hippocampus guttatus*.

A. hirsuta. (L. hirsutus, shaggy.) Found in the intestine of *Osmorus eperlanus*.

A. heloptera. (ὅλος, whole winged.) Found in the intestine of *Testudo graeca*.

A. humilis. (L. humilis, low.) Found in the lung of *Tropidonotus virens*.

A. hystrix. (L. hystrix, the porcupine.) Found in the rectum of *Podocnemis erythrocephala*.

A. incisus. (L. incisus, notched.) Found in the peritoneum, and encapsuled in the stomach, of *Sorex tetragonurus*, and encapsuled in the peritoneum of *Tupa europaea*.

A. incrassata. (L. incrassatus, part from *incrasso*, to make stout.) Found in the stomach of *Trygon brucei*.

A. increta. (L. *increta*, part from *increto*, to increase.) Found in the oesophagus and stomach of *Lophius piscatorius*.

A. incurva. (L. incurvus, bent.) Found in the oesophagus and stomach, and in tubercles of the walls of the intestine, of *Xiphias gladius*.

A. infecta. (L. infectus, part of *infectio*, to impregnate, to taint.) A mature nematode infesting *Panulirus cornutus*.

A. inflexa. (L. *inflexus*, part from *infectio*, to bend.) Found in the intestine of the common fowl.

A. ischnoptera. (ἰσχνός, dry; πτερόν, a wing.) Found in the large intestine of *Struthio camelus*.

A. jacchi. (Ἰάκχος, mystic name of Barchus.) Found in the intestine of a species of *Hapale*.

A. labia. (L. labia, a lip.) Found in the intestine of *Anguilla vulgaris*.

A. labri luscii. (L. labrum, a lip; luscus, one-eyed.) Found in the abdomen of *Labrus luscus*.

A. levis. (L. levis, light.) Found in the intestine of *Arctomys monax*.

A. lenis. (L. lenis, a butcher.) Found in the intestine of *Lenius colurus*.

A. larvi. (L. larva, a gull.) Found in the intestine in *Larus ridibundus*.

A. latiuscula. (L. latus, broad; cauda, a tail.) Found in the small intestine and caecum of *Dicholophis cristatus*.

A. leptoptera. (λεπτός, thin, fine; πτερόν, a wing.) Found in the oesophagus and stomach of *Felis leo*, and many other Felidae.

Also, in Rudolphi's classification, a synonym of *A. mystax*.

A. leucostictus. (λευκός, the white mullet.) Found in the intestine of *Ilex melanotus*.

A. linguatulus. (L. linguatus, dim. of *linguatus*, provided with a tongue.) Found in the mesentery of *Scelus vulgaris*.

A. lobulata. (λόβος, the lobe of the ear.) Found in the large intestine of *Platanista gangetica*.

A. lonchoptera. (Λονχός, the head of a javelin; πτερόν, a wing.) Found in the biliary ducts and duodenum of *Rhiphus indicus*.

A. longa. (L. longus, long.) Found in the intestine of *Tantulus loculator*.

A. lumbricoides. (L. lumbricus, an intestinal worm. F. *ascaride lumbricoides*, *lumbric*; G. *Spulwurm*, *Rundwurm*, *Springwurm*.) A parasite of man, the ox, and pig. It is cylindrical, of considerable size, becoming attenuated at both extremities of the body, but rather more in front than behind, brownish or reddish grey in colour. The head is naked, mouth small, lips with a circular constriction at their base. The teeth very fine, never measuring more than 0.0035 mm., and about 200 in number. Male 15—17 centim. in length; caudal extremity conical, dorsally reflected, with two short, sharp, curved spicules. On the right and left sides of the abdomen are two irregularly arranged longitudinal rows of papillae, numbering at least 70 on each side. Female from 20—25 centim. in length, 5-6 mm. thick; vulva in adults just behind the anterior third, in young specimens near the middle of the body; ovaries two, filiform; ova 0.075 mm. in length, 0.058 mm. in breadth; shell thin, smooth, covered with a transparent, muriform, white envelope, semiopaque, and becoming brown after extrusion, their number estimated at several millions. In development the whole of the vitellus undergoes segmentation, and the process may occupy a year. The embryo does not escape spontaneously from the ovum, and its existence may be prolonged for five years.

This worm is found in the small intestine, and is especially prevalent in children. It is found in all parts of the world. It has a peculiar and unpleasant odour.

The symptoms of ascarides are that children, in whom they most frequently occur, suffer from want of appetite, from colic, and have a white tongue, foul breath, with alternations of constipation and diarrhoea, tickling of the nose and anus. These worms sometimes produce dilatation of the pupil, impaired vision, and strabismus. In adults, they may be the cause of incontinence of urine, spermatorrhoea, palpitation of the heart, cough, and various conditions of cerebral disturbance, as cephalalgia, vertigo, delirium, coma, hysteria, and epilepsy.

The treatment consists in the administration of

ASCARIS.

purgatives and various anthelmintics. Amongst the former calomel used to be the most frequently employed. Amongst the latter the *Semen contra*, or, preferably, its active principle, santonin, is now in the greatest favour; kousou and oil of male fern have also been employed. Other remedies mentioned by Bouchut are saoria, half to one ounce, in powder; tatsé, two drachms to one ounce, in syrup; the juice of pagimirioba injected into the anus; the powdered seeds of the *Chenopodium anthelminticum*, in 15 to 30-grain doses, in form of electuary; monocenna, camphor, decoction of onion, and the animal oil of Dippel. It has been supposed that a bitter infusion, such as that of quassia, is useful in preventing the return of the worms.

A. lyrae. (*L. lyra*, a harp.) Found in the mesentery of *Trigla lyra*.

A. macrop'tera. (*Μακρός*, long; *πτερόν*, a wing.) Found in the stomach of *Jacars nigra*.

A. maculo'sa. (*L. maculosus*, spotted.) Found in the intestine of the pigeon; a specimen has been seen two inches and a half long.

A. mæ'næ. (*Μαῖνæ*, a small sea-fish.) Found in the intestine of *Mæna vulgaris*.

A. mæ'nidia. (*Μαῖνς*, a crescent.) Found as a vesicle in the stomach of *Manis brachyura*.

A. mar'cesc. Found in the intestine of *Anas penelope*.

A. margina'ta. (*L. marginatus*, part. from *margino*, to furnish with a border.) Found in the intestine of the dog and wolf. Head with convex lobes, each bearing a projecting papilla in the centre of their convexity, and having a thin dentated border at their margin; two semi-elliptical lateral alæ. Length of male 3—9 centimeters; caudal extremity with two narrow alæ, having 15 papillæ on each side. Length of the female 9—12 centimeters. Vulva situated in front of the anterior fourth of the body. Ova almost globular, reticulated on the surface. These ova only develop after having undergone a certain amount of desiccation.

Also, in Rudolphi's classification, a synonym of *A. mystæz*.

A. marit'ima. (*L. maritimus*, maritime.) An immature female has been found in the stomach of man.

A. mar'tis. (*L. martes*, a marten.) Found in the small intestine of *Muscula martes*.

A. mas'cula. (*L. masculus*, male.) Found in the intestine of *Pseudophis bivittatus*.

A. megalocceph'ala. (*Μεγας*, large; *κεφαλή*, head.) Found in the small intestine of *Bos taurus* and of *Equus caballus*; also, in the ass, mule, and zebra. Head with three large, rounded, and very prominent valves. Male 24 centimeters in length; tail with two lateral alæ. Female 20—32 centimeters in length; tail conical, mucronate; vulva situated at the anterior fourth; ova globular, diameter 0.09 mm. to .10 mm.; embryo from 0.23 mm. to 0.28 mm. in length. It was at one time supposed to be identical with *A. lumbricoideis*, but this has now been disproved.

A. mer'gl. (*L. mergus*, a diver.) Found in the œsophagus of *Mergus morganser*.

A. microceph'ala. (*Μικρός*, small; *κεφαλή*, head.) Found in the intestine and abdominal cavity of *Ardea comata*.

A. microla'biūm. (*Μικρός*, small; *L. labium*, lip.) Found in the stomach of *Falco cærenatus*.

A. minu'ta. (*L. minutus*, small.) Found in the intestines of *Platessa passer*.

A. mucrona'ta. (*L. mucronatus*, pointed.) Found in the stomach of *Lota vulgaris*.

A. mu'lli. (*L. mullus*, the red mullet.) Found in the intestines of *Mullus rubescens*.

A. mustela'rum. (*L. mustela*, a weasel.) Found in the intestine of *Mustela foina* and *M. martes*.

A. mys'tax. (*Μύσταξ*, the moustache.) Found in the intestine of man, and various Carnivora, as the wild and domestic cat, tiger, and lion. Head infected, with two membranous semi-oval alæ; valves of the mouth small, rounded. Male 3—6 centimeters in length; posterior part of the body with two slightly projecting alæ, and two rows of 13—15 papillæ; spicules recurved. Female 5—10 centimeters in length; vulva situated near the anterior fourth; two oviducts and ovaries; ova almost globular, and having a thick reticulated or alveolated investment.

A. nasu'ta. (*L. nasutus*, large-nosed.) Found in the œsophagus and stomach of *Pelecanus onocrotalis*.

A. neglec'ta. (*L. neglectus*, part. from *negligo*, to neglect.) Found in the intestine of *Diodon maculo-striatus*.

A. nigroveno'sa. (*L. niger*, black; *vena*, a vein.) Found in the lung of *Anguis fragilis* and in *Rana*.

A. nodulo'so-stria'ta. (*L. nodulus*, a little knot; *striatus*, streaked.) Found in the intestine of *Sarcophampus papa*.

A. novac'ula. (*L. novacula*, a sharp knife.) Found in the peritoneum of *Xyrichtys cultratus*.

A. nu'da. (*L. nudus*, naked.) Found in the intestine of *Crotalus adamanteus*.

A. obcon'ica. (*L. ob*, near; *conus*, a cone.) Found in the *Uranops angulatus*.

A. obtusocauda'ta. (*L. obtusus*, part. from *obtusum*, to blunt; *cauda*, a tail.) Found in the stomach and intestine of *Frutilla fario*.

A. oculi ra'sæ. (*L. oculus*, the eye; *rana*, a frog.) Found in the vitreous humour of the eye of the *Rana esculenta*.

A. ophid'i'i barba'ti. (*Ὄφις*, a snake; *L. barbatus*, bearded.) Found in the mesentery of *Ophidium barbatum*.

A. ophid'i'i imber'bis. (*Ὄφις*, a snake. *L. imberbis*, beardless.) Found in the mesentery of *Fierasser imberbe*.

A. orthagoris'ci. (*Ὀρθαγορίσκος*, a sucking pig.) Found in the intestine of the *Orthagoriscus mola*.

A. oscula'ta. (*L. osculatus*, part. of *osculor*, to kiss.) Found in the œsophagus, stomach, and intestine of *Halichærus grypus*, *Leptomys monachus*, *Phoca barbata*, *P. grænlandica*, *P. anellata*, and *P. vitulina*.

A. o'vis. (*L. ovis*, a sheep.) Found in the intestine of *Ovis aries*.

A. papillo'sa. (*L. papilla*, a nipple.) Found in the intestine of *Corvus cajanus*.

A. pastina'ce. (*L. pastinaca*, a parsnip.) Found in the intestine of *Trygon pastinaca*.

A. paucip'ara. (*L. paucus*, few; *pario*, to produce.) Found in the intestine of *Testudo græca*.

A. pe'dum. (*L. pes*, a foot.) Found in the stomach and intestine of *Scomber scombrus*.

A. pellu'cida. (*L. pellucidus*, transparent.) Found in the investment of the liver in *Upupa epops*.

ASCARIS.

A. perspicillatus. (L. *perspicillo*, to see through.) Found in the intestine of the turkey.

A. physcidis. Found in the pyloric appendage of *Physio mediterranea*.

A. pica. (L. *pica*, a magpie.) Found in the intestine of *Pica caudata*.

A. procellarise. (L. *procella*, a hurricane.) Found in the bladder of *Procellaria anglorum*.

A. pterophora. (Πτερόν, a wing; φέρω, to bear.) Found in the intestine of *Dicholophus Maragra*.

A. pusilla. (L. *pusillus*, insignificant.) Found encased in the peritoneum of *Brinaceus europaeus*.

A. quadrangulatus. (L. *quadrangulus*, four-cornered.) Found in the stomach of a species of *Crotalis*.

A. quadricornis. (L. *quatuor*, four; cornu, a horn.) Found in the stomach and duodenum of *Naja haje*.

A. radiosa. (L. *radius*, emitting many rays.) Found in the stomach of *Echidna rhinocerotis*.

A. raia. (L. *raia*, a ray.) Found in the stomach and intestines of *Raja batia*.

A. reclinata. (L. *reclinatus*, part of reclino, to bend back.) Found in the caecum of *Crotophaga asi* and *C. major*.

A. rhytinae. Found in the stomach and duodenum of *Rhytina stelleri*.

A. rigida. (L. *rigidus*, stiff.) Found in the stomach and intestine of *Lophius piscatorius*.

A. rotundata. (L. *rotundatus*, part of *rotundo*, to make round.) Found in the peritoneum of *Gadus morhua*.

A. rubicundus. (L. *rubicundus*, ruddy.) Found in the oesophagus and stomach of *Python molurus*.

A. rugosa. (L. *rugosus*, shrivelled.) Found in the intestine of *Bubo maximus*.

A. salaris. (L. *salar*, a trout.) Found in the intestine of *Gadus morhua*.

A. salmoneus. (L. *salmo*, a salmon.) Found in the pyloric appendages of *Salmo autumnalis*.

A. salvini. Found in the intestine of *Oreopharis Derbyana*.

A. saur. (Σαῦρα, a lizard.) Found in the mesentery of *Saurus saurus*.

A. sciaenae. (Σκίανα, a sea-fish like a grayling.) Found in the peritoneum of *Umbra vulgaris*.

A. scorpaenae. (Σκόρπανα, a kind of fish.) Found in the intestine of *Scorpaena scorpa*.

A. semiteres. (L. *semis*, half; *teres*, round.) Found in the intestine of *Vanellus cristatus*.

A. serpentinus. (L. dim. of *serpens*, a serpent.) Found in the intestine of *Grus cinerea*.

A. siluri. (L. *silurus*, the sheat fish.) Found in the intestine of *Silurus glanis*.

A. similis. (L. *similis*, like.) Found in the intestines of various species of *Phoca*.

A. simplex. (L. *simplex*, simple.) Found in the stomach of *Phoca communis*.

A. smaragdina. (Σμαράς, the pickerel.) Found in the intestine of *Smaris vulgaris*.

A. soleae. (L. *solea*, the sole.) Found in the intestine of *Solea vulgaris*.

A. spiraea. Found in the peritoneum of *Sparus spira*.

A. spiculigera. (L. *spiculum*, a point; *gero*, to bear.) Found in the oesophagus of *Mergus morghanii*.

A. spiralis. (L. *spira*, a coil.) Found in the intestine of *Nyctale Tugmalai*, *Uthala aluco*, *Agolius brachyotus* and *otus*, *Sturnia nyctea*, *Bubo maximus*, *Stris flammea*, and *Ficus comatus*.

A. squale. (L. *squalus*, a kind of sea-fish.) Found in the intestine of a species of *Squalus*.

A. stephanostoma. (Στέφανος, a crown; στόμα, a mouth.) A term applied by Leus and Jördens to the larva of the blowfly.

A. sternus hircinensis. (L. *hirundo*, a swallow.) Found in the intestine of *Sterna hirundo*.

A. sternus niger. (L. *niger*, black.) Found encased in the intestines of *Sterna nigra*.

A. subulata. (L. *subula*, a pointed instrument, an awl.) Found in the caecum of *Oculus cayanus*, *C. melacoryphus*, and other *Oculi*; in the caecum of *Nyctidibus atherus* and *N. grandis*, and in the intestines of various *Cepimulgi*.

A. succosa. (L. *succiosus*, part of *succido*, to cut off.) Found in the intestine of *Cyclopterus lumpus*.

A. suilla. (L. *suillus*, belonging to swine.) A species found in the pig, proved by Schneider to be identical with the *A. lumbroscoides* of man.

A. sulcata. (L. *sulcatus*; part of *sulco*, to plough or furrow.) Found in the intestine of *Goochelons Schoefferi*.

A. tentaculata. (L. *tento*, to touch.) Found in the caecum of the American opossum, *Didelphys*.

A. tenuicollis. (L. *tenuis*, thin; *collum*, the neck.) Found in the stomach and intestine of *Alligator Mississippiensis*.

A. tenuissimus. (L. sup. of *tenuis*, thin.) Found in the intestine of *Morlangus vulgaris*.

A. tetraptera. (Τέτρα, from *tetrapsa*, four; πτερόν, a wing.) Found in the intestine of the mouse.

A. tigris. (L. *tigris*, a tiger.) Found in the intestine of *Felis tigris*.

A. todar. Found beneath the peritoneum of *Loligo todarus*.

A. torpedinis. (L. *torpedo*, sluggishness, the electric ray.) Found in the stomach of *Torpedo marmorata*.

A. transfuga. (L. *transfuga*, a deserter.) Found in the intestine of *Ursus arctos*, *U. Americanus*, *U. labiatus*, and *U. maritimus*.

A. tribothyroidea. (Τρίψ, thrice; θύρος, a pit; είδος, like.) Found in the intestine of *Anas obscura*.

A. trigonura. (Τρίγωνος, three-angled; ουρά, a tail.) Found in the peritoneum of *Cebitis barbatula*.

A. triquetra. (L. *triquetrus*, three cornered.) A synonym of *A. mystax*.

A. tritonis. (L. *Triton*, a son of Neptune.) Found in the *Triton tenuis*.

A. truncatula. (L. *truncus*, to maim, to cut off.) Found in the intestine, and encased in the liver and muscles, of *Perca fluviatilis*.

A. unguicula. (L. *unguis*, a nail.) Found in the large intestine of *Lepidosternon microcephalus*.

ASCAROPSIS MORRHUÆ—ASCIDUM.

A. ungula'ta. (L. *ungulatus*, having hoofs.) Found in the intestine of *Labrus maculatus*.

A. uranoscop'i. (Οὐρανός, the heavens; σκοπία, to look at.) Found in the peritoneum of *Uranoscopus scaber*.

A. valdemucrona'ta. (L. *valde*, strongly; *mucronatus*, pointed.) Found in the stomach and proventriculus of *Ciconia maguari*.

A. vermicula'ris. (L. *vermiculus*, a little worm.) The thread- or maw-worm. A synonym of *Oxyuris vermicularis*.

A. vesicula'ris. (L. *vesicula*, a little bladder.) Found in the intestine of the common fowl, and in the turkey.

A. vim'bea. Found encapsuled in the intestinal walls and in the liver of *Abramis vimbea*.

Ascaropsis morrhue. (Ἀσκαπία, an intestinal worm; ὄψις, appearance.) A sexually mature nematoid entozoon, found by v. Beneden in the intestines of *Gadus morrhua*.

As'coles. (Ἀσκαλός; ἄ, neg.; σκέλος, the leg.) In Teratology, destitute of legs.

Ascell'a. (L. *ascella*, the bosom of man.) The *Axilla*.

Ascellus. (L. dim. of *ascus*; from ἄσκός, a wine skin.) A synonym of *Ascus*.

Ascen'dens. (L. *ascendens*, part. of *ascendo*, to climb. F. *ascendant*; G. *aufwärts*, *steigend*, *aufsteigend*.) Rising up; ascending.

Ascend'ing. (L. *ascendo*, to climb. F. *ascendants*.) Mounting up.

In Anatomy, applied to structures passing to the upper parts of the body.

In Botany, applied to a stem which rises upwards. Also, to ovules attached a little above the base of the ovary, and directed obliquely upwards. Also, to the metaphorphosis of the floral organs when it occurs in the higher direction, as from sepal to petal, from stamen to carpel.

A. aor'ta. See *Aorta*, ascending portion of arch of.

A. cur'rent. The electric current when transmitted through an animal body by means of an arrangement in which the positive electrode is towards the periphery and the negative towards the central part of the animal.

A. f'bres. See *Fibres of brain*.

Ascen'sus. (L. *ascensus*, an ascending or climbing up, an ascent.) Applied by Libavius and others to the act or process of sublimation, formerly termed *Distillatio per ascensum*.

Applied, also, to the increase of a disease.

Asce'sis. (Ἀσκησις, from ἄσκια, to exercise.) Exercise.

Asch'er'son's ve'sicles. (L. *vesicula*, a little blister.) The small cell-like bodies that are formed when oil is agitated with an albuminous fluid. Each drop of oil becomes surrounded by a layer of albumen, which Ascherson thought represented a cell.

As'chil. The *Scilla maritima*.

Aschistodactylus. (Ἀσχιστός, undivided; δάκτυλος, the finger. F. *aschistodactyle*.) In Teratology, a simple arrest of development, in which the digits are webbed.

Asci. (Ἀσκός, a bag.) Sac-like bodies forming the final ramifications of branches which arise from the fertilised ascogonium or female organs in certain Fungi, e.g. in the *Ascomycetes*. They appear, in the first instance, as oblong cells filled with colourless protoplasm, which is gra-

dually taken up by the sporidia. Asci dehiscence either by a simple fissure or by an operculum, and the four or eight sporidia are set free.

As'cia. (L. *ascia*, an axe, akin to ἄξιν, an axe.) A great hatchet. Applied (ἐκίταρον) by Galen, de *Fract.* iii, 40, to a kind of bandage, from its supposed resemblance to a hatchet, when properly adjusted.

Ascia'no. Italy, in Tuscany. A mineral water containing sodium chloride 4 grains, magnesium chloride 2, sodium sulphate 3, calcium sulphate 9, calcium carbonate 4, and a considerable amount of carbonic acid, in 25 ounces. Used in lithic acid diathesis, and in chronic catarrh of the alimentary mucous membrane.

Ascid'ia. (Ἀσκίδιον, for ἄσκιον, a dim. of ἄσκός, a leather bag, a wine skin. F. *ascidie*; G. *Mantelhier*.) A Group of animals belonging to the tunicate or ascidioid Division of the *Mollusca*, represented by *Appendicularia*, *Pyrosoma*, *Salpa*, *Cynthia*, and *Phallusia*. Some are free, some social or compound. Interesting because, on Haeckel's theory of anthropogeny, they constitute a type of one of the stages of the development of man. The body in many of the genera is enclosed in a test containing cellulose. The branchial or pharyngeal sac is fenestrated, and opens below by a short oesophagus into a stomach and intestine, with hæmal curvature. There is a heart, and the direction of the blood-current undergoes periodic reversal. A nerve ganglion anteriorly sends branches to the body. Sexes united or separate; development, either by ova or by gemmation from a stolon.

Ascidia'cea. A synonym of *Ascidioidea*.

Ascidia'rium. (Ἀσκίδιον.) The common mass formed by the aggregation of the zooids in the compound Ascidians. There is no fusion of the inner structure, but the tests become united to each other.

Ascid'iate. (Ἀσκίδιον. G. *schlauchartig*; F. *ascidié*.) A term applied to leaves which have a portion of their structure developed into an urn-shaped body, or *Ascidium*.

Ascid'iform. (Ascidium; L. *forma*, likeness. G. *schlauchförmig*.) Applied to bractæ when in form of a cup.

Ascidig'erous. (Ascidium; L. *gero*, to bear.) Supporting or presenting ascidia.

Ascidio'carpous. (Ἀσκίδιον, for ἄσκιον, dim. of ἄσκός, a leather bag; καρπός fruit. G. *schlauchfruchtig*.) Applied to Hepaticæ, the fruit of which is open at top, as *Riccia*.

Ascidio'l'ea. (Ἀσκίδιον; εἶδος, likeness.) A synonym of *Tunicata*.

Ascid'ium. (Ἀσκίδιον, a small leathern bottle.) A bottle.

Applied to a hollow foliaceous appendage resembling a small bottle. It has been chiefly applied to cavities or hollow organs, sometimes with and sometimes without an operculum, exhibited by certain leaves of *Nepenthes*, *Sarracenia*, and *Cephalotus*. In *Nepenthes* the leaf, in the first instance, presents a laminar expansion, supported on a short petiole. The median nervure is prolonged beyond the expansion in the form of a tendril-like cylindrical body, which bears at its distal extremity an urn-like cavity lined with glands, and having a small operculum attached to one point of the rim. In *Sarracenia purpurea* the petiole is nearly cylindrical, and forms a conical alate receptacle, opening by an oblique orifice, which is surmounted by a dorsally-placed operculum. In *Cephalotus fol-*

ASCIFORM—ASCITES.

lioularis the ascidiated leaf presents a cylindrical petiole, with an ovoid urn at its extremity, the opening of which is superior, surrounded by a fleshy margin, and closed by a rounded operculum. The outer surface of the urn has three aëæ, a bilabiate median one, and two lateral and simple ones, all supporting stiff hairs.

Much difference of opinion exists amongst botanists in regard to the homologies of the several parts of the organs termed ascidia. Some, with De Candolle and Lindley, regarding the ascidia of *Nepenthes* and *Sarracenia* as being constituted by the coalescence of the edges of the petioles; others, with C. Morren, considering the urn of *Nepenthes* as formed by the lamina of the leaf, whilst the inferior phyllomorphous organ represents the petiole, and the operculum is formed by the terminal portion of the lamina, which remains free. Griffith, again, with Hooker, looking to the development of the organ, maintains that in its rudimentary state it is a mere depression on the upper surface of the leaf, which terminates in a slight oval depression, that is, a simple gland. The part of the leaf below this becomes contracted, and forms the basilar or laminar part of the organ, whilst the operculum is formed by the distal portion. Lastly, Faivre and Bailon are of opinion that, in all the instances mentioned above, the urn represents a peltate foliar expansion, the edges of which develop more than the central portion, and thus the superior surface of the leaf constitutes the lining of the urn, and is destitute of stomata, whilst the inferior surface forms its exterior, and presents stomata and hairs. In *Mæcgravia* and *Norantea* floral bracts are transformed into ascidia.

Asciform. (Ἀσκός, a leathern bag; *L. forma*, likeness. *G. schlauchförmig*.) Applied by Link to leaves which, placed upon themselves and joined by their edges at their inferior part, remain open superiorly, and thus produce a sort of vase, as the terminal ascidium of *Nepenthes*.

Ascigeri. (Ἀσκός. *L. gero*, to carry.) A term applied in Botany to Fungi which have their spores contained in thecae, and hence more generally named thecasporous.

Also, a synonym of the *Tuberacea* amongst the *Gasteromycetæ*.

Also, a synonym of the *Sphariacea* amongst the *Pyrenomycetæ*.

Ascigerous. (Same etymon. *F. ascigere*; *G. schlauchtragend*.) Applied to mushrooms, the reproductive corpuscles of which are contained in a small utricle.

As'cil. (Ἄ, neg; σκία, a shade. *G. Schattenlose*.) Applied to the inhabitants of the torrid zone, who, having the sun perpendicular above their head, are for two days in each year without shadow.

Ascilla. The *Axilla*.

Ascites. (Ἀσκήτης; from ἀσκός, a bag. *L.* and *S. ascitis*; *F.* and *I. ascite*; *G. Bauchwassersucht*.) A collection of serous fluid in the peritoneal cavity. The causes are acute or chronic or tubercular inflammation of the peritoneum, or, very frequently, disease of one or more of the viscera of the abdomen, which either induces inflammation of the peritoneum, or subjects the veins to pressure, and thus retards, or altogether arrests, the flow of blood through the vena cava, vena portæ, or their tributaries. It is hence seen in cancer of the liver, stomach, and uterus; in aneurysms; in tumours of the pancreas, mesen-

teric glands, and other organs, pressing on the vena portæ; it occurs in cirrhosis and other diseases of the liver, heart disease, and Bright's disease. It also appears to result from some alteration in the constitution of the blood, as in fevers, scurvy, and phthisis, and in some anæmic conditions. In uncomplicated cases it may remain stationary for many years, but more commonly the primary disease, of which it is only symptomatic, proves fatal. The fluid varies considerably in character, being sometimes clear yellow, at others turbid, whey-like, or mixed with lymph and blood. It is usually alkaline, sometimes neutral; its sp. gr. varies from 1.008 to 1.018; it contains a few leucocytes, often converted into masses of fatty granules, epithelial scales from the peritoneal folds, occasional red blood discs, and plates of cholesterin. Its chemical composition is somewhat that of the serum of blood, but it varies considerably, the amount of water in 1000 parts averaging from 930 to 980, and of solids from 70 to 20, the difference consisting chiefly in the greater or less amount of albumen, which may vary from 5 to 60 parts in 1000; in addition, it contains small quantities of fibrin, fat, and urea, and often of paralbumen, leucin, uric acid, zanthin, cholesterin, sugar, biliary colouring matters, and acids; the saline constituents average from 7 to 10 parts in a thousand, and consist chiefly of sodium chloride, with some sodium carbonates, with alkaline phosphates and sulphates, and calcium phosphate.

The symptoms are uniform enlargement of the abdomen, fluctuation, dullness on percussion, the highest part being resonant when the patient lies on the back or sides, owing to the floating of the intestines, thinning of the skin, with great venous development, and generally anasarca of the lower extremities. In extreme cases the respiratory and cardiac movements are seriously interfered with, impairment of the general health occurs, and there is thirst, loss of appetite, flatulence, scanty urine, and confined bowels.

In regard to treatment, when ascites arises from debility, the administration of diuretics, with iron and quinine, is recommended, the most serviceable diuretics being nitrate or acetate of potash, scoparium, squilla, juniper, and digitalis. In other instances drastic purgatives, as elaterium, gamboge, hellebore, podophyllin, and croton oil, may be given; or the patient may be subjected to the action of sudorifics, as hot and vapour baths, and jaborandi. The value of diaphoretics, diuretics, and purgatives has been much doubted. Other remedies that have been suggested are copalaiba, iodide and bromide of potassium, the juice of the bark of the elder, parsley, decoction of *Pyrola umbellata*, the application of electricity to the walls of the abdomen, frictions of mercurial ointment, with camphorated oil. Lastly, *paracentesis* may be resorted to.

A. abdominalis. (*L. abdomen*, the belly.) The same as *Ascites*.

A. adiposus. (*L. adeps*, fat. *F. ascite huileuse*.) A form in which the effused fluid is white and opaque, from suspended oil globules; it is observed in some cases of peritoneal cancer or tubercle. The fatty matter has been observed to amount to from 16 to 20 parts in a thousand.

A. chylosus. (Χυλός, chyle.) A form in which the effused fluid is milky, from rupture of some lacteal vessel.

A. hepatocysticus. (Ήπαρ, the liver;

ASCITES—ASCLEPIAS.

ascitis, the bladder.) Dropsy of the gall-bladder; great distention of that organ.

A. ovaril. (*Ovarium*.) Ovarian dropsy.

A. purulentus. (Πύον, matter, pus.) Purulent effusion into the abdominal cavity.

A. saccosus. (Σάκος, a bag.) A term applied to ovarian or other abdominal cysts containing fluid.

A. uterinus. (L. *uterinus*, belonging to the womb.) A term for *Hydrometra*.

Ascites, active. A term given to those cases of ascites which suddenly occur in persons of previously good health, after exposure to cold and wet, and which rapidly recover. In these there is probably some peritoneal inflammation.

A. chronic. Ascites depending on a cause other than acute peritonitis.

A. hepatic. (Ἡπατικός, of the liver.) Ascites depending on liver disease.

A. rheumatic. A term that has been applied to ascites which appeared to be metastatic, or a coincident manifestation of a rheumatic diathesis, or which seemed to have rheumatic inflammation of the peritoneum as its cause.

Ascitic. (Ἀσκίτης, dropsy of the belly. F. *ascitique*; G. *wassersüchtig*.) Having, or pertaining to, ascites.

Asclepiadaceae. (Ἀσκληπιάδαι. F. *asclépiadées*; G. *Seidenpflanzengewächse*.) The milk-weeds. An Order of epipetalous corolliflorous Exogens. Shrubs or herbs, often twining, generally with a milky juice; leaves entire, exstipulate; calyx 5-partite, persistent; corolla 5-partite, deciduous; stamens five, alternate with the lobes of the corolla; pollen, when the anther dehisces, cohering in masses, and sticking to five processes of the stigma singly, by twos, or by fours; carpels two; stigmas adherent, and forming a fleshy 5-angled head, to gelatinous processes arising from which the pollen masses adhere.

Asclepiadai. (Ἀσκληπιάδαι; the Latin *Asclepiades*.) A name given to the descendants of Asclepius, who for many centuries appear to have been almost the only Greek physicians. The line stretches from Machaon, who flourished between B.C. 1200 and B.C. 1100, to Dracon the Third, who lived between B.C. 250 and B.C. 150; and it includes the names of Podalirius, Hippocrates, and Aristotle.

Asclepiades. The same as *Asclepiadaceae*.

Asclepiades. (Ἀσκληπιάδης.) A native of Prusa in Bithynia. He flourished at Rome in the end of the second and beginning of the first century before Christ. He founded his practice on a doctrine of atoms and pores, considering that acute diseases depended on narrowing of the pores or their obstruction by excess or false motion of the atoms, and that chronic diseases arose from relaxation of the pores and deficiency of the atoms. He employed sparingly active remedies, but trusted mainly to a fitting diet, exercise, baths, and friction; he used wine freely, and would appear to have been a physician who considered the comforts, and perhaps the fancies, of his patients. He died from an accident when he was an old man.

Asclepiadin. A substance obtained by macerating the root of *Vincetoxicum officinale* in strong alcohol. It is yellow, bitter, amorphous, and hygroscopic; it does not contain nitrogen, and is not alkaline, but has emetic properties.

Asclepias. (Ἀσκληπιάς. F. *asclépiade*; G. *Seidenpflanze*, *Schwalbenwurz*.) A Genus of the Nat. Order *Asclepiadaceae*. Calyx small; corolla rotate, generally reflexed; staminal coronet consisting of five cucullate processes, with a subulate process on its inside; pollinia five pairs.

A. alba. (L. *albus*, white.) The *Vincetoxicum officinale*.

A. amoenus. Michx. (L. *amoenus*, pleasant.) The *A. incarnata*.

A. aphylla. (Ἄφυλλος; φύλλον, a leaf.) The *Sarcostemma aphyllum*.

A. apocynum. (Ἀπόκυνον, from ἀπό, from, against; κύων, a dog.) The *A. syriaca*.

A. asthmatica. Roxb. (Ἀσθματικός, afflicted with shortness of breath.) A synonym of *Tylophora asthmatica*.

A. bicolor. (L. *bicolor*, two-coloured.) The *A. curassavica*.

A. contrayerba. A species said by some to supply the purgative root *Mechoacan*.

A. cornuta. (L. *cornutus*, horned.) The *A. syriaca*.

A. crispus. (L. *crispus*, curled.) The *Gomphocarpus crispus*.

A. curassavica. (*Curassavia*, the island of Curaçoa.) Bastard ipecacuan, or white ipecacuan of St. Domingo, the leaves of which are used as an emetic; the root is mixed with that of ipecacuan, and has similar powers, but less in degree. It is said to be anthelmintic. Dose 20—40 grains.

A. cynanchoides. The *Sarcostemma glaucum*.

A. decumbens. (L. *decumbo*, to lie down.) A species the root of which is used as a cathartic, expectorant, sudorific, and diuretic; it is also said to have tonic properties. Externally it has been used as an irritant.

A. gigantea. (L. *giganteus*, of, or belonging to, the giants.) A synonym of *Calotropis gigantea*.

A. flesh-coloured. The *A. incarnata*.

A. incarnata. Willd. (G. *fleischfarbige Schwalbenwurz*.) Flesh-coloured milkweed. Hab. North America. Stem erect, downy; leaves opposite, nearly sessile, lanceolate, downy; flowers in crowded, erect umbels. The root is official in U.S. Ph., and has been used as an emetic and cathartic in catarrh, asthma, rheumatism, syphilis, and intestinal worms.

A. lactifera. Linn. (L. *lac*, milk; *fero*, to bear.) The milky juice of this species is used as food.

A. linearis. Linn. (L. *linearis*, consisting of lines.) A Mexican species; used as an emetic and cathartic.

A. obovata. (L. *ob*, near; *ovatus*, egg-shaped.) The *A. syriaca*.

A. procera. (L. *procerus*, tall.) A somewhat doubtful Egyptian plant, the leaves of which are applied to indolent humours, and the milky juice used as a caustic. Probably a *Calotropis*.

A. prolifera. (L. *proles*, offspring; *fero*, to bear.) An emetic; has been used in hydrophobia.

A. pseudo-sarsa. (Ψευδής, false; *sarsa*, *sarsaparilla*.) A synonym of *Hemidesmus indicus*.

A. rosea. Roxb. (L. *roseus*, rose-coloured.) The *Oxytelisma aculeatum*.

A. setosa. (L. *setosus*, bristly.) A Mexican species, having diaphoretic and tonic properties.

ASCLAPIADACEAE—ASYTRUM.

A. stipitiforme, Forsk. An Arabian species, the young shoots of which are eaten as food.

A. syriacum, Willd. (*L. Syriacus*, Syrian.) Common silk-wood, common milk-wood, Syrian dog-bone. A plant widely distributed in the United States. Stem simple; leaves opposite, petiolated, lanceolate-oblong, downy underneath; foliols prickly, full of silky down. The root possesses anodyne properties, it promotes expectoration and diaphoresis, relieves pain, cough, and dyspnea. It has also been used in caries, and is an excellent alternative in hepatic affections. The tincture is made by macerating two ounces of the fresh root in one pint of spirit. The silky down has been used for stuffing beds and pillows, and in the manufacture of hair.

A. tomentosum. (*L. tomentosum*, a stuffing for cushions.) The *A. syriacum*.

A. tuberosum, Willd. (*L. tuberosum*, full of lumps; *G. hollipes Schomburgkianum*.) Buttery-wood or ploury-root. A plant indigenous to the United States. Stems many, round, hairy; leaves oblong-lanceolate, with short petioles; fruit an erect lanceolate follicle. The root, which is the only part used, and is official in the U.S. Ph., is large, irregularly tuberosum, branched, fistular, fleshy, externally brown, internally white and striated, with a subacid, nauseous taste. It is diaphoretic and expectorant. It is largely employed in the Southern States in catarrh, pneumonia, pleurisy, and other pectoral affections. It has also been found useful in diarrhoea, dysentery, and rheumatism. Dose, 20 to 60 grains.

Also, a synonym of *A. decussatum*.

A. verticillatum. (*L. verticillatum*, the whirl of a spindle.) Herb. North America. A decoction of the plant has been used, it is said with success, in the bites of snakes and venomous insects.

A. vincetoxicum. (*F. asclepiade despectuosa*.) Swallow-wort, or time poison; formerly esteemed as alexipharmic, diuretic, and doubrant. The *Finlandicum officinale*.

A. viciaefolium. (*L. viciaefolium*, that which is rolled round.) The *Hoya cordifolia*.

Asclepiasium. A term for hamamelids.

Asclepiadite. A product of the *Asclepias tuberosa* and *A. vincetoxicum*. Used as an expectorant and diaphoretic. Dose, 1-4 grains.

Asclepiadion. (*Asclepiadion*, a temple of Asclepius.) The temples of Asclepius, to which the sick resorted to be treated by the priest who possessed some knowledge of medicine, were so-called, they were usually situated in healthy places, and those who were cured deposited an account of their case and recovery.

Asclepiol. $C_{10}H_{16}O_2$. A substance obtained from the milky juice of *Asclepias syriaca* by treating it with ether. On evaporating the ethereal extract it is left in white, multiflower-like tufts of needles, which are without smell or taste. It fuses at 104° C (210° F.), decomposes at a higher temperature, dissolves readily in ether, but not in water or alcohol.

Asclepiol. (*Asclepiol*, *Asclepiol*.) A name formerly given to several different medicines.

Asclepiaditum. (*Asclepiaditum*, a leathern bag; *Asclepiaditum*; *G. Asclepiaditum*.) A bandium, from the top of which a chain of spores, like a thren, appears.

Asclepiaditum. (*Asclepiaditum*, a leathern bag; *Asclepiaditum*, to draw.) A Group of the cup-shaped *Discomycetes*, or of the fleshy *Ascomycetes*.

Asclepiaditum. (*Asclepiaditum*; *Asclepiaditum*, a leathern bag.) A term applied to a mass of mycelium containing micrococci and bacteria, and invaded by a more or less distinct crust. According to Billroth, it is one form of the development of his *Chondrostoma capitis*.

Asclepiaditum. (*Asclepiaditum*, a leathern bag; *Asclepiaditum*, offspring.) The female organ in Fungi, formed by the termination of a mycelium thread. This statement of De Bary has been disputed.

Asclepiaditum. Italy; in the Abruzzi. A mineral water, of 50° C. (50° F.), containing sodium sulphate, some iron, and a hydrogen sulphide; there are also carbonated saline springs containing sodium sulphate.

Asclepiaditum. (*Asclepiaditum*, a leathern bag; *Asclepiaditum*, for the hole in a ship for the oar.) A term applied by some botanists to the pillow and lamellae of Agarum.

Also, an old term for the *Alvea conoides*, or eminence of the female pubes at puberty. (Quincy.)

Ascomycetes. (*Ascomycetes*, a leathern bag; *Ascomycetes*, a mushroom.) A very widely distributed Family of Fungi, containing numerous genera and species, all agreeing in producing spores, contained in certain cells called *asci*, which are developed from the hymenium. Examples are met with in the true truffles, *Tuber ostreum*, *T. moerhousii* and *Ascomycetes*, *T. brunnescens*, in *Helvella* and *Peziza*, in *Morchella* and *Gyromitra*. In some instances paraphyses are present, and in some investing moustings.

Ascomycetes. (*Ascomycetes*; *Ascomycetes*, to burn.) Term applied to those hyphae branched in Fungi which penetrate between the ends of the paraphyses, and develop into club-shaped ones.

Ascomycetes. (Same etymon. *G. Schleichbach*.) Bearing an ascomycete.

Ascomycetes. (*Ascomycetes*; *F. ascomycetes*.) Name by Dees van Beunhach for the portion of the pileus of mushrooms containing the stipe; also called *Stratum thamperum*.

Ascomycetes. (*Ascomycetes*; *Ascomycetes*; *F. ascomycetes*.) Applied by Beunhach to an Order of Leathens having their reproductive corpuscles contained in steriles.

Ascomycetes. (*Ascomycetes*, a leathern bottle; *Ascomycetes*, a seed.) The ripe spores of the ascomycetes Fungi (yeast plants, truffles, &c.). These spores are formed in the eight-spored *asci*, which arise after the conjugation of the antheridium, with the corkerew-like end of a branch of the mycelium, or oocogonium.

Ascula. (*Ascula*, a leathern bag.) One of the stages in the development of a sponge. It is a sac-like body resembling a gastrula, from which, indeed, it only differs in being fixed by its aboral pole. It is uncellular, and consists of two layers of cells.

Ascula. (*Ascula*, a leathern bottle.) The swollen sac-like terminal cell of a branch of a hypha or mycelium in Fungi, in which the spores develop.

Ascyphous. (*A. neg.*; *Ascyphous*, a cup. *G. Ascyphous*.) In Botany, that which is destitute of the cup which, in certain Lichens, supports the organs of fructification, and in *Morchella* the propogula.

Ascyrum. (*Ascyrum*.) The herb St. Peter's wort, *Hypericum quadrangulum* or *H.*

ascyron. It was formerly esteemed as an aperient and cholagogue. It was used locally to burns, and the seeds were given in sciatica.

A. cruz-Andrew. Linn. St. Andrew's cross. Hab. North America. Has the same reputation as *Ascyrum*.

Asdenigi. See *Asedenigi*.

Asē. (Ἄση, nausea, from *asē*, to satiate.) Old term, used by Hippocrates, *Aph.* v, 61, for loathing of food; also, a sense of heaviness about the heart or stomach; also, restlessness of body.

Asēb. (Arab.) Old name for alum. (Ruland and Johnson.)

Asedenigi. Arabic for the hæmatites, or blood-stone. (Ruland and Johnson.)

Also, an old name for alumen.

Asēf. (Arab.) Name for pemphigus; also termed *Albasēf*. See *Asēph*.

Asēgon. Arabic for dragon's blood. (Ruland and Johnson.)

Asēgon. Same as *Asēgon*.

Asēli. (L. *asellus*, an ass's foal. F. *cloportes des caves*; G. *Aseln*, *Kellerwürmer*.) An old term for wood-lice, the *Oniscus asellus*. They were used in dropsy.

Aselli, G. An Italian anatomist, born 1681, died 1628. He discovered the lacteals, and wrote a book on the subject.

A. pancreas of. The right extremity or head of the pancreas when separated from the rest. Called also the lesser pancreas.

Asellus. (Dim. *asinus*, the ass.) An ass's colt; formerly sometimes used for *Asinus*.

Also, an old term for the cod, *Gadus morhua*.

Asclou'ri. A plant mentioned by Dioscorides, which has been identified with the *Atriplex halimus*.

Asēma or'is. (Ἀσημος, from *ā*, neg.; *σημα*, a sign; *κρίσις*, the turning-point of a disease.) A crisis occurring unexpectedly, and without the usual precursory symptoms, or when beyond all reasonable expectation.

Asēma'sia. (Ἄ, neg.; *σημαίνω*, to show by a sign.) A term proposed by Dr. Hamilton as a substitute for aphasia, which he objects to as too limited in meaning, and as confining the view to speech defects, to the exclusion of loss of power of gesticulation, of singing, of reading, and of writing, which are also often affected in the disease thus named.

Asēmia. (Ἄ, neg.; *σημα*, a sign.) A term suggested by Steinthal to indicate loss of the power of forming or of understanding any sign or symbol of thought, whether spoken, written, or acted.

A. graphica. (Γραφικός, belonging to writing.) Loss of power of forming or of understanding writing.

A. mimica. (L. *mimicus*, mimic.) Loss of power of forming or of understanding thought expressed in action.

A. verba'lis. (L. *verbalis*, belonging to words.) Loss of power of speaking, or of understanding speech.

Asēph. Arabic for *Alumen plumosum*, or *A. acinum*. (Ruland and Johnson.)

Asēpta. (Ἀσηπτος, undigested, from *ā*, neg.; *σηπ*, to putrefy.) Term applied to substances not liable to putrefaction.

Also, to undigested matters.

Asēptic. (Ἀσηπτος, undigested.) Not liable to putrefy. Also, undigested.

Asēpton. Same as *Asēpes*.

Ascrumb'drue. Ashantee name of a species of *Piper*, the leaves of which are given in soup to relieve abdominal swellings. (Waring.)

Asexual. (L. *a*, neg.; *sexus*, sex, or gender. G. *geschlechtlos*.) Having no sexual organs.

Applied to those modes of reproduction which do not take place through sexual intervention, as fission, budding.

Also, formerly applied to Cryptogamia.

A. reproductive cell. (G. *Keimzelle*.) A term applied in Botany to those reproductive cells which are capable of development without further contact or connection with other cells.

Asex'ns. Same as *Asexual*.

Asfe. A synonym in Dioscorides of the *Atriplex halimus*.

As'fos. Egyptian name of the *Ballota fatida*.

As'gund. Hind. for *Physalis somnifera*.

Ash. (Sax. *asc*. F. *frêne*; I. *frassino*; G. *Esche*.) The *Frazinus excelsior*.

A. bark. The bark of *Frazinus excelsior*.

A. bitter. Quassia, *Picræna excelsa*.

A. blue. The *Frazinus quadrangulata*.

A. com'mon. The *Frazinus excelsior*.

A. Europe'an. The *Frazinus excelsior*.

A. flower'ing. The *Frazinus ornus*.

A. moun'tain. The *Pyrus aucuparia*.

A. moun'tain, Ameri'can. The *Sorbus americana*.

A. moun'tain, Europe'an. The *Pyrus aucuparia*.

A. poi'son. The *Rhus toxicodendron*.

A. prick'ly. The *Xanthoxylon fraxineum*; also, the *Aralia spinosa*.

A. prick'ly, shrub'by. The *Xanthoxylon fraxineum*.

A. round-leav'ed. The *Frazinus rotundifolia*.

A. stink'ing. The *Ptelea trifoliata*.

A. tree. The *Frazinus excelsior*.

A. weed. The *Ægopodium podagraria*.

A. white. The *Frazinus americana*.

Ash-by-de-la-Zouche. Leicestershire; a town about twelve miles from Derby. Here is a mineral spring, containing, in one pound, calcium chloride 94.5 grains, magnesium chloride 1.7, sodium chloride .911, magnesium and sodium bromide .868 grain. It is employed chiefly in scrofulous diseases.

Ash'es. (Sax. *asca*. F. *cendre*; G. *Asche*.) The residual substance after burning anything. The common name for the vegetable alkali, potash.

A. an'imal. The residue of the burning of such substances as hartshorn and bone.

Ashk'ila. An Abyssinian plant; a species of *emilax*, regarded as astringent; the wood is used as a toothbrush. (Waring.)

Ashko'ko goo'man. A plant of South Abyssinia, employed in the treatment of epilepsy; perhaps a species of *Brassica*. (Waring.)

Ashoo-kuchoo. Beng. for *Arum colocasia*.

Ashoo'vri'hi. Sansk. for *Oryza sativa*.

Ash'tead. Surrey; two miles from Epsom. Here is a mineral water containing magnesium sulphate.

Ashu'va. Sansk. for *Physalis somnifera*.

Ash'wa. Sansk. and Beng. for *Physalis somnifera*.

Ashwer'tha. Beng. for *Urostigma religiosum*.

Asia'lia. (Ἄ, neg.; *σίαλον*, spittle. F.

ASPERGULA—ASPERULA.

minal gradual enlargement; the fructification consists of a rounded greenish capitulum covered with spores. Probably *A. glaucus*.

***A. flavescens*.** (L. *flavescens*, to become golden yellow.) A species which has been observed in the meatus auditorius externus. Probably *A. glaucus*.

***A. glaucus*.** (L. *glaucus*, bluish grey.) Ordinary blue mould. A fungus or mould very common on preserved fruits, appearing to the naked eye as a woolly, fleecy crust, at first purely white, then gradually becoming covered with little firm glaucous or dark green dusty heads. Microscopical examination shows branched cylindrical filaments, with rounded ends, containing protoplasm, constituting the *mycelium*. From the superficial filaments of the mycelium rise vertically, at intervals, thicker fruit filaments (carpophores) or conidia filaments. These swell at their upper extremity, and give off numerous rayed divergent protuberances, termed *sterigmata*, and every sterigma bears on its apex a chain of ten or more round bodies or spores, which are so much older the farther they stand from the sterigma. From other filaments of the mycelium springs a second kind of fructification. A spiral filament rises, becoming a hollow screw, at the end of which a globose *conceptacle* is formed, consisting of a thin wall of delicate cells and an enclosed mass of cells. These last, for the most part, form *asci*, in the interior of each of which eight *sporidia* are developed. By the bursting of the conceptacle the sporidia are set free. It is the fruit-bearing stage of the *Eurotium herbariarum*.

Mühlenbach has described two cases of apparent poisoning, accompanied by vomiting, headache, and vertigo, in coopers who had brushed out a cask covered with this fungus. It was contained in a yellowish-green secretion on the membrana tympani.

It has been found in the lungs of a plover dead of phthisis; in the aërial sacs of the eider duck.

***A. mucoroides*.** A species found by Virchow in the lungs of persons the subjects of tubercular disease or pulmonary gangrene.

***A. niger*.** (L. *niger*, black.) A species the mycelium of which is one of the most active agents in the gallic acid fermentation.

***A. nigrescens*.** (L. *nigresco*, to become black.) It has been found in the aërial sacs of the pheasant, *Phasianus colchicus*.

***A. nigricans*.** (L. *nigricans*, blackish.) The species described as producing *Mycomyrmecium*. Probably *A. glaucus*.

***A. polymorphus*.** (Πολύς, many; μορφή, form.) The name given by Pouchet to the fungus of yeast, *Torula*, or, more recently, *Saccharomyces cerevisiae*, in consequence of the extremely variable form of its fructification.

***Aspergula*.** Same as *Asperula*.

***Aspericollis*.** (L. *asper*, rough; *collum*, the neck. F. *aspericollé*; G. *rauhsalsig*.) Having a rough neck or corselet, as *Apaté aspericollis*.

***Asperifolia cœm*.** (L. *asper*, rough; *folium*, a leaf. F. *asperifoliées*.) A synonym of *Boraginæ*.

***Asperifoliate*.** (L. *asper*, rough; *folium*, a leaf.) Rough-leaved.

***Asperitas*.** (L. *asperitas*.) Roughness.

***A. arteriæ asperæ*.** (L. *arteria*, the windpipe; *asper*, rough; so *arteria aspera*, the windpipe.) Hoarseness.

***Asperitudo*.** (L. *asperitudo*, roughness.)

A term applied to granulations of the eyelids, or trachoma.

***Asperity*.** (L. *asperitas*, roughness. F. *aspérité*, *asperité*; G. *Rauhigkeit*.) Roughness, harshness, hoarseness.

In Botany, it is applied to surfaces covered with short, stiff hairs, like those of the stems and leaves of cordia and borage, which were hence named by Linnaeus *Asperifoliæ*.

In Anatomy, applied to roughnesses and inequalities of bone.

***Asperma*.** (A, neg.; *ovipua*, seed.) Absence of semen.

***Aspermasia*.** (A, neg.; *ovipua*, seed.) Term for a want or deficiency of semen.

***Aspermatic*.** Same as *Aspermous*.

***Aspermaticum*.** (A, neg.; *ovipua*, seed. F. *aspermaticum*; G. *Samenmangel*.) Term for the absence, or non-emission, of the semen, owing to its reflux into the bladder, otherwise termed *Dyspermaticum refluxus*.

***Aspermaticus*.** (A, neg.; *ovipua*, seed.) Wanting, or without, seed.

***Aspermia*.** (A, neg.; *ovipua*, seed.) Want of semen.

***Aspermous*.** (A, neg.; *ovipua*, seed. F. *aspermé*; G. *Samenlos*.) Term applied by Turpin to plants, destitute of seeds, which do not appear to be able to reproduce themselves.

***Aspersio*.** (L. *aspergo*, to besprinkle. F. *arrosement*, *asperion*; G. *Besprengung*.) Applied to the sprinkling of the body with a liquid medicinal substance or powder; a besprinkling.

Another term for cataplasma, the sprinkling of a part with a powder.

Also, a term for a fomentation.

***Asperuck*.** Hind. for *Melilotus officinalis*.

***Asperugo*.** (L. *asper*, rough.) A plant mentioned by Pliny, l. xxvi, c. 66, as one of the ancient remedies for gout. It has been referred to *Asperugo procumbens*, Linn.; but Fée remarks that, from its resemblance to mullugo, to which Pliny likens it, the plant must be sought amongst the Rubiæ, and not among the Boraginæ. (Waring.)

A Genus (G. *Scharfkraut*) of the Nat. Order *Boraginæ*.

A. procumbens, Linn. (L. *procumbens*, to lie prostrate.) German madder, great goosefoot. The root is said to be sudorific, and has been used with oil as a dressing for wounds.

***Asperula*.** (L. *asper*, rough. F. *asperule*; G. *Waldmeister*.) Nat. Order *Rubiæ*. Woodruff. Flowers in terminal or axillary cymes; corolla funnel-shaped; stamens 4; fruit without distinct margin to the calyx, dry, or rather fleshy.

Also, a name of the *Galium aparine*.

A. cynanchica, Linn. (Κυνάγχη, dog quinsy, sore throat; from κύων, dog; ἄγχε, to strangle. F. *herbe à l'asquinancie*, *petite garance*, *garance de chien rubéole*, *étranglé chien*; I. *schinanzia*.) Small woodruff, squinancy wort. Leaves linear, four in a whorl, narrow-linear, mucronate, rigid, recurved, not ciliate; upper whorls with two opposite leaves reduced to stipules; flowers blue—June and July. A plant formerly held to be efficacious in curing quinsy, in the form of poultice, or infusion, or gargle.

A. multiflora, Lap. (L. *multus*, many; *flos*, a flower.) The *A. cynanchica*.

A. odorata, Linn. (L. *odoratus*; from *odoro*, to smell. F. *muguet des bois*, *petit muguet*, *hepatique étoilée*, *h. des bois*, *reine des bois*; G.

ASPERULUS—ASPHYXIA.

Feldmeister, Stenochloa) Sweet woodruff. Leaves about eight in a whorl, oblong-lanceolate, cuspitate, ciliate, flowers panicled, on long stalks, white. Flowers May and June. Whole plant very odorous when dried. It has been recommended as diuretic, deobstruent, cordial, and vulnerary. Infused in boiling red wine it forms the Matrecock of Rhenish Germany.

A. tinctoria, Linn. (*L. tinctorius*, relating to a dyer.) Said to be aperient. The roots contain a red colouring matter.

Asperulus, (*L. dim. of asper*, rough.) Slightly rough to the touch.

Asphalt. See *Asphaltum*.

A. English. The residue left in the retort after the distillation of amber.

A. varnish. Asphalt & ox., india-rubber & a drachm, mineral naphtha 10 os. Dissolve by the aid of heat. Used to make cells on glass slides for the reception of objects for the microscope; and to attach cover-glasses over them, either alone or over a coating of gold size.

Asphaltina. (*Asphaltum*, unfailing; possibly from *ἀσφαλίζω*, to make secure; or *ἀσφαλίζω*, to overthrow.) Term for the last lumbar vertebra, according to Gervase; the first, as stated by Castellan.

Asphaltitis. See *Asphaltum*.

Asphaltum. (*Asphaltos*, bitumen. *F. asphaltis*; *L. asphaltis*; *G. Asphalt*, *Judaspach*.) Jew's pitch. Name for a smooth, hard, brittle, black or brown substance, which easily melts by being heated, found in a soft or liquid state on the surface of the Dead Sea, which is therefore called *Lacus asphalticus*, and growing dry and hard by keeping, it is found in other localities, and also as a mineral product in different parts of Europe, Asia, and America. It was used in many affections of the chest, intestines, and uterus, and by the Egyptians for embalming their dead, under the name *Momia*. It was used formerly in stimulating plasters and ointments.

Aspharine. A synonym of the *Ostium asperum*.

Asphodel. (*Asphodelos*. *L. asphodelus*; *F. asphodelo*; *L. asphodelo*; *G. asphodel*; *Asphodel*.) A plant belonging to the Group *Asphodelineae*, Nat. Order *Liliaceae*. The asphodel of the ancients is generally referred to *Asphodelus ramosus*, or king's spear, but by some to *Narcissus pederis*. It was regarded as an emmenagogue, diuretic, discutient, and alexipharmic, and was employed in a great variety of diseases, especially locally in alepecia. The bulbs were used as food. Dioscor. *l. ii.*, c. 190. Paul. *Ag. l. vii.*, a. 3; Pliny *l. xxi.*, c. 22, *l. xxi.*, c. 26, *Colus. l. v.*, a. 37. In Algeria alcohol is obtained from them. The asphodel of earlier English and French poets is *Narcissus pseudonarcissus*.

A. bog. The *Narthecium ossifragum*.

A. Ranunculus. The *Narthecium ossifragum*.

A. Scotch. The *Typhelia palustris*.

A. white. The *Asphodelus ramosus*.

Asphodelon. A Family of *Liliaceae*, characterized by having a regular perianth; a superior or bicarpellary fruit; a straight or incurved embryo, with radicle looking towards the umbilicus.

Asphodelus. A Genus of the Tribe *Anthoxanthae*, Nat. Order *Liliaceae*. The flowers are regular and hermaphrodite.

Asphodelolideae. Used by some for *Asphodelus*.

A. luteus, Linn. (*L. luteus*, yellow. *F. Baton de Jacob*) Hab. Sicily. Roots diuretic.

A. ramosus. (*L. ramosus*, branching. *F. Baton royal*, *L. assula regis*, *G. asiger Asph.*) White asphodel. Hab. South Europe, Algeria. The root is said to be diuretic, it has been used in itch, and as an ointment for syphilitic sore of the mucous membrane of the nose, as a substitute for squills, and, after boiling in water, the starch has been made into bread.

A. verus albus. (*L. verus*, true; *albus*, white.) The *A. ramosus*.

A. verus luteus. (*L. verus*; *luteus*, yellow.) The *A. luteus*.

Asphote. Sansk. for *Clitoria tornata*.

Asphyxia. (*Asphyxia*, pulseless.) A term for an invertebrate group containing *Ascalaphus*, *L. hirsuta*, and others.

Asphyctic. (*Asphycticus*, without pulsation. *L. pulsio*, *asphycticus*.) Having no pulse. Belonging to *Asphyxia*.

Asphyctous. (Same etymen.) Pulseless, if *luteus* not causing pulsation.

Asphyxia. (*Asphyxia*, a stopping of the pulse, from *ἀσφ*, neg., *σφίξω*, the pulse. *F. asphyxia*, *L. asphyxia*, *G. asphyxia*; *G. Schensted Pulsoverloest*, *Asphyxia*.) The condition into which the body is thrown when the access of oxygen to the blood is prevented, either by compression of the chest (suffocation), pressure on the trachea (hanging), or occlusion of the mouth and nostrils (smothering), or by submersion in a fluid (drowning), or when the subject is compelled to breathe air containing an insufficient amount of oxygen, or none at all. In the latter case it is most commonly observed to occur in man from the respiration of air charged with carbonic acid or other irrespirable gas, the result of fermentation or combustion. It may, however, be a consequence of paralysis of the respiratory centres. In asphyxia from mechanical causes a period of quiescence occurs, lasting for a few seconds, succeeded by violent involuntary, and then by violent involuntary and convulsive, efforts to inspire. These gradually diminish in force and frequency, and ultimately cease. The blood-pressure usually rises for a time, and then gradually falls. It indicates a curious inflexibility of etymology that the pulse in asphyxiated animals continues to beat long after all signs of respiratory effort have ceased.

In the early stages of asphyxia the failure of the interchange of gases, leading to the absorption of oxygen and the elimination of carbonic acid, causes the blood to stagnate in the pulmonary capillaries, as a result, the left side of the heart receives an insufficient supply of arterial blood, whilst the right side becomes overcharged with venous blood. The organs of the body generally are in a similar condition to the right cavity of the heart. The respiratory centres, powerfully stimulated by the imperfectly aerated blood, for some time liberate strong muscular efforts to respire, but the brain rapidly loses its functional activity, and loss of consciousness results.

The treatment of asphyxia must vary with the cause. Some cases are incurable, as when an aneurysm of the aorta or innominate presses upon the trachea; but the general proceedings to be adopted in cases of sudden asphyxia from any cause have already been stated under the head of *Artificial respiration*. The head should be raised, fresh air be admitted to the room, vigorous friction, with stimulants, applied to the limbs, hot towels to the belly, and an injection of whisky

ASPHYXIA—ASPIDION.

or brandy into the rectum. Electrical currents should be applied to the neck and epigastric region, to excite the phrenic nerve, and through it to cause the diaphragm to contract. If the cause of the asphyxia be situated above the larynx, tracheotomy must be performed. If a stone or coin have slipped into the trachea, the instruments for tracheotomy should be at hand, but an attempt may be made to remove it by placing the patient in the prone position over the end of a sofa, directing him to take a deep breath slowly, and to make a violent expiration, at the same moment striking him a sharp blow on the back. In asphyxia from hanging or strangulation, a slight bleeding often proves very serviceable by unloading the congested right side of the heart.

A. by drowning. See *Drowning*.

A. by heat. Sunstroke.

A. by strangulation. See *Hanging*.

A., cutaneous. (*L. cutis*, the skin.) The asphyxia that results in rabbits from shaving off the hair from the body, and covering the skin with varnish. There is a great fall of temperature, deficient arterialisation of the blood; many nervous symptoms, such as tremors, perverted sensibility, and cramps, precede death; gastric ulcers and nephritis have also been observed. External heat delays the occurrence or relieves the acuteness of the symptoms. The condition was at one time believed to depend on suppression of the cutaneous secretion, and was looked on as a form of asphyxia. The doctrine is not now generally held, and the symptoms are thought to be caused by the retention in the blood of some cutaneous secretion.

A. from cold. This may either be general or partial. General asphyxia is due to contraction of the cutaneous capillaries, causing engorgement of the vessels of the brain and of the viscera of the chest and abdomen, whilst at the same time the capillaries of the lungs are probably contracted from the action of the cold air inspired, the due aeration and circulation of the blood is interfered with, and asphyxia is the result. This must be combated by frictions, warm, or perhaps alcoholic, drinks, and artificial heat carefully and not too suddenly applied. Partial asphyxia is seen in the impeded circulation occurring in the extremities on exposure to intense cold, the fingers, toes, nose, and ears becoming first red, then blue, and finally white. The treatment consists in friction with ice, cold water, or snow, or alcohol; if heat be too suddenly applied the part becomes gangrenous.

A., paralytic. (*Παραλυτικός*, affected with paralysis.) A term applied by Barnes to that form of asphyxia neonatorum in which, from compression of the head, there is injury to the brain tissue, or meningeal hemorrhage, or congestion of the pons Varolii and medulla oblongata.

A., syn'copal. (*Συγκοπή*, a swoon.) A form in which the cavities of the heart are found empty.

Asphyxia algida. (*L. algidus*, cold.) Asphyxia caused by intense cold.

A. demerso'rum. (*L. demersus*, from *demergo*, to immerse in water.) Asphyxia from drowning.

A. electrica. Term for asphyxia produced by lightning or electricity.

A. ex compressu. (*L. ex*, from; *compressus*, a pressing together.) Asphyxia from crushing.

A. ex corpore superincubante. (*L. ex*; *corpus*, the body; *superincubans*, part. of obsolete *superincubo*, to lie upon. *G. Erdrücken*.) Asphyxia from overlying, as of a baby by a grown-up person.

A. ex obturatis spir'itus itiner'ibus. (*L. ex*; *obtur*, to stop up; *spiritus*, the air; *iter*, a passage.) Asphyxia from plugging of the air passages by a foreign body.

A. ex suspensio. (*L. ex*; *suspensum*, a hanging.) Asphyxia from hanging.

A. ex vaporibus pestiferis. (*L. ex*; *vapor*, an exhalation; *pestifer*, pestilential.) Asphyxia from gaseous poisons.

A. idio'pathica. (*Ἰδιος*, pertaining to one's self; *πάθος*, affection.) A term proposed for asphyxia, or sudden death, with pulselessness, occurring without the presence of manifest cause.

A. mephit'ica. (*L. mephiticus*, pestilential.) Asphyxia produced by the inhalation of carbonic acid, or other non-respirable gas.

A. neonato'rum. (*Nios*, new; *L. natus*, part. of *nasco*, to be born.) A form of asphyxia occurring in new-born infants, resulting, in protracted delivery, from compression of the funis, or from separation of the placenta, or from imperfect aeration of the blood of the mother before the first efforts of respiration are made, or from some cause preventing the respiration of the infant after delivery. The position of the cord may sometimes be shifted. Mucus should be cleared from the mouth and fauces, and artificial respiration commenced. See *Apnæa neonatorum*.

A. neophyto'rum. (*Νεόφυτος*, newly planted.) A synonym of *A. neonatorum*.

A. siderato'rum. (*L. sideratus*, star-struck.) A term for the coma caused by narcotic poisons.

A. strangulato'rum. (*L. strangulator*, a strangler.) Asphyxia from strangling.

A. suffocatio'nis. (*L. suffocatio*, a choking.) Asphyxia from suffocation by hanging or drowning.

Asphyxial. (Same etymon.) Relating to asphyxia.

Asphyxiate. (Same etymon. *F. asphyxier*.) To produce a state of asphyxia.

Asphyxiated. (*Ἀσφυξία*. *F. asphyxié*; *G. asphyktisch*, *scheintodt*, *ohne Pulsschlag*.) Labouring under asphyxia.

Aspic. (*F.* from a corruption of *spice*.) The French lavender, *Lavandula spica*.

The same as *Asp*.

Aspidechid'nei. (*Ἀσπίς*, a round shield; *ἐχίδνα*, a viper.) Applied to a Family of *Ophidii*, including venomous serpents that have plates on their head.

Aspidi'æ. (*Ἀσπιδιον*, a small shield.) A Subfamily of the Family *Polypodiaceæ*. Sori single, dorsal, roundish, with shield- or kidney-shaped indusium.

Aspidin. (*Aspidium*.) A substance by some regarded as the active principle of the root of the male fern; by others considered to be *Filicic acid*; most probably a mixture of several of the constituents of the root.

Aspidioid. (*Ἀσπίς*, a round shield; *ειδός*, likeness. *G. schildähnlich*.) Resembling a shield; clypeal; peltate; scutiform; thyroid.

Aspidion. (*Ἀσπιδιον*, a small shield.) A synonym of *Allypum*, because its fruit resembles a buckler.

ASPIDIOPSORIASIS—ASPIRATOR.

Aspidiopsoriasis. (Ἀσπίς; psoriasis. G. *Schildräude*.) Term for psoriasis scutellata.

Aspidiota. (Ἀσπίς. F. *aspidiota*.) Applied by Latreille to a Group of Crustacea, the body of which is covered with a kind of shield.

Aspidiphora. (Ἀσπίς; φέρω, to bear. F. *aspidiphore*; G. *schildtragend*.) Applied by Latreille and Cuvier to a Family of Crustacea, having the body covered with a shell.

Aspidiscina. (Ἀσπίδοσκος, the boss of a shield. F. *aspidiscine*.) Applied by C. G. Ehrenberg to a Tribe of Polygastrica, having the *Aspidiscus* for their type.

Aspidiscus. (Ἀσπίδοσκος, the boss of the shield.) Used by Cael. Aurelianus for the sphincter of the anus, from its shape.

Aspidium. (Ἀσπίδιον, a small shield. G. *Schildfern*.) A Genus of the Tribe Polypodiaceae, Nat. Order Filices. Shield fern. Hab. various. Sori dorsal, globose; involucre superior, orbicular, peltate.

A. athamanticum. (*Athamanta*.) Hab. South Africa. A species the root of which is used as an anthelmintic. It is called panna in Europe, iakomankomo, or uncomocomo, by the Kaffirs.

A. barometz. The *Cibotium barometz*.

A. coriaceum. (L. *corium*, a skin.) The *Polypodium calaguala*.

A. depasum. (L. *depasum*, part. of *depasce*, to feed upon.) The *Nephrodium filix-mas*.

A. discolor. (L. *discolor*, of various colours.) The *Polypodium calaguala*.

A. erosum. (L. *erosus*, part. of *erode*, to gnaw off.) The *Nephrodium filix-mas*.

A. ferrugineum. (L. *ferrugineus*, rust-coloured.) The *Polypodium calaguala*.

A. filix-foemina. The *Asplenium filix-femina*.

A. filix-mas. (L. *filix*, a fern; *mas*, a male.) The male fern, or polypody. A synonym of *Nephrodium filix-mas*. See, also, *Filix mas*.

A. marginale. Schwartz. (L. *marginis*, to furnish with a border.) Hab. United States. The oil has been successfully used in the treatment of tapeworm.

Aspidocheloni. (Ἀσπίς; ἔλκω, neg.; χελών, the hand. F. *aspidochelone*.) Applied by J. A. Ritgen to a Family of saurian reptiles, having the body covered with scales, and two hind feet only.

Aspidobranchia. (Ἀσπίς; βράγχια, the gills. F. *aspidobranchie*; G. *schildfischhörig*.) A synonym of *Rhipidoglossa*.

Aspidocephali. (Ἀσπίς; κεφαλή, a head. F. *aspidocéphale*; G. *schildkopfig*.) Applied by J. A. Ritgen to a Section of ophidian reptiles, having the head furnished with plates.

Aspidocephalus. (Ἀσπίς; κεφαλή.) A Genus of the Order Nematoides, Class Scolelida, Subkingdom Vermes.

A. scoleciformis. (Σκώληξ, a worm; L. *forma*, shape.) A sexually mature nematoid entozoon found in the intestine of the *Dasyatis acronotus*.

Aspidocheloni. (Ἀσπίς; χελών, the hand. F. *aspidochelone*; G. *schildhandig*.) Applied by J. A. Ritgen to a Family of saurian reptiles, having the body covered with scales, and two fore feet only.

Aspidocolobi. (Ἀσπίς; κολοβός, mutilated. F. *aspidocolobe*.) Applied by J. A. Ritgen to a Family of saurian reptiles, having the

body covered with scales, and more or less mutilated as to the limbs.

Aspidocotylus. (Ἀσπίς; κοτύλη, a hollow.) A sexually mature trematode worm.

A. mutabilis. (L. *mutabilis*, variable.) A species found in the intestine of the fish named *Cichla temensis*.

Aspidogaster. (Ἀσπίς; γαστήρ, the belly.) A sexually mature trematode worm.

A. ascidia. (Ἀσπίδιον, a little bag.) A species believed to inhabit the sac of the tunicate *Ascidia*.

A. conchyolia. (Κόγχη, a mussel shell; L. *colo*, to inhabit.) A species found in the *Unio pictorum*.

A. limacoides. (L. *limax*, a slug; εἶδος, like.) A species found in the intestine of *Squalius cephalus*.

Aspidophora. (Ἀσπίς, a buckler; φέρω, to bear.) A synonym of *Branchiopoda*.

Aspidophorous. (Same etymon. G. *schildtragend*, *beschildet*.) Provided with a shield, or with a scaly integument.

Aspidota. Same as *Aspidiota*.

Aspil'ia latifolia. Hemorrhage plant. A plant in use in West Africa for arresting bleeding. The pounded leaves and flowers are applied to the bleeding part.

Aspilonotus. (Ἀσπίλος, spotted; νῶτος, the back. F. *aspilonote*.) Same etymon. G. *Medusa*, the *Chrysaora aspilonota*, because its umbel is entirely white.

Aspirates. A division of continuous consonants, produced by a rush of air either through the nearly closed lips, labial consonants; through a small slit formed by the approximation of the tip of the tongue to the back of the front upper teeth, or the anterior part of the hard palate, dental consonants; or, in the throat, by the approximation of the root of the tongue to the soft palate or pharynx, guttural consonants.

A. dental. (L. *dens*, a tooth.) *S*, *t*, *ch*, and the hard *th*, formed without the voice; and *s*, *sh*, as in *azure*, and the soft *th* formed with the voice. See *Aspirates*.

A. guttural. (L. *guttur*, the throat.) The sound of *ch*, as in *loch*, without the voice; and *gh*, as in *tough*, produced with the voice. See *Aspirates*.

A. labial. (L. *labia*, a lip.) These are *f* and *v*, the former produced with the voice, the latter without it. See *Aspirates*.

Aspiration. (L. *aspiratio*, a breathing upon, from *ad*, to; *spiro*, to breathe. F. *aspiration*; I. *aspirazione*; S. *aspiration*; G. *Einathmen*.) A term for inspiration.

Also, the act of using the *Aspirator*. Also, synonymous with imbibition.

Also, the act of pronouncing a letter with the rough breathing.

A. continuous. (F. *aspiration continue*.) A mode of treatment of wounds, proposed by Maisonneuve, to prevent traumatism or pyemia from external contamination. The apparatus employed consisted of an envelope of india-rubber, which closely fitted the stump of an amputated limb, communicating by a tube with a bottle capable of being exhausted of air by a syringe. The effused fluids were thus not retained in the wound, but expelled by atmospheric pressure.

A. pneumatic. The removal of fluid from a cavity by means of the pneumatic instrument called an *Aspirator*.

Aspirator. (L. *aspiro*, to breathe out. F.

ASPIROUS—ASPOREOUS.

aspirateur. An instrument for the evacuation of the contents of an abscess without admitting air. One form consists of a bottle fitted with an india-rubber cork, through which a tube passes, dividing above into two arms, to each of which a stop-cock and a piece of india-rubber tubing is connected. One of these pieces ends in a fine trocar, the other in an exhausting syringe. In using the instrument the trocar is inserted into the cavity containing the fluid it is desired to withdraw, and the stop-cock between it and the bottle is closed. The air is then exhausted from the bottle by the syringe, and the stop-cock on this side is closed. The bottle is now in the condition of an exhausted receiver. On opening the first stop-cock the fluid is expelled by atmospheric pressure from the cavity, and no air need be allowed to enter on withdrawing the trocar.

Also, in Chemistry, an apparatus for drawing a current of air through a tube or vessel. An ordinary form is a closed tin vessel, of the dimension of a cubic foot, communicating with the chamber through which air is to be drawn by an elastic tube, and having a tap at its bottom; being filled with water, and the tap opened, the water runs out and air passes in through the chamber to supply its place.

A., pneumatic. (*Pneumatic.*) The surgical instrument now called simply *Aspirator*.

A.-trocar. The same as *Aspirator*, the surgical instrument.

Aspi'rous. (A, neg.; *σπῖρα*, anything wound round. G. *spiral/aeorlos*.) Not spiral. In Botany, used to express the absence of a spiral fibre.

As'pis. (A'σπίς, an asp; Heb. *ḥDN*, asap, to collect together; or from *ā*, neg., and *σπῖρα*, a circle; or from *lós*, poison.) A venomous serpent.

Also (*ἀσπίς*, a round shield), a shield, as of ferns.

A. intestinalis. See *Callophis intestinalis*.

Aspi'tes. (A'σπίς. F. *aspistes*.) Applied by J. A. Ritgen to a Suborder of *Reptilia*, comprising serpents, the body of which is covered with plates.

Asplen'iceæ. (*Asplenium*.) A Subfamily of the Family *Polypodiaceæ*. Sori below, longish or linear; indusium lengthened, attached along its whole length to the side of the nerve.

Asplenio'idææ. (*Asplenium*. F. *asplenioides*.) Applied by G. F. Kaulfuss to a Section of *Polypodiaceæ*, having the *Asplenium* for their type.

Asplen'ium. (A'σπλήνιος, from *ā*, neg.; *σπλήν*, the spleen; because it was believed to remove disorders of that organ. G. *Milakraut*, *Streifenfarn*.) A Genus of the Tribe *Asplenieæ*, Suborder *Polypodiaceæ*, Nat. Order *Filices*. Fronds herbaceous, or membranaceous and coriaceous, simple lobed, bipinnate, or decompound; sori dorsal on the veins, indusiate, linear, short, or elongate; the receptacles lateral on the anterior side of the veins; indusium linear and membranaceous; veins simple or forked, from a central costa.

A. adiantum nig'rum. L. (A'διδαντος, unwetted; L. *niger*, black. F. *capillaire noir*, *capillaire commun*; G. *Frauenhaaretreifarn*, *schwarze Frauenhaar*.) The leaf fern, or black maidenhair. The maidenhair fern. Frond deltoid-ovate, two or three pinnate; pinnules petio-

led, inciso-pinnatifid, serrate. Used as astringent and pectoral.

A. aureum. (L. *aureum*, golden.) The *A. ceterach*.

A. ceterach. Linn. (An Arabic word. F. *doradille*; G. *Milafarn*.) The herb spleen-wort, or milk-waste. Fronds erect or spreading, leathery, clothed underneath with rusty, ovate, toothed scales; sori linear, covered by the scales. Grows on old walls and rocks. It has a mucilaginous, rough taste, and has been recommended in diseases of the chest and in nephritis and calculous complaints. A decoction of the leaves in vinegar was considered of great value in reducing indurations of the spleen, the leaves being also applied externally, Dioscorid. i. iii, c. 141; Paul. *Æg. Hb.* vii, § iii; Pliny, i. xxvii, c. 17.

A. filix-foemina. Bernh. (L. *filix*, a fern; *foemineus*, or, more properly, *femineus*, female. F. *fougère femelle*, *pteride*.) Female fern. Fronds large, 2-3-pinnate; pinnules numerous, crowded, subsessile, oblong, serrate. Rhizome has been used as that of *Nephrodium filix-mas*.

A. hemionit'is. (H'μῖωνος, a mule.) The mule's fern. Used, like the *Scolopendrium vulgare*, as demulcent and pectoral, and as an astringent.

A. latifolium. (L. *latius*, broad; *folium*, a leaf.) The *A. ceterach*.

A. murale. (L. *murale*, belonging to a wall.) The *A. ruta-muraria*.

A. obtusum. (L. *obtusum*, blunt.) The *A. ruta-muraria*.

A. officina'rum. (L. *officina*, a work-shop.) The *A. ceterach*.

A. ruta-mura'ria. (L. *ruta*, rue; *murus*, a wall. F. *sauve-vie*, *rue des murailles*; G. *Mauerstreifarn*, *Mauerkraut*.) The wall rue, or tent-wort. Frond oblong or ovate, rigid, irregularly bipinnate, tip rounded or truncate, toothed. Grows on walls and rocks. Used as a demulcent and expectorant. It has nearly the same qualities as the *A. adiantum nigrum*, and has by some been supposed specific in the cure of ulcers of the lungs, in the form of decoction.

A. scolopendrium. The *Scolopendrium vulgare*.

A. trichoman'es. (Τριχομανής, from *θρίξ*, hair; *μάνος*, thin. F. *capillaire rouge*, *polytrich des officines*; G. *Steinfarn*, *rother Streifarn*.) The common maidenhair, or spleen-wort. Fronds linear, pinnate; rachis rigid; sori oblique, short. Grows on walls and rocks. Used as a demulcent and expectorant. Its leaves have a mucilaginous, subastringent taste, sweetish, but without any particular flavour, and are esteemed expectorant and deobstruent.

A. trichomanoid'es. (Θρίξ; *μάνος*; *είδος*, likeness.) The *A. trichomanes*.

Asple'nium. (A'σπλήνιος, the spleenwort.) The same as *Asplenium*.

Aspondyloid'ea. (A, neg.; *σπόνδυλος*, a vertebra. F. *aspondyloide*.) Without vertebrae; proposed by G. Fisher as a substitute for Invertebrata.

Asporomyc'etes. (A, neg.; *σπόρος*, seed; *μύκης*, fungus.) A term formerly applied by Wallroth to the first Order of Fungi (*Mycetes*). Supposed to be characterized by the absence of spores.

Aspo'reous. (A, neg.; *σπόρος*, a seed. F.

ASPREDO—ASSERAC.

aspore; *G. ohne Keimkorn*.) Having no spores or reproductive corpuscles.

Aspre^{do}. (*L. aspre^{do}*, roughness; from *asper*, rough. *G. Rauigkeit, Unebenheit*.) The same as *Trachoma*, which was used by Galen, in *Def. Med.*, for a roughness of the eyelids.

Also, the ruff, a fish, from the inequalities of its scales.

A. milia^{cea}. (*L. milium*, a millet seed.) Miliary fever.

Asprella. (*L. asper*, rough.) A name formerly used for the plant *Equisetum majus*, or the rough horsetail.

Aspreto^{do}. The same as *Aspre^{do}*.

Aspris. (*L. asper*, rough.) The holm oak, or holly, *Ilex aquifolium*.

Aspurka. An article of the Indian *Materia Medica*. Said to be useful in dropsy. 'Taleef Sherief,' p. 14, No. 46. (Waring.)

Ass. Arab. for the *Myrtus communis*.

Ass. Common name of the *Equus asinus*.

A's milk. See *Milk, ass's*.

Assa dulcis. (*L. dulcis*, sweet. *F. assa doux*.) Ancient name of benzoin.

A. odora^{ta}. (*L. odoratus*, sweet-scented.) A synonym of *Storax*, or gum benzoin.

Assab. See *Asab*.

Assaba. A plant growing in Guinea. The leaves considered useful in dispersing buboes.

Assaba^{tus}. Name for the disease bor-sail, when it affects females. See *Borozail*.

Assac. (Heb. *פסן*. Arab. *asak*.) Gum ammoniacum.

Assacou. The Brazilian name of the *Hura brasiliensis*.

Assafetida. A synonym of *Assafetida*.

Assafetida. (*F. asafetida*; *G. Stink-sant, stinkender Asant, Teufelsdröck*; Sans. *Hinga*; Beng. Hind., Dec. *Hing*; Tam. *Perungyrm*; Tel. *Ingooa*; Arab. *Hilleet, Sumugh-ul-mehroos*; Pers. *Ungoosh*; Mal. *Angoo*.) A gum resin, the product, it is believed, of two umbelliferous plants, *Narthex asafetida* and *Scorodoea fatidum*. The pharmacopoeial name (*B. Ph.*, *L.*, *E.*, *D.* and *U.S.A.*) of the concrete gum-resin which is obtained by exudation from the transversely cut root of the plant *Perula asafetida*, or *Narthex ferula* (*L.*), or *Narthex asafetida* (*U.S.A.*), and probably *Perula persica* (*E.*). About the end of April, when the plants have ceased to grow, about eight inches of the roots are exposed by removing the soil; a month later the crown of the root is removed, and the juice that exudes, called *shir*, i.e. milk, is collected, and mixed with a soft earth. In the course of a few days, when fresh slices are removed or incisions made, a thicker exudation is obtained, called *pispa*. Some roots yield scarcely half an ounce, others as much as two pounds. Freshly imported the drug forms a clammy, yet hard, yellowish-grey mass, in which opaque, white, or yellowish milky tears, sometimes an inch or more in length, are more or less abundant. By exposure to air it acquires a bright pink, and then a brown hue. The tears have a conchoidal fracture, and if the freshly exposed surface be touched with nitric acid, sp. gr. 1.2, it assumes for a short time a fine green colour. The drug has a powerful and persistent alliaceous odour, and a bitter, acrid, alliaceous taste. It dissolves readily in vinegar, weak alcohol, and yolk of egg. *Assafetida* is composed of resin 65, bassorine 11.66, soluble gum 19.44, essential oil 3.60, salts, &c., 0.30; it also contains a small quantity of

ferulic acid, with traces of malic, acetic, formic, and valerianic acids; the resin contains ferulic acid; the volatile oil, containing ferulyl sulphurets, is probably the active principle. It is used as an antispasmodic in hysteria and whooping-cough, a carminative in tympanitis and flatulence in the intestines, an expectorant in chronic bronchitis, and as an adjuvant to purgatives in flatulence and constipation. In the East it is used as a condiment instead of garlic. Dose, 5–20 grains in pill.

A. disgunen^{sis}. A synonym of *Perula assafetida*.

A. pulvera^{ta}. Helv. Ph. (*L. pulvera*, to reduce to powder.) *Assafetida* exposed to a freezing temperature, or rendered quite dry by the help of caustic lime, and then reduced to a fine powder.

A. resⁱⁿ. $C_{10}H_{12}O_{10}$. It forms 65 per cent. of the gum resin. It dissolves with decomposition in warm concentrated nitric acid, but is not wholly soluble in either chloroform or ether. It contains ferulic acid.

Assa^{er}et. A compound of bitter, stomachic, and purgative remedies in the form of a pill. (*D.*)

Assa^{kur}. Sugar.

Assal. Syrian and modern Egyptian for the honey bee.

Assala. Arabic for the nutmeg. (*R.* and *J.*)

Assalia. In Bombay the name of the *Lepidium sativum*, or common cress.

Assalio. Old name for worms growing within wood. Same as *Xylephagi*.

Assaliⁿⁱ. An Italian surgeon. Works dated from 1786–1815. Invented a tenaculum.

A. tenaculum of. (*L. teno*, to hold.) A pair of small forceps furnished with a spring catch, whereby when they are closed they are retained in that position until the spring is released. They are used for holding arteries during tying.

Assamar. (*L. asso*, to roast; *amarus*, bitter.) A term applied by Reichenbach to the bitter substance formed in bread, malt, sugar, coffee, and other similar substances, by roasting. It is also obtained from tar. It is obtained as a yellow transparent solid, or as a reddish-yellow syrupy liquid; it is soluble in water, and neutral.

Assam^{odum}. A Cingalese name of several exciting Umbelliferae, amongst others the *Ammi majus*.

Assarabac^{ca}. See *Asarabacca*.

Assa^{ra}-re^{wund}. Arabic and Persian for gamboge.

Assari^{um}. Same as *Asarius*.

Assarius. A Greek weight (*Gr. ἀσάριον*), used by Galen, *l. de Pond. et Mens.*, of two drachma, or the fourth part of an ounce; also called *As*.

Assatio. (*L. asso*, to broil. *F. assation*; *I. assazione*; *G. Braten, Rosten*.) The preparation of food, or medicine, in their own juice, without the addition of any liquid.

Assay. (*F. essayer*, to prove or try.) Term for an operation for determining the quantity of precious metal in any mineral or metallic mixture, by ascertaining how much of the particular metal in question is contained in a determinate quantity of the material under examination.

Assella. The *Azila*.

Asserac. A species of bhanga; used in

ASSERCULUM—ASSUETUDE.

Eastern countries, and the same as *Assis*. See *Cannabis indica*.

Asserculum. (L. *asserculum*, a small stake.) A splint. (Dunglison.)

Asses eye bean. The seeds of the *Mucuna urans*, which are used in French Guiana as a remedy for hemorrhoids.

Assident. (L. *ad*, to, at; *sedeo*, to sit. F. *assident*.) Associating with or sitting by others; concomitant; it is accessory applied to symptoms.

Assidentia signa. (F. *symptômes assidentes*.) Term formerly used for accessory symptoms, or those which are, for the most part, but not always, present to disease; hence they are distinct from such as are pathognomonic.

Assideration. (L. *assido*, to sit down.) Homicide, and especially infanticide, by assideration consisted in the forcible immersion and retention of the body in a bath of ice-cold water.

Assiduus. (L. *assiduus*, unremitting, constant.) A term employed synonymously with continuous; *assiduus febris*, being the same as continued fever.

Assimilability. (L. *assimulo*, to make like. F. *assimilabilité*.) According to Burdach, a quality of alimentary substances which enables them to acquire, while still in the intestine, a condition similar to that of the blood.

Assimilable. (Same etymon.) Capable of being applied to the purposes of nutrition.

Assimilate. (L. *assimulo*, to make like. F. *assimiler*; I. *assimigliare*; G. *verähnlichen, assimilieren*.) To perform the process of *Assimilation*.

Assimilating. (Same etymon.) Capable of effecting such changes in raw material as may fit it for the nutrition of the body.

Assimilation. (L. *assimilatio*; from *assimulo*, to make like. F. *assimilation*; I. *assimilazione*; G. *Gleichmachung, Anähnlichung*.) The process by which food is prepared for the nutrition of the tissues. In its widest sense it may be applied to culinary operations, by which food is divided, softened, more or less altered in composition, and rendered more rapid and digestible. It may also be applied to the changes which are effected in food by the operation of the digestive organs and fluids, starchy compounds being converted into dextrin and sugar; oils and fats being emulsified and saponified; and albuminous compounds being changed into peptones. The term is, however, more properly limited to the changes that the solids and fluids ingested as food undergo after being absorbed into the lymphatics in their passage through the mesenteric and other glands, and after absorption into the blood-vessels of the intestines in their passage through the liver. In one sense each tissue and organ of the body, in taking up from the blood the materials fitted for its own nutrition or secretion, prepares the blood for the nutrition of other parts, and may, therefore, be said to exert an assimilative action upon it.

A., destructive. A term formerly used to express what is known now as *Metabolism*.

Assimilative. (Same etymon.) Capable of being applied to the nutrition of the body; capable of taking up materials for the purpose of nutrition.

A. faculty. (L. *facultas*, capability. F. *faculté assimilatrice*.) A term applied to the power that all living organic matter has of as-

similating; that is to say, of rendering outside matter like to itself.

Assimilatory. (Same etymon.) Tending to assimilate.

A. property. The power possessed by organised beings of converting food into their own substance.

Assimivum. A name applied by Desvoux to an autocarpic fruit, the ovaries of which are numerous, bacciform, monolocular, proceeding from a single flower, and united into a spherical fruit, as in the fruit of the *Anonae*.

Assios is'chas. A purgative and emetic root of the ancients, synonymous with *Raphanus agria*, the wild radish.

Assis. Old name, said to have been either the same as opium or meconium, or a powder made from the leaves of the *Cannabis sativa*, mixed with water, of which five boluses, or more, about the size of a chestnut, were swallowed, and produced intoxication, ecstasy, and delightful visions. See *Asseros*.

Under this name Prosper Alpinus mentions a medicament in use amongst the Egyptians as a stimulant. It consisted of the powdered leaves of Indian hemp made into boluses with water.

Arabic name for hemp.

Assistens. (L. *ad*, to, at; *sisto*, to stand, stop.) Aiding; standing by.

Assistentes glandulae. (L. *assiste*, to stand by; *glandula*, dim. of *gland*.) The assisting glands. An old term for the lobes of the prostate gland.

Assius lapis. (*Assos*, a city of Tross, in Asia Minor; *lapis*, a stone.) Term for a soft sandstone, friable and loose, anciently said to have the power of destroying fungous growths without causing pain. It was also called *Sarcophagus*, a consumer of flesh, because the dead buried in graves made of it were entirely consumed within forty days, the teeth only excepted.

Associated. (F. *associé*.) Combined, connected with each other.

A. movements. A term given to movements having no connection with the essential act calling them forth, but coincident or consensual with it; such is the knitting of the brows and the fixturing of facial muscles in strong bodily effort.

Associating. (L. *associo*, to make one's companion; from *ad*, to; *socius*, a fellow.) Unit-ing together.

A. fibres. A term applied to those fibres of the brain which unite parts of the same hemisphere to each other. They are also called collateral.

Association. (L. *associatio*; from *ad*, at, to; *socius*, companion.) The act of uniting; combination; union. Used wherever union, or combination, or connection of any kind, occurs; but, as a special term, it is most common in mental philosophy or psychology, where it applies to the connection existing in the mind between impressions which have previously coexisted, or which are similar. Any idea tends to bring into the mind its associated ideas, in accordance with the two great laws of association, the law of con-tiguity and the law of similarity.

Assodes. See *Assodes*.

Assos. Arabic for *Assamen*, or alum. (R.)

Assouron. Allapic, the *Eugenia pimenta*.

Assuetude. (L. *assuetudo*, to accustom.) Habit, custom.

ASSULA—ASTER.

Assula. (L. *assula*, a small board. F. *assule*; G. *Feld, Schildchen*.) Name by Illiger for each piece of the cuirass of *Mammifera* when composed of many scales united in a kind of areolated table.

Also, a term for a splint.

Assultus. (L. *assultus*, part. of *assulto*, to leap.) The attack or onset of a disease.

Assumption. (L. *assumo*, to take to one's self. G. *Aufnahme*.) The laying hold of a thing; prehension.

Assurgent. (L. *assurgo*, to rise up. G. *aufsteigend, erhebend*.) Rising up, that is, first bent down, then rising erect towards the apex.

Astaci fluviatilis concrementa. (L. *concrementum*, a concretion; from *concreresco*, to grow together.) The concretions from the crayfish, *Astacus fluviatilis*; formerly used in medicine, and known as *Crabs' eyes*.

Astacides. (Ἀστακός, a species of crab. F. *Astacides*.) A Family of the Tribe *Macrura*, Suborder *Decapoda*, Order *Podophthalma*. Body slightly compressed; tail rather long; carapace with a transverse suture; dermal skeleton hard and solid; branchiae in tufts.

Astacus. (Ἀστακός.) A Genus of the Family *Astacidae*, Tribe *Macrura*. Frontal appendage triangular; last thoracic ring movable; pincers of the first pair of feet greatly enlarged on their convex surface; male appendages attached to the first abdominal ring.

A. fluviatilis. Rond. (L. *fluviatilis*, belonging to a river. F. *écrovisse d'Europe*; I. *gambro*; G. *Bachkrebs*.) The crayfish, the river crawfish. It furnishes the concretions called *Crabs' eyes*.

A. marinus. (L. *marinus*, belonging to the sea.) The lobster. See *Homarus gammarus*.

Astakillos. Term, by Paracelsus, *de Ulc.*, c. 18, for a gangrenous ulcer of the feet encroaching upon the legs, from the abuse of mercury. Also called *Araneus*, and *Ulcus aranei*.

Astan'tes. (L. *asto*, to stand by; from *ad*, to; *sto*, to stand.) Term formerly used for those who were at hand to minister to the sick and take charge of them.

Astaphis. (Ἀσταφίς, for σταφίς, a raisin.) A confit, a raisin, or confected raisin.

Astarzof. An ointment or liniment made of litharge, frog's spawn, juice of leeks, and the white water-lily, used by Paracelsus.

Also, applied to a mixture of rose-water and camphor.

Astasia. (Ἀστασία, unsteadiness; from *ἀ*, neg.; *στημι*, to stand. G. *Unruhe*.) Inquietude, restlessness.

Astasiacæ. (F. *astasié*.) Applied by E. G. Ehrenberg to a Tribe of *Polygastrica*, having the *Astasia* for their type.

Astathe. (Ἀσταθής, unstable. F. *astathe, astathe, la couche secondaire interne, membrans cellulaire secondaire*.) Hartig has applied this term to the internal layer of cellulose of the cells, which swells up under the action of sulphuric acid.

Astatic. (A. neg.; στατικός, causing to stand. G. *unbeständig*.) Having no fixed position.

A. circuit. An electric circuit which is so arranged about its axis of rotation as to neutralise the directive action of the earth's magnetism.

A. needle. (F. *aiguille astaticue*.) A

magnetic needle so arranged as to be unaffected by the earth's magnetism; this may be accomplished by placing a magnet at such a distance from it, and in such a position, as to neutralise the terrestrial force.

A. system. Two magnetic needles of equal force, fixed parallel to each other, with their poles in opposite directions; they set at right angles to the magnetic meridian.

Astchach'ios. A term applied by Paracelsus to a malignant gangrenous ulcer which spreads from the feet upwards. Some call it *Araneus*. (Quincy.)

Asteato'des. (A. neg.; στίαι, tallow; ὠδὴ, a termination signifying fulness.) Defective secretion of sebaceous matter by the sebaceous glands of the skin. It occurs in syphilitic cases, and also in dirty and ill-fed people, and renders the skin harsh and dry. The treatment consists in alkaline baths, inunction of oil, good food, tonics, and cod-liver oil.

Asteato'sis. Same as *Asteatodes*.

A. cutis. (L. *cutis*, the skin.) Deficiency of the secretion of the sebaceous glands of the skin.

Aste'ghoon. A Hindustani nostrum, prepared by adding to rice or congee water, rock salt, assafetida, coriander, ginger, and peepul. It is described as an excellent drink in fevers and bilious affections. It improves the appetite, and gives tone to the kidneys and bladder. 'Taleef Shereef,' p. 14, No. 48. (Waring.)

Astelia. A Genus of the Nat. Order *Juncaceæ*.

A. alp'ina. (L. *alpinus*, alpine.) Hab. Tasmania. The blanched portion of the base of the inner leaves of this sedgy plant is an article of diet.

Aster. (Ἀστήρ, a star. G. *Sternblume*.) A Genus of the Tribe *Asteroidææ*, Suborder *Corymbifera*, Nat. Order *Compositæ*. Out of Britain a large genus, especially in America. The Michaelmas daisies of the horticulturist belong to it. The China and German asters belong to a closely allied genus. The claim of any of the asters to be considered as medicinal plants is of the slightest, the few that have any at all belonging to some allied family. See *Erigeron* and *Inula*.

Also, a name for a kind of white earth, which was anciently used as an astringent in hæmorrhæmæis.

A., heart-lea'ved. The *A. cordifolius*.

A., rough-stemmed. The *A. puniceus*.

Aster amellus. Linn. (L. *amellus*, the Latin name of the plant. F. *œil de Christ*.) Hab. South Europe. Used as a vulnerary and discutient, and in sore throat.

A. argophyllus. (Ἀργός, shining; φύλλον, a leaf.) A species the silvery leaves of which supply a stimulating aromatic like musk.

A. atticus. (L. *atticus*, Athenian.) Probably the *Fullen spinosa*.

A. cordifo'lius. (L. *cor*, the heart; *folium*, a leaf.) The heart-leaved aster. An inhabitant of America, possessing aromatic properties.

A. dysenter'icus. The *Inula dysenterica*.

A. helen'ium. The *Inula helenium*.

A. inguina'lis. (L. *inguinalis*, belonging to the groin.) The *Eryngium campestre*.

A. officina'lis. (L. *officina*, a shop.) The *Inula helenium*.

A. peruvia'nus. The Peruvian aster.

ASTERACANTHA—ASTHENOPIA.

An old name for the Jerusalem artichoke, *Heli-anthus tuberosus*.

A. puniceus. (L. *puniceus*, Carthaginian, purple red.) Hab. United States. The rootlets are said to be aromatic, bitterish, and astringent, and have been used as a stimulating diaphoretic in rheumatic and catarrhal affections.

A. thalassius. (Θαλάσσιος, belonging to the sea.) Name for a certain marine zoophyte, otherwise called *Stella marina*; recommended by Hippocrates, *de Nat. Mul.* xxix, 85; and *l. ii. de Morb. Mul.* lxxix, 7, with cabbage and perfumed wine, for the womb, and for hysterical pains.

A. tortifolius. (L. *tortus*, twisted; *folium*, a leaf.) The *Sericocarpus tortifolius*.

A. tripolium. The *Tripolium vulgare*.

A. undatus. Mönch. (L. *undato*, to wave.) The *Inula dysenterica*.

Asteracantha, Nees. (Ἀστὴρ; ἀκανθα, a thorn.) A Genus of the Nat. Order *Acanthaceæ*.

A. longifolia. (L. *longus*, long; *folium*, a leaf. Tam. *Neer-moolie*; Tel. *Neer-goobie*; Hind. *Gokshura*; Beng. *Kanta Koolika*; Mal. *Wahel-schulli*.) Long-leaved barleria. An Indian annual. The decoction of the leaves and roots is tonic and diuretic. It is given in dropsy and gravel.

Also, called *Hygrophila spinosa*.

Astera-cææ. A synonym of *Compositæ*.

Asterales. (Ἀστὴρ.) A cohort of epigynous Gamopetalæ. Flowers regular or irregular, often unisexual, and collected into involucrate capitula; stamens equal to the lobes of the corolla, epipetalous; ovary inferior,ilocular. It includes *Compositæ*, *Valerianaceæ*, and *Dipsacaceæ*.

Asterantium. (Ἀστὴρ, a star; ἄνθος, a flower, from the star-like form of its flowers.) The *Anthemis pyrethrum*, or pellitory of Spain.

Astereæ. (F. *astéri*.) Applied by H. Cassini and Kunth to a Tribe of *Synantherææ*, by Lessing to a Subtribe of *Asteroideæ*, having the *Aster* for their type.

Asteria. Same as *Asterias*.

A. gemma. (L. *gemma*, a precious stone.) The same as *Asterias*.

Asterias. (Ἀστὴρ, a star.) A fossil stone which presents, on section, rays like a star, found in India; also called *Astroites*, and *Astrios*. It was used as a charm against mother's marks.

A. lutea. (L. *luteus*, orange yellow.) The *Gentiana lutea*.

Asteriated. (Ἀστὴρ, a star.) Radiated, star-shaped.

Astericum. (Ἀστὴρ, a star; from the form of its flowers.) A name for a Species of *Anthemis*, or pellitory.

Asterion. (Ἀστὴρ.) A synonym of *Hemp.* (Dioscorides.)

Also, an uncertain species of starwort, aster.

Also, a term employed in Craniometry to designate a point situated behind the mastoid process, where the parietal, occipital, and temporal bones meet. (Topinard.)

Asteriscus. (Ἀστὴρ-ῖσκος, a small star. F. *asterisque*; I. *asterisco*; G. *sternförmiger Hornhautfleck, Sternchen*.) A name for a star-shaped corneal opacity.

Also, an uncertain species of aster.

Asternal. (A, neg.; ἀστέριον, the breast-bone. F. *asternal*.) Not connected with the sternum.

A. ribs. (F. *côtes asternales*.) The lower five pairs of ribs; so called because their cartilages do not join the sternum.

Asternia. (A, neg.; sternum. F. *asternie*; G. *Mangel des Brustbeins*.) Term by Breschet for a kind of organic deviation, or partial agenesis, characterised by the absence of the sternum.

Asterocephalus succisa. Wall. (Ἀστὴρ, a star; κεφαλή, the head; L. *succisus*, part. of *succido*, to cut through.) The *Scabiosa succisa*.

Asteroid. (Ἀστὴρ; εἶδος, form.) Star-like.

Asteroid'a. (Same etymon.) A synonym of *Alcyonaria*.

Also, a synonym of *Stellerida*.

Asteroid'ea. An Order of the Class *Stellerida*, Subkingdom *Echinodermata*. Body star-shaped or pentagonal, consisting of a hollow disc, from which radiate five or more hollow arms, which receive prolongations of the viscera; on the ventral surface of the arms is the ambulacral groove, from which project the ambulacral tubes; the larva is vermiform, and without a skeleton.

Asteroid'ess. (Ἀστὴρ; εἶδος, form.) A Tribe of the Nat. Order *Compositæ*, having a cylindrical style, with linear arms, flat on the outer, and downy on the inner, surface.

Astheneæ. (Ἀσθενής, without strength. G. *schwach*.) Infirm, weak.

Asthenia. (Ἀσθὴνεια, from ἀ, neg.; σθίς, strength. F. *asthénie*; G. *Schwäche, Unkraft*.) Want or loss of strength; debility.

A. deglutiti'nis. (L. *deglutitio*, to swallow down.) Difficulty of swallowing from imperfect paralysis of the pharynx or œsophagus.

A. pannoni'ca. (L. *pannonicus*, Pannonian.) The same as *Amphimerina hungarica*.

A. pectora'lis. (L. *pectoralis*, belonging to the breast.) Angina pectoris.

Asthenia, death by. See *Death by asthenia*.

Asthen'ic. (Ἀσθενικός, weakly. F. *asthénique*; G. *schwach, kraftlos*.) Wanting, or deficient in, strength; adynamic.

A. fever. (F. *fièvre asthénique*; G. *asthenisches Fieber*.) An old term for a fever in which there is great weakness.

Asthenicopyra. Same as *Asthenopyra*.

Asthenicopyretus. Adynamic fever. See *Asthenopyra*.

Asthenogen'ia. (Ἀσθὴνεια; γίνομαι, to be born. F. *asthénogénie*.) The advance of asthenia, or want of strength.

Asthenology. (Ἀσθὴνεια; λόγος, a discourse. F. and G. *asthénologie*.) The consideration, or doctrine, of diseases arising from debility.

Asthenomacrobio'tica. (Ἀσθὴνεια, want of strength; μακρός, long; βίος, life.) The means whereby weakly lives may be prolonged.

Asthenop'ia. (A, neg.; σθίς, strength; ὤψ, eye. F. *asthénopie*; G. *Schwachsichtigkeit, Gesichtsermüdung*.) Impairment of vision from defective power, the sharpness remaining normal. There are three forms—Accommodative asthenopia, muscular asthenopia, and retinal asthenopia.

A., accom'modative. (G. *accommodativen Asthenopie*.) This form occurs in hypermetropic patients, and results from the constant exertion they have to make in contracting the

ASTHENOPYRA—ASTHMA.

iliary muscle, even for the distant vision of remote objects, and much more, consequently, for near objects. The symptoms are that, for a short time, and especially after rest, the vision for near objects is good, but as soon as the power of contracting the muscle fails, objects become hazy and confused, and further attempts to read or work induce pain, lachrymation, and conjunctivitis. The affection is cured by the use of appropriate convex glasses.

A., appa'rent. A condition existing in myopia, and in hyperæmia of the optic disc and retina.

A., binocular. A term employed by Giraud Teulon, synonymous with *A., muscular.*

A., mus'cular. (*G. musculäre Asthenopie.*) This term is applied to a condition in which there is imperfect power of convergence of the two eyes, owing to insufficiency of the internal recti. It is recognised by slowly approximating a small object towards the median line, when, on arriving at a certain point, one or both of the axes of the eyes, hitherto fixed upon it and converging, will be observed to diverge suddenly. It is observed in myopes and in those who are constantly engaged in fine work. In emmetropic patients it requires treatment by prismatic glasses; in myopic by appropriate concave glasses; and in hypermetropic by appropriate convex glasses; the action of which may be aided by placing the centre of the concave glasses a little outside, and of the convex a little inside, the optic axis, thus making them act slightly as prisms.

A., nerv'ous. The same as *A., retinal.*

A., retinal. (*G. nervöse Asthenopie*) A form which is due to hyperæsthesia of the retina.

A., true. A synonym of *A., accommodative.*

Asthenopyra. (*Ἀσθενίς*, without strength; *πύρ*, a fever. *F. asthénopyre.*) Asthenic fever.

Asthenopyre'tus. The same as *Asthenopyra.*

Asth'ma. (*Ἀσθμα*, panting, from *ἀν*, to blow. *F. asthme*; *I. asma*, *bolzagaine*; *S. asma*; *G. Engbrüstigkeit*, *Bronchialkrampf*.) An affection characterised by a peculiar intermittent dyspnoea, bronchial exudation, and a secondary lesion of the pulmonary vesicles or emphysema.

The attack is occasionally preceded by premonitory symptoms, as unusual buoyancy or depression of spirits, lethargy or sleeplessness, or free discharge of pale urine; often there is some slowly growing chest oppression, or thickness of breathing, or cough; often, on the other hand, the paroxysm is sudden in its assault. It most usually commences two or three hours after midnight, with a more or less intense feeling of suffocation, which causes the sufferer to sit or stand in a fixed position to get leverage for the respiratory muscles; the face is pale or dusky, and, with the trunk, is bathed in perspiration; the nostrils are dilated, the mouth open, the eyes staring; the pulse quick, small, weak, and sometimes irregular; the extremities cold. The respiration is not much quickened, the inspiration is short and jerky, the expiration long, and running at once, without a pause, into the next inspiration; in spite of the violent action of the breathing muscles there is little real movement of the chest, but it remains in a state of over-expansion. The percussion note is resonant, and the respiratory murmur

is replaced by loud, dry, sibilant rhonchus, of various shades of whistling, cooing, snoring, loudest in expiration; these abnormal sounds are not always to be heard all over the chest, but sometimes are more or less local in manifestation; occasionally, and especially if there have been antecedent bronchitis, moist rhonchi are heard. As the paroxysm declines, and it may last minutes, hours, or days, the cough begins to come on, at first dry, but afterwards with the expectoration of transparent pearly masses of mucus, sometimes streaked with blood, the breathing becomes easier, and the patient recovers with some soreness and stiffness of chest, more or less cough and expectoration, and a sense of weariness from labour.

The disease is the result of spasm of the muscular tissue of the smaller bronchial tubes, probably caused by some disturbance of nervous tissue. A paroxysm may be produced by the breathing of certain dusts, or vapours, or smells, as the pollen of grasses, the smell of a cat; by weather alterations of the air, as fog, or east wind; by unknown climatic or other conditions applicable to certain localities, and then not the same for all asthmatics, but peculiar to the special case. Asthma may be produced by certain articles of diet, perhaps in consequence of their indigestibility, perhaps as a result of their absorption into the blood. It may be caused by bronchial irritation or inflammation; the action of certain gases; reflex irritation of vagus, of stomach and intestines, of ovario-uterine system, of the skin, and nerves of special sense; irritation of central organs of the nervous system; alteration of the blood; the toxic influence of certain metals, of alcohol, of marsh air, of syphilis; constitutional disease, as gout and rheumatism. There is an hereditary predisposition to it. Five or six men are attacked to one woman. In regard to age, the order of frequency is the first twenty years, old age, and lastly, the middle period of life. In the treatment, air is to be admitted freely into the room, all constriction is to be removed from the body; if there is evidence of a loaded stomach, ipecacuanha to vomiting is to be given, tobacco or datura is to be smoked, or the fumes of burning nitre paper inhaled; lobelia may be administered; belladonna, or opium, or chloral, or conium, or amyl nitrite, strong black coffee, ether, alcohol, or other stimulant, may aid; potassium bromide and arsenic have been given with advantage. In prevention, care is to be taken as to the selection of a residence, as to the food and to the times of taking it, and as to the avoidance of special causes of an attack.

A., bron'chial. Asthma accompanied by, and interdependent on, bronchitis.

A., bronchit'ic. Same as *A., bronchial.*

A., car'diac. (*Καρδία*, the heart.) Any dyspnoea depending on disease of the heart, was formerly called cardiac asthma. Modern authors restrict the term to cases of asthma accompanying heart disease, and probably caused by the lung-congestion arising therefrom.

A., conges'tive. Asthma accompanied by some congestion of lung or small bronchial tubes.

A., dry. Asthma without bronchial secretion.

A., dyspep'tic. The same as *A., peptic.*

A., grind'ers'. (*F. phthisie des aiguiseurs*; *I. asma degli arrotini*; *G. Asthma der Schleifer.*) See *Grinders' asthma*.

ASTHMA.

A., hay. (*F. asthma de foin, asthma d'été*; *G. Hayfeber*.) See *Hay asthma*.

A., humoral. (*L. humor, liquid*.) Asthma with bronchial secretion.

A., idiopath'ic. (*Idios, peculiar*; *ἰδίος, affection*.) Ordinary spasmodic asthma, unaccompanied by any other affection.

A., leop'liam. A synonym of *Thymic asthma*; from its describer.

A., minors'. (*F. asthma des mineurs*; *L. asma de minatori*; *G. Asthma der Bergleute*.) See *Miners' asthma*.

A., moist. Asthma with expectoration.

A., mor'vous. A synonym of ordinary *Spasmodic asthma*.

A., non-organ'ic. Asthma not depending on any structural disease, such as ordinary spasmodic asthma; or asthma depending on stomach derangement.

A., organ'ic. Asthma caused by bronchitis or heart disease.

A., pep'tic. (*Perruicé, assisting digestion*; but here used for relating to digestion.) Asthma depending on undigested food in the stomach, or other disturbance of the digestive organs.

A., pitu'itous. (*L. pituita, phlegm*.) Asthma with bronchial secretion.

A., pri'mary. Simple uncomplicated asthma.

A., re'nal. (*L. ren, the kidney*.) A form of dyspnoea which occurs in Bright's disease. It is paroxysmal, and occurs after a meal or during the night; there are sometimes loud sibilant râles to be heard, but generally only loud puerile respiration; the breathing is very difficult, and the heart's action quick and weak. It has been suggested that the dyspnoea may be caused by spasm of the pulmonary arterioles, and the consequent hindrance to the circulation. Digitalis in full doses, potassium bromide, chloral, and ether, have been recommended.

A., sec'ondary. Asthma having its origin in some other affection.

A., spasmod'ic. (*Σπασμός, a spasm*.) A term for *Asthma*.

A., symptomat'ic. Asthma taking origin in some other disorder or disease, as in derangement of stomach, or disease of bronchial tubes or heart.

A., thy'mic. (*F. asthma thymicus*.) Dyspnoea from spasm of the glottis, supposed to depend on enlargement of the thymus gland. A synonym of *Laryngismus stridulus*.

A., uræ'mic. (*Uræmia*.) A synonym of *A., renal*.

A., weed. The *Lobelia inflata*.

Asth'ma acu'tum. (*L. acutus, violent*.) A synonym of *Laryngismus stridulus*.

A., aë'rium. (*L. aerius, belonging to the air*.) A synonym of *Pneumothorax*.

A., aë'rium ab emphysemate pul-mo-num. (*L. pulmo, a lung*.) Dyspnoea from emphysema of the lungs.

A., arthrit'ic. (*Ἀρθριτικός, gouty*.) Angina pectoris. (Schidh., 1793.)

Also, asthma depending on gout.

A., bronchia'le. (*Βρόγχια, the bronchial tubes*.) Ordinary asthma.

Also, see *Asthma, bronchial*.

A., convuls'ivum. (*L. convulsus, spasmodic*; from *convellere*, to tear. *F. asthma convulsif*.) Ordinary spasmodic asthma.

The term has also been applied to angina pectoris. (Elsner, 1778.)

A., cultrari'orum. (*L. cultrarius, pertaining to a knife*.) Grinders' asthma.

A., diaphragmat'ic. (*Διaphragma, the diaphragm*.) Angina pectoris.

A., dolor'ic. (*L. dolor, pain*; *facile, to make*.) Obsolete name for *Angina pectoris*. (Darwin, 1781.)

A., dyspep'ticum. (*Δύς, difficult*; *πνεν, digestion*.) Asthma proceeding from disturbance of the digestive organs, or appearing concomitantly with cardialgia or with worms.

A., emphysemat'ic. (*Εμφύσημα, an inflation*.) A synonym of *Pneumothorax*.

A., ex siccitate'. (*L. ex, from*; *funiculus, a hay field*.) Hay asthma.

A., exanthemat'ic. (*Ἐξάνθημα, an eruption*.) Asthma arising from the recession of an eruption.

A., gyp'sum. (*L. gypsum, of gypsum*.) A synonym of grinders' asthma, or a similar disease from dressing stones and such like.

A., herpet'ic. (*Ἑρpes, herpes*.) A form of asthma stated by Waldenburg to be connected with the occurrence of herpes.

A., hu'midum. (*L. humidus, moist*. *F. asthma humidum*.) Asthma accompanied with expectoration.

A., idiopath'ic. (*Idios, peculiar*, from *idios, peculiar*; and *ἰδίος, affection*. *G. essential Asthma*.) Ordinary asthma.

A., idiosyncrat'ic. (*Idios, peculiar*; *σύνκρασις, a mingling*.) Asthma induced by psychical impressions, or by impressions made upon the organs of special sense, especially upon the olfactory nerves. Hay asthma is an example of this form.

A., infan'tum. (*L. infans, a young child*.) Croup.

A., infan'tum spasmod'ic. (*Σπασμός, a spasm*.) Laryngismus stridulus.

A., laryng'eum infan'tum. (*Ἄσφυξ, the larynx*; *L. infans, a young child*.) Laryngismus stridulus.

A., metallari'orum. (*L. metallarius, a miner*.) Miners' asthma.

A., Millari acu'tum. (*L. acutus, severe*.) Millar's acute asthma; probably laryngismus stridulus.

A., monta-num. (*L. montanus, belonging to a mountain*.) A synonym of *Grinders' asthma*.

Also, a term for difficulty of breathing occurring in high elevations.

A., nerv'ous. (*L. nervosus, full of sinews*.) Ordinary or true asthma.

A., noctur'num. (*L. nocturnus, belonging to the night*.) A synonym of *Nightmare*.

A., pletho'rum. (*Πληθυσμός, plethora*.) Asthma caused by a suppression of any usual evacuation of blood, or from spontaneous plethora.

A., saturn'um. (*L. Saturnus, Saturn*; an old name of lead.) Asthma caused by chronic lead poisoning, or the inhalation of dust containing lead.

A., sic'cum. (*L. siccus, dry*. *F. asthma sec*.) Asthma without, or with little, bronchial secretion.

A., spasmod'icum infan'tum. (*Σπασμός, spasm*; *L. infans, a young child*.) A synonym of *Laryngismus stridulus*.

A., spastico-artirit'ic. (*Σπαστικός, from σπάζω, to cause convulsion*; *ἄρθρις, gout*; *L. inconvulsus, capricious*.) Angina pectoris.

ASTHMATIC—ASTIGMATISM.

A. spas'ticum. (Ἐσπαστικός, from σπᾶω, to cause convulsion.) Ordinary spasmodic asthma.

A. spas'ticum infan'tum. (L. *infans*, a young child.) Laryngismus stridulus.

A. sponta'neum. (L. *spontaneus*, voluntary.) Asthma arising without manifest cause or being accompanied by any other disease.

A. stomach'icum. (Στομαχικός, belonging to the stomach.) Spasmodic asthma caused by indigestible or other irritating matter in the stomach.

A. symptomatica. (L. *symp'toma*, a sign. G. *symptomatisch*, or *reflectorisch Asthma*.) Asthma in indirect connection with pathological affections of the respiratory and other organs, which are, nevertheless, not of that kind that occasion sudden dyspnoea.

A. typ'icum. (Τυπικός, conformable.) Asthma having definite periods of return.

A. uteri. (L. *uterus*, the womb.) A synonym of *Hysteria*.

A. uter'inum. (L. *uterinus*, belonging to the womb.) Asthma caused by disturbance of the uterine functions.

A. vermino'sum. (L. *vermino*, to be troubled with worms.) Asthma caused by intestinal worms.

Asthmatic. (Ἀσθματικός, asthmatic. F. *asthmatique*; G. *asthmatisch*.) Of, or belonging to, asthma. Having, or labouring under, asthma.

Also, as a noun (F. *asthmatique*; G. *Asthmatiker*), one afflicted with asthma.

Asthmatophthi'sis. (F. *asthmatophthisis*; G. *Schwindtaucht mit Asthma*.) Asthmatic phthisis, or phthisis with asthma.

Asth'matos cilia'ris. A name applied by Dr. Salisb'ry to a rhizopodous organism supposed to be the cause of "hay fever" or "hay asthma." Each animal is armed on one side with cilia, in the midst of which is a slender process or proboscis terminating in a cilium.

Asth'morthopno'sa. (F. *asthmorthopnoë*; G. *Bruststörung*.) Asthmatic orthopnoea. Difficulty of breathing from causes inside the chest, as hydrothorax.

Astigmatic. (A. neg.; στίγμα, a mark, a spot.) Relating to, or exhibiting, *Astigmatism*.

Astigmatism. (A. neg.; στίγμα, a point. G. *Brennpunkt-mangel*.) The word was devised by Whewell, though the defect had been observed, and the appropriate remedy employed, by Young.

A structural defect of the refractive media of the eye, in which homocentric rays of light are not brought collectively to a common focus on the retina. It is essentially due to a difference in the curvature of the cornea in different meridians, the curve of the vertical meridian being usually sharper than that of the horizontal meridian. The existence of the defect can be recognised by directing the patient to look with one eye—the other being closed—at a card on which a circle has been drawn with radii at a distance of about 10° or 15° from each other. To the healthy eye the definition of all the radii is equally good, but in astigmatism some of the lines are blurred when others are distinct, whatever may be the distance at which the card is held. The most defective meridian of the eye is at right angles to that line which is most distinctly seen. Astigmatism is expressed in Ophthalmol-

ogy by the symbol *As*. It is corrected by cylindrical glasses.

A., acqui'rod. (G. *acquirirten Astigmatismus*.) Astigmatism resulting from injuries to, or operations upon, the eyes.

A., comp'ound. (F. *A. composé*; G. *zusammengesetzter Astigmatismus*.) That form of astigmatism in which the two chief meridians of the eye are metropic; both may be myopic, or both may be hypermetropic. Relief may be obtained by correcting with a cylindrical glass that meridian which is the most myopic or the most hypermetropic of the two meridians.

A., congen'ital. (L. *congenitus*, born together with.) Astigmatism existing from birth; it is generally regular and dependent on asymmetry of the cornea.

A., cor'neal. (G. *Hornhaut-astigmatismus*.) Astigmatism arising from differences in the curvature of the different meridians of the cornea. This is the most common cause of astigmatism.

A., hypermetrop'ic. (G. *hypermetropischer Astigmatismus*.) Astigmatism occurring in hypermetropia or associated with a long-sighted eye. It is represented by the formula *Ah*. The highest degrees of astigmatism are almost always associated with hypermetropia.

A., hypermetrop'ic, comp'ound. (G. *zusammengesetzter hypermetropischer Astigmatismus*.) That form of astigmatism in which the refraction of the eye is hypermetropic in all meridians, but to a greater degree in one meridian than in the others. It is represented by the formula *H + Ah*.

A., hypermetrop'ic, simp'le. (G. *einfach hypermetropischer Astigmatismus*.) Astigmatism resulting from hypermetropic refraction in one meridian of the eye, the others being emmetropic. It is represented by the formula *Ah*.

A., irreg'ular. (F. *astigmatisme irrégulier*; I. *astigmatismo irregolare*; G. *unregelmässige Astigmatismus*.) That condition in which the several segments of any meridian of the eye have not the same curvature; it is generally the result of irregularity of lens structure. The defect in this form is irremediable by glasses.

A. lentic'ular. Astigmatism arising from differences in the curves of the different meridians of the lens.

A., mixed. (F. *astigmatisme mixte*; G. *gemischter Astigmatismus*.) That form of astigmatism in which one chief meridian is hypermetropic and the other myopic.

A., myop'ic. (G. *myopischer Astigmatismus*.) Astigmatism complicated with myopia, or occurring in a short-sighted eye. It is represented by the formula *Am*.

A., myop'ic, comp'ound. (G. *zusammengesetzter myopischer Astigmatismus*.) That form of astigmatism in which the refraction of the eye is myopic in all meridians, but to a greater degree in one meridian than in the rest. It is represented by the formula *M + Am*.

A., myop'ic, simp'le. (G. *einfach myopischer Astigmatismus*.) That form of astigmatism in which the refraction of the eye is myopic in one meridian, and emmetropic in the others. It is represented by the formula *Am*.

A., regul'ar. (F. *astigmatisme régulier*; I. *astigmatismo regolare*; G. *regelmässige Astigmatismus*.) That condition in which, although the various meridians of the eye differ from each

ASTIGMATISMUS—ASTRAGALUS.

other in their curvation, each meridian preserves the same curvation throughout its whole length. The defect in this form is capable of being remedied by glasses.

A., simple. The form in which the refraction of one meridian is emmetropic, and of the other myopic or hypermetropic.

Astigmatismus. Same etymon and meaning as *Astigmatism*.

Astigmometer. (A; *στίγμα*; μέτρον, a measure.) An instrument for determining the presence and the amount of astigmatism.

As'tites. (L. *adsto*, to stand by; because by or near the neck of the bladder.) An old term for the lobes of the prostate gland.

Astoch'ados. The Arabic name for the *Lavandula stoechas*.

Astomæ. (A, neg.; στόμα, mouth.) Person has grouped under this term the *Sphærie*, of the Division *Simplicia*, the ostiole of which is not apparent.

Astomata. (Same etymon.) A Division of the *Protozoa*, comprising the *Gregarinida* and *Rhizopoda*, and distinguished by having no mouth.

Astomatous. (Same etymon.) Same as *Astomous*, and the more correct form. Both forms are used by Owen.

As'tome. (Same etymon.) In Botany, this term is applied to mosses in which the urn does not open by the detachment of an operculum closing an orifice or stoma, but when mature dehisces irregularly to give issue to the spores. Phascum and Archidium burst in this way.

Astomia. (A, neg.; στόμα, a mouth. F. *astomie*; G. *Mangel des Mundes*.) Absence of a mouth.

Astomous. (A, neg.; στόμα, a mouth. F. *astome*; G. *mundlos*.) Having no mouth; mouthless. Without an opening.

Astoures. (Fr.) Seeds possessing a toxic influence on fishes, and which, according to Bosc, belong to two verbasums.

Astragaleæ. (Αστράγαλος.) A Subfamily of the Family *Papilionaceæ*. Upper stamens free; pod more or less completely divided by a suture into two compartments; leaves generally unequally pinnate.

Astragalo-calca'neal liga'ments. The ligaments uniting the astragalus to the os calcis; they are:

An *interosseous ligament*, lying between the groove separating the anterior and posterior articulating surfaces of the astragalus, and a similar groove in a corresponding condition of the os calcis; it is a broad and strong fibrous mass.

A *posterior ligament*, attaching the hind border of the astragalus to the upper surface of the os calcis; it is membranous, with short oblique fibres.

An *external ligament*, passing vertically downwards from the outer surface of the astragalus to the outer side of the os calcis; it is a thin slip running parallel to the internal lateral ligament of the ankle.

A.-calca'neum. The name given to the single bone of the tarsus in some lizards and other animals, which is the representative of the two bones, astragalus and os calcis of man.

A.-scaphoid ligament. A thin fibrous structure on the dorsum of the foot, between the anterior extremity of the astragalus and the upper surface of the scaphoid bone.

Astragaloides. (Αστράγαλος, the

milk-vetch; είδος, shape.) Resembling the *Astragalus*, or milk-vetch; applied to a kind of bastard milk-vetch.

A.syphilitica. The *Astragalus escaopus*.

Astragalos. (Αστράγαλος.) A plant of the ancients, regarded as astringent, and given in dysentery, diarrhoea, and other fluxes; it was also considered diuretic, and was applied locally to ulcers and gumboils (Dioscorides l. iv, c. 62; Paul. Æg. l. vii, s. 3; Pliny, lib. xxvi, c. 29). It is referred by Sprengel to *Orobis tuberosus*, or bitter vetch; by Littré to *O. serpyllifolius*; and by Fée to *Lathyrus tuberosus*. (Waring.)

Astragalus. (Αστράγαλος, a die originally made of a knuckle-bone, or of the ankle-bone of sheep, now known by this name. F. *astragale*; I. and S. *astragalo*; G. *Sprungbein*.) Name of the ankle-bone; the upper bone of the foot, on which the tibia rests.

It is irregularly 6-sided in form. The upper surface presents a rough surface for ligaments, and a convex surface, broader in front than behind, for articulation with the tibia. The inferior surface presents two facettes, separated by a deep groove, for articulation with the os calcis. The groove runs forwards and outwards, and contains the interosseous ligament. The outer surface has a large triangular surface behind, for articulation with the lower extremity of the fibula, and a rough surface in front, for ligaments; the inner aspect presents above an oval or reniform surface, articulating with the malleolar process of the tibia. The anterior surface articulates with the scaphoid, and the posterior is deeply grooved for the tendon of the flexor longus pollicis, ossification from one centre appearing about the seventh month of fetal life.

In frogs it is so much elongated as to form a long bone; in lizards it joins with the os calcis, and forms a single bone, the astragalo-calcaneum, in some Saurians with the navicular, and in some Batrachians and other animals it is represented by two bones, which have received the names of *tibiale* and *intermedium* by Gegenbaur, who also considers that the astragalus represents the coalesced scaphoid and lunar bones of the wrist.

Also, an old name for the atlas, or first cervical vertebra.

Astragalus. (Αστράγαλος.) A Genus of the Nat. Order *Leguminosæ*. Herbs, shrubs, or small trees. Leaves imparipinnate; flowers in axillary spikes, or in clusters, sometimes solitary or in umbels; calyx gamosepalous, tubular or ventricose, 5-toothed; petals unguiculate; andræcium diadelphous; ovary sessile or stipitate; pod continuous, two-celled by the expansion of the dorsal suture.

A. aculeatus. (L. *aculeatus*, thorny.) A name for the *Astragalus vernus*.

A. adscendens. Bois. and Hausk. (L. *adscendo*, to climb.) Stem at first prostrate, then ascending and shrubby; leaves alternate, with triangular stipules, tomentose at the base, glabrous at the summit; leaflets folded, oblong-linear, mucronate, silky; bracts oval, acute; inflorescence multiflorous, axillary; calyx with lanceolate teeth; ovary surmounted by a glabrous style, and containing an indefinite number of campylotropous ovules in two vertical rows. Supplies tragacanth and a manna. By some it is said to be identical with *A. vernus*.

A. ammodytes. (Αμμοδύτης, sand-creeper.) The properties of this plant are said by Pallas to be identical with those of liquorice.

ASTRAL—ASTRANTIA.

A. aristatus. (L. *aristatus*, having an awn. The species said by Sieber to yield true tragacanth.

A. bateticus. (L. *Baticus*, belonging to Betic, a province of Southern Spain, consisting of Andalusia, a part of Granada.) The roasted grains of this plant are said to be an extremely good substitute for coffee, and are known as Swedish coffee.

A. Boissie'ri, Bunge. The *A. creticus*.

A. brachycalyx, Fisch. (Βραχύς, short; κάλυξ, the calyx.) Very like *A. ascendens*, but differing in its larger and elliptical leaflets, its oval obtuse bracts, and its calyx with triangular teeth. Supplies a form of tragacanth.

A. creticus, Lam. (L. *Creticus*, of, or belonging to, Crete.) A plant originally growing in Crete and the Ionian Islands, which was probably known to Theophrastus. According to Théodore de Martius, this species yields *gomme à tragante vermiculée*, the vermicular or Morea tragacanth. Leaflets oblong, folded, terminated with spines, covered with whitish hairs; flowers arranged in twos to form globular capitula.

A. cyllenæus, Boissier and Heldreich. (Κυλλήνη, a mountain in Arcadia.) Hab. Greece. Leaflets in five pairs, oblong, obtuse, with a longish terminal spine; stipules lanceolate, acuminate, glabrous, ciliate; flowers in oval capitula. It is the almost exclusive source of the tragacanth collected about Vostizza and Patras.

According to some, a variety of *A. parnassii*.

A. denudatus, Stev. (L. *denudo*, to lay bare.) The *A. microcephalus*.

A. eriocaulos, De Cand. (Ἐριον, wool; καυλός, a stem.) The *A. microcephalus*.

A. escapus. (L. *ex*, out of; *scapus*, a stem.) See *A. escapus*.

A. exscapus. (L. *ex*, out of; *scapus*, a stem. F. *astragale sans tige*.) Stemless milk-vetch. A plant growing in the Alps. The part used is the root, which has many heads, is cylindrical, $\frac{1}{2}$ to $\frac{3}{4}$ inch thick, 10 or 12 inches long, tough, very fibrous, externally greyish brown, internally pale brown, with radially fissured wood and bark. It contains, according to Fleuret, a feebly bitter substance, a fermentable sugar, starch, fixed oil, aromatic resin and salts. Used as a remedy for the sequelæ of syphilis, and also as an antirheumatic and diuretic.

A. florulentus, Bois. and Hausk. (L. *florulentus*, abounding in flowers.) Furnishes, along with *A. ascendens*, a manna, which is made up into sweetmeats, known in the bazaars of Persia as Gaz Anjabin.

A. glycyphyllous. (Γλυκύς, sweet; φύλλον, a leaf. F. *fausse-régisse*, *reglisse bâtarde*, *r. sauvage*, *chasse-vaches*.) A plant common in woods in Germany and in the vicinity of Paris. Several stems rise from one root, and are recurved and smooth; leaves 5–6 paired; leaflets oval, clusters axillary, stalked, elongated, oval, shorter than the leaves, with dirty yellow flowers. It has been recommended in cases of retention of urine, colic, stranguy and dartuous affections.

A. gummiifer. (L. *gummi*, gum; *fero*, to bear.) Same as *A. gummiifera*.

A. gummiifera, Labil. (L. *gummi*, gum; *fero*, to bear. G. *Syrische Traganth*.) White tragacanth. A spiny bush; leaflets smooth, in 4–6 pairs, oblong, linear; flowers 3–6, axillary, sessile; calyces woolly, 5-cleft. Hab. Koordistan. Observed by Labillardière on Mount Libanus. It yields the gum named pseudo-adragante by

Guibourt, and the Syrische traganth of the Germans.

A. kurdicus, Bois. (*Kurdistan*, a region of Western Asia.) A shrub, three or four feet high, inhabiting the mountains of Cilicia and Cappadocia, and extending thence into Kurdistan. Leaflets smooth, or slightly folded, short, straight, terminated by a long silvery spine; stipules lanceolate; flowers on a short spike; teeth of the calyx less velvety than the tube. It is the chief source of the aintab tragacanth.

A. massiliensis, Lam. The *A. tragacanthus*.

A. microcephalus, Willd. (Μικρός, small; κεφαλή, the head.) Leaves 5–8 pairs, oblong, lanceolate, terminating in a spine, villous, whitish; stipules acuminate, ciliated; flowers in small oval or oblong capitula; spines spreading. Supplies a form of tragacanth.

A. nuda, Bunge. (L. *nudo*, to make naked.) The *A. kurdicus*.

A. parnassii. A variety of this species, *A. cyllenæus*, yields a tragacanth.

A. pycnocladus, Bois. and Hausk. (Πυκνός, close-packed; κλάδος, a young shoot.) Hab. Persia. Very like *A. microcephalus*, from which it is distinguished by its slender close-set spines and its folded, almost aciculate, short and green leaflets. Supplies a tragacanth.

A. pycnophyllus, Sted. (Πυκνός, close-packed; φύλλον, a leaf.) The *A. microcephalus*.

A. semperverens, Lam. (L. *semper*, always; *vero*, to be green.) The *A. aristatus*.

A. strobiliferus. (L. *strobilus*, a pinecone; *fero*, to bear. G. *syrische Traganth*.) Red tragacanth. A spiny bush; leaflets woolly, in 3 pairs, aristate; flowers in sessile, axillary, ovate cones; calyx feathery. Hab. Koordistan. Supplies a gum.

A. stromatodes. (Στρώμα, a mattress; ὥδης, postfix signifying fulness.) Very similar to *A. kurdicus*, differing only in its globular inflorescence and its larger flowers.

A. syriacus. (L. *Syriacus*, belonging to Syria.) A species the roots of which are astrigent and diuretic.

A. stramonthoides. (Τραγάνθη, goat's thorn.) A species which is employed by the Kalmucks to cut short an attack of intermittent fever.

A. tragacanthus, Linn. The species formerly, but erroneously, supposed to be the source of gum tragacanth.

A. verus, Ölliv. (L. *verus*, true. F. *astragale vraie*; G. *Smyrner*, *Blättertraganth*.) Goatshorn, milk-vetch. A plant originally growing in Armenia, Persia, and Asia Minor, and which yields, according to Öllivier, the true gum tragacanth. Leaflets linear, folded, hispid, borne on a slender common petiole; stipules lanceolate, smooth when adult, velvety while young; flowers in groups of two to five, sessile; calyx tomentous, with five obtuse teeth.

Astral. (L. *astralis*, belonging to the stars.) Of, or belonging to, the stars. This term was formerly applied to the influence of the planets, when astrology was taken into account among the speculations of the ancient physicians.

Astrantia. (Ἀστρον, a star, from the star-like umbels.) A Genus of the Nat. Order *Umbelliferae*.

A. dispensis, Scop. (L. *dispensus*, distributed.) The *Sanicula europea*.

ASTRAPE—ASTRONOMY.

A. major. (L. *major*, greater.) Nat. Order *Umbelliferae*. Black masterwort. Hab. South Germany and Switzerland. The root, which is the part used, is annulated, about three inches in length and a quarter of an inch thick; blackish brown externally, whitish internally, with thin black rootlets. The cortex is rather thick, lined internally with a series of lactiferous vessels; medulla large. The parenchyma cells contain starch. The root possesses an acrid quality, and was formerly used as a purgative.

Also, a synonym of the masterwort, *Imperatoria ostruthium*.

A. niger. (L. *niger*, black.) A synonym of *A. major*.

A. vulgaris. (L. *vulgaris*, common.) A synonym of *A. major*.

Astrape. (Ἀστραπή, a flash of lightning.) Lightning. Regarded by Galen as one of the remote causes of epilepsy.

Astraphobia. (Ἀστραφία, lightning; φόβος, fear.) Fear of lightning.

Astrio. (Ἀστρικός, belonging to the stars.) Relating to the stars, especially as to their supposed influence on human life and health.

Astricta alvus. See *Alvus astricta*.

Astriction. (L. *ad*, to; *stringo*, to bind.) Term for the act of using, or the state produced by the use of, astringent medicines; also, for constipation.

Astrictorius. (L. *astrictorius*, from *astringo*, to gird or strengthen. F. *astriction*; I. *astrizioni*; S. *astriccion*; G. *Zusammenziehung*.) Astringent; astrictive, or having power to bind.

Astringent. (L. *astringo*, to gird or straighten. F. *astringent*; I. *astringente*; G. *zusammenziehend*.) Having power to produce shrivelling and contraction of organic structures.

A. principle. A term for tannin.

A. root. The *Comptonia asplenifolia*.

Astringentia. See *Astringents*.

Astringents. (Same etymon.) Medicines which produce contraction of living structure. The nature of their action is very various. Some, as tannin and alum, act by producing coagulation of albumen; some, as alcohol, by absorption of water; others by producing reflex muscular contraction; probably none by producing simple contraction. They are usually divided into vegetable and mineral astringents. They are used to restrain hæmorrhage and mucous or other discharges, and topically to produce contraction of a too relaxed structure.

Astrion. (Ἀστριον, a little star.) An old name for a species of the milk-vetch, *Astragalus*, or of a species of *Stellaria*.

Also, an old name (Gr. ἄστριον) for the astragalus or ankle-bone. Johnson, *Ingrussias*, *Comm. in Gal. l. de Ossib.* p. 164.

Astrios. (Ἀστριον, dim. of ἄστυρ, a star.) Same as *Asterias*.

Astrobles. (Ἀστρον, a planet or star; βάλλω, to strike.) Blasted; planet-struck. An old term (Gr. ἄστροβλήν), used for apoplectic. (Gorræus.)

Astrobole'sia. (Ἀστροβολησία.) Same as *Astrobolismus*.

Astrobolia. (Ἀστροβολία.) Same as *Astrobolismus*.

Astrobolismus. (Ἀστροβολίζομαι, to be struck by the sun.) A blasting; the being star-stricken. A term given to a sudden paralysis attributed to astral influence.

Also, a synonym of *Apoplexy*.

Also, a synonym of *Gangrena*.

Also (G. *Sonnenstich*), a term for sunstroke.

Astrobolis mus. (Ἀστροβολίζομαι, to be blasted.) A blasting. A term (Gr. ἄστροβολισμός), used by Math. Flacius, *de Vit. et Mort.* ii, 24, p. 96, for *Sphacelus*, although properly referring to plants that perished under the Dog star, as if stricken by it; also, used for apoplexy. See *Diss. div.* ii, s. vi, t, 7.

Astrobolus. A term for *Asterias*.

Astrocaryum vulgare. (Ἀστέαρ, a star; κάρυον, a nut; *vulgaris*, common.) Nat. Order *Palmaceæ*. A plant growing in French Guiana, the root of which is used as an anti-syphilitic remedy.

Astroites. (Ἀστέαρ, a star.) A species of madrepore, formerly employed, in doses of from 12–24 grains, as an alexipharmic, to purify the blood, and to prevent apoplexy. The *Asterias*.

Astroitis. (Ἀστρον, a star.) The same as *Astroites*.

Astrolobium scorpioides. The *Ornithopus scorpioides*.

Astrologer. (Ἀστρολόγος, an astronomer. G. *Sterndeuter*.) One who practised divination by the stars. Also, formerly used synonymously with astronomer.

Astrology. (Ἀστρον, a star or planet; λόγος, a discourse. F. *astrologie*; G. *Astrologie*, *Sterndeuterkunst*.) Term for the doctrine of the heavenly bodies, their nature and distinctions, and thus synonymous with Astronomy; also applied, however, to the so-called science which pretended to explain the phenomena of nature by astral influences, and to tell of the future by a scrutiny of the stars, planets, and constellations, their aspects and relative positions, thus constituting what was called judicial astrology. Formerly, it formed a prominent part of medicine. A person's temperament was held to be determined by the planet under which he was born, and the virtues of herbs, gems, and medicinal substances, were believed to be attributable to the influence of their ruling planets.

Astrolo'ma. (Ἀστρον, a star; λῶμα, a fringe.) A Genus of the Nat. Order *Ericaceæ*.

A. humifusum. (L. *humifus*, on the ground; *usus*, part. of *fundo*, to spread out.) The Tasmanian cranberry. Used as an esculent fruit.

Astroman'cy. (Ἀστέαρ, a star; μαντεία, a divination.) Astrology.

Astroman'tia. (Ἀστρον; μαντεία, a prophesying. F. *astromantie*; G. *Sterndeuterei*.) Divination from the aspect of the stars, and so, similar to astrology.

Astro'nium. A Genus of the Nat. Order *Terebinthaceæ*, Tribe *Anacardiaceæ*. Large trees, with alternate imparipinnate leaves; flowers disposed in very ramified, axillary, or terminal branches; hermaphrodite or polygamous; pentamerous; ovary sessile, uniovulated; fruit a drupe. Hab. Tropical America.

A. fraxinifolium. (L. *fraxinus*, the ash; *folium*, a leaf.) This plant yields a turpentine and an astringent wood.

A. graveolens. (L. *graveolens*, strong smelling.) The fruit of this plant is used as a medicine in New Granada.

Astron'omy. (Ἀστρον, a star; νόμος, a law. F. *astronomie*; G. *Himmelskunde*, *Sternkunde*.) Term for that branch of science which treats of the heavenly bodies.

ASTROP—ASYMMETROCARPOUS.

A., physical. Term for that division of astronomy which investigates the causes of the motions, &c., of the heavenly bodies.

Ast'rop. Northamptonshire; five miles west of Brackley. A chalybeate water containing magnesium sulphate; used in skin diseases.

Astro'trichus. (Ἀστρον; ὀπίξ, hair. *F. astrotriche*; *G. sternhaarig*.) Applied to *Clidemia astrotricha*, because most of its hairs are parted at the top into branches, disposed so as to present a star.

As'truc. A French physician, born at Sauve, Département du Gard, March 19, 1684; died May 5, 1766. He was a professor in the Universities of Montpellier, Toulouse, and Paris. He wrote numerous works on fermentation, digestion, fistula, plague, midwifery, diseases of women, as well as on metaphysics, natural history, and theology; his great book was on the venereal disease.

Astrum. (*L. astrum*, a star.) The olden chemists used this word to signify the virtue or power which accrues to a medicinal substance by reason of a special mode of preparation, as in its reduction to a fluid condition.

A. duplicat'um. (*L. astrum*, a star; *duplico*, to double. *G. Doppelgestirn*.) A stomachic nostrum, composed of antimony, coral, amber, and musk.

Astr'ni. Italy; near Naples. A sulphur spring, which is said also to contain alum.

Astruthium. The *Peucedanum ostruthium*.

Astuc'cio dell' Ippocam'po. Ital. (*I. astucchio*, a case.) Part of the sphenoidal cornu of the lateral ventricles; it is roofed in above by the posterior part of the corpus callosum and posterior pillars of the fornix. It really corresponds with all the space of the inferior cornu which is in relation with the hippocampus major.

Asturian. (*Asturias*, one of the ancient provinces of Spain, now called Oviedo.) Belonging to Asturias.

A. rose. (*F. rose des Asturies*; *I. rosa delle Asturie*; *G. Asturische Sommerseuche*.) A skin disease, endemic in the Province of Asturias, probably a species of pellagra.

Asty'la. (A, neg.; στυλος, style.) One of the ancient names of mistletoe.

Also, a variety of lettuce, which was anciently recommended for its anaphrodisiac properties. In this sense the word is probably a misspelling of *Astyis*.

Astylous. (Same etymon. *F. astyle*; *G. stiellos*.) Term applied by Wachendorf to plants the flowers of which have no style.

Astyphia. (A, neg.; στυς, to make erect.) Impotence.

Astyra. Turkey. The ancient name of a place, now called Kirgheuz (i.e. forty eyes), mentioned by Pausanias, where the mineral water issues by about forty fissures from the soil. The temperature varies, now rising to 50° C. (122° F.) and even 60° C. (140° F.), now falling to 40° C. (104° F.), and 30° C. (86° F.) The water is highly saline, and is in repute for visceral engorgements and in scrofulous diseases.

Astys'ia. (A, neg.; στυς, to make stiff. *F. astysis*; *G. das männliche Unvermögen*.) Male impotency.

Asty'tic. (Same etymon.) Incapable of erection. Applied to the penis.

Asty'tis. (Ἀστυτίς, impotent.) Term applied to lettuce by the ancients, on account of its anaphrodisiac properties.

Asuar. The *Myrobalanus indica*.

Asu'gar. (Arab.) An old name for verdigris. (Quincy.)

Asul. Arab. and Hind. for *Tamariz furas*.

Asul'ol. Old name for the lapis lazuli, or azure-stone. (Ruland and Johnson.)

Asu'na. The vernacular name in India of the *Briedelia spinosa*.

Asu'li. (Arab.) Old name for fuligo, or soot; also for atramentum, or ink. (Ruland and Johnson.)

Aswagand'hi. Tel. for *Physalis somnifera*.

Asylum. (*L. asylum*, a place of refuge; from ἀσυλος, safe from violence. *F. asile*; *I. and S. asilo*; *G. Zufluchtsort*.) A place of refuge. A place for the safe keeping of those who need help and shelter from the world, as the blind and insane.

A., lunatic. (*L. lunaticus*, an insane person. *F. maison d'aliéné*; *I. manicomio*; *G. Irrenanstalt Irrenhaus*.) A place for the cure of insanity, and the safe keeping of insane persons.

Asymbol'ia. (A, neg.; σύμβολον, a sign.) A term, suggested by Finkelnburg as being more general and comprehensive than aphasia, to indicate loss of power of forming or comprehending any sign or symbol of thought, whether spoken, written, or acted.

Asymmetran'thous. (A, neg.; συμμετρία, symmetry; ἄνθος, a flower. *F. asymmetranthe*.) Applied by G. Allman to plants the flowers of which are without symmetry; not forming equal halves.

Asymmet'ric. (Same etymon. *F. asymmetrique*.) Not symmetrical. In Botany, an organ is said to be asymmetric when it cannot be divided into two similar halves by a vertical plane. A flower is asymmetric when any of the whorls which form it is asymmetric, or when each whorl is symmetrical in itself, but not symmetrical with the others. The flower of *Centranthus ruber*, for example, is asymmetric, notwithstanding the calyx, corolla, androecium, and gynoecium have each a plane of symmetry, for each plane differs from that of the rest. The term compound asymmetric fruits has been applied to those fruits in which the number of carpellary leaves differs from the number of the leaves of the perianth, and these are divided into *fructus ex defectu asymmetricus* when the number of carpellary leaves is less than that of the petals, as in Digitalis and Carrot, and *fructus ex excessu asymmetricus* when the carpellary leaves are more numerous than the divisions of the perianth, as in Anona and Magnolia. Multiple fruits, or fruits formed of several distinct carpels, are similarly said to be asymmetric when the number of the carpels differs from that of the leaflets of the perianth. Thus, Ranunculus and Adonis represent a multiple fruit, asymmetric by augmentation, and Agrimony a multiple fruit, asymmetric by diminution.

A. system. A term for *Triclinic system* of crystallography.

Asymmetrical flowers. (A, neg.; συμμετρία, harmony.) Term applied to entirely irregular flowers.

Asymmetrocar'pous. (A, neg.; συμμετρία, symmetry; καρπός, fruit. *F. asymmetrocarpe*.) Applied by G. Allman to plants

ASYMMETRY—ATAXIC

the fruit of which, cut in two, does not present symmetrical halves.

Asymmetry. ('A, neg.; *συμμετρία*, symmetry. F. *asymétrie*; I. *asimmetria*; G. *Unregelmässigkeit*.) Want of symmetry in parts which should be symmetrical.

Asymphytous. ('*ἀσύνφυτος*, G. *nicht verwachsen*.) Not grown together; dissimilar.

Asymptotous. ('*ἀσύνπτωτος*, not compressed. G. *nicht zusammenfallend*.) Not close together; remaining loose or separate.

Asynechia. ('A, neg.; *συνήχη*, continuous. F. *asynchie*; G. *Mangel an Zusammenhang*.) A defect of continuity.

Asynechia. (Same etymon.) Not continuous.

Asynergia. ('A, neg.; *συνεργία*, joint-work, co-operation. F. *asynergie*; G. *Mangel an Mitwirkung*.) Want of combined action of the various organs of the system.

A., progressive locomotor. A term for locomotor ataxy.

Asynesis. ('*Ἀσυνεσία*, want of understanding. F. *asynésie*; G. *Dummheit, Einsichtlosigkeit*.) Want of intelligence; witlessness; stupidity.

Asynesis. (Same etymon.) A synonym of *Aphasia*.

Asynetous. ('*Ἀσύνετος*, void of understanding. G. *dumm, einsichtlos*.) Stupid, foolish.

Asyngamia. ('A, neg.; *σύν*, with; *γάμος*, marriage.) Term applied to flowers in which the male and female organs are not simultaneously mature or ripe for fecundation. It is believed by the Darwinists to be a condition favorable for the development of new species.

Asynodia. ('A, neg.; *συνωδία*, companionship. F. *asynodie*; G. *Mangel des Beischlafs, Unermögen zum Beischlaf*.) Want of, or impotency for, sexual intercourse.

Asynodia. (Same etymon.) Impotent.

Asynovia. ('A, neg.; *συνωβία*. F. *asynovie*; G. *Mangel der Gelenkfeuchtigkeit*.) Defect of synovia.

Asynthesis. ('A, neg.; *σύνθεσις*, a pulling together. F. *asynthèse*.) Defect of joining or juncture.

Asyn'trophy. ('A, neg.; *σύντροφος*, brought up together.) A term, employed by Mr. Gardiner-Brown, to denote a deficient or retarded growth or development of one of a pair of symmetrical bones, such as the temporal; or of one half of a bone having two symmetrical halves, as the inferior maxilla.

Asystole. ('A, neg.; *συστολή*, a contraction. F. *asystolie*; G. *mangelnde Zusammenziehung*.) A term applied by Beau to a condition in the progress of heart disease in which the systole or contraction of the left ventricle is insufficient to unload the heart of the blood which flows to it. In this condition the face is turgid and injected, the eyelids puffy, the neck swollen; the jugular veins pulsate; the pulse is small, and often irregular, the cardiac contractions are feeble; there is often between the third and fifth ribs on the left side of the sternum a soft, systolic, diffused murmur, due to tricuspid regurgitation. In advanced cases the cardiac impulse is very weak, and a humming sound replaces any murmur that may have been present. Digitalis is the chief remedy, with rest, nutritive food, and stimulants.

Asystolism. Same etymon and meaning as *Asystole*.

A'tao. Old name for talc, or nitre. (Bailey and Johnson.)

Atactic. ('*Ἀτακτος*, out of order, irregular.) Irregular. Usually applied to want of co-ordination of the muscles; thus, in atactic aphasia, the loss of speech is due to the want of co-ordinating power over the muscles of articulation.

A. apophyses. ('*Ἀποφύσεις*, an offshoot.) An old term for the ultimate subdivisions of a vein.

Atactically aphasic. ('*Ἀτακτος; ἀφασία*, speechlessness.) A term applied by Kussmaul to one who is able to form the sounds and syllables of familiar words, but unable to re-group these sounds and syllables in any other unfamiliar way.

Atactomorphosis. ('*Ἀτακτος; μορφή*, form. F. *atactomorphose*.) The case where a larva passes from its state of nymphs into the almost absolute paralysis, from which it does not change till arrived at the condition of a perfect insect.

Atactos. ('*Ἀτακτος*, from *ἀ*, neg.; and *τάσσω*, to put in order. G. *unordentlich, regellos*.) Erratic; disorderly; undisciplined.

Ataltec. Arabic name for *Acacia gumifera*.

Atanta. A species of *Rhus*, resembling *R. tomentosum*, used in Guinea as a tonic.

A'tap. The fruit of the Indian plant *Nipe utriculus*.

Ataractopole'sia. ('A, neg.; *ταράσσω*, troubled; *πολεῖν*, to do.) Intrepidity; presence of mind. A quality which, according to Hippocrates, should be possessed by the physician.

Ataraxia. ('*Ἀταραξία*, coolness. G. *Geistesruhe, Gemüthsruhe, Seelenruhe*.) Freedom from passion; calmness; tranquillity; serenity.

Atavism. (L. *atavus*, a forefather. F. *atavisme*.) A term given to the reappearance in an individual or a group, whether plant or animal, of some anatomical, physiological, or pathological condition which has been present in an ancestor, not the immediate parent.

A'tax. A Genus of the Family *Hydrachnida*, Order *Acariidea*; parasitic on Lamellibranchiate Mollusca.

Ataxacanthous. ('*Ἀταξία*, want of order; *ἀκανθα*, a spine.) Having spines dispersed without order upon the branches and petioles.

Ataxia. ('*Ἀταξία*, disorderliness; from *ἀ*, neg.; *τάσσω*, to order. F. *ataxie*; G. *Unordnung*.) A term for irregularity; want of order, especially of the pulse. See *Ataxy*.

A. motus. (L. *motus*, motion.) A synonym of *Ataxy, locomotor*.

A., progressive locomotor. See *Ataxy, locomotor*.

A. spir'ituum. (L. *spiritus*, spirit.) The nervous diathesis.

Ataxio. ('*Ἀταξία*, want of order. F. *ataxique*; G. *unordentlich*.) Of, or belonging to, ataxy, as occurring in the progress of diseases, or in the natural animal functions; irregular.

A. apha'sia. See *Aphasia atactica*.

A. fever. An order of fevers with great weakness, according to Pinel.

Also, an old term for an irregular form of

ATAXMIR—ATELORACHIDIA.

fever, in which the brain and nervous system are chiefly affected.

Atax'mir. (Arab.) A term used by Albucasis to signify the treatment of a disease of the eye, arising from the presence of supernumerary eye-lashes growing under the natural ones.

Atax'o-adyname'io. (Ἀταξία, want of order; ἀδυναμία, debility.) Relating to ataxy and adynamy.

A-ty'fer. (F. *fièvre ataxo-adynamique*.) Typhus fever of cattle.

Ataxodyn'amy. (Ἀταξία, want of order; δύναμις, power.) Irregularity in the action of any part; defective co-ordination of the movements of a part.

Ataxophe'mia. (Ἀταξία; φημί, to speak. F. *ataxopémie*.) Defective co-ordination of the words; a kind of aphasia.

Atax'y. (Ἀταξία, from ἀ, neg.; τάξις, order.) Irregularity; want of order.

A-, hysterical. An hysterical simulation of progressive ataxy.

A-, locomoto'. (L. *locus*, place; *motus*, motion.) A want of the power of co-ordinating the voluntary movements, indicated by a peculiar unsteadiness in their performance, usually preceded by pains of various parts. The disease usually commences in the lower limbs, and gradually extends to the arms. The patient totters, walks, sometimes with short and quick steps, sometimes with his legs more widely separated than usual. In the advanced stages of the disease he cannot stir without keeping his eyes fixed on his feet. Similar loss of control is observed over the movements of the arms. In addition there are sudden jerking movements, rendering it difficult for the patient to carry food to the mouth. Other affections of the nervous system are commonly present, as pain, anæsthesia, analgesia, paralysis, incontinence of the urine, dysuria, spermatorrhœa, anaphrodisia, ocular and aurial affections. Occasionally serious, though painless, disease of the joints supervenes, commencing with extensive effusion into and around the joint-cavity, and proceeding to erosion of the cartilages, absorption of the joint-ends of the bones, and complete destruction of the joint. Now and then there is spontaneous fracture. The disease is progressive. The causes are those that depress the nervous system, as cold, wet, fatigue, bad or insufficient food, depressing mental emotions, masturbation. The pathological conditions found after death are congestion and thickening of the membranes of the cord, sclerosis with atrophy and disintegration of the posterior columns and posterior roots of the nerves, with hypertrophy of the connective tissue and the presence of corpora amylacea. Many of the blood-vessels of the cord are loaded or surrounded with oil globules. According to Charcot, the specific seat of the disease is in a band of white matter lying between the posterior pyramid of the cord and the posterior roots of the nerves with the adjacent part of the posterior cornu of the cord.

Atch'ar. Name for a condiment used in India, composed of several green fruits, garlic, ginger, pimento, and mustard, pickled in vinegar.

Ate. A terminal syllable which, added to the name of an acid ending in the syllable *ic*, expresses a combination of that acid with a base; as *nitrate* of silver, or a combination of nitric acid with the base silver.

Ate'bras. (Arab.) Ancient name for a subliming vessel. (Ruland.)

Atech'nia. (A, neg.; τέχνη, an art. F. *atechnie*; G. *Ungeschicklichkeit, Unbeholfenheit*.) Want of art; Hippocrates, *de Art.* vii, 5. Used by Lindennus, *S. M. Ex.* ix, § 22, the same as *Anaphrodisia*; and as *Agonia*, according to F. Platerus, *Prax.* ii, 19.

Atech'nous. (Ἀτεχνος, without art. G. *Kunstlos, Einfach*.) Simple; artless.

Atec'nia. (Ἀτεκνος, without offspring; sterile. F. *atecnie*; G. *Unfruchtbarkeit*.) An old term for the want of children, or of the power to procreate.

A'tees. The name of the root of the *Aconitum heterophyllum*.

Atelemorrhoid'es. (Ἀτελής, imperfect; αἱμορροίς, piles) Blind piles or hæmorrhoids.

Atelec'tasis. (Ἀτελής, imperfect; ἱκτασις, expansion. F. *atelectasie*; I. *atelectasia*; G. *unvollkommene Ausdehnung*.) A term applied to a state of imperfect expansion or dilatation in general, but especially to that of the air-cells of the lungs in new-born children. It is not due to disease of the structures, but to imperfection of the respiratory effort caused by injury to the nerve-centres from pressure, or by weakness from repeated placental hæmorrhage, or from premature birth.

A-, acqui'ed. Collapse of the air-cells of the lungs, the result of debility or disease. See *Pulmonary collapse*.

A. acqui'sita. (L. *acquisita*, part. of *acquirere*, to get in addition.) Acquired atelec'tasis. Collapse of the air-cells of the lung, the result of bronchitis or other disease. See *Pulmonary collapse*.

A. adna'ta. (L. *adnascor*, to grow to.) Congenital atelec'tasis. Persistence of the fetal condition of the air-cells of the lungs. See *Atelec'tasis*.

A-, congen'ital. Non-inflation of the air-cells of the lungs from birth. See *Atelec'tasis*.

A. pulmo'num. (L. *pulmo*, a lung.) See *Atelec'tasis*.

Ateleobran'chia. (Ἀτελής; βράγχια, the gills.) Having imperfect branchiæ; applied to Amphibia.

Ateli'a. (Ἀτέλεια, imperfection. F. *atélia*.) In Teratology, the absence or defective development of some part of the body.

Ate'locardia. (Ἀτελής, incomplete; καρδία, the heart.) Imperfect development of the heart.

Ateleocheil'ia. (Ἀτελής, imperfect; χύλος, the lip.) A term for imperfect development of the lip.

Ateleocephalia. (Ἀτελής, imperfect; ἑγκεφαλος, that which is in the head, here meaning specially the brain.) A term for imperfect development of the brain.

Ate'loglossia. (Ἀτελής; γλῶσσα, the tongue.) Imperfect development of the tongue.

Ate'lognath'ia. (Ἀτελής; γνάθος, the jaw.) Imperfect development of the jaw.

Ate'lomyl'ia. (Ἀτελής; μυελός, the marrow.) Imperfect development of the spinal cord.

Ate'loproso'pia. (Ἀτελής; πρόσωπον, the face.) Imperfect development of the face.

Ate'lorachid'ia. (Ἀτελής; ράχις, the spine.) Imperfect development of the spine.

ATELOSTOMIA—ATHERMIC.

Atelostomia. ('Ατελής; στόμα, the mouth.) Imperfect development of the mouth.

A'ten. A shrub of the Moluccas, perhaps a species of *Heritiera*. The kernels of the fruit are used as a tonic.

A'ter. (L. *ater*, black. F. *noire*; I. *nero*; S. *negro*, G. *schwarz*.) Of the deepest black colour.

A. succus. (L. *succus*, juice.) Black juice. An old term for melancholia and atra bilis.

Ateramnia. ('Ατράμνια, harshness, hardness. G. *Härte*, *Unverdaulichkeit*.) Indigestibility.

Ateram'nus. ('Ατράμνος, unsoftened, harsh, bitter. G. *Unzerreiszbar*, *unverdaulich*, *hart*.) Indigestible; hard.

Athalamia. ('Α, neg.; θάλαμος, a couch.) A term formerly employed to designate the naked Foraminifers.

Athal'amous. (Same etymon.) Applied to lichens which have no conceptacles.

Athal'ine. (L. *a*, neg.; *thallus*.) Having no thallus.

Athallous. (L. *a*, neg.; *thallus*.) Without a thallus.

Athaman'ta. ('Αθάμας, a mountain of Thessaly, where the plant was first found; or 'Αθάμας, son of Eolus, who first named it. G. *Augenwurz*.) A Genus of the Nat. Order *Umbelliferae*.

A. an'na. (L. *annus*, a year.) A synonym of *A. cretensis*.

A. aureoseli'num. The same as *A. oreoselinum*.

A. creten'sis. (L. *Crete*, an island in the Mediterranean. F. *dancus de Crète*; G. *Kandischer Mohrenkummel*, *Beerswurzsamen*; Dut. *Kandische belwortel*.) The systematic name of the *Daucus creticus*, or Candy carrot, brought from the Isle of Candy. The fruit is elongated, cylindrical, velvety, yellowish, and aromatic, has a slightly pungent flavour, and is employed as carminative, diuretic, and antihysteria.

A. cre'tica. The *A. cretensis*.

A. flexu'osa. (L. *flexuosus*, full of turns.) The *Peucedanum palustre*.

A. leucospermum. (Λευκός, white; σπέρμα, a seed.) The *Seseli leucospermum*.

A. libano'tis. The *Seseli libanotis*.

A. macedon'ica. The *Bubon macedonicum*.

A. matth'oli. Hab. Alps of Central Europe. Roots acrid, emetic, and purgative.

A. me'um. A name for the *Meum athamanticum*, or baldmoney.

A. oreoseli'num. ('Ορεισελινον, mountain parsley. F. *persil de montagne*; G. *Bergpetersilie*.) The systematic name for the black mountain parsley; also called *Daucus alsaticus*, *D. montanus*, *D. selenoides*. Formerly used, and highly esteemed as aperient, attenuant, deobstruent, and lithontriptic; an ethereal oil distilled from the seed formed a remedy in toothache.

A. pisa'na. The *Peucedanum palustre*.

Athaman'ticus. ('Αθίμας, a mountain of Thessaly.) Of, or belonging to, Athamas.

Athaman'tin. C₂₁H₃₀O₇. An indifferent crystalline substance obtained from the root and seed of the *Athamanta oreoselinum*. It is absent in the leaves. It has a soap-like odour, and an acrid, bitter, rancid taste. It is insoluble in water, but is easily soluble in alcohol and ether. When heated with muriatic acid it breaks up into valeric acid and oreoselin.

Athana'sia. ('Αθανασία, immortality.

F. *athanasie*; G. *Unsterblichkeit*.) An old term applied by Galen, de C.M. sec. Loc. viii, 7, &c., to various antidotes, medicaments, compositions.

Also a name of taney, because, when stuffed in the nostrils of a corpse, it was supposed to hinder putrefaction.

Also, a Genus of the Nat. Order *Compositae*.

A. ama'ra. (L. *amarus*, bitter.) Hab. Mexico. A species the leaves of which are tonic and anthelmintic.

A. marit'ima. The *Diotis maritima*.

Athanasie'ae. A Tribe of the Nat. Order *Compositae*.

Atha'nor. ('Αθανή, undying.) Name for a kind of digesting furnace used by the alchemists, by means of which a gentle and uniform heat could be long maintained. (Ruland, Libavius.)

Atha'ra. ('Αθήρα, a kind of porridge.) Groats, or oatmeal, or porridge made of it.

Atheca'ta. ('Α, neg.; θήκη, a case.) A synonym of *Gymnoblastera*.

Athelas'mus. (A, priv.; θηλασμός, a suckling.) Inability to give suck, particularly from defect or malformation of the nipples.

Athe'les. ('Α, neg.; θηλή, the nipple.) Applied to a child that has been weaned, or who has not sucked the breast.

Also, without a nipple.

Athe'na. ('Αθήνη, the goddess of wisdom, Minerva.) Ancient name for a highly reputed plaster composed of oxide of copper, galls, verdigris, myrrh, ammoniacum, galbanum, wax, pitch, colophony, &c., and used for wounds of the head, described by Oribasius, Aëtius, Egineta, according to Gorreus.

Athenato'rium. Old name for a kind of glass cover for a cucurbit, used for sublimation. Th. Chym. vol. iii, 33. (Castellus.)

Athenio'nis catapot'ium. ('Αθήμιον, the name of the inventor: καταπότιον, a pill, a bolus.) Old term for a pill made of myrrh, pepper, castor, and opium, anciently recommended against a cough.

Athenip'pium. (*Athenippus*, its inventor.) Ancient term (Gr. *ἀθηνίππιον*) for a collyrium made from pompholyx, oxide of copper, saffron, myrrh, spikenard, hematite, white pepper, opium, and Chian wine, according to Scribonius Largus, n. 26, 27, and Rhodius. (Gorreus.)

Athenip'pum. Same as *Athenippium*.

Athe'nor. See *Athanor*.

Ather. ('Αθήρ.) The extreme point of the spike of barley; also, by translation, the sharpened point of an arrow, or its beard; Hippocrates, iii, de Morb. xix, 4.

Athera. ('Αθήρα, for *άθήρα*, of Dioscorides (lib. 2, c. 114) corresponds with the Pula, Pulmentaria, or Pulticula of the Romans (Pliny, l. xviii, c. 19, and l. xxii, c. 58), with the Bouillie of the French, and the pap of English nurses. G. *Weizengraupen*.) A porridge or gruel prepared from various substances, as wheat, barley, rice. Besides being employed for food, it was used in the formation of cataplasms.

Atherapen'tus. ('Α, neg.; θεραπεύω, to cure.) Incurable; incapable of treatment.

Ather'mancy. ('Α, neg.; θερμαίνω, to heat.) The possession of the power of arresting or preventing the transmission of heat rays.

Athermanous. ('Α, neg.; θερμαίνωμαι, to become hot.) Term applied to substances which do not transmit rays of heat.

Athermic. ('Α, neg.; θέρμη, heat.)

ATHERMOSYSTALTIC—ATHRIX.

Term applied to substances which arrest the rays of heat, as alum.

Athermosystaltic. (Α; θερμη; συσταλτικός, drawing together.) Term applied to striated muscle, because it does not contract notably with slow or moderate changes of temperature.

Athermosystaltic. (Α; θερμη; συσταλτικός, drawing together.) Term applied to those muscles to which heat is not a direct excitant.

Atherodes. (Αθέρωδες, bearded like ears of corn; from ἀθήρ, an ear or spike; ὠδης, postix meaning fulness. F. *athéroux*; G. *ährenförmig, voll Ähren*.) Having, or full of, spikes.

Atheroid. (Αθήρ; εἶδος, likeness. G. *ährenförmig, breiähnlich*.) Resembling an ear or spike.

Atheroma. (Αθήρα, gruel, or panada. G. *Breigeschwulst, Grützbeutelgeschwulst*.) Term for an encysted tumour containing a soft substance of a pulaceous consistence, or like panada; also for the substance itself.

This term is also used alone to signify a different disease, atheroma of the arteries. See *Arteritis*.

A. arteriale. (L. *arteria*, an artery.) Atheroma or fatty degeneration of the arterial coats, a result of chronic arteritis. See *Arteritis*.

Atheroma'sia. (Atheroma.) The process of conversion into atheroma.

Atheromatous. (Atheroma, an encysted tumour, composed of a soft substance like panada.) Of the nature, appearance, or consistence of the contents of *Atheroma*.

A. abscess. A term applied to that stage of retrogressive change in chronic arteritis in which the cells of the new deposit become fatty, and the intercellular substance softens, so that a soft yellowish matter is formed beneath the tunica intima.

A. ulcer. A term applied to the stage following an atheromatous abscess in chronic arteritis, in which the tunica intima gives way, and, the pulaceous contents being swept away by the current of blood, an excavation is left.

Atherosis. The same as *Atheroma*.

Atherosperma. (Αθρος, repelling noxious animals; σπέρμα, a seed.) A Genus of the Nat. Order *Monimiaceae*.

A. moschata. (Μόσχός, musk.) Hab. South Australia. Australian sassafras. The bark is curled on its long axis, or in rolls, hard, heavy, 1-8th to 1-4th inch thick, dark greyish brown externally, with longitudinal sinuous ridges; pale brown internally, with musky odour and taste. It contains *Atherospermin*, tannin, resin, wax, fatty and ethereal oils, sugar, butyric and oxalic acids, starch, and gum. The volatile oil obtained from the bark of this tree is said to be diaphoretic, diuretic, and sedative to the heart's action. Dose, one to two minims twice a day.

Atherosperma'ceae. A Nat. Order of *monochlamydous Eoogens*. Trees with opposite exstipulate leaves; flowers axillary, in short racemes, with short deciduous bracts; calyx tubular, with several divisions; male flowers with numerous perigynous stamens; anthers opening by recurved valves; female flowers with shorted stamens; fruit, consisting of achænia, enclosed in the tube of the calyx, with the adherent styles converted into feathery awns; seed solitary, erect; embryo minute, at the base of soft fleshy albumen.

Atherosper'mee. The same as *Atherospermaceae*.

Atherosper'mee. Applied by A. Richard to a Tribe of the Family *Monimiceae*, in which the anthers open from base to summit by means of a valve, and the seeds stand erect.

Atherospermin. C₂₆H₄₀N₂O₂? A white or grey powder, of alkaline reaction and basic properties, obtained from *Atherosperma moschata*. It has a pure bitter taste, melts at 128° C. (262.4 F.), dissolves with difficulty in ether, but easily in water.

Athetosis. (Αθητος, without fixed position.) An affection resembling paralysis agitans, first described by Hammond in 1871, characterised by an inability to retain the fingers and toes in any position in which they may be placed, and by their continual motion. The disease appears to be associated with some organic disease of the brain and spinal cord, being preceded or accompanied by various cerebral symptoms, such as epileptic paroxysms, mental debility, headache, tremulousness of the tongue, numbness of the affected side, pain in the spasmodically affected muscles, and complex movements of the fingers and toes, with a tendency to distortion, but no paralysis; one limb alone may be affected. The movements cease during sleep; and in the few cases that have been observed it has occurred most frequently in men in middle life. It is by many considered to be a post-hemiplegic condition, or secondary to other diseases of the nervous system, and so to be looked upon as a symptom and not as a separate disease.

Athletic. (Αθλητικός, from ἀθλήτης, an athlete, or one who contended in the public games of the ancients.) Having strong muscular development, as in those who exercised in the ancient games.

Athoracephalous. (Α, neg.; θώραξ, the chest; κεφαλή, the head.) A term in Teratology, applied to a monster without head or chest.

Athoracica. (Α, neg.; θώραξ, the chest. F. *athoracique*.) Applied by Blainville to an Order of *Decapoda* apparently without a thorax.

Athrep'sia. (Α, neg.; τρέφω, to nourish. F. *Athrepsie*; G. *Atrophie in Folge von Dyspepsie*.) A term used to denote a profound disturbance of the nutritive functions in children, consequent on neglect of hygienic measures, and especially on defective supply of wholesome food. It presents three stages, the gastro-intestinal, the hæmatic, and the encephalopathic; the early symptoms are thrush, vomiting, and diarrhoea, followed by anæmia, and ultimately by convulsions and trismus. The relative number of the blood-corpuscles is at first increased, sometimes amounting to seven millions in a cubic millim., owing to the escape of fluids, but towards the close of life it falls below the normal. The urine is always turbid, acid, of a deep colour, small in quantity, sp. gr. 1009—1013. The sediment, which is almost always deposited, contains variously formed casts, fatty elements, and pigment. The urea is much augmented, viz. on the average, 3.20 gramme per kilogramme of body higher.

Athrix. (Α, neg.; θρίξ, hair. F. *athrix*.) A deficiency of hair; baldness.

Also (G. *haarlos*), used as an adjective, hairless.

A. depilis. (L. *depilis*, without hair.) Baldness.

ATHROOPOMPHOLYX—ATMIATRY.

Athroopompholyx. (*Ἀθρόπος*, crowded together; *πυφόδωγ*, a bubble. *F. athroopompholyx*; *G. der gehäufte Blasenausschlag*.) Name for *Pompholyx confertus*.

Athrozophytum. (*Ἀθροφύτων*, to gather together; *φύτον*, a plant.) Applied by Necker to *Alga*, the fronds of which accumulate by the effect of successive and continued evolution.

Athymia. (*Ἀθυμία*, from *ἄ*, neg.; *θυμός*, mind or courage. *F. athymie*; *G. Muthlosigkeit*, *Traurigkeit*.) Old term used by Hippocrates, *Coac. Praenot.* 4, and 482, for dejection of spirits; despondency; melancholy. See *Euthymia*.

A. pleonectica. (*Ἀθυμία*, want of heart; *πλεονεκτής*, greedy, selfish.) Insanity accompanied by inordinate desire for gain.

Athyrium. The *Asplenium oterach*.
Athyrium filix-femina. The *Asplenium filix-femina*.

A. filix-mas. The *Nephrodium filix-mas*.
A. molle. (*L. molle*, soft.) The *Asplenium filix-femina*.

A. ovatum. (*L. ovatum*, egg-shaped.) The *Asplenium filix-femina*.

A. trifidum. (*L. trifidus*, three-cleft.) The *Asplenium filix-femina*.

Atin'car. (Arab.) Old name for borax. (Ruland and Johnson.)

Atin'kar. Same as *Atinecar*.

Atis. An Indian name applied to the tubers of *Aconitum napellus* and *A. heterophyllum*, and also to the inert root of *Asparagus sarmientosus*.

Atisin. $C_{12}H_{11}N_2O_5$. A bitter alkaloid obtained from the root of the *Aconitum heterophyllum*.

Ativish's. A Sanskrit name, signifying supreme poison, for the root of the *Aconitum feros*.

Atlan'tad. (*Atlas*.) A term applied by Dr. Barclay in the same sense as *Atlantal* used adverbially, or towards the atlantal aspect.

Atlantal. (*Atlas*, the first vertebra. *F. atlatoide*.) Of, or belonging to, the atlas; applied by Dr. Barclay, of Edinburgh, in his proposed nomenclature, as meaning towards the atlas, in treating of the aspects of the neck.

A. aspect. Looking towards the atlas.

A. extremities. The upper limbs.

Atlan'tides. (*Atlantic* ocean) A term under which Dr. Latham has included the Semitic and African races, which he considers closely allied.

Atlantion. The atlas.

Atlanto-axial. (*Atlas*; *axis*.) Belonging to the atlas and axis.

A. axial ligaments. The same as *Atlo-axoid ligaments*.

Atlas. (*ἄτλας*, one of the older family of gods who bears up the pillars of heaven; or *Atlas*, a mountain in Mauritania, in Libya, on which the heavens were supposed to rest.) The first or uppermost cervical vertebra, which is destitute both of body and spinous process. The centre of ossification, which in other vertebrae forms the body of the bone, here becomes attached to the subjacent vertebra, and forms the odontoid process of the axis. The atlas forms a ring, composed of an anterior and posterior arch and two lateral masses. The lateral masses present a pair of superior oval and concave articular facets for the reception of the condyles of the occipital bone, and a pair of inferior circular and flattened facets for articulation with the axis. The superior articulation permits the nodding movements, and the inferior the rotatory movements of the head. The inner and opposed surfaces of the lateral masses present a tubercle on each side for the attachment of the transverse ligament, which divides the spinal canal into two parts, an anterior, lodging the odontoid process, and a posterior, occupied by the spinal cord and its membranes.

Behind each superior and inferior articular process is a groove, corresponding to the superior and inferior intervertebral notch; the upper one transmits the vertebral artery and suboccipital nerve, the lower one the second cervical nerve. The posterior arch terminates posteriorly in a tubercle, to which the rectus capitis posterior minor is attached. The anterior arch about half the length of the posterior, presents an articular surface posteriorly for the odontoid process, and gives attachment centrally to the longus colli and rectus capitis anterior minor. The transverse processes are strong, not bifurcated, perforated at the base for the vertebral artery, and give attachment to the rectus lateralis, obliquus superior and inferior, splenius colli, levator anguli scapulae, interspinous, and intertransverse muscles. Development from two primary centres and one or two epiphyseal centres.

The atlas is without a body in all vertebrates above the Ichthyopsida; in birds and some reptiles it presents post-synsiphyses; its shape varies much in the lower animals, and it becomes in some fishes ankylosed to the occipital bone or to the axis.

A. wood. A kind of rosewood from the *Ferolia guianensis*.

Atle. Egyptian name for the *Tamariscus*, or *Tamarix Gallica*.

Atlo-axoid articulation. Term applied to the articulation between the first two cervical vertebrae, which is effected, in the absence of any intervertebral substance, by two articular processes, and by the articulation of the odontoid process with the back of the anterior arch of the atlas. There are no ligaments subflava. There are anterior and posterior ligaments, and a transverse ligament, passing from one side of the atlas to the other, behind the odontoid process. There are four synovial membranes: one between each of the articular processes, one between the odontoid process and the transverse ligament, and one between this process and the arch of the atlas.

A. ligaments. See *Atlo-axoid articulation*.

Atlodymus. (*ἄτλαν*, the first vertebra; *διδύμος*, a twin.) In Teratology, a monster with one body and two heads.

Atlold. Relating to the atlas or first cervical vertebra.

Atloldo-ax'oid. The same as *Atlo-axoid*.

A. articulation. The same as *Atlo-axoid articulation*.

A. ligaments. The same as *Atlo-axoid ligaments*.

Atloldo-occip'ital. See *Occipito-atlantal*.

A. muscle. The rectus capitis posterior major.

Atloldo-odon'toid articulation. The articulation between the atlas and the axis. See *Atlo-axoid articulation*.

Atmiatry. (*ἄτμός*, vapour; *λατρεία*,

ATMIC—ATMOSPOREUS.

medicinal treatment. G. *Athmungsheilkunde*, *Luftheilkunde*.) A method of treatment which consists in directing a current of vapour or gas on the part affected. In the *atmiatrie pulmonaire* of Martin Solon, iodine, bromine, chlorine, the vapours of ammoniacal salts, oxygen, carbonic acid gas, arsenic, water charged with essences, the smoke of stramonium and belladonna, were recommended as being especially serviceable in phthisis and asthma.

Atmic. (Ἀτμός, vapour.) Belonging to, or arising from, vapour.

Atmidiatrics. (Ἀτμίς, the vapour of a fomentation; *λατρικός*, pertaining to medicine. F. *atmidiatique*; G. *Dampfheilkunde*.) Term for the treatment of diseases by subjecting the body, or any part, to the action of vapour either of water or other fluid, simple or medicated.

Atmidometer. (Ἀτμίς, or ἄτμός, a vapour; μέτρον, a measure. G. *Ausdünstungsmesser*.) Name for an instrument by which the amount of vapour exhaled from a humid surface in a given time may be measured.

Atmismometer. Same etymon and meaning as *Atmidometer*.

Atmisterion. (Ἀτμίς, the steam of a fomentation.) The vaporarium, or heated air-bath.

Atmograph. (Ἀτμός, vapour; γράφω, to write.) An instrument for measuring the extent and frequency of the movements of respiration. It consists of a girdle and an elastic cylinder, the changes in the capacity of which, produced by respiration, are registered by means of a lever and style.

Atmography. (Ἀτμός, vapour; γράφω, to write. G. *die Beschreibung der Dünste*.) A description or history of vapour.

Atmologia. (Ἀτμός; λόγος, a discourse.) The science of vapour.

Atmolutron. The same as *Atmolutrum*.

Atmolutrum. (Ἀτμός; λουτρόν, a bath. F. *atmolutron*; G. *Dampfbad*.) A vapour bath.

Atmolyser. (Ἀτμός, vapour; λύω, to loosen.) An instrument for the performance of atmolysis.

Atmolysis. (Same etymon.) A method of separating one gas from another by diffusion through a plate of graphite or porous earthenware into a vacuum.

Atmomechané. (Ἀτμός, vapour; μηχανή, machine. G. *Dampfmaschine*.) A steam engine.

Atmometer. (Ἀτμός; μέτρον, a measure. G. *Verdunstungsmesser*.) A meteorological instrument to determine the quantity of water which evaporates in a given time when freely exposed to the air. It consists of a thin sphere of porous earthenware, into which is fixed a graduated glass tube. Being filled with water and the outlet of the tube closed, the apparatus is exposed to the air; the water passing through the porous earthenware evaporates from the surface, and the quantity, during a given period, is marked by the graduated tube.

Atmos. (Ἀτμός, vapour.) The breath. **Atmospherology.** (Ἀτμοσφære; λόγος, a discourse.) The science of atmospheric air.

Atmosphere. (Ἀτμός, a vapour; σφαῖρα, a globe or sphere. G. *Dunstkreis*.) The

thin elastic æriform fluid encompassing the earth, in gradually diminishing density, to a height which is not well ascertained, but judged to be from forty to forty-five miles, and accompanying it in its axial and orbital motions. Its weight at sea level in the latitude of England is equal to that of a column of mercury, at 0° C. (32° F.), of 760 millimeters in height, and thus it exerts a pressure of 1033·3 grms. on a square centimeter of surface, or about 14·7 pounds to the square inch. Regnault determined that a litre of atmospheric air, at 0° C. (32° F.), under a pressure of 760 mm., weighed 1·293201 grm. at the latitude of Paris. Inequalities in the temperature of the atmosphere give rise to winds. Atmospheric air consists essentially of a mixture of oxygen and nitrogen, but contains also aqueous vapour, carbon dioxide, ozone and ammonia, as normal constituents, and, as accidental impurities, various locally-formed gases and vapours, and minute particles of solids, such as sodium chloride, ammonium nitrate, and substances of animal and vegetable origin. The average percentage of oxygen is 20·924 volumes; on the sea-shore and mountains it may rise to 20·999, in towns it may be as low as 20·82, in living rooms and theatres it may sink to 20·28, and in mines to 20·26. The average amount of carbon dioxide is 4 volumes in 10,000, on the sea-shore about 3 volumes, and in towns it may amount to 6 or 7 volumes. The amount of aqueous vapour varies greatly; the average may be taken as '84 per cent. Ammonia is present, in combination with carbonic and other acids, and is in very small quantity. Ozone is usually present, but in small quantity, as from its powerful oxidizing properties it is soon removed. The inorganic impurities consist of fine particles of mineral matter, varying with the locality. The organic impurities are unorganised and organised; the former consisting chiefly of the products of destruction of animal bodies given off in respiration and perspiration, and of products of decomposition of animal and vegetable structures; of the latter are the germs of low vegetable life, which, according to recent experiments, are by most authorities believed to be the cause of putrefactive and vegetative changes.

A., compressed. See *Bath, compressed air*.

Atmospheric. (Same etymon. G. *atmosphärisch*.) Relating to the atmosphere.

A. air. See *Atmosphere*.

A. precipitates. (G. *atmosphärische Niederschläge*.) Term applied to dew, rain, hail, and snow.

A. pressure. The pressure which the weight of the air exerts on everything; it is equal in all directions, and amounts to 1033·3 grms. on each square centimeter of surface, or nearly fifteen pounds to the square inch at sea-level, with a temperature of 0° C. (32° F.)

Atmospherilla. (Ἀτμός; σφαῖρα.) The gaseous constituents of the atmosphere: oxygen, nitrogen, carbon dioxide, aqueous vapour, ammonium carbonate and nitrate, and ozone.

Atmospherization. (Ἀτμός; σφαῖρα, a sphere.) The result of exposure of the blood to the air; hæmatosis.

Atmospherology. (Ἀτμός, vapour; σφαῖρα, a sphere; λόγος, a discourse.) A term synonymous with meteorology.

Atmosporeus. (Ἀτμός; σπείρω, to scatter. F. *atmospore*; G. *Dampfverbreiter*.)

ATMOSTATICS—ATOMICITY.

Name by J. Corrigan for a disseminator of vapour, or vaporiser.

Atmostatics. (Ἀτμός; στατικός, causing to stand.) The art, doctrine, or science of the comparative weight of æriform bodies.

Atmoxomious. (Ἀτμός; ὤμα, that which is girded.) Applied by Blackadder to a hygrometer of his invention, consisting of two thermometers, one of which indicates the external temperature, while the other has its bowl covered by muslin kept continually moist with water, which flows drop by drop from a bottle.

Atocia. (Ἀτοκος, barren. *F. atocia*; *G. Unfruchtbarkeit.*) Barrenness; sterility. A word formerly much used, the same as *Atecnia*.

Also, a term for remedies or means to produce barrenness in women.

Atocium. (Ἀτόκιον, causing barrenness.) A name for the *Lychnis sylvestris*, because its flowers were said often to bear no seed. Formerly applied to a medicament which destroyed or took away the faculty of conceiving, or caused barrenness.

Atokous. (Ἀτοκος, barren. *G. unfruchtbar.*) Barren.

Atolmia. (Ἀτολία, cowardice.) Want of confidence; discouragement.

Atom. (ἄτομος, from ἀ, neg.; τέμνω, to cut; because it cannot be further divided. *G. Urstofftheilchen.*) The smallest particle of matter, which is incapable of further division; a particle.

When used in Chemistry, the word is regarded as expressing the smallest portion of matter which can enter into a chemical compound.

A., component. Term for that which unites with another atom of a different nature to form a third or compound atom, as the atoms of sulphur and oxygen are component atoms of sulphuric acid.

A., compound. Term for an atom composed of two or more atoms of different nature and bearing itself as a simple atom.

A., elementary. Term for the atom of a substance which has not been decomposed; also called primary atom.

A., organic. Term for the atom of a substance found only in organic bodies.

A., primary. See *A., elementary*.

Atomic. (Same etymon. *F. atomique*; *G. atomisch.*) Belonging to atoms or particles.

A. bonds. In modern Chemistry it is assumed that each of the elementary atoms has a certain definite number of bonds, and that by these alone it can be united to other atoms. Thus, the hydrogen, sodium, and chlorine atoms have only one bond or pole, and hence, in combining with each other, they can only unite in pairs. The oxygen atom has two bonds or poles, and can combine, therefore, with two hydrogen atoms, one at each pole. Again, the atom of carbon has four bonds, which may be satisfied by either four atoms of hydrogen, or four atoms of chlorine, or two atoms of oxygen, or, lastly, one atom of oxygen and two of hydrogen. Finally, the chromium atom binds six atoms of fluorine, or three of oxygen, or two of oxygen and two of chlorine.

A. formula. A chemical formula which expresses simply the number of atoms of each constituent contained in a compound. It is described by using the symbols of each element, and a small figure on the right hand of each when the number of atoms is greater than one.

A. heat. The capacity of an atom for heat, or the quantity of heat necessary to raise the temperature of an equal number of atoms of different substances one degree. This amount is the product obtained by multiplying the atomic weight of a body by its specific heat, and is for most substances between 6.1 and 6.6. According to Dulong and Petit, the atomic heat is a constant quantity for all bodies. Further experiments have not proved the truth of the conjecture, but it is probable that the removal of some known sources of error might explain the discrepancies.

A. proportion. A term indicating the fact that elements combine with each other in definite proportions, according to the weight of their atoms.

A. saturation. The condition in which an element is combined with the full possible number of atoms of another element.

A. theory. (*G. Atomtheorie.*) Term specially applied to a theory by Dalton, which, taking into account the hypothesis that matter is composed of extremely minute indivisible particles or atoms, and that the weight of an atom of each individual element is not alike, but is different for each element, concludes that the relative atomic weights of the elements are the proportions by weight in which they combine. Modern Chemistry distinguishes between the divisibility of matter by mechanical means, which leads to *molecules*, and the ideal divisibility resulting from the action of physical forces, which leads to the conception of *molecules*, which, however, are no longer perceptible to sense. Each separate substance is composed of a number of similar molecules. But, with the exception of some simple gases or vapours, every molecule can, by chemical means, be divided into at least two indivisible atoms, and the molecules of the simple bodies contain, as a rule, two atoms. The *atom* of an element is the smallest weight which can enter into a chemical composition; the *molecule*, on the other hand, is the minimum weight which can exist in the free state. Many elements combine with one another in single atoms, as hydrogen, chlorine, potassium, silver. In others, one atom combines with two atoms of the former class, as oxygen, sulphur, calcium, magnesium. In others, one atom combines with three atoms of the former, as in the case of nitrogen, phosphorus, arsenic, and antimony. And there are still others one atom of which combines with four atoms of the former, as silicon and carbon. In accordance with this the atoms of the elements are termed monad or univalent, diad or bivalent, triad or trivalent, and tetrad or tetravalent.

A. value. The same as *Quantivalence*.

A. volume. The product of the division of the atomic weight by the specific gravity of an element.

A. weight. (*G. Atomgewicht.*) The weight of an atom of an element, which is its combining weight, expressed in figures, calculated from the assumption that the atom of hydrogen represents unity.

Atomicity. (Same etymon.) The capacity of absolute saturation of any element. By an assumption made by Dumas and Lockyer, all metals and metalloids are simple modifications of a single substance, probably hydrogen, the atoms of which form different molecular groupings. Each of these atomic groupings has its own energy and affinities, and is called a molecule. The atom of potassium or sodium can only fix or saturate one

ATOMISM—ATRAMENTUM.

atom of chlorine or bromine; calcium and barium, in order that their attractive power may be saturated, require two atoms of chlorine. The former metals are monoatomic, the latter diatomic. Phosphorus can saturate five atoms of chlorine, and is therefore pentatomic. These irregularities in the capacity of saturation constitute the *atomicity* of each kind of atom, designating by that expression especially the maximum capacity of saturation. The capacities of inferior saturations are termed *quantivalences*. (Letourman.)

Atomism. (Same etymon.) The doctrine of atoms in regard to the constitution of matter.

Atomismus. (Same etymon. F. *atomismus*.) The system in which is explained the formation of the universe by means of atoms.

Atomist. (Same etymon.) A believer in atomism.

Atomistic. (Same etymon.) Having relation to atoms, or the atomic theory.

Atomisation. (Same etymon.) The production of a fine spray of fluid by means of an atomizer.

Also, synonymous with *Pulverisation*.

Atomizer. An instrument by means of which a current of fluid, issuing from a pipe, is converted into a fine spray.

Atomogynia. (Ἀτομος, infinitely small; γυνή, a woman.) Applied by Richard to an Order of *Didymia*, having a capsular point, and corresponding to the *Angiospermia* of Linnaeus.

Atonia. (Ἀτονία, languor.) Atony.

A. ventriculi. (L. *ventriculus*, the stomach.) Weakness of digestion.

Atoniatonblepharon. (Ἀτονία, to be relaxed; βλέφαρον, the eyelid. G. *Augeniedererschließung*.) Laxity of the eyelid; ptosis.

Atonic. (A, neg.; τόνος, tone or tension.) Without, or having diminished, tone or power.

Also, applied to a remedy having power to allay excitement.

Atonics. (Same etymon. F. *atoniques*.) A term proposed by Hardy to replace that of emollients, and, including poultices, warm lotions, and fomentations.

Atony. (A, neg.; τόνος, tone or tension. F. *atonie*; G. *Atonie*, *Erschlaffung*, *Schwäche*.) A term for the want, or diminution, of muscular tone or power.

Atorcular. A term applied to those cerebral sinuses which do not enter the *Torcular herophili*.

Atosia. A misspelling of *Atocia*.

Atotia. A misspelling of *Atocia*.

Atoxic. (A, neg.; τοξικόν, poison to smear arrows with.) Not poisonous. Applied to serpents that are not venomous.

Atrabiliarius. (*Atrabilis*.) Afflicted with melancholy.

Atrabiliary. (L. *ater*, black; *bilis*, bile. F. *Atrabilaire*; I. *atrabilare*; G. *gallsüchtig*.) Belonging to atrabilis or black bile.

Applied to the renal or supra-renal glands, or capsules, and to the arteries and veins by which they are supplied.

A. arteries. The supra-renal arteries.

A. capsules. The supra-renal capsules or adrenals.

A. veins. The supra-renal veins.

Atrabilis. (L. *ater*, black; *bilis*, bile. *Μέλαιρα χολή*; F. *atrabile*; G. *schwarzgallig*, *schwarze Galle*.) Black bile. A term anciently used for an imaginary fluid thick, black, and

acid, supposed to be the cause of melancholia, when existing in excessive quantity; it was supposed to be secreted by the adrenals. Also called *Ater succus*.

Atrachelia. (A, neg.; τράχηλος, neck. G. *Kurzhalsigkeit*.) The condition of having no neck or a short neck.

Also, a Division of the *Heteromera*, Order *Coleoptera*, having the head not exerted, nor narrowed behind into a neck.

Atrachelius. Same as *Atrachelous*.

Atrachelocephalus. (A, neg.; τράχηλος, a neck; κεφαλή, the head.) In Teratology, a monster with imperfectly formed or defective neck.

Atracheious. (A, neg.; τράχηλος, the neck. F. *atrachile*; G. *halslos*, *kurzhalsig*.) Wanting the neck; short-necked.

Atractenchyma. (Ἀτρακτος, a spindle; χύμα, that which is poured out.) A term for the variety of proseuchyma of plants, which consists of fusiform cells.

Atractis dactylura. (Ἀτρακτος, a spindle; δάκτυλος, a finger; οὐρά, a tail.) A synonym of *Acaris dactyluris*. A sexually mature nematoid entozoon found in the large intestine of *Testudo græca*.

Atractosomatous. (Ἀτρακτος, a spindle; σῶμα, a body.) Applied by Duméril to a family of fishes having fusiform bodies.

Atractosomous. Same as *Atractosomatous*.

Atractyl'ic acid. An acid said to exist in the root of the *Atractylis gummifera*, in combination with potassium.

Atractylis. (Ἀτρακτύλις, a thistle-like plant used for making spindles; probably *Cirsium creticum*, or *C. lanatus*. G. *Spindelkraut*.) A Genus of the Nat. Order *Compositæ*, Suborder *Cynaroideæ*, Family *Carlinae*. Outer bracts of the involucre large and foliaceous, inner erect; style scarcely bilobed; achenia oblong, hairy.

A. gummifera, Linn. (L. *gummi*, gum; *fero*, to bear. F. *chamaleon blanc*.) The gummy-rooted atractylis, or pine-thistle. Hab. Mediterranean region. The root possesses poisonous properties, and is used by Arab women to kill their husbands. The leaves and the receptacle are boiled and used as a food in Morocco and Algeria.

A. humilis. (L. *humilis*, lowly.) Hab. South Europe. Diuretic and diaphoretic.

Atragenö. A name for the *Clematis vit-alba*.

Also, a Genus of plants (G. *Alpenrebe*) of the Nat. Order *Ranunculaceæ*, separated by some botanists from the Genus *Clematis*.

A. alpina. (L. *alpinus*, belonging to the Alps.) The *Clematis viticella*.

Atrament'al. (L. *atramentum*, ink.) Black, like ink.

Atramentary. (L. *atramentum*, a black liquid, ink.) That which has the appearance or taste of ink.

Atrament'ous. (Same etymon.) Of the colour or character of ink.

Atramentum. (L. *atramentum*, ink. G. *Schwärze*, *Tinte*.) Ink. Also, applied to blacking, to copperas or vitriol, to the black fluid of the cuttle fish, and, somewhat enigmatically, as a name for the philosopher's stone.

A. sutorium. (L. *sutorium*, of, or belonging to, a shoemaker.) A term for iron sulphate.

ATRANORIC ACID—ATRICHIA.

Atranoric acid. (G. *atranorsäure*.) An acid obtained from lichens, *Umea barbata*, *Lecanora atra*, and others, growing on cinchona bark.

Atrophax'ia. (Ἀτροφᾶξις.) Ancient name for the *Atriplex*, or orach.

Also, a Genus of the Nat. Order *Polygonaceae*.

A. spine'sa. (L. *spinosa*, thorny.) A plant yielding a kind of manna, brought from Herat, and known by the ancient writers on *Materia Medica* as *Säur-Kheist*.

Atratus. (L. *ater*, black. G. *geschwärtzt*.) In Botany, applied to parts having a brown colour inclining to black.

Atresoly'tria. (A, neg.; *τετραίνω*, to pierce; *ἐλτρον*, a cover, a sheath.) Term by Broesbet for imperforation of the vagina.

Atresenter'ia. (A; *τετραίνω*; *ἐντρον*, the intestine.) Imperforation of the intestine.

Atres'ia. (A, neg.; *τετραίνω*, to perforate.) Old term for the absence of any natural opening or canal, either from congenital malformation, or occlusion, the effect of disease or injury; so used by Pechlinus, in *Observ.* i, 25.

A. a'ni. (L. *anus*, the fundament.) Imperforate anus.

A. a'ni adna'ta. (L. *anus*; *adnascor*, to be born in addition.) Congenitally imperforate anus.

A. a'ni vesica'tis. (L. *anus*; *vesica*, the bladder.) Vesico-rectal fistula.

A. fridis. (L. *iris*, a rainbow.) Closure, by lymph, of the aperture of the pupil of the eye.

A. vag'ine. (L. *vagina*, a sheath, the vagina.) Imperforate hymen. The term is usually employed to designate more or less complete occlusion of the canal of the vagina, resulting from imperfect development, or from mechanical, chemical, or pathological changes. The result is more or less complete retention of the menses, with its consequences.

Atresoblephar'ia. (A; *τετραίνω*; *βλέφαρον*, the eyelid.) Adhesion of the eyelids.

Atresocys'tia. (A; *τετραίνω*; *κύσος*, any hollow, the vagina, the anus.) Imperforation of the vagina, or of the anus.

Atresocyst'ia. (A; *τετραίνω*; *κύστις*, a bladder.) Imperforation of the bladder.

Atresogas'tria. (A; *τετραίνω*; *γαστήρ*, the stomach.) Imperforation of the stomach.

Atresole'mia. (A; *τετραίνω*; *λαίμω*, the throat.) Imperforation of the pharynx, or œsophagus.

Atresome'tria. (A; *τετραίνω*; *μήτρα*, the womb.) Imperforation of the womb.

Atresop'sia. (A; *τετραίνω*; *ὥψ*, the eye.) Occlusion of the pupil.

Atresorhin'ia. (A; *τετραίνω*; *ῥίς*, the nose.) Imperforation of the nostrils.

Atresostom'ia. (A; *τετραίνω*; *στόμα*, the mouth.) Imperforation of the mouth.

Atresure'thria. (A; *τετραίνω*; *οὐρήθρα*, the urethra.) Occlusion of the urethra.

Atretely'tria vag'ine. (Ἀτρητος, unpierced; *ἐλτρον*, a sheath; L. *vagina*, a sheath, the vagina.) Imperforate hymen.

Atretenter'ia. (Ἀτρητος; *ἐντρον*, the intestine.) Imperforate condition of some part of the intestine.

Atretis'mus. (Ἀτρητος.) Imperforation. Permanent condition of atresia.

Atretoblephar'ia. (Ἀτρητος; *βλέφαρον*, the eyelid.) Non-separation or persistent

adhesion of the eyelids to each other. Absence of the palpebral fissure.

Atretoceph'alus. (Ἀτρητος; *κεφαλή*, the head. F. *atretocéphale*; G. *Mangelhaart mit mangelnden Öffnungen am Kopfe*.) A monster fetus without any opening in the head, as the mouth.

Atretocor'mus. (Ἀτρητος; *κόμης*, trunk.) In Teratology, a fetus in which one or other of the openings of the trunk, as the vulva, anus, or urethra, are imperforate.

Atretocys'tia. (Ἀτρητος; *κύσος*, anus.) Imperforate anus.

Atretocyst'ia. (Ἀτρητος; *κύστις*, the bladder.) Imperforation of the bladder.

Atretogas'tria. (Ἀτρητος; *γαστήρ*, the stomach.) Imperforate stomach.

Atretole'mia. (Ἀτρητος; *λαίμω*, the throat.) Imperforate condition of the upper part of the alimentary canal, as of the pharynx and œsophagus.

Atretome'tria. (Ἀτρητος; *μήτρα*, the womb.) Imperforation of the womb.

Atretop'sia. (Ἀτρητος; *ὥψ*, the eye.) Imperforate condition of the pupil.

Atretorrhin'ia. (Ἀτρητος; *ῥίς*, the nose.) Imperforate condition of the nostrils.

Atretostom'ia. (Ἀτρητος; *στόμα*, mouth.) Imperforate condition of the mouth.

Atreture'thria. (Ἀτρητος; *οὐρήθρα*, the urethra.) Imperforation of the urethra.

Atret'us. (Ἀτρητος, unpierced.) Imperforate. Old term, used by Galen, *de Sympt. Caus.* iii, 4, applied to one of either sex whose anus or genitals are imperforate, whether congenitally malformed or the effect of diseased action.

A'tria. (L. *atrium*, a hall.) The auricles of the heart.

A. mor'tis. (L. *mors*, death.) A term applied to the brain, lungs, and heart, because death was believed to commence in one or other of them, in the form of death by coma, by asphyxia or apnoea, and by asthenia, or anaemia, or syncope.

A'trial. (Same etymon.) Belonging to the *Atrium* of Tunicata.

A. cham'ber. The same as the *Atrium* of Tunicata.

A. sys'tem. A system of branched excretory tubes, seen in *Brachiopoda*. They are situated within the pallial lobes, anastomose with one another, and end in caecal extremities. This system communicates with the perivisceral cavity by means of two or four organs, called *Pseudo-hearts*.

A. tun'ic. The lining membrane of the atrium of Tunicata.

Atricap'illous. (L. *ater*, black; *capillus*, hair.) Black-haired.

A'trices. (A, neg.; *θρίξ*, hair.) Ancient term applied to small tumours around the anus, that are without hairs, as hæmorrhoids or condylomata; spelled with double t, *A'trices*, by some.

A'trichæ. (A, neg.; *θρίξ*, hair.) A Section of the Subdivision *Lamprospora*, of the Division *Endospore*, of the Class *Hyxomyxozoa*. The sporangia are destitute of capillitium.

Also, a synonym of *Amœboides*.

A'trich'ia. (A, neg.; *θρίξ*, hair. F. *atrichie*; G. *Haarlosigkeit*.) Loss of the hair.

A. adna'ta. (L. *adnascor*, to grow to.) Congenital alopecia.

ATRICHUS—ATROPA.

A. senilis. (L. *senilis*, belonging to old people.) Baldness of old age.

A'trichus. (Ἀτρίχος.) A hairless person.

A'trici. (L. *atrium*, a hall.) Old term for wounds or sinuses at the extremity of the rectum, but whose concavity does not perforate the intestine.

Atrioventricular. (Atrium; ventricle.) Pertaining to the auricle and ventricle of the heart.

A. valves. (G. *Atrioventrikularklappen*.) The valves closing the auriculo-ventricular aperture.

A'triplex. (Ἀτρίπλαξ. G. *Melde*.) The plant orache. A Genus of the Nat. Order *Chenopodiaceae*.

A. alimus. See *A. halimus*.

A. ambrosioides. Crantz. The *Chenopodium ambrosioides*.

A. angustifolia. (L. *angustus*, narrow; *folium*, leaf.) Narrow-leaved orache. Indigenous. A variety of *A. patula*.

A. anthelmintica. Crantz. The *Chenopodium anthelminticum*.

A. botrys. Crantz. The *Chenopodium botrys*.

A. deltaidea. (Δ, the fourth letter of the Greek alphabet; *aldos*, form.) Triangular-leaved orache. Indigenous.

A. erecta. (L. *erectus*, upright.) Spear-leaved orache. Indigenous. A variety of *A. patula*.

A. fetida. (L. *foetidus*, stinking.) A name for the *Chenopodium vulvaria*, or stinking orache.

A. halimus. (ἅλιμος, belonging to the sea.) The orache. The *A. littoralis*.

A. hortensis. (L. *hortensis*, belonging to a garden. F. *chenopode des jardins*, *arroche*, *bonne dame*.) Orache. A pot-herb. Its infusion is regarded as an emetic. The plant and seeds are antiscorbutic.

A. laciniata. (L. *lacinia*, a fringe.) Frosted sea orache. Indigenous. Used for making a pickle.

A. littoralis. (L. *littoralis*, belonging to the sea-shore.) Indigenous. The grass-leaved sea orache, formerly considered antiscorbutic, its leaves and young shoots being pickled and eaten like samphire. Also called *A. halimus*.

A. marina. (L. *marinus*, belonging to the sea.) A variety of *A. littoralis*.

A. mexicana. The *Chenopodium ambrosioides*.

A. odorata. (L. *odoratus*, sweet-smelling.) The *Chenopodium botrys*.

A. olida. (L. *olidus*, stinking.) The *Chenopodium vulvaria*.

A. patula. (L. *patulus*, from *pateo*, to be open.) Delt orache, lamb's quarters, fat hen, spreading orache. Indigenous. A species the leaves of which are eaten like spinach, and also used as a pickle.

A. pedunculata. (L. *pedunculus*, a small foot, a foot-stalk.) Marsh orache. Indigenous. Used as a pickle.

A. portulacaefolius. (L. *portulaca*, the plant purslane; *aldos*, form.) Shrubby or sea purslane. Indigenous. Formerly esteemed antiscorbutic. The leaves and shoots are sometimes used for pickles. Also called *Portulaca marina*.

A. purpurascens. The *A. patula*.

A. sativa. (L. *sativus*, that which is

sown.) The systematic name of the orache. The herb and seed were formerly exhibited as antiscorbutic. Also called *A. hortensis*.

A. sylvestris. (L. *sylvestris*, belonging to a wood.) The *Chenopodium album*, var. *viride*.

Atriplexum. Formerly used for *Atriplex*.

Atriplicese. A synonym of *Chenopodiaceae*.

Atriplicinese. A synonym of *Chenopodiaceae*.

Atritostomia. See *Atresostomia*.

A'trium. (L. *atrium*, the fore-court, or hall; probably from *Atria*, a Tuscan town, where this style of architecture originated.) The entry, porch, or hall of a house; a court-yard.

Applied to the auricles of the heart, but more especially to that main part of the auricle into which the veins directly pour their blood, as distinguished from the appendix auriculæ.

Also, a term for the large cavity into which the intestine opens in Tunicata; itself has an external opening, and is lined by a membrane, which is reflected like a serous sac on to the viscera.

A. anterius. (L. *anterior*, in front. G. *rechte Vorhof*, *Hohlkammersack*.) The right auricle.

A. cordis dextrum. (L. *cor*, the heart; *dexter*, on the right side.) The right auricle of the heart.

A. cordis sinistrum. (L. *cor*; *sinister*, on the left side.) The left auricle of the heart.

A. dextrum. (L. *dexter*, the right. G. *rechte Vorhof*.) The right auricle.

A. posterius. (L. *posterior*, behind. G. *linke Vorhof*, *Lungenvenensack*.) The left auricle.

A. sinistrum. (L. *sinister*, the left. G. *linke Vorhof*.) The left auricle.

A. vaginæ. (L. *vagina*, a sheath, the vagina.) The vestibule of the vulva.

Also, the upper part of the sinus urogenitalis of the female human embryo, into which open the urethra and the united lower portion of Müller's ducts.

A'trix. The singular number of *Atrices*.

Atrocha. (Α, neg.; τροχός, a wheel.) A term applied to those larvae of Polychæte worms in which the cilia form a broad zone encircling the body, but leaving at each end an area, which is either devoid of cilia, or, as is frequently the case, has a tuft of long cilia at the cephalic end.

Atropa. (Ἀτροπος, one of the three Fates, whose special duty it was to cut the thread of life; because of its deadly effects. F. *belladone*; G. *Tollkirche*, *Tollkraut*, *Wolfskirche*.) A Genus of the Nat. Order *Solanaceae*, or of the Nat. Order *Atropaceae*. Leaves entire; flowers solitary or few, peduncled; calyx five-partite; corolla campanulate, regular; stamens five, arising from the bottom of the tube of corolla; filaments filiform; anthers with elits; ovary two-celled; style simple; stigma peltate; berry two-celled, many-seeded, not filled with pulp.

A. belladonna. Linn. (I. *bella*, handsome; *donna*, woman; in allusion to the flowers. F. *bella dame*, *morelle furieuse*, *permettan*, *belladone*; S. *belladonna*; G. *Nachtschatten*, *Wolfskirche*, *Tollkirche*, *gemeine Wolfskirche*, *tödlicher Nachtschatten*; Dan. *Natakade*; Dut. *Doodkruid*, *Doodelyke nachtschade*; Swed. *Wargbaer*; Arab. *Inubas saleb*, *Amrea*; Ind. *Sagung-*

ATROPACEÆ—ATROPHY.

gor; Pers. *Rubak turbus*; Pol. *wilcza winia*; Rus. *Krasa vitia*; Turk. *Ghiusul corat*.) The belladonna; deadly nightshade, death's herb, great morel or dwale. An indigenous, annual, herbaceous plant, found in woods. Stems 3—5 feet high, branched, downy, reddish; leaves ovate, entire, often in pairs, of unequal size; flowers stalked, solitary, drooping, about one inch long; corolla campanulate, greenish towards the base, dark purple towards the extremity; berries shining, black, the size of a small cherry, two-celled, with many small reniform pitted seeds, enclosed by, but not lying in, a mawkish tasting pulp. The plant is largely used in medicine as a remedy in nervous and other diseases. See *Atropia* and *Belladonna*.

A. mandrag'ora. (*Μανδράγωρα*, possibly from *μάδρα*, a stable; *άγροια*, to denote; because it grows near cattle-sheds. F. *mandragore*; L. and S. *mandragora*; G. *Atrium*; Dut. *alruin*; Arab. *Jabara*, *Ustrang*; Turk. *Insankuku*; Egypt. *Apemon*; Beng. *Yahroj*; Tam. *Kant-jutia*; Per. *Mardum gash*; Pol. *Pokrzyk-siele*.) Dudaim of the Old Testament. The mandrake. A stemless plant, with a large forked, fleshy, perennial root; leaves lanceolate; flowers concealed among the leaves, pale violet; corolla campanulate, plaited; stigma capitate; stamens enclosed in the tube of the calyx; berry two-celled, surrounded by the enlarged calyx. Hab. South Europe. An anæsthetic and purgative. The peculiar forked form of the root has led to the term *anthropomorphon* and of *semi-homo* being applied to it, from its likeness to a man's legs, a circumstance which was taken advantage of in ancient times by the mountebanks, who, by a little artificial preparation of the upper portion, sold the roots to the credulous as possessed of marvellous virtues, especially as incentive to love. It was formerly employed in Europe, and still is in China, as an anæsthetic. It is regarded as an aphrodisiac, and is sometimes used in the form of cataplasm to disperse strumous and scirrhous tumours.

A. physalodes. The *Nicauda physalodes*.

Atropa'ceæ. (*Atropa*.) A Nat. Order of corollifloral *Exogæmæ*, separated by Miers from the *Solanaceæ* and the *Scrophulariaceæ*. They are distinguished by their imbricated aestivation, by the unequal size of the lobes of the corolla, and by the longitudinal dehiscence of the anthers. It includes *Atropa*, *Datura*, *Hyoscyamus*, *Nicotiana*, and *Mandragora*.

Atropal. (A. neg.; *τρέπω*, to turn. G. *geradialupg*.) A term applied to an ovule which retains, when fully developed, the original relation of the parts, the nucleus straight, and the micropyle opposite the hilum. This condition is also called orthotropal.

Atrop'ese. Applied to a Tribe of *Solanaceæ*, having the *Atropa* for type.

Atroph'ia. (*Ατροφία*, want of nourishment; from *ά*, neg.; *τροφή*, to nourish. G. *Darrreucht*.) Atrophy. A Genus of disease of the Order *Marcorea*, Class *Cachexia*, of Cullen's nosology; consisting in emaciation and loss of strength, without hectic fever.

A. ab lactato'rum. (L. *ablacto*, to wean.) A term by Cheyne for the wasting and diarrhoea which occurs sometimes in newly-weaned children.

A. acu'ta jecin'oris. (L. *acutus*, violent; *jecur*, the liver.) Acute atrophy of the liver.

A. cano'chym'ica. (*Κανόχυμα*, badness of the juices.) Atrophy from corrupted food.

A. cer'ebr'i. (L. *cerebrum*, the brain.) Atrophy of the brain.

A. cor'dis. (L. *cor*, the heart.) Atrophy of the heart.

A. deb'il'itum. (L. *debilis*, debilitated.) Atrophy proceeding from a depraved state of the function of nutrition, without previous or excessive evacuation, or depraved state of the humours.

A. den'tis. (L. *dens*, a tooth.) Atrophy of the teeth.

A. fam'elic'um. (L. *famelicus*, a famished person.) Atrophy from defect of nourishment.

A. glandula'ria. (L. *glandula*, a gland.) Strumous disease of the mesenteric glands.

A. hep'atis. (*Ήπαρ*, the liver.) Atrophy of the liver.

A. inan'ito'rum. (L. *inanitus*, part. of *inano*, to empty out.) Atrophy from excessive evacuation.

A. infan'tum. (L. *infans*, a young child.) Strumous disease of the mesenteric glands.

A. ingraves'cens musculo'rum. (L. *ingravesco*, to increase; *musculus*, a muscle.) Progressive muscular atrophy.

A. intesti'num. (L. *intestina*, the intestines.) Atrophy of the coats of the intestines.

A. lactan'tium. (L. *lactans*, she who gives suck.) A term for the debility and loss of flesh which occasionally occurs during lactation.

A. later'al'is crura'ta. (L. *cruratus*, part. *crurio*, to crucify. G. *gekruante halbesitzige Atrophie*.) Atrophy of the nerves, muscles, and bones of one side of the body, resulting from imperfect development of one hemisphere of the cerebrum and the opposite half of the cerebellum and spinal cord.

A. lie'nis. (L. *lien*, the spleen.) Atrophy of the spleen.

A. linea'ris. (L. *linearis*, consisting of lines.) The lines indicating excessive tension of the skin, seen on the abdomen and breasts of women who have been pregnant.

A. mesenter'ica. A term for *Tubercles mesentericus*.

A. musculo'rum progress'iva. (L. *musculus*, a muscle; *progreddior*, to proceed.) See *Atrophy*, progressive muscular.

A. musculo'rum progress'iva pseudo'hyper'troph'ica. (*Ψευδής*, false; *επί*, above; *τροφή*, nutrition.) See *Pseudo'hyper'trophia muscularum*.

A. spina'lis. (L. *spinalis*, belonging to the spine.) A term for *Alaxy*, locomotor.

A. testic'uli. (L. *testiculus*, a testicle.) Atrophy of the testicle.

A. un'guis. (L. *unguis*, a nail.) Atrophy of the nails.

Atroph'ic. (Same etymon.) Ill-nourished; wasted; relating to atrophy.

A. paral'ysis. A synonym of *Atrophy*, progressive muscular.

Atroph'ici morbi. (*Ατροφικός*, ill-fed; L. *morbus*, a disease.) Diseases of nutrition, characterised by loss of flesh and strength.

Atrophol'ysis. (*Ατροφικός*, pining away; *λύσις*, a loosing. G. *atrophische Auflösung*.) Term for atrophic solution, or wasting.

Atroph'y. (*Ατροφία*, want of nourishment. G. *Darrreucht*.) Term for wasting or

ATROPIA—ATROPIC ACID.

emaciation of the body, with loss of strength, unaccompanied by fever; defect of nutrition.

Also, applied to diminution in the size and weight of an organ or tissue with loss of functional power.

Atrophy is said to be simple or numerical, general or partial; in its later stages it is accompanied usually by change of structure, such as fatty degeneration. It may be caused by a deficient supply of nutrient matter, as in starvation, stricture of œsophagus, obstruction of thoracic duct, pressure on blood-vessels, or of retained secretion, or disease of mesenteric glands; from excessive waste, as in hæmorrhage, suppuration, diarrhœa, diabetes, fever, or inordinate use of an organ; it may be caused by disuse of an organ, by inflammation, by injury to the nerve supply, and by certain drugs, such as iodine, bromine, and mercury.

In Botany, the term atrophy is generally used synonymously with arrest of development or abortion.

A., accidental. Wasting of an organ or part of the body from pressure on itself or on its source of nutrient supply.

A., Cruveilhier's. A term for *A., progressive muscular.*

A., general. Atrophy or emaciation of the whole body.

A., linear. (*L. linearis*, consisting of lines.) A form of morphea in which the deposit takes place in lines.

More usually applied to the glistening, bluish-white bands, half an inch or more in width and much more long, seen in more or less parallel curves about the hips and thighs; they are caused by atrophy of the papillary layer of the skin and of the subjacent fatty tissue. See, also, *Atrophia linearis.*

A., necrobiotic. (*Necrobiosis.*) The same as *A., numerical.*

A., neu'ral. (*Νευρά*, a nerve.) A term synonymous with *Chronic neuritis.*

A., numerical. A term applied to the form of atrophy of an organ in which the number, as well as the size, of its histological elements is diminished, some of them being utterly destroyed.

A., partial. Wasting of an organ or a tissue only.

A., partial facial. A condition described by Romberg, in which there is atrophy of the structures of the lower part of one side of the face, without anesthesia. The skin becomes tense, glistening, and white; sometimes there is atrophy of the corresponding side of the tongue. The electric contractility of the muscles is not lower, but there is some diminution of temperature. The disease is probably of a trophic nature and of central origin.

A., physiolog'ical. Wasting of an organ from disuse, or when no longer needed, as of the umbilical vessels in the new-born child, the thymus in infancy, the ovaries after the cessation of menstruation.

A., progressive muscular. (*F. paralysis amyotrophique*; *G. progressive Muskelatrophie*, *progressive Muskellähmung*.) Cruveilhier's atrophy. The essential feature of this disease is a slowly progressive wasting of the voluntary muscles, ending in complete annihilation of the functions of the muscles affected, very rarely curable, and in many cases leading to death. It is characterized anatomically by the nature of

the pathological changes in the muscles, consisting in chronic myositis, interstitial proliferation of connective tissue, with secondary destruction of the muscular fibres, and, finally, fibrous degeneration, conditions that are associated with various changes in the nervous system. The disease presents a distinct tendency to heredity. It is more common in men than in women, and in adults of thirty to fifty years, than in youth or age. Its occurrence is favoured by acute exhausting diseases, as typhoid and measles, and by certain dyscrasias, such as lead poisoning, syphilis, and rheumatism. It usually commences in the upper extremities, sometimes in the lower, and rarely in the facial muscles. The interossei, and especially the first dorsal interosseous muscle, are first affected, then those of the thumb and little finger, then special groups of muscles of the fore and upper arm. The muscles affected lose their vigour, and either emaciate, or retain their volume by undergoing fatty degeneration. They present fibrillary contraction, and ultimately permanent contractures and deformities are developed, such as the clawed hand. They cease to respond to electrical currents, whether faradaic or constant. Pain is sometimes felt in them, followed by partial paralysis of sensation and formication, sensation of cold, and the like. The temperature may at first be somewhat increased, but soon falls one or more degrees centigrade below the normal. Vaso-motor and trophic disturbances have often been observed, such as local sweatings, painful swelling of joints, and atrophy of the integuments. The disease is associated with disease of the anterior and lateral columns of the cord, and by the appearance of granular exudation masses replacing the ganglion cells in the anterior cornua of the grey matter. Various changes have also been described in the sympathetic nerves and peripheral nerves. The prognosis is unfavorable.

A., pulmonary. A condition occurring in senile atrophy and after arrested lung diseases; the air-cells are dilated. In these cases the chest looks fixed, the diaphragm is depressed, there is epigastric pulsation, the lung covers the heart, and the percussion note is tympanitic.

A., qual'itative. Atrophy accompanied by degeneration of tissue.

A., quan'titative. Simple atrophy unaccompanied by change of structure.

A., rheumatic. Loss of size and strength of muscles after rheumatism.

A., rigid. Atrophy of muscles, combined with rigidity.

A., sen'ile. The emaciation which accompanies old age.

A., simple. The diminution in size only of the histological elements of an organ, without or with little change in structure.

A., spi'nal. A synonym of *Ataxy, locomotor.*

Atrop'ia. See *Atropin.*

Atropiæ sulphas. B. Ph. Sulphate of atropin. This is directed to be prepared with atropia 120 grains, distilled water 4 fl. drachms, diluted sulphuric acid a sufficiency. The solution is evaporated to dryness. It is a colourless powder, soluble in water, forming a neutral solution, which dilates the pupil. It leaves no ash when burnt.

A. sulphas li'quor. B. Ph. Solution of sulphate of atropin. This contains 4 grains in 1 fl. ounce of water.

Atropic acid. (*G. Atropasäure.*)

ATROPIN.

$C_8H_8O_2$. An acid obtained by boiling atropin with caustic soda, when a sodium atropate is formed, which being decomposed by muriatic acid, the acid appears in the form of oily drops, melting at $98^\circ C.$ ($208.4^\circ F.$), and volatilising at $106^\circ C.$ ($221^\circ F.$), with an odour of benzoic acid. It dissolves in 692.5 parts of water at $19.1^\circ C.$ ($66.38^\circ F.$), and can be crystallised in tablets belonging to the clinorhombic system. It is isomeric with cinnamic acid.

Atropin. $C_{17}H_{23}NO_3$. An organic base, obtained from the *Atropa belladonna*, in which it probably exists as a malate; and, as an isomeric compound, is contained in *Datura stramonium*. It appears in the form of colourless, odourless, acicular crystals, with silky lustre and bitter taste. It has an alkaline reaction. It dissolves in 299 parts (Planta) or 500 parts (Geiger) of cold water, 30 parts of hot water, in 8 parts of rectified spirit, and 1 part of ether. The solution is optically inactive, but if it contains, as is often the case, daturin, it rotates polarised light feebly to the left. It melts at $90^\circ C.$ ($194^\circ F.$), and volatilises, at the same time decomposing, at $140^\circ C.$ ($284^\circ F.$). Its solution in water gives a citron yellow precipitate with terchloride of gold. It dissolves in sulphuric acid, giving a red, and ultimately black, colour to the solution. On addition of bichromate of potash to the solution, the mixture acquires a green colour from the production of peroxide of chromium. It is not precipitated by picric acid. It is precipitated from its solutions by caustic alkalies, and also by ammonia, the precipitate with ammonia redissolving in slight excess of the reagent. Hydrobromic acid saturated with free bromine gives a yellow precipitate, insoluble in the mineral acids and caustic alkalies, and in acetic acid. Solution of iodine in iodide of potassium gives a reddish-brown precipitate, insoluble in potash or in acetic acid. Gold chloride and carbazotic acid give yellow precipitates, the former insoluble, the latter soluble, in potash. Tannic acid gives a white amorphous precipitate, soluble in caustic alkalies (Woodman and Tidy). In regard to its physiological properties, Schroff found, fifteen minutes after the administration of 0.005 gramme (0.772 of a grain) of atropia, violent frontal headache; after thirty minutes, wide dilatation of the pupil; after forty minutes, heat and dryness of the hands, and formication of the skin, dryness of the throat, increasing rapidly, till swallowing could not be performed. The pulse at first fell about ten beats, but quickly increased in frequency till, ninety minutes after the dose had been taken, it was forty beats above the normal. The muscular power was weakened, so that the gait was staggering. There was considerable mental excitement. The after-effects, chiefly expressed in dilatation of the pupil and debility of mind and body, lasted three days. A drop of a solution containing only 1 part to 129,600 of water is sufficient to affect the pupil sensibly. The effects on the pulse appear to be due to the fact that atropin first stimulates and then paralyses the inhibitory fibres of the vagus, or perhaps paralyses an inhibitory centre in the heart itself. The respiration is accelerated with small, but is greatly retarded with large, doses of atropin; and in accordance with this the animal heat is at first slightly increased, then lowered. Atropin exalts the reflex excitability of the spinal cord. Atropin neutralises the action of physostigmin, muscarin, pilocarpin, aconitin,

hydrocyanic acid, and bromal, in greater or less degree; its antagonistic influence on morphia is very doubtful. As an internal remedy it has been used in phthisis to diminish sweating; also, in various acute infectious diseases, as scarlet fever, in which it has been supposed to cut short the attack, though the evidence on this point is very unsatisfactory, erysipelas, measles, and whooping-cough. In dysentery it is said to relieve the tenesmus, and it has been employed in intermittent fever and in hydrophobia. It has been found useful in neuralgic affections, in rheumatism and gout, in constipation and spasmodic diseases of the anus, and of the genito-urinary apparatus. It is serviceable in the incontinence of urine of children; and in various neuroses, as epilepsy, chorea, and tetanus. Trouessart recommended it in the vomiting of pregnancy, and in asthma. As an external remedy the alkaloid is chiefly used in ophthalmic surgery to effect dilatation of the pupil, which it effects by paralyzing the third nerve, sphincter iridis, and perhaps also by stimulating the sympathetic fibres supplying the dilator iridis. The ciliary muscles are also paralysed, hence there is loss of the power of accommodation. The action, when a solution of 1 to 120 is employed, commences in the adult in fifteen minutes, attains its maximum in twenty or twenty-five minutes, and lasts for ten or eleven days. It acts strongly on the cat, dog, or frog, slightly on rabbits and birds, and not at all on fishes. In ophthalmic diseases it is commonly used to dilate the pupil, in order that a searching ophthalmoscopic examination of the media and fundus may be made, but it is also used as a therapeutic agent in cases of wounds near the centre of the cornea, to prevent engagement of the margin of the iris. In keratitis to relieve the irritability of the conjunctiva and the intolerance of light. In ulceration of the cornea, especially when the ciliary neuroses are severe. In iritis, to prevent adhesion of the iris to the capsule of the lens. In cases of posterior synechia, to break down the adhesions that have formed between the iris and capsule of the lens, in consequence of iritis. In cases of central macula, to enable light to penetrate into the interior of the eye at the margin of the opacity. In cases of spasm of the accommodation caused by too prolonged a strain of the eye on close work. As a means of determining the refraction of long-sighted eyes, when it renders evident the latent hypermetropia. In the treatment of myopia. And finally, as a preparatory proceeding in many operations on the lens and iris, which it facilitates by affording more space for the introduction and use of instruments. See, also, *Belladonna*.

A. discs. (*Charta atropinisata*.) Small discs punched out of a sheet of gelatin impregnated with atropin. Used by oculists as a convenient means of carrying atropin, and of applying a known quantity.

A. oleate. Two parts of atropin dissolved in 98 parts of oleic acid. Used externally as an anodyne.

A. paper. Books of bibulous paper impregnated with solution of atropine sulphate, and marked out into squares of about one eighth of an inch. Used chiefly by oculists as a ready and convenient means of dilating the pupil.

A. poisoning. See *Belladonna poisoning*.

A. salicylate. A salt obtained by mixing 16.2 grm. of atropin with 7.8 grm. of salicylic

ATROPINUM—ATTOLLENS.

acid. It is a powerful mydriatic, and does not irritate the eye.

Atropin^{um}. Atropin.

A. purum. G. Ph. (*L. purus*, pure.) Dose, 0.0003—0.0009 gramme. The same as *Atropia*.

A. salicylicum. See *Atropin salicylate*.

A. sulfuricum. G. Ph., Aust. Ph., Russ. Ph. (*G. schwefelsaures Atropin*.) The same as *Atropia sulphas*.

A. valerianicum. (*F. valerianate Atropin*; *G. valeriansaures Atropin*.) A salt, easily soluble in water, smelling of valerianic acid. Used in the same way, and in the same doses, as *Atropia sulphas*.

Atropism. The poisonous effects of atropin, or belladonna. See *Belladonna*, poisoning by.

Atropurpureus. (*L. ater*, black; *purpureus*, purple. *F. d'un pourpre noirâtre*.) Of a dark blackish-purple colour.

Atro rubens. (*L. ater*; *rubens*, part. of *rubens*, to reddens.) Of a reddish-black colour.

Atrosanguineus. (*L. ater*; *sanguineus*, bloody. *F. d'un rouge sanguin noirâtre*.) Of a dark blood-red colour.

Atrosia. A false synonym of *Atrophia*.

Atrosin. A red colouring matter obtained from the root and the fruit of *Atropa belladonna*.

Atrovirens. (*L. ater*, black; *virens*, part. of *virens*, to be green. *F. d'un vert noirâtre*; *G. schwarzgrün*.) In Botany, greenish black.

Atry. (*L. ater*, black.) Purulent; containing matter; applied to a discharging sore.

Atta. (As if *attinga*, from *attingo*, to touch lightly.) Old term used by Festus for one who, by reason of the gout or other disease of the legs or feet, touches rather than treads the ground. (Castellus.)

Attack. (*F. attaquer*, to attack.) The invasion of, or sudden seizure by, a disease.

Also, the existence of a disease, as an attack of gout.

Attagas. (Ἀττάγας, or ἀττάγην.) A bird much esteemed as food by the ancients. It was a little larger than a partridge, and of variegated plumage. It was probably the *Tetrao bonasia*, L., the Italian *francolino*, a kind of grouse. Some believe it to have been the lesser bustard, others the red grouse.

Attage^{na}. (*L.*) A synonym of *Attagas*.

Attalea. A Genus of the Nat. Order *Palmaceae*. Lofty palms of the cocoa-nut tribe. The kernel, when rubbed in water, forms an emulsion, used in medicine, both externally and internally. The central bud is used as food.

Attaleth. The name in Morocco of the tree producing Barbary gum. It is believed to be the *Acacia gummifera*.

Attar ghal. The otto or attar of roses.

A. of roses. The volatile oil of roses. See *Oleum rose*.

Attelle. (*L. assula*, *ferula*. *F. attelle*; *G. beinade*, *beinschiene*.) A splint. An instrument used in the treatment of fractures.

Attention. (*L. attentio*; from *ad*, to; *tendo*, to stretch. *F. attention*; *G. Aufmerksamkeit*.) The sustained and continued concentration of the consciousness, or of the mental faculties on some particular object or question. The closeness of the application, the extent to which it is prolonged, and the relevance of the whole train of thought to the object or question under notice, give the measure of the amount and extent

of the attention. In difficult cases the mind is said to be on the stretch, and this is the meaning of the word attention, as translated into English. Attention may be considered, according to Hamilton, as the opposite pole to abstraction in the same mental act.

A., automatic. (Ἀὐτόματος, of one's own accord.) That form of attention which is secured by the attractiveness of the object.

A. volitional. (*L. volitio*, will.) That form of attention which is obtained by an effort of the will.

Attenuant. (*L. attenuo*, to make thin. *F. atténuant*; *G. verdünnend*.) Applied to that which, it is supposed, can impart to the blood or the secretions a thinner or more fluid consistence, as water, whey.

Attenuants. (Same etymon.) Medicines which produce attenuation of the blood and thinning of the body.

A., direct. A term applied to mercury, iodine, the alkalies and fucus vesiculosus.

A., in direct. A term which includes purgatives, especially saline purgatives, diaphoretics, and diuretics.

Attenuate. (Same etymon.) Tapering gradually to a point.

Attenuated. (*L. attenuo*, to make thin. *F. atténué*; *G. verdünnt*, *geschwächt*.) Become slender; thin.

Attenuation. (*L. attenuatio*, a diminishing. *G. Verdünnung*.) A making thin; a dilution.

Also, applied to fluids when they become of lighter specific gravity from internal chemical action, or by the addition of water.

A., foetal. (*F. attenuation foetalis*.) A term applied to describe a method of reducing the size or arresting the growth of the foetus when, from pelvic deformity or other cause, it is believed that a full-grown child could not be born alive; it consists chiefly in low diet, occasional bleedings, and iodine.

Attialu. The Malabar name of the *Ficus racemosa*.

Attich. (Ger.) The *Sambucus ebulus*.

Attin^{car} veneris. (*Venus*, the goddess of love, an old term for silver. An alchemical term, used by Paracelsus, *Manual*, i, for the whitening of copper, to transmute it into silver.

Attingat. (Arab.) Old name for verdigris. (Ruland and Johnson.)

Attisholz. Switzerland, near Solothurn. A mineral water, of a temp. 15° C. (59° F.), containing calcium and magnesium chloride. It is used in gout and rheumatism, in gastric diseases, and chronic diarrhoea.

Attitude. (*F. attitude*; *G. Leibstellung*, *Stellung*.) Term for the different positions which the body can assume by the action of its muscles; the position of the body in disease often presents very important indications.

Attollens. (*L. attollo*, to raise up.) Raising up; elevating. Applied to certain muscles.

A. aurum. (*L. auris*, the ear. *G. Ohrheber*.) The *A. auriculum*.

A. auriculum. (*L. auricula*, the external ear.) A small fan-shaped muscle, arising from the tendon of the occipito-frontalis muscle, and inserted into the inner or cranial surface of the pinna of the ear; supplied by the occipitalis minor, and auricular branch of the facial nerves, and by the temporal artery.

ATTONITUS—ATYPUS.

A. humerum. (L. *humerus*, the shoulder.) The deltoid muscle.

A. oculi. (L. *oculus*, the eye.) The superior rectus muscle of the eye.

Attonitus. (L. *attono*, to make astonished. F. *étonné*.) Properly, thunder-struck, but used synonymously with surprised or amazed; astonished.

A. morbus. (L. *morbus*, disease.) Term formerly applied to apoplexy, from the sudden and overwhelming nature of its attack.

Attouchement. (F. *a*, to; *toucher*, to handle.) A French term for masturbation.

Attraction. (L. *attraho*, to draw to. F. *attraction*; G. *Anziehung*.) A drawing to another. That universal power by which matter attracts matter; it is exerted at all distances; is directly proportional to the amount of the masses, and inversely proportional to the square of their distances.

A., capillary. See *Capillary attraction*.

A., chemical. The same as *Affinity, chemical*.

A., elective. That apparent process of selection by which certain substances will combine with only certain, and not all, others.

A., elective, double. A term for the operation or agency by which, when two bodies, each compounded of two principles, are applied to each other, and mutually exchange a principle of each, two new bodies or compounds are produced, of a different nature from the original compounds. Also, termed double affinity.

A., elective, simple. That by which, when a simple substance is applied to another compounded of two principles, it unites with one so as to exclude the other. Also termed simple, or single, affinity.

A., electrical. The tendency to touch each other which exists in two bodies charged with opposite electricities. This attractive force is exerted in the inverse ratio of the squares of the distance of their centres from each other, and in the direct ratio of the amount of electricity with which they are charged.

A., electrodynamic. The mutual attraction exerted between electric currents moving in parallel lines.

A., magnetic. The attraction exerted by a magnet on pieces of iron. This force is greatest near the extremities, least at the centre, of the magnet.

A., molecular. (L. *moles*, a mass, dim. *molecule*.) The force which attracts molecules towards each other and aggregates them in masses; it is exerted only at infinitely small distances. To different aspects of the same force are given the terms adhesion, chemical affinity, and cohesion.

A. of affinity. The tendency towards each other of different elements or compounds in such wise as to form a new compound. See *Affinity, chemical*.

A. of aggregation. A synonym of *Cohesion*.

A. of cohesion. The tendency of molecules to adhere to each other, so as to form masses. See *Cohesion*.

A. of gravitation. The tendency of bodies towards the earth. See *Gravitation*.

A., universal. The tendency of all masses of matter to approach each other. See *Attraction*.

Attractive. (L. *ad*, to; *trahere*, to draw.) The same as *Attractant*.

Attractorius. Same etymon and meaning as *Attractant*.

Attrahens aurium. (L. *ad*, to; *trahere*, to draw; *auris*, the ear. G. *Anzieherdes Ohres*.) The *A. auriculum*.

A. auriculum. (L. *auricula*, the external ear.) A small muscle of the external ear, arising from the fore part of the aponeurosis of the occipito-frontalis muscle, and inserted into the front of the helix. It is supplied with blood by branches of the temporal artery, and with nerves by the temporal branch of the facial nerve, and by the auricular branch of the auriculo-temporal branch of the fifth pair of nerves.

Attractant. (L. *attrahere*, to draw unto. F. *attractif*; G. *anziehend*.) Drawing; applied to medicaments which produce irritation of the surface to which they are applied, thereby attracting the fluids to the part, as blisters, sinapisms; synonymous with *Spasmodic*.

Atrie. (L. *ater*, black.) Purulent; containing matter.

Atritis. (L. *atritio*, friction.) Chafing.

Atritio. (L. *atritio*, friction.) Chafing.

Attrition. (L. *atritio*, from *atrito*, to rub against. F. *attrition*; G. *Anreibung, Aufreibung*.) Term for an abrasion or solution of continuity of the cuticle.

Also, for a severe kind of cardialgia, or heart-burn, accompanied with great pain and sense of suffocation.

Term for the violent crushing of a part.

Attritus. (L. *atritus*, a rubbing.) Chafing.

A. tum condina'dum. The commercial name of the *Lycopodium rubrum*.

Aturion. The Greek name of the ceterach; a fern that was formerly used as a beak and lithontriptic.

Atya. Austria-Hungary; in the County of Weissenburg. An earthy alkaline water, containing calcium carbonate 5.6 gra., magnesium carbonate 5 gra., magnesium chloride 6 gra., with much free carbonic acid, in 16 ounces.

Atypia. (A. neg.; *τύπος*, a type. F. *atypic*; G. *der Mangel an Regelmässigkeit*.) Defect or irregularity in the usual appearance.

Atypic. (A. neg.; *τύπος*, a type. G. *Unregelmässig*.) Irregular, not according to type.

In Morphology, not conformable to the ordinary type, presenting exceptional characters. Thus, for example, as a rule, two vomers exist in all Batrachia, but only one in Dactylethra, which so is atypic.

A. fever. An intermittent fever with irregular exacerbations.

Atypomorphosis. (Ατυπος, conforming to no distinct type; *μόρφωσις*, a shaping.) A kind of metamorphosis in which the larvæ entirely lose their primitive form, and contract into a small ball without any external appearance of the insect they contain, as in most of the *Diptera*.

Atypus. (A. neg.; *τύπος*, a type. F. *atypique*; G. *atypisch, unregelmässig*.) Having no regular form or type. Applied by Galen, & Tytus. iv, to fevers that have no regularity in their periods.

Also (G. *undeutlich sprechend*), speaking inarticulately, stammering.

Atypus. Same as *Atypus*.

Auan'to. (*Abaius*, to dry.) Old name (Gr. *αυαντον*), used by Hippocrates, l. ii, *de Morb.* lxi, i, for a disease attended with emaciation, supposed to proceed from an acid ferment in the stomach, and a morbid state of the pancreatic juice. Also called *Auspse*.

Ausp'se. The same as *Auante*.

Auaremotemo. See *Pithecolobium auaremotemo*.

Aubergier's syrup. A syrup of lactucarium, containing rather more than three grains to the ounce. Used as a sedative.

Aubergine. (Fr.) The egg-apple; the cylindrical, reddish, edible fruit of the *Solanum coculentum*, or *S. melongena*.

Aubier. (Fr.) The alburnum, or outer layer of woody tissue in trees.

Aubifoil. (Fr.) The *Centaurea cyanus*.

Auble'tia. A Genus of the Nat. Order *Rutacee*.

A. trifo'lia. Rich. (L. *tres*, three; *folium*, a leaf.) A Brazilian species, said to be a source of a kind of jaborandi.

Aucella. (L. *avicella*. G. *Vögelchen*.) A little bird.

Auch'en. (*Αὐχέν*.) Old term for *Cervix*, or *Collum*; the neck.

Auchena'tes. (*Αὐχέν*. F. *auchénates*.) Name by Degeer for an Order of *Aptera*, having a neck or a head distinct from the corselet.

Auche'nia. (*Αὐχέν*, neck.) A Genus of the Group *Tylopoda*, or Family *Camelidae*, Suborder *Artiodactyla*, Order *Ungulata*.

A. llama. (G. *Kameskiege*.) The llama. A South American unhorned ruminant. One of the animals producing the occidental bezoar.

A. vicu'na. (G. *Schafkameel*.) The vicuna. One of the animals producing the occidental bezoar.

Auchenia'tria. (*Αὐχέν*; *λατρεία*, a healing. G. *Heilheilkunde*.) Treatment of diseases of the neck.

Auchenis'ter. (*Αυχενιστήρ*, a halter; from *αυχενίζω*, to behead.) An instrument devised by Scanzoni for decapitating the fetus in order to effect delivery under certain circumstances.

Auche'nium. (*Αὐχέν*.) Name by Illiger for the region of the neck below the nape.

Auchenop'tera. (*Αὐχέν*; *πτερον*, a wing. F. *auchenoptère*; G. *Kehlflügel-fliege*.) Applied by Duméril to a Family of fishes the inferior fins of which precede the thoracic, and are situated under the neck.

Auchenorhyn'chi. (*Αὐχέν*; *ρύγχος*, a beak. G. *halschnabelig*.) Applied by Duméril to a Family of *Hemiptera*, the base of the beak of which seems to grow from the neck.

Auchenorrh'euma. (*Αὐχέν*, *rheuma*. G. *Hals-rheumatismus*.) Rheumatism of the neck.

Auchenoch'isis. (*Αὐχέν*; *σχίσις*, a cleaving. F. *auchenochisis*; G. *eine Spaltung des Halses*.) Fissure of the neck.

Auchenosphinx'is. (*Αὐχέν*; *σφίγξις*, constriction.) Term for strangulation. See *Decaposphinxis*.

Auchenost'rangalé. (*Αὐχέν*; *στράγγαλη*, a halter.) Same as *Auchenosphinxis*.

Auchenozos'ter. (*Αὐχέν*; *ζωστήρ*, a girdle. G. *Halsgürtel*.) Term for herpes zoster of the neck.

Aucheny'drocele. (*Αὐχέν*; *hydrocele*. F. *auchenydrocele*; G. *Blasenkreppf*.) Hydrocele of the neck, or cystic goitre.

Auche'ticus. (*Αὐχέν*, the neck. G.

prahlend, prahlerisch.) Wry-necked or stiff-necked.

Auckland'ia. A Genus of the Nat. Order *Compositae*.

A. cos'tus. Falconer. (*Κόστος*, an Oriental aromatic plant. Sansk. *Koostum*, *Koot*; Hind. *Koost*, *Putchuk*; Tam. *Kustum*, *Kostum*; Arab. *Kust-hindee*; Pers. *Kust-tulk*; Malay. *Sepud-day*.) Hab. The mountains of Cashmere. The roots are met with in pieces from 1 to 3 in. in length and $\frac{1}{4}$ to $\frac{1}{2}$ in. in thickness, wrinkled, brownish red outside, lighter brown within; transverse section with radiated lines, often hollow. Taste aromatic, and more or less bitter. They are used as incense in the temples of the gods, and to protect the shawls of cashmere from the attacks of moths.

Also, a synonym of *Aplotaxis auriculata*.

Auct'oville. France; Calvados, Arrond. de Bayeux. Here are cold bicarbonated ferruginous waters. Temp. 22° C. (71.6° F.)

Auctum'nus. (L. *auctumnus*, the autumn. G. *das Herbst*.) The autumn.

Auct'us. (L. *aucto*, to increase. F. *accru*, *augmenté*; G. *vergrößert*.) Increased; augmented. Applied to a calyx having a series of distinct leaves around its base, shorter than its own.

Au'dō. (*Αὐδή*, voice. G. *die Stimme, der Laut*.) The voice.

Audim'eter. Same as *Audiometer*.

Au'dinac. France; Ariège, Arrond. de Saint-Giron, about six miles from Saint-Giron. Here is a well-appointed bathing establishment, situated in the middle of a large park. There are two springs: first, the Source des Bains, which contains sulphate of lime, with magnesia and iron, and has a temperature of 22.7° C. (72° F.); and, secondly, the Source Louise, or Source froide, which is about two or three degrees colder. The quantity discharged daily from the Source des Bains is estimated at 40,000 gallons. The waters are recommended in functional disturbances of the digestive and urinary organs.

Audiometer. (L. *audio*, to hear; *μέτρον*, a measure.) Hughes' instrument consists of two Leclanché's cells, a simple microphonic key connected with the cells and with two fixed primary coils, and a secondary or induction coil, the terminals of which are attached to a telephone. The induction coil moves on a bar between the two fixed coils, and the bar is graduated into 200 parts, by which the readings of sound are taken. In using the instrument the induction coil is moved along the scale from or towards the larger primary, and the degree or units of sound are read off from the figures on the scale, the sound being made by the movement of the microphonic key between the battery and the primary coils.

Au'diphone. (L. *audio*, to hear; *φωνή*, a sound.) An instrument for improving the hearing; invented by Mr. Rhodes, of Chicago. It consists of a thin elastic plate of ebonite of about the size and shape of a palm-leaf fan. Strings attached to its upper edge serve to bend it into a curved form, and a small clamp at the handle fixes the string. When thus bent the instrument is pressed against the upper front teeth of the deaf person, the convex surface outwards. The sounds received on the plate cause it to vibrate, and the vibrations are conducted through the teeth and the bones of the head to the auditory nerve.

Audition. (L. *auditis*, from *audio*, to

AUDITORY—AUGMENTUM.

hear. *F. audition*; *I. udito*; *S. audicion*; *G. Gehör.*) The act of hearing.

Auditory. (*L. audio*, to hear. *F. auditif*; *G. das Gehör*, or *das Ohr betreffend.*) Belonging to the organ, or the sense, of hearing. The same as *Acoustic*.

A. artery, internal. (*G. innere Ohrarterie.*) A small branch that is given off from the basilar artery, and entering the internal auditory meatus with the auditory nerve, is distributed to the vestibule, the semicircular canals, and the cochlea.

A. bulb. (*F. bulbe auditif.*) A term applied to the membranous labyrinth and cochlea collectively.

A. canals. The same as *Meatus auditorius externus* and *internus*.

A. capsule. The case containing the third organ of special sense, that of hearing, at first, in all vertebrata, a distinct membranous pouch, which chondrifies, and in most cases ultimately ossifies, by a variable number of special ossous centres. It is situated on each side of the head above the first post-oral cleft, between the primary exit of the fifth and seventh nerves in front, and the ninth and tenth behind; the eighth is distributed in it. The largest number of intrinsic ossifications is found in the osseous fishes, where they are named the prootic, opisthotic, epiotic, pterotic, and sphenotic. The last two are seldom present outside the class of osseous fishes. The first three are found permanently separate from each other, though often uniting with other and surrounding bones, in reptiles and in birds, and in man they exist at an early stage, but subsequently coalesce with each other, with the squamosal, and with the tympanic bone, to form the temporal bone.

A. centre. The superior temporo-sphenoidal convolution of the brain, according to late observations.

A. ganglia. (*Γάγγλιον*, a tumour under the skin.) A synonym of *A. nuclei*.

A. hairs. The long, fine hair-like processes which project from the crista acustica into the endolymph of each ampulla of the membranous labyrinth. Their exact relationship is not settled. According to one view, they are nerve-fibrils, which pass through and project from the spindle-cells lying between the columnar epithelium which covers the crista acustica; according to another view, they are borne on the cells of columnar epithelium itself, which, at their deep and narrow end, are directly connected with a nerve-fibril.

A. meatus. See *Meatus auditorius*.

A. nerve. (*L. audio*, to hear. *F. nerf acoustique*; *G. Gehörnerv.*) The eighth pair, or the portio mollis of the seventh pair of cranial nerves. Each arises from two nuclei, forming a continuation upwards of the pneumo-spinal ganglion-cells in the upper part of the floor of the fourth ventricle. Fibres proceed from the posterior, and partly from the anterior nucleus, which curve round the side of the medulla, and form a well-known transverse band; this unites with other fibres springing from the outer nucleus, and emerging in front of the restiform body forms a large flattened nerve that, after a short course, enters the internal auditory meatus, at the bottom of which it perforates the spiral foraminated portion of bone, and divides into two branches, an anterior for the cochlea, and a posterior vestibular for the labyrinth. The ves-

tibular branch supplies—(1) the utricle and the ampullary enlargements of the superior vertical and horizontal membranous semicircular canals; (2) the sacculus; and (3) the ampulla of the posterior vertical semicircular canal. The cochlear branch runs along the base of the spiral lamina, and is distributed in the scala media, terminating, it is believed, in the spindle cells of the organ of Corti. The nerves minister to the sense of hearing.

A. nu'clei. (*L. nucleus*, a nut.) The centres of origin of the auditory nerves. There are two on each side, an anterior and a posterior, the cells of which communicate. They lie opposite the broadest part of the floor of the fourth ventricle. Some of the fibres proceeding from the anterior nucleus enter the peduncle of the cerebellum of their own side, and probably minister to the preservation of the balance of the body; others, the striæ medullares, which run transversely on the floor of the ventricle, enter the cerebellar peduncle of the opposite side; others, again, run in the cerebral peduncle to the occipital lobes of the hemispheres.

A. os'sicles. (*L. ossiculum*, a small bone.) The bones of the ear: malleus, stapes and incus.

A. pit. The depression on the epiblastic surface of the embryo which forms the rudiment of the labyrinth of the ear, situated on a level with the first postoral cleft.

A. process, external. (*G. äusserer Ohrfortsatz.*) The lower curved border of the external opening of the meatus auditorius externus, to which the cartilage of the pinna is attached.

A. vertigo. See *Vertigo*, auditory.

A. ves'icle. (*L. vesica*, a bladder.) The small cavity which results from the closure of the mouth of the *A. pit.* In the chick this occurs on the third day of incubation.

Auditus. (*L. audio*, to hear. *F. audition*; *G. Gehör.*) The sense of hearing.

Au'erbach. A German anatomist.

A's. plexus. A gangliated plexus of nerves lying between circular and longitudinal muscular layers of the intestinal coat throughout its entire length. It is mainly composed of non-medullary fibres; it gives off fine fibres, which supply and form a plexus around the muscular fibres, and many branches to join Meissner's plexus.

Aug'ē. (*L. augeo*, to increase.) Some of the older anatomists gave this term to a reservoir into which liquids flow in an interrupted manner, so that it is alternately full and empty. Such are the auricles and ventricles of the heart. (*Dunglison.*)

Also (*Αὐρή*, bright light. *G. Glanz*), radiance, brightness, as of the eye.

Augen'trost. (*Ger.*) The *Euphrasia officinalis*.

Aug'ere. (*L. augeo.*) Intermittent fever. (*Dunglison.*)

Augmen'tation. (*L. augmento*, to increase.) The development or increase of the symptoms of a disease.

Augment'ing. (*L. augmento*, to increase or enlarge.) Increasing.

A. fibres. The same as *A. nerves*.

A. nerves. The same as *Accelerating nerves*.

Augmen'tum. (*L. augmento*, or *augeo*, to increase. *F. augment*; *G. Vermehrung*, *Zunehmen.*) A term applied to the period between

AURAL—AUREUS.

stance, allied to myricin and cerein, soluble in ether, found in the volatile oil of orange flowers after contact with alcohol.

Aural. A stearopten containing oxygen, obtained in the proportion of one per cent. from oil of neroli by spirit of wine (90 per cent.), which dissolves the oil and leaves aural. It is tasteless, has no smell, and is insoluble in water, and soluble with difficulty in ether.

Also (*L. auris*, the ear), belonging to the ear.

A. vertigo. See *Vertigo*, auditory.

Auran'cum. Old term for egg-shells. (Ruland and Johnson.) See *Aurancum*.

Auran'tia. (Mod. Gr. *vipar'i*; *L. oran-cia*; *S. Naranja*; Sans. *Nagarenda*; Hind. *Ndrangi*; Pers. *Narank* and *Taranj*; Hung. *Narancs*; Venet. *Narangi*; Port. *Laranja*; Basque *Laranja*.) Orange. It seems that the initial consonant was first dropped in the Italian; and the notion arose that it was from its golden colour that the plant took its name. It certainly took it from the colour, but not from the colour of the metal. In India, where the name originated, and from whence the tree was first diffused, the word *Naranga* was applied to the carrot. In the first notice of it in an English book it is associated with the pomegranate, or *Pomum granatum*.

A. curassavensis. (*F. orangettes*; *G. unreife Pomeranz.*) Curassoa oranges or apples, orange berries. Applied to immature oranges, the growth of which has been somehow accidentally checked; when dried they are from one eighth to three quarters of an inch in diameter, greenish black, very hard, of a pleasant aromatic flavour, bitter, but without acidity; infused in wine or brandy, they form a good stomachic; and reduced in size and made smooth by turning, they are employed as issue peas.

A. hispalensis. (*L. hispalensis*, belonging to Hispalus, a Spanish town, now called Seville.) The Seville orange, the fruit of *Citrus bigaradia*.

A. immatura. (*L. immaturus*, unripe.) The same as *A. curassavensis*.

Aurantia'ceæ. (*L. aurantium*, the orange. *F. aurantiacées*.) An Order of thalamifloral *Krogers*; or, according to Lindley, an Order of the Alliance *Rutales*. Fruit consolidated, succulent, and indehiscent; petals imbricated; stamens equal in number to, or some multiple of, the petals, hypogynous; leaves alternate, dotted, exstipulate.

Aurantia'ceous. (*L. aurantium*, the orange. *G. pomeranzengelb*.) Of an orange colour, as the flowers of the marigold and nasturtium.

Aurantia' bac'cæ. (*L. bacca*, a berry.) The immature fruit of the orange tree; also called *Aurantia curassavica*.

Aurantii ama'ri cortex. U.S. Ph. (*L. amarum*, bitter; *cortex*, rind.) Bitter-orange peel; the rind of the fruit of *Citrus vulgaris*.

A. cor'tex. B. Ph. (*L. cortex*, the bark or rind. *F. corce d'orange amere*; *G. Pomeranzenschale*.) Bitter-orange peel. The dried outer part of the rind of the *Citrus bigaradia*. It is of a dark orange colour, and has an aromatic bitter taste, and a fragrant odour. Orange peel contains gum, albumen, some fixed oil, resin, a volatile oil, a principle like tannin, and, in the white part, hesperidin. It is an aromatic, stomachic, and carminative.

A. dulcis cor'tex. U.S. Ph. (*L. dulcis*, sweet. *F. corce d'orange douce*; *G. Apfelsinenschale*.) Sweet-orange peel; the rind of the fruit of the *Citrus aurantium*. It differs from bitter-orange peel only in being lighter in colour, and less bitter in taste.

A. flo'ra. U.S. Ph. (*L. flo.*, a flower. *F. fleurs d'orange*; *G. Orangenblüthen*, *Pomeranzblüthen*.) The flowers of *Citrus aurantium* and *C. vulgaris*. They consist of a cup-shaped, five-toothed calyx, five white, or, when dry, brownish, oblong, obtuse, glandular petals; about 20 stamens, united at the base into three or more bundles; and a cylindrical style. They are very fragrant, and contain the volatile oil of neroli, gum, bitter extractive, acetic acid, and salts. They are used to make a distilled water, and are supposed to be a mild nervine tonic.

A. flo'ris a'qua. Orange-flower water.

A. oleum. (*L. oleum*, oil.) The same as *Neroli*, oil of.

Auran'tin. A bitter substance obtained from unripe oranges by brandies. It accompanies the precipitate which is thrown down when hydrogen sulphide is transmitted through an infusion of unripe oranges, to which lead-acetate has been added.

Auran'tin. Same as *Aurantium*.

Aurantium. (Supposed *aurum*, gold, from its rich colour; see also, *Aurantia*. *F. orange*; *G. Orange*, *Pomeranze*.) The name of the fruit of the *Citrus bigaradia*, and *C. aurantium* (Ph. L.), of the *C. vulgaris* (E.), of the *C. vulgaris*, or *C. aurantium* (U.S.A.). The orange; also termed *Arantia*.

A. ama'rum. (*L. amarum*, bitter.) The Seville, or bitter orange, *Citrus vulgaris*.

Aura'rio. (Arab.) Old term for Mercuria. (Ruland and Johnson.) See *Aroch*, *Aurario*.

Aurate. Term for a combination of auric acid with a base.

A. of am'monia. The substance otherwise called fulminating gold. See *Aurum fulminans*.

Aurated. (*L. auris*, the ear.) Ear-shaped, or having ears, or ear-like appendages.

Aures Alexandrina. Term for a kind of opiate, named either after Alexander, a physician, or Alexandria, where it was first used.

Aurelia. (*L. aurum*, gold.) A term for the chrysalis, pupa, or nymphs of Lepidoptera, on account of some exhibiting a golden lustre.

Aurelia'na canadensis. The *Panas quinquefolium*.

Auren'san. France; Departement du Gers. Feeble bicarbonated, calcic, and ferruginous waters. They deposit a mud, which is used externally.

Aureola. (*L. aureolus*, golden.) A term applied by Chaussier to the inflammatory blush around the base of a vesicle.

A. mam'mæ. (*L. mamma*, the breast. *G. Warzenhofe*.) The coloured ring which surrounds the nipple in pregnancy.

Aureous. (*L. aurum*, gold. *F. d'or*; *G. goldig*, *goldgelb*.) Belonging to, or of the colour of, gold; golden. Of a golden yellow colour, as in the dandelion and sunflower.

Aureum o'lum. (*L. olus*, a garden or kitchen herb.) The golden herb, a term for the *Atriplex*, or orache.

Aureus. A weight of a drachm and a half.

A. arabum. (*L. arabe*, an Arab.) A

AURI CHLORETUM—AURICULA.

weight of about the seventh part of an ounce; the same as the Roman denarius.

A. ra'mus. Alchemical term for the art of making gold.

Auri chlore'tum. (L. *aurum*, gold.) The *A. chloridum*.

A. chlore'tum cum chlore'to na'trii. The *A. et sodii chloridum*.

A. chlori'dum. AuCl_3 . Auric chloride, or chloride, or trichloride of gold. It is obtained by dissolving pure gold in nitro-muriatic acid, evaporating, dissolving in water, filtering, and again evaporating. It is a red, crystalline, deliquescent substance, soluble in water, alcohol, ether, and volatile oils, and decomposing at 150°C . (302°F .) It has been used as a caustic in lupus and cancer.

A. cyan'i'dum. AuCy_3 . Auric cyanide, or cyanide of gold. A lemon-yellow precipitate, produced by adding a solution of potassium cyanide to one of gold chloride. It has been used in syphilis and scrofula.

A. cyanure'tum. The *A. cyanidum*.

A. et ammo'nii chlo'ri'dum. Ammonio-chloride of gold. Equal parts of gold chloride and ammonium chloride are dissolved in water, acidulated with hydrochloric acid, and then evaporated to dryness. Used as *Auro-natrium chloratum*.

A. et na'tri chlorure'tum. The same as *A. et sodii chloridum*.

A. et so'dii chlo'ri'dum. $\text{NaAuCl}_4 + 2\text{H}_2\text{O}$. Chloride of gold and sodium, sodium chlor-aurate. The *Chloruretum aurico-sodicum*, Fr. Codex; the *Auro-natrium chloratum*, G. Ph.

A. iodi'dum. AuI_3 . Iodide of gold. A dark-green precipitate, obtained by adding a solution of potassium iodide to one of auric chloride. It has been used in scrofula and secondary syphilis.

A. iodure'tum. The *A. iodidum*.

A. mu'rias. The *A. chloridum*.

A. nitromu'rias. Probably the double chloride of gold and hydrogen obtained in the process of making chloride of gold.

A. oxi'dum. $\text{Au}(\text{OH})_3$. Oxide of gold, gold trihydroxide, auric acid. It is obtained by heating a solution of gold trichloride with an excess of magnesia or oxide of zinc, and washing the precipitate with nitric acid. When dry it is a blackish-brown powder, which decomposes with evolution of oxygen on exposure to light. It forms salts, called aurates. It has been given in syphilis, by friction on the sides of the tongue, or in pill. Dose, one tenth of a grain.

A. pulvis. Powdered gold. Gold leaf triturated with 10 or 12 times its weight of potassium sulphate, or other hard soluble substance, until the metallic lustre is lost, when the medium is dissolved out. It may also be obtained by adding ferrous sulphate to a solution of gold chloride. It was employed in syphilis, by friction on the tongue, in doses of one fifth of a grain to three grains daily.

A. terochlo'ri'dum. The same as *A. chloridum*.

A. terocyan'i'dum. The same as *A. cyanidum*.

A. teroxi'dum. The same as *A. oxidum*.

Auric. (L. *aurum*, gold.) Of, or belonging to, gold.

A. acid. Gold trihydroxide, or oxide of gold. See *Auri oxidum*.

Also, a term applied by some to *A. oxide*.

A. chlo'ride. See *Auri chloridum*.

A. cy'anide. AuCy_3 . This compound is said by some authors not to exist in the free state; but for a preparation known by this name see *Auri cyanidum*.

A. ful'minate. See *Aurum fulminans*.

A. i'odide. See *Auri iodidum*.

A. oxide. Au_2O_3 . Gold trioxide. A blackish-brown powder, obtained by heating auric trihydroxide, otherwise auric acid, to 100°C . (212°F .) If strongly heated it gives off oxygen, and metallic gold, in a brown powder, is left; this is the old calx of gold.

Aurichal'cum. (L. *aurum*, gold; $\chi\alpha\lambda\kappa\acute{o}\varsigma$, brass or copper. G. *Messing*.) An old term for a composition of copper and zinc similar to our brass, or pinchbeck; also called *Orichalcum* and *Chrysochalcos*.

Auricle. (L. *auricula*, the outer ear. F. *auricule*; G. *äusseres Ohr*.) The outer ear, consisting of the pinna and the meatus auditorius externus.

Also (F. *auricule du cœur, oreillette*; G. *Vorhof*), a chamber at the base of each side of the heart.

The auricles of the heart are two in number, right and left, and are the chambers that are intermediate between the veins and the ventricles. The general form of the right auricle is rounded, but it presents a process which clasps the right side of the pulmonary artery, and is named the appendix auriculæ. The left is more cubical, but has a similar process embracing the left side of the aorta. The internal surface of both appendices presents an almost cavernous aspect, owing to the presence of numerous muscoli pectinati, but the rest of the interior of both auricles is smooth, except the anterior and external wall of the right auricle and the part surrounding the entrance of the coronary vein. The walls present small depressions between the muscular fasciculi, as well as the openings of minute veins, both of which are included under the name of foramina Thebesii. The openings into the right auricle are those of the superior vena cava, which opens above, and has no valve; of the inferior vena cava, which opens below and behind, and which is guarded imperfectly in the adult by the Eustachian valve; of the auriculo-ventricular passage, guarded by the tricuspid valve; of the coronary vein, which opens below and in front of the inferior vena cava, and is guarded by the valve of Thebesius; and the more or less completely closed inter-auricular opening, or foramen of Botalli, which is surrounded by the annulus of Vieussens. The vein of Galen, or the vein of the right side of the heart, and the vein of the infundibulum, also open into the anterior and inferior part of the right auricle. The openings into the left auricle are five—namely, four openings of the pulmonary veins, which have no valves, and the auriculo-ventricular opening, guarded by the bicuspid valve. In addition to these principal openings, numerous small veins open into each auricle.

Auricled. (L. *auricula*, the outer ear.) Having ears; ear-like.

Aurico-. A prefix employed by Berzelius in compound epithets applied to double salts, resulting from combination of an auric with another salt, indicated by the remaining portion of each epithet, as aurico-ammonicus, aurico-baryticus.

Auricula. (L. *auricula*, the outer ear, dim. of *auris*, the ear. F. *auricule, oricule*; G. *äusseres Ohr*.) A little ear, or auricle. The name

AURICULÆ—AURICULARIS.

usually given to the external ear, as only a part of the auditory apparatus.

Also, to each auricle of the heart.

In Botany, applied to certain parts of plants resembling an ear.

Also, the *Primula auricula*.

A. cor'dis. (L. *cor*, the heart.) The auricle of the heart.

A. cor'dis dex'tra. (L. *cor*, the heart; *dexter*, right. G. *rechte Herzohr*.) The right auricle of the heart; also, the right auricular appendix.

A. cor'dis sinis'tra. (L. *cor*; *sinister*, the left. G. *linke Herzohr*.) The left auricle of the heart; also, the left auricular appendix.

A. in'fima. (L. *infimus*, lowest. G. *Ohr-lappchen*.) The lobule of the external ear.

A. ju'dæe. (Judas, one of the Apostles. G. *Hollunderschwamm*, *Judaohr*.) Jew's ear; a name for the *Hirneola auricula judæ*.

A fungus growing on the elder. It is gelatinous, thin, concave above, bald, blackish-brown, and undulating, adherent near the centre of the inferior surface, which is yellowish. It assumes a cartilaginous consistence on drying, but imbibes water, and then swells considerably. It has neither taste nor smell, and is applied as a cooling agent in inflammation of the eye.

A. lep'oris. (L. *lepus*, a hare.) Hare's ear; a name for the *Bupleurum rotundifolium*.

A. mu'ris. (L. *mus*, a mouse.) Mouse's ear; a name for the *Hieracium pilosella*.

A. mu'ris ma'jor. (L. *mus*; *major*, greater.) The *Hieracium murorum*.

A. ur'sæ. (L. *ursus*, a bear.) The *Primula auricula*.

Auriculæ. (L. *auricula*.) Ear-shaped perforated processes which project over the ambulacra of Echinoids.

Auricular. (L. *auricula*, the external ear. F. *auriculaire*, *oreculaire*; G. *zum Ohr gehörig*.) Of, or belonging to, the ear.

A. ang'le. See *Angle, auricular*.

A. ante'rior nerve. A synonym of the *Auriculo-temporal nerve*.

A. appen'dage. (F. *appendice auriculaire*, *auricule*; G. *Herzohr*.) The ear-shaped or tongue-shaped muscular portion of each auricle of the heart; also called the true auricle. The appendage of the left auricle projects from its anterior and superior angle over the root of the aorta. It is more posterior, as well as longer and narrower, than that of the right. That of the right auricle projects from its left side, towards the right, over the pulmonary artery. The interior presents muscoli pectinati.

A. appen'dix. The same as *A. appen'dage*.

A. ar'teries, ante'rior. (G. *vordere Ohrarterien*.) Two or more branches of the temporal artery arising above the middle temporal branch. They supply the anterior auris muscle, the lobe of the auricle, and a part of the meatus externus; they anastomose with the posterior auricular.

A. ar'tery, poste'rior. (G. *hintere Ohrschlagader*.) A small branch of the external carotid just above the occipital. It gives off branches to the parotid gland and to the neighbouring muscles, a stylohyoid branch, auricular branches to the back of the ear and its muscles, and an occipital branch, which anastomoses with the occipital artery, and it divides into terminal branches, the anterior of which

anastomose with the temporal, the posterior with the occipital artery.

A. cartilagin'ous plate. The plate of cartilage uniting the auricular surfaces of the ilium and sacrum. When forcibly torn asunder it usually separates into two plates, which often enclose a small cavity, sometimes containing a glairy fluid.

A. ling'ua. (G. *Ohrzungen*.) A term for the little finger, because, from its small size, it can be introduced somewhat into the auditory canal.

A. fora'men. (L. *foremen*, an opening, from *foro*, to bore.) The opening of the external auditory meatus.

A. mus'cle, ante'rior. A synonym of the *Attrahens aurium muscle*.

A. mus'cle, poste'rior. A synonym of the *Retrahens aurium muscle*.

A. point. The centre of the opening of the external auditory meatus.

A. ra'dii. (L. *radius*, a spoke of a wheel.) A term in Craniometry for lines drawn from the auricular point to certain parts of the cranium, as the supra-orbital projection, the point of the lambdoid suture, the bregma, and others; the lines then bear the names auriculo-supra-orbital, auriculo-lambdoidal, auriculo-bregmatic, and such like, respectively.

A. surface of il'ium. (G. *Ohrheber-fläche*.) The inferior smooth, uneven surface of the posterior part of the inner aspect of the ilium, which articulates by means of cartilage with the sacrum.

A. surface of sa'crum. (G. *Ohrheber-fläche*.) The anterior part of the outer aspect of the upper part of the sacrum, which is united to the ilium by cartilage.

A. veins. A few small anterior or superficial veins which arise in the anterior part of the auricle of the ear; there are also some deeper veins, which spring from the auditory meatus and neighbouring parts, and, descending, open into the posterior facial nerve.

Auricula'ria. (L. *auricula*, a little ear.) The *Dysophylla auricularia*.

A. sambuca'na. (L. *sambucina*, a female player on the sambuca; *sambucus*, an alder or elder tree.) A synonym of the *Auricularia judæ*.

Auricularia'ceæ. (L. *auricula*. G. *Rindenschwämme*.) A Family of the Suborder *Hymenomyces*. Receptacle variously formed, often membranous, with smooth or slightly warty hymenium.

Auricula'ris. (L. *auricula*, the external ear.) Belonging to the ear.

A. ante'rior. (L. *anterior*, in front.) The *Attrahens auriculam muscle*.

A. mag'nus nerve. (L. *magnus*, large. F. *branche auriculaire du plexus cervical*; G. *größer Ohrnerv*.) Formed from branches of the second and third cervical nerves. It perforates the deep fascia at the posterior border of the sterno-mastoid muscle, and ascends parallel to and beneath the posterior part of the platysma as far as to the angle of the jaw, crossing the fibres of the sterno-mastoid nearly at right angles. At this point it gives off some filaments, which are partly distributed over the parotid gland and partly penetrate the gland, and join the facial. The terminal branches are the external and internal auricular. The former supplies the inferior part of the ear, the concha, the helix, and the

AURICULATE—AURIUM FLUCTUATIO.

antihelix. The latter or mastoid branch, running in the substance of the parotid gland, crosses the mastoid process obliquely, anastomosing with the auricular branch of the facial, and terminates in a branch supplying the upper part of the auricle and an occipital branch.

A. posterior. (L. *posterior*, hinder.) The *Retrahens auriculum* muscle.

A. superior. (L. *superior*, upper.) The *Attollens auriculum* muscle.

Auriculate. (L. *auricula*, the external ear. F. *auriculé*; G. *ohrformig*, *gehört*, *klein-gehört*.) Having ears; shaped somewhat like the external ear.

Applied to a leaf when it has a lobe on each side of its base; eared.

Auriculately-sagittate. (L. *auricula*; *sagitta*, an arrow.) Applied to a leaf, when arrow-shaped, with two ear-like lobes at the base.

Auriculatopinnate. (L. *auricula*; *pinnatus*, feathered, pinnate.) Applied by Link to pinnate leaves the folioles of which are auriculated.

Auriculiferous. (L. *auricula*; *fero*, to bear. F. *auriculifère*; G. *ohrtragend*.) Bearing auricles.

Auriculiform. (L. *auricula*; *forma*, likeness. F. *auriculiforme*; G. *ohrformig*.) Formed like a small ear, as the suckers of the *Tetrarhynchus*.

Auriculo. (L. *auricula*, an auricle.) This word, used as a prefix in compound adjectives, denotes relation to, or connection with, the auricles of the heart.

A.-orbicularis. (L. *auricula*; *orbicularis*, circular.) A circular muscle surrounding the base of the auricle in some vertebrate animals.

A.-temporal nerve. (F. *nerf auriculo-temporal*; G. *Ohrschlaffenerv*, *vorderer Ohrner*, *oberflächlicher Schlafenerv*.) Arises by two roots, between which the middle meningeal artery passes, from the inferior maxillary nerve of the fifth pair. It lies at first beneath the external pterygoid muscle as far as to the inner side of the articulation of the lower jaw. It then turns upwards with the temporal artery between the external ear and condyle of the jaw and beneath the parotid gland. Its terminal branches are the anterior and posterior temporal. In its course it gives off branches to the *meatus auditorius*; to the articulation of the lower jaw; the inferior auricular branch to the external ear, which gives off twigs to the sympathetic surrounding the maxillary nerve; parotidian branches to the gland; branches passing to the external carotid arteries and communicating with the facial and sympathetic nerve; and filaments arising near the origin of the trunk to the otic ganglion.

A.-temporalis. (L. *temporalis*, belonging to the temples.) A name by Cruveilhier for the combined *atrahens auriculum* and *retrahens auriculum* muscles.

A.-ventricular opening. (F. *orifice auriculo-ventriculaire*; G. *Atriocentricularöffnung*.) Term for the opening of the communication between the auricle and ventricle of each side of the heart.

A.-ventricular ring. The same as *A.-ventricular opening*.

A.-ventricular valves. (F. *valvules auriculo-ventriculaires*; G. *Atriocentricularklap-*

pen.) The mitral and tricuspid valves at the auriculo-ventricular apertures.

A.-zygomaticus muscle. A synonym of the *Atrahens aurem* muscle.

Aurides. (F. *aurides*.) Name by Beudant for a Family of minerals comprehending gold and its combinations.

Auriferous. (L. *aurum*; *fero*, to bear. F. *aurifère*; G. *goldhaltig*.) Containing gold.

Aurific. (L. *aurum*; *facio*, to make. F. *aurifique*; S. *aurifico*; G. *goldmachend*.) Producing or containing gold.

A. tincture. The *Tinctura antimoni*, so called on account of its colour.

Aurification. (L. *aurum*; *facio*, to make.) The stopping of a tooth with gold.

Auriform. (L. *auris*, an ear; *forma*, shape.) Ear-shaped.

Auriga. (L. *auriga*, a waggon.) Ancient name for the fourth lobe of the liver.

Term used by Galen, *de Fasc.* n. 100, for a kind of bandage for binding the side, so called because of its likeness to the traces of a waggon-horse.

Aurigerous. (L. *aurum*, gold; *gero*, to bear.) Gold bearing or containing.

Auriginous. (L. *auriginosus*, jaundiced. F. *aurigineux*; S. *aurignoso*.) Having, or being of the colour of, jaundice.

A.-fever. A term by Vogel for jaundice.

Aurigo. (L. *aurum*, gold; from its colour. G. *Gelbsucht*.) A former term for icterus, or jaundice; also spelled *Aurugo*, Scribonius Largus, n. 110.

Also, see *Epichrosis aurigo*.

A. calculosa. (L. *calculus*, a small stone.) An old term for jaundice from gall-stones.

A. neophytorum. (Νεοφυτος, newly-planted.) Jaundice of the newly-born.

Aurilave. (L. *auris*, the ear; *lavo*, to wash.) An instrument for cleansing the external auditory meatus.

Aurin. (Ger.) The *Gratiola officinalis*.

Auripigmentum. (L. *aurum*, gold; *pigmentum*, paint; from its colour, and its use. F. *orpiment*; G. *Auripigment*, *Opferment*.) Old name for yellow sulphuret of arsenic, or king's yellow.

A. rubrum. (L. *ruber*, red.) Old term for realgar.

Auripuncture. (L. *auris*, the ear; *punctura*, a prick.) A term for puncture of the *membrana tympani*.

Auris. (As if *ausis*, from οὖς, ὠτός, *Cretice* οὖς, ὠτός, the ear; hence *autis*, *ausis*, and *auris*. F. *oreille*; G. *Ohr*.) The organ of hearing; the ear.

Auriscalpium. (L. *auris*, the ear; *scalpo*, to scrape. F. *auriscalpium*, *cure-oreille*; G. *Ohrloeffel*.) Old name of an instrument for cleansing the ear; an ear-pick. See *Melotis*.

Auriscopes. (L. *auris*, the ear; *σκοπεῖν*, to explore, or inquire.) Name of an instrument, resembling a flexible stethoscope, the bell-end being large enough to cover the auricle of the patient, for ascertaining the condition of the Eustachian passage.

Aurist. (L. *auris*, the ear.) One who specially devotes himself to the study of the pathology and therapeutics of the ear.

Auritus. (L. *auritus*.) Eared.

Aurium fluctuatio. (L. *auris*, the ear; *fluctuatio*, a wavering motion.) Buzzing in the ear.

AUROFERRIFEROUS—AURUM.

A. marmorea'ta. (L. *marmoreo*, to incrust with marble.) An old term for the cerumen of the ear.

A. sib'bus. (L. *sibilus*, a hissing.) A singing in the ears.

A. son'itas. (L. *sonitus*, a noise.) Bussing in the ears.

A. sor'des. (L. *sordes*, dirt.) The cerumen of the ear.

A. susur'rus. (L. *susurrus*, a murmuring.) Noise in the ears.

Auroferri'ferous. (L. *aurum*; *ferum*, iron; *fero*, to bear. F. *auroferri'fero*.) Applied to a mineral accidentally containing gold and iron.

Auro-na'trium chlora'tum. G. Ph. (G. *Chlorgoldnatrium*.) Chloride of gold and sodium. Made by dissolving 65 parts of gold in 260 parts of nitromuriatic acid, evaporating until it solidifies, on cooling mixing it with 100 parts of powdered sodium chloride, and drying in a vapour bath. It is an orange-yellow powder. It is used as a caustic; or, when diluted, is rubbed into the tongue in syphilis. Dose, one tenth of a grain.

Auro'ne. (Fr.) The *Artemisia abrotanum*.

Auroplumbi'ferous. (L. *aurum*, gold; *plumbum*, lead; *fero*, to bear.) Applied to a mineral accidentally containing gold and lead.

Auropubes'cent. (L. *aurum*; *pubes*, soft hair.) Having small leaves of a golden yellow.

Auro'ra consurgens. (L. *aurora*, the daybreak; *consurgo*, to arise.) A doubtful term used by the alchemists to express the vegetation of their gold. *Th. Chym.* vol. i, p. 161.

A. sur'gens. (L. *surgo*, to arise.) Same as *A. consurgens*.

Auro'reous. (L. *aurora*, the dawn of morning. F. *aurors*.) Having the yellow colour of saffron.

Auro'reous. Same as *Auror'ous*.

Auro'sus. (L. *aurum*, gold. F. *aurus*.) Applied by Berzelius to the first degree of oxidation of gold, or *Orydum auro'sum*; the first degree of sulphuration of it, or *Sulphuretum auro'sum*; to *Orysales auro'se*, having the auro's oxide for their base.

Auro'sus. (L. *aurum*.) Belonging, or relating, to gold.

A. chlo'ride. AuCl. Gold monochloride. A yellowish powder obtained by heating auric chloride to 185° C. (365° F.)

A. ox'ide. Au₂O. Gold monoxide. Obtained by adding cold solution of caustic potash to auro's chloride. It is a violet-black or greenish powder.

Auro'go. (L. *aurum*, gold, from its colour.) An old name for icterus, or jaundice. The same as *Aurigo*.

Aurum. (Aṓρον, gold. L. *aurum*; F. *or*; I. *oro*; G. *Gold*; Arab. *Tibr*, *Zehab*, *Dahab*; Pers. *Tilla*, *Zir*; Sansk. *Sucarna*, *Sucarna*; Chin. *Au*; Runic *Cyn*; Duk. Ind. *Suna*; Mal. *Max*; Tam. *Poonn*; Tel. *Bungarum*; Turk. *Alloun*.) Gold. A yellow metal found native, sometimes pure, but oftener alloyed with silver or copper. See *Cah*, *Dauid*, *Deheb*, *Dehebeh*, *Fida*, *Obrusum*, *Orizum*, *Orogamo*, *Sch*, *Secur*, *Sol*, *Tricor*, *Zaras*, and *Gold*.

A. chlora'tum. The *Aurichloridum*.

A. chlora'tum natrona'tum. The same as *Auro-natrium chlora'tum*.

A. chlora'tum officina'le. The same as *Auro-natrium chlora'tum*.

A. crystal'linum. (Κρυσταλλος, crystal.) Used for stopping teeth.

A. cyana'tum. The *Auri cyanidum*.

A. cyan'icum. The *Auri cyanidum*.

A. folia'tum. (L. *foliatus*, leaved. G. *Blattgold*.) Gold leaf. Formerly much used for wrapping up pills in, or gilding them, as was said.

A. ful'mineum. (L. *fulmine*, to lighten.

G. *Knallgold*.) Fulminating gold. A term for a brown precipitate formed by adding liquid ammonia to a concentrated solution of chloride of gold, then collected on a filter, washed with a little water, and carefully dried at the temperature of 100° C. (212° F.) It was recommended in scarlet fever. Also called *Aurate of ammonia* and *Ammoniauret of peroxide of gold*.

A. horizonta'le. (Opt'ic, the horizon.) Old term for a preparation, said to have been the *Mercurius auri*, or essential part of gold fixed by the alchemist; also said to have been an *Oleace-charum* or *Elaeosaccharum*, made with the oil of cinnamon.

A. hydrocyan'icum. The *Auri cyanidum*.

A. in libella. (L. *in*, in; *libella*, a level.) Gold leaf.

A. in mus'culis. Cuttings of gold leaf ground with gum water, and spread on the inside of mussel shells.

A. ioda'tum. The *Auri iodidum*.

A. lepro'sum. (L. *leprosus*, lepro'sus.) An old term for antimony.

A. lima'tum. (L. *limo*, to file off.) Gold filings. Formerly administered in medicine.

A. muriat'icum. The same as *Auro-natrium chlora'tum*.

A. muriat'icum natrona'tum. The *Auro-natrium chlora'tum*.

A. mus'ivum. (L. *musicus*, artistic.) Mosaic gold. A compound of tin and sulphur, being a bisulphuret of tin, consisting of one equivalent of tin and two of sulphur. It was used in medicine.

A. natrona'to chlora'tum. AuCl₂NaCl + 4Aq. The same as *Auro-natrium chlora'tum*.

A. nitromuriat'icum. See *Auri nitromurias*.

A. oxyda'tum. The *Auri oxidum*.

A. oxyda'tum muriat'icum. The *Auri chloridum*.

A. potabi'le. (L. *potabilis*, that which may be drunk. G. *Trinkgold*.) Old term for a preparation of gold by pouring some volatile oil on a solution of nitro-muriate of gold; the oil, floating at the top, deoxygenised the gold, and held it suspended in a state of minute subdivision; the oil containing the gold was separated from the remaining liquor, and alcohol added. Potable gold was highly esteemed as a cordial medicine.

A. sal'itum. (L. *salitus*, salted.) The *Auri chloridum*.

A. sophis'ticum. (Σοφιστικός, fallacious.) Old term for brass.

Also, a name of bronze powder. Used as a means of producing a gold colour.

A. stan'no para'tum. (L. *stannum*, tin; *paratus*, part. of *paro*, to prepare.) A synonym of the compound known as the *Purple of Cassius*.

A. vegetabilis. (*L. vegetabilis*, animating.) Vegetable gold. An old name for saffron.

Aurungzebo. A term for Delhi boil; from the celebrated Moghul Emperor of Hindustan, who suffered from this disease.

Aururet. (*L. aurum*.) An alloy of gold and another metal in definite proportions.

Aurus brazilien'sis. A name for the *Calamus aromaticus*.

Auscultate. (*L. auris*, anciently written *ausis*, the ear; *culto*, to till often, or cultivate. *G. auscultiren*, *zuhören*.) To listen, or give ear. Applied particularly to listening to the sounds of the action of the lungs or heart, or to those produced by the chest or abdomen, when struck in practising percussion, in health or disease.

Auscultation. (*L. ausculto*, to listen with attention. *F. auscultation*; *G. Zuhören*.) Term for the act of listening to the sound given by particular parts of the body when struck (the doing so is termed *percussion*), or to the sound of the movements of the lungs or heart, or other organs, in order to form a judgment of their condition. In auscultation of *healthy respiration* a soft vesicular murmur is heard; most distinct during inspiration, and becoming less audible in congestion, whether acute or chronic, in pleurisy, and in compression of the bronchi by tumours. It cannot be heard in cases of extensive effusion into the pleural cavity, because the lungs are then compressed, and little or no air enters them. The cause of the sound is believed to be the passage of air through the trachea and bronchi, as well as the separation of the walls of the smallest tubes. In bronchitis the presence of mucus, more or less inspissated, gives rise to dry sounds or râles termed rhonchus, or to whining and singing sounds, termed sibilus. Mucus in all tubes, except the finest, gives rise to coarse crackling or bubbling sounds, called large crepitation; fluid in the finest tubes and air-cells, to a peculiar crackling sound—small crepitation—such as may be produced by rubbing the hair between the fingers close to the ear. The presence of large spaces or cavities containing more or less fluid is characterised by gurgling sounds, metallic tinkling, and cavernous respiration.

In auscultation of the *voice* in health, through the walls of the chest, a general resonance, varying in intensity in different parts, and in men vibration is felt. In disease the voice is more or less modified. See *Bronchophony*, *Egophony*, and *Pectoriloquy*.

In auscultation of the *heart* in health, two sounds are heard, the first dull and prolonged, the second shorter and sharper. The first is usually attributed to the sudden tension of the auriculo-ventricular valves, and of the muscular walls of the contracting heart. The second is due to the sudden tension of the semilunar valves of the aorta and pulmonary artery. The first sound is heard best at the apex of the heart in the fifth intercostal space, a little below and to the inner side of the left nipple, the aortic second sound over the second right intercostal space, and the pulmonary second sound over the third left costal cartilage. When the valves of the heart are affected the natural sounds of the heart are prolonged or obscured, or replaced by certain bruits, souffles, or murmurs, and the nature of the disease can, with care and attention, be diagnosed with considerable accuracy. Thus, a systolic

murmur, heard most distinctly at the base of the heart, and propagated along the aorta, indicates obstruction at the aortic orifice. A similar systolic murmur, heard over the third left cartilage, and propagated upwards and to the left, has its origin in the pulmonary artery, and is usually hæmic. A systolic murmur, heard most distinctly at the apex, and outwards into the axilla, and at the inferior angle of the left scapula, indicates insufficiency of the mitral valve or mitral regurgitation. Tricuspid regurgitation, which is usually secondary to other valvular disease, is indicated by a systolic murmur audible down the left side of the ensiform cartilage.

A diastolic bruit, audible at the base, but propagated down the sternum, or towards the apex, indicates insufficiency of the aortic valves; whilst a murmur immediately preceding the systole (præ-systolic), usually vibratory in character, heard over a limited area to the inner side of the apex, and often accompanied by a thrill, indicates obstruction at the mitral orifice. A soft murmur is sometimes heard in chlorotic states at the base of the heart, which is prolonged along the aorta and the vessels of the neck, and also outwards along the second left intercostal space, without organic disease of the organ.

In auscultation of the *pericardium*. When this membrane is inflamed the natural sounds of the heart become enfeebled and accompanied by a friction sound, sometimes termed a to-and-fro sound or bruit de cuir neuf, which often disappears as fluid is poured out, separating the opposed surfaces of the membrane. It may reappear on absorption of the fluid.

Auscultation of *tumours*. Arterial aneurysms often present a loud systolic blowing sound, the aneurysmal bruit. Arterio-venous aneurysms are accompanied by a continuous bruit.

Auscultation of the *abdomen*. Employed to determine the existence of pregnancy, the position of the placenta and of the child, and the presence of twins. It is also used as a means of diagnosing the presence and position of obstruction of the intestines at any point, whether by intussusception or adhesions.

Auscultation of *fractures*. Employed as a means of diagnosing the existence and seat of fracture in obscure cases.

A. cephalic. (*Κεφαλή*, the head.) Auscultation of the head to ascertain the presence of vascular murmurs.

A. immediate. Term for that mode in which the ear of the practitioner is placed close to the part examined, without the aid of the stethoscope or other instrument.

A. mediate. Term for that mode in which a stethoscope, a piece of ivory, or hard wood, or the like, is placed between the part examined and the practitioner.

A. obstetrical. (*L. obstetrix*, a midwife.) Auscultation of the lower part of the abdomen in a pregnant female, to ascertain the presence of placental murmur, or the sound of the fetal heart.

Auscultator. (*L. ausculto*, to listen.) One who practises auscultation.

Auscultatory. (Same etymon.) Having relation to auscultation.

A. percussio. A term for *Acouphonia*.

Aussee. Austria; not far from Ichl, 2100

AUSTERE—AUTOGENES.

feet above sea-level, situate in a beautiful district of the Salskammergut. There is a very strong salt spring, and the whey-cure is carried out.

Austere. (*Ἀσπερός*, making the tongue dry and rough; from *αἶμα*, to dry. *G. Aëris, resé.*) Of a harsh, astringent, or subacid taste.

Austral. (*L. auster*, the south wind.) Belonging to the south.

A. pole. A term applied by some, especially French, physicists, to the end of the magnetic needle which points north; it is so called on the assumption of the existence of a terrestrial magnet, each pole of which would necessarily attract its opposite magnetism.

Australene. The terebenthene of the *Pinus australis*. It turns the plane of polarisation to the right.

Australia. An island-continent. Taken as a whole, it is characterised by an arid climate and a deficiency of water. Its fauna and flora are very peculiar. The only non-aquatic Mammalia of other parts of the world it possesses are the Bats and the Rodents. The Quadrumana, Carnivora, and Ungulates, are replaced by the Marsupialia and Monotremata. Many widespread Families of birds, as Finches, Vultures, and Pheasants, are absent, and there are many peculiar to itself, as Bennett's Cassowary, the Emu, Menura, and Seythrope. There are but few Reptiles, Amphibia, or Fish, that are peculiar to it.

In works treating of the distribution of animals, Australia, or the Australian province or region, includes, together with the Continent of Australia, Polynesia.

Australian gum. A kind of gum arabic imported from Australia. It is in large yellowish or reddish-brown tears, having a rough surface, a vitreous fracture, and a slightly astringent taste. It is the product of *Acacia decurrens* and *A. dealbata*.

A. gum tree. The *Eucalyptus globulus*.

A. sas'safra. The *Atherosperma moschata*.

Australians. The aboriginal inhabitants of Australasia. They are a degraded type, with marked negroid features, but with smooth hair.

Australia. (*L. auster*, the south wind. *F. austral*; *G. südlich*.) That which is situated, in relation to us, beyond the equator. Same as *Meridionalis*.

Austraterebenthene. The same as *Australene*.

Autalgia. (*Ἀυτός*, self; *ἄλγος*, pain.) Pain in the body.

A. dolorosa. (*L. dolorosus*, painful.) A term applied to neuralgia of the face, and to pleurodynia.

A. pruriginosa. (*L. pruriginosus*, from *prurigo*, an itching.) Severe itching.

A. vertigo. (*L. vertigo*, a turning round.) Giddiness.

Autarola. (*Ἀυτάρεια*, sufficiency in one's self. *G. Selbstständigkeit, Selbsthinlänglichkeit*.) Tranquillity of mind.

Autoscope. (*Ἀυτός*, self; *ἤχη*, a sound; *σκοπέω*, to examine.) An instrument for examining, or listening to, sounds in one's own body.

Autemesia. (*Ἀυτός*; *ἔμεσις*, vomiting. *F. autémésie*.) Spontaneous or idiopathic vomiting.

Autemprosmus. (*Ἀυτός*; *ἐμπροσθεν*, a conflagration.) Spontaneous combustion of the human body.

Autenrieth. A German physician of the early part of the nineteenth century.

A. a. poma'se. Powdered tartarised antimony 10 grains, benzoated lard 30 grains; mix. Rubbed into the skin to produce a pustular eruption.

Authe'meros. (*Ἀυτός*, itself; *ἡμέρα*, a day.) Of, or belonging to, the same day.

Formerly applied to a medicine which takes effect the same day on which it is exhibited; it was termed *αὐθήμερον φάρμακον*.

Authe'meros. Same as *Authe'meros*.

Authe'psa. (*Ἀυθίψα*, from *ἔψα*, to cook. *G. Selbstkochen*.) An apparatus for cooking, like a coffee or tea urn.

Authygian'sia. (*Ἀυτός*; *ὕλη*, a making well. *F. authygian'sis*; *G. die Heilkraft der Natur*.) The healing power of nature.

Authypnobate'sia. (*Ἀυτός*; *ὑπνός*, sleep; *βαίω*, to walk.) Spontaneous hypnobia, or somnambulism.

Autites. (*Ἀυτός*, self.) A substance or medicine that is pure and unadulterated.

Auto-audible. (*Ἀυτός*; *L. audire*, to hear.) To be heard within himself.

A. mur'mura. Vascular murmur, whether venous, arterial, or cardiac, which may be heard by the patient himself.

Autocarpian. (*Ἀυτός*; *καρπός*, fruit. *F. autocarpium*; *G. alleinfruchtig*.) Applied to fruit when the ovary is developed without contracting any adherence to surrounding parts, or being immediately covered by them, and the fruit unmodified by any addition of parts.

Autochir. (*Ἀυτός*; *χείρ*, the hand. *G. ein Selbstmörder*.) A self-murderer; one who has committed suicide.

Autochiria. (*Ἀυτός*; *χείρ*, the hand. *F. autochiria*; *G. Selbstmord*.) Self-murder, or suicide; a laying hands on himself.

Autochirus. Same etymon and meaning as *Autochir*.

Autochthonous. (*Ἀυτός*; *χθών*, the earth. *G. eingeboren*.) Aboriginal, indigenous.

A. clot. A blood-clot, or thrombus, in a blood-vessel, formed at the spot where it is found.

Autocinesis. (*Ἀυτός*; *κίνησις*, from *κίνηω*, to move. *F. autocinesis*; *G. Selbstbewegung*.) Voluntary movement.

Also, motion without the agency of muscles or apparent contractile fibres.

Autocrateia. (*Ἀυτός*, itself; *κράτος*, power. *F. autocratie*; *G. Selbstherrschaft*.) Independent, self-existent force. A term applied to the vital principle, on the hypothetical idea that it is self-acting. Also, synonymous with *Vita medicatrix natura*.

A. natura. (*L. natura*, nature.) According to Stahl, the power or controlling force which nature, or the vital principle, exercises on the progress and the duration of diseases.

Autocratoria. (*Ἀυτοκρατορία*, absolute sway.) The same as *Autocratie*.

A. physiatrica. (*Physiatria*.) The *Vita medicatrix natura*.

Autocroria. (*Ἀυτοκρορία*, to slay one's self.) Suicide.

Autogenes. (*Ἀυτός*; *γενέσθαι*, to beget.) Term applied to bulbous plants, like the Nar-

AUTOGENESIS—AUTOPHTHALMOSCOPY.

cissus, which begin to sprout before being planted, so that they seem to spring from themselves.

Autogenesis. (Αὐτός; γένεσις, production; G. *Selbsterzeugung*.) Self-production. Applied to the origin of tissues from a blastema which contains no parent of like nature; and also, to the origin of animals or plants by spontaneous generation.

Autogenetic. (Same etymon.) Self-generating. Applied by Barnes to a form of puerperal fever, in which the poisonous matter causing the disease is believed to be generated in the woman's system under the strain of labour.

Autogenia. (Αὐτός; γένος, offspring.) Same as *Autogenesis*.

Autogenous. (Same etymon.) Term applied by Prof. Owen, in his *Homologies*, to the parts, or processes, which are usually developed from distinct and independent centres.

The term has also been applied to denote the essential elements of morbid tissues, in contradistinction to those which are occasional or accidental.

Autognosis. (Αὐτός; γνώσις, knowledge. F. *autognose*; G. *das Erkennen durch eigene Untersuchung, durch Selbstsehen*.) Knowledge from actual observation, or self-seeing.

Autogony. (Αὐτός; γόνος, offspring. F. *autogonie*.) One of the modes of spontaneous generation. That in which there is the production of a very simple organism being in a liquid containing, in solution, the simple materials necessary for the development of the organism, such as carbonic acid, ammonia, salts. The other form is called *Plasmogony*.

Autoinoculation. (Αὐτός; L. *inoculo*, to implant.) The inoculation into the body of a person suffering from a disease of the virus of the disease obtained from himself.

Autoiques. (Fr.; from αὐτός, the same; οἶκος, a house.) Term applied by the French to cryptogams which complete their whole circle of development on the same host plant.

Autolabis. (Αὐτός; λαβίς, a holder.) Small pincers which are self-closing.

Autolaryngoscopy. (Αὐτός, self; λάρυγξ, the larynx; σκοπέω, to examine.) The examination of the larynx by one's self. The ordinary laryngoscope, properly illuminated, is introduced into the throat, and the observer stands in front of a looking-glass. Garcia and Czermak made extensive use of this method to determine the movements of the larynx.

Autolithotomus. (Αὐτός; λίθος, a stone; τέμνω, to cut.) One who cuts himself for stones.

Automatic. (Αὐτοματίζω, to act spontaneously, or without compulsion. F. *automatique*; G. *automatische, selbstbeweglich*.) Having power of self-motion; instinctive; involuntary. Applied to functions that are performed without the aid of the will, as digestion, the heart's action.

Autonomia. (Αὐτός; νόμος, a law. F. *autonomie*.) The faculty of tracing the laws according to which one acts.

Autonomous. (Same etymon.) Self-governed. Applied to plants that are perfect and complete in themselves, especially in sexual development.

Autonomy. (Αὐτονομία, independence; from αὐτός, self; νόμος, government.) Term applied in Biology to whatever has laws of its own which are not subject to a higher law. Thus,

the several tissues of the body, as the muscles and nerves, have some properties which they possess in common with all the other tissues, and others which are peculiar to themselves, governed by special laws, and not subject to the laws affecting the rest of the system. In this respect they have an autonomy of their own. In a more general sense, anatomy and physiology are autonomous, since the phenomena presented by animals and plants are not at present referable to chemical, physical, or other laws. The phenomena of pathology, on the other hand, are subject to the laws of physiology acting under different conditions.

In the philosophy of Kant, a term employed to designate the absolute sovereignty of reason in the sphere of morals.

Autonosographia. (Αὐτός; νόσος, a disease; γράφω, to write. F. and G. *autonosographie*.) A description of one's own diseases.

Antonyctobatesia. (Αὐτός; νύξ, night; βαίνω, to walk. G. *Nachtwandeln*.) Somnambulism.

Autopepsia. (Αὐτός; πέπτω, to digest. F. *autopepsie*.) Self-digestion, as of the stomach after death.

Autophagi. (Αὐτός, self; φαγῖν, to eat.) A term applied to those birds which, like the common fowl, can obtain their own food as soon as they are hatched.

Autophagous. (Same etymon.) Self-devouring. See *Autophagy*.

Autophagy. (Αὐτός; φαγῖν, to eat.) The feeding on one's self, as in starvation.

A., artificial. A term applied to the starvation of an animal, and the giving it daily meals of its own blood. By this means life is prolonged to a greater extent than is possible under total deprivation of food.

A., spontaneous. The mode by which life is sustained in animals deprived of all food, that is, by absorption of the tissues.

Autophic. (Fr.) A term used by some French writers synonymously with *Autopsia*. See *Autopsy*.

Autophil'ia. (Αὐτός; φιλέω, to love. G. *Selbstliebe*.) Love of self.

Autophon'ia. (Αὐτοφονία, self-murdering. F. *autophonie*; G. *Selbstmord*.) Term for self-murder.

Autophonia. (Αὐτός; φωνή, sound of the voice. F. *autophonie*; G. *Selbststimme*.) See *Autophony*.

Autophonomania. (Αὐτοφόνος, a self-murderer; μανία, madness.) Suicidal insanity.

Autophony. (Αὐτός, one's self; φωνή, voice. F. *autophonie*; G. *Selbststimme*.) The conditions of resonance and other characters of the observer's own voice when, in the examination of a patient, he places his head on the chest and speaks in a loud tone. Where there is a large cavity the resonance or tone of the voice is intensified.

Autophosphorus. (Αὐτός; φωσφόρος, giving, or bringing, or bearing, light.) A synonym of *Phosphorus*.

Autophthalmoscopy. (Αὐτός, self; ὀφθαλμός, the eye; σκοπέω, to see.) An instrument constructed to enable a person to see his own eye. See *Autoscopy*.

Autophthalmoscopy. (Αὐτός, self; ὀφθαλμός, the eye; σκοπέω, to see.) The examination of his own eyes by any man.

AUTOPHYLLOGENY—AUXOSPORES.

Autophyllogeny. (Ἀυτός; φύλλον, a leaf; γένεσις, to produce.) The growth of a leaf upon another leaf.

Autophysiotherapeia. (Ἀυτός; φάρμακον, nature; θεραπεία, medical treatment.) Self-cure of a disease by natural forces alone.

Autoplastie. (Autoplasty. *F. autoplastique.*) Of, or belonging to, autoplasty. Applied to the operations so termed.

Autoplasta. (Ἀυτός, one's self; πλαστόν, to form.) Bodies resembling nuclei, but without differentiated cell areas around them. Such bodies are found in the ova of Cephalopoda; they become branching contractile cells, by which the rhythmical contractions of the yolk-mass are effected.

Autoplasty. (Ἀυτός, himself; πλαστόν, to form. *G. Selbstbildung.*) A term for several operations, by which a variety of lesions of the face or body are repaired by means of healthy parts being taken from the neighbourhood of the lesion, and made to supply the deficiency caused by wounds or disease. The particular operations are further distinguished according to the locality in which they are performed, as rhinoplasty, the repair of the nose.

Autopsia. (Ἀυτός, himself; ὄψις, the act of seeing. *G. Selbstsehen.*) Self-inspection; evidence actually present to the eye. See *Autopsy.*

A. cadaverica. (*L. cadaver,* a dead body.) A post-mortem examination.

A. cadaverica legalis. (*L. cadaver;* *legalis,* belonging to the law.) A post-mortem examination for judicial purposes.

Autopsides. (Ἀυτός; ὁπταί, to see. *F. autopsides.*) Applied to a class of metallic substances naturally endowed with metallic lustre in one or more of their states.

Autopsorin. (Ἀυτός, himself; ψώρα, the itch, or a cutaneous disease.) A term in homoeopathic language for that which is given in administering to a patient some of his own virus by way of remedial treatment, as in cases of itch, smallpox, cancer, and syphilis.

Autopsy. (Ἀυτός; ὄψις, the act of seeing. *F. autopsy;* *G. Autopsie, Selbstsehen.*) Evidence presented to the eye; ocular demonstration; but this word formerly comprehended the things observed, not only by the sight, but by the other external senses also. It has of late been used to signify the dissection of a dead body.

A. wound. A dissection wound.

Autopyroa. (Ἀυτός, itself; πυρὸς, wheat.) Term for wheaten bread, the bran not having been removed from the flour.

Autopyrus. Same as *Autopyroa.*

Autosaturation. (Ἀυτός, self; σάτω, to saturate.) The capacity possessed by the atoms of some bodies, as by those of carbon, to saturate themselves.

Autoscope. (Ἀυτός, self; σκοπία, to see.) An instrument invented by Coeius for the self-examination of the eye. It consists of a perforated plane mirror, which is placed in front of one eye, and throws the light of a laterally placed lamp on a concave mirror. The light reflected from this is directed into the opposite eye. The rays returning from this eye undergo the same reflection, and enable the fundus to be seen.

Autoscop'ia. (Ἀυτός; σκοπία, to explore. *G. Selbstuntersuchung.*) The same as *Autopsia.*

Autoscopy. (Same etymon.) The investigation of one's own disease, as by the sub-laryngoscope.

Autosite. (Ἀυτός; ὄφει, food.) A fatal monstrosity, which is capable of being nourished by the agency of its own organs after separation from the mother. See, in opposition, *Omphalosite.*

Autositions. (Ἀυτός, bringing one's own provisions. *F. autositions.*) A term applied by Geoffroy St. Hilaire to those double monsters which are equally developed, and each by their organs contribute to the common life.

Autostethoscope. (Ἀυτός; στήθεα, the breast; σκοπία, to explore. *F. autostethoscope;* *G. Selbstbrustuntersucher.*) An instrument for examining the condition of one's own chest; a kind of flexible stethoscope corresponding to the Polystethoscopia.

Autostylio. (Ἀυτός, himself; στήλη, a pillar.) A skull is said to be autostylic when, as in the Amphibia and higher Vertebrata, the mandibular arch is suspended by its own super pier, the quadrate, as in reptiles and birds.

Autotherapia. (Ἀυτός; θεραπεία, medical attendance.) The self-cure of a disease, the *Via medicatrix nature.*

Autotransfusion. (Ἀυτός; *L. transfundo,* to pour over.) Term applied to the introduction, or, more properly speaking, the retention, of blood in the vessels of the more important parts of the system, as in those of the brain and of the viscera of the chest and abdomen, after severe hemorrhages, by the systematic application of bandages to the limbs, and by position.

Autumn. (*L. autumnus,* from *autum,* an increasing. *Φθινόπωρον;* *F. automne;* *L. autumnus;* *S. otoño;* *G. Herbst.*) The season of the year which commences on the day the sun enters Libra, and ends on the day he enters Capricorn; which times, in this latitude, are September 23rd and December 22nd.

Autumnal. (Same etymon.) Relating, or belonging, to autumn.

A. crepus. The *Crocus autumnus.*

A. fe'ver. A term for intermittent fever, because of its prevalence at that season.

A. ge'ntian. The *Gentiana autumnalis.*

A. hawk'bit. The *Leontodon autumnalis.*

Auxonometer. The same as *Aurimeter.*

Auxosis. (Ἀύξωσις, growth, increase. *G. Vermehrung, Wachsthum.*) Increase. The augmentation or exacerbations of a disease.

Auxiliaris musculus. The auxiliary muscle; a name of the pyramidalis abdominis muscle.

Auxiliary. (*L. auxilior,* to help, or succour. *F. auxiliaire;* *L. auxiliaris;* *S. auxiliar;* *G. helfend.*) Assisting; assistant. Applied to muscles that aid others in their action.

Also, applied to a medicine given at same time with another to aid its effect.

Auximeter. (Ἀύξωσις, to increase; μέτρον, a measure. *F. auximètre.*) An instrument for measuring the magnifying power of an optic apparatus; the increase of power of a lens during effort; or the increasing size of a member.

Auxosperes. (Ἀύξωσις; σπέρμα, seed.) A product of development found amongst the *Bacillariaceae*. The cells of these plants, by a continuous process of fusion into two, diminish till their size is reduced to a mini-

mum. A formation of spores—termed by Pfitzer auxospores—now occurs, which checks the regular process of division, and leads to the formation of cells possessing the maximum size of the species, and in all other respects precisely similar to the mother-cells. These primary cells commence anew the same process of division, which continuously gives birth to generations of cells, each more diminutive than the preceding. In some cases the auxospores are produced by actual copulation (Suriraya), like the zygospores of the Conjugatæ; in others, by a simple reproductive effort of individual cells (Molossireæ), like the swarm-spores of the Edogoniæ; and several intermediate conditions have been described by Schmitz, 'Quart. Jour. Mic. Sci.,' 1873.

Auzon. France; Département du Gard. Athermal waters, containing calcium sulphate and some hydrogen sulphide.

Also, the name of a mineral spring near Brionde, Département de la Haute-Loire. It contains sodium bicarbonate.

Avā. An intoxicating beverage, produced in the Sandwich Islands from the *Piper* or *Macropiper methysticum* by chewing the rhizome and allowing it to ferment in water.

Avagoo'da. The Telugu name of the *Trichosanthes palmata*.

Availles. France; a village near Poitiers. The waters contain iron, sodium and calcium chloride, and sodium sulphate. Also called *Abac*.

Avalanche theory. According to Pfleger, the result of stimulation of a nerve, as, for instance, the muscular contraction produced by irritation of a motor nerve, is greater the further the place of stimulation is removed from the organ excited; he explains this by the avalanche theory, according to which nervous influence gathers force as it descends. The facts on which the hypothesis is raised have been doubted.

Avaloo. The Telugu name for the species of mustard.

Avanāk. The Bengali name for the *Ricinus communis*.

Avāray. The Tamul name for *Cassia auriculata*.

Avēlate. (L. *a*, neg.; *velum*, a veil.) Without a veil or indusium.

Avella'na. (*Avella*, a city of Campania, which abounded with hazel nuts. F. *noisette*; G. *Haselnuss*.) The hazel nut. See *Corylus avellana*.

A. cathartica. (Καθαρτική, purgative.) Name for a purgative seed or nut, the produce of the *Jatropha curcas*. Also, of the nut of the *Jatropha multifida*.

A. in'dica. (L. *indicus*, Indian.) Name for the *Balanus myrpesica*, or ben-nut.

A. mexica'na. Name for the seed of the cacao tree, or the *Theobroma cacao*.

A. purga'trix. (L. *purgatrix*, purifying.) The systematic name of the garden spurge. Also, of the *Jatropha multifida*.

Avella'næ græ'cæ. (*Avellana*; Græcæ, Grecian.) An ancient term for sweet almonds.

Avellana'rius. (*Avellana*.) Applied to the grains of a granular rock when of the size of a small nut.

Avēma'voo. The Tamul name for *Careya arborea*.

Avēna. (L. *avena*, oats. F. *avoine*; I.

avena; G. *Hafer*.) The oat. The pharmacopœial name (E.) for the seeds of the *Avena sativa*.

A Genus of the Nat. Order *Gramineæ*, having subterete spikelets; flower glumes not keeled; lowest flower bisexual; fruit hairy at apex.

A. excortica'ta. (L. *ex*, out of, from; *corticatus*, provided with a bark. G. *Hafer-grütze*.) Groats.

A. fatua. Linn. (L. *fatuus*, foolish.) Wild oats.

A. nu'da. (L. *nudus*, naked.) Pill corn, short oat, naked oat. The variety preferred for making groats.

A. sati'va. Linn. (L. *sativus*, that which is sown. F. *avoine*; I. *avena*; G. *Hafer*.) The common oat. Panicle loose, equal-sided; glumes two-flowered, longer than the florets; florets smooth, bifid. The seeds are called oats. See *Oatmeal*.

A. strigo'sa. Schreb. (L. *strigosus*, full of furrows, thin.) The Spanish oat. Cultivated as the common oat.

Avena'cea. (L. *avena*.) A Tribe of the Family *Gramineæ*. Spikelets multiflorous, bifid or trifid; the terminal flower often rudimentary; glumella and glume membranous; awn, when present, dorsal and twisted.

Avenæ far'ina. (L. *farina*, meal.) The pharmacopœial name (U.S.A.) for oatmeal.

A. semen. (L. *semen*, a seed.) The seed of the oat, *Avena sativa*.

Avenain. (G. *avenain*.) Name by Hermstedt for the gluten of the *Avena*.

Avenæ. The same as *Avene*.

Avenheim. (Ger.) A village near Strassburg, where an aperient saline spring arises.

Aveniform. (L. *avena*, oats; *forma*, likeness.) Having the form and size of an oat.

Avenin. The nitrogenous principle of the oat. It is obtained by washing oatmeal on a sieve, allowing the liquid to deposit the starch, heating it to 98.8° C. (209.8° F.) to throw down the albumen, and then precipitating the white avenin by means of acetic acid. It is composed chiefly of casein.

Aven'nes. A village in the Department of Hérault. Here is a saline spring; temp. 29° C. (84.2° F.)

Avenous. (L. *a*, neg.; *vena*, a vein. G. *aderlos*.) Without veins or nerves; veinless, nerveless.

Avens. (Mod. L. *avancia*, or *avencia*, a barbarous unintelligible synonym, now obsolete.) A name for the herb *Geum urbanum*.

A. com'mon. The *Geum urbanum*.

A. purple. The *Geum rivale*.

A. wa'ter. The *Geum rivale*.

A. white. The *Geum virginicum*.

A. yellow. The *Geum urbanum*.

Avenzo'ar. The name of two eminent Arabian physicians, father and son, who flourished in Spain during the twelfth century. The most important work of the former, the author of several treatises long held in high esteem, is the 'Taisir, or Introduction,' one of the most valuable works of the Arabian physicians. The younger Avenzoar, called by his Arabian biographer Alhafid, or the Descendant, was the pupil of his father, and succeeded him as chief physician to the Sultan Abdu-l-Mumen. He wrote several works on medicine, among others, one on the treatment of the eyes.

A'verich. A term for sulphur.

A'verie. The Tamul name of the *Indigofera tinctoria*.

Averoyne. An old name for southern-wood, *Asteriscia abrotanum*.

Averrhoa. A Genus of the Nat. Order *Osaliaceae*.

A. acida. (*L. acidus*, sour.) The *Cocos disticha*.

A. bilimbi. An Indian tree. Juice of fruit subacid; given in fevers.

A. carambola. A beautiful Cingalese tree. Fruit contains an acid watery pulp. Used as a pickle and in curries.

Averrhoa. An Arabian physician, born at Cordova in 1128, died at Morocco 1198. A great expounder of Aristotle.

Aversio. (*L. averto*, to turn away.) This familiar word was formerly used in the same sense as derivation or revulsion.

Avértebrate. The same as *Invertebrate*.

Avérin. A name in France for the vertiginous disease of sheep, more generally called tounis. Applied in common language to crassness, or sullenness, being said to be a disease of the mind, in which the patient becomes obstinate or furious.

Avés. (*L. avis*, a bird. *F. oiseau*; *I. uccelli*; *S. ave*, *pazaro*; *G. Vögel*; *Port. passari*.) A term employed to designate the class of birds in Zoology. They are characterized as feathered Vertebrata, with warm red blood, elliptical blood-corpuscles, complete double circulation, the heart possessing two auricles and two ventricles. They breathe by lungs. The bones of the skull are thin, but compact, and almost completely coalesced. The skull articulates with the spine by one articular process only. The jaws are destitute of teeth. The limbs consist of two wings and two legs. They sit on their eggs, and provide for their young when hatched.

A. cypris. See *Avicula cypris*.

Avésne. France; Department Héruault. A cold alkaline and saline mineral water; employed in diseases of the skin, syphilis, and scrofula. Season from the 15th June to the 15th September.

Avicen'na. An Arabian philosopher and physician, who acquired a European reputation; born in a hamlet near Bokhara, A.D. 980 (A.H. 370), and died in June, 1037, near Hainadai.

He wrote, amongst many other treatises, the 'Kitāb al-Kānūn fī'l-Tibb, or Book of the Canon in Medicine,' two volumes of which treat of physiology, pathology, and hygiene, two of the methods of treating disease, and the fifth of the composition and preparation of remedies.

Avicen'nia. (*Avicenna*, the celebrated Arabian physician.) A Genus of the Nat. Order *Myoporaceae*.

A. resinifera. (*L. resina*, resin; *fero*, to bear.) The *A. tomentosa*.

A. tomentosa. (*L. tomentum*, a stuffing for cushions.) The systematic name of the white mangrove of Brazil, growing there, in Cochinchina, and the Antilles. The fruit, boiled in water is eaten, and the leaves are employed as emollient cataplasms.

Avicula cypris. (*L. avicula*, a little bird; *cypris*, Cyprian.) Old name for certain odoriferous candles, said to have been made for burning in times of pestilence.

Also, sticks of wax of various colours, used for sealing letters.

A. hermet'ice. (*Ἡρμης*, Mercury.) Name

formerly given to a pretended universal salt collected from dew.

Avicula'ria. (*L. avicula*, a little bird.) Bodies shaped like birds' heads, with a movable mandible, which snap incessantly, and are either sessile or are seated upon slender and flexible peduncles found on the cells of many Polysen.

Avig'to pear. Name of the fruit of the *Persea gratissima*.

Avigna. Sanskrit name for *Curies carandae*.

Avila. The name of the fruit of the *Fouillea cordifolia*. A cucurbitaceous plant growing in the Antilles. The seeds, and the oil expressed from them, are emetic and purgative; they are used against the bites of serpents and in poisoning by the manchineel tree, *Hippomane mancinella*.

Aviros'trate. (*L. avis*, a bird; *rostrum*, a beak.) Resembling a bird's beak.

Av'is. (*L. avis*, a bird. *F. oiseau*; *G. Vogel*; *Gr. ὄρνις*.) A bird. Applied in the plural to a class of the oviparous vertebrates.

A. med'ica. (*L. medicus*, healing.) The medical bird. An old epithet of the peacock, *Pavo cristatus*, which was anciently used in medicine.

Avoca'do pear. The fruit of the *Persea gratissima*.

Avocat'ier. (Fr.) The *Persea gratissima*.

Avoga'dro, Amado'o. An Italian physicist, 1811.

A. law of. The different gases, both elementary and compound, under like conditions of temperature and pressure, contain in equal volumes the same number of molecules. This law, though first enunciated by Avogadro, is often connected with the name of Ampère.

Avoldupois weight. (*F. avoir*, to have; *du poids*, weight, or some weight.) 27.34375 gr. = 1 dr.; 437.5 gr. = 16 dr. = 1 oz.; 7000 gr. = 256 dr. = 16 oz. = 1 lb.

Avon springs. United States of America; New York State. Saline springs, of which three contain sulphur and one iodine.

Avran'cum. Old term for egg-shells. See *Aurancum*. (Quincy.)

Avrar'ic. Old name for hydrargyrum, or mercury. See *Auracic*. (Quincy.)

Avul'sion. (*L. avulsio*, from *avellere*, to tear away. *G. Abreissen*, *Trennung*.) A tearing off, as of a polypus, from its root.

Also, a wrenching away, as of a tooth, from its socket.

Awamuri. A spirituous liquor, prepared in Nepal from corn.

Awl-shaped. (*F. alatus*; *G. pfriemenförmig*.) Tapering to a slender point. Applied to leaves, receptacles.

AWN. (*Sv. agn*, chaff. *F. arête*; *G. Granne*.) The sharp point or beard of the palea, or, more rarely, of the glumes of grasses.

Aw'ned. (*F. arist.*) Having arista, or awns; aristate.

Awulgoon'dur. Deccan name for the species of *Boeswellia*, from which olibanum is obtained.

Awus'ada-nelli. The Cingalese name of the *Phyllanthus emblica*.

AX. France; Department Ariège. A sulphurous sodic mineral water, issuing by a large number of springs, the temperature of which varies from 25° to 70° C. (77° to 158° F.) It is

AXEA COMMISSURA—AXILLARY.

employed in the form of baths, and internally in cases of contracture, rheumatism, gout, and gravel, in chronic diseases of the skin, chronic bronchitis, and scrofulous affections. The climate is mild in summer and autumn, but the variations of the temperature are rapid, and the rain-fall great.

A'xa commissu'ra. (L. *axis*, an axle-tree; *commissura*, a joint.) Old term for that kind of articulation otherwise called Trochoides, in which one bone turns on the pivot of another, as in the atlo-axoid articulation.

A'xia. Name of a shrub in Cochin China, said to be tonic and diaphoretic.

A'xial. (L. *axis*.) Belonging to an axis.

A. em'bryo. Same as *Asile embryo*.

A. ske'ton. (Ἀξελών, a dried body.) The whole number of vertebrae, true and false, with their appendages and the cranial bones.

Axiferous. (L. *axis*, the point on which a wheel revolves; *fero*, to bear.) In Botany, applied to plants consisting solely of an axis without appendages.

Axifugal. (L. *axis*, an axle-tree; *fugo*, to fly.) Same as *Centrifugal*.

A. forcea. The tendency which a rotating body possesses to fly from the axis around which it is turning.

Ax'il. (L. *axilla*, the arm-pit.) The arm-pit.

In Botany, the angle formed by the axis and any one of its lateral appendages.

A. flower'ing. Flowering in the axils of the leaves.

Ax'ile. (L. *axis*, the axle-tree. G. *achselständig*.) Belonging to the axis.

A. bod'ies. The touch corpuscles.

A. em'bryo. In Botany, an embryo which has the same direction as the axis of the seed.

Ax'illa. (As if *Axis ala*; from *axis*, the point on which a wheel revolves; *ala*, a wing, also the arm-pit itself; because the movements of the arm, which is analogous to the wing of a bird, proceed from this point or axis. F. *aisselle*; G. *Achselhöhle*, *Achselgrube*.) Name for the cavity under the upper part of the arm and shoulder; the arm-pit.

Also, the angle formed by the stem of a plant and one of its lateral appendages.

Ax'il'ians. (L. *axilla*, the axilla. F. *axillant*.) Term applied to the leaf, in the axilla of which a bud develops, to distinguish it from other leaves.

Axilla'ris. (L. *axilla*, the arm-pit. F. *axillaire*; G. *achselständig*.) Of, or belonging to, the axilla or arm-pit.

A. gem'ma. (L. *gemma*, a bud.) The gem or bud proceeding from the axilla of a plant.

Axillary. (Same etymon.) Belonging to the axilla.

In Botany (G. *blattwinkelständig*), growing in, or springing from, the axil.

A. arch'es. Muscular bands which stretch from the border of the latissimus dorsi across the axilla and unite with the tendon of the pectoralis major, the fascia, the coraco-brachialis, or the biceps muscles.

A. artery. (G. *Achselschlagader*.) The axillary artery is a continuation of the subclavian, and extends from the lower border of the first rib to the lower border of the tendon of the teres major, where it becomes the brachial. It is covered in front by the pectoralis major and minor, and its relations to the last-named muscle

permits it to be conveniently divided into three parts, that above the pectoralis minor, the portion beneath it, and that below it. *The part above* the pectoralis minor is covered in front by the skin and superficial fascia branches of the clavi-cular nerves. Pectoralis major, costo-coracoid membrane, with branches of superior and acromial thoracic arteries, and the cephalic vein behind, is the first intercostal space, the first digitation of the serratus magnus, and the long thoracic nerve of Bell. To its inner side is the axillary vein, and to its outer side the brachial flexus. *The part beneath* the pectoralis minor is covered by the pectoralis major and minor in front; behind are the subscapularis muscle and posterior cord of the brachial plexus. To the inner side are the axillary vein and inner cord of the plexus, and to the outer side is the outer cord of the plexus. *The part below* the pectoralis minor has at first the pectoralis major in front, but afterwards is superficial, being covered only by the skin and fascia. Behind are the subscapularis, the tendons of the latissimus dorsi and teres major, and the musculo-spiral and circumflex nerves; to the inner side the axillary vein, with the ulnar and internal cutaneous nerves; and to the outer side the coraco-brachialis, the median and musculo-cutaneous nerves. The branches of the artery are the superior thoracic and the acromial thoracic, which are given off above the pectoralis minor, the alar thoracic and long thoracic from the artery beneath the muscle, and the anterior and posterior circumflex arteries below the muscle. In about one case out of every ten the artery gives off a large branch, which either forms one of the arteries of the forearm or a large muscular trunk. (Gray.)

A. fas'cia. A dense layer of connective tissue extending from the thorax to the arm, and forming the base of the axilla, when the arm is abducted. It is continuous internally with the thoracic fascia, and externally with the brachial fascia; anteriorly with the fascia covering the pectoralis major, and posteriorly with that covering the latissimus dorsi and teres muscles.

A. glands. (G. *Achseldrüsen*.) The lymphatic glands of the axilla; they are numerous, but vary considerably in size. They are for the most part in close contiguity to the vessels. They receive branches from five sources: from the superficial and from the deep lymphatics of the arm, from the lymphatics of the lumbar region of the back and of the posterior part of the neck, and from the antero-lateral portions of the trunk.

A. nerve. The circumflex nerve of the arm.

A. plex'us. (G. *Armgeflecht*.) A name for the brachial plexus of nerves, formed by the three last cervical and the first dorsal. See *Brachial plexus*.

A. space. This is an irregularly conical space with the base below, bounded internally by the first four ribs and intervening intercostal muscles, with the corresponding portion of the serratus magnus; posteriorly by the subscapularis, teres major and latissimus dorsi muscles; anteriorly by the two pectorals; and externally by the humerus, with the coraco-brachialis and biceps muscles. The base is closed by a dense aponeurosis, and the apex lies between the upper margin of the scapula and the first rib. The space is crossed by the axillary artery, vein, and brachial plexus of nerves, and contains numerous lymphatic glands and vessels.

AXILLATED—AXIS.

A. vein. (G. *Achselblutader*.) This vein is a continuation of the basilic. As it ascends it lies on the inner side of the axillary artery. It has almost the same general relations as the artery. It receives successively the circumflex, long and alar thoracic, and subcapular veins, the veins comites of the brachial artery, and near its termination the cephalic vein opens into it. The vein has a pair of valves opposite the lower border of the subcapularis muscle, and valves are also found at the mouth of the cephalic and subcapular veins.

Axillated. (L. *axilla*.) Having an axis disposed around a common axis.

Axilliferous. (L. *axilla*; *flor*, a flower.) Having flowers in the axilla.

Axin. An oleaginous product, employed as a soothing ointment, yielded by the large Mexican cochineal, *Coccus axinus*, which lives on the manihot, *Jatropha curcas*. It contains lauro-stearic acid, a little stearic or palmitic acid, and axinic acid.

Axine. (Ἀξιν, an axe.) A sexually mature form of trematode worm.

A. belones. (Βελόν, a sharp point.) Found in the branchia of *Bolone acus*.

Axinic acid. A fatty acid found in *Axin*.

Axinnach. (Arab.) Old name for fat formed in the upper eyelids of children. *Albumin*, *M.M.* ii, 10, p. 65.

Ax'is. (Ἄξιν, an axle-tree. L. *vertebra dentata epistropheus*; F. *axis*; I. *axis*; G. *swister Halswirbel*.) The second cervical vertebra is strong and triangular; the body is marked by a ridge, on either side of which is a depression, to which the longus colli muscle is attached. It is characterized by the vertical tooth-like process called the odontoid process, which ascends from the upper surface of the body to occupy the anterior osteofibrous ring of the atlas. This apophysis is about three fifths of an inch in height, and presents a smooth surface in front to articulate with the atlas; another behind, to play on the transverse ligament; and is rough above for the attachment of ligament. The superior articular processes, looking upwards and outwards, support the atlas, and are anterior and internal to the lower ones, which articulate with the third cervical vertebra. The superior notches are behind the articular processes. The transverse processes are small, and neither bifurcated nor grooved. The passage for the vertebral artery runs obliquely upward, outward, and backward. The laminae are thick and prismatic. The spinous process is large and strong, deeply channelled on the under surface, and tubercular at the extremity, for the insertion of the recti capitis, postici majores, and obliqui inferiores. The vertebral foramen is kidney-shaped. The bone has an extra point of development for the odontoid process (Ward). The rotatory movements of the head on the spine are effected by the rotation of the atlas and head, supported on the articular processes of the axis, round the odontoid process.

Also, a synonym of the modiolus of the cochlea.

In Botany, applied to the stem and root of a plant.

Also, applied to an imaginary line from the base to the apex of a pericarp.

Also (F. *axe*; G. *Achse*), name given to a right line, real or imaginary, passing through the centre of any body, being, as in the case of a

wheel, the object on which it acts or turns, or may be supposed to turn. The axis of the earth is that diameter about which it performs its diurnal revolution.

Also, applied to the centre of a mountain group.

A., antistellmal. (Ἀντί, opposite; ἄλκον, to slope.) Term for a longitudinal ridge of rock from which the strata decline on both sides, usually at very high angles; termed also an axis of elevation.

A., ascending. The stem of a plant.

A., cerebro-spinal. (L. *cerebrum*, the brain; *spinalis*, belonging to the spine. I. *axis cerebrospinalis*.) The central nervous system, consisting of cerebrum, cerebellum, medulla oblongata, and medulla spinalis, and occupying the axis of the body.

A., cochleae. (L. *cochlea*, a small shell, the cochlea of the ear. I. *axis della chiocciola*.) The modiolus.

A., costine. See *Costine axis*.

A. cord. A term by His for the place of fusion of the epiblast and mesoblast of the embryo beneath the primitive groove.

A., corp'uscle. The same as *Thalid corpuscle*.

A., cranio-spinal. (Κρανιον, the skull.) The same as *A., cerebro-spinal*.

A., cyl'inder. See *Cylinder-axis*.

A., descend'ing. The root of a plant.

A., hae'mal. (Ἄλκον, blood.) The aorta.

A., hypocotyle'deum. (Ἰσός, below; *cotyledon*. F. *axe hypocotylid*.) That part of the axis or stem of a plant which lies between the cotyledons and the uppermost radicles; from it neither roots nor buds are ever developed.

A., mak'd. (F. *axe mu*.) A condition of peripheric nerve-fibre in which the cylinder-axis alone appears to remain and to anastomose with other similar fibrils; it presents small cells in its course, or at the points of union, fusiform in the former case, and polygonal in the latter, which appear to be peripheral nerve-cells.

A., neural. (Νεῦρον, a nerve.) The same as *A., cerebro-spinal*.

A. of elevation. A term for the anticeclinal axis.

Also, a synonym of *Fault*.

A. of electric'ity. A term given to the line connecting the poles of certain minerals when exhibiting the phenomenon of pyroelectricity. The poles are opposite to each other, one being the place where positive electricity is most intense, the other where negative electricity is most manifest.

A. of lens. The straight line connecting the centres of curvature of spherical lens; and in the case of a plano-convex lens the perpendicular let fall from the centre of the spherical face to the plane face.

A. of magnet. The shortest line connecting the two poles of a magnet.

A. of turn'ing. A term used to designate an imaginary line on which the eye turns on the contraction of one of its muscles; it is perpendicular at this point to the muscle plane.

A., opt'ic. (F. *axe de l'œil*; I. *axis optice*; G. *Augenaxe, optischer Ass.*) The axis of the dioptric system of the eye; the anterior extremity of this corresponds to the centre or apex of the cornea, and the posterior extremity to a point situated between the yellow spot and the entrance

AXOID—AZADIRACHTA.

of the optic nerve. It is not identical with the visual line or axis.

Also, in a doubly refracting crystal, a line which represents a direction in which the double refraction does not occur. All crystals of this nature possess one such axis, and so are uniaxial; some possess two, and are biaxial.

A., pel'vic. (*Pelvis*. G. *Beckenachse*.) An imaginary line drawn at right angles to the planes of the brim, the several segments of the cavity, and the outlet of the pelvis, through their central points. It is a curved line, its upper extremity looking upwards and forwards towards the umbilicus; its lower extremity downwards and forwards.

A., syncl'nal. (Σύν, together; κλίνω, to slope.) Term for a longitudinal depression or trough, towards which strata of a hill or mountain chain decline.

A., thorac'ic. See *Thoracic axis*.

A., thy'roid. See *Thyroid axis*.

A., vis'nal. (F. *axe visuel, ligne visuel*; I. *asse visuale*; G. *Sehaxe, Gesichtslinie*.) The line of direction drawn straight from the object through the nodal point to its image formed at the yellow spot. The visual axis outside the eye lies above and to the inner side of the optic axis, and its posterior extremity on the retina consequently lies a little to the outer and lower side of the optic axis.

Axoid. (L. *axis*; ἄλδος, likeness.) Relating to the axis.

Axoido-atloid. See *Atlo-axoid*.

A.-atloide'us. (*Axis*; *atlas*.) The *Obliquus capitis inferior muscle*.

A.-mastoid'e'us. (*Mastoid process*.) The *Obliquus capitis inferior muscle*.

A.-occipita'lis. (*Occipital bone*.) The *Rectus capitis posterior major muscle*.

Ax'olotl. The male or female tailed larva or tadpole of the *Amblystoma*. One of the *Urodela* Batrachians.

Axon'ophyte. (Ἀξων, an axle; φυτόν, a plant.) An amentaceous plant the flowers of which surround a common axis.

Axophyte. (Same etymon.) The axis of the nutritive organs of a plant.

Axotomous. (Ἀξων, the axis; τμήνω, to cut.) Cleavable in one direction. Applied to cleavage, when it appears as a single plane, or face, perpendicular to the axis.

Axunge. A synonym of *Adeps prepa-ratus*.

Axun'gia. (L. *axis*, an axle-tree; *unguo*, to smear; because used for that purpose. F. *axonge*; G. *Schmalz, Schweinfett*.) The pharmacopoeial name (E.) of the fat of the *Sus scrofa*; the *Adeps* (L.), or *Adeps suillus* (D.), or hog's lard. The hardest and firmest part of the fat of animals. See *Adeps preparatus*.

A. articula'ris. (L. *articularis*, belonging to the joints.) Synovia.

A. balsam'ica. (Βάλσαμον, the balsam tree.) The *Adeps benzoatus*.

A. benzoa'ta. Belg. Ph. Benzoated lard. Powdered benzoïn 40, fresh lard 1000 parts; place in a vapour bath for two hours, and strain. The benzoïn prevents rancidity.

A. benzoïna'ta. The *Adeps benzoatus*.

A. castor'is. (L. *castor*, a beaver.) The soft, unctuous contents, formerly official, of a pair of oil sacs, terminating in the cloaca of the male beaver, *Castor fiber*. It is different from castor.

A. de mu'mia. (Arab. *mumia*, a kind of bitumen.) Old term for marrow or fat of bones; also called *mumia de medullis*. (Dornseus, Ruland, and Johnson.)

A. ga'di. (Γάδος, a kind of fish, perhaps the hake; whence *gādus*, the generic name of the cod.) Cod-liver oil.

A. lu'næ. (L. *luna*, the moon.) Name formerly given to a species of white bole. (Quincy.)

A. oxyge'na'ta. The *Unguentum oxygenatum*.

A. pe'dum tau'ri. (L. *pes*, a foot; *taurus*, a bull.) Neat's-foot oil. See *Oleum bubulum*.

A. pisci'na mari'na. (L. *piscinus*, belonging to a fish; *marinus*, belonging to the sea.) Cod-liver oil.

A. porci. (L. *porcus*, a pig.) Lard of the pig.

A. porci'na. (L. *porcinus*, of a hog. G. *Schweinefett*.) Another term for *Adeps suillus*, or hog's lard.

A. porci'na depura'ta. Belg. Ph. Purified hog's lard. Lard melted in hot water and strained through linen.

A. so'lis. (L. *sol*, the sun.) Name formerly given to a yellow species of bole.

Axylæ. (Ἄξυλος, without wood. G. *holzlos*.) Applied to those plants which do not develop woody fibre.

Axylous. (Same etymon. G. *holzlos*.) Without wood, or without woody fibre.

Ayally. Name of a kind of grass in St. Domingo; used as a laxative.

Ayaloo'gi. A name of *Aloes wood*.

Aya-pa'na. The *Eupatorium aya-pana*.

Aybor'zat. (Arab.) An old name for galbanum. (Quincy.)

Ayca'pher. (Arab.) Old term for burnt copper. (Quincy.)

Ayco'phos. (Arab.) Old term for the *Es ustum*, or burnt brass. (Ruland and Johnson.)

Ayden'dron. A Genus of the Nat. Order *Lauraceæ*.

A., Cuju'mary. Nees. The plant from which Cujumary beans are obtained; they are aromatic, and employed in indigestion.

A. laur'el. Nees. The *Ocotea pichurim*, which is supposed by some to produce *Pichurim beans*.

Aye-green. An old name of house leek, *Sempervivum tectorum*.

A'yloüs. (ἄυλος, without matter.) Incorporeal, immaterial.

A'yp'nia. (Ἀΰπνια. G. *Schlafllosigkeit*.) Sleeplessness.

A'yp'nous. (Same etymon. G. *schlaflos*.) Sleepless.

Ayri. A synonym of *Aibi*.

Aza'a. (Arab.) Ancient name for the *Terra rubra*, or red marl. (Ruland and Johnson.)

A'zac. Arabian name for the gum ammoniacum. (Quincy.)

Azad-i-du'rucht. Persian for *Azadirachta indica*.

Azadirach'ta. A Genus of the Nat. Order *Meliaceæ*.

A. in'dica. Juss. (F. *margousier*; Mal. *Arja bepon*; Tam. *Vaypum*; Tel. *Vepa*.) The neem or margosa tree. An Indian tree, 20 feet high. The bark, bitter, is used as a substitute for cinchona in intermittent fevers and chronic rheumatism. The

AZAGOR—AZOTIC.

bruised, fresh, or dried leaves, applied on common poultices, are said to prevent glandular tumours from coming to maturity, and rapidly remove psoa and other pustular affections. On the decline of smallpox the natives cover the body with the leaves of this tree. From the pericarp of the seed an acrid bitter oil is expressed, which is useful in leprosy and rheumatism, and is anthelmintic and stimulant. Used also externally in bad ulcers, and as a liniment in headaches. The bark of the roots, the leaves, and nuts, as well as an alkaloid, asedarin, extracted by Piddington, are used in the Antilles as a febrifuge.

Azagor. (Arab.) Ancient name for verdigris. (Castellus.)

Azalar. A name of the Peruvian cinchona.

Azalea. (Ἀζαλίος, dry; from ἀζαίω, to make dry.) A Genus of the Nat. Order Ericaceae.

A. arbores. (L. arbor, a tree.) The *A. pontica*.

A. pontica. (L. ponticus, belonging to the Black Sea.) The systematic name of a plant generally supposed to be the egoethron of the ancients; it yields by exudation a nectareous juice having intoxicating and poisonous qualities, and was supposed to be the cause of the pestilence which killed so large a number of the soldiers in the retreat of Xenophon, by means of the honey then eaten. See *Chamaerhododendron*.

A. procumbens. (L. procumbo, to prostrate one's self.) The *Loiseleuria procumbens*.

Azalein. The same as *Fuchsin*.

Azamar. (Arab.) Old name for minium, or the red oxide of lead; also for the hydrargyri sulphuretum rubrum, vermilion, or native cinnabar properly prepared. (Ruland.)

Azane. (Arab.) Term for a drop. (Quincy.)

Azar. Same as *Azane*.

Azarakhee. A name applied by Avicenna to *Strychnos nux vomica*.

Azarret. (Arab.) Old name for auripigmentum, or orpiment. (Ruland and Johnson.)

Azarole. The *Crataegus azarolus*.

Azarum. The same as *Azarum*.

A. cabaret. The *Azarum europaeum*.

Azoi. (Arab.) Old name for stramentum, or ink. (Ruland and Johnson.)

Azedarach. The *Azadirachta indica*.

Also, the pharmacopoeial name (U.S.A.) for the bark of the root of the *Azadirachta indica*, or *Melia azedarach*.

Azedarin. An alkaloid obtained from the *Azadirachta indica*; proposed as a substitute for quinine.

Azedegrin. (Arab.) Old name for the *Lapis hematites*. (Ruland and Johnson.)

Azedera cha amona. (L. amarus, pleasant.) The *Azadirachta indica*.

Azof. (Arab.) Old name for *Alumen scissum*, or scissile. (Ruland and Johnson.)

Azeg. (Arab.) Old name for vitriol. (Ruland and Johnson.)

Azeloinic acid. The same as *Cenanthylic acid*.

Azemafor. (Arab.) Old name for minium, or the red oxide of lead. (Quincy.)

Azema'sor. (Arab.) Old name for vermilion, or native cinnabar. (Ruland and Johnson.)

Azensali. (Arab.) Old term for moss

growing on stones; also, for a certain black stone found among gold. (Ruland.)

Azimmar. (Arab.) Ancient name for *Azustum*, or burnt copper. (Ruland.)

A'zius. (Arab.) Old name for a stone on which salts grow. (Ruland.)

A'zob. (Arab.) Old name for *Alumen saccharinum*. (Ruland.)

Azoben'zene. Same as *Asobenzide*.

Azoben'zide. $C_{12}H_{10}N_2$. Name given to a substance obtained by heating a mixture of nitrobenzine and sodium amalgam. It crystallizes in reddish plates, sparingly soluble in water, easily in alcohol and ether.

Azocarb'ic. A synonym of *Opanis*.

Azocarbide. A synonym of *Opanide*.

A. hy'dric. A synonym of *Hydrocyanic acid*.

Azocarbon'ic. A synonym of *Picric*.

Azocarburi'c. A synonym of *Cyanuric*.

A'zoch. (Arab.) A word applied formerly to the *Mercurius philosophorum*, or quicksilver extracted from any metallic body. See *Azwari*.

A'zock. Same as *Asoch*.

Azo'ic. (A, neg.; ζω, life.) Having no life.

Azolit'min. According to Kane, one of the colouring matters of *litmus*.

Azoll'ce. A Tribe of the Family *Rhizophoraceae*, according to some botanists, having the sexual organs located on the petiole.

Azodynam'ia. (A, neg.; ζω, life; δύναμις, power. G. *Lebenshaltigkeit*.) Loss, or lessening, of the powers of life.

Azoo'g'ony. (A, neg.; ζω, an animal; γένω, to produce.) The generation of imperfectly developed progeny.

Azoosperm'ia. (A; ζω, life; σπέρμα, seed.) Loss or diminution of vitality of the spermatozoa, or their absence from the ejaculated fluid.

Azorella. A Genus of the Nat. Order *Umbelliferae*, growing in the neighbourhood of the Straits of Magellan. The different species supply a gum-resin, which is used as an aromatic and stimulant.

A'zores. Islands in the Atlantic Ocean, some 800 miles off the coast of Portugal. The climate is like that of Madeira, being temperate and equable, but the moisture of the atmosphere is very great.

Azosul'phate. A synonym of *Nitrosulphate*.

Azotate. (*Azote*.) A synonym of nitrate.

Azotation. (*Azote*.) A term for the fixation of atmospheric nitrogen by plants, herbivorous animals, and carnivorous animals deprived of albuminous substances, or subjected to starvation.

Azote. (A, neg.; ζω, life; because unfit for sustaining life. F. *azote*; G. *Azet*, Nitrogen, Stickstoff, Stickluft.) Another name for nitrogen gas.

Azoted. (*Azote*.) Nitrogenised.

Azoteneses. A term for a class of diseases, including scorbutus, gangrene, and cancer, supposed to depend on excess of azote or nitrogen in the tissues.

A'zoth. (Arab.) The same as *Asoch*; also, a name for brass; also, a panacea made from mercury, gold, and silver.

Azot'ic. (*Azote*. G. *azotisch*, Stickstoffhaltig.) Belonging to azote or nitrogen.

A. ac'id. A synonym of *Nitric acid*.

AZOTISED—AZYGOS.

Azotised. (*Azote.*) Nitrogenised; charged with nitrogen.

A. substances. The immediate constituents of the animal body containing nitrogen; they are albumin, fibrin of blood, myosin, syntonin, casein, globulin, gelatin, chondrin, salivin, kreatin, kreatinin, pepsin, mucin, keratin, pigment, hæmoglobin, urea, uric acid, hippuric acid, inosuric acid, sarcosin, leucosin, tyrosin, lecithin, neurin, and the biliary nitrogenous compounds.

Azotite. (*Azote.*) The same as *Nitrite*.

Azotous. (*Azote.*) The same as *Nitrous*.

Azotum. Same etymon and meaning as *Azote*.

Azoturina. (*Azotum*, azote or nitrogen, which is the chief constituent of urea; *urina*, the urine.) Term for a class of diseases characterised by a great increase of urea in the urine.

Also, a synonym of *Diabetes insipidus*.

Azotus. (*Azote.*) A synonym of *Nitrate*.

A. argenticus. The *Argenti nitras*.

A. argenticus fusus. (*L. fusus*, melted; from *fundo*, to pour out.) The *Argenti nitras fusa*.

A. hydrargyrus liquidus. (*L. hydrargyrus*, mercury; *liquidus*, liquid.) The *Hydrargyri nitras*.

A. hydrargyroso-ammonicus. The *Mercurius solubilis Hahnemanni*.

A. hydrargyrosus. (*L. hydrargyrus*, mercury.) Mercury nitrate.

A. plumbicus. (*L. plumbum*, lead.) Nitrate of lead.

A. potassicus. Potassium nitrate.

A. sodicus. Sodium nitrate.

Azragar. (Arab.) Old term for verdigris. (Ruland and Johnson.)

Azub. (Arab.) Old name for alumen or alum. (Ruland and Johnson.)

Azu'bo. (Arab.) Name formerly given to a certain chemical vessel. (Ruland and Johnson.)

Azuc. (Arab.) An old name for red coral. (Ruland and Johnson.)

Azulene. $C_{16}H_{13}O$. A blue liquid of sp. gr. .910, boiling at $302.2^{\circ}C$. ($576^{\circ}F$.) It is supposed to cause the blueness of volatile oils, and with resin the green or brown colour. Also called *Cerulein*.

Azulmic acid. (*G. Azulminsäure.*) Name given to a black substance deposited during the spontaneous decomposition of hydrocyanic acid, which is very similar to ulmic acid.

Azulmin. Another term for azulmic acid.

Azur. A name of coral.

Azuro. A name of smalt.

Also (*F. azur*, *azuré*; *G. azurblau*, *himmelblau*), of an azure-blue colour, like ultramarine, and brighter than *Ceruleus*.

A. stone. (*F. lapis lazuli*; *G. Lasurstein.*) A name for the *Lapis lazuli*, from its colour.

Azurium. Old term for a preparation of two parts mercury, one third part sulphur, and one fourth sal ammoniac. Albertus Magnus, *Chymia*, in *Th. Chym.* vol. ii, p. 437.

Azygos. (*A. neg.*; ζυγός, a yoke.) The same in all respects as *Azygos*. Formerly applied to the sphenoid bone, as having no fellow.

A. processus. (*L. processus*, a projection.) The rostrum of the sphenoid bone.

Azygos. (*A. priv.*; ζυγός, a yoke. *F. azygos*; *G. ungepaart.*) Without a fellow, or corresponding part; unyoked.

This word has hitherto had no distinct character assigned to it, being unintelligibly used sometimes as a name of a muscle, &c., and presented *per se*, as if it were an indeclinable noun. It is an adjective as here stated, and so agrees with *musculus*, *processus*, *vena*, one of which must always be expressed or understood, in its employment in medical language.

A. artery. (*A. neg.*; ζυγός, a yoke. *L. arteria articularis genu medii*; *F. artère articulaire moyenne*; *G. mittlere Kniegelenkarterie.*) Generally a branch of the popliteal artery given off opposite the back of the knee-joint, but occasionally of one of the superior articular arteries. It penetrates the posterior ligament of the joint, and supplies the ligamentous structures, the fat, and the synovial membranes.

A. glandulæ thyroideæ. The *Levator thyroideæ muscle*.

A. pharyngis. A small muscle lying in the middle line between the upper and middle constrictors of the pharynx; it arises from the pharyngeal spine of the basilar bone, and is inserted into the median raphe of the pharynx.

A. processus. Term for a process of the sphenoid bone, called the *Rostrum sphenoidale*.

A. uvulæ. (Dim. of *uva*, a grape. *L. Palato-uvularis*, *palato-staphylinus*, *staphylinus*, or *epistaphylinus*; *F. muscle azygos de la luette*; *G. Zäpfenmuskel.*) Occupies the middle line of the soft palate. It arises from the spine of the palate bone, and extends backward to the tip of the uvula. A thin layer of the palato-pharyngeus covers its upper surface; it elevates and shortens the uvula.

A. veins. These are three in number, one larger on the right side, two smaller on the left. The *right*, or *larger vena azygos*, commences by small branches coming from the upper lumbar vertebrae. It enters the thorax by passing through the aortic orifice on the right side of the aorta and thoracic duct, ascends on the right side of the bodies of the dorsal vertebrae till it reaches the level of the third intercostal space, when it arches forward over the right bronchus, and joins the superior vena cava just above the pericardium. It has one valve at the point where it arches forward. It receives in front the right bronchial and some œsophageal and mediastinal branches, on its right side the eight inferior right intercostal veins, and on its left side the lesser azygos vein and the common trunk formed by the left superior intercostal veins. At the level of its entrance into the superior vena cava the three superior right intercostals sometimes open into it by a single trunk.

The *left lower*, or *small azygos vein*, begins, like the right, in the upper lumbar veins, and often communicates with the left renal vein. Entering the thorax through the aortic opening, and through the crus of the diaphragm, it receives the four or five left inferior intercostal veins, and crosses at the level of the eighth dorsal vertebra, behind the aorta and thoracic duct, to join the right azygos, though it occasionally runs up to the left innominate vein. It receives some œsophageal and mediastinal branches.

The *left upper azygos vein* (Ellis and Breschet) is formed by offsets from the spaces between the superior intercostal and the highest branch of the lower azygos. Receiving three or four branches, the trunk either joins the lower azygos of its own side, or crosses the spine to open separately into the right vein.

AZYGOUS—BACCA

The vena azygos major is the persistent upper part of the right vena cardinalis of the embryo. The upper part of the left vena cardinalis remains as the left upper azygos vein, or as the left superior intercostal.

A. vena. See *A. veins*.

Azygos. (Same etymon.) Without a fellow.

A. ganglion. (Γάγγλιον, a tumour under the skin.) A ganglion of the sympathetic nerve, situated on the coccyx, and formed at the junction of the two terminal filaments of the great sympathetic nerve.

A. mus'cle of the thyroid gland. The *levator glandula thyroidea*.

Azy'mar. (Arab.) Old name for vermillion, or native cinnabar.

Azy'm'ia. (A, neg.; ζύμη, ferment. G. *Ungehehrtheit*.) A condition of non-fermentability, or of absence of fermentation, or of crudity.

A. hume'rum. (L. *Humor*, a liquid.) An old term for crudity of the humours.

Azy'mic. (Same etymon. G. *ungeheuer*, *ungesund*.) Unfermented, unleavened.

Azy'mos. (A, priv.; ζύμη, ferment.) Old term applied to unfermented or unleavened bread, as sea-biscuit, &c.; having no ferment.

Azymous. Same as *Azy'mic*.

B.

B. A contraction of Beaumé, and having reference to his areometer.

Also, of balsum, a bath.

B. A. A contraction of balneum aqua, a water bath.

Also, of balneum arena, a sand bath.

B. M. The initials of balneum maris, or maria, a bath of water; a water bath.

These letters, in formulæ and prescriptions, are the initials of the words balneum marinum, a bath of the sea, or sea-water bath.

B. V. These letters, used in formulæ and prescriptions, are the initials of the words balneum vaporis, a bath of vapour, or vapour bath.

Ba. The symbol of the metal barium.

Ba'al-shemen. Royal oil. Term applied to the balm of Gilead.

Ba'asen. Hungary, near Mediasch; situated in a pleasant valley, surrounded by woods and vineyards. Salt springs, containing iodine and bromine. Temp. 16° C. (59° F.) to 19° C. (66·2° F.); one spring is cold. The sodium iodide amounts to about half a grain to a pint, and the sodium bromide to one third of that amount. Used in chronic rheumatism, scrofulous enlargement of glands, uterine and ovarian congestions, syphilitic joint and periosteal affections.

Ba'cho. The Hindustani name of a plant found near Umritsir, which is used as an ointment in itch, and, in decoction, as an application to unhealthy ulcers.

Also, a small dark-coloured aromatic seed, which has been used in India in lepra. (Waring.)

Ba'bern. Russia; Government of Courland. A place about ten miles from Riga and from Mitau. Here are sulphuretted waters, containing 10·5 cub. in. of hydrogen sulphide, 1·4 gr. of sodium sulphate, 2·7 grs. of magnesium sulphate, 1·2 gr. of calcium sulphate, and 1·6 gr. of sodium chloride in one pint.

Babla. Bengali for *Acacia arabica*.

Bablah. An Indian name of the fruit of the species of *Acacia*.

B. of Egypt. The legumes of the *Acacia vera*.

B. of India. A commercial name of the legumes of the *Acacia nilotica*, or *A. arabica*. They contain much gallic and tannic acids. A

powerful astringent; used for tanning purposes.

B. of Sen'egal. The legumes of the *Acacia seyal*.

Ba'bo-mant'en. A Tribe of the Sam Family of the Hottentot race inhabiting the western region of the Ngami Sea.

Bab'ouny. The flowering heads of the *Santolina fragrantissima*. Used in Egypt, in infusion, as a stomachic.

Bab'reny. The Hindustani name of the seed of the *Embelia ribes*. Used as a vermifuge.

Ba'bu'ckr. A Tribe of Negroes inhabiting the West of Abaka and Luba and the East of Sandeh (Nyamnyam), probably belonging to the Nuba race.

Babul bark. The bark of the *Acacia arabica*. It is coarsely fibrous, of a mahogany colour, and of a bitterish and astringent taste. A decoction of ʒiiss to Oj of water is used, as an injection, in leucorrhœa, piles, and prolapsus ani, as a gargle in relaxed throat, and internally in chronic diarrhœa, in doses of ʒij twice daily.

Babu'na ka phul. Hindustani name of chamomile flowers.

Babung'era. A synonym of the Sandeh Tribe of Negroes.

Babu'ta. The Malay name of a low shrubby tree of Penang. Used in cutaneous affections. (Waring.)

Babuzica'rius. (Βαβζικω, to speak inarticulately.) An old term for ephialtes, incubus, or nightmare, from the indistinct attempts to cry out in this affection.

Babylonians. The race of men inhabiting Mesopotamia. They are of Semite origin.

Bacaris. A synonym of an ointment, mentioned by Galen, named the ointment of Lydia.

Bac'ca. (L. *bacca*. Gr. κόκκος; F. *bac*; I. *bacca*; S. *bays*; G. *Beere*.) An inferior, indehiscent, one-celled pulpy fruit, with parietal placentæ, having the seeds attached at first only to the placentæ, afterwards loose in the pulp.

B. composita. (L. *compositus*, put together.) A compound berry; one composed of small aggregated berries.

B. orienta'lis. (L. *orientalis*, eastern.) The fruit of the *Cocculus indicus*.

B. pyrena'ta. (Πύρη, the stone of fruit. G. *Steinbeere*.) A drupe.

B. spu'ria. (L. *spurius*, false. G. *Scheinbeere*.) A spurious berry, a pseudocarp, formed by the development of some part other than the ovary, as of the receptacle in the strawberry.

Bac'cæ ac'tes. (L. *bacca*; *acte*, a shrub good for the dropsy.) The fruit of the *Sambucus edulis*.

B. alkeken'gi. The ripe fruit of the *Physalis alkekengi*.

B. arbu'ti. The fruit of the whortleberry, *Arctostaphylos* or *Arbutus uva ursi*.

B. aurantii immatu'rae. See *Aurantia immatura*.

B. berber'idis. The fruit of the berberry, *Berberis vulgaris*.

B. berberum. (G. *Berberisbeeren*.) The fruit of the berberry, *Berberis vulgaris*.

B. berma'dæ. The fruit of *Sapindus saponaria*.

B. cap'sici. The same as *Capsici fructus*.

B. chamæmo'ri. The fruit of the cloud-berry, *Rubus chamæmorus*.

B. coccogni'dii. The fruit of the meze-reon, *Daphne mezereum*.

B. cube'bæ. The unripe fruit of *Cubeba officinalis*. See *Cubeba*.

B. dac'tyli. The fruit of the date-palm, *Phoenix dactylifera*.

B. eb'uli. The fruit of the elder tree, *Sambucus ebulus*.

B. fraga'rise. The fruit of the strawberry, *Fragaria vesca*.

B. halicac'abi. (Ἀλικακᾶβον, the alkekengi.) The fruit of the *Physalis alkekengi*.

B. junip'eri. The fruit of *Juniperus communis*. See *Juniper*.

B. lau'ri. See *Lauri fructus*.

B. lau'ri tos'tæ. (L. *tostus*, part. of *torreo*, to roast.) Laurel berries baked in dough and reduced to powder. Used as a stomachic and carminative.

B. mo'ri. The fruit of the mulberry, *Morus niger*.

B. myrt'i. Same as *B. myrtillorum*.

B. myrtillo'rum. Name for the fruit of the *Vaccinium myrtillus*.

B. norland'icæ. Name for the berries of the *Rubus arcticus*, or shrubby strawberry.

B. oxycoc'ci. (G. *Kransbeeren*.) The fruit of the cranberry, *Oxycoccus palustris*.

B. par'idis. The fruit of the *Paris quadrifolia*.

B. phytolac'cæ. See *Phytolacæa bacca*.

B. piperis gla'abri. (L. *piper*, pepper; *glaber*, smooth.) A synonym of *Cubeba*.

B. piscato'rise. (L. *piscatorius*, belonging to fishermen.) Fisherman's berries. A synonym of *Cocculus indicus*.

B. rham'ni cathart'ici. The fruit of the *Rhamnus catharticus*.

B. ribes ru'bri. (G. *Johannisbeeren*.) The fruit of the currant, *Ribes ruber*.

B. rubrum. Same as *B. ribes rubri*.

B. rubi fruticos'i. (G. *Brombeeren*.) The fruit of the blackberry, *Rubus fruticosus*.

B. rubi idæ'i. (G. *Himbeeren*.) The fruit of the raspberry, *Rubus idæus*.

B. sambu'ci. The fruit of the elderberry, *Sambucus niger*.

B. spinæ cervi'næ. (L. *spina*, a thorn; *cervinus*, belonging to a deer.) The fruit of *Rhamnus catharticus*.

Bacca'lis. (L. from *bacca*, a berry. G. *Beerentragede*.) Bearing berries.

Baccanella. Italy; in Tuscany, near Pondera. A richly carbonated iron water, of temp. 16° C. (60-8° F.), springing from blue clay mixed with tufa. It also contains traces of sulphurous acid and of sulphuric acid. Used in the sequelæ of gout and nervous affections, in chronic skin diseases, and in ulcers.

Bac'car. Same as *Baccharis*.

Bacca'ta cap'sula. (L. *bacca*, a berry; *capsula*, a small box.) A capsule, the inner layers of which are succulent.

Bac'cate. (L. *baccatus*, from *bacca*. F. *baccien*; G. *beerenartig*.) Having baccæ or berries; having a pulpy fruit.

Bac'charis. (Βάκχαρις.) A fragrant herb used by the ancients in their garlands against enchantments; supposed by some to be an *Asarum*, by others, variously, *Valeriana celtica*, *Nardum rusticum*, *Gnaphalium sanguineum*, and several other plants.

A Genus of plants of the Nat. Order *Compositæ*, several of the species of which are tonic and stimulating.

B. articula'ta. (L. *articulatus*, jointed, distinct. Braz. *cargueja*.) Hab. Brazil. An extract is used in dyspepsia, debility, and anæmia. (Waring.)

B. brasilia'na. The bruised leaves are used in ophthalmia in Brazil.

B. cunnelfolia. A synonym of *B. halimifolia*.

B. gandiaudis'na. (Braz. *cargueja doce*.) Used as *B. articulata*. (Waring.)

B. gemistelloid'es. Pers. Hab. Brazil. The bitter extract is used in intermittents, and as an anthelmintic.

B. halimifo'lia. (*Halimus*, the plant of that name; L. *folium*, a leaf.) A decoction is used in the United States of America as a demulcent in cough and phthisis. It is believed to be of value.

B. indica. Hab. Java. An aromatic and stimulant plant. Used as an addition to baths in atrophy of children. (Waring.)

B. ivaco'fia. An infusion of the leaves is used in Peru as a stomachic.

B. oblongifo'lia. Spreng. (L. *oblongus*, oblong; *folium*, a leaf.) Hab. South America. Used as a vulnerary.

B. ochra'cea. (Ὠχρα, yellow ochre.) Used in Brazil as a vulnerary. (Waring.)

B. prostra'ta. Pers. (L. *prostratus*, part. of *prosterno*, to prostrate one's self.) A native of the Peruvian Andes, where it is employed, in decoction, in dysuria.

B. trim'era. (Τρίσις, three; μέρος, a part. Braz. *cargueja amaragosa*.) Used as *B. articulata*.

B. vene'ta. The *Haplopappus discoideus*.

B. veno'sa. (L. *venosus*, full of veins.) Hab. South America. Used in intermittents.

B. visco'sa. Lam. (L. *viscosus*, sticky.) The *Psadia glutinosa*.

Baccharoides anthelmint'ica. Mönck. The *Vernonia anthelmintica*.

Bac'chia. (*Bacchus*, the god of wine. F. *bacchie*.) The pimples on the face of a drunkard. See *Aene rosacea*.

Bac'chica. The *Hedera helix*, ivy, so called because sacred to Bacchus.

Bac'chus. (Lat.) A sea fish; by some thought to be the mullet, *Mugil cephalus*.

BACCI—BACILLUS.

Baccl. A learned Italian physician. Born at Milan in the early part of the sixteenth century, died at Rome in 1567. He wrote on wines, poisons, baths, and many non-medical subjects.

Bacciferous. (L. *bacciferus*, from *bacca*, berry; *fero*, to bear. F. *baccifère*; G. *beerentragend*.) Bearing or producing berries.

Bacciform. (L. *bacciformis*, from *bacca*, berry; *forma*, shape. F. *bacciforme*; G. *beerenförmig*.) Having the shape of a berry.

Baccinia. A synonym of *Vaccinium*.

Baccin'ium. A synonym of *Vaccinium*.

Baccivorous. (L. *bacca*; *voro*, to devour. F. *baccivore*; G. *beerenfressend*.) Living on berries.

Baccula. (L. *baccula*, a small berry. G. *Beerrhen*.) A little berry.

Baccular. (Same etymon.) Having the fruit composed of numerous distinct bacciform ovaries.

Baculus. (Βάκυλος, a eunuch in the service of Cybele.) A eunuch; one who is castrated.

Bachelor's button. A name of the *Ranunculus acronitifolius*, and also of the *Lychnis vespertina*.

Bachelor. A French physician, born 1709, died in Paris, date unknown.

B.'s pills. There are several formulæ represented by the following:—Extract of black hellebore, myrrh, of each one part, carduus benedictus three parts; mix, and divide into pills of a grain each. A tonic; dose, 2—6, three times a day.

Bachelor. France; Isère, Arrondissement de Grenoble. Near this town is a small spring of cold sulphuretted sodic water.

Bachschwefel. Switzerland; Canton Unterwalden. A sulphurous water of not much note.

Bachtelenbad. Switzerland; Canton Solothurn. Situate in a pleasant valley in the Jura Mountains, 1360' above the sea. The water, of a temperature of 9° C. (48.2° F.), springs from argillaceous ironstone and limestone. It contains calcium and magnesium carbonate, as well as potassium and magnesium chloride. There is also a whey-cure establishment.

Bachtia'ri. One of the Eranian family of men inhabiting the country extending eastward to Burudschird, Feridun and Tschahar Mahal, two days' journey from Ispahan; westward to the hills and to the plains above Dizful Schuster and Ram Hormuz; northward to the river Dizful, and southward to a line drawn from Deh Jur and Felat to the region of Kumish.

Bacia. (G. *Abtritt*, *Kloake*.) An outlet, a cloaca.

Bacillar. (L. *bacillum*, a stick.) Club-shaped.

Bacillaria'cese. (Same etymon. G. *Stäbthierchen*.) Synonymous with *Diatomaceæ*.

Bacillariæ. Same as *Diatomaceæ*.

Bacillarius. (L. *bacillum*, dim. of *baculum*, a stick. G. *stäbchenförmig*.) Staff-shaped; rod-like.

Bacillaris. (Same etymon.) Staff-shaped; rod-like.

Bacillary. (L. *bacillarius*, *bacillaris*, from *bacillum*, a small staff. G. *stäbchenförmig*.) Having the form of a small rod.

B. layer. The layer of rods and cones, one of the layers of the retina.

Bacilli. (L. *bacillum*, a little stick.) The narrow plates or valves of diatoms.

Bacilliform. (L. *bacillus*, a small staff; *forma*, likeness.) Rod-shaped.

Bacillum. (L. dim. of *baculum*, a stick. G. *Knebel*.) A little stick. A name applied of old to several iron implements.

Also (G. *Arzneistängelchen*), a cylindrical troche, or pastile, *Candela fumatis*.

A surgical instrument carrying a sponge. The rods of the *membrana Jacobi* of the retina.

The valve of a distom.

B. candent'ium. (L. *candeo*, to be glowing hot. G. *Brennstift*.) A caustic brush or pencil.

B. escharot'um. (Εσχάρωτική, fit to form an eschar. G. *Ätztübchen*.) A bacillum made with flour or gum and some caustic, as nitrate of silver, caustic potash, or chloride of zinc. Used to destroy cancerous or other tumours by insertion to a hole made by a knife.

B. fer'reum. (L. *ferrus*, made of iron. G. *Nagel*, *Bracheisen*, *Stocheisen*.) A nail, a pin.

B. iodoform'i. Iodoform mixed with gum, and introduced into one of the canals of the body to relieve pain.

B. liquorit'ice. (L. *liquiritia*, liquorice. G. *Hustentlangen*.) Pastiles containing liquorice and sugar. Used as a demulcent in hoarseness or cough.

B. resol'vens. (L. *resolvo*, to loosen, to disperse.) A bacillum containing iodine.

B. tannic'um. (G. *Tanninstift*.) Tannic acid mixed with gum or bread-crum and rolled into proper shape. A local astringent for the urethra or uterus.

B. tannic'um glycerin'um. Made as *B. tannic'um*, with the addition of glycerin.

Bacillus. (L. *bacillum*, a little stick.) A Genus of the Tribe *Desmobacteria*, of the Family *Bacteriaceæ*, in Cohn's classification. It includes some of the Bacteridia of Davaine. Distinguished from the other genus of the same tribe, *Vibrio*, by the straightness of the rods.

B. amylobacter. (Αμυλον, starch; βακτηρία, a rod.) A club-shaped form of Bacillus, described by Ph. v. Tieghem. It is coloured by iodine, and is motionless.

B. anthra'cis. (Ἀνθραξ, a carbuncle. G. *Milzbrandbacillen*.) The *Bacteridium anthracis* of Davaine. Found in the blood and diseased structures in milzbrand, or splenic fever of animals. It is homogeneous and unjointed when fresh, develops spores, and is probably a variety of *B. subtilis*.

B. lepro'se. (L. *lepra*, leprosy.) A form of uncertain existence, supposed to be the cause of leprosy.

B. mala'rise. (I. *malo*, bad; *eria*, air.) A form discovered by Krebs and Tommasi-Crudeli in the air and soil of malarious districts, specially in the Pontine marshes, and believed by them to be the cause of intermittents. It consists of small, narrow, longish-cylindrical spores, about half a micro-millemeter long, and rods of about the same breadth, and seven micro-millemeters in length. In the body of animals the spores develop into long filaments, which subsequently undergo transverse segmentation, so as to form a chain, in the segments of which new spores grow. They develop most freely in the spleen and the medulla of the bones.

B. minimus. (*L. minimus*, least.) A form found in the pneumo-enteritis or typhoid of pigs. The rods are finer and more delicate than those of *B. subtilis*.

B. subtilis. (*L. subtilis*, slender. *G. Heubacillen*.) The *Vibrio subtilis* of Ehrenberg. Very thin and flexible filaments, accompanying or causing butyric acid fermentation. It possesses active habits.

B. tremulus. (*L. tremulus*, trembling.) An elongated club-shaped Bacillus with spores, described by Cohn. It occurs frequently in putrefying vegetable infusions, in such quantities as to form a mucous scum. It has a peculiar trembling rotating movement. Both extremities are provided with a whip.

B. ulna. (*L. ulna*, the elbow.) Short, stiff, and thick filaments, with dense, finely granular plasma, occurring singly, or in two- or four-jointed straight or zig-zag chains.

Back. (*Sax. bac. L. dorsum*; *Gr. vōros*; *F. dos*; *I. and S. dorso*; *G. Rücken*.) The posterior surface of the trunk of the body; the part opposite to the belly. In animals it is usually the upper surface.

Backbone. The vertebral column.

Backstroke. A term given by Dr. Hope to the diastolic impulse which occasionally is felt, especially in hypertrophied hearts, in consequence of a sudden relaxation of the ventricles after a powerful contraction.

Also, a term applied to the inverse discharge of electricity from the earth to one end of a cloud, to restore the equilibrium when the other end of the cloud has discharged to the earth the direct discharge. It is not so violent or destructive as the direct discharge.

Bacon. (*Old Dut. backe*, a pig; *old Fr. bacon. F. lard*; *I. lardo*; *G. Speck*.) The salted and dried flesh of the pig. Pavy gives as its percentage composition nitrogenous matter 8.8, fat 73.3, saline matter 2.9, water 15.

Bacopa. A Genus of the Nat. Order Scrophulariaceæ.

B. aquatica. (*L. aquaticus*, belonging to water. *F. herbe aux brûlures*.) Used in Cayenne, as an emollient and cicatrizant in burns.

Bacsko-ra'ho. Hungary; near Szigeth. The water, which springs from the granite and gneiss, contains sodium, iron, and calcium carbonates, sodium sulphate and chloride, and some iodide. Used in splenic and hepatic enlargements in gout, rheumatism, scrofula, chronic skin diseases, and syphilis.

Bacteria cœæ. (*Βακτήριον*, a little staff. *F. Bacteriens*; *G. Bacterien*.) A Family of the Order Schizomycetes. The individuals consist of chlorophyllous cells of spherical, oblong, or cylindrical, sometimes twisted or wrinkled shape, which increase exclusively by transverse division, and live either separately or in cell-groups. They are divided by Cohn into four tribes:

1. *Sphaerobacteria* (*G. Kugelbacterien*), in which the cells are spherical;
 2. *Microbacteria* (*G. Stäbchenbacterien*), in which the cells are short and cylindrical;
 3. *Desmobacteria* (*G. Fadenbacterien*), in which the cells are filamentous;
 4. *Spirobacteria* (*G. Schraubenbacterien*), in which the cells are tortuous or screw-shaped.
- Bacteridium.** A Genus of the Family Vibrionæ, according to Davaine, and described by him as filiform, straight or bent, more or less distinctly articulated, in consequence of an im-

perfect spontaneous division, always motionless. Other members of the Bacteridia have been included under this name, not filiform but globular. The filiform Bacteridia are described by Cohn under the head *Bacillus*, and the globular ones under *Micrococcus*.

B. anthracis. (*Ἀνθραξ*, a malignant pustule.) The *Bacillus anthracis*.

B. aurantiacum. (*Mod. L. aurantiacæus*, of the orange, as in colour.) The *Micrococcus aurantiacus*.

B. brunneum. *Schröt.* A doubtful species.

B. cyanæum. (*Κυάνεος*, dark blue.) The *Micrococcus cyanæus*.

B. fermenti. (*L. fermentum*, ferment, yeast.) Described by Davaine as occurring in the leaven of wheat and barley. Generally short and slender, two-jointed, straight or bent, immobile, or having a Brownian motion. Occasionally they are composed of three or four joints bent at an angle.

B. glareosum. (*L. glareosus*, gravelly.) Davaine describes under this head certain minute, slender hyaline filaments.

B. intestinalis. (*L. intestinalis*, the intestines.) According to Davaine, this variety is found in the intestinal canal of many birds. The filaments are short and thick, having often a clear central space.

B. luteum. (*L. luteus*, yellow.) The *Micrococcus luteus*.

B. prodigiosum. (*L. prodigiosus*, wonderful.) The *Micrococcus prodigiosus*.

B. violaceum. (*L. violaceus*, violet coloured.) The *Micrococcus violaceus*.

Bacterium. (*Βακτήριον*, a little staff.) Defined by Dujardin as filiform, rigid, more or less distinctly articulated by imperfect division, having a vacillating, but not an undulatory, movement.

According to Luerissen, a Genus of the Family Bacteriaceæ, of the chlorophyllous Section of the Order Schizomycetes.

According to Cohn, Bacterium is the single Genus of the Tribe Microbacteria, of the Family Bacteriaceæ. Bacteria are short cylindrical or elliptical cells, hanging together in pairs whilst undergoing transverse division; occasionally in fours when the second cells have divided before the primary separation has been completed. When under favourable nutrient conditions, and well supplied with oxygen, they move very freely at times. They form no chains or threads, but they propagate in a connecting gelatinous mass, *zooglaæ*, in regard to which they are distinguished from the sphaerobacteria by the firmness of the intermediate substance, and by the absence of any finely granulated appearance. Cohn describes two species only, *B. termo* and *B. lincola*.

B. seruginosum. (*L. æruginosus*, verdigris coloured.) A species supposed to be the active agent in the production of the pigment of blue pus.

B. articulatum. (*L. articulatus*, jointed.) A species, described by Ehrenberg, of doubtful existence.

B. capitatum. (*L. capitatus*, having a head.) A doubtful species described by Davaine.

B. carbuncula're. (*L. carbunculus*, a little coal.) A form of bacillus stated by Davaine to be found in the blood of men and animals who have died with carbuncle. They are motionless, flat, straight, highly refractile, without inflexion

BACTEROID—BADEN-BADEN.

when short, and with one or two inflexions when long. They may attain a length of 0.06.

B. catenula. (*L. catenula*, a small chain.) A doubtful species described by Dujardin, said to have been found in typhoid fever.

B. cuneatum. (*L. cuneatus*, wedge-shaped.) A form described by Rivolta, and stated to exist in putrefying blood, in the intestine of horses and dogs dying from putrefactive diseases, and in the blood in the septic metritis of cows.

B. euche'tys. (*Eû*, well; *χρησ*, a crab's claw.) A doubtful species described by Ehrenberg.

B. lactis. (*L. lac*, milk.) A bacterium described by Lister as the cause of lactic fermentation in milk. It is motionless, most commonly occurring in pairs, sometimes in threes, fours, or even more.

B. lineola. (*L. lineola*, a little line.) The *Vibrio lineola* of Ehrenberg. Larger than *B. termo*; found in stagnant water, and where there is no putrefaction. The cells are distinctly cylindrical, about four times longer than broad, .0038—.0062 mm. broad, seldom curved, and possessing strongly refracting soft contents, beset with dark points. They are separate, or united in pairs. Their movement is effected by a terminal flagellum.

B. punctum. (*L. punctum*, a point.) A doubtful species described by Dujardin.

B. putredinis. (*L. putredo*, rottenness.) Probably *B. termo*.

B. synonymum. (*Εύς*, with; *σύννομος*, dark blue.) A species supposed to be the active agent in the production of the pigment of blue milk.

B. termo. (*L. termo*, a boundary.) The *Monas termo* of Ehrenberg. Cylindrical, two to five times as long as broad, about .0016 mm. long; often two-jointed, with a vacillating movement, produced by a terminal flagellum. It is found wherever putrefaction of either animal or vegetable matter is going on, and by many is believed to be the active agent of that process. When putrefaction ceases they cease to be found.

B. trilicula're. (*L. tris*, three; *loculus*, a little place.) The *Bacterium lineola*.

B. xanthinum. (*Ξανθός*, yellow.) A species supposed to be the active agent in the production of the pigment of yellow milk.

Bacteroid. (*Βακτηρίον*, a little staff; *ειδός*, likeness.) Having the appearance of a small rod, or resembling a bacterium.

Bactrianus. (*L. Bactrianus*, relating to Bactra. *G. baktrianisch*, *baktrisch*.) Bactrian. Growing in, or belonging to, Bactria, an ancient country of Central Asia, lying south of the river Oxus, and extending to the Hindu Kush.

Bactris. A Genus of the Nat. Order *Palmaceæ*. Several kinds of this genus of palm, growing in Trinidad and New Grenada, yield good amadou. (Waring.)

B. minor. Willd. (*L. minor*, less.) Fruit contains an acid juice, from which a wine is made.

B. rotunda. (*L. rotundus*, round.) The *B. minor*.

Bactrylobium fistula. The *Cassia fistula*.

Baculiferous. (*L. baculum*, a stick; *fero*, to bear.) In Botany, cane-bearing, as the bamboo.

Baculiform. (*L. baculum*; *forma*, shape.) Rod-like.

Baculus ferreus. (*L. baculus*, a staff; *ferreus*, of iron.) An instrument for supporting a vessel.

Bac'zuch. Hungary. An alkaline carbonated chalybeate water, of 8° C. (46.4° F.), springing from the granite and mica slate. It is tonic and diuretic.

Bada'gar. A tribe of the Kanarese group of the Dravidical race inhabiting the Nilagiri woods between Maisur and Koimbatur.

Bada'ward Shookai. The Hindustani name of the twig, leaves, and flowers of *Cacalia sonchifolia*, growing in the Himalayas. Used as a stimulant and expectorant. (Waring.)

Badella. The same as *Bdella*.

Bad'en. Austria; near Vienna, in a broad valley at the foot of the Wienerwald, 670 feet above sea level. The *Therma pannonica* of the Romans. The mineral waters spring from the foot of the Calvarienberg dolomitic limestone and conglomerate by thirteen sources, which vary in temperature from 35° C. to 45° C. (95° F. to 104° F.) They contain calcium, sodium, and magnesium carbonate, calcium, potassium, and sodium sulphate, sodium and magnesium chloride, carbonic acid, and a little sulphuretted hydrogen, with nitrogen and oxygen. The accommodation is good, and many of the baths very large, affording accommodation for nearly two hundred bathers at once, who remain in for a long time. The waters are little used internally, and then chiefly mixed with milk, whey, or other mineral waters. They are used in chronic catarrh of the bronchial tubes and of the bladder, in chronic skin diseases, in chronic rheumatism, and scrofula. Mud baths are used in chronic lymphatic swellings, in scrofulous ulcers, in caries and necrosis, in chronic joint diseases, in rheumatic stiffenings, and chalk-stones.

Bad'en in Aargau. Switzerland; near Zürich; a pleasant, quiet place, beautifully situated at the foot of a hill on the left bank of the Limmat, 1180 feet above sea level, with a mild winter and a hot summer climate. Mineral waters springing from the Jurassic formation, at a temp. of about 46° C. (114.8° F.), and containing calcium, sodium, and magnesium sulphate, sodium chloride, a little lithium chloride, calcium and magnesium carbonate, carbonic acid, nitrogen, and a little sulphuretted hydrogen. Many Algae are found in the water, which are referred to the Genus *Beggiatoa*. They are used in chronic rheumatism, gout, scrofula, neuralgia, menstrual troubles, hemorrhoidal disorders, and chronic mercurial poisoning.

Bad'en-Baden. Germany; in the Grand Duchy of Baden, at no great distance from Strasburg. A very pleasant town on the river Oos, at the outskirts of the Black Forest. The arrangements for visitors are excellent; the climate is mild, but somewhat variable. Indifferent waters of no active properties, and of a temperature of 46° C.—71° C. (114.8° F.—159.8° F.), containing small amounts of calcium, magnesium, and ammonium carbonate and sodium chloride, with carbonic acid. Lithia and arsenic are found, but in such small quantities as to be inefficacious. The water is drunk pure, or with milk, whey, or other mineral waters, and is used internally and as a bath in chronic bronchial catarrh, especially in scrofulous and gouty persons, in gout, joint-contractions, chronic rheumatism, and scrofula. Extract of fir leaves is often used as an adjunct.

Baden is also used as a winter residence on account of its mildness.

Badenweiler. Germany; Grand Duchy of Baden, near Mühlheim, in the Black Forest. A beautifully-situated place, 1450 feet above sea-level, in a mild and equable climate, where the west wind predominates; it is used on this account as a climatic resort. Indifferent waters, of a temperature of 27.5° C. (77.5° F.), containing small quantities of sodium, potassium, and calcium sulphate, calcium chloride, and calcium and magnesium carbonate. Algae of the Genera *Hyphothrix*, *Stigeoclonium*, and *Ulothrix* are found in the waters. They are used in chest affections.

Badexahr. The same as *Bezoar*.

Badger. (*F. blaireau*; *L. tasso*; *G. Dachs*.) The *Meles tazus*. Its flesh is said to be good.

Badhumm. A cereal resembling millet, inhabiting Ceylon, and used as food.

Badiağa. A marine Alga, the powder of which is used in Russia to procure the absorption of ecchymoses.

Badiane. (Fr.) The seed of the star anise, *Illicium anisatum*.

Badiera. A Genus of the Nat. Order *Polypalacea*.

B. diversifolia. (*L. diversus*, separate; *folium*, a leaf.) Hab. West Indies. The wood is used as a substitute for guaiacum. The seeds contain an aromatic oil.

Bad'iri. An urticating plant of Amboyna. Used as a whip to make infants walk.

Bad'isis. (*Badīz*, to walk. *G. Einkerkeisen*.) Walking. Galen, *Meth. Med.* i, 6.

Badis'mus. (*Badīz*, to walk. *G. Einkerkeisen*.) Walking.

Bad'ius. (*G. kastanienbraun*.) Brown or chestnut colour.

Badmug-baya. The Hindustani name of *Melissa repens*. Used as a scent and a carminative. (Waring.)

Bad'scho. A synonym of *Wadscho*.

Badstofuh'ver. Sweden. An alkaline mine water of 83° C. (181.4° F.), springing to the height of 36 feet. It contains sodium sulphate, chloride, and carbonate, with a considerable amount of silicic acid.

Badu'ca. A caper, the *Capparis badiuca*.

Baduk'ka. Same as *Badu'ca*.

Bad'ula. A Genus of the Nat. Order *Myrinales*.

B. micrantha. (*Μικρός*, little; *άνθος*, a flower.) Hab. Bourbon and the Mauritius. The leaves and root are used in urinary disorders, and as a diuretic in dropsy.

Bad'ulam. The *Ardisia humilis* of Ceylon, where its fruit yields a syrup, which is used to allay heat and thirst in fevers.

Bad'zar. The same as *Bezoar*.

Beck'ca. A Genus of the Nat. Order *Myriales*.

B. utilis. (*L. utilis*, useful.) Hab. Australia. Proposed as a substitute for tea.

Be'el. See *Bela fructus*.

B. m'dian. See *Bela fructus*.

Benodactylous. (*Baiwa*, to walk; *δάκτυλος*, a finger.) Having feet fit for walking.

Beobotrys. (*Baiós*, little; *βότρυς*, a cluster of grapes.) A Genus of the Nat. Order *Myrinales*.

B. lanceola'ta. (*L. lanceolatus*, furnished with a point, lance-shaped.) A synonym of *B. picta*.

B. picta. (*L. pictus*, painted.) Hab. Abyssinia. A species the dried fruit of which is used as a vermicide, and called *Saoria*.

Baer, Von. A Russian physiologist. Born 1792 in Esthonia. His chief work was 'De ovi Mammalium et Hominis,' published in 1827; died 1876.

Von Baer's Classification of Animals (1828) is founded on their development. Commencing with the lowest, he divides them into—(1) those developing from a germ, or (2) from an egg containing a germ. Of the former he appears to have known no type; the latter he divides into (a) animals with radiate development, (β) with complex or convoluted (gewundene) development, (γ) with symmetrical elongated type of development, and (δ) with double symmetrical development, which last are represented by the Vertebrata. These have a vertebral column, dorsal and ventral laminae, nerve tube, branchial slits, and possess (A) branchiae or (B) a urinary sac growing forwards. Group A either have no true lungs or possess lungs. Those with no true lungs, and in which the skeleton does not ossify, are the cartilaginous fishes; but if the skeleton ossifies, the osseous fishes. Those with lungs are represented by the Amphibia; if the branchiae persist, we get the Sirenidae; if they persist externally, the Urodeles; if they become enclosed, the Anura. Group B is divisible into (a) those without an umbilical cord, and (b) those with an umbilical cord; a either have no wings or air-sacs—Reptilia; or have wings and air-sacs, and constitute Aves; b are Mammalia, and are again divisible into those in which the umbilical cord soon separates, either (as he then thought) without connection with the mother—Monotremata; or after a brief period of connection with the mother—Marsupials; or the umbilical cord remains for a longer period. In this case the yolk-sac may grow considerably or may grow but little. If it grow considerably, and the allantois increases slightly, Rodentia; moderately, Insectivora; to a great extent, Carnivora. If the yolk-sac grow but little, and the allantois grows but slightly, whilst the umbilical cord is very long, Apes, Man. If the allantois grows very long, and the placenta is in separate masses, Ruminantia; if expanded, Pachydermata and Cetacea.

B. cavity of. (*G. Keimhöhle*.) The cleavage cavity; the segmentation cavity. The cavity formed, in all animals above the Protozoa, by the segmentation of the yolk and the formation of a double layer of cells at the periphery, which enclose a cavity.

B. vesicle of. The ovum of the human female, described by Von Baer in 1827, but said to have been seen previously by Von Graaf, Prevost, and Dumas.

Ba'tious. (*L.*, from *Betis*, the ancient name for a part of Spain now called Andalusia and Granada.) Originally the word was applied to the inhabitants, or the products, of Batis, and especially the wool; but of late it has been used to denote a blackish colour.

Ba'us. (*Baiós*, little.) Small.

Ba'fu Keng. A tribe of Bechuana Caffres inhabiting the interior of the South African Continent.

Bag. A tribe of Circassians inhabiting the northern side of the mountain chain of that

BAG—BAGNI DI ST. AGNESE.

country, near the origin of the rivers Kchods and Urup.

Bag. (Sax. *baelg*, a bulge; Gael. *baig*, a bag.) That which bulges out, a pouch, a sack.

B. of waters. The amnion and its contained fluid.

Baga. A race of Western Africa, allied to the Negro, inhabiting the coast district to the north-west of the embouchure of the Rio Pongas.

Baghir'mi. A race of men, allied to the Negro, inhabiting the region of Western Africa to the south of Bornu, below the Tsad Sea. They are the representatives of a special group of languages.

Bagli'vi. An Italian physician born at Ragusa in 1669, died 1707. He advanced a solidist theory of disease, in opposition to the humoral pathology of the day, and considered that the membranes of the brain were the great source of force or power over the solids and liquids of the body.

Bagnac'cio del Colomba'jo. Italy; near Valagli. Chalybeate waters springing from grey chalk, in which sulphur is found. Incrustations of iron sulphate are observed in the neighbourhood. They are of a temperature of 18° C. (64.4° F.), and contain calcium, aluminium, sodium, and iron sulphates, with free carbonic, sulphuric, and sulphurous acids.

Bagne-bad. Switzerland. A sulphur bath in the Canton Valais. It was lost after an inundation, but has again been discovered.

Bagnères adour. The same as *Bagnères-de-Bigorre*.

Bagnères de Bigorre. France; at the foot of the Pyrenees, in the valley of the Adour. A pleasant, clean town, 1850 feet high, in a beautiful district, with a mild and pretty equable climate; it is used as a winter residence. The waters contain magnesium and sodium chloride, calcium and sodium sulphate, calcium, magnesium, and iron carbonate, carbonic acid, nitrogen, and a little oxygen; they have a temperature of 13° C.—61° C. (55.4° F.—123.8° F.), according to the spring. Used in chlorosis, anaemia, neuralgia, non-inflammatory catarrh of bronchial tubes and bladder, and in dyspepsia.

Bagnères de Luchon. France; Arrondissement de St. Gaudens, in the Pyrenees, close by the Spanish frontier. Aquæ convenarum of the Romans. A well-appointed town, 2000 feet high, beautifully situated, with a mild but changeable climate. Strong sulphur waters, of a temperature of 17.5° C.—56° C. (63.5° F.—132.8° F.), containing sodium, iron and manganese sulphate, sodium chloride, sodium, potassium and calcium sulphate, sodium, calcium, magnesium, and aluminium silicate, and much sulphuretted hydrogen. Used in chronic rheumatism, skin diseases, chronic ulcers, convalescence from brain affections, as paralysis, and in metallic poisoning.

Bagnères-saint-Felix. France; Lot, Arrond. de Gourdon. The mineral waters contain 15 grs. of magnesium sulphate in one litre. The temperature is 19° C. (67° F.).

Bagnette. (Fr., from *I. bacchetta*, a rod.) A term applied to the curved rods or spermatozoa which lie in bundles in the seminal capsule or nucleolus of some of the Infusoria, as the Paramecium, during conjugation.

Bagni a Acqua. Italy; not far from Pisa. Several springs of earthy waters, with some iron, from the muschelkalk and travertine,

both forms of limestone, of a temperature of 36° C. (96.8° F.). They contain a large quantity of calcium sulphate, with sodium and magnesium sulphate, calcium, magnesium, and iron carbonate. They are not drunk, but are used as baths in rheumatic and gouty affections, and in paralysis.

Bagni a Morba. Italy; in the valley of Possera. Fourteen springs arising from the grey limestone; iron sulphides and quartz are also present in the neighbourhood. The bath arrangements are good. The temperature of the water varies in the different springs from 20° C. (68° F.) to 49° C. (120.2° F.). They contain calcium sulphide, calcium, magnesium, and sodium chloride, calcium, magnesium, and iron carbonate; in two or three the iron is wanting; four contain sulphuretted hydrogen; and most of them carbonic acid gas. The springs Leopoldo and della Cappella are used in calculous affections and abdominal congestions, and as injections in leucorrhœa, menorrhagia, and dysentery. The springs S. Desiderata, S. Caterina, and S. Giuseppe are used in rheumatic affections and in paralytic affections, when there is no brain disease progressing. The springs della Scala and S. Francesco are used in chronic ulcers, œdema, and joint affections, in the form of baths and douches. The indifferent hot springs, del Piano and della Fossa, are used in rheumatic contractions. The springs S. Adelaide, S. Raimondo, S. Cammillo, del Cacio, and della Perla, most of which contain sulphuretted hydrogen, are used in skin diseases.

Bagni, Acqua del. Italy; a spring in the Temple of Serapis at Puzzuoli; there are also other springs. Muriated alkaline waters, arising from tufa and other formations. They contain calcium and magnesium bicarbonates, sodium sulphate and carbonate, sodium chloride, silica and iron. Used in intestinal catarrh, jaundice, liver diseases, kidney and bladder disorders, diabetes, rheumatic and neuralgic affections.

Bagni del Valli di Diavolo. Italy; in the Val d'Arno. Alkaline iron waters, springing from the limestone, of a temperature of 18° C. (64.4° F.). The right spring contains iron and calcium sulphate, free sulphuric acid, and carbonic acid. It has been used in mercurial cachexia. The left spring contains calcium and magnesium sulphate, sodium and magnesium chloride, iron and calcium carbonate, and carbonic acid.

Bagni della Scarpetta. A village in Italy, at the foot of the Apennines. Here is a cold sulphuretted spring. The mud baths of this place are in repute for cutaneous affections.

Bagni di Crana. Switzerland; Canton Ticino. Altitude 3270 feet. Sulphur waters of a temperature of 35° C. (95° F.). Badly arranged and not much used.

Bagni di Luc'ca. See *Lucca*.

Bagni di Sant'Elena. Italy; near Battaglia. Hot sulphur waters, springing from lava rocks. Three springs, varying in temperature from 40° C. (104° F.) to 71° C. (159.8° F.). Pleasant neighbourhood, and comfortable arrangements. They contain sodium, magnesium, and calcium chlorides, sulphates and carbonates, traces of iron, iodine, and bromine, sulphuretted hydrogen, and carbonic acid. Used externally in skin diseases and scrofula; internally, simple or with milk, in scrofula, atony of stomach, and constipation.

Bagni di St. Agnese. Italy; on the

BAGNIGGE WELLS—BAIE.

left bank of the Savio. Hot sulphuretted waters springing from the quartz, mica, lime, and slate rocks, of a temperature of 40° C. (104° F.) to 44° C. (111·2° F.). Two springs contain sodium chloride, sulphate, and carbonate, calcium and magnesium carbonate, nitrogen, carbonic acid, and one sulphuretted hydrogen. Used in gout, sciatica, rheumatism, joint and urinary affections, and lymphatic enlargements.

Bagnigge Wells. Two mineral springs, which were discovered in A.D. 1760 in the garden of Bagnigge House, Clerkenwell, London. The water was much used at one time, but is now lost. One appears to have contained magnesium sulphate and sodium chloride, and the other was a chalybeate.

Bagnio. (I. *bagno*, a bath.) In olden phrase a sweating-house; a kind of precursor of the present Turkish bath.

Bagno. Italy; near Antrodoto, in the Abruzzi. A very hot spring, but not used.

Bagno a Baccanella. Italy; in the Valley of Agra, near the Arno. An alkaline chalybeate water, 17° C. (62·6° F.), springing from the blue clay. It contains calcium and aluminum sulphate, sodium chloride, magnesium, calcium, and iron carbonate, and free carbonic acid. Used internally in atony of the stomach and indolence of intestinal action; externally, in rheumatic gout and skin diseases.

Bagno Bossole. Italy; near Siena. Hot chalybeate water, 39° C. (102·2° F.), springing from the calcareous slate. It contains sodium and calcium sulphate, sodium and calcium chloride, and magnesium and calcium carbonate.

Bagno d'Apollo. Italy; in the Valley of Paglia. An alkaline chalybeate water, 35° C. (95° F.), springing from calcareous slate and schist. It contains calcium carbonate and sulphate and chloride, calcium and magnesium chloride, iron carbonate, carbonic acid, oxygen, and nitrogen. Used in liver congestions, jaundice, and relaxations of mucous membranes.

Bagno del Prochio. Italy; near Pitigliano. An alkaline iron water, 39° C. (102·2° F.), springing from the limestone and travertine. It contains sodium chloride and sulphate, calcium chloride, sulphate, and carbonate, magnesium and iron carbonate, and free carbonic acid. Used in abdominal congestions and constipation.

Bagno di Colle. Italy; near Amagnolo. Sulphur water of a temperature 31° C. (87·8° F.). It contains sodium chloride and sulphate, magnesium chloride, sulphate and carbonate, calcium sulphate and carbonate, iron carbonate, sulphuretted hydrogen, and much carbonic acid. Used in gravel and kidney affections.

Bagno di Miemo. Italy; not far from Pima. Saline waters, at 23° C. (73·4° F.) to 31° C. (87·8° F.), springing from the mountain chain of Miemo, which consists chiefly of green serpentine.

Bagno d'Ischia. Italy; near Ischia. Saline chalybeate waters, containing sodium bicarbonate, sulphate and chloride, and iron bicarbonate, with a little potassium iodide, and traces of bromine. Used in articular rheumatism, gout, sciatica, glandular enlargements, and skin affections. Mud baths are used in joint-swellings, anchylooses, and chronic ulcers.

Bagno fresco. Italy; Ischia, at the entrance of the Val Tamburino. A weak carbonated water.

Bagnoles. France; in Normandy. Height 645 feet. A quiet place, situated in a valley surrounded by a rocky forest. Air warm, but often chill and damp in the evening. Waters sulphurous, of a temperature of 25° C. (77° F.). There are also iron waters. Used in dyspepsia, skin diseases, rheumatism, and paralysis.

Bagnoli. Italy; near to Naples. A sulphurous mineral water, of a temperature of 45° C. (113° F.). Used in rheumatism and skin diseases.

Bagnoli no dei Ruchiti'ci. Italy; in Tuscany. A mineral water, containing sodium carbonate 12 grs., calcium carbonate 10, and half a grain of oxide of iron, with 36 volumes of carbonic acid, in 25 ounces. Used in rickets as a bath, in which the patients stay for long periods.

Bagnols. France; near Lozère. Height 2317 feet. Sulphur waters, of a temperature of 31° C. (87·8° F.) to 42° C. (107·6° F.). The baths are large, and commonly employed while a current of water is running through them. Used in chronic rheumatism and skin diseases.

Baglia. (I., from *L. bacula*, a little berry.) A small berry. Applied to the fruits of the Myrtle and Amelanchier by Cæsalpinus.

Bagrim'ma. A synonym of *Baghirmi*.

Baguenaude. (Fr.) Term applied to fruits containing air in their interior, like those of the *Colutea arborescens* and *Physalis alkekengi*.

Baguenaud'ier. The *Colutea arborescens*.

Bagnet'te, tiges-à. (Fr.) Term applied to stems which, whilst very slender, rise perfectly straight to a great height.

Bahamas. West India Islands. The garrison is composed of black troops, and the rate of mortality from phthisis is very great; out of 100 deaths 60 were from diseases of the lungs; miasmatic diseases are very prevalent. The winds are often dry and cold, and the alternations of temperature rapid.

Bahamensis. (G. *bahamisch*.) Belonging to, or growing in, the Bahamas.

Baharut'se. A tribe of the Bechuanas inhabiting the region of South Africa to the west of the Kaffirs.

Bahel. The *Columnia longifolia*.

Bahel schulli. The *Genista spinosa indica*.

Bahi's powder. A synonym of *Goa powder*.

Bahlapi. A tribe of Bechuanas inhabiting the country westward of the Kaffirs.

Bahlok'wa. A tribe of Bechuanas inhabiting the region of South Africa to the west of the Kaffirs.

Bahmia. The *Hibiscus esculentus*.

Bahn'e. (Ger. a path.) Applied to the nerves through which motor impulses or sensory impressions travel.

Baho'bah. See *Baobab*.

Bahurai. The Bengali name of the fruits of the *Cordia myra* and *C. latifolia*.

Bai's spirit. A spirit distilled from the flowers of the *Bassia latifolia*. It has an odour as of Irish whisky and a pungent taste. When new it is highly deleterious, but when matured is a useful alcoholic stimulant.

Bai'ao. Cerussa, or plumbic carbonate. (Ruland and Johnson.)

Bai'se. Italy; ten miles west of Naples. Recommended as a winter resort for pulmonary

BAIE—BALANCE.

invalids. The climate is mild and not very variable, but it is very moist.

Baie. (Fr., from *L. bacca*, a berry.) A berry.

Bailey's itch ointment. Alum, nitre, sulphate of zinc, of each 1½ oz.; vermilion ½ oz.; sweet oil ½ pint; lard 1 lb.; oils of aniseed, lavender, and origanum, q. s. to perfume.

Baillement. (Fr.) Sighing.

Bains. France; in the Vosges Mountains, near Plombières and Epinal. Indifferent waters, of 29° C.—50° C. (84°—122° F.), springing from the sandstone, and containing very small quantities of sodium sulphate and chloride, and sodium and calcium carbonate. Drunk and used as baths in chronic rheumatic and gouty affections, paralysis, chronic intestinal catarrh and skin diseases.

Bains de la Reine. Algeria; Province of Oran. Salt waters, of a temperature of 35° C. (95° F.), recommended in rheumatism, scrofula, chronic hepatitis, and the sequelæ of malarious fevers. Used as a military establishment.

Bains Llu'pia. France; Département des Pyrénées orientales, not far from Perpignan. A mineral water, of a temp. of 38° C. (100°—4° F.), springing from felspathic granite. A water containing sodium sulphide. Used in skin diseases, bronchial and other mucous relaxations.

Bains Ma'met. France; Département des Pyrénées orientales. Mineral water, not far from, and very like in composition to those of, *Bains Llu'pia*.

Bains près Ar'les. Another name of *Amelie les bains*.

Baj'falu. Austria-Hungary; in the County of Szatmar. A strong sulphur water. Used in rheumatism and skin diseases.

Baj'mocz. Hungary. A town twenty-five kilometers from Kremnitz, on the Neutra. Here are thermal mineral waters, containing sodium sulphate, which were anciently, and are still, in repute.

Baj'or. Austria-Hungary; County Saros. A mild sulphur water.

Bajorva'gas. Austria-Hungary; County Saros. A sulphur spring.

Baj'ra. The Hindustani name of the small millet, *Panicum vulgare*.

Baj'ree. The same as *Baj'ra*.

Baju. The native name of the inhabitants of the Nicobar Islands. The word signifies "Men." They believe themselves to have come originally from Laoi or Great Nicobar.

Bajuva'ren. A German tribe believed to be identical with the ancient Marcomanni.

Baka'a. A tribe of Bechuanas inhabiting the country to the west of the Kaffirs.

Bakaki. A tribe of men inhabiting Fernando Po.

Bakalahari. A synonym of the *Balala*.

Bak'alai. A synonym of the *Bakele*.

Bak'as. The *Justicia adhatoda*.

Bak'chee. The *Babche*.

Bakele. A race of men inhabiting the west coast of Southern Africa. Their language is closely allied to that of the M-pongwe of the west coast and to the Ki-suaheli of the east coast of South Africa.

Bakers' itch. A disease of the skin, occurring on the fingers and wrists of bakers; by some, called psoria-is diffusa, by others, eczema or lichen agrius.

B's. salt. A term for carbonate of am-

monia, because it is used as a substitute for yeast in the making of bread.

Bakhatla. A tribe of Bechuanas inhabiting the country to the west of the Kaffirs.

Bakka. Indian name of *Cannabis sativa*.

Bak've'na. A tribe of the Bechuanas inhabiting the region to the west of the Kaffirs in South Africa, and between 28°—16° south lat.

Bala. The Hindustani name of *Peritium tortuosum*. Used as a febrifuge and as an embrocation.

Also, a name of the *Andropogon muricatum*.

Balade'a. A synonym of New Caledonia.

Bala'na. (Φάλανα, or φάλλανα, a whale. *G. Walffsch.*) A Genus of the Family *Balenidae*, Order *Cetacea*.

B. macrocephalus. (Μακρό, long, large; κεφαλή, the head.) A synonym of *Physeter macrocephalus*.

B. mystice'tus. (Μύσταξ, the upper lip; κήτος, a huge fish. *G. grönländische Walffsch.*) The Greenland, or right whale. The chief source of whalebone and of oil.

Balena'ta vir'ga. (*L. virga*, a rod. *G. Fischbeinstab.*) A rod of whalebone.

Balena'tus. (*L. balena*, a whale.) Belonging to, or obtained from, a *balena* or whale.

Balenoid'ea. (*L. balena*, whale; είδος, likeness.) A Group of the Order *Cetacea*. Nasal chambers communicate externally by two spiracles, and are unconnected with subintegumentary sacs over the skull; ribs united to the bodies of the vertebrae by ligament only; sternum unites with first rib only; skull large, nearly symmetrical; nasal bones short, but longer than in other *Cetacea*; maxilla extends in front of supra-orbital process of frontal; lachrymal bone present; rami of mandible united at the symphysis by ligament only; teeth present in foetal state, but soon give place to whalebone or the baleen plates.

Balenology. (*L. balena*, a whale; λόγος, a discourse.) The description and science of whales.

Balenopter'idæ. (*L. balena*, a whale; πτερον, a wing.) A Family of the Suborder *Mystacocete*, Order *Cetacea*. The porquals, or fin whales. They possess a dorsal fin; the ventral surface of the fore-part of the body closely marked with longitudinal furrows.

Balais ruby. The rose-coloured ruby, a species of carbuncle, to which many virtues were attributed: the reconciling of friends; the bringing health to the body, specially in diseases of the eyes and liver.

Bala'la. A tribe of Bechuanas inhabiting the country to the west of the Kaffirs, between 26° and 16° south lat.

Balam poolie. The Tamarind, *Tamarindus indica*.

Balana'tus. (*L. balanus*, a balsam nut. *G. cinbalsamirt.*) Anointed with balsam.

Balance. (*L. bilanx*, from *bis*, two, and *lanx*, a plate. Gr. τριτάν; *F. balances*; *I. bilancia*; *S. balanza*; *G. Wage*.) An instrument for determining weights, consisting of a lever, supported in its centre by a knife edge, and having suspended at the end of each arm a scale pan.

B., hydrostatic. The hydrometer.

B. of O'dier and Bla'che. A form of scales for the weighing of an infant without inconvenience.

BALANCEMENT—BALATA.

B. torsion. See *Coulomb's torsion balance*.
Balance'ment. (F. *balancement*, balancing.) A term by Geoffrey St. Hilaire to describe the condition in which inequalities of size of organs are balanced, one small organ being compensated by another large one, and *vice versa*.

Balanera. The *Halteres* of insects.
Balanda. (Βάλανος, an acorn.) The beech tree.

Balaneum. (Βαλανεύιον, a bath.) A bath.

Balanoutria. (Βαλανούτρια. G. *Badefrau*, *Badewärterin*.) A female attendant at a bath.

Balanide. (Fr.) A name given by some botanists to the fruit of the chestnut and beech, which is composed of two or three achenia contained in the same involucre.

Balaniferous. (L. *balanus*, an acorn; *fero*, to bear.) Bearing acorns or nuts.

Balani'us. (L. *balanus*, a balsam nut.) Prepared from balsam.

Balanismus. (L. *balanus*, a suppository.) The application of a balanus or suppository.

Balanites. A Genus of the Nat. Order *Aspyridaceae*.

B. egyptiaca. (Beng. *Hingen*; Tam. *Nunjoond*; Tel. *Gava*; Arab. *Hilege*, *Haladesch*; Egypt. *Egleg*; by Negroes *Soum*, and the fruit *Lalob*.) Hab. North Africa and India. This is the *Pernex* of the ancient Egyptians sacred to Ather. The nut is covered by a soft pulp, which, when unripe, is very bitter, and of an offensive greenish taste; when ripe it is eaten by the negroes. The unripe pulp is used as a purgative, the leaves as an anthelmintic.

Balanitis. (L. *balanus*, the glans penis; *itis*, suffix indicating inflammation. F. *balanite*; L. *balanitis*; S. *balanitis*; G. *Eichelentzündung*, *Eicheltripper*.) Inflammation of the surface of the glans penis, with purulent discharge. It may be simple or gonorrhoeal. Mr. Eichen uses the term to denote inflammation of the prepuce; other authors include inflammation of both prepuce and glans penis.

Also, an acorn-shaped fruit.

B. diabética. (Διά, through; βαίω, to go.) A form occurring in diabetes, and due to the lactic acid and acetic acid fermentation of the saccharine urine in the preputial sac leading to the development of fungi.

Balanoblennorrhoe'a. (L. *balanus*, the glans penis; *blennorrhoea*. G. *Eichelfluss*.) Blennorrhoea of the glans penis.

Balanocastanum. (Βάλανος, an acorn; κάστανος, a chestnut tree.) The *Bunium bulbocastanum*.

Balanoid. (Βάλανος, an acorn; είδος, likeness.) Resembling an acorn.

Balanophora. (Βάλανος, an acorn; φέρω, to bear.) A Genus of the Nat. Order *Balanophoraceae*.

B. fungosa. (L. *fungosus*, spongy.) A native of Tahiti, where it is used as a mild purgative. (Waring.)

B. gigantea. (L. *giganteus*, belonging to the giants.) Hab. Ava and North India. A parasitical plant, used as an astringent in Burmah. (Waring.)

Balanophoraceae. (Βάλανος, an acorn; φέρω, to bear.) An Order of *Monochlamydeae*, or a Family of the Order *Serpentariae*.

Leafless root-parasites, having amorphous fungoid stems of various colours; peduncles scaly; flowers in spikes; ovary inferior, one-celled; styles two; ovules solitary, pendulous; fruit one-seeded.

Balanophor'ees. The same as *Balanophoraceae*.

Balanoposthi'tis. (Βάλανος, the glans penis; πόσθη, the foreskin.) Inflammation of both glans penis and prepuce.

Balanorrh'gia. (Βάλανος, the glans penis; ῥήγνυμι, to break forth.) A synonym of *Gonorrhoea*.

Balanorrhoe'a. (Βάλανος, the glans penis; ῥίω, to flow. G. *Eicheltripper*, *Vorhautcatarrh*.) Purulent inflammation of the mucous membrane of the glans penis.

Balanos phoeniceos. (Βάλανος, a date; φοινίξ, a Phœnician.) The *Date palm*.

Balantes. A tribe of Western Africa, allied to the Negro, inhabiting the region between the rivers Geba and Casamanza.

Balantidium. A Genus of the Family *Bursariidae*, Suborder *Heterotricha*, Class *Infusoria*. Peristome at the anterior extremity of the body, like a chink, enlarged in front, without or with only a rudimentary oesophagus.

B. coli, Malmst. (*Colon*, the intestine of that name.) A translucent, egg-shaped species found in the mucus of the colon of man and in that of the pig.

B. duodenal. A species found in the duodenum of the green frog.

Balan'tion. The same as *Balan'tium*.

Balan'tiophthalmic. (Βάλαντιον, a bag; ὀφθαλμός, an eye.) Having the eye pouch-like.

Balan'tium. (Βάλαντιον, a bag.) The scrotum.

Balanus. (Βάλανος, an acorn. F. *balane*; G. *Meerschel*.) A Genus of the *Balanidae*. Acorn shell. The shell is formed by calcification of the first three cephalic segments of the animal, which is fixed head downwards to a plate, the *basis*, which closes the lower opening. The basis is fixed to some external object. The shell is limpet-shaped, or conical, and is open at the top, but capable of being closed by a lid, *operculum*. The animal has six thoracic segments, each bearing a pair of ciliated limbs, the *cirri*, which, being protruded through the opening of the shell, and being in action, bring food. No special respiratory organs. For development see *Nauplius*.

The glans penis and glans clitoridis.

Certain suppositories and pessaries were so called from their form.

Also, in Botany, a synonym of a *Glans* or *Nut*.

B. myrep'ica. (Μυραψικός, aromatic.) The Ben nut, *Moringa pterygosperma*.

Balaruc. France; Département Herault; near Montpellier, on the border of a salt lake, and with a mild climate. Strong salt waters, of 58° C. (136.4° F.), containing sodium and magnesium chloride, calcium and potassium sulphate, calcium carbonate, and a little magnesium and sodium bromide. Douches, and mud and vapour baths are employed. Used in scrofula, rheumatism, and paralysis.

Bala'sius la'pis. The *Bala's ruby*.

Bala'ta. A substance closely allied to gutta percha. It is the inspissated exudation of the *Sapota Mulleri*, growing in Guiana. It

softens at 50° C. (122° F.), and melts at 150° C. (302° F.) It is soluble in benzol, carbon bisulphide, and hot oil or turpentine; is somewhat acted on by absolute alcohol and ether, and is insoluble in alkalies and hydrochloric acid; strong nitric and sulphuric acids decompose it.

Balatón-Fured. See *Fured*.

Bala'tus. The inspissated juice, like gutta percha, of the *Achoas nulleri*.

Bala'tus. (L. *balo*, to bleat.) The bleating of a sheep or a goat, or a similar sound.

Balausta. (Βαλαύστιον, the flower of the wild pomegranate. *F. balausta*; *S. balaustis*; *G. Granatapfel*.) The botanical name of the fruit of the *Punica granatum*, or pomegranate. It is an inferior, many-celled, many-seeded, indehiscent fruit, with a hard pericarp crowned by the teeth of the calyx. Seeds irregularly attached to the walls or centre.

Balaustine. (Βαλαύστιον, the flower of the wild pomegranate.) Belonging to, or resembling, the balaustum, or pomegranate flower, which themselves are called balaustines.

Balaustum. (Βαλαύστιον, the pomegranate flower. *G. hochroth*, *granatroth*.) Bright red; like the pomegranate flower in colour.

Balaustum. (Same etymon. *G. Granatblüthen*.) The flower of the *Punica granatum*, or pomegranate.

Balbani. A living French embryologist.

B. nucleus of. (*F. viscinus embryonens*, *nucleus de Balbiani*; *G. Balbianische Kern*.) A nucleus stated by its discoverer to be present in all ova, in addition to the germinal vesicle. Its function he believes to be to cause the separation of the contents of the ovum into a germinal part and a nutritive part. Balbiani's nucleus accumulates around it the materials destined to form the plastic part or germ, which subsequently becomes the embryo, whilst the nutritive material remains around the germinal vesicle.

Balbidodes. (Βαλβιδόδης, with two projecting edges.) Used by Hippocrates, in *Mochlos*, for the cavity in the lower end of the humerus into which the olecranon process of the ulna is received.

Balbis. (Βαλβίς, a starting-point.) Any oblong cavity with a bar or stop. *Foësius*, in *Icon*, p. 118.

Balbis'ia. A Genus of the Nat. Order *Compositæ*.

B. borte'ril. Hab. Juan Fernandez. Yields an odoriferous resin.

Balbitodes. Same as *Balbidodes*.

Balbus. (*G. stammelnd*, *lallend*.) Stammering, stuttering.

Balbuties. (L. *balbutio*, to stammer. Heb. *balbel*, to stutter.) Stammering.

Bal'char. The Hindustani name of a species of *Nardostachys*. Used as a scent and a stimulant. (Waring.)

Bal'chus. A term of *Bdellium*.

Bald. (*S. pelado*. Φαλακρός; *F. chauve*, *pelé*; *L. calvus*; *I. calvo*; *G. kahl*.) Having no hair on the head.

B. ring'worm. A term applied to tinea tonsurans when it produces smooth, shining, hairless patches of skin.

Baldini, Acqua di. Italy; near Monte Catini. A sulphated, saline water, containing much sodium chloride. It is a purgative.

Baldmoney. (Said to be a corruption of *L. calde bona*, very good.) The *Ethusa mucum*.

Baldness. (Finnish, *peljes*, bare. *L. calvitie*; *Gr. φαλακρότης*; *F. calvitie*; *L. calveus*; *S. calvieus*; *G. Kahlheit*.) The absence of hair on parts where it should be. This may be congenital, which, as a rule, is a transitory condition, or acquired. Acquired baldness is divisible into senile, or calvitie, and premature. In senile baldness the hairs turn grey, and then fall out, as a result of the shrivelling of the tissues and interference with the nutrition of the hair follicles. Premature baldness is produced by attacks of fever or other exhausting diseases. See *Alopecia*, *Trichorexis nodosa*.

B. of tongue. Applied to syphilitic peoriasis of the tongue.

Bald'oon. Austria-Hungary; County Zips. A mineral water, containing calcium carbonate and free carbonic acid; one spring has an astringent taste.

Baldrian'ic acid. A synonym of *Valeric acid*.

Bald'win's phosphorus. Calcium nitrate. Prepared by evaporating a watery solution of the salt to dryness, continuing the heat till it fuses, breaking it into fragments while warm, and putting it into a close stoppered bottle; after exposure to the sun's rays for some time it will emit light in the dark.

Baleen. (L. *balena*, a whale.) Whalebone.

B. plates. The horny plates of whalebone which occupy the palate of the whale. They are triangular, with a thick smooth outer edge, which is nearly vertical; and are attached to a transverse elevation of the gum which occupies the palate. The third side is filamentous and somewhat concave; into it the tongue fits, so that when water is taken into the capacious mouth, the tongue is pressed against the whalebone, the water expelled through it, and the food of the animal, consisting of minute Mollusca, Crustacea, and fishes, is strained out and swallowed.

Balg'drüsen. (*G. Baly*, a bag; *Drüse*, a gland.) Follicular glands, like those at the root of the tongue and pharynx.

Balibabu'lah. The local name of the gum of the *Acacia farnesiana*.

Balil'pa. A race of Kaffirs inhabiting Fernando Po.

Balimba'go. The *Thespesia populnea*.

Bal'inese. A tribe of Malays inhabiting the Island of Bali, near Java.

Ball'olus. (*G. braunlich*.) Dark, swarthy, chestnut-coloured.

Baliosperm'um. (Βαλιός, spotted; σπρίμμα, a seed.) A Genus of the Nat. Order *Euphorbiaceæ*.

B. montanum. Muller. (L. *montanum*, belonging to a mountain.) Hab. India. A species which furnishes seeds, which are cathartic. The leaves are in great repute as a vulnerary.

Ballistoe'ra. Red earth. (Ruland and Johnson.)

Balius. The same as *Badius*.

Ball-and-sock'et joint. Same as *Enarthrosis*.

Ballabolla. An aboriginal tribe of the North-West Coast of America inhabiting the mainland to the east of Queen Charlotte's Island.

Ballis'mus. (Βαλλισμός, from βαλλῆναι, to dance.) A synonym of chorea; also, of tremor and of paralysis agitans.

Ballistæ os. (L. *ballista*, a military

BALLO DI SAN VITO—BALNEUM.

engine, like a bow for throwing projectiles; *os*, a bone.) The *Astragalus*.

Ballo di san Vito. (Ital.) Chorea. **Balloon.** (F. *ballon*. L. *ampulla*; I. *borsa*; S. *recipiente*; G. *Ballon*.) A spherical glass receiver, used in distillation, with one or two necks for adaptation to a retort, or to a second balloon when requisite.

Ballota. (G. *Schwarzandorn*.) Horehound. The *Ballota* of Pliny and Dioscorides. A Genus of the Nat. Order *Labiatae*. Calyx salver-shaped; corolla with tube included; upper lip erect, lower one trifid; anthers opening longitudinally; achenes rounded at end.

B. africana. Hab. Cape of Good Hope. Has an aromatic bitter taste. Used as a tonic and expectorant in pulmonary diseases, especially in asthma. (Waring.)

B. stitida. (L. *fatidus*, stinking.) The *B. nigra*.

B. lanata. (L. *lanatus*, woolly. F. *ballote oetonneuse*; G. *wollige Ballotte*, *Wolfschappkraut*.) An aromatic plant growing in Siberia. It contains tannin and an aromatic resinoid matter, picro-ballotin. Used in gout, rheumatism, and dropsy.

B. nigra. Linn. (L. *niger*, black. F. *marrube noir*, *ballote*; I. *cimiciotto erba lavanda marrubastro*; G. *schwarze stinkende Andorn*.) Black horehound. Stem pubescent; leaves petiolated, ovate, crenate; calyx teeth longer than tube of corolla. Has a disagreeable odour. Used as an antispasmodic and vermifuge; and in hysteria.

B. suaveolens. (L. *suaveolens*, sweet smelling. F. *ballote odorante*.) Jamaica spike-nard. Found in St. Domingo. Used as an emmenagogue, antihysterical, expectorant, and vermifuge; added to baths as an aromatic.

B. vulgaris. (L. *vulgaris*, common.) The *B. nigra*.

Ballottement. (F. from *ballote*, a ball.) The movement of a body which is pushed. A mode of diagnosing pregnancy. The woman being in a semi-recumbent, or other position, and the fundus uteri being steadied by pressure on the abdomen, the forefinger is introduced into the vagina, so as to touch the front part of the uterus near the cervix, a smart and sudden push is then given, and the finger held steady, a firm resistant substance is felt to move away, and in a short time to return on to the finger. This procedure proves the existence of a resistant body floating in a fluid, and it may certainly be inferred that the firmer substance is a foetus. Ballottement can only be practised from about the fourth month to the eighth, as before that time the foetus is too small to give the desired sensation, and in the last few weeks it fills up the cavity of the uterus.

Ballston Spa. A village in Saratoga County, New York. The water contains sodium iodide, sodium chloride, sodium bicarbonate, magnesium bicarbonate, calcium carbonate, iron carbonate and silica. There is also a sulphur spring. (Dunglison.)

Ballynahinch. Ireland; Co. Down. A weak chalybeate water, with a little sulphuretted hydrogen, in a hilly and pleasant country, with fair accommodation.

Ballyspellan. Ireland; near Kilkenny. A dissolved chalybeate spring.

Balm. (F. *baume*.) A contraction of *Balsam*.

Also, the *Melissa officinalis*.

Also, a fragrant or highly esteemed ointment. Also, an application or remedy for the relief of pain.

B. bastard. The *Melittis melissophyllum*.

B. common. The *Melissa officinalis*.

B. horse. The *Collinsonia canadensis*.

B. Indian. The *Trillium latifolium*.

B. mountain. The *Melittis melissophyllum*, and the *Monarda coccinea*.

B. of Gilead. See *Balsam of Gilead*.

B. of Mecca. Same as *Balsam of Gilead*.

B. stink'ing. The *Hedcoma pulegioides*.

B. tea. An infusion of the leaves of *Melissa officinalis*. Used as a diaphoretic drink in fevers and an emmenagogue.

B. Turkey. Oil of the *Dracocephalum moldavicum*.

B. water. The *Aqua melissa*.

Also, the Eau des carmes, the *Alcoolatum melissae compositum*.

Balmapple. The *Momordica balsamica*.

Balmoney. The *Chelone glabra*.

Bal'nea d'Avignone. See *Vignoni*.

Bal'neae. (Lat.) Spas, and also official baths.

B. canosae. (L. *balneum*, a bath; *canosus*, boggy.) Mud baths, as used at several mineral water places.

Balnearia. (L. *balnearia*. G. *Badergärth*.) The utensils and implements requisite for bathing.

Also, bathing rooms.

Balne'ris. (L. *balneum*, a bath.) Of, or belonging to, a bath.

Balneation. (L. *balneum*, a bath.) The act of bathing.

Balneography. (L. *balneum*, a bath; *γράφω*, to write. G. *Bäderbeschreibung*.) A description of baths.

Balneology. (L. *balneum*; *λόγος*, a discourse.) A treatise on, or the science of, baths.

Balneotechny. (L. *balneum*; *τεχνη*, art. G. *Baderbereitungskunst*.) The art of medical treatment by baths.

Balneotherape'ia. The same as *Balneotherapy*.

Balneotherapy. (L. *balneum*; *θεραπεία*, tending in sickness.) The knowledge of baths as curative agents.

Bal'neum. (L. *balneum*. Heb. *balan*; F. *bain*; I. *bagno*; G. *Bad*.) A bath.

B. amyliatum. (L. *amylum*, starch.) See *Bath*, starch.

B. animale. (L. *animalis*, living.) See *Bath*, animal.

B. aque. (L. *aqua*, water.) A water bath. See *Bath*, water.

B. arene. (L. *arena*, sand. F. *bain de sable*; G. *Sandbad*.) A sand bath. See *Bath*, sand.

B. arenosum. Same as *B. arene*.

B. arena. (L. *arena*, dry. F. *bain de sable*; G. *Sandbad*.) A sand bath. See *Bath*, sand.

B. aromaticum. Fr. Codex. (L. *aromaticus*, composed of spices. F. *bain aromatique*.) Species aromatica 500 grms., boiling water 10 litres. Infuse for an hour and strain. Used in diarrhoea, rheumatism, and phthisis.

B. bareginense. Fr. Codex. (F. *bain de Baréges artificiel*.) Artificial Baréges water bath. Sodium sulphide 60 grms., sodium chloride 60, dry sodium carbonate 30, added to the water necessary for a bath.

BALOKO—BALSAM.

B. cineris. (*L. cinis*, ash. *G. Aschenbad.*) A bath of hot ashes piled around the body to restore the heat.

B. cum acido chlorhydrico. *Fr. Codex.* (*F. pétilons chlorhydrique.*) Hydrochloric acid 100 grms., tepid water 6 litres. To be used as a foot bath.

B. cum carbonato sodico. *Fr. Codex.* (*F. bain alcalin.*) Sodium carbonate 250 grms. to sufficient water for a bath.

B. cum chlorureto hydrargyrico. *Fr. Codex.* (*F. bain de sublimé corrosif.*) Bichloride of mercury 20 grms., alcohol 50, distilled water 200; dissolve, and add to sufficient water for a bath. Used in venereal diseases.

B. cum chlorureto sodico. *Fr. Codex.* (*F. bain de sel marin.*) Sea salt 5000 grms. dissolved in sufficient water for a bath.

B. cum hydrargyro bichlorato corrosivo. See *Bath, mercurial.*

B. effervesco salinum. (*L. sal, salt.*) The same as *B. effervesco simplex*, with the addition of sodium chloride 1000 grms.

B. effervesco simplex. (*L. effresco*, to foam up; *simplex*, simple.) Sodium carbonate 500 grms. is added to the bath water, and then hydrochloric acid 500 grms.

B. ferri carbonici effervesco. (*L. effresco*, to foam up.) Sodium carbonate 500 grms. is added to the water of the bath, and, when the patient is in it, ferric sulphate 15 grms., dissolved in water 225 grms., and dilute sulphuric acid 15 grms., is poured in, and then hydrochloric acid 500 grms.

B. frigidum. (*L. frigidus*, cold.) A cold bath.

B. gelatinosum. See *Bath, gelatinous.*

B. glutinosum. *Fr. Codex.* (*L. glutinosus*, gluey. *F. bain gelatinoux.*) Gelatin 500 grms., soak in two litres of cold water for an hour, then dissolve by the aid of heat, and add to the bath water.

B. iodata. See *Bath, iodine.*

B. ioduratum. *Fr. Codex.* (*F. bain ioduré.*) See *Bath, iodine.*

B. laconicum. (*L. laconicum*, the sweating room in a hot bath. A semicircular alcove in the Roman hot bath, in which the temperature was kept very high for the purpose of producing perspiration. *G. Schwitsbad.*) A vapour bath used to induce sweating.

B. maris. (*F. bain maris*; *G. Wasserbad.*) A water bath. The word is probably a corruption of *bain de mer*, or *baïneum maris*. See *Bath, water.*

B. maris. (*L. mare*, the sea. *F. bain de mer*; *G. Wasserbad.*) A water bath. See *Bath, water.*

B. medicatum. (*L. medicatus*, healing.) A medicated bath; one which contains, or to which is added, some substance of the nature of a remedy.

B. mercuriale. See *Bath, mercurial.*

B. plumbarium. *Fr. Codex.* (*F. bain dit de Plombières.*) See *Bath, artificial Plombières.*

B. rosæ. (*L. ros*, dew.) A vapour bath. See *Bath, vapour.*

B. siccum. (*L. siccus*, dry.) A dry bath, as a sand bath, a hot-air bath, a bath of hot ashes.

B. sinapisatum. *Fr. Codex.* (*L. sinapis*, mustard. *F. pétiluce sinapis.*) Mustard flour 150 grms., tepid water 6000. For a foot-bath.

B. stimulum. (*L. stimula*, to rouse up.) Solution of ammonia, concentrated spirit, of each 400 grms., common salt 5000; mix with the bath water.

B. sulfureum. *Fr. Codex.* (*F. bain sulfuré.*) Potassium sulphide 100 grms. dissolved in the water of a bath.

B. sulfureum gelatinosum. *Fr. Codex.* (*F. bain sulfure-gélatinoux.*) Potassium sulphide 100 grms., gelatine 250; dissolve and add to a bath.

B. sulfureum liquidum. *Fr. Codex.* (*L. liquidus*, fluid. *F. bain sulfuré liquide.*) Potassium sulphide 100 grms., water 250; dissolve and add to a bath.

B. sulphureum. A sulphur bath. See *Bath, sulphur.*

B. vaporis. (*L. vapor*, steam. *G. Dampfbad.*) A vapour bath. See *Bath, vapour.*

B. victuæ. *Fr. Codex.* (*F. bain artificiel de Vichy.*) Sodium carbonate 500 grms. dissolved in the water of a bath.

Baloko. A tribe of Kaffirs inhabiting Fernando Po.

Balsam. (*Balapeo*. *L. balsamum*; *F. baume*; *I. and S. balsamo*; *G. Balsam*. Calmet derives the word from *Baal-sham*, royal oil.) A vegetable juice, often exuding naturally, either fluid, or solid from inspissation, consisting of resin mixed with volatile oils. Balsams are of two classes:

1. Simple solutions of resin in volatile oil, as copaiba balsam;

2. Similar solutions, with the addition of benzoic or cinnamic acid, as balsam of Tolu.

Balsams have an aromatic, agreeable odour, and a strong penetrating taste; they are insoluble in water, almost entirely soluble in alcohol, and partially soluble in ether and oil. Balsams are natural and artificial.

B., acetic. Soap made with marrow, camphor, of each 154 grains, volatile oil of thyme 30 drops, acetic ether 1235 grains. An embrocation for rheumatic pains.

B., acoustical. (*Acousticus*, belonging to the sense of hearing. *Balsamum acousticum*.) Tinctures of benzoic, castor, and opium, of each 1 oz., essential oil of assafetida 5 drops. There are several similar compounds. Used in deafness.

B., American. The *Myrcosylon peruvicum*, or *Peruvian balsam*.

B., anisated sulphur. (*Balsamum sulphuris anisatum*.) A solution of sulphur in oil of aniseed, with or without oil of turpentine.

B., anodyne, of Bate. (*Balsamum anodynum Batei*.) A preparation very similar to the *Linimentum saponis compositum*.

B., anodyne, of Guy. (*Balsamum anodynum Guidonis*.) A vulnerary balsam of ancient repute, by Guy of Caliac, composed of aloes, amber, ammoniacum, balsam of Peru, belladonna, caranna, castor, galbanum, labdanum, myrrh, olibanum, storax, tacamahaca, and Venice turpentine, digested in alcohol.

B., antiarthritic. The *B. of Seneca*.

B., apoplectic. (*Balsamum apoplecticum*, *E. Ph.*, 1744.) Oil of nutmeg 1 oz., oils of cloves, lavender, and rosemary, of each $\frac{1}{2}$ dr., oil of amber 10 drops, balsam of Peru 1 dr. Used to anoint the head and nostrils of apoplectic patients, and believed to be of great power.

B., apple. The *Momordica balsamina*.

B., Asiatic. The *Balsam of Gilead*.

BALSAM.

B., Brazilian. The *B. copaiba*.
B., Caffro. The *B. of Gilead*.
B., Calaba. The resin of the *Calophyllum calaba*. See *Tucamahaca*.
B., Canada. A pale yellow, viscid oleo-resin, of agreeable balsamic odour and slightly bitter taste, the product of *Abies balsamea* and *A. canadensis*. Used in gleet, leucorrhoea, cystitis, and chronic bronchitis. Dose, 6 grains. Used for mounting microscopic objects.
B., Cana'ry. A fragrant essential oil distilled from the *Dracocephalum moldavicum*.
B., capt'vi. The same as *B. copaiba*.
B., Carpa'thian. The essential oil distilled from the cones and young shoots of the *Pinus combra*. It is a thin, light, turpentine. Also, called German oil, Carpathian oil, and Eiga balsam.
B., cephal'ic. (Κεφαλῆ, the head. *Balsamum cephalicum saxonicum*.) A preparation of the essential oils of amber, lavender, marjoram, nutmeg, pennyroyal, rue, and sage.
B., Chi'na var'nish. The exudation of *Augis sinensis*; highly fragrant. Used as a varnish in China. It abounds in benzoic acid.
B., comman'der's. (*Balsamum commendatoris*.) The tinctura benzoini composita, Friar's balsam.
B., copaiba. The oleo-resin of the *Copaifera multijuga*, *C. officinalis*, and other species. Of the consistence of olive oil, and of a pale yellow colour, but varying in both these characters; sp. gr. .940—996; transparent, perfectly soluble in an equal volume of benzol, of a strong odour, and bitter burning taste, mixes with absolute alcohol and oils, dissolves in ether. Eliminated by the genito-urinary and bronchial mucous membranes, and the skin. Used in gonorrhoea and chronic cystitis, in chronic bronchitis, in dropsy, and in some skin diseases; in the latter also externally.
B., copalm'. The product of *Liquidambar styraciflua*. It is a yellowish, thickish fluid, which has been used instead of storax.
B., Egypt'ian. The *B. of Gilead*.
B., Fe'male. (*Balsamum embryonum*.) An infusion of mistletoe, civet, musk, and various other aromatics, in a mixture of wine and several kinds of distilled waters, which is then itself distilled. It was used both externally and internally to prevent abortion, by strengthening the fetus and the womb.
B., Fioravan'ti's. A product of the distillation of turpentine, myrrh, elemi, canella, cloves, ginger, and such like, which have been macerated for some days in alcohol. The first product of distillation in a water bath is the *Spiritus balsam*, liquid and strongly terebinthinate. The second product, the *Oily balsam*, is obtained by subjecting the residue, in an iron vessel, to an open fire. A third product, the *Black balsam*, is obtained by subjecting the mass to a still greater heat.
Also, a synonym of *Alcoolat de Fioravanti*, Fr. Codex.
B., Fr. The *Pinus balsamea*.
B., Fo'et. The resin of *Calophyllum inophyllum*.
B., Friar's. Tinctura benzoini composita.
B., Ge'oa. The *B., Locatelles*.
B., Gou'ard's. The *B., saturnine*.
B., green. (*Balsamum viride*.) Gum elemi 1 lb., verdigris 3 oz., linseed oil 6 lbs. Used as a detergent.

B., guai'acum. (*Balsamum guaiacinum*.) Gum guaiacum 1 lb., balsam of Peru 3 dra., rectified spirit 1 quart. Used in agues and rheumatism. Dose, 30—60 drops.
B., Gurjun. The *Gurjun* oil.
B., Guy's. See *B., anodyne*, of Guy.
B., Hunga'rian. An exudation from the out twigs of the *Pinus pumilio*. It is thin, transparent, and yellowish. Called also, Hungarian turpentine.
B., hypno'tic. (Υπνος, sleep.) A liniment prepared with opium, saffron, and oil of black nutmeg, the juice of some narcotic plants, and an oily menstruum. Used locally to produce sleep.
B., hyste'ric. (G. Mutterbalsam.) Bitumen, aloes, galbanum, laudanum, of each 62, asafoetida 186, castor, opium, of each 31 grs., oils of rue and amber, of each 10; oils of wormwood, savin, and petroleum, of each 12 drops, butter of nutmeg 23 grs.
B., In'dian. The *B. of Peru*.
B., iod'uretted. Animal soap 60, potassium iodide 42, alcohol 600, essence of lemon 4 parts. Used in goitre locally. (Dunglison.)
B., Jew's. The *B. of Gilead*.
B., lead. The *B., saturnine*.
B., Locat'elles. (*Balsamum locatelli*.) Yellow wax 4 oz., red sanders 4 drs., Strasburg turpentine 6 oz., balsam of Peru 2 drs., sherry 6 oz., olive oil 6 oz. Used in phthisis and chronic coughs. Dose, half a drachm. Also used as a mild stimulating ointment.
B., Luca'telles. The same as *B., Locatelles*.
B., mercur'ial. The *Unguentum hydrargyri nitratis*.
B., Mex'ican. Peruvian balsam.
B., nervine. (*F. baume nerve*.) Beef marrow 350, oil of sweet almonds 100, oil of nutmeg 450, oil of rosemary 30, oil of cloves 15, camphor 15, balsam of tolu 30, alcohol 60 parts. In sprains and rheumatic pains.
B. of Acou'chi. The produce of *Icica aracouchini*.
B. of Alpi'nus. The *B. of Gilead*.
B. of am'ber. The *Oil of amber*.
B. of Aro'ma's. (*Balsamum arcæi*.) An ointment like the *Unguentum elemi* compositum. It contained mutton fat 120 parts, turpentine 150, elemi resin 150, oil 100.
B. of Cartha'ge'na. A synonym of *B. of Tolu*.
B. of Chi'ron. Olive oil, yellow wax, turpentine, camphor, and black balsam of Peru, coloured with alkanet root. Used in stonic ulcers.
B. of Con'dom. The *B. of Lectoure*.
B. of Four'croy. The *B. of Laborde*.
B. of Genevi'sve. Olive oil 360, yellow wax 60, red sandal wood 16, turpentine 120 drs. Digest at a gentle heat, and add, when cold, camphor 2 dra. A vulnerary.
B. of Gil'ead. (Bomb. Ood-i-balsam; Arab. *Alkooyelass moon rooms*; Pers. *Rooghen-balsam*; Egypt. *Balsam*.) An oleo-resin of the *Balsamodendron gileadense*, or perhaps the *B. opobalsamum*. It is the balm of the Old Testament, the *Βάλαμον* of Dioscorides. It is in commerce a solid of a golden colour, a delicate aromatic odour, a bitter, somewhat astringent taste. Formerly used as an antiseptic, stimulant, nervine, and vulnerary; its fumes were supposed to cure barrenness. It is so highly prized by the

BALSAM.

Turks that very little is sent to England, and that only of an inferior quality.

B. of Oil'ead, false. A factitious balsam is made by mixing benzoin, storax, tolu, and Canada balsam together, and scenting with oils of lemon, cassia, rosemary, nutmeg, and vanilla.

B. of Honey. Gum benzoin 5 oz., balsam of tolu 1 oz., honey 8 oz., alcohol 3 pints. Digest for ten days, and filter. Used for coughs.

B. of Laborde. Olibanum, turpentine, storax, benzoin, juniper, theriacum, infused in olive oil. For chapped hands and cracked nipples.

B. of Lausanne. The *B. ioduretted*.

B. of Lectoure. A mixture of essential oils holding in solution camphor, saffron, musk, and ambergris. A stimulant and sudorific. Used as an aromatic, and burnt in rooms.

B. of Life. (*F. baume de vie.*) Compound decoction of aloes.

B. of Life, Hoffman's. See *Balsamum vitæ Hoffmanni*.

B. of Liquorice. The *Tinctura camphoræ composita*, strongly impregnated with oil of aniseed.

B. of Maria. The product of *Verticillaria acuminata*.

B. of Mecca. The *B. of Gilead*.

B. of Metz, green. Verdigris 24 parts, sulphate of zinc 12, Venice turpentine 120, aloes 16, essential oil of juniper 30, of clove 58, olive oil 365, linseed oil 335, and oil of laurel berries 60 parts. In fungous ulcers.

B. of Mindere's, vulnerary. Turpentine, elemi, oil of hypericum, and wax, mixed, and used as a dressing to wounds.

B. of Mynsicht, paralytic. A mixture of the essential oils of different aromatic plants with oils of turpentine and amber.

B. of needles. The *B. of steel*.

B. of Pareira. Balsam, resin, muriate of ammonia, and powdered pareira root, mixed, and used as a diuretic. (Dunglison.)

B. of Permes, Commander's. Olibanum, myrrh, balsam of tolu, benzoin, Cape aloes, angelica root, and hypericum tops, dissolved in alcohol. Used as a vulnerary.

B. of Peru'. (*F. baume de Peru*; *G. Peru-balsam*.) An exudation from the trunk of the *Myrozyllon pereira*, after the bark has been scorched and removed. A dark reddish-brown liquid, of sp. gr. 1.15, of balsamic odour, and acrid taste. Soluble in five parts of rectified spirit. Used in chronic bronchitis. Dose, 10—15 minims. Applied to indolent ulcers.

B. of Peru', red. The *B. of Tolu*.

B. of Peru', white. A thick, yellowish-white liquid obtained by subjecting the fruit of the *Myrozyllon pereira* to pressure; it contains myroxocarpin.

B. of Sanchez. Animal soap, oils of nutmeg, cloves, and mint, mixed with acetic ether. External stimulant.

B. of Senner'tus, cordial. The essential oils of citron, cloves, and cinnamon, musk, and ambergris. Used as a stimulant.

B. of St. Thomas. The *B. of Tolu*.

B. of steel. (*F. baume d'acier*, or *B. d'aiguilles*.) Steel filings 8, nitric acid 32 parts. Dissolve, and add rectified spirit and olive oil, of each 32 parts. Used in joint pains.

B. of the Samaritan. (*F. baume de Samaritain*.) A mixture of wine and oil. Used by the ancients in the treatment of wounds.

B. of Tolu'. (*F. baume de Tolu*; *G. Tolu-*

balsam.) A balsam obtained by incisions into the bark of the *Myrozyllon toluifera*. It is a soft, light-brown solid, of fragrant odour and pleasant sweetish taste, perfectly soluble in alcohol, ether, and chloroform. It is used as an expectorant in chronic coughs. Dose, 5—25 grains.

B. of Vinoguerre. The *B. of Lectoure*.

B. pa'ra. The *B. copaiba*.

B. Persian. The *Tinctura benzoini composita*, Friar's balsam.

B. polychrest. (Πολύς, many; χρηστός, useful.) Same as *Jesuits' drops*.

B. Racassira. The same as *B. raka-siri*.

B. Rakas'ri. A balsam probably obtained from the *Bursera balsamifera*, but may be factitious; brought from India in gourds. It is of slightly bitter taste, adheres to the teeth when chewed, inodorous when cold, when heated smells like balsam of Tolu. Used as copaiba balsam.

B. Rhadas'ri. The same as *B. raka-siri*.

B. Ri'ga. The same as *B. Carpathian*.

B. San Pa'o'lo. The *B. copaiba*.

B. San Salvador. The *B. Peruvian* of commerce. Dark in colour.

B. saturnine. (*Balsamum saturni*. *Saturnus*, Saturn, an old name of lead.) Hot oil of turpentine, saturated with lead acetate. Applied to foul ulcers.

B. Saxon. (*F. baume Saxon*.) Butter of nutmeg, mixed with several aromatic oils.

B. soap. The *Linimentum saponis compositum*.

B. sulphur. (*Balsamus sulphuris*, *balsamum sulphuris crassum*, *balsamum sulphuris simplex*, *oleum sulphureum*.) One part of sulphur dissolved in eight of olive or linseed oil. Used in catarrh and other chest affections, and applied to foul ulcers.

B. sulphur, an'isated. Oil of anise 5 parts, sulphur balsam 1 part.

B. sulphur, Barba'does. (*Balsamum sulphuris barbadoense*.) Sulphur boiled with Barbadoes tar.

B. sulphur, terebinth'inated. (*Balsamum sulphuris terebinthinatum*.) A mixture of balsam of sulphur with 3 parts of oil of turpentine.

B. Syrian. The *B. of Gilead*.

B. Thibaut's. A tincture of myrrh, aloes, dragon's blood, hypericum tops, and turpentine. Diuretic and vulnerary.

B. tranquillising. *Fr. Codex.* (*F. baume tranquille*.) The fresh leaves of belladonna, hyoscyamus, black nightshade, tobacco, poppy, and stramonium, of each 200 grms., are simmered in 5000 grms. of olive oil, and in this the dry tops of wormwood, hyssop, marjoram, peppermint, hypericum, and thyme, the dried leaves of tansy, rosemary, rue, and sage, of each 50 grms., and the flowers of lavender and elder, of each 50 grms., are infused. It is employed in frictions in rheumatic and other pains.

B. traumatic. (Τραυματικός, relating to wounds.) A vulnerary balsam very like Friar's balsam, *Tinctura benzoini composita*.

B. tree, yellow-flowered. The *Clusia flava*.

B. Turkey. The Oil of *Dracocephalum moldavicum*.

B. turpentine. The reddish resin left after the distillation of turpentine.

B. umi'ri. A balsamic exudation from the

BALSAMADENA—BALSAMODENDRON.

stem of the *Humirum floribundum*. It is a fragrant, pale yellow, oily liquid, and is said to combine the properties of the balsams of copaiba and tolu.

B., universal. (*Balsamum universale*.) The *Cratium plumbi compositum*.

B., Venezuela. The *B., copaiba*.

B., Vervain's. Compound tincture of benzoin.

B. wood. The *Impatiens fulva*.

B., white, of San Sona to. A granular, yellowish substance, having an odour of cloves, obtained from the fruit of the *Myrosporum peruvianum* by expression. From it is obtained *Myrocarpine*.

Balsamade'na. (Βάλαμον, balsam; ἄδω, a gland.) The internal oil-bearing glands of the leaves of plants.

Balsamation. (L. *balsamatio*, from *balsamum*, balsam. G. *Einbalsamirung*.) Embalming.

Balsamel'on. (Βάλαμον, balsam; λαιον, oil.) The Balm of Gilead.

Balsamella. A synonym of *Balsamel'on*.

Balsam'eous. (L. *balsameus*. G. *balsamisch*.) Of the nature of balsam, or belonging to balsam.

Balsami oleum. (L. *balsamum*; *oleum*, oil.) The Balm of Gilead.

Balsam'ic. (L. *balsamicus*. F. *balsamique*; I. and S. *balsamico*; G. *balsamisch*.) Of the nature and properties of a balsam.

Balsam'ica. (Same etymon.) Medicines of a resinous and fragrant nature.

Balsam'ico-amarus. (L. *balsamicus*; *amarus*, bitter. G. *bitterbalsamisch*.) Having a bitter balsamic taste.

B.-aromaticus. (L. *aromaticus*, fragrant. G. *gewürzigbalsamisch*.) Having an aromatic balsamic taste or smell.

B.-empyreumaticus. (Ἐμπύρευμα, a coal to preserve a smouldering fire; and so applied to the substances obtained from the dry distillation of organic substances. G. *brenzlich-balsamisch*.) Having a burnt empyreumatic taste or smell.

Balsamifera brazil'ensis. (L. *balsamum*, balsam; *fero*, to bear.) The *Copaifera officinalis*.

B. indica'na. The *Myrozyton pereira*, yielding Peruvian balsam.

Balsamiferous. (L. *balsamum*, balsam; *fero*, to bear. F. *balsamifere*; G. *balsamführend*.) Yielding balsam.

Balsamifluus. (L. *balsamum*; *fluo*, to flow. G. *Balsambäume*.) A synonym of the *Altingiaceae*, or liquidambar.

Balsamifluus. (L. *balsamifluus*, from *balsamum*; *fluo*, to flow. G. *balsamführend*.) Yielding balsam.

Balsamifluus ductus. (L. *ductus*, from *duco*, to lead. G. *Balsamgang*.) The canals in which balsam is deposited.

Balsamina. See *Impatiens balsamina*.

Balsamina'ceae. (G. *Balsaminengewächse*.) An Order of thalamifloral *Exogens*, or a Family of the Order *Gruinales*. Herbaceous plants, with a succulent stem and watery juice; leaves simple, exstipulate; flowers very irregular, unsymmetrical, and without an involucre; sepals 3, one spurred, with an imbricated aestivation; petals with a convolute aestivation; stamens 5, alternate with the petals, nearly dis-

tinct; fruit dehiscing by elastic valves; seeds exalbuminous.

Balsamin'ee. The same as *Balsaminaceae*.

Balsam'inous. (L. *balsaminus*, made of balsam.) Composed, or consisting of, balsam.

Balsam'ita. A Genus of the Family *Artemisia*, Suborder *Tubuliflorae*, Nat. Order *Compositae*.

B. femine'a. (L. *femineus*, female.) A synonym of the maudlin tansy, *Achillea ageratum*.

B. ma'jor. (L. *major*, greater.) A synonym of *B. suaveolens*.

B. mas. (L. *mas*, a male.) A synonym of *B. suaveolens*.

B. mi'nor. (L. *minor*, less.) The maudlin tansy, *Achillea ageratum*.

B. odora'ta. (L. *odoratus*, having an odour.) A synonym of *B. suaveolens*.

B. suave'olens. (L. *suaveolens*, sweet smelling. F. *menthe cog, grande baume*; I. *erba di San Pietro*; S. *yerba romana*; G. *breitblättriger Rainfarn, Frauenminze*.) Hab. France. An herbaceous plant, with an odour like that of mint, and a bitter hot taste. The leaves and flowering tops were formerly used in France as a tonic, antispasmodic, and vermifuge.

B. vulgari's. (L. *vulgaris*, common.) A synonym of *B. suaveolens*.

Balsami'to. Tincture of virgin balsam. Made by digesting the fruit of the *Myrozyton pereira*, deprived of its winged appendages, in rum. It is a fragrant liquid, in high repute through Central America as a stimulant and vulnerary, and as a diuretic and anthelmintic. It is used to excite uterine contraction, to relieve spasm, and to check diarrhoea and vomiting.

Balsamo blan'co. White balsam. A semisolid substance obtained by pressing, without heat, the interior of the fruit and the seeds of the *Myrozyton pereira*. It is not to be confused with Tolu balsam.

B. ne'gro. Name of the *Balsam of Peru* in San Salvador, whence it is obtained.

B., re'al. The resinous balsamic exudation of a species of *Figaria* indigenous in British Guiana. It is of a greenish or golden colour, subacid, bitterish, and very fragrant. It is used to old ulcers, and in phthisis and spasmodic disorders. (Waring.)

Balsamoden'dron. (Βάλαμον, balsam; δένδρον, tree. G. *Balsambaum*.) A Genus of the Nat. Order *Amyridaceae*. Sexes sometimes imperfect; calyx four-toothed, cup-shaped; petals four, induplicate-valvate; stamens eight, inserted under a cup-shaped disc; ovary two-celled; style short, four-lobed; drupe hard, one- or two-celled.

B. africa'num. Arnott. A species yielding African bdellium. A synonym of *Bendelotia africana*, A. Rich.

B. aga'locha. (Ἀγάλλοχον, the bitter aloe.) A synonym of *Amyris commiphora*, Roxb.

B. Ehrenbergia'num. A synonym, or, perhaps, a variety, of the *B. myrrha*.

B. gilladen'se. Kunth. Hab. Arabia and India. A species which supplies the *Balsam of Gilead*.

B. ka'fal. A native of Arabia. The balsamic exudation of the tree is very fragrant, and is used as a purgative. (Waring.)

B. ka'taf. Kunth. The *B. myrrha*.

BALSAMODES—BALSAMUM.

B. mar'kul, Hooker. A species yielding Indian bdellium.

B. myrr'ha, Nees. Hab. Arabia and Abyssinia. A shrub with spiny branches; ternate leaves; obovate leaflets; solitary, nearly sessile flowers; 4-toothed calyx; four petals; eight stamens; 2-celled ovary; smooth, brown, ovate, acuminate drupe; from its bark exudes the gum-resin *Myrrh*.

B. opobalsamum, Kunth. A small tree of Arabia, by some regarded as a variety of *B. gileadense*, and, like it, yielding a fragrant balsam.

B. pubes'cens. (*L. pubescens*, to be covered.) A species yielding a fragrant gum-resin, and whose inner bark peels off in thin white layers, which are used as paper. It is said to be one of the sources of Guggul, Indian bdellium.

B. Roxburgh'i. A species supplying Indian bdellium.

Balsamoides. (Βάλαμίδης. *G. balsam-artig.*) Like balsam; balsamic.

Balsamosaccharum. (Βάλαμον; σάκχαρον, sugar.) A synonym of *Eleosaccharum*.

Balsamum. (Βάλαμον, the balsam tree. Hebrew, *Balsamen*, the prince of oils. *F. baume*; *G. Balsam*.) A balsam.

B. sarvangien'se. The *Tinctura benzoini composita*.

B. al'bum. (*L. albus*, white. *S. balsamo blanco*.) White balsam. Said to be obtained by expression from the fruit of *Balsamum peruvianum*, but this is doubtful. It is semifluid, somewhat granular, and separates, on standing, into a white crystalline deposit, and a more fluid portion. It is similar in use to the balsam of Peru. It contains a resinous body, *Myroxocarpin*.

B. al'bum fluidum america'num. (*L. albus*, white; *fluidus*, liquid.) An old name of copaiba balsam.

B. al'pinu. The *Balsamum gileadense*, called after Prosper Alpinus, who wrote about it.

B. arce'li. The *Unguentum elemi compositum*.

B. aromaticum. The *B. vite Hoffmanni*.

B. canadense. See *Balsam, Canada*.

B. capivi. The *Balsam of copaiba*.

B. carpatium. See *Balsam, Carpathian*.

B. cathol'icum. (Καθολικός, general.) The *Tinctura benzoini composita*.

B. chin'icum. A synonym of *Balsam, Fioravanti's*.

B. commendato'ris. (*L. commendator*, one who commands.) See *Balsam, commander's*.

B. constantinopolita'num al'bum. (*L. albus*, white.) The *Balsam of Gilead*.

B. copaiv'e. See *Balsam, copaiba*.

B. copaiv'e inspissa'tum. (*L. inspissatus*, to thicken.) The *Resina copaiba*.

B. copaiv'e parisiens'e. The *Resina copaiba*.

B. copaiv'e sic'cum. (*L. siccus*, dry.) The *Resina copaiba*.

B. copaiv'e solidifica'tum. (*L. solidus*, firm; *facio*, to make.) Copaiba balsam 16 parts, magnesia usta 1 part. Mix and form into pills.

B. diptero'carpi. A synonym of *Gurjun oil*, the product of *Dipterocarpus laevis*.

B. embryo'num. (Εμβρυον, the embryo.) Same as *Balsam, female*.

B. femelle'd. The *B. viride*:

B. Fioravanti. The *Alcohol de Fioravanti*, Fr. Codex.

B. Frank'ii. The *Unguentum trochanthina*, G. Ph.

B. fus'cum. (*L. fuscum*, dusky.) The *Balsam of Peru*.

B. game'le. The *Balsam of copaiba*.

B. Geneve'nsis. See *Balsam of Genevieve*.

B. gennif'um antiqua'rum. (*L. gennifinus*, natural; *antiqui*, the ancients.) The *Balsam of Gilead*.

B. gileaden'se. The *Balsam of Gilead*.

B. Guila'nia. See *Balsam, amodum, of Guy*.

B. hispan'icum. (*L. hispanicus*, Spanish.) An old name of a balsam; probably balsam of Tolu.

B. hungar'icum. See *Balsam, Hungarian*.

B. hyperici simp'lex. (*L. simplex*, simple.) See *Oleum hyperici*.

B. in'dicum. Indian balsam; a term for *Balsam of Peru*.

B. in'dicum nig'rum. (*L. niger*, black.) A term for Peruvian balsam.

B. juda'icum. (*L. Judaicus*, Jewish.) The *Balsam of Gilead*.

B. lib'ani. (Λιβανος, the frankincense tree.) The *Balsam, Carpathian*.

B. majora'nis. (Mod. *L. majorana*, the marjoram. *G. Majoranbalsam*.) Oil of marjoram 2 parts, oil of nutmeg 5. Used as an infraction in colic and chronic nasal catarrh of children.

B. mas. (*L. mas*, male.) The *Balsamita suaveolens*, official costmary, or alceost.

B. ment'hae. An old name for the essence of spearmint, *Mentha viridis*.

B. mercurialis'e. The *Unguentum hydrargyri nitratis*.

B. meten'stium. See *Balsam of Mts, green*.

B. nucis moscha'tae. The oil of nutmeg, or, as it is often called, of mace.

B. nucis'tae. (Mod. *L. nucista*, a nutmeg.) The expressed oil of nutmeg.

B. ophthal'micum. (Ὠφθαλμικός, for the eyes.) The *Unguentum hydrargyri oxidis rubri*.

B. ophthal'micum ru'brum. (Ὠφθαλμία, a disease of the eyes; *L. ruber*, red.) The *Unguentum hydrargyri oxidis rubri*.

B. opodel'doch, Fr. Codex. (*F. baume opodeldoch*.) Common soap, 300 grms., are dissolved in 2500 grms. of alcohol, by the aid of a water-bath; camphor in powder, 240 grms., are added, and, when this is dissolved, oil of rosemary 50 grms., and oil of thyme 20 grms. The fluid is decolorized by animal charcoal, 100 grms. of a solution of ammonia are added, and the whole rapidly filtered. A stimulating embrocation in rheumatism.

B. opodel'doch ioda'tum. See *Lini-mentum saponato-iodatum*.

B. pers'icum. (*L. persicus*, Persian.) The *Tinctura benzoini compositum*.

B. peruvia'num. See *Balsam of Peru*.

B. peruvia'num nig'rum. (*L. niger*, black.) The *Balsam of Peru*.

B. sapona'ceum. (*L. sapo*, soap.) See *Balsam, soap*.

B. Scherzeri. The *B. vite Hoffmanni*.

BALSAMUS PALUSTRIS—BAND.

B. stomachicum. (Στομαχικός, belonging to the stomach.) The *B. vita Hoffmanni*.

B. styra'cis. A synonym of *Styracis*.

B. styra'cis benzoin'i. Gum benzoin.

B. succini. (L. *succinum*, amber.) Oil of amber.

B. sulfuris terebinthina'tum. See *Balsam, sulphur, terebinthinated*.

B. sulphuris anisa'tum. See *Balsam, sulphur, anisated*.

B. sulphuris simplex. (L. *simplex*, simple.) See *Balsam, sulphur*.

B. sympathicum. (Συμπάθεια, like-feeling.) An ointment composed of human fat, raspings of a human skull, and blood. Anciently used to smear a cutting instrument for the purpose of curing a wound which had been inflicted by its means.

B. syriacum. (L. *Syriacus*, Syrian.) *Balsam of Gilead*.

B. toluta'nium. See *Balsam of Tolu*.

B. Trach'mil. Turpentine of the larch 12 parts, yellow wax 3, spirit of turpentine 1-5.

B. tranquillans, Fr. Codex. See *Balsam, tranquillising*.

B. traumat'icum. (Τραυματικός, relating to wounds.) The *Tinctura benzoes composita*.

B. universale. (L. *universalis*, universal.) The *Ceratium plumbi compositum*.

B. verum. (L. *verus*, true.) The true balsam, *Balsam of Gilead*.

B. viride. (L. *viridis*, green.) Same as *Balsam, green*.

Also, the *Balsam of Metz, green*.

B. viride meten'sium. See *Balsam of Metz, green*.

B. vitæ. (L. *vita*, life.) Benzoin, liquid storax, of each 12 oz.; balsam of tolu, extract of liquorice, of each 4 oz.; balsam of Peru 2 oz.; aloes, myrrh, angelica root, of each 1 oz.; spirit of wine 7 pints. Used as a rubefacient, and as a stimulant and pectoral.

B. vitæ exter'nium. White soap and turpentine, of each 6 parts, mixed with 1 of potassium carbonate. The *Sapo terebinthinatus*, G. Ph.

B. vitæ Hoffmanni, Ger. Ph. (L. *vita*, life.) Hoffmann's balsam of life. Oils of lavender, cloves, cinnamon, thyme, citron, mace, orange flower, of each 1 part, balsam of Peru 3, alcohol 240. Mix, allow to stand for several days, and filter.

B. vitæ Bolan'di. The *Oleum terebinthine sulfuratum*, G. Ph.

Balsamus palustris. (L. *paluster*, belonging to a marsh.) The *Mentha palustris*.

Balu'gas. A mixed Papuan race inhabiting the Province of Paugasinan, and proceeding from the union of the curly-haired Negritos with the straight-haired Malays.

Ba'lux. (Sp.) Gold dust. Used by Pliny for and in which gold was found. Also called *Chrysommos*.

Ba'zach. Switzerland; Canton St. Gall. A mineral water, containing sulphur, iron, calcium carbonate, and chlorides. It is used in diseases of the skin and lymphatics, and in chronic gout and rheumatism.

Balzoin'um. The *Benzoin*.

Bamangwa'to. A tribe inhabiting the region of South Africa to the west of the Kaffirs.

Baman'tati. A tribe inhabiting the

region of South Africa to the west of the Kaffirs.

Bama'pela. A tribe inhabiting the region of South Africa to the west of the Kaffirs.

Bamatlaru. A tribe inhabiting the region of South Africa to the west of the Kaffirs.

Bamba. A mixed race of Thibet and Hindoo blood, inhabiting the Himalayan region west of Gandaki.

Bambaceu'tria. (Βαμβάκευτρία. G. *giftige Arzneistoffe*.) The use of poisonous medicinal substances, or the substances themselves.

Bambacia. (Βαμβάξια. G. *Giftmischerei*.) The same as *Bambaceutria*.

Bamba'cion. A term for cotton wool.

Bamba'gium. A term for cotton wool.

Bamba'lio. (Βαμβαλίο, to chatter with the teeth.) Stammering.

Bam'bara. A race allied to the Negro and to the Mandingo, inhabiting the west coast of Africa from the River Nunez to the Seacinas.

Bamba'tus. (Βάπτω, to dip in water. G. *eingetaucht*.) A term signifying immersed.

Bam'bia. A Negro race in subjection to the Sandeh in the west coast of Africa.

Bambi'ri. A Negro race in subjection to the Sandeh.

Bamboo'. The *Bambusa arundinacea*.

Bambul'io. (Βαμβαλίο, to chatter with the teeth.) A stammerer, or one who lisp.

Bambu'sa. (G. *Bambusrohr*.) A Genus of the Nat. Order *Graminacea*.

B. arundinacea, Retz. (F. *bambou*; I. *bambu*; G. *Bambusrohr*.) The bamboo. The leaves are used in India and China as an emmenagogue and oxytocic, and as a diuretic and diaphoretic. In the interior of the stem of the female plant white siliceous concretions are found, called *Tabasheer*.

B. bacifera. (L. *bacca*, a berry; *fero*, to bear.) Probably the female plant of the *B. arundinacea*.

Bameri. A tribe inhabiting the region to the west of the Kaffirs in South Africa.

Bam'ia. See *Bammia*.

Bamma. See *Embamma*.

Bamma'tus. (Βάμμα, from βάπτω, to dip in water. G. *eingetaucht*.) A term signifying immersed.

Bam'mia. The *Abelmoschus esculentus*.

B. moscha'ta. The *Abelmoschus moschatus*.

Ban. The *Coffea arabica*, coffee plant; called also *Bon*.

An Egyptian name for the *Salix aegyptiaca*, or *Calaf*.

Bana'na. (F. *banane*; G. *Paradiesfeige*, *Adamsfeige*.) The fruit of the *Musa sapientum*. It is pleasant to the taste, and is largely eaten as food in tropical countries. An analysis of Brazilian banana gives water 73.9, vegetable albumin 4.82, cellulose 2, fatty matter .632, sugar, organic acid, and traces of starch 19.657, phosphates of soda and potash, carbonates of soda and potash, chlorides of potassium, earthy phosphates, silica, and iron .791.

B. essence. An alcoholic solution of acetate of amylic ether with butyric ether.

Banar. An isolated race inhabiting Siam.

Banausia. (Βαναυσία, handicraft. G. *Marktschreieret.*) Charlatanry.

Ban'coul oil. The oil of *Aleurites triloba*.

Band. (Sax. *banda*, from *bindan*, to bind.

BANDAGE.

F. bande; **I. banda**; **G. Band.**) That which binds; a bond; a cord; a narrow strip.

B., flattened. The cylinder-axis of white nerve fibre.

B. of a tooth. Same as *Cingulum*.

B. of Nerve. The cylinder-axis of white nerve fibre.

B. of spectrum. The bright lines seen in the spectrum of ignited gases and vapours.

B., primitive. The cylinder-axis of white nerve fibre.

B., vascular, of cochlea. The *Stria vascularis*.

Bandage. (*L. deligatio*; *Gr. τειδεσμος*; *F. bandage*; *I. fasciatura*; *S. rēda*; *Port. atadura*; *G. Verband, Wundverband.*) An appliance of cotton, linen, flannel, or other material, used for wrapping, in a methodical manner, round any part of the body, for the purpose of supporting or compressing it, or of retaining in position apparatus or local applications.

The ends of a bandage are called the tails; when partially rolled up, the roll is the head, the remainder the body; the free end by which the bandaging is begun is the initial extremity, the other end inside the head is the terminal extremity.

Bandages are *simple* in which the appliance is continuous, and *compound* in which it is made up of several parts.

The application or putting on (*G. bandagiren*) of a bandage.

B., annular. (*L. annulus*, a ring.) That mode of applying a simple bandage or roller in which the upper rounds come exactly over the undermost.

B., body. (*F. bandage de corps.*) A towel or strip of calico rolled one or more times round the body and then fixed. It is used to maintain the position of dressings or other applications, to restrain the movements of the parts, to compress the abdomen in paracentesis or in labour, or to retain protrusions.

B., capeline. (*L. capistrum*, from *caput*, the head. *F. capeline, bandage recurrent*; *S. capelina*.) A bandage which is so applied as to form a sort of hood or cap. It was applied to a stump after amputation, to the shoulder, or to the head, and in the latter case was called the cap or mitra of Hippocrates (*bonnet d'Hippocrate*). It consisted in applying the bandage alternately in a circular and in an opposite direction in such a manner that the whole head was covered, and the longitudinal folds of the bandage were held tight by the pressure of the circular folds on their ends.

B., circular. (*F. bandage circulaire.*) A band of cotton or other material wrapped round a part in circular fashion, so that each turn more or less completely covers the one underneath.

B., compound. (*F. bandage composé.*) A bandage which is made up of several distinct pieces.

B., compressing. (*F. bandage compressif.*) A simple bandage applied circularly or spirally.

B., containing. A bandage applied for the purpose of retaining medicines or dressings upon the affected parts.

B., dividing. (*F. bandage divisif.*) A bandage so applied as to produce retraction, and prevent a wound uniting, as in tenotomy.

B., double-headed. (*F. bandage à deux globes.*) A bandage which is rolled up from both ends.

B., eighteen-tailed. (*F. bandage à dix-huit chefs.*) A compound bandage consisting of a longitudinal strip, to which are attached by their centres eighteen transverse pieces, arranged in an imbricated fashion.

B., elastic. (*G. Schnürbinde.*) See *Langenbeck's* and *Esmarch's bandage*.

B., Esmarch's. See *Esmarch's bandage*.

B., expelling. A bandage exerting pressure, so as to aid in expulsion of the contents of the structure compressed.

B., figure-of-eight. (*F. bandage en huit de chiffre, b. croisé.*) A simple roller applied over the joints and from shoulder to shoulder in such a manner that the folds cross each other on the same side of the limb in the fashion of the figure 8.

B., four-tailed. A piece of cotton of sufficient length to go one and a half times round the member to which the bandage is applied, and split up the middle at each end to within a few inches of the centre, so that there are two tails on each side.

B., Galen's. (*L. fascia Galeni, f. pauperum*; *F. bandage des pauvres.*) A piece of cotton, split at each end, to within a few inches of the middle, into three pieces. The middle part is placed on the crown of the head, the two anterior pieces are fastened at the back of the neck, the two posterior on the forehead, and the two middle pieces under the chin.

B., Geng's. Same as *B., Theden's*.

B., glue. Applied as the gum bandage; a watery solution of glue, to which some spirit has been added, being used instead.

B., gum. A spiral bandage having been applied, a mucilage of gum is rubbed in and allowed to dry. Chalk may be mixed with the gum.

B., gypsum. An open bandage, having previously had gypsum or plaster of Paris rubbed into it, is applied to the limb on to which a flannel bandage has been previously rolled; it is then wetted with water by the hand, and a recently made paste of plaster of Paris and water is smoothly rubbed in. It dries very hard.

B., hernial. A truss.

B., immovable. A bandage made with gum, plaster of Paris, starch, or such like material.

B., incarnative. (*L. incarno*, to clothe with flesh.) A synonym of the *uniting bandage*.

B., inguinal. (*L. inguen*, the groin.) It consists of a pelvic and a thigh band, united at the groin, and having there a triangular compress.

B., invaginated. (*L. in, into*; *vagina*, a sheath.) A broad band, with tapes or tails at each end, and a set of holes, through which one set of tails may pass in order to tie with the other.

B., knotted. A long bandage rolled from each end, used to keep a compress on the temporal artery when wounded. The middle of the bandage is placed over the compress, the two ends wound in opposite directions round the head till they meet again over the compress; they are then crossed, so as to form a knot over the compress, carried one under the chin, the other over the vertex, and tied.

B., many-tailed. A series of slips of a roller, each long enough to go one and a half times round a limb, are stitched, in imbricated fashion, on to a piece of a roller as long as the limb, and so arranged that when the lower slip is

BANDAGING—BAÑOS.

applied first, the second one will wrap a little over it, and so on to the top.

B., Martin's. See *Martin's bandage*.

B., mustard. A flannel bandage covered with a thin paste of mustard and water. Applied to the abdomen or a limb when an active stimulant is required.

B. of separate strips. Same as *B., Scultetus*.

B. of the poor. Same as *B., Galen's*.

B., permanent. A gum, starch, or gypsum bandage.

B., plaster-of-Paris. See *B., gypsum*.

B., Pott's. The same as *B., many-tailed*.

B., rampant. (*F. ramper*, to creep.) A bandage applied in such a way that the ascending or descending turns of the spiral do not touch each other, but leave intermediate spaces uncovered.

B., reinversed. This term is applied to a bandage when the change in form of the limb, as of the leg, requires the roller to be inverted or half twisted at each round to make it sit tight, smooth, and evenly.

B., Ribball's. A spica bandage for the instep.

B., roller. (*F. bandage roulé*.) A simple continuous strip, applied spirally or circularly to a part.

B., Scultetus. (*F. bandage de Scultet, bandage à bandes séparées*.) Pieces of bandage, long enough to go one and a half times round the limb, are applied separately and successively, beginning from below (ascending), or from above (descending).

B., Scutlin's. See *Splint, Scutlin's*.

B., silica. Applied as the gum bandage, a solution of silicate of soda being used instead.

B., simple. A bandage consisting of one piece.

B., solar. (*L. sol*, the sun.) A synonym of the knotted bandage.

B., spica. (*L. spica*, an ear of corn. *L. fascia repens*; *F. spica*; *I. epiga*; *S. espica*; *G. Ahrenerband*.) So called because the regular folds of the bandage resemble an ear of corn. It is a spiral bandage, in which the bandage is regularly folded on itself, like the letter V.

B., spiral. (*F. dolaires*.) A roller spirally applied, so that each succeeding turn overlaps the half of the preceding one.

B., splint. An immovable bandage of gum, gypsum, or such like.

B., starch. Applied as the gum bandage, starch being substituted.

B., Starlin's. A bandage applied like the gum bandage, the strengthening material being paraffin and stearin.

B., stellar. (*L. stella*, a star.) A synonym of the knotted bandage.

B., suspensory. Used for supporting the scrotum, and consists of a pelvic band and a scrotal bag, attached to the middle of the front part of the bandage.

B., T-sha'ped. This consists of two pieces of bandage attached to each other in the form of the letter after which it is named; the one band encircles the pelvis, the other, depending behind, is passed between the thighs and fastened in front, so as to retain perineal applications.

B., Theodan's. A bandage beginning at the fingers, and continuing up the arm. Used in brachial aneurism.

B., une'qual. A simple bandage applied

circularly, but so that the turns do not quite cover each other.

B., un'fing. (*F. bandage unissant*.) A bandage so applied as to cause the lips of a wound to approximate.

Bandaging. (*Ἐπίδεσις*.) The act or process of applying a bandage.

Bandolier fruit. The fruit of the *Zanonia indica*.

Bandura. Hindoo name of the *Nepenthes indica*.

Bandy-legged. (*F. banca*; *G. krumm*.) The bending outwards of the tibia and fibula from rickets.

Baneberry. (*Eng. bane*, a poison.) The *Actæa spicata*, U.S. Ph.

B. root. (*F. racine de St. Christophe*; *G. Wolfswur*, *Christopherswur*.) The root of *Actæa spicata*. It resembles that of *Actæa racemosa*, but the rootlets are shorter, thinner, and of a blackish-grey colour; the taste is first bitter, then acrid and sweetish.

Bane'wort. The *Ranunculus flammula*, because it is said to be poisonous to sheep.

Also, a name of nightshade, *Atropa belladonna*.

Bang. The *Cannabis indica*.

Bange. The *Cannabis indica*.

Banguo. The *Cannabis indica*.

Bangwellgetta. Cingalese name of *Pereira medica*.

Ban'ian tree. See *Banyan tree*.

Banica. A synonym of *Fastinaca sativa*.

Banilla. See *Vanilla*.

Banillas. The *Vanilla*.

Banilloes. The *Vanilla*.

Banisteria. A Genus of plants of the Nat. Order *Malpighiaceæ*.

B. angulosa. (*L. angulosus*, full of corners.) A Brazilian plant, used as a sudorific, and as an antidote in snake-bites.

B. caapi. An intoxicating drug, used by the Indians of many parts of South America.

B. leona. Used in Sierra Leone, when dried and powdered, to destroy pediculi, and, mixed with water, to relieve the headache of fever. (Waring.)

Ban'ja. Bulgaria. A warm, saline sulphur water.

Banjaluka. Bosnia. A saline water having a temperature of 46° C. (113° F.)

Bank cress. The *Sisymbrium officinale*.

Bankoul oil. See *Bancoul oil*.

Banks oil. A term given to the cod-liver oil obtained after the first or Straits oil has been drawn from the livers before putrefaction has gone on long; the residue, after being exposed to the heat of the sun in the fishing-boats, is, on their return to shore, put into boilers, heated, and the oil extracted and removed. This oil is very dark and offensive.

Bank'sia abyssin'ica. A synonym of the *Brayera anthelmintica*.

B. speciosa. (*L. speciosus*, beautiful.) The *Costus arabicus*.

Ban'na. The Abyssinian name for the tapeworm.

Banner. The vexillum or upper petal of a papilionaceous flower.

Ban'os. Spain; Province Estremadura. A mineral water springing at the foot of the Malagados mountain, having a temperature of 23° C. (73.4° F.), and containing alkaline carbonates. It is used in nervous diseases, joint pains, scaly skin diseases, and syphilis.

BAÑOS DE BEJAR—BARRADOES.

Baños de Bejar. Spain; near Salamanca. A sulphur spring of 35° C. (100.4° F.) Used in gout, rheumatism, scrofula, and skin diseases.

Baños de Tiermas. Spain; in Navarre. A sulphur water of a temperature of 41° C. (105.8° F.)

Bantingism. A dietetic plan for the diminution of corpulence, named after the author of the pamphlet by which it was made known to the public. It consisted essentially in complete abstinence from saccharine foods and drinks, and almost complete abstinence from farinaceous foods.

Bantus. A tribe of Negroes of South and Middle Africa. Their language is peculiar in the use of defining prefixes.

Banyan tree. The *Ficus bengalensis*.

Baro. A variety of *Curare*. It is a dark-brown, dry, hard substance, partially soluble in water and alcohol.

Barbab. The *Adansonia digitata*.

Baphia. A Genus of the Suborder *Cesalpiniæ*, Nat. Order *Leguminosæ*.

B. nitida. (*L. nitidus*, shining.) Hab. Sierra Leone. Furnishes cam wood, from which is obtained a red dye of the character of that of red sandal wood.

Baphicus coccus. (Βαφικός, fit for dying; from βάπτω, to dye.) The kermes berry; galls of a coccus of the *Quercus coccifera*.

Baphorrhiza. (Βάπτω, to dye; ῥίζα, a root.) A synonym of *Anchusa*.

B. tinctoria. (*L. tinctorius*, belonging to a dyer.) A synonym of *Anchusa tinctoria*.

Baptisia. A Genus of the Suborder *Papilionaceæ*, Nat. Order *Leguminosæ*. Wild indigo.

B. alba. (*L. albus*, white.) Prairie indigo. Said to have the same properties as *B. tinctoria*.

B. leucantha. (Λευκός, white; άνθος, a flower.) Hab. United States. A species said to have the same properties as *B. tinctoria*.

B. tinctoria. (*L. tinctorius*, belonging to a dyer.) Hab. United States. Stem smooth, branching; leaves small, ternate, cuneate-obovate; flowers yellow. The root, which is the most active part, is dark brown, with a nauseous, somewhat acrid, and bitter taste. Laxative in small doses, emetic and cathartic in large doses. Used in scarlet fever, typhus, gangrene, and dysentery. Externally, as a lotion or poultice to foul or gangrenous ulcers. It supplies a pale blue colouring matter, which is used instead of indigo.

Baptisin. An impure resin obtained from the *Baptisia tinctoria*. Purgative and emetic. Dose, 2–6 grains.

Baptisterium. (Βαπτιστήριον, a bathing place.) A cold plunge bath.

Baptorrhæa. (Βαπτός, infected, dyed; from βάπτω, to dye; ῥίω, to flow.) A generic term proposed by Dr. Mayne instead of *Gonorrhæa*.

Baptorrhœal. Belonging to, or of the nature of, *Baptorrhæa*.

Baptothecorrhœa. (Βαπτός, infected; θήκη, sheath, and so the vagina; ῥίω, to flow.) Term proposed by Dr. Mayne for gonorrhœa in women.

Baptothecorrhœal. (Same etymon.) Belonging to, or of the nature of, *Baptorrhæa*.

Bapturethorrhœa. (Βαπτός, infected; οὐρήθρα, the urethra; ῥίω, to flow.)

Term proposed by Dr. Mayne for gonorrhœa in men.

Bapturethorrhœal. (Same etymon.) Belonging to, or of the nature of, *Bapturethorrhœa*.

Baptus. (Βάπτω, to colour.) A species of soft bituminous fossil of agreeable smell, so named because a tincture made of it was coloured with alkanet root.

Bar. (*Sax. barryen*, to protect.) A belt, a stop, a hindrance.

B. of neck of bladder. A ridge at the outer part of the neck of the bladder, and obstructing the flow of the urine from the one side, and the passage of a catheter from the other. It depends on growth of the prostate gland, or, occasionally, it is non-prostatic.

Barac. Same as *Barack penis*.

Barach panis. An Arabic name for nitre. (Ruland and Johnson.)

Baracza. Hungary; County Gömör. A mineral water, temp. 23° C. (73.4° F.), containing calcium sulphate and carbonate, and a little iron. Used as a tonic.

Baræsthesiometer. (Βάρος, weight; αίσθησις, perception by the senses; μέτρον, a measure.) An instrument devised by Eulenberg to estimate the sense of pressure, by means of a spiral spring acting on an index.

Baraquette. Influenza. An epidemic, which was prevalent in 1761, was described under this name by Razous.

Baras. Arabic name for lepra alba.

Barathron. An old name for the juniper.

Barathrum. (Βάραθρον, a pit.) A synonym of *Antrum*.

Barb. (*L. barba*, a beard. *F. barba*.) The recurved part of an arrow-head or a fish-hook.

The lateral processes from the shaft of a feather. They are narrow plates, pointed at their free ends, and contain the pigment granules in coloured feathers. They bear on their free edges the *barbules*.

In Botany, a strong hair with a single or double hooked point, or a backward projecting bristle at its tip.

Barba. (Lat.) The *Beard*.

B. aronis. The *Arum maculatum*.

B. capræ. (*L. capra*, a she-goat.) The goat's beard, or meadow-sweet, *Spiræa ulmaria*.

B. hirci. (*L. hircus*, a he-goat.) The *Tragopogon pratensis*.

B. Jovis. The beard of Jupiter. The name of several plants, among others the *Anthyllis barba Jovis*, the *Sempervivum tectorum*.

A deposit in the neck of the retort which occurs in the distillation of the *Fuming liquor* of Libavius.

Barbadoes. West India. Partly mountainous, partly a lower country, consisting of a series of terraces; open, cultivated, no marshes. Climate equable, limited; hottest month October, coldest January; hurricanes in August; dry season December to May, rain chiefly in autumn. Water good, vegetables scanty. Barracks not good. Yellow fever occurs; dysentery uncommon; elephantiasis common. Used as a resort for pulmonary invalids from the United States.

B. aloes. See *Aloes*, *Barbadoes*.

B. cedar. The *Cedrela odorata*.

B. cherry. The fruit of the *Malpighia glabra* and *M. puniceifolia*.

BARBALOÏN—BARBINERVATE.

B., green min'eral naph'tha of. Same as *B. tar*.

B. leg. The *Elephantiasis arabum*.

B. millet. The *Sorghum bicolor*.

B. nut. The seed of the *Jatropha curcas*.

B. pride. The *Poinciana pulcherrima*.

B. rock oil. Same as *B. tar*.

B. tar. (*Pix liquida barbadensis, petroleum barbadense.*) A dark liquid bitumen or petroleum exuding spontaneously from the earth in Barbadoes and other places.

Barbaloin. $C_{17}H_{20}O_7$. The bitter principle of Barbadoes aloes; it occurs in small yellow prismatic needles, sparingly soluble in cold water, freely in warm water and alcohol. Bromine produces a deposit of yellow needles of bromaloin; heated with nitric acid it yields aloetic, oxalic, picric, and chrysammic acids. See *Aloin*.

Barbamentum. (*L. barba, the beard; mentum, the chin*) A term for the chin.

Barbarea, Br. (Dedicated to St. Barbara. *G. Barbarakraut.*) A Genus of the Tribe *Arabideae*, Nat. Order *Cruciferae*. Biennial. Stem angular; leaves entire, lobed, or pinnatifid; pods linear, straight, stiff; valves keeled or ribbed; stigma capitate, or two-lobed; seeds one-serrate; cotyledons accumbent.

The official name, when it was in use, of the *Erysimum barbatum*.

B. præcox, Br. (*L. præcox*, ripe before its time. *F. cresson d'Amérique*; *G. Amerikanischer Winterkresse.*) American cress, Belle Isle cress. Leaves pinnatifid; petals three times as long as the sepals; pods long, thin; style short. Grows by rivers. Used as an antiscorbutic.

B. stricta. (*L. strictus*, close.) A variety of *B. vulgaris*; used for the same purposes.

B. vulgaris, Br. (*L. vulgaris*, common. *F. herbe de St. Barbe*; *L. erba di Santa Barbara*; *S. ruqueta*; *G. Barbenkraut.*) Winter rocket, common winter cress. Leaves toothed, or pinnatifid at the base; pods short, four-angled, acuminate; pedicels slender; style distinct. Somewhat bitter. Used as an antiscorbutic, a lithontriptic, and in coughs; externally applied to bruises.

Barbaria. A term for rhubarb.

Barbarossa's pills. One of the earliest mercurial preparations; made of mercury, rhubarb, musk, amber, scammony, and some other matters.

Barbarum. An agglutinant plaster applied to bleeding wounds; *Scrib. Largus, n., 207*.

Barbary. That part of Northern Africa which includes the States of Morocco, Algeria, Tunis, and Tripoli.

B. gum. The same as *Mogador gum*, the produce of *Acacia gummiifera*, and *A. seyal*.

B. mas'tich. The product of *Pistacia atlantica*.

Barba'ta. (*L. barbatus*, bearded.) A woman possessing a beard.

Barbate. (*L. barbatus. F. barbé; G. bärtig, bebartet.*) Bearded, having thin long hairs.

Barbatima'o bark. A name given in Brazil to the astringent barks of several leguminous trees, among which are *Acacia angica*, *A. jurema*, *Pithecollobium auaremoremolemo*, and *Styryphnodendron barbatimao*. The bark is used in infusion as an application to hernia, and to the mammae of women, to give the flesh firmness.

Barbatulus. (*L. dim. of barbatus*, bearded. *G. schwachbärtig.*) Having a small beard.

Barbaty. The *Dolichos catiang*.

Barbazan. France; Département Haute Garonne. A water, containing calcic sulphate and iron, at a temperature of 19° C. (66.2° F.), with a large quantity of carbonic acid. Tonic and slightly laxative. Used in chronic rheumatism, the sequelæ of malarious fever, and chronic urinary diseases.

Barbel. (*F. barbeau; I. barbjo; S. barbo; G. Barbe, Flussbarbe.*) *Cyprinus barbatus*. An edible fresh-water fish. The roe is said to produce vomiting, especially in the spring.

Barbella. (*L. dim. of barba, a beard. F. barbelle.*) Short, stiff, straight, cylindrical, and thick hairs, as in the *Centaureæ*.

Barbellate. (*F. barbellat.*) Applied to any surface furnished with short stiff hairs, or barbells.

Barbellulate. (*F. barbellul.*) Applied to surfaces or organs when provided with barbells.

Barbellule. (*Dim. barbella. F. barbellule.*) A very small, conical, pointed, spine-like hair, less than a barbella.

Barberie. France; Département Loire Inférieure. An acidulous ferruginous water, used as a tonic.

Barberina. A Genus of the Nat. Order *Strygaceæ*.

B. tetran'dra, Mart. (*Τίτρα, four; άνίρ, a man.*) A Brazilian tree, used in intermittent fevers.

Barbern. Russia; near Riga. A mineral water containing sodium, magnesium and calcium sulphate, magnesium and calcium carbonate, and hydrogen sulphide.

Barberry. The *Berberis vulgaris*.

B. American. The *Berberis canadensis*.

B. bark, U.S. Ph. The bark of the root of *Berberis vulgaris*. See *Berberis*.

B., Indian. A name given to *Berberis asiatica, B. aristata*, and *B. lycia*.

B., Nepaul. The *Berberis aristata*.

B. oak. (*Pers. Buloot-ul-mulk.*) The *Quercus ballota*.

B., ophthalmic. The *Berberis lycium*.

Barbiana. A Genus of the Nat. Order *Iridaceæ*.

B. hypogæa. (*Υπό, beneath; γή, the earth.*) A plant growing at the Cape of Good Hope, the roots of which are eaten by the natives.

Barbicel. (*Dim. of L. barba.*) Hook-like teeth on the barbules of feathers, which serve for interlocking.

Barbicornate. (*L. barba, a beard; cornu, a horn. F. barbicorne; G. barthornig.*) Having a fasciculus of hair at the base of the antennæ, as the males of the *Ceratopogon barbicornis*.

Barbiers. Probably a modification of the word *beriberi*. A paralytic disease of India and the Malabar coast; most prevalent in the first three months of the year, and said to be caused by sleeping in the open air, exposed to the winds which blow from the mountains about sunrise. The paralysis begins in the limbs, and is followed by loss of voice, emaciation, and great weakness.

Barbigeros. (*L. barba, a beard; gero, to carry. F. barbigère; G. barttragend.*) Having a beard; applied to petals that are hairy all over.

Barbinervate. (*L. barba; nervus, a nerve. F. barbinervi; G. bartnervig.*) Having the

BARBIROSTRATE—BARIUM.

nerves of the leaves furnished with hairs on the under surface, either only at the extremity, or in all their length upon the sides.

Barbirostrate. (*L. barba*; *rostrum*, a beak. *F. barbirostre*; *G. bartacknabelig*.) Having the proboscis covered with hairs.

Barbitium. (*L. barbitium*.) The beard.

Barbituric acid. $C_4H_4N_2O_3$. Obtained by heating a solution of alloxantin with strong sulphuric acid. It crystallises in large colourless prisms, slightly soluble in cold, easily in hot, water.

Barbotan. France; Departement Gers. Acidulated iron and sulphur waters, varying in temperature from 32° C. (89.6° F.) to 38° C. (100.4° F.). There are many springs in the valley, and mud baths are employed. They are little used now, but were formerly in vogue for rheumatism and paralysis.

Barbotine. A synonym of *Semen contra*.

Barbula caprina. (*L. barbula*, a small beard; *caprinus*, belonging to a goat.) A synonym of *Spiraea ulmaria*.

B. hirc. (*L. hircus*, a he-goat.) The hairy growth on the tragus of the auricle.

B. tra'gi. (*Τράγος*, a goat.) The same as *B. hirci*.

Barbulate. (*L. barbula*. *F. barbult*.) Having barbules.

Barbule. (*L. barbula*, dim. of *barba*.) The inner teeth of the peristome of mosses.

Also, a series of pointed, often serrated or hooked, processes, arising from the edge of each barb of a feather, filling up the interspace between the barbs and interlocking with their fellows of adjacent barbs by means of the barbicels, so as to fix one barb to another, and preserve the continuity of the vane.

Also (*G. Bärchen*), a small beard.

Barbu'ra. The *Acacia arabica*.

Barcelo'na. Spain; on the shores of the Mediterranean. Climate very variable; only partially protected from the north winds, which alternate with moist southerly breezes in the winter. It has been recommended as a winter residence for consumptive or other chest sufferers, who can bear a somewhat stimulating climate, but it is probably a risky place.

Barclay's antibilious pills. Resinous extract of jalap 1 dr., almond soap 1½ dr., extract of colocynth 2 drs., guaiacum 3 drs., potassio-tartrate of antimony 10 grs., oil of juniper 10 drops, oils of caraway and rosemary of each 4 drops, syrup of buckthorn q. s. Mix; divide into 4-grain pills. Dose, 1—3 at bed-time.

Barda'ia. An Arabic term for the Libra or pound weight. (Ruland and Johnson.)

Barda'na. (*L. bardus*, foolish; so called, perhaps, because the burs are often foolishly thrown at others. *G. Klette*.) The *Aretium lappa*. It was recommended for the cure of gout by Hill and Crine, about the middle of the 18th century.

B. minor. (*L. minor*, less.) A synonym of the *Xanthium strumarium*.

Barda'næ oleum. (*G. Klettenwurzelöl*.) Oil of the burdock root, *Aretium lappa*, used in Germany as an antidyseratic.

B. ra'dix. Belg. Ph. (*L. radix*, root. *G. Klettenwurzel*.) The root of the *Aretium lappa*.

Bardan'æ ra'dix. The same as *Bardana radix*.

Bar'ges. France; Department of Hautes-

Pyrénées. A village, 4000 feet above sea-level, in a ravine among high mountains, uninhabitable in winter, and having a cold and variable climate. Mineral waters from nine sources, of 31° C. to 45° C. (87.8° F. to 113° F.), containing small quantities of sodium sulphide, sulphate, carbonate, chloride, and silicate. Used alone, or with milk or whey, internally, but chiefly in baths or piscine (baths through which a stream is running) in diseases of the bones and joints, old wounds, skin diseases, chronic rheumatism, and scrofula. Active congestions and lung diseases are contraindications. The water contains *Barytes*.

Bar'egine. (*F. barygina, glairine*; *L. glairina*; *S. barygina, glarina*; *G. Barygin, glairin*.) This substance has received many names: this from *Barytes*, zoogene, vegeto-animal, glairigene, glairinuma, iodine, geline, thermoline, pyreneine, luchonine, duxine, saint-salverine, norisine, viridine, sulfurose, sulfurine, hydrea, sulfurhydrine, sulfomucose, sulfodiphtherose, and many others. It is a glairy, organic substance, found in many mineral waters when they have been exposed to the air for some time, especially in sulphurous and thermal waters. It varies in colour according to its source, and in it many low vegetable and animal forms are developed. Its origin is unknown.

Barstrand Sys'sel. Iceland. A hot spring, temp. 103.3° C. (218° F.) Used in rheumatism and other diseases.

Barga'da. The *Ipomoea pes-caprae*.

Bar'l. Hungary, County Zemplin. A coal sulphur spring.

Bar'iga. A name for that variety of Borneo camphor which occurs in grains or small scales.

Barig'lia. See *Barilla*.

Bar'il bromidum. See *Barium bromide*.

B. carbo'nas. See *Barium carbonat*.

B. chloridum. See *Barium chlorid*.

B. iodidum. See *Barium iodid*.

B. sulphas. See *Barium sulphat*.

Barilla. (*F. barille*.) The impure alkali resulting from the burning of several plants, principally of the Genera *Salicaria*, *Salicornia*, *Chenopodium*, and *Atriplex*. These are cultivated for the purpose, and when ripe are burned on iron bars laid across pits. The ash is thus fused into a bluish-grey and porous substance. It is made in Spain and the Levant, and is used in the manufacture of soap and glass, but is not in so much demand for the manufacture of soda as formerly.

B. al'icant. Impure soda, from the ashes of the *Mesembryanthemum nodiflorum*, *Chenopodium setigerum*, and several species of *Salicaria*.

B. Carthage'na. Impure soda, obtained from the ashes of the species *Salicornia* and *Salicaria*.

B. Sic'ily. Impure soda, obtained chiefly from the ashes of *Salicaria sativa*.

B. Turkey. Impure soda, obtained from the ashes of *Mesembryanthemum copticum*.

Barill'or. The same as *Barilla*.

Barisart. Belgium; close to Spa. A chalybeate water containing much carbonic acid. Used in debility after exhausting diseases, and in chronic leucorrhæa.

Barium. (*Bap'us*, heavy. *F. baryum*; *I. and S. bario*; *G. Baryum*.) Atomic weight 137. Symbol Ba. A dyad metal of an alkaline

BARK.

earth. Of silvery whiteness, which speedily tarnishes from its easy oxidation in the air; it decomposes water; it is malleable, and melts below a red heat, and burns with a red flame; sp. gr. 4.7. Its soluble salts are poisonous.

B. acetate. $\text{BaC}_2\text{H}_3\text{O}_2$. A soluble salt. Efflorescent crystals of bitter acid taste. Poisonous. Has been employed as *B. chloride*.

B. arsenate. $\text{Ba}_3(\text{AsO}_4)_2$. A solution of barium chloride is added to one of sodium or potassium arsenate; the resulting precipitate collected, dried, washed, dissolved in a solution of arsenic acid, and crystallised. Recommended in skin diseases and tubercular phthisis. Dose, one sixteenth to a quarter of a grain.

B. arsenite. Ba_2AsO_3 . Used as *B. arsenate*.

B. bromide. (*F. bromure de baryum*; *G. Brombarium*.) $\text{BaBr}_2 \cdot 2\text{H}_2\text{O}$. Molecular weight 333. Obtained by dissolving barium carbonate in hydrobromic acid; it forms colourless rhombic plates, freely soluble in water and alcohol. It has an offensive taste. Used in scrofula.

B. carbonate. BaCO_3 . Sp. gr. 4.3. Found native as witherite. A solution of barium chloride is precipitated by an alkaline carbonate. A heavy white powder, sparingly soluble in water, undecomposed by heat; tasteless. Poisonous, inasmuch as it is soluble in the gastric juice.

B. carbonicum. See *B. carbonate*.

B. chlorate. $\text{Ba}(\text{ClO}_3)_2$. Obtained by saturating aqueous chloric acid with barium carbonate. It crystallises in monoclinic prisms, very soluble in water.

Also, a synonym of *Barium chloride*.

B. chloratum. See *B. chloride*.

B. chloride. $\text{BaCl}_2 \cdot 2\text{H}_2\text{O}$. Barium sulphate is exposed to a red heat with coal or potassium carbonate; the resulting sulphide is treated with hydrochloric acid, the solution filtered and crystallised. Flat quadrangular tables, colourless, transparent, of an acid taste. Very poisonous. A solution of one part to three of water is used (*U.S. Ph.*) in scrofula, worms, and skin diseases. Dose, five drops three times a day. Externally in corneal opacities and pulsating ulcers.

B. chloride, solution of. One part in ten of water. Used as a test for sulphuric acid and its salts in solution.

B. dioxide. BaO_2 . Made by exposing barium monoxide at a red heat to oxygen.

B. hydrate. The *B. hydroxide*.

B. hydroxide. $\text{Ba}(\text{OH})_2$. A white powder, obtained by the slaking with water of barium monoxide, or by decomposing a hot concentrated solution of barium chloride with a solution of caustic soda. In contact with water it crystallises; its solution is baritic water.

B. iodate. $\text{Ba}(\text{IO}_3)_2$. Used in the preparation of iodic acid.

B. iodatum. See *B. iodide*.

B. iodide. $\text{BaI}_2 \cdot 2\text{H}_2\text{O}$. Formed by the action of iodine on barium sulphide. Slender deliquescent needles, giving up iodine in the air. Has been used in scrofula. Dose, one eighth of a grain; as an ointment 4 grs. to lard 1 oz.

B. monoxide. BaO . Baryta. Sp. gr. 4. A grey spongy mass prepared by decomposing barium nitrate by heat. In contact with water it evolves heat, and becomes hydrate of baryta, or barium hydroxide.

B. muriate. The *Barium chloride*.

B. nitrate. $\text{Ba}(\text{NO}_3)_2$. Prepared as the chloride, but with nitric acid. Transparent octa-

hedral anhydrous crystals. Used, in solution, as a test for sulphuric acid and the soluble sulphates.

B. oxide. The *B. monoxide*.

B. peroxide. The same as *B. dioxide*.

B., poisoning by salts of. All the soluble salts are poisonous. Great abdominal pain, vomiting, diarrhoea, palpitation, and convulsions. Extreme times of death one hour and seventeen hours. Stomach and duodenum are much inflamed, brain, lungs, and kidneys congested, and great congestion of rectum. Perforation of stomach has been recorded, but it is doubtful if this were not the result of previous disease. Sodium and magnesium sulphate should be freely given in solution, along with emetics, and the stomach-pump used if justifiable. Death has resulted from a drachm of the chloride. Barium salts give, with sulphuric acid, a white precipitate, insoluble in acids and alkalis. Heated on a platinum wire they burn with a green flame.

B. protoxide. The *Barium monoxide*.

B. sulphate. BaSO_4 . Found native as heavy spar, or barytes. Sp. gr. 4.5. Prepared by adding sulphuric acid to a solution of barium chloride. Bevelled tables or six-sided prisms; inert; used as a pigment.

B. sulphide. BaS . Made by exposing barium sulphate, mixed with coal, to a red heat. Thin colourless plates.

B. superoxide. The *B. dioxide*.

Bark. (*Dan. bark*; *L. cortex*; *Gr. φλοιός*; *F. écorce*; *I. corteccia*; *S. corteza*; *G. Rinde*.) The outermost part of the stem of an exogen surrounding the wood, to which it is united by the cambium and the medullary rays. The bark consists originally of four distinct layers: the *liber*, the *cellular or green layer*, the *suberous layer*, and the *epidermis*, which is soon lost.

The liber is the innermost, and is composed of connected cells or bast tissue, mixed with laticiferous tissue and parenchymatous cells. It is united to the wood by the cambium, and gives passage to the medullary rays. Called also *inner bark* and *endophloeum*.

The cellular layer is the middle layer; its inner surface unites with the medullary rays, which have passed through interstices in the bast tissue of the liber; it consists of loosely connected, angular parenchymatous cells, containing chlorophyll; some laticiferous vessels are usually to be found. Called also *green layer* and *mesophloeum*.

The suberous layer is the outer layer of the bark of all but very young plants and twigs; it is composed of layers of tabular, closely united, cells, usually of a brown colour. In some trees, as the *Quercus suber*, the cork tree, this layer is enormously developed. In young plants and twigs small brown projections, called lenticular glands, are found; they are not glandular, but development of the suberous tissue; from them roots may spring under favorable circumstances. Called also *cork layer*, *epiphloeum*, and *periderm*.

The epidermis consists of layers of tubular cells, united to each other. It is only found in young formations, and is soon lost on the stem and branches.

The bark grows by accretions to the inner surface of each layer. The cellular and suberous layers cease growing after a tree is a few years old, but the liber grows as long as the tree lives, and is the essential structure of the bark. The

BARLEY.

bark acts as a protection to the parts which it surrounds. Its inner part conveys the elaborated sap from the leaves to the different structures to supply material for nutriment, and for the special deposits in the wood, or its own substance.

The term is often used to signify specially *Cinchona* bark.

B., Arica. See *Arica* bark.

B., ash-colored. The same as *B., Jam.*

B., bitter. The *Pinckneya pubens*.

B., Bogota. A synonym of *B., Carthage*.

B., Calisaya. See *Calisaya* bark.

B., Carabaya. A bark imported from the Province of Carabaya, through the ports of Ilay and Arica; probably the produce of *Cinchona ovata*, and its variety *rusticaria*.

B., Caribbean. A false *Cinchona* bark, the product of *Krotonia caribaea*.

B., Carthage. Certain non-official cinchona barks are known under this name. The hard, or hard yellow, or common yellow Carthage bark is the product of *Cinchona cordifolia*; the fibrous, or fibrous yellow, or spongy Carthage bark is obtained from the *Cinchona lancifolia*; and the brown Carthage, or hard Pitaya bark, is the growth of the *Cinchona pitayensis*.

B., cherry, wild. The bark of *Prunus virginianus*.

B., coquetta. The same as *B., Bogota*.

B., crown. The same as *B., Loxa*.

B., Cusco. Imported from the Province of Cusco, in the South of Peru. The produce of *Cinchona scrobiculata*, var. *Delondriana*.

B., doom. The bark of *Erythrophloeum guineense*.

B., elk. The bark of *Magnolia glauca*.

B., essential salt of. A watery extract of Peruvian bark.

B., Florida. The bark of *Pinckneya pubens*.

B., Fusagasuga. A variety of the Carthage bark.

B., Georgia. The bark of *Pinckneya pubens*.

B., grey. The bark of *Cinchona cinerea*, *C. micrantha*, *C. nitida*, and *C. peruviana*, and, perhaps, other species.

B., Guamilies. One of the pale *Cinchona* barks; probably the product of *Cinchona pubescens*.

B., Huana'co. The bark of *Cinchona micrantha*, *C. nitida*, and *C. peruviana*.

B., Indian. The bark of *Magnolia glauca*.

B., iron. The *Eucalyptus resinifera*.

B., Ja'en. The product of *Cinchona ovata*.

B., Jamaica. The bark of the *Cinchona caribaea*.

B., Jes'uits. A synonym of *Cinchona* bark.

B., Lima. This bark is of two kinds, fine and coarse; the former obtained from the *Cinchona nitida*, the latter from the *C. micrantha*.

B., Loxa. The most highly esteemed of the pale *Cinchona* barks; the produce of *Cinchona condaminea* and its varieties, and, perhaps, some other species.

B., Maracaybo. One of the varieties of Carthage bark.

B., neem. The bark of the *Andromeda indica*.

B., oak. The bark of a species of *Quercus*.
B., oak, white. The bark of *Quercus alba*.

B., of cotton root. See *Geopigia radialis cortex*.

B., of St. Ann. A synonym of *B., Omo*.

B., ordo'al. The bark of *Erythrophloeum guineense*.

B., pale. The bark of the *Cinchona officinalis*, var. *condaminea*.

B., Peruvian. General term for the bark of various species of *Cinchona*.

B., Pitaya. A synonym of the Brown Carthage bark.

B., red. The bark of the *Cinchona succirubra*.

B., royal. The bark of *Cinchona cordifolia*.

B., San'ta Mar'tha. A variety of the Carthage bark.

B., sandy. The bark of *Erythrophloeum guineense*.

B., silver. The bark of the *Cinchona cinerea*.

B., St. Za'eda. The bark of the *Cinchona floribunda*.

B., yellow. The bark of the *Cinchona calisaya*.

Barleria. A Genus of plants of the Nat. Order *Acanthaceae*.

B. buxifolia. (*L. buxus*, the box tree; *folium*, a leaf.) The *B. obovata*. The plant supposed to be the *Cere schullii* of Malabar.

B. ciliosa. (*L. cilium*, an eyelash.) Hab. Bengal. The seeds are used in snake bites. (Waring.)

B. longifolia. Linn. The *Asteracantha longifolia*, Nees.

B. obovata. (*L. ob*, near; *ovatus*, egg-shaped.) Hab. India. A decoction is given in dysuria, and the powdered plant, mixed with vinegar, is applied to anasarous swellings.

B. prionitis. (*Πριονίτις*, the plant betony.) Hab. India. The juice is bitter, and is used by the Hindoos in the febrile catarrhal affections of children. The dried plant is used in dropsies. (Waring.)

Barley. (Welsh, *barlys*, from *bava*, broad, and *llys*, a plant. *L. hordeum*; Gr. *αββα*; F. *orge*; I. *orzo*; S. *cebada*; G. *Gerste*.) The seeds of *Hordeum distichon*, *H. vulgare*, *H. hexastichon*, and *H. zeocitron*, the first being the official one. Barley was the original prize of the victors in the Eleusinian games. The Egyptians are stated by Herodotus to have used a wine prepared from it. Barley is very nutritious, but somewhat laxative. Dr. Parkes has found it very unsuitable for dysenteric cases. According to Einhoff, barley contains—meal 70.06, husk 18.75, water 11.20 per cent. In 100 parts of barley-meal Von Bibra found water 15, nitrogenous matter 12.98, gum 6.744, sugar 3.2, fat 2.17, starch 59.95. The ash of barley contains, according to Schmidt, potash 20.91, magnesia 6.91, lime 1.67, iron oxide 2.10, phosphoric acid 38.48, silica 29.10, per cent.

A principle called *hordeine* was supposed by Proust to exist in the husk of barley, but it is only the finely divided bran, or a mixture of cellular tissue, starch, and gluten. *Malt* is made from barley.

B., bat'tedore. The *Hordeum scabrum*.

B., can'tic. The seeds of the *Asagraea officinalis*. See *Cevadilla*.

B., pearl. (*L. hordeum decorticalum*, or *perlum*; *F. orge perli*; *G. Perlengraupen*.) Decorticated barley, rounded and polished in a mill; it is white, and retains a trace of the longitudinal furrow. Used for making Decoctum hordei, barley water.

B., Scotch. (*L. hordeum mundatum*; *F. orge mondi*; *G. Gerstengraupen*.) The seeds deprived of the bran, but not rounded.

B.-sugar. The *Saccharum hordeatum*.

B. water. Two ounces of washed pearl barley boiled for twenty minutes in a pint and a half of distilled water and strained. See *Decoctum hordei*.

B., winter. The *Hordeum hexastichon*.

Barm. (*Sax. borma*.) Yeast.

Barnet. Hertfordshire. The mineral waters were once in high repute; they contain magnesium sulphate and sodium chloride.

Barolite. (*Bápos*, weight; *λίθος*, a stone.) The native *Barium carbonate*.

Barology. (*Bápos*, weight; *λόγος*, doctrine.) That section of physics which relates to weight.

Baromacrometer. (*Bápos*, weight; *μακρός*, long; *μέτρον*, a measure. *F. baromacromètre*; *G. Kindermesswerk*.) An instrument invented by Stein to ascertain the weight and length of new-born infants.

Barometer. (*Bápos*, weight; *μέτρον*, measure. *F. baromètre*; *I. and S. barometro*; *G. Wetterglas, Luftschweremesser*.) An instrument for ascertaining the weight of the atmosphere, and for measuring heights and for foretelling the weather. The mercurial barometer, the first instrument of the kind, was invented by Torricelli in A.D. 1643. The simplest form consists of a glass tube, 36 inches long, one end of which is sealed; it is filled with mercury, and then inverted into a glass vessel or cistern containing mercury. The mercury in the tube will fall until balanced by the pressure of the atmosphere on the mercury in the cistern. The column will be about 30 inches high, and the upper part of the tube will be empty, constituting the *Torricellian vacuum*. Any other fluid may be used, but mercury is most convenient, because of its weight, which makes the column shorter and the instrument more portable. The shapes of the instrument are various, and the cistern is usually the lower end of the tube turned up and dilated, but the principle is the same. In the manufacture great care is needed to ensure the expulsion of all air from the mercury, and a perfect vacuum at the top.

B., an'roid. See *Aneroid barometer*.

B., cis'tern. That form in which there is a cistern or reservoir at the lower end of the tube containing the same material as itself contains.

B., syphon. A barometer, with a tube bent in the shape of a syphon, with a long and short leg, the latter open, and serving as a cistern.

B., wheel. A syphon barometer, in the shorter leg of which is a float on the surface of the mercury, to which is attached a string, which passes round the pulley, and has a weight somewhat lighter than the float at the other end; an index is attached to the pulley, and, moving with it, shows the variations of the level of the mercury.

Barometric. (Same etymon.) Relating to the barometer.

Barometrical. (*Bápos*; *μέτρον*, a measure.) Of, or belonging to, a barometer.

Barometrograph. (*Bápos*; *μέτρον*; *γράφω*, to write. *G. Schwermassbeschreiber*.) A barometer so constructed as to register its own variations; either by means of a lever, which is moved by the mercury, and which carries at its long end a style, which marks blackened paper; or by means of a screen with a perforation, through which light falls on photographic paper.

Bar'nes. A term for small worms.

Baros'nome. (*Bápos*, weight; *άνεμος*, wind.) An instrument which indicates the force of the wind.

Baroscope. (*Bápos*, weight; *σκοπία*, to ascertain.) An instrument for determining the loss of weight of bodies in air, consisting of a scale beam, having a hollow copper sphere at one end and a solid counterpoise of exact balance in the air at the other end. When placed under the receiver of an air-pump, and a vacuum produced, the equilibrium is destroyed, the copper sphere being the heavier. When balanced in the air the real weight of sphere was not apparent, inasmuch as from its greater surface it was more buoyed up by the air.

Also, an instrument which is only a barometer sensible to the slightest atmospheric variations, and so especially applicable to marine purposes.

Also, an instrument, invented by Esbach, to determine amounts of urea. It is a bent tube, with one arm dilated into the bulb, into which the gas evolved from the decomposition of urea by the hypochlorites is received, and the amount is calculated, under different pressures, by means of tables.

Barosel'enite. (*Bápos*; *selenite*.) A synonym of native *Barium sulphate*.

Baros'ma. (*Bápos*, weight; *σμή*, a smell. *G. Bukkostrauch*.) Plants of the Suborder *Di-osmea*, of the Nat. Order *Rutaceæ*, with opposite, coriaceous, simple leaves, having pellucid oil-bearing glands; solitary flowers, five petals; ten stamens, five of which are abortive; five carpels united into a five-celled ovary; five-lobed stigma; oblong smooth seeds in a fruit composed of five follicles, adherent at the axis and dehiscing at the summit. Natives of the Cape of Good Hope.

B. betul'ina. Bartl. (*L. betula*, the birch.) One of the species affording *Buchu*, with obovate, apically recurved, serrated leaves and pink flowers.

B. cam'phor. A stearopten, obtained from the oil of the buchu leaves. It crystallises in needles, having an odour of peppermint.

B. crenata. (Mod. *L. crenatus*, from *crena*, a notch.) The *B. crenulata*.

B. crenula'ta. Hook. (Mod. *L. crenulatus*, dim. of *crenatus*.) Also supplies *Buchu*. It has ovate-lanceolate, obtuse, crenate leaves, and pedicels with two bracts close under the flowers.

B. ecklonia'na. Berg. The *B. crenulata*.

B. ericifo'lia. Andr. (*L. erica*, heath; *folium*, a leaf.) A species the leaves of which have been found amongst the buchu leaves of commerce.

B. pulchell'ia. (*L. pulchellus*, dim. of *pulcher*, beautiful.) Hab. Cape of Good Hope. Used by the Hottentots, mixed with grease, to smear their bodies.

B. serratifolia. Willd. (*L. serratus*, notched on the edge; *folium*, a leaf.) Another source of *Buchu*. Leaves linear, lanceolate, ser-

BAROSMÆ FOLIA—BARYGLOSSIA.

ulate; pedicels with two bracts about the middle; flowers white.

Barosmæ folia. Same as *Buchu folia*.

Barosmin. The same as *Barosma camphor*.

Barotes salinus. (*L. salinus*, part. of *salio*, to salt.) A synonym of *Barium chloride*.

Barr. An intoxicating drink, prepared from the milk-sap of the *Calotropis gigantea*, by the tribes inhabiting the Western Ghats of India.

Barra. (Fr.) White resin; that portion of the turpentine which concretes around wounds of the tree, and is removed during the winter.

Barre. Germany; near Strasburg. Ferruginous thermal waters. Used as a diuretic and tonic.

Barren. (Old F. *baraigne*; or Breton, *bré han*.) Sterile.

In Botany, applied to a stem that produces no branches.

Barrenness. Sterility, unfruitfulness.

B. of impotency. See *Aphoria impotenti*.

B. of incongruity. See *Aphoria incongrua*.

B. of irrespondence. See *Aphoria improbita*.

B. of menses. See *Aphoria paramenica*.

Barrenwort, alpine. The *Epimedium alpinum*.

Barreswill. A French chemist, who died in 1873.

B.'s solution. A test for diabetic sugar in the urine. Acid potassium tartrate 60 grams, sodium carbonate 40 grams, are dissolved by heat in a third of a litre of water; to this 30 grams of cupric sulphate, in powder, are added; the mixture is boiled, and, on cooling, 40 grams of caustic potash, dissolved in a fourth of a litre of water, is mixed with it, and the amount brought up to a litre by the addition of water. The solution is blue. Diabetic urine, boiled with a little of this test fluid, deposits a reddish-yellow oxide of copper.

Barringtonæ. Same as *Barringtoniaceæ*.

Barringtonia. A Genus of the Nat. Order *Myrtaceæ*. Ornamental trees, chiefly tropical.

B. acutangula. Gaertn. (*L. acutus*, sharp; *angulus*, an angle.) A riverside tree of India. The juice of the leaves is used as an ointment in scabies; the seeds are used in diarrhoea, jaundice, and tenesmus, and as an emetic.

B. neo-caledonia. The fruit of this species is used, to intoxicate fishes, by the natives in New Caledonia.

B. racemosa. (*L. racemosus*, clustering.) Hab. India and Burmah, on rivers. The powdered fruit is used as a sternutatory in headache and hemiparesis, and is given in diabetes, jaundice, and mesenteric affections. The bark of the root is given in colic and amenorrhoea.

B. speciosa. (*L. speciosus*, splendid.) Hab. Moluccas, Singapore, Fiji Islands, by rivers. Used by natives as *B. racemosa*.

Barringtoniaceæ. An Order of epigynous corollifloral *Eragrostis*, or an Order of the Alliance *Grossales*. Fruit pulpy or fibrous; placenta axile; style one; stamens numerous; calyx imbricated.

Barros. A synonym of *Terra portugalica*.

Barrowdale. England; Cumberland. A salt water, formerly used as a purgative.

Bartemont. France; Département Alpes Maritimes. A mineral water said to contain oxygen. It is diuretic, and is used in lithiasis and vesical catarrh.

Bartfeld. Hungary; on the northern slope of the Carpathians. Chalybeate water, containing sodium bicarbonate 16 to 24 grains, sodium chloride 5 to 8 grains, iron bicarbonate 67 grains, and carbonic acid 46 cubic inches, in 16 ounces of water. Used in chronic catarrh of the mucous membranes.

Bartholin, Thomas. Born at Copenhagen in 1619; died 1690.

Bartholin's. Inflammation of the duct of Bartholin's glands.

B., duct of. One of the ducts of the sublingual gland, which runs alongside Wharton's duct, and opens into or close by it. It is often also connected with the submaxillary gland.

B., glands of. (*G. Bartholinæ Dr.*)

Two reddish-yellow, round or oval acinous glands, of the size of a small bean, situate one on each side of the external opening of the vagina, between it and the bulbo-cavernosus muscles, in such manner that the upper fibres of this muscle surround the glands; they lie in front of the transverse perineal muscles and beneath the superficial fascia. The ducts open on the inner surface of the nymphæ in front of the place of origin of the hymen.

The name has also been used to signify the sublingual glands.

Barton. An American surgeon of Philadelphia.

B.'s ankylosis operation. (Same origin.) The cutting down on the trochanter major, and sawing through the bone, or cutting out a V-shaped piece, in angular ankylosis after hip-joint disease.

B.'s fracture. An oblique fracture of the lower end of the radius, beginning in the articulating surface and running out an inch or more higher up. (Dunglison.)

Bartramia cæcæ. A Family of the Suborder *Acrocarpeæ*, Order *Stegocarpeæ*. Leaves with papillæ; capsule spherical, without fissured openings.

Barbung. (Hind.) An angular glossy seed, imported into India, and used as an astringent in diarrhoea. Probably the seed of *Plantago lanceolata*. (Waring.)

Barurao. Arabic name for glass.

Baruria. (*Barûs*, heavy; *urios*, urine.) The condition of the urine when the specific gravity is high.

Barus camphor. The same as *Borneo camphor*.

Barwood. The *Baphia nitida*.

Baryococcalon. (*Barûs*, heavy, strong in smell; *kôkka*, the kernel of the fr-seed.) The *Datura stramonium*, from its narcotic properties.

Baryococcalon. See *Baryococcalon*.

Barycticæ. (*Barûs*, heavy. *F. baryctique*; *G. Baryctik*.) The doctrine of weight.

Barycticæ. Same as *Barycticæ*.

Barycolia. (*Barûs*, heavy; *and*, hearing. *G. Schœrherigkeit*.) Dulness of hearing.

Baryencephalia. (*Barûs*, heavy; *ἐγκέφαλος*, the brain.) Imbecility.

Baryglossia. (*Barûs*, heavy; *γλῶσσα*,

BARYGLOTTIA—BASE.

the tongue. *F. baryglossie*; *G. Schwerzüngig-keit.*) Slow or heavy utterance.

Baryglottia. Same as *Baryglossia*.

Baryhydrias ioda'ti. The Barium iodide.

Barylalia. (*Bapús*, heavy; *λαλία*, talking. *F. barylalie.*) Dull, heavy speaking.

Baryma'zia. (*Bapús*, heavy; *μαζός*, the breast.) A condition in which the breasts are large.

Barymetry. (*Bapús*, heavy; *μέτρον*, a measure. *F. barymétrie.*) The measuring of weight or thickness.

Baryod'mia. (*Bapús*, heavy, strong; *ὀδμή*, smell. *F. baryodmie.*) A heavy, oppressive, and disagreeable smell.

Baryodyné. (*Bapús*, heavy; *δύνη*, pain. *F. baryodynée.*) A heavy, deep, excessive pain.

Baryosma odorata. (*Bapús*; *ὀσμή*, smell.) The *Dipteris odorata*.

B. tonga. (*Bapús*; *ὀσμή*, odour.) The *Dipteris odorata*.

Baryphonia. (*Bapús*, heavy; *φωνή*, the voice.) Difficulty of speech.

Barypicro'n. (*Bapús*, heavy; *πικρός*, bitter.) A species of absinthium.

Baryplo'teres. (*Bapús*, heavy; *πλωτήρ*, a swimmer. *F. baryplo'teres.*) Name by J. A. Ritgen for a Family of aquatic birds remarkable for the heavy manner in which they swim.

Barysoma'tia. (*Bapús*, heavy; *σῶμα*, a body. *F. barysomie*; *G. Schwerfälligkeit des Körpers.*) Great weight and bulk of the body.

Barysoma'tia. Same as *Barysoma'tia*.

Bary'ta. (*Bapύτης*, weight. *F. baryte, barote, terre pesante*; *I. barite*; *S. barita*; *G. Baryt, Schwereerde, Schwerepath.*) BaO. The Barium monoxide.

B. acé'tica. The Barium acetate.

B. carbo'nate of. The Barium carbonate.

B. carbon'ica. The Barium chloride.

B. hydr'iodate of. The Barium iodide.

B. hydr'iod'ica. The Barium iodide.

B. hydrochlorate of. The Barium chloride.

B. hydrochlor'ica. The Barium chloride.

B. mu'riate of. The Barium chloride.

B. muriat'ica. A synonym of Barium chloride.

B. ni'trica. The Barium nitrate.

B. sulphate of. The Barium sulphate.

B. sulphu'rica. A synonym of Barium sulphate.

Bary'to arse'nias. See Barium arsenic.

B. ar'senic. See Barium arsenic.

B. carbo'nas. See Barium carbonate.

B. hydr'iodas. See Barium iodide.

B. mu'rias. See Barium chloride.

B. sulphas. See Barium sulphate.

Bary'ta. (*Bapύτης*, weight.) The Barium sulphate.

Barythymia. (*Bapús*, heavy; *θύμος*, the mind. *F. barythymie*; *G. Schwermuth.*) Deep melancholy.

Barytic. (*L. baryticus*; *G. barythaltig.*) Of the nature of, or containing, baryum or its compounds.

Barytiferous. (*Baryta*; *fero*, to bear. *F. barytifere*; *G. baryttragend.*) Containing baryta.

Bary'tina. A name given to a supposed alkaloid obtained by Simon from the white helle-

bore, *Veratrum album*, so called because, like baryta, it was precipitated from its solution in acetic or phosphoric acids by sulphuric acid.

Barytium. A synonym of Barium.

Baryum. A synonym of Barium.

B. chlorat'um. See Barium chloride.

B. ioda'tum. See Barium iodide.

Barzud. Arabic name for *Galbanum officinale*.

Barzun-Bare'ges. France; Hautes-Pyrénées, near to Bareges. A sodium sulphide water, of 31° C. (87·8° F.), containing nitrogen and a little carbonic acid, with much baregine. It is said to be calnative, and in this respect differing from Bareges. Used in skin diseases and in uterine catarrhal affections, even when in a somewhat inflammatory stage.

Bas. The native Indian name of *Tabasheer*.

Bas'al. The *Embelia ribes*.

Bas'al. (*Básis*, a step, a base.) Belonging to, or arising from, a base.

B. op'tic gan'gion. A mass of grey matter lying on the outer side of the tuber cinereum, and which gives origin to some fibres of the deep attachment of the optic nerve of the same side.

B. pro'cess. The straight, thick process given off from the external hair-cells of the organ of Corti, and attached by a small three-cornered prominence to the basilar membrane.

Basalia. (*Básis*.) The basal cartilages of the fins of Elasmobranch fishes.

Basal-nerved. Applied to a leaf in which all the nerves spring from the base.

Basalt. (*L. basaltis*, a dark, hard marble from Ethiopia.) An igneous rock occurring in the trap and volcanic series, consisting essentially of augite and felspar. It is of fine texture, dark colour, and usually columnar.

Basalt'es. (*L. basaltis*, a dark, hard marble from Ethiopia.) Basalt.

Basanastrag'ala. (*Βασαναστραγάλα*, plague of the joints, as in gout.) Pain in the ankle-joint; gout in the foot.

Basan'ismus. (*Βασανίζω*, to cross-question.) Investigation of a disease, or examination of a patient.

Basanites. The *Basanus*.

Basanus. (*Βάσανος*, a touchstone.) A species of basalt formerly used to try the purity of gold and silver, and of which apothecaries' mortars were made.

Basanium. (*Βασάνιον*, an amulet.) A charm against witchcraft.

Bascula'tion. (*F. bascule*, a swing.) A term applied to the movement by which retroversion of the uterus is remedied when the fundus is pushed up and the cervix is pulled down.

Bas'cule move'ment. (*F. bascule*, a swing.) A term signifying recoil of the heart in systole.

Base. (*Básis*, a foundation. *F. base*; *I. and S. base*; *G. Basis.*) That which serves as a foundation or groundwork.

In Anatomy, it signifies the foundation or lower part, as base of brain.

In Botany, in like manner, the term base is used in contradistinction to summit; the part by which an organ is attached to its support.

In Chemistry, it is employed to designate those bodies, whether metallic oxides, or hydrates, or alkaloids, which, entering into combination with an acid, form salts.

BASEBROOM—BASIDIUM.

In Dentistry, it is used for the plate which supports the artificial teeth.

In Pharmacy, it signifies the most important ingredient of a prescription.

Bas., organ'ic. A term applied to the large class of organic compounds containing nitrogen, which unite with acids.

Basebroom. The *Genista humilis*.

Basel'ow. A German physician.

Bas's disease. A synonym of *Keophthalmio bronchocela*.

Bas'city. A synonym of *Basieity*.

Basella. (*L. basella*, a small base. *F. basella*.) A Genus of plants of the Nat. Order *Chenopodiaceae*.

B. alba. (*L. albus*, white.) Malabar nightshade. A common East Indian plant, possessing demulcent properties. It is a variety of *B. rubra*.

B. cordifolia. (*L. cor*, the heart; *folium*, a leaf.) An Indian plant, used as a sudorific and laxative, in cutaneous diseases, and as a pot-herb.

B. rubra. Linn. (*L. ruber*, red.) Leaves eaten like spinach. Supplies a purple dye. Juice of the leaves used in catarrh.

B. tuberosa. (*L. tuberosus*, full of swellings.) A native of New Granada. Eaten by women to increase their fecundity.

Basella'cea. An Order, according to some, of climbing shrubs, distinguished from *Chenopodiaceae* by having a coloured calyx, with two rows of sepals, and perigynous stamens.

Basement membrane. (*F. membrana intermediaire*; *G. Basalmembran*.) A fine transparent layer lying between the epithelium and the fibrovascular layer of mucous membranes. It is in connection with the latter structure, but is not penetrated by its blood-vessels; it consists of flattened epithelioid connective tissue. It is most prominent in villous or glandular processes of the mucous membrane, but is not visible on perfectly flat mucous surfaces. It is found in most glands, and is said to be present in the skin.

Baserocket. The *Roseda lutea*.

Bas'hirs. People of the Central and Southern Ural Mountains, with the physical characteristics of the Finnish race, but speaking a Turkish language.

Basi. The Bali name of *Charica siriboa*.

Also, an intoxicating drink made in the Philippines from the sugar-cane.

Basia'lis. (*F. basial*.) Applied by Robineau-Desvoidy to a body which is the central piece of the nine, of which the vertebra of articulated animals is composed.

Bas'ians. A small tribe of Turkish people living near Mount Elbrus.

Basiarachni'tis. (*Basis*, a foundation; *arachnitis*. *F. basiarachnite*.) Inflammation of the arachnoid membrane at the base of the skull.

Basia'tio. (*L.* from *basio*, to kiss.) Coition. (Dunglison.)

Basia'tor. (*L. basio*, to kiss.) The *Orbicularis oris muscle*.

Basibranch'ial bone. A series of bones lying along the ventral surface of the throat in Ganoid and osseous fishes, conjugating the right and left moieties of the branchial arches, of which they form the inverted key-stones. Rudiments of these are found in all Vertebrata above fishes. The rudiment in man is the body of the hyoid,

with its two thyrohyals or cornua majora; these latter represent the hypobranchial segments of the first branchial arch of a fish.

Bas'cartilages. A series of cartilages corresponding to the basibranchial bones of osseous fishes. Found in sharks and skates.

Bas'ic. (*Basis* a foundation. *F. basique*; *G. basisch*.) Having the nature of a base. With the prefix *mono*, *bi*, *tri*, it is used to describe the nature of an acid in regard to the number of atoms of hydrogen, replaceable by a metal, which they contain.

B. im'pulse. A condition of very rare occurrence, in which the heart's impulse is greater about the third than at the sixth left costal interspace.

B. ox'ides. See *Oxides*.

B. salts. A term applied to those salts in which a part of the acid radical of the normal compound is replaced by oxygen or hydroxyl. (Tilden.)

The term is also applied to neutral salts which do not redden litmus paper.

B. wa'ter. Water which is an essential constituent of a compound, and replaceable by another substance with change of property.

Basioer'ite. (*Basis*; *αίρας*, a horn.) The second segment of the antenna of an Arthropod, counting from the base.

Basio'city. (*Basis*, a base. *F. basicité*; *G. Basicität*.) A property of certain chemical compounds which enables them to act as a base.

A term applied to acids to denote their power of entering into combination with bases, the basic proportion being dependent on the number of atoms of hydrogen replaceable by metals; thus nitric acid, HNO_3 , is monobasic; phosphoric acid, H_3PO_4 , is tribasic.

Basiora'nial. (*Basis*, a foundation; *κρανιον*, the skull.) Pertaining to the base of the skull.

B. ax'is. (*Basis*, ground; *κρανιον*, the skull; *axis*, an axle.) A line drawn from the anterior margin of the foramen magnum to the front end of the middle part of the upper or cerebral surface of the sphenoid bone.

B. fontane'la, poster'ior. An oval space lying between the parachordal cartilages in the embryo of many vertebrate animals.

B. plate. Same as *Basilar plate*.

Basidiomyce'tes. (*G. Basidiomycetes*.) An Order of Fungi distinguished by having spores supported on the branches, usually four in number, of the *Basidia*.

Basid'iospore. (*Basidium*; *σπίρας*, seed.) A spore which is supported by a *basidium*. They are found both in hymenomycetous and gasteromycetous Fungi. They are solitary and naked; sometimes they acquire a dense and dark-coloured outer coat.

Basidiospo'reae. (Same etymon.) A former Division of Fungi, distinguished by the spores being supported on basidia. They were divided into Ectobasidae, in which the spores covered the surface, and Entobasidae, in which the spores were enclosed in the interior of the organism.

Basidiospo'reous. (Same etymon.) Bearing basidiospores.

Basid'ium. (*Basis*, a step. *F. baside*; *G. Basidio*.) A pedestal; a process of the hymenium or gills of certain Fungi, often composed of a single cell, which carries on its summit one or

BASIFACIAL—BASILICON.

many conical points, on each of which is developed a spore.

Basifacial. (L. *basis*, a base; *facies*, the face.) Relating to the base of the cranium and the face.

B. axis. (L. *basis*, a base; *facialis*, facial; *axis*, an axle.) A line drawn from the middle part of the upper or cerebral surface of the sphenoid bone to the front part of the alveolar margin of the maxilla. In man the basiscranial and basifacial axes form an angle, which varies from 90° to 120°.

Basifixed. (L. *basis*; *figor*, to be fastened. F. *basifixe*.) Applied by Mirlbel to a part attached by its base.

Basigenic. (Báσις; γεννάω, to produce.) Base producing.

B. elements. A term applied to metals.

Basigenous. (Báσις, a step, the base; γεννάω, to engender.) Same as *Amphigenous*.

Basigenus. (Báσις; γεννάω, to generate. F. *basigène*; G. *grundhervorbringend*.) Applied by Berzelius to electro-negative bodies which do not neutralise metals, but, on the contrary, produce with them compounds, electro-negative (acids) and electro-positive (bases); as oxygen, sulphur, selenium, and tellurium.

Basiginium. (Báσις, base; γυνή, female.) A synonym of *Podogynium*, *Carpophore*, or *Thecapore*.

Basihyal. (L. *basis*, a base; *hyoid*.) The two bones of this name, one on each side, form the body of the *Hyoid bone*. According to some, the basihyal is the whole mass of the body of the hyoid bone.

Basil. (Βασιλικός, royal. F. *basilic*; I. *basilico*; S. *albahaca*; G. *Basilicum*.) The *Ocimum basilicum*, citron, sweet basil.

B. bush. The *Ocimum caryophyllatum*, or the *O. minimum*.

B. citron. The *Ocimum basilicum*.

B. cow. The *Saponaria raccaria*.

B. field. The *Calamintha clinopodium*.

B. holy. The *Ocimum sanctum*.

B. small. The *B. bush*.

B. sweet. The same as *Basil*.

B. thyme. The *Calamintha acinos*.

B. wild. The *Calamintha acinos*; the *Onila mariana*, the *Chenopodium vulgare*, and also the *Pycnanthemum incanum*.

Basiliad. The adverbial form of Dr. Barclay's use of *Basilar aspect*.

Basilar. (L. *basilaris*. F. *basilaire*, *basilar*; I. *basilare*; S. *basilar*; G. *grundständig*.) Of, or belonging to, or arising from, the base of a thing.

B. apophysis. (Απόφύσις, an offshoot.) The basilar process of the occipital bone.

B. artery. (F. *A. meso-cephalique*; G. *Grundschlagader*.) Formed by the junction of the two vertebral arteries at the hinder border of the pons Varolii; it extends along the pons to its front border, and there divides into the two posterior cerebral arteries. Its branches are the transverse given off on each side to supply the pons and the adjacent parts of the brain; a branch which supplies the auditory nerve; the anterior cerebellar arteries, which arise near its commencement, and supply the fore-border of the under surface of the cerebellum; and the superior cerebellar arteries, which, arising near its end, wind round the crus cerebri, and ramify on the upper surface of the cerebellum; they supply also the pineal gland, the valve of Vieussens, and the velum interpositum.

B. aspect. A term used in Dr. Barclay's nomenclature in regard to the aspects of the head, and meaning towards the base of the skull.

B. bone. Various used by authors. According to some, the sacrum; to others the sphenoid; and also applied (G. *Grundbein*) to the basilar process of the occipital bone, the basioccipital bone.

B. fossa. (L. *fossa*, a ditch.) The upper surface of the basioccipital bone.

B. membrane. The fibrous prolongation of the lamina spiralis to the outer wall of the cochlea.

B. plate. The cartilaginous mass formed by the coalescence of the parachordal cartilages of the embryo, from which the basioccipital bone takes origin.

B. process. The part of the occipital bone in front of the foramen magnum.

B. region. The base of the skull.

B. sinus. The *Transverse sinus*.

B. surface. The lower face of the basioccipital bone.

B. vertebra. The last lumbar vertebra.

Basilate. (F. *basilé*.) Applied to hair which is raised on a basis, or a cellulous mammilla, as in the *Urtica dioica*.

Basileion. (Βασιλειον, royal.) An eyewater mentioned by Aetius, l. vii, according to Gorræus, and efficacious against dulness of sight.

Basileionum. The *Basilicon*.

Basilio. (Βασιλικός, royal. F. *basilique*; I. and S. *basilica*.) A name given by the older anatomists to veins which were supposed to be of great importance in the animal economy.

Also applied, in like fashion, to other structures, and to medicines of excellence.

B. powder. See *Puleis basilicus*.

B. vein. (F. *cubitale-cutaneæ*; G. *Königsader*.) A large vein formed by the junction of the anterior and posterior ulnar cutaneous veins with the median basilic vein in front and at the inner side of the elbow; passing upwards on the inner side of the biceps a short distance it perforates the deep fascia, ascends in front of the brachial artery, and joins one of its venæ comites or the axillary vein. Of old it was believed that the right basilic vein was in direct communication with the liver and the left with the spleen, and they were named respectively hepatic and splenic vein.

B. vein, median. The inner branch of the median vein which joins the basilic vein at the bend of the elbow; it lies above the brachial artery, separated from it by the biceps fascia, and is enclosed by several filaments of the internal cutaneous nerve.

Basilioa nux. (L. *basilicus*, royal; *nux*, a nut.) The fruit of the *Juglans regia*, the walnut.

Basilici herba florens. Belg. Ph. (*Basilicum*; L. *herba*, springing vegetation, a herb; *florens*, flowering.) The plant *Ocimum basilicum* when in flower.

Basilicon. (Βασιλικός, royal. I. *basilico*; S. and F. *basilicon*; G. *Königsalbe*.) A name given to several cerates and ointments, indicating their excellence.

B. ointment. Yellow wax, yellow resin, Burgundy pitch, of each 1 lb., olive oil 16 fl. oz.; melt, and then stir in common turpentine 3 oz.

BASILICUM—BASIS.

B. ointment, black. Resin, black pitch, and beeswax, of each 11 oz., olive oil 1 pint.

B. ointment, green. Verdigris 1 oz., basilicon ointment 8 oz., olive oil 3 fl. oz. Used for syphilitic and fungating ulcers.

B., yellow. The *Ceratium resina*.

Basilicum. (Βασίλικός, royal. *G. Basilionkraut*.) A synonym of the *Ocimum basilicum*.

B. citratum. (*L. citratus*, furnished with citron leaves.) The *Ocimum basilicum*.

B. majus. (*L. major*, greater.) The *Ocimum basilicum*.

Basilidion. (Βασίλις, a queen.) An eye-water described by Galen, *de O. M.*, sec. loc. vii, *ad fin.*, according to Gorreus.

Also, an ointment for the itch.

Basilis. (Same etymon.) An eye-water mentioned by Galen. (Hooper.)

Basiliscus. (Βασίλισκος, little king.) The philosopher's stone.

Also, hydrargyri perchloridum, corrosive sublimate.

Also, an old term for syphilis.

Basilisk. (Βασίλισκος, little king; perhaps from the white spot on the basilisk's head like a crown. *F. basilio*; *I. basilisco*; *G. Basilisk*.) A fabulous animal, the cockatrice of the Hebrews, to which most malignant powers were attributed.

A Genus, *Basiliscus*, of the Suborder *Iguanida*, Order *Sauria*.

Basilysis. (Βάσις, a base; λύσις, a loosening or disengaging.) The complete dismemberment of the base of the fetal skull by compression or laceration.

Basilyst. (Βάσις; λύσις.) An instrument suggested by A. R. Simpson to effect the reduction in size of the base of the fetal skull by the complete dismemberment of the bones. It consists of a strong gimlet, with a screw half an inch in length; a shoulder prevents penetration beyond this. One side is excavated to receive a branch, which is jointed to the main stem, about four and a half inches from the shoulder. On screwing the instrument home, the branch penetrates with it, pressure on its handles will then push it out, and dilaceration of the cranial floor at the point of perforation must ensue.

Basin. (*F. bassin*, from *Celt. bac*, hollow. *I. bacino*; *G. Becken*.) The doubly sloping area which supplies or retains the water of a river, lake, or ocean.

Also, the hollow formed by the dipping of strata of rocks to a common centre.

Basinervate. (*L. basis*, a base; *nervus*, a nerve.) Applied to leaves the veins of which run from the base to the apex or margin without any branching.

Basioccipital. (*L. basis*, base; *occipitalis os*, occipital bone.) Belonging to the occipital bone and the base of the skull.

B. bone. The basilar process of the occipital bone. It articulates with the sphenoid anteriorly, forms the front part of the foramen magnum, and supports the medulla oblongata. It is a separate bone in many of the lower vertebrata, and forms, with the basisphenoid, what has been called the central axis of the skull. It may give off a median descending process. It is the hindermost sclerotome of the cranium. It is formed by ossification round the posterior part of the cranial notochord, which extends into the basal cartilaginous plate right and left. It is restricted

laterally by the exoccipitals, and anteriorly by the basisphenoid. Posteriorly it is covered by the cartilage of the single or double condyle. It is found in the more ossified Ganoids—the Holosteii and in Teleostei, is aborted or suppressed in Amphibia, and is well developed in all the Amniota. It enters into the formation of the occipital foramen, forming the threshold of the foramen magnum between the condyles. It lies mesiad of the nerve passages, which perforate the exoccipitals.

B. teeth. A bony projection into the pharynx of certain fishes, as the tench, being a prolongation of the median process of the *B. bone*.

Basiooceratochoandroglossus. (Βάσις, base; κέρα, a horn; γλῶσσοι, cartilage; γλῶσσα, the tongue.) The *Hyoglossus muscle*.

Basiooceratoglossus. (Βάσις, a base; κέρα, horn; γλῶσσα, the tongue.) The hyoglossus muscle, so called from its attachment to the base and cornu of the hyoid bone and the tongue.

Basiocestrum. (Βάσις, a base; κέστρον, a pick-axe, a pointed instrument. *G. Kopfbohrer*.) A species of arrow-headed cephalotoms for perforating the fetal skull in utero.

Basioglossus. (Βάσις; γλῶσσα, the tongue.) The portion of the hyoglossus muscle attached to the base of the hyoid bone.

Basion. (Βάσις.) A term used in Craniometry, to denote the central point in the median line of the anterior border of the occipital foramen.

Basiopharyngeus. (Βάσις; φάρυγξ, the gullet.) Certain fibres of the constrictor pharyngis medius muscle, which arise from the body of the hyoid bone.

Basioophthalmite. (Βάσις; ὀφθαλμός, the eye.) The first joint of the eye-stalks of Crustacea.

Basipetal. (*L. basis*, the base; *pete*, to direct one's course to.) Growing or proceeding from the apex to the base.

Basipodite. (Βάσις; πούς, a foot.) The second segment of the leg of an Arthropod, counting from the body.

Basipterygium. (Βάσις; πτερυγίον, a wing.) The basal central cartilaginous rod of the primitive limb or pterygium.

Basipterygoid plate. (Βάσις; πτερυγίον, a wing; εἶδος, likeness.) A process extending from each side of the basisphenoid bone to the inner aspect of the pterygoid in some Vertebrates, as the lizards.

Basis. (Βάσις, ground, from *Baino*, to step.) The base; that on which anything rests.

B. cerebri. (*L. cerebrum*, the brain.) The base of the brain.

B. cordis. (*L. cor*, the heart.) The base of the heart.

B. coronæ radiatæ. (*G. Wurzels des Strabkranzes*.) The narrow part of the *coronæ radiata* at the surface of the corpus striatum and optic thalamus.

B. corporis. (*L. corpus*, the body.) The sole of the foot.

B. cranii. (*L. cranium*, the skull. *G. Schadelgrund*.) The base of the skull.

B. linguae. (*L. lingua*, the tongue. *G. Zungengrund*.) The root of the tongue.

B. maxillæ inferioris. (*L. maxilla*, the jaw; *inferior*, lower.) The horizontal ramus of the lower jaw.

BASISPHENOID—BASTARD.

B. patellæ. The broad upper border of the patella.

B. pedunculi cerebri. (G. *Grundfläche der Hirnstiele*.) The lower fibres of the peduncle of the brain, derived from the anterior pyramid of the medulla oblongata.

B. prostatae. The posterior border of the prostate gland, which is directed towards the bladder.

Basisphe'noid. (L. *basis*, the base; *sphenoid*, the bone of that name.) The posterior part of the body of the sphenoid bone. It varies much in different animals, in some fishes being merely rudimentary, in birds sending out a long anterior process, and inferior and diverging processes in some mammals. It is the next scleroto-me of the cranium to the basioccipital. It commences, as a rule, as an ossification of the cartilage which surrounds the apex of the notochord, and spreads right and left into the basal plate like the basioccipital. It passes beneath the pituitary body, forming the floor of the sella turcica, and also in front of it, forming the anterior clinoid region. The pituitary part of this bone is prochordal. Behind it is restricted by the basioccipital, laterally by the alisphenoids, and anteriorly by the presphenoids. It is imperfectly developed in even the most highly ossified fishes, is not developed in Amphibia, but is well developed in all the Amniota. In birds the bone is very complex, being primarily formed in three subcutaneous splints, divisions of the parasphe'noid, which graft themselves upon the overlying cartilage. The additional ossicles in man, called the lingulae sphenoidalis bones, that are of considerable size in some mammals, as the guinea-pig, are evidently homologous with the two hinder bones (the basi-temporals) of the bird.

Basisphe'noid'al. (Same etymon.) Belonging to the *Basisphe'noid*.

B. ossicles. (L. *ossicula*, a little bone.) Two osseous deposits in the base of the skull of the embryo of birds, one on each side of the pituitary space.

Basitemporal bone. (Basis; *tem-poral bone*.) A wing of the parasphe'noid bone developed in the middle of the petrotic region.

B. wing. The same as *B. bone*.

Basket. (Welsh *basged*, or *basgawd*, from *bay*, a netting or plaiting, as of twigs.) A receptacle of wickerwork.

B. of lamprey. A cartilaginous areolated framework which, in the lamprey, supports the gills anteriorly, and the heart posteriorly. It is attached to the cartilaginous spine.

B. of retina. See *Fibre-basket*.

Basourin'ha. The *Scoparia dulcis*.

Basques. A people living in the south-west of France and the north-east of Spain. They have the physical characters of the Mediterranean race, but their language differs entirely.

Bass. The same as *Bast*.

Bassère, La. France; Département Hautes Pyrénées, near Bagnères de Bigorre. A mineral water, springing from the granite and tuff, containing sodium sulphide .35, sodium chloride 1.58, calcium silicate .33 in 1000 parts. Temp. 13° C. (55.4° F.) Used in chronic laryngeal and bronchial catarrh.

Bassi, col'ica. Name of a medicine composed of aromatics and honey, invented by Julius Bassus.

Bassi, F. An Italian botanist in Bologna, died 1774.

Bassia. (After *Bassi*.) A Genus of the Nat. Order *Sapotaceae*.

B. butyrosa. Roxb. (Βούτυρον, butter.) Indian butter tree. Nepaul. The kernels yield on pressure a concrete white oil, Choerie or *Fulwa butter*, which is used externally in rheumatism and contraction of the limbs, and for chaps. Sugar is obtained from it in Rohileund.

B. Dja'vè. A plant indigenous in Gaboon, which yields 56 per cent. of oil, of a dirty white colour. Used in rheumatism by the natives.

B. latifolia. Roxb. (L. *latus*, broad; *folium*, a leaf. Sansk. *Madooka*; Hind. *Mahwa*; Dec. *Mowrah*; Tam. *Caat*.) Bengal. Fatty oil from the ripe kernels is used in skin diseases; the residuum is an emetic. The flowers and fruit are edible. A spirit, Bain or Mahwa spirit, distilled from the flowers, is largely used, and resembles Irish whisky.

B. longifolia. Linn. (L. *longus*, long; *folium*, a leaf.) Leaves ovate-lanceolate, entire; calyx of two opposite pairs of leaflets; corolla 8-cleft; stamens 16—20, filaments almost absent; fruit olive-shaped, 8—9-seeded. Malabar. The gum which exudes from the bark is used in rheumatism. A decoction of the bark is astringent, and is used in itch. The oil of the seeds, Illipe oil or butter, is used as that of the other species.

B. Moungou. A plant indigenous in Gaboon, which yields a pure white oil. Used in rheumatism by the natives.

B. Parkii. A species which produces the *Shea* or *Galam butter*.

Bassil'itas. (Βάσσιν, Doric comp. of βαβύ, thick.) Corpulence.

Bassinet. (F. *bassinet*, a skull-cap.) A name given to the species of *Ranunculus*, from the shape of the flower.

B. brava. The *Callitha palustris*.

Bassora gum. A gum obtained at Bassora, on the Persian Gulf, in wrinkled drops, without taste or flavour. It consists chiefly of bassorin, and is probably derived from the *Sterculia urens*.

Bassorin. (G. *Tragantstoff*, *Pflanzenschleim*.) C₁₂H₂₀O₁₀. A substance found in bassora gum and other gums. It is inodorous, colourless, translucent, and insoluble in water, in which it becomes gelatinous.

Bassulus. (Dim. of *bassus*.) Somewhat corpulent.

Bassus. (Βάσσιν, Doric comp. of βαβύ, thick. G. *dichleibig*.) Heavy-bodied, corpulent.

Basswood. The *Tilia americana*.

Bast. (Sax. *best*, a lime tree. G. *Bast*, *Phloem*.) The liber or inner bark of *Exogena*. See *Bark*.

Also, a name of the common lime, *Tilia intermedia*.

B. cells. Same as *Liber cells*.

B. fibres. Same as *Liber cells*.

B. tissue. The tissue of plants composed of liber cells.

B. tubes. Same as *Liber cells*.

B. vessels. The laticiferous vessels of the bast.

Bastard. (Welsh, *basdardd*; *basu*, to lower; *tardd*, an issue; more probably from old F. *bast*, a pack-saddle. L. *nothus*; F. *batard*.) Spurious.

B. cedar. The *Guazuma tomentosum*.

B. chin'a. The *Senecio pseudo-china*.

B. dit'tany. The *Dictamnus albus*.

B. measles. The *Roscola*, epidemic.

BASYL—BATH.

B. peltitery. The *Achilles ptarmica*, or sneeze-wort.

B. peripneumony. The *Peripneumonia notha*.

B. pleurisy. Same as *B. peripneumony*.

B. pez. Same as *Luce cyphilodes*.

B. saffron. The *Carthamus tinctorius*.

B. sa'go tree. The *Caryota urens*.

B. sen'na. The *Columba arborescens*, or *Senna pauperum*.

B. sponge. The *Halcyonum*.

B. syl. A body, simple or compound, which acts as a chemical base.

According to Graham, the metallic element of the base of a salt.

B. ta. The *Musa paradisiaca*.

B. ta' di purga. (Bras.) The roots of *Convolvulus operculatus* and *C. mechoacana*. Used as a purgative. See *Mechoacan*.

B. ta' tas. (Span.) The Peruvian name of the tuberous roots of the potato-plant, *Solanum tuberosum*, and of the *Batatas edulis*.

A Genus of the Nat. Order *Convolvulaceae*.

B. ta' cea. (L. *bataceus*, relating to the beet.) The beet-rooted sweet potato. Used as the *B. edulis*.

B. ta' culis. Choisy. (L. *edulis*, eatable.) Sweet potato. Stem creeping; leaves angular or lobed; sepals five; corolla campanulate; peduncles 3-5 flowered. The tubers are used as food, but are slightly laxative.

B. ta' pa. A species the root of which is said to be purgative.

B. ta' panicle' ta. Choisy. (L. *panicula*, a tuft, a panicle.) Hab. East Indies. Root large and tuberous. Used as a cathartic.

B. ta' peregrina. (L. *peregrinus*, foreign.) The *Ipomoea quamoclit*, the cathartic potato-plant.

B. ta' vineboo. The Hindoo name of the shaddock.

B. ta' man's pectoral drops. A compound of variable composition. The following is one of the formulas:—Castor 1 oz., ol. anisi 1 dr., camph. 5 drs., coccus 1½ dr., opium 6 drs., sp. vini 1 gallon. (Gray.)

B. ta' s' anodyne bal'sam. A preparation closely corresponding with the *Lini-mentum saponis compositum* of the Pharmacopoeias.

Bath. Somersetshire. The *Aque solis* of the Romans. A well-built, beautifully situated town, 100 feet above sea-level, on the right bank of the river Avon; it is on the Oolite. Climate mild in winter; hot, and somewhat relaxing, in summer. The town is protected by hills from the north and east winds. The hotel and other accommodation is very good. The waters contain sodium and magnesium chloride, potassium, magnesium, and calcium sulphate, and a little iron carbonate. They vary in temperature from 40° C. to 49° C. (104° F. to 120° F.). They are used in chronic gout and rheumatism, in ordinary and lead paralysis, in sciatica, and in chronic eczema and lepra.

Bath. (Sax. *bath*. L. *balneum*; Gr. *balneion*; F. *bain*; I. *bagno*; S. *bano*; G. *Bad*.) A bath, or bathing room.

Also (L. *labrum*, *solum*, *piscina*; F. *baig-voire*; I. *bagno*; S. *bano*; G. *Badeicanne*), the vessel or bath in which to bathe.

Also, the medium in which the body is more or less immersed during bathing.

Also, a place where natural waters containing

some special saline or gaseous constituent are used for therapeutic purposes.

Baths, as therapeutic agents, are classified in various ways: according to the amount of immersion, as complete, partial; according to the character of the medium, as water, vapour; according to the temperature, as hot, cold; according to the purpose, as medicinal, nutritive; according to the source of the material, as natural, artificial. The special objects, uses, and actions of baths will be set out under the different headings which follow.

In Chemistry, a bath is a vessel containing sand, oil, water, or other substance, into which another vessel, containing the material to be heated, is placed for the purpose of exposing it to a temperature which is uniform and definite.

B., ac'id. See *Balneum cum acido ether-hydrico*.

B., air. An arrangement whereby a vessel containing the substance to be dried is suspended or placed in a chamber, which itself is heated from the outside.

B., air, cold. The exposure of the body to the cold air, partly secured by a loose dressing gown, formerly used as a strengthener.

B., air, compress' ed. A chamber capable of containing sufficient air is so arranged that air may be forced into it, and the exit so regulated by valves that any amount of air pressure exceeding that of the atmosphere may be produced. Respiration is increased in frequency, the heart's action is made slower, and the pulse becomes smaller. The effect on the amount of carbonic acid given off is not settled, but there seems to be little increase; the amount of oxygen taken up is greatly increased. It is used in many pulmonary disorders, especially where deficient oxygenation of blood is present. It is said to stop hæmoptysis and nose bleeding, to be useful in emphysema, chronic catarrh, neuralgia, and other disorders.

B., air, hot. The exposure of the body to dry heated air, which may be breathed or not. The temperature may be 55° C. (131° F.), or higher if the air be not breathed. It produces great perspiration. A lamp under a blanket will accomplish the purpose. Used where rapid and intense sweating is needed in anasarca and ague.

B., air, re'fres'd. In a closed chamber the air is removed by an air-pump, and not renewed in the same proportion. This has been recommended in the treatment of lung affections.

B., al'kaline. Potassium or sodium carbonate 12 oz., dissolved in 60 gallons of water. Used in scabies, prurigo, scaly diseases of skin, and gout.

B., al'um. Alum, 1 to 2 lbs., in 60 gallons of water. In burns, vesicular skin diseases, piles, and diarrhoea.

B., al'um springs. Situated in Bath Co., Virginia, United States of America. Chalybeate and sulphated waters. Used in dyspepsia, scrofula, and chronic diarrhoea.

B., am'monium chlo'ride. Ammonium chloride, 1 to 4 lbs., in 60 gallons of water. In glandular enlargements, rheumatic affections of joints, leucorrhoea, and frost bites.

B., an'im'al. The newly-flayed skin of a sheep or other animal wrapped round the whole or part of the body. Formerly held to be a potent restorative.

B., anti'monial. Antimony and potassium

BATH.

tartrate, 1 or 2 oz., in 60 gallons of water. In lumbago, and as a counter-irritant.

B., antipso'ric. The *B., sulphuretted*.

B., antisyp'hilit'ic. The *B., mercurial*.

B., arm. A bath for the arm only.

B., aromati'c. A decoction of balm, chamomile, lavender, mint, rosemary, thyme, angelica, valerian, and any other aromatic herbs, is added to the simple bath, or to the alum, or salt, or ammonium chloride bath. Used in skin diseases, chronic rheumatism, diarrhoea, spermatorrhoea, and hysteria.

B., arsen'ical. Half a drachm to 2 drachms of sodium arsenate in 60 gallons of water. Used in rheumatoid arthritis.

B., astrin'gent. Alum, 2 to 4 lbs., in a sufficient quantity of whey. Used in extensive burns.

B., balsam'ic. A bath to which benzoin, tolu, myrrh, lavender, and such like, have been added. Also, Bordeaux turpentine, tar, of each 3 lbs., hot water 6 gallons; stir till cold, pour off the clear liquid into 50 gallons of water. Used in prurigo and eczema.

B., Barèges, artifi'cial. Sodium sulphide 200 grains, sodium chloride 200 grains, boiled water 23 oz. Dissolve and keep in a well-corked bottle. Add to 60 gallons of water for a bath.

B., benzo'ic. Half a pound of powdered benzoin in 60 gallons of water. In hysteria.

B., blood. A bath in warm blood, which is supposed to be a very powerful tonic in great debility from long-continued diseases, in weakly children, and in anæmic girls.

B., bran. (*F. bain de son.*) Bran 5 lbs., boiled in 2 gallons of water for a quarter of an hour, strained, and mixed with 60 gallons of water. Emollient in irritable skin diseases.

B., calomel. See *Mercurial fumigation*.

B., cam'phor. Camphor, 3 or 4 drs., on a plate heated with boiling water, placed near the bather that he may inhale the fumes. In spasmodic asthma and irritable cough.

B., carbon'ic acid. Carbonic acid gas applied by a bag or other apparatus to the body, the head being excluded. Diaphoretic, stimulant, and antiseptic, in amenorrhoea, hysteria, and foul and cancerous ulcers.

Or, the gas dissolved in water, applied to foul ulcers.

B., chalyb'eate. Ferrous sulphate, 1 or 2 lbs., in 60 gallons of water. Recommended as a tonic where the stomach will not bear iron, and in piles.

B., chlor'ine. Chlorine gas dissolved in water, or applied by means of a bag to the body. In liver diseases, scabies, and foul ulcers.

B., cold. Water from 0° C. (32° F.) to 15° C. (59° F.). The morning bath is usually taken by healthy persons in water at the temperature of the chamber, whatever that may be, and so long as reaction is complete and immediate it is a good practice. For delicate persons such higher temperature should be used as does not permanently chill. Under all circumstances the process should be short.

B., cool. Water from 16° C. (60.8° F.) to 24° C. (75.2° F.).

B., douche, alter'nate. This consists in the frequent alternation of hot and cold jets, and is a valuable mode of treatment in thickenings about joints, and, according to some, in spinal paralysis.

B., douche, cold. (*F. douche; I. doccia; G. Sturzbad, Giesbad.*) A stream of water of varying size, more or less forcibly driven against any part of the body. The mechanical effect of the douche is greater or less according to the force used, and ranges from reddening to almost contusion. The coldness of the water adds to the effect produced. The douche is descending, ascending, or lateral, according to its direction, and has received appellations according to the organ treated, uterine, ocular. The after-effect is said to be increased tissue change. The douche is used in various atonic diseases of the surface, as connective-tissue thickenings, exudation around joints, and to the head in cases of drunkenness and opium poisoning.

B., douche, warm. Hot water used as in the cold douche. There is little reaction, and it is used in cases where this result is not desired.

B., dry. Ashes, sand, salt, or other dry materials, piled around the body. Much used of old.

B., dung'hill. (*F. bain de fumier chaud; G. Mistbad.*) A popular remedy in some districts for rheumatism and for restoring to life persons who are frozen. The dunghill must be hot.

B., earth. The sand bath.

B., East'ern. The Turkish bath.

B., Egypt'ian. The Turkish bath.

B., elec'tric. The patient, placed on an insulated stool, is connected by means of a wire with the prime conductor of an electrical machine, when the bath is intended to be electro-positive, and with the rubber if it is to be electro-negative. Used in chronic rheumatism.

Or, the patient is placed in a wooden bath, with his arm in a small vessel; one of the poles of an interrupted current is plunged in the small vessel, and the other into the bath. The muscles of the body become intermittently contracted.

B., fer'ro-arsen'ical. Half to 2 drs. of ferric arsenate to 60 gallons of water. Recommended in rheumatism in anæmic persons.

B., ferru'ginous. A bath to which some soluble salt of iron has been added.

B., foot. A bath into which the feet only are put. Hot water, with or without mustard, is used as a revulsive in colds, and in menstrual difficulty at the period.

B., gelati'nous. Gelatine 3 to 4 lbs., dissolved in hot water and added to a warm bath of 60 gallons. Emollient in eczema and irritable conditions of skin.

B., gen'eral. In which the whole body is immersed, except the head.

B., glyce'rine. Glycerine, 2 lbs., gum acacia 1 lb., in 60 gallons of warm water. In prurigo and irritable scaly skin diseases.

B., half. A hip bath.

B., hand. The *Manulivium*.

B., head. The *Capitilivium*.

B., hem'lock. Dried hemlock leaves 5 or 6 handfuls, or extract of hemlock 2 oz., in 30 gallons of water. In irritable skin diseases, gout, and cancer.

B., hip. (*F. bain de sauteuil, b. de siege; G. Sitzbad.*) A bath with a back so constructed that the patient can sit with his legs out and the water covering the lower part of the abdomen and the hips. Useful in uterine disturbances and lumbago.

B., hot. (*F. bain chaud.*) Water of a temperature of 37° C. (98.6° F.) and upwards.

BATH.

It is employed for the purpose of relaxing spasm in the urethra or elsewhere, and for producing perspiration.

℞. hydrochloric acid. Hydrochloric acid, 2 to 3 lbs., mixed with 60 gallons of water. Used in liver diseases; in a more diluted form in skin diseases.

℞. hydrosulphuretted. See *B. sulphuretted*.

℞. iodide of iron. Half an ounce to 2 oz. of iron iodide to 60 gallons of water. In amenorrhoea, scrofula, and leucorrhoea.

℞. iodide of potassium. Ten ounces of potassium iodide in 60 gallons of water. In rheumatism and secondary syphilis.

℞. iodine. Three drachms of iodine and 6 drs. of potassium iodide in 60 gallons of water. In scrofula, joint affections, and indolent skin diseases.

℞. lamp. A mode of inducing profuse perspiration. The patient is placed naked on a wicker chair, with his feet on a stool; a lighted spirit-lamp is placed under the chair and the patient covered with blankets, the head being outside.

℞. lime. Slaked lime 3 lbs., added to 60 gallons of water. Used in gout, lithuria, and scabies.

℞. medicated. The *B. aromatic*.

℞. mercurial. Two to 4 drs. of mercuric chloride dissolved in 60 gallons of water, with or without the addition of hydrochloric acid, 1 dr., or ammonium chloride, 4 drs. Used in syphilis, joint diseases, obstinate skin diseases, scabies, and to destroy parasites. See *Mercurial fumigation*.

℞. metal. In chemical processes, when great heat is required, mercury, tin, or lead is employed as the contents of a bath. A temperature of upwards of 315° C. (599° F.) may be attained.

℞. metalline. A bath to which the scoriae of some metal, as iron, has been added.

℞. milk. At a moderate heat it is emollient. It is probably not nutritive.

℞. moor. The *B. peat*.

℞. mud. (*F. bain de limon*; *I. bagno di fango*; *S. limo*; *G. Schlammbad*.) In many places the mud or deposit of the mineral water is used as a local application, and in some cases the warm mud is piled over the patient in a small chamber. This bath produces much determination of blood to the skin and profuse perspiration, and is used in chronic joint affections and rheumatism.

℞. mud, saline. Same as *B. mud*.

℞. mustard. From 6 oz. to 2 lbs. of mustard, according to the effect desired, infused in a gallon of warm water, the juice expressed, and added to 60 gallons of hot water. Used to excite reaction in the collapse of cholera.

℞. narcotic. Thirty-five ounces of a mixture of narcotic herbs, such as belladonna, stramonium, common morell, henbane, and poppy heads, are boiled in 21 pints of water for an hour, and the strained liquor added to the bath. Used in painful piles, peritonitis, uterine inflammations, cystitis, spasmodic stricture, and such like.

℞. nitromuriatic acid. Dr. Scott's formula is nitric acid 2 fl. oz., hydrochloric acid 3 fl. oz., water 5 fl. oz.; mix. An ounce and a half or two ounces to be added to each gallon of water for a general bath; and three ounces to a

gallon of water for a foot, knee, or sponge bath. Used in liver diseases. Often produces tingling of skin and salivation. The patient should bathe for a quarter of an hour daily.

℞. oak-bark. Ten or twelve handfuls of oak bark boiled in water and strained. The liquid added to 60 gallons of water. Used in hæmorrhoids, leucorrhoea, hernia, and phthisis.

℞. of herbs. (*G. Kräuterbäder*.) Same as *B. aromatic*.

℞. of lees of grapes. (*F. bain de marc de raisin*.) The residue after the expression of the juice of the grape is put in a heap for a few days, until it becomes of a temperature of 26° C. (77° F.) to 35° C. (95° F.), when a hole is made in the heap, the patient put into it, and the fermenting material is piled around him to his neck. He remains about an hour, and then goes into a warm bath of simple water. A free current of air must play over the mass of lees to dilute and drive off the carbonic acid. Used in chronic rheumatism, neuralgia, spinal paralysis, and chronic joint diseases.

℞. of lees of olives. The residue, after the expression of the oil, is treated as that of grapes, and is used for the same purposes.

℞. oil. Baths of warm olive oil are used as calmatives in rheumatism, as emollients in inflammatory affections and in anchylosis. In the East baths of olive oil, in which ambergris and vanilla have been digested, and to which oils of cloves, cassia, nutmeg, cedron, and juniper, have been added, are used as a preservative against the plague.

In Chemistry, linseed oil in a vessel, on which floats the dish containing the substance to be heated. Heat being applied it will attain a temperature of 300° C. (572° F.)

℞. oxygen. A local bath of oxygen gas has been used in senile gangrene, but without very definite result.

℞. peat. Peaty soil is saturated often with the mineral water of the place, and exposed to at least one winter's frost. The mineral water is added until it is of a consistence of pea-soup and a temperature of 35° C. (95° F.) The chemical composition has been much examined, and humus, humic acid, resin, silica, alumina, iron, and the other constituents of the mineral water found; in addition, in some peat, formic acid has been found; they usually contain carbon dioxide and hydrogen monosulphide. These baths produce congestion of skin and great perspiration. They are used in the removal of thickenings about joints, in splenic tumours, anæmia, and hysterical spine.

℞. peat-water. The brown water which runs from bogs or mooses is used as a bath, and has been used in similar cases to the peat baths.

℞. Pennes. A factitious mixed salt, with some volatile oil, to be added to a bath, and which is asserted speedily to produce the thermic fever of bath physicians, and so materially to aid in the absorption of chronic deposits both articular and visceral.

℞. pine-leaf. The baths are composed of water, to which is added a decoction of pine leaves, and also a greenish-brown balsamic fluid distilled from the fresh green leaves of the different species of pine, and which contains resin and formic acid. The effect is stimulating, and they are useful in chronic rheumatism and neu-

BATH

ralgia; also, in chronic bronchitis, for the sake of the balsamic vapour.

B., Plombieres, artificial. Sodium sulphate 531 grains, sodium carbonate 1690, sodium bicarbonate 620, sodium chloride 620, gelatine 1690, in 40 gallons of water.

B., plunge. A cold bath where, for the pleasure of the thing, a bather dives head foremost.

B., pneumatic. See *B., air.*

B., potassium sulphuret. See *B., sulphuretted.*

B., Roman. The bath as used by the ancient Romans was a very elaborate process. The rooms were in a complete establishment:—1. The apodyterium or spoliatorium, where the bathers undressed; 2, the alipterium or unctuarium, where they were anointed; 3, the frigidarium or cool room, where was the piscina or baptisterium, the cold bath; 4, the tepidarium, a moderately heated room, where the bathers rested; 5, the calidarium or hot room, over the hypocaustum, the furnace; this had at one end the alveus, the warm bath, and at the other, 6, the sudatorium or laconium, which had a large vessel containing water, the labrum, from which the bathers sprinkled themselves to remove the perspiration. The order in which the rooms were used varied, but commonly the bather sweated a little first with his clothes on in the tepidarium, undressed, was anointed, and then passed on to the calidarium; having sweated freely, he had water, first warm, gradually cold, poured over him, or he went at once into the cold bath; he was then scraped with the strigil, and lastly, rubbed and anointed.

B., Russian. Steam is produced by throwing water over hot stones in a room the temperature of which is raised from 50° C. (122° F.) to 60° C. (140° F.), when the bather is whipped with birch rods and soaped; after a longer or shorter sojourn, he plunges into cold water. See, also, *B., Turkish.*

B., saline. Common salt 36 oz., water 60 gallons, as a substitute for sea bathing.

B., saline, gelatinous. Common salt and glue, of each 1 lb., dissolved in water and added to the bath. Used in scrofula and debility.

B., sand. (*F. bain de sable, arenation.*) Employed on the coast of Normandy and the Mediterranean shores. The body, or the part affected, is covered with damp sand, and exposed to the sun's rays. Considerable irritation of the skin is produced and free perspiration. Artificial sand baths are used in Dresden, Köstritz, and Berka, at a temperature of 47° C. (116.6° F.) to 50° C. (122° F.) The sand is heated to a uniform temperature on hot iron plates, and piled over the body in thin layers only over the trunk. The sand bath is used in chronic rheumatism, scrofula, and paralysis.

In Chemistry, a vessel containing rather coarse sand, in which is plunged another vessel containing the matter to be heated. Used when a high, but not a definite, temperature is needed.

B., Scott's. See *B., nitromuriatic acid.*

B., sea. Sea water contains a varying proportion of saline matter in different places. According to Dr. Schweitzer, the water off Brighton contains, in 1000 parts, sodium chloride 27, potassium chloride .76, magnesium chloride 3.66, magnesium bromide .029, magnesium

sulphate 2.29, calcium sulphate 1.4, calcium carbonate .033, and traces of iodine and ammoniacal salts. The temperature was about 20° C. (68° F.) Sea bathing is a tonic in persons who are simply weak, where there is no weakness of heart, congestion or advanced organic disease of lungs, disease or indolence of liver, ulceration of stomach. In scrofula it is of great service, in some forms of neuralgia, and in muscular rheumatism. The best time for bathing is from two to three hours after breakfast.

B., sea-mud. This bath is much valued in the North of Europe. It is a more stimulating form of sea bath or than the sool bath.

B., sea-water, warm. Sea water may be used, warm or hot, for the same purposes as simple water. From its more stimulating property it is of more service in chronic rheumatism.

B., sea-weed. *Fucus vesiculosus*, bruised and infused in water, added to a sea-water bath. Used in struma, chronic rheumatism, and thickened joints.

B., shower. (*F. douche*; *I. doccia*; *G. Schauerbad.*) An apparatus by means of which water may be poured on the body in a set of fine streams, as out of a watering-can. The shock is greater than in the cold bath, and the reaction, if it occurs, more intense. Used as a tonic, but care should be taken that the functions be not too depressed to ensure sufficient reaction.

B., sitz. Same as *B., hip.*

B., soap. Two or 3 lbs. of soap dissolved in 30 gallons of water. Used in scabies and other skin diseases.

B., solution. A mode of applying definite heat in chemical processes by means of saturated solutions of salts; these boil at different temperatures.

B., sool. (*G. Soolbad.*) The name by which baths of the salt springs of Germany are known. The effect is very similar to that of sea bathing, but the action on the skin can be increased or diminished by the addition of water or of the salt.

B., sponge. The use of water by means of a sponge.

B., spray. (*F. bain d'hydrofère*; *G. Staubbach.*) An apparatus, the hydrofère, invented by Mathieu de la Drôme, pulverises the water and throws it on to the body of the bather. Water, either simple or mineral, is supposed to have a greater influence when used in this way, as it is believed by the inventor that it is only the water which immediately touches the body which is of use, and by this means it is constantly renewed.

B., springs. Situated in Berkley Co., Virginia, United States of America. Mild carbonated water. Temperature 23° C. (73.4° F.) Contains some of the salts of lime and magnesia. Used in skin diseases. (Dunglison.)

B., starch. Two to 4 lbs. of starch dissolved in boiling water, and added to the bath. Used in eczema.

B., steam. The *B., vapour.*

B., steel. The *B., chalybeate.*

B., succession. A bath where hot and cold water are alternated.

B., sulphur. A pound of flowers of sulphur, agitated frequently for twenty-four hours in 2 gallons of water, and then added to a bath. In skin diseases.

BATH.

B., sulphur va'pour. See *B., sulphurous acid*.

B., sulphuretted. Potassium, or sodium, or calcium sulphide, 3 oz., in 40 gallons of water. Used in scabies and in chronic eczema.

B., sulphurous acid. The exposure of a limb or the body, carefully excluding the head, to the vapour of burning sulphur. Used in scabies and psoriasis.

B., sweating. The *Achicolum*.

B., tan. See *B., oak-bark*.

B., tem'perate. A bath of a temperature of 24° C. (75.2° F.) to 30° C. (86° F.)

B., tep'id. A bath of a temperature of 30° C. (86° F.) to 33° C. (91.4° F.)

B., transition. Same as *B., succession*.

B., tumble. A shower bath in large volume.

B., Tur'kish. In the modern bath which goes by that name the bather is first placed in a hot room until he perspires freely; he is then rubbed down and shampooed, and afterwards has cold water poured over him. Used in gout, rheumatism, and as a tonic generally.

B., turpentine. Four to 8 oz. of rectified oil of turpentine, 2 lbs. of sodium carbonate, $\frac{1}{2}$ dr. of oil of rosemary, in 30 gallons of water. Used as a diaphoretic.

B., vale'rian. A pound of valerian root is infused in hot water, and added to the bath. Used in hysteria and neuralgia.

B., va'pour. The exposure of the body to steam. A convenient plan is to seat the patient without any clothes on a chair, under which is placed a lighted spirit lamp under a vessel of hot water, the whole is closely enveloped in blankets, the head of the patient only being left outside; copious perspiration ensues. Used in congested kidney, gout, rheumatism, or whenever free sweating is needed.

B., warm. A bath of a temperature of 34° C. (93.2° F.) to 37° C. (98.6° F.) Very refreshing after great fatigue. Used in chronic rheumatism, eczema, and psoriasis.

B., water. A vessel containing water, on which floats a dish containing the substance to be heated. Used in chemical manipulation, when it is desired not to exceed a temperature of 100° C. (212° F.) If sodium chloride is dissolved in the water to saturation, the temperature may be brought to 107.5° C. (225.2° F.), and if calcium chloride be used the heat will rise to 125° C. (257° F.)

B., wa'ter, sim'ple. As its name.

B., wa'ter, min'eral. The different baths are described under their several names.

B., whey. The serum of milk after the removal of the casein and butter. The bath is taken at a temperature of 25° C. (77° F.) to 31° C. (87.8° F.) for an hour at a time, gradually increasing to three hours. Used in anæmia after loss of blood, for rickety children, and in convalescence from disease, as a tonic and nutritive.

B., wine. Wine is added to baths, for the purpose of stimulation, in feeble, rickety, and scrofulous children, in chronic rheumatism, and in extreme debility.

Bath'mis. (*Bath'is*, a step; from *balva*, to step.) Term used by Hippocrates, de *Fract.* i, 10, for the cavity of a bone which receives the articular extremity of another bone; as the fossa of the humerus, which receives the olecranon, *Scamnum Hippocraticum*.

Bath'mos. Same as *Bath'mis*.

Bath'mus. Same as *Bath'mis*.

Bathomet'er. (*Báthos*, depth; *met'ron*, to measure. *F. bathomet're*.) An instrument, proposed to be substituted for the ordinary sound, to measure the great depths in the ocean.

Bath'ron. (*Báthron*, a bench. *F. bancus Hippocrate*; *G. Hippokratisko Bank*.) An instrument formerly used for reducing luxations by extension. It consisted of a frame, on which the patient was laid, having at each end a wooden axis, to which was attached a cord or strap, which was fastened to two opposite points of the body between which lay the dislocation; the axis, being rotated by means of a wooden handle, extension was made, and the dislocation reduced. (*Gorræus*.)

Bath'rum. The same as *Bath'ron*.

B. hippocrate'ia. See *Bath'ron*.

Bathyr'hyn. (*Báthos*, deep; *hyn*, life.) A gelatinous substance found at great depths in the sea, and at one time supposed to be formless masses of protoplasm containing numerous oocysts and discoliths, but without nuclear or cell structure. It is generally believed to be not a living organism, but probably a flocculent precipitate of sulphate of lime by strong alcohol.

Bathyocente'sis. (*Báthos*, deep; *centesis*, a pricking. *F. bathyocentèsis*; *G. Tiefstochen*.) The deep puncture of a part.

Bathymet'rical. (*Báthos*, *met'ron*, a measure.) Relating to *Bathymetry*.

B. zone. A term applied to certain zones of animal and vegetable life on the sea-shore and in deep sea, which vary according to the depth of water.

Bathym'etry. (*Báthos*, deep; *met'ron*, measure.) The measuring of the depths of cavities.

Bathymorph'ia. (*Báthos*, *mor'phé*, form.) Increase in shape.

B. bulb. (*L. bulbus*, a bulb.) Increase of the longitudinal diameter of the globe of the eye, a chief cause of myopia.

Bathypic'ron. (*Báthos*, deep; *rup'is*, pungent, bitter.) A species of *Abinthium*, wormwood.

Bathyr'hyn'chus. (*Báthos*, thick; *py'xos*, a beak. *F. bathyrhynchus*; *G. dick-schnabelig*.) Having a thick beak.

Bathystir'is. Same as *Bathyocentesis*.

Bat'ia. A retort or cucurbit with a recurved neck, according to Morley, *Coll. Chem. Leidens. proleg. c. 2*.

Bat'iator root. The root of an undetermined plant used as an emetic in Senegal.

Batida'ces. The same as *Batidea*.

Batid'ces. A doubtful Natural Order included by Lindley among the Euphorbial Alliance. Ovules solitary, ascending; female flowers naked, combined into a succulent cone.

Batides. (*Batis*, a skate.) A Group of the Order *Elasmobranchii*, Class *Pisces*. Branchial apertures on the under surface of the body, forming two rows of openings behind the mouth. The body in the typical species is flattened out into a sort of rhomboidal disc, chiefly consisting of the immensely developed pectoral fins. This group includes the Skates, the Rays, the Torpedo.

Bat'non. The *Rubus idæus*, raspberry plant.

Bat'is. A Genus of the Nat. Order *Batidea*.

B. marit'ima. (*L. maritimus*, belonging

to the sea-shore.) A West Indian species used in pickle.

Batis'se. France; near Clermont. Slightly warm waters, containing sodium carbonate and sulphate, calcium and iron sulphate, magnesium chloride, and calcium carbonate.

Battura. See *Battitura*.

Batoid'el. (*Batis*, a skate.) The same as *Batides*.

Baton. (*Bátros*, a blackberry. *G. Brombeere*.) A blackberry, the fruit of *Rubus fruticosus*.

Batoo. Arabic name for the *Croton tiglium*.

Bátos. (*Bátros*, a bramble bush. *G. Brombesträuch*.) The bramble, *Rubus fruticosus*.

Batra'chia. (*Bátrapxos*, a frog. *G. Frosche*.) An Order of the Class *Amphibia*. Tailless and with lungs in the adult state; tailed and with gills in the larval condition; dorsal vertebrae procelous, with long transverse vertebrae instead of ribs, which are rudimentary; bones of forearm and of leg ankylosed to form a single bone; hind digits webbed; tongue fleshy, fixed to symphysis of mandible; respiration of adult an act of swallowing; oviparous. The Batrachia are divided into the *Pipida*, *Bufonida*, and *Ranida*.

Batra'chides. (*Bátrapxos*, a frog. *G. Froschfische*.) A Family of the Group *Acanthoptera*, Suborder *Acanthopterygii*, Order *Teleostei*, Class *Pisces*. Skin naked, or covered with fine scales; abdominal fins with two soft rays; dorsal fin with short spines; anal fin long; three branchiae; pseudobranchiae absent; teeth conical, large. Marine, tropical, voracious fishes.

Batrachi'tes. (*Bátrapxus*, from *Bátrapxos*, a frog. *G. Krötenstein*.) A stone like a frog in form and colour; the toad-stone. See *Bufonites*.

Batrachium. (*Bátrapxos*, a frog.) The *Ranunculus*, or crow's-foot, so-called because found in marshy places, or because frogs conceal themselves under its shade.

Batrachoid. (*Bátrapxos*, a frog; *eidōs*, form.) Frog-like.

Batrachoph'ides. (*Bátrapxos*, a frog; *ídēs*, a serpent. *F. batrachophides*.) Applied by Ficinus, Carus, and Latreille to a Division of ophidian reptiles, resembling the *Ophidia* in the formation of their bodies, and the *Batrachia* in their skin, without scales, soft and slimy.

Batrachoplasty. (*Bátrapxos*, a frog; *plásōs*, to form.) An operation for ranula. Excision of a piece of mucous membrane of the mouth, and attachment of its borders to the lips of an incision made into the cyst of the ranula.

Batrachospermēs. A synonym of *Nematice*.

Batrachus. (*Bátrapxos*, a frog.) Term for a tumour under the tongue, so called because it causes the voice to be hoarse and croaking.

Batra'cia. Same as *Batrachia*.

Batrachine. (Same etymon.) The active principle of the white secretion from the skin of a Batrachian, the *Phyllobates chocoensis*, which is used by the Indians of New Granada to poison arrows. It is a whitish, alkaloidal, nitrogenous substance, insoluble in ether, slightly soluble in water, very soluble in alcohol. Taken internally it is inactive, introduced into a wound it produces convulsions and speedy death.

Battaglia. Italy; not far from Padua.

Beautiful neighbourhood; good accommodation. Sulphur waters, of a temperature of 23° C. (73.4° F.) to 71° C. (159.8° F.)

Battalis'mus. Same as *Battarismus*.

Battalus. (*Bάτταλος*, or *Bάταλος*, a nickname given to Demosthenes in reference to *βάτταλιω*, to stammer, because he stuttered when a young man, and could not pronounce the *ρ*.) A stammerer.

Battarismus. (*Βατταρίζω*, to stammer, from *Bάττος*, Battus, king of Cyrene, who was so afflicted. *G. Stottern, Stammeln*.) Stammering with hesitation; the affection termed *psellismus*; the *psellismus hesitans* of authors.

Battarus. (*Βατταρίζω*, to stammer.) A stammerer.

Batta'ta virginia'na. The potato, *Solanum tuberosum*.

Batta'tas. Same as *Batatas*.

Battery. (*F. battre*, to beat. *F. pile*; I. and S. *pila*; *G. Säule*.) The generic name of certain combinations of metals, or of certain instruments, for the development of electricity in its different forms. The varieties are described under their specific titles.

B., electric. A series of Leyden jars, having their external coatings and internal surfaces respectively joined to each other.

B., galvano-caustic. See *Galvanic cautery*.

B., gas. See *Grove's gas battery*.

B., constant. A galvanic battery composed of two elements, or a series of each, placed in different liquids; so called because their action is somewhat lasting.

B., magnetic. Two or more magnets connected together by their separate poles.

B., thermo-electric. See *Thermo-electric battery*.

Bat'tey. An American surgeon.

B.'s operation. The removal of the ovaries by abdominal section for the cure of dysmenorrhœa. Also called *Oophorectomy*.

Battignolles. France; a suburb of Paris. A cold sulphurous water. Used in scrofula, chronic bronchitis, and skin diseases.

Battitura. (*F. battiture*.) A scale of metal struck off at the forge with a hammer. (Ruland and Johnson.)

Battledore-shaped. Same as *Spatulate*.

Bátus. (*Bátros*, a bramble bush.) Same as *Rubus, Sentis*.

Bauche, la. France; Savoie. A cold ferruginous spring.

Bau'da. Same as *Bayda*.

Baud'eloque. A French accoucheur, born 1746, died 1810.

B.'s pelvim'eter. (*Pelvis*; *μέτρον*, to measure.) A pair of calipers, with legs straight for some distance, and then curved considerably for a greater length; at the junction of the straight with the curved portion is a scale attached at right angles, so that the distance between the extremities of the two arms may be measured. By this an outside measurement of the pelvis may be made, and thence the internal diameters may be deduced.

Baud'ricourt. France. Mild sulphur waters, which are very little used.

Bau'eres. A Tribe of the Family of Nat. Order *Saxifragaceæ*, having polystemonous flowers, two styles, and opposite, astipulate leaves.

BAUHIN—BAZA

Baughin. A French anatomist, born 1660, died 1624.

B., valve of. The ileo-caecal valve.

Bauhini'a. A Genus of climbing plants of the Suborder *Cesalpiniæ*, Nat. Order *Leguminosæ*. Hab. South America. Several species furnish fibres for making ropes, some supply gum.

B. acuminata, Linn. (*L. acuminato*, to bring to a point.) Hab. India and the Mauritius. Used in cutaneous diseases, as a carminative and vermifuge. (Waring.)

B. candida. (*L. candidus*, white, glistening.) A variety of *B. variegata*.

B. emarginata. (*L. emargino*, to deprive of its edge.) Supplies a brownish coloured gum.

B. forficata. (*L. forfex*, a pair of scissors.) Used in Brazil as a mucilaginous, subastringent enema, gargle, or poultice. (Waring.)

B. porrecta. (*L. porrectus*, wide-spread.) Used in Jamaica as a lotion for ulcers. The flowers, beaten with pepper, are applied to the forehead in headache. (Waring.)

B. purpurascens. (*L. purpurascens*, to grow purple.) A variety of *B. variegata*.

B. racemosa. Vahl. (*L. racemosus*, clustering.) The *B. Vahlia*.

B. retusa. Roxb. (*L. retusus*, blunted.) Supplies a brownish coloured gum.

B. scandens. (*L. scandens*, to climb.) Hab. India. Used as *B. porrecta*.

B. tomentosa. Linn. (*L. tomentum*, stuffing for cushions.) Hab. India, Ceylon. The seeds and flowers are used in dysentery, and the decoction of the bark in liver diseases, and as a vermifuge.

B. tuberosa. (*L. tuberosus*, full of swellings.) The *Ipomœa quamoclit*.

B. Vahlia, Wight and Arn. Hab. India. The kernels are supposed to possess tonic and aphrodisiac properties. (Waring.)

B. variegata, Linn. (*L. variegatus*, to make of various sorts or colours.) Hab. India. The bark is astringent and tonic, and an infusion of the flowers is applied to wounds and ulcers.

Baumé. A French chemist, born 1728, died 1804.

B.'s areometer. (*Ἀραιός*, thin, light; *μέτρον*, a measure.) An instrument for determining approximatively the concentration of liquids. It consists of a closed glass tube, containing mercury in a small enlargement at the bottom, immediately above that is a bulb, and the scale in the tube above.

B.'s hydrometer. (*Υδρομ.*, water; *μέτρον*, a measure.) The same as *B.'s areometer*.

Baume vert de Metz. See *Balsamum viride metensium*.

Baunscheid'sism. A mode of treatment of rheumatic pains, taking a name from its inventor, which consisted in the use of an instrument, *rèvulseur*, furnished with fine needle points, dipped in an irritant oil of mustard and other materials, which caused an almost immediate crop of papules, like the stings of many gnats.

Baurac. (Arab.) Nitre, or any salt. The word borax is derived from it. (Ruland.)

Baurin. France; Department of the Somme. Strong chalybeate waters.

Bay. The *Laurus nobilis*.

B. berries. The fruit of the *Laurus nobilis*.

bilis. They are black and wrinkled, and contain a volatile and a fixed oil. They were used as a narcotic, and in infusion in impetigo.

B. cherry. The *Prunus laurocerasus*. Called also, poison-laurel, and cherry-laurel.

B., dwarf. The *Daphne laurifolia*.

B. laurel. Same as *B. cherry*.

B.-leaved passion flower. The *Passiflora laurifolia*.

B. leaves. The leaves of the *Laurus nobilis*. They have a fragrant odour and a bitter aromatic taste; they yield on distillation a greenish-yellow volatile oil. They were used as a narcotic.

B., plum. The *Prunum pyrifolium*.

B. salt. (*F. sal gris*; *G. See sala*.) Impure common salt, in large dark-coloured crystals, obtained by evaporating sea-water, in shallow ponds, by the sun's heat; it is brought from France, Spain, and Portugal.

B. sore. An endemic disease at the Bay of Honduras, considered by Dr. Mosely as a true cancer.

B., strawberry. The *Arbutus andrachne*.

B. tree. The *Laurus nobilis*.

B., wild. The *Viburnum tinus*.

B., willow. The *Salix pentandra*.

Bayberry. The *Myrica corifera*.

B., alexandrian. The *Ruscus hypophyllum*.

B. bark. The bark of the *Myrica corifera*. Tonic, stimulant, and astringent. Used in dysentery.

B., castor. The *Magnolia glauca*.

B., rose. The *Rhododendron chrysanthemum*, or the *Nerium oleander*.

B., rose, American. The *Rhododendron maximum*.

B. rum. Rum distilled with the leaves of the Bayberry tree, *Myrtus acris*. See *Spiritus myrtis*.

B., sweet. The *Laurus nobilis*.

B. tallow. The wax obtained from the fruit of the *Myrica corifera*. See *Myrtle wax*.

B. tree. The *Myrtus acris*.

B., white. The *Magnolia glauca*; and also, the *Magnolia macrophylla*.

Bay'de. Arabic for a vessel used by the ancients for distillation. Also spelt *Beude*. (Ruland.)

Bayl. An old word for urine. (Ruland and Johnson.)

Baynton, Thomas. An English surgeon.

B.'s adhesive plaster. Resin 1 oz., lead plaster 1 lb. Melt.

B.'s bandage. Name for the application of strips of Baynton's adhesive plaster round the leg, as in *B.'s method*.

B.'s method. A mode of treating ulcers of the leg by the application of strips of adhesive plaster enclosing the whole circumference and crossing at the ends; each succeeding strip overlies a little the one below it.

Baza. Spain. Mineral waters; also called the baths of Zujar, of a temperature of 38° C. (100.4° F.), containing sodium chloride .947, sodium sulphate 4.63, calcium sulphate 14, sodium carbonate .25 parts in 1000. Used in hysteria, amenorrhœa, chronic skin diseases, scrofula, and renal diseases.

Bdallipodobatra'chii. (Βδάλλω, to suck; ποὺς, a foot; βδραχως, a frog. *F. bdallipodobatrachien.*) Applied by J. A. Ritgen to a Family of the *Reptilia*, having the toes supplied with suckers, as in the tree-frog.

Bdal'sis. (Βδάλσις, from βδάλλω, to milk. *G. Melken, Saugen.*) The process of milking or sucking from the female breast.

Bdella. (Βδέλλα, a leech, from βδάλλω, to suck. *G. Blutegel.*) The leech, *Hirudo medicinalis* and *H. officinalis*.

Also, a Genus of the Family *Bdellidae*, Order *Acarida*. Acarids living in moist places, some of which were formerly erroneously supposed to be parasitic on man.

Bdella'ria. (Βδέλλα, to suck. *F. bdellaria.*) Applied by Blainville to a Family of the *Entomozoa apoda* that move by means of vents at the two extremities of the body, as the leeches.

Bdellat'omy. (Βδέλλα, a leech; τίμνω, to cut.) The application of the *Bdellometer*.

Bdellepith'e'ca. (Βδέλλα; ἐπιθήκη, from ἐπιτίθημι, to put on.) A tubular instrument, of glass or other material, used for the application of leeches to any part.

Bdellepith'esis. (Βδέλλα, a leech; ἐπιτίθειν, a laying on.) The application of leeches.

Bdellidae. A Family of the Order *Acaridea*, Class *Arachnida*. Body long; rostrum distinctly separated from the rest of the body; a constriction between the two pairs of anterior legs; chelicerae ending in nippers; palpi large, antenniform; two to six ocelli.

Bdellium. (Βδέλλον, from Heb. *b'dolach.*) A gum resin somewhat resembling very impure myrrh, the product of various species of *Balsamodendron*.

B., African. A species of the resin said to be produced by the *Balsamodendron africanum*. It is translucent, waxy in fracture, and is in tears of a pale yellowish to a brown-red colour.

B., Egyptian. The produce of *Hyphene thebaica*. Formerly used as a diuretic and dia-phoretic.

B., Indian. A species yielded by *Balsamodendron mukul*, *B. pubescens*, and *B. Roxburghii*. The best is of a yellowish or dark brown colour, according to its age, unctuous, brittle, but soon softening and growing tough between the fingers; it is somewhat transparent, of a bitterish taste, and moderately strong smell; is slightly deobstruent, and was used as pectoral and emmenagogue, being likewise called *Bolchon*; externally as a stimulant and for promoting suppuration. It is the Gugul of the Indian Materia Medica.

B., Sicilian. See *B. siculum*.

B. sic'ulum. (*L. siculus*, Sicilian.) A bitter balsamic exudation from the roots of the *Daucus gummiifer*.

Bdellometer. (Βδέλλα, a leech; μέτρον, a measure. *F. bdellomètre*; *I.* and *S. bdellometro*; *G. Bdellometrum.*) Mechanical leech. An instrument which serves as a substitute for the leech, consisting of a small cupping-glass to which is connected a scarificator and exhausting syringe.

Bdely'gia. (Βδελυγία, from βδελύσσω, to feel a loathing.) Nausea, or dislike of food (*Hippocrates*); an abominable fætor.

Bdema. (Βδίσμα, a stench.) The escape of intestinal flatus.

Bdol'us. (Βδόλος, a stench.) The escape of intestinal flatus.

Bead. (*Sax. bed*, genitive *gebed*, a prayer; so called from their use in saying prayers.) A small ball, perforated so as to be strung on a thread, originally used for counting prayers.

B.-proof. A term denoting the strength of spirituous liquors, as shown by the continuance of the bubbles or beads on the surface for a certain time. (*Hoblyn.*)

B., specific gravity. Hollow balls of different densities, the amount being marked on them. Used to determine by their floating the specific gravity of a fluid.

B. tree. The *Melia azederach*.

Bead'ed. (*Eng. bead*, from *Sax. bed*, genitive *gebed*, a prayer. *L. moniliformis*; *F. moniliforme*; *S. moniliforme*; *G. rosenkranzformig.*) Consisting of beads.

B. roots. Knotted roots, consisting of alternate enlargements and contractions.

Beaf'steak fungus. The *Fistulina hepatica*.

Beak. (A Celtic word, probably from Breton *bek*, a beak. *L. rostrum*; *Gr. ῥύγχος*; *F. bec*; *I. becco*; *S. pico*; *G. Schnabel.*) A bill, a point.

The horny epidermic covering of the anterior extremity of the mandible and maxilla of the ornithorhynchus and of birds and of turtles. The beak of certain fishes, as the scarus, parrot-fish, is not epidermic or ecteronic, but dermal or enderonic, and consists of a congeries of long narrow teeth.

In Botany, a long narrow tip.

The tubular portion of a retort.

B. of corpus callo'sum. (*F. bec du corps calleux.*) The recurved anterior termination of the corpus callosum of the brain beyond what is called the knee.

B. of enceph'al'on. (*F. bec de l'encephalon.*) The anterior pointed extremity of the hemispheres of the cerebrum.

Beak'ed. (Same etymon.) Having a long tip.

B. pars'ley. The *Anthesis vulgaris*.

Beak'er. (Old *Sax. bikeri*, a cup; or from low *Lat. bicarium*, a wine-cup, from *Sixos*, an earthen wine-vessel.) A glass with or without a beak or spout; used in chemical operations.

Beale, L'ionel. An English physician, now living.

B.'s ophthal'moscope. An ophthalmoscope in which the reflector and lens are enclosed in a tube, to the side of which a small lamp is affixed having a plano-convex lens.

Beam. (*Sax. beam*, a tree.) A long piece of timber.

Also, a ray of light.

B. of a bal'ance. The horizontal rod which has the fulcrum in the middle and a scale pan suspended from each end. The part of the beam from the fulcrum to either end is called an arm, each of which should be exactly equal to the other.

B. tree, white. The *Pyrus aria*.

Bean. (*Sax. bean*; Welsh *faen*, from *fa*, that which is covered. *L. faba*; *Gr. κύαμος*; *F. fève*; *I. fava*; *S. haba*; *G. Bohne.*) The seed of the *Leguminosæ*, especially the seed of the *Faba vulgaris*.

B., Algar'o'ba. See *Algaroba bean*.

B., bog. The *Menyanthes trifoliata*.

B., bog, fring'ed. The *Limnanthemum nymphaeoides*.

BEANCAPERS—BEAUMONT.

B., **Brazilian**. The *Pichurim* bean.
B., **broad**. A variety of the *Faba vulgaris*. Broad beans are used as food in the young state; when dried in this condition they contain, according to Payen, nitrogenous matter 29.06, starch 55.85, cellulose 1.05, fat 2, salts 3.65, and water 8.4, in 100 parts.
B., **buck**. The *Menyanthes trifoliata*.
B., **bush**. The kidney bean, *Phaseolus vulgaris*.
B., **Cal'abar**. The seed of the *Physostigma venenosum*. See *Physostigmatis faba*.
B., **ca'per**. The *Zygophyllum fabago*.
B., **cop'per**. A term for granulated copper.
B., **cow**. The *Cicuta virosa*.
B., **cut'sm**. The *Phaseolus lunatus*.
B., **earth**. The *Arachis hypogaea*.
B., **Egypt'ian**. The *Nymphaea nelumbo*.
B., **Egypt'ian, black**. The *Lablab vulgaris*.
B., **French**. The *Phaseolus vulgaris*. The green pods are eaten as food.
B., **gar'den**. The *Faba vulgaris*.
B., **har'lot**. The ripe seed of *Phaseolus vulgaris*. Used as food. They contain, according to Payen, nitrogenous matter 25.6 parts, starch 55.7, cellulose 2.9, fat 2.8, salts 3.2, and water 9.9, in 100 parts.
B., **horse**. A variety of *Faba vulgaris*. Horse beans are used as a cattle food, and to adulterate wheat flour. According to Payen, they contain nitrogenous matter 30.8 parts, starch 48.3, cellulose 3, fat 1.9, salts 3.5, and water 12.6, in 100.
B., **In'dian**. The *Catalpa bignonioides*.
B., **kid'ney**. The *Phaseolus vulgaris*. The green pods are eaten as food when cooked.
B., **kid'ney, un'derground**. The *Arachis hypogaea*.
B., **Malac'oa**. The *Aricennia tomentosa*.
B., **of Carthage'na**. The oblong oval-shaped bean produced by the plant *Laurus pichurim*, and probably also by the *Ocotea puchury*. It is heavy, brown-coloured, and has a musk-like smell; is aromatic and carminative; famed in South America as an antidote for the poison of all serpents; called, likewise, the *Pichurim* bean.
B., **of St. Ignat'ius**. See *St. Ignatius's bean*; the seed of *Ignatia amara*.
B., **orde'al, of Cal'abar**. The seed of *Physostigma venenosum*.
B., **Pich'urim**. See *Pichurim* bean.
B., **Pon'tic**. The *Nymphaea nelumbo*.
B., **Puch'ury**. Same as *Pichurim* bean.
B., **red**. The *Abrus precatorius*.
B., **sa'cred**. The *Nelumbium luteum*.
B., **scar'let**. (*F. haricot d'Espagne*.) The *Phaseolus multiflorus*, var. *coccineus*.
B., **snap**. The *Phaseolus vulgaris*.
B., **string**. The *Phaseolus vulgaris*.
B., **Ton'ga**. Same as *B. tonka*.
B., **Ton'ka**. The seed of *Dipterix odorata*.
B., **tree**. The *Catalpa bignonioides*.
B., **tree, white**. The *Cratogeomys aris*.
B., **tre'foil**. The *Anagyris fatida*.
B., **tre'foil tree**. The *Cytisus laburnum*.
B., **vanilla**. The fruit of *Vanilla planifolia*.
B., **Vello're**. The *Phaseolus lunatus*.
B., **wild**. The *Apios tuberosa*.
Beanca'pers. The plants of the Nat. Order *Zygophyllaceae*.
Bear. (Sax. *bers*, allied to *L. fera*, a wild

beast; Gr. *ἀρκτος*; L. *ursus*; F. *ours*; I. *orso*; G. *Bär*.) A name of the species of the Genus *Ursus*. Bear's flesh is good food, and the fat is esteemed as an application to the hair.
Bear'berry. The *Arbutus uva ursi*.
Beard. (Sax. *beard*, L. *barba*; Gr. *αἰχμή*; F. *barbe*; I. and S. *barba*; G. *Bart*.) The hair on the upper lip, part of the cheeks, and the chin of adult men, and some apes.
The respiratory organs of some molluscs.
Filamentous appendages, as the arms of grasses.
Bearded. (L. *barbatus*; F. *barbe*; G. *bärtig*, *langhaarig*.) Having a beard, or some beard-like appendage.
B., **dar'nel**. The *Lolium temulentum*.
B., **pepp'er agaria**. The *Agaricus piperatus*.
Bearing down. A familiar term applied to the sensation of weight and fulness and pressure downwards in the vaginal canal in certain uterine cases, as prolapsus.
B., **pain**. The expulsive pains of the uterus in labour.
Bear's berry. The *Arctostaphylos uva ursi*.
B., **bill'berry**. Same as *B.'s berry*.
B., **broech**. The *Acanthus mollis*.
B., **car san'tole**. The *Certosa mathioli*.
B., **car, yellow**. The *Primula auricula*.
B., **foot**. The *Alechemilla vulgaris*, and also, the *Helleborus fatidus*.
B., **foot, great bast'ard**. The *Helleborus fatidus*.
B., **fright**. The *Heptallon gracilescens*.
B., **gar'lick**. The *Allium ursinum*.
B., **grass**. The *Yucca filamentosa*.
B., **whortleberry**. The *Arctostaphylos uva ursi*.
Bear'wood. The *Veratrum viride*.
Bear'wort. (G. *Bärwurz*.) The *Mamm. athamanticum*.
Beat. (Sax. *bedtan*, to beat.) A stroke.
Also, a term used to express the condition in which two simple tones alternately strengthen and weaken each other.
B., **of heart**. The systole of the heart.
Bea'tenberg. Switzerland. Above the lake of Thun; 3438 feet high. Comfortable hotels, in a fairly sheltered and very sunny spot. An excellent summer residence for invalids.
Beau. A French physician, born 1806, died 1864. He was a voluminous writer on the liver and spleen, on epilepsy and hysteria, on anaesthesia, whooping-cough, and other subjects.
Beau'gency. France; near Orleans. Tonic and aperient waters, containing sodium, calcium, magnesium, and iron carbonates.
Beau'jolais. An old subdivision of the province Lyonnaise, in the Rhone district of Eastern France. It gives its name to a red wine which has more body than claret, but is less full than Burgundy.
Beaulieu. France; Departement Pay de Dôme. An alkaline gaseous mineral water, containing sodium carbonate 2.5 parts, and baric carbonate .09, in 1000. Used in the sequelae of ague and in anaemia.
Beaumont. An American physician, born 1785, died 1853. He is chiefly known by an account of his observations of the process of digestion, especially as observed in the cure of

BEAUMONT ROOT—BEDFORD.

Alexis St. Martin, who had a fistulous opening into the stomach from a wound.

Beaumont root. The *Gillenia trifoliata*.

Beau'perthuy's method. A plan for treating leprosy, consisting in good hygiene, abstinence from salted meats, soap and water baths twice a day, infusions over the body of cocoa-nut or olive oil, application of cashew nut oil, and the administration of perchloride of mercury, or, where this is contraindicated, of carbonate of soda.

Beaupreau. France; Departement Maine et Loire. A feeble chalybeate and bicarbonated water.

Beau'regard-vandon. See *Rouzat*.

Beaurepaire. See *Les Roches*.

Beauvais. France; in Picardy. Little used chalybeate waters.

Beaver. (Sax. *befer*, form of *L. fiber*, a beaver.) The *Castor fiber*. It supplies *Castor*, and is excellent eating.

B. tree. The *Magnolia glauca*, and also, the *Magnolia macrophylla*.

B. wood. The *Celtis occidentalis*, and also, the *Magnolia glauca*.

Beberia. Same as *Beberin*.

B. sulphate. See *Beberia sulphas*.

Beberic. Relating to beberin.

B. acid. (F. *acide biberique*.) A white, crystalline, deliquescent substance, soluble in alcohol, fusible and volatile, found in the seeds of *Neotandra rodiei*.

Beberin. (L. *beberia*.) An alkaloid, $C_{24}H_{21}NO_5$, found in the bark and seeds of *Neotandra rodiei*, the bebera or green-heart tree of British Guiana. It is whitish, inodorous, amorphous, bitter, very slightly soluble in water, very soluble in alcohol, slightly soluble in ether; forms uncrystallisable salts.

B. sulphate. See *Beberia sulphas*.

Bebeeru. The *Neotandra rodiei*.

Beberia sulphas. B. Ph. $C_{24}H_{21}NO_5$, $O_2H_2SO_4$. Sulphate of beberin. It occurs in thin brownish scales, yellowish white when pure, soluble in alcohol and acidulated water. Used as a tonic, 1—2 grs.; as an antiperiodic, 5—20 grs. It is also given in periodic headache, neuralgia, dyspepsia, and menorrhagia. Inferior in value to quinine.

Bec. France; near Rouen. Chalybeate waters little used.

Beccabunga. The *Veronica beccabunga*; also, the *V. anagallis*.

Beccaria's test. A sign of pregnancy, being intense pulsating pain in the occipital region.

Bechæsthesia. (Bêξ, a cough; *αἰσθησις*, sensation.) The excitement of a cough.

Bechia. (Bêxia; G. *Heiserkeit*.) Hoarseness, cough.

Bechias. (Bêxias.) Same as *Bechia*.

Bechio. (Bêξ, a cough. F. *bechique*; I. *bechio*; G. *hustenstillend*.) Belonging to medicines given for a cough.

B. flowers. (F. *Neurs bechiques*.) Equal parts of flowers of *Verbascum thapsus*, *Malva sylvestris*, *Althæa officinalis*, *Helichrysum*, *Tussilago farfara*, and *Papaver rhæas*. Used in infusion.

B. fruits. (F. *fruits bechiques*.) A term applied to a mixture of dates, the fruit of *Rhamnus zisiphus*, dried figs, and raisins.

Be'chia. (Bêχικá, from Bêξ.) Cough medicines.

Be'chics. (Same etymon.) Remedies against a cough.

Be'chion. (Bêχιον, from Bêξ, a cough. G. *Hufatich*.) The *Tussilago farfara*.

Be'chium. Same as *Be'chion*.

Becho'des. (Bêξ, a cough. F. *bêcheux*; G. *hustend*.) Having, or full of, or pertaining to, cough.

Bechorthopnœ's. (Bêξ, a cough; *ὀρθός*, upright; *πνέω*, to breathe.) Hooping-cough.

Be'chous. (Bêξ.) Having, or pertaining to, a cough.

Beck'enried. Switzerland; Canton Unterwalden. A climatic health resort on the south shore of the Lake of Lucerne, the Vierwaldstädter See.

Becon'gulle. A name of the *Cephaelis ipecacuanha*.

Bequerel. A French physician, born 1814, died 1866.

B's pills. Sulphate of quinine 1·50, extract of digitalis 0·20, colchicum seeds 0·5 gramme, for 10 pills. Dose, one to three daily in gout.

Becuí'ba nux. (L. *nux*, a nut.) A nut produced by a Brazilian tree, which yielded a balsam highly esteemed in rheumatism. (Quincy.)

Bed. (Sax. *bedd*; G. *bett*; etymology doubtful.) Something to sleep on.

In Geology, a thick layer or stratum; also, the surface of junction of a stratum, as distinct from the line of junction, which is a seam.

B. air. See *Air bed*.

B. bug. The *Cimex lectularius*.

B. case. A form of hysteria in which the patient will not leave her bed.

B. hydrostatic. Same as *Arnott's bed*, the invention of Dr. Neil Arnott.

B. sore. (F. *decubitus*; G. *Wundliegen*.) An inflamed spot over the sacrum, hip, or other projecting part liable to pressure, occurring in a person who, from disease or injury, is confined in great measure to one position; the epidermis may be rubbed off, and the skin and subjacent tissues may slough.

B. water. A term for *Arnott's bed*, the invention of Dr. Neil Arnott.

Bed e musk. (Hind.) The *Salix aegyptiaca*. Cultivated at Lahore for the sake of an aromatic water used in the hot season.

Bed'da nuts. A term for *Belleric myrobalans*.

Bed'does, Thomas. An English physician, born at Shiffnal, in Shropshire, 1754, died 1808. He established a pneumatic institution for the treatment of disease by inhalation of gases. Here, with Davey as the superintendent, the properties of nitrous oxide gas were first demonstrated. He wrote many popular medical works.

Bed'eguar. (S. *bedegar*. L. *fungus rosaceus*, *spongia cynobasti*; G. *Rosenschwamm*, *Siebenschläfer*.) A filamentous gall on roses, produced by the *Cynips rosæ*, *C. brandtii*, a species of *Mesoleptus* and perhaps other insects. Formerly esteemed as a remedy for the bite of poisonous animals, as lithontriptic and vermifuge, and was used in scrofula, calculous affections and hydrophobia.

Bed'ford. United States of America; between Philadelphia and Pittsburgh, near the

BEDFORD WILLOW—BEER.

Alleghany mountains. Saline and sulphurous mineral waters, in an agreeable climate.

Bedford willow. The *Salix Russelliana*.

Bed lift. A canvas stretched by a wooden frame, having an aperture in the centre for defecation, which is placed upon a mattress. By means of a strap attached to each end the frame may be raised with the patient, and kept in this position by wooden rests. In Volkmann's modification pulleys for extension are fastened to this frame.

Bed rest. An inclined plane which can be fixed at any angle by a rack, and which is placed under the pillow to support the head and back.

Bed straw. The *Galium aparine*.

B., cheese remaining. The *Galium verum*.

B., cross-leaved. The *Galium cruciata*.

B., great hedge. The *Galium mollugo*.

B., greater ladies. The *Galium mollugo*.

B., ladies. The *Galium verum*.

B., rough marsh. The *Galium uliginosum*.

B., sweet-scented. The *Galium triphyllum*.

B., white. The *Galium mollugo*.

B., yellow. The *Galium verum*.

Bee. (Sax. *beo*, probably of onomatopoeitic origin. L. *apis*; Gr. *μήλισσα*; F. *abeille*; I. *ape*; S. *abeja*; G. *Biene*.) A Genus of Hymenopterous insects, specially the *Apis mellifica*, from which honey and wax are obtained. When dried or powdered bees were used as a diuretic.

B.-bread. See *Propolis*.

B. drop. The *Orobancha virginiana*.

B. drop, Albany. The *Pterospora andromeda*.

B. drop, false. The *Hypopitys lanuginosa*.

B. glue. Same as *Propolis*.

B., hive. The *Apis mellifica*.

B., honey. The *Apis mellifica*.

B., Indian. The *Apis indica*.

B., queen. The female of the *Apis mellifica*.

Beech. (Sax. *bice*, a probable noun form. G. *Buche*; F. *hêtre*; I. *faggio*.) The *Fagus sylvatica*.

B., Indian. The *Pongamia glabra*.

B. mast. The fruit of the *Fagus sylvatica*.

B. mast oil. See *Oleum fagi*.

B. nut. The fruit of the *Fagus sylvatica*.

B. nut oil. See *Oleum fagi*.

B. tree. The *Fagus sylvatica*.

Beef. (Old F. *boef*, *buuf*. F. *bœuf*; I. *manzo*; S. *edea*, *buéy*; G. *Rindfleisch*.) The flesh of domestic cattle. Good beef should be firm but elastic, of a lively red colour, without lividity; the fat should be firm, of a pale yellowish white colour. The odour should not be unpleasant.

If beef possesses the following characteristics it is unfit for food:—Very pale or purple colour; wet, sodden, and flabby to the touch; fat looking like jelly or wet parchment; a sickly or cadaverous smell, or one of drugs; the presence of parasites. (Lethby.)

An average composition, according to Moleschott, is—water 73.4, soluble albumin and hæmatin 2.26, insoluble albuminous matters, as fibrin, 15.2, gelatin 3.3, fat 2.87, extractive 1.38, creatin .068, ash 1.6; this ash consists of sodium chloride .31, potassium chloride .154, potash .54, soda .026, lime .051, magnesia .023, iron oxide or phosphate .011, phosphoric acid .435, sulphuric acid .036, silica .014.

B. tape-worm. The *Tænia mediceana-lata*.

B. tea. A pound of lean meat, cut into small pieces, put into a jar with a pint of cold water, is allowed to stand two hours; the jar is then placed in a saucepan containing water on a fire; the water is allowed to simmer very gently for an hour; the liquid is then strained from the meat, and, with addition of salt or other condiment, is fit for use. Beef tea is commonly employed in the dietary of the sick.

Beef woods. The plants of the Nat. Order *Camarinaceæ*.

Beehive topped. Having a rounded top, like a beehive; applied to certain vesicles.

Be'en. The *Centurus taken*.

Beemel. (Mal.) Probably the *Oreos racemosum*. Used in headache.

Beer. An Austrian surgeon, born 1763, died 1821. His works on ophthalmic surgery and medicine are greatly esteemed.

B.'s cataract knife. An instrument used for making the section of the cornea in the extraction of cataract. The blade is triangular in shape, the back on a line with the handle, and the cutting edge forming with it an angle of 18°.

B.'s collyrium. An eye-water, composed of plumbic subacetate, rose water, and spirit of rosemary.

Beer. (Sax. *beor*, beer. L. *cerevisia*; Gr. *ζυθος*; F. *bière*; I. *birra*; S. *cervass*; G. *Bier*.) The product of the vinous fermentation of an infusion of malt and hops. Crushed malt is infused in water, at 77° C. (170° F.), for two hours; during this time the diastase effects the conversion of the starch of the grain into dextrin and sugar. The clear liquor, wort, is boiled with hops, cooled, and then mixed with yeast in fermenting vessels; having been allowed to ferment for some time, but not to its full course, the yeast is removed, and the remainder, beer, is drawn off into casks, where a further process of slow fermentation proceeds. Sp. gr. varies from 1006 to 1030 or more. Beer consists of water; alcohol 1 to 10 per cent.; malt extract (sugar, dextrin, and allied substances) 4 to 16 per cent.; hop extract in small quantity; acids consisting of lactic, acetic, gallic, and malic acids, in variable quantity; albuminous matter 5 per cent.; alkaline chlorides and phosphates, and earthy phosphates 1 to 2 per cent.; free carbonic acid 1 to 2 per cent. by weight. Beer is stimulating and nutritive. See *Malt*, *Ale*, *Porter*.

B., adulteration of. Beer has been adulterated with water, cane sugar, liquorice, caramel, gentian, chiretta, quassia, wormwood, orange peel, chamomile, picric acid, cocculus indicus, strychnine, tobacco, opium, ginger, coriander, caraway, cardamoms, grains of paradise, capicum, ferrous sulphate, alum, salt, chalk, soda, cream of tartar, sulphuric acid.

B., antiscorbutic. (F. *aspinitte*.) Scurvy grass and buds of spruce fir, of each 1 oz., horseradish root 2 oz., new ale half a gallon. Macerate 4 days, press, and strain. Dose, 4–6 ounces, in scurvy. There are other nearly similar formulæ.

B., black. A synonym of *B., spruce*.

B. chowder. Spruce beer boiled with water and mixed with molasses.

B., cincho'na. Cinchona bark 1 oz., brandy 2 oz. Infuse for a day, then add new beer 1 quart; in three days filter. Dose, 4 to 6 ounces, in ague. There are other formulæ.

BEES-NEST—BEHEN ABIAD.

B. Jews'. The same as *B. ter.*
B. pine. See *B. spruce.*
B. pipisew'a. *Pyrola umbellata* (pipisewa) $\frac{1}{2}$ lb., water 1 gallon. Boil, strain, add sugar (lb., powdered ginger $\frac{1}{2}$ oz. Yeast q. s., ferment, strain, and bottle. Dose, half a tumblerful, in scrofulous diseases of joints.
B. sarsaparilla. Sarsaparilla 1 lb., guaiacum bark $\frac{1}{2}$ lb., guaiacum wood, liquorice root, of each 2 oz., aniseed $1\frac{1}{2}$ oz., mexereon root-bark 1 oz., cloves $\frac{1}{2}$ oz., moist sugar $3\frac{1}{2}$ lbs., hot water 9 quarts. Mix, let it stand in a warm room, occasionally shaking, till fermentation sets in, when, after standing a few days, it may be used. Dose, 6 or 8 ounces three or four times a day, as an alterative. There are other formulas.
B. springs. A term applied to mineral water containing carbonic acid gas.
B. spruce. (*F. sapinetis*; *G. Tannen-sprossender.*) Essence of spruce $\frac{1}{2}$ pint, pimento, ginger, of each 5 oz., hops $\frac{1}{2}$ lb., water 3 gallons. Boil for 10 minutes, add moist sugar 12 lbs., warm water 11 gallons; mix, add yeast 1 pint, ferment 24 hours, and then bottle. Diuretic and antiscorbutic.
B. stomachic. Centaury tops, Roman wormwood, of each 4 handfuls, gentian root 2 oz., the yellow rinds of 6 Seville oranges, Spanish angelica root, winter's bark, of each 1 oz., new ale 3 quarts. One or two wineglassfuls on an empty stomach.
B. sulphuric acid. Sulphuric acid $\frac{1}{2}$ drachm to 10 pints of mild beer. Let it settle, and use the clear liquid. Used in lead work and in lead colic. A tumblerful two or three times a day.
B. Swiss vulnerary. (*G. Falltrunk.*) An infusion of various Alpine aromatic plants, including the species of arnica, achillea, valeriana, primula, pyrola, hypericum, asperula, and others, according to the custom of the family or district. Used in all injuries, of whatever kind, as a drink.
B. tar. Bran 2 pints, tar 1 pint, honey $\frac{1}{2}$ pint, water 6 pints. Mix, simmer for three hours, then add yeast $\frac{1}{2}$ pint, ferment for 36 hours; strain. In bronchitis and phthisis. Dose, a wineglassful before each meal.
B. yeast. See *Cerevisia fermentum.*
Bees-nest. The *Daucus carota.*
Beesia. A Genus of the Nat. Order Gramineae.
B. rheed'li. Hab. India. A large bamboo. A decoction is used as a gargle in toothache, and is given in amenorrhoea. It is the chief source of *Tubashcer.* (Waring.)
Beeswax. See *Cera flava.*
Best. (Sax. *beta*, from *L. beta*. Gr. *πῦρ-λας*; *F. bette*; *L. betula*; *S. acelga*; *G. Mangold.*) A Genus of the Nat. Order Chenopodiaceae. See *Beta.*
B. chard. The *Beta cyclo.*
B. sold. The mangel wurzel, *Beta hybrida.*
B. hybrid. See *Beta hybrida.*
B. red. See *Beta rubra.*
B. sea. See *Beta maritima.*
B. white. See *Beta alba.*
Beetle. (Sax. *bitel*, from *bitea*, to bite.) A generic name given to coleopterous insects.
B. blistering. The *Cantharid vesicatoria.*
B. oil. The *Melos proscarabaeus.* It is an

irritant diuretic, and has been used in gout, kidney diseases, dropsy, syphilis, gonorrhoea, ague, and jaundice.
Beetlowood. The *Galax aphylla.*
Begbie. A Scottish physician.
B. a. disease. A name given sometimes to *Rophthalmic gout.*
Beggar's lice. The *Galium aparine.*
Begonia. (*Begonia*, from *Bisew*, to cough.) Used by Hippocrates, *de Morb. l. ii. xlv. 8*, for the sputum, or matter expectorated by coughing; also, for the cough itself.
Begon. A French botanist, who lived in Saint Domingo.
Begonia. (*Begonia*.) A Genus of the Nat. Order Begoniaceae.
B. aceto'sa. (*L. acetum*, vinegar.) Used as the *B. acida.*
B. acida. (*L. acidus*, sour.) Hab. Brazil. Used in vesical catarrh.
B. acutifolia. (*L. acutus*, pointed; *folium*, a leaf.) Hab. Jamaica. Climbing sorrel. Leaves acid, somewhat acrid in taste. A decoction is used in catarrh. (Waring.)
B. bidentata. (*L. bis*, twice; *dentatus*, toothed.) Anticatharral and antiscorbutic. (Waring.)
B. cucullata. (*L. cucullus*, a cowl.) Anticatharral. (Waring.)
B. grandiflora. (*L. grandis*, great; *flor.*, a flower.) The astringent roots are used in Peru against hæmorrhages, chest complaints, and scurvy.
B. hirtella. (Dim. of *L. hirtus*, hairy.) Antiscorbutic. (Waring.)
B. malabar'ica. Used as a potherb.
B. planatifolia. (*L. planus*, the plane tree; *folium*, a leaf.) Antiscorbutic. (Waring.)
B. tomentosa. (*L. tomentum*, a stuffing for cushions.) Same as *B. grandiflora.*
B. tuberosa. (*L. tuberosus*, full of swellings.) Used as a potherb.
B. undulata. (*L. undulatus*, waved.) Antiscorbutic. (Waring.)
Begoniaceae. (*F. begoniacei.*) Applied by Bonpland and Kunth to a Family having the *Begonia* for their type. Succulent plants; leaves alternate, unequal-sided at the base, stipulate; flowers dichous, calyx superior; male flower with two large external, and two small inner, petals, stamens numerous; anthers 2-celled, clavate; female flowers with 6—8 sepals, ovary inferior, winged, 3-celled, placentas axile, stigmas 3, sessile, 2-lobed; fruit winged, capsular; seeds numerous, without albumen.
Begoniads. The plants of the Nat. Order Begoniaceae.
Beguan. A bezoar or concretion found in the intestines of the Iguana lizard.
Beguin's fuming liquor. A solution of ammonium sulphide, the same as *Boyle's fuming liquor.*
B. s. sulphuretted spirit. Same as *B.'s fuming liquor.*
Behen abiad. The *Centaurea behen.*
B. abias. The *B. rubrum.*
B. ack'mar. The *B. rubrum.*
B. album. (*L. albus*, white. *I. deen*; *G. morgenländische weissé Wüderstors.*) The white behen. The root of the *Centaurea behen*, found on the Libanus, of an aromatic odour and rough taste. Reputed a vermifuge and antispasmodic.
B. ha'mar. The *B. album.*

BEHENIC ACID—BELL.

B. magnum. (L. *magnus*, great.) The seeds of the *Jatropha multifida*.

B. officinarum. (L. *officina*, a workshop. F. *béhen blanc*; G. *Schachtkraut*.) The root of the *Cucubalus behen*.

B., red. See *B. rubrum*.

B. rubrum. (L. *ruber*, red. F. *béhen rouge*; G. *rothen Widerstora*.) The roots of the *Statice limonium*, red behen. Said to be tonic and astringent.

B. vulgaris. (L. *vulgaris*, common.) The *Cucubalus behen*.

B., white. See *B. album*.

Behenic acid. Same as *Benic acid*.

Behahalsen. The *Sempervivum tectorum*.

Beid el ossar. *Asclepias procera*. Used in Africa against fever and the bites of serpents. The leaves are used in cataplasms for indolent swellings; the caustic milky juice is employed to disperse venereal nodes, and the down of its seeds forms a kind of tinder.

Beid'elsar. Same as *Beid el ossar*.

Beijoin. A synonym of *Benjoin*.

Bejar y Montemayor. See *Montemayor y Beyar*.

Bejetlan. The fruit of species of the Genus *Lansium*.

Bejul'o. The Bean of Carthage, which see.

Be'kes. Hungary; County Zemplin. A tepid sulphur water, used only for bathing.

Bekh-bunufsha. Probably the root of *Iris florentina*, imported from Cabul to Patna. Used as a perfume and stimulant. (Waring.)

Bel. The same as *Bael*. The fruit of *Egle marmelos*.

Bel mos'chus. See *Abelmoschus*.

Bela. The fruit of *Egle marmelos*, which see; also, *Bela fructus*.

Bela-aye. (Ind.) The bark of the *Nerium antidysentericum*. Used in Madagascar in dysentery.

Beladam'bec. A Species of *Convolvulus* which grows in Malabar; containing an acrid juice, which is made, with oil and ginger, into a liniment; used against the bite of a rabid animal.

Bela fructus. *Bael* fruit. The dried half ripe fruit of *Egle marmelos*. The fruit is a berry, the size of a large orange, spherical, with a hard, woody rind or shell, containing 10—15 seed-bearing cells, which enclose a large quantity of tenacious mucilage. It is imported in vertical slices, or broken pieces, with a brownish-orange dried pulp adhering to the pale brown rind. It contains mucilage and sugar, but is said to exhibit a mere trace of tannin. It is recommended in chronic dysentery and diarrhea.

The dried fruit of the mangosteen, *Garcinia mangostana*, is said to be occasionally substituted for it.

B. liq'uidum extractum. B. Ph. A fluid ounce represents an ounce of *bael*. Dose, 1—2 drs.

Belake. Same as *Bela-aye*.

Belalp. Switzerland; four hours by mule from Brieg, in the Rhone valley. Height 6732 feet. The hotel is beautifully situated above the Great Aletsch Glacier. Splendid summer air-cure place for overworked townsmen.

Belamodagam. A Malabar plant of the Genus *Scaevola*, the leaves of which are said to be diuretic and emmenagogue.

Belanger'ess. A Tribe of the Nat. Order *Cunoniaceae*.

Bel'belta. An Abyssinian name of an anthelmintic composed of the tops of the *Celastris trigyna* and *C. populifolia*. Used for tænia.

Belemnite. (*Βέλεμιον*, a dart.) Fossil remains of a Cephalopod of the Family *Belemnitidae*, popularly called *Thunderbolts* and *Arrowstones*. They were powdered and used as a remedy against nightmare. The structure which goes under this name is the terminal part of the endoskeleton, and consists of a nearly cylindrical body, the guard, which occasionally contains, lodged in a cavity in its upper end, the alveolus, a chambered cone, the phragmacone, having the remains of the ink-bag in the last chamber, and superiorly being continued as a horny lamina, the pen or proostracum.

Belemnitidae. An extinct Family of the Subsection *Decapoda*, of the Order *Dibranchiata*, Class *Cephalopoda*. Shell internal, composed of a conical-chambered portion, with a marginal siphuncle, sometimes produced into a horny plate, and lodged in a cylindrical fibrous guard.

Belemnitology. (*Belemnite*; λογος, a discourse. F. and G. *belemnitologie*.) Term by Faure Bignet for the natural history of the *Belemnites*.

Belemnoid. (*Βελεμιον*, a dart; εidos, form.) Dart-shaped.

B. process. A styloid process.

Belenite. (*Βέλος*, a dart.) Same as *Belemnite*.

Bel'enoid. (*Βέλος*, a dart; εidos, form. L. *belenoides*.) Styloid; long, conical, and slender.

Bel'eson. Balsam. (Ruland and Johnson.) Also, the Indian name of the *Mussenda frondosa*.

Bel'gaum wal'nut. The *Aleurites triloba*.

Beli oculus. (L. *Belus*, an Indian deity; *oculus*, an eye.) See *Belloculus*.

Bell'la. The *Mussenda frondosa*.

Bell'num. The *Apium graveolens*.

Bell. (Sax. *bell*, from *bellan*, to bellow. L. *campana*, *tintinnabulum*; Gr. κωδων, χαλκωσα; F. *cloche*; I. *campana*; G. *Glocke*, *Schelle*, *Klingel*.) A hollow metallic body, of a cup-shape, used for producing more or less musical sounds.

Also, any body having the ordinary shape of a bell.

B., Can'terbury. The *Campanula trachelium* and *C. medium*.

B., Coventry. The *Campanula medium*.

B.-flower. The *Campanula*; also, *Narcissus pseudonarcissus*.

B.-flower, field. The *Campanula patula*.

B.-flower, nettle-leaved. The *Campanula trachelium*.

B.-flower, ram'pion. The *Campanula rapunculus*.

B.-flower, spread'ing. The *Campanula patula*.

B.-flower, Syr'ian. The *Campanula laciniata*.

B.-metal. Founders' standard consists of an alloy of copper 77 parts, tin 2, antimony 2. The proportions vary, and zinc, iron, and lead are sometimes added.

B.-shaped. Having the shape of a bell. Same as *Campanulate*.

B. sound. (F. *bruit d'airain*.) A metallic

BELL—BELLIRICA.

ring heard on placing the ear over a large cavity when its surface is percussed or struck by a hammer on a metallic pleximeter. Heard in pneumothorax.

Bell. An American physician.

Bell's disease. A form of mania characterized by a sudden accession of symptoms, with loss of sleep, delirium, loathing of food, and extreme depression after excitement. The disease runs a rapid course.

Bell, Benjamin. A Scotch surgeon of the eighteenth century. He wrote a 'System of Surgery,' and treatises on 'Ulcers and on Gonorrhoea.'

Bell, John. A Scotch surgeon, born in Edinburgh in 1762, died in Rome 1820. His 'Anatomy and Physiology of the Human Body' and his 'Principles of Surgery' were his most noted writings.

Bell, Sir Charles. An English surgeon, born 1774, died 1842. His anatomical researches and his surgical works possess a lasting reputation.

Bell's law. The doctrine that the anterior roots of the spinal nerves consist of motor fibres, and the posterior roots of sensitive fibres.

Bell's paralysis. Paralysis of the portio dura of the seventh pair of cranial nerves; the facial nerve.

Bell's powder. An anthelmintic and purgative composed of equal parts of rhubarb, scammony, and calomel, and three parts of sugar.

Belladonna. (*L. bella donna*, handsome lady, because the juice was used to improve the skin. *L. atropa*; *F. belladone*; *S. belladonna*; *G. Tollkirsche, Nachtschatten*.) The pharmacopoeial name of the leaves and root of the *Atropa belladonna*. Belladonna produces mydriasis, first accelerates the heart's action, with increase of force, then the pulse becomes weaker, and in a later stage slower, than normal; the temperature is first increased, afterwards lowered; it excites the brain, and afterwards quiets it, in medicinal doses; it relaxes the circular involuntary muscular fibres, arrests the secretion of saliva and sweat, produces often a red rash on the skin, and increases the secretions of the liver and kidneys. Belladonna has been much used in epilepsy, in chorea and tetanus, in mania, in neuralgia, especially pelvic, as a relaxor of spasm in asthma, spasmodic stricture, during the passage of gall-stones, in spasm of the sphincter ani, in constipation without distension of bowels, in hooping-cough, in scrofulous ophthalmia, in acute inflammation, in acute nephritis, in scarlatina, and in suppression of urine. It has been used in salivation and the night sweats of phthisis, and as an antidote to poisoning by opium or fungi. Locally applied, belladonna is of great service in stopping the secretion of milk, and in relieving pain. Dose of the tincture 6—20 min., of the succus 5—15 min., and of the extract $\frac{1}{4}$ to 1 or 2 grs. See *Atropin*.

B. baccifera. (*L. bacca*, a berry; *fero*, to bear.) The *Atropa belladonna*.

B., poisoning by. Giddiness, sleepiness, dryness of mouth, difficulty in swallowing, strong quick pulse, flushed face, bright eyes, dilated pupils, imperfect sight from paralysis of ciliary muscle, hesitation of speech, unsteady gait, numbness of surface; then delirium, coma, and death. Or after a sleep the symptoms may rapidly decline. Death usually is within twenty

hours. No marked post-mortem signs; dilated pupils, congested brain, perhaps congested stomach. Fatal dose very irregular. Antidotes: emetics, tannin and things containing it, and the stomach-pump; opium has been advised. For tests, see *Atropin*.

B. rash. A rosy rash, accompanied by fever, dry throat, and dilated pupils, resulting from an overdose, or too long continuance in medicinal doses, of belladonna.

B. trichotoma. (*Tríxē*, threefold; *trómos*, a cut.) The *Atropa belladonna*.

Belladonnae folia. B. Ph., U.S. Ph. (*L. folium*, a leaf. *F. feuilles de belladone*; *G. Tollkirscheblätter*.) The leaves of *Atropa belladonna*, and the branches to which they are attached. They are 3"—6" long, ovate, acute, entire, smooth, the uppermost in pairs of unequal size; when dry they are of a dull greenish colour, and have a faint narcotic odour and a sweetish, subacid, slightly nauseous taste.

B. radix. B. Ph., U.S. Ph. (*L. radix*, a root. *F. racine de belladone*; *G. Tollkirschenwurzel*.) The root of *Atropa belladonna*. It is 1"—2" long, 5"—2" thick, round, spindle-shaped, branched, wrinkled, pale brown on the outside, internally whitish, of little odour, and sweetish taste.

Belladonna. An amorphous base which accompanies atropin.

Bellagio. Italy; on the Lake of Como. A climatic health resort in lung and nervous diseases.

Bellain. A Derbyshire term for lead colic.

Bellegru. The *Myrobalanus*.

Belleisle cress. The *Barbarea prae-cox*.

Bellereg. The *Myrobalanus*.

Belleric myrobalanus. The fruit of *Terminalia bellerica*.

Bellerive. Switzerland; Canton Bern, on the right bank of the Bir, not far from Basel. A mineral water, of milky appearance and sulphurous taste. Sixteen ounces contains magnesium sulphate 5 grains, sodium sulphate 8·6, and calcium carbonate 3·4. Used in chronic affections of mucous membranes, scrofula, kidney and skin diseases; as a douche in chronic rheumatism and gout.

Bellesme. France; near Montagne. Chalybeate waters of little note.

Belleville. France; a suburb of Paris. A cold sulphur spring. Used in chronic skin diseases, bronchitis, chronic laryngitis, and scrofula.

Belley. France; Department of Ain. Saline aperient waters.

Bellidese. A Tribe of the Nat. Order *Compositae*.

Bellideoides. (*L. bellis*, a daisy; *eidēs*, form.) The *Chrysanthemum leucanthemum*.

Belliese. A Tribe of the Nat. Order *Compositae*.

Bellied. Having a belly. Same as *Urceolates* and *Ventricoses*.

Bellini. An anatomist of Florence. Born 1643, died 1704.

B., ducts of. (*G. Bellinische Röhren*.) The excretory tubes of the kidney opening on the papilla; the *Uriniferous tubules*.

B., tubes of. The *B., ducts of*.

Bellinzona. Italy; on the Lago Maggiore. A winter climatic resort.

Bellirica. See *Myrobalanus bellerica*.

Bellis. (*L. bellus*, neat.) A Genus of the Nat. Order *Compositæ*. Achenes compressed; papus none; receptacle naked, conical; involucre-scales obtuse, equal, in a single row.

B. an'na. (*L. annuus*, lasting a year.) The same as *B. perennis*.

B. hortens'is. (*L. hortensis*, of a garden.) The *B. perennis*.

B. ma'jor. (*L. major*, greater.) The *Chrysanthemum leucanthemum*.

B. mi'nor. (*L. minor*, less.) The *B. perennis*.

B. peren'nis. (*L. perennis*, perpetual. *F. paquerette*; *I. margherita*; *G. Massliebchen*, *Günzblume*.) Common daisy. Scape single-headed; leaves spatulate, obovate, crenate, one-nerved. The leaves and flowers, which are somewhat acrid, were formerly applied to wounds, and used in phthisis and pulmonary affections. The root is antiscorbutic.

B. pratens'is. (*L. pratensis*, belonging to a meadow.) The *Chrysanthemum leucanthemum*.

B. sylves'tris mi'nor. (*L. sylvester*, belonging to a wood; *minor*, less.) The *B. perennis*.

Bell'oc. France; Departement de la Gironde. A cold, bicarbonated, feebly chalybeate, mineral water.

Bell'oc. A French surgeon, who wrote in the middle of the eighteenth century, born 1752, died 1807.

B.'s sound. A metallic cannula open at both ends, and containing a stylet of considerably greater length, which has a plug at one end and at the other a long flexible piece of steel terminating in a ring; when protruded from the cannula the stylet curves on itself. The instrument is used for plugging the posterior nares for the arrest of hæmorrhage. It is introduced, with the stylet drawn in, into the nostril from the front as far as it will pass, the handle is then pushed in so that the ringed end protrudes and curves round the soft palate; a string, previously attached to the ring, is caught, and to it is tied a sponge or pad of lint; the stylet is drawn in, and with it the pad is closely applied to the posterior nares, so as to block up the opening.

Bello'culus. (*Beli oculus*, the eye of Bel.) A gem held sacred to Bel by the Assyrians, who alleged that an eye was visible in it. Believed to be efficacious in removing diseases of the eye.

Bell'on. (Fr.) A term for lead colic.

Bellos'te. A French surgeon; born 1634, died 1730.

B.'s pills. Mercury 6 parts, honey 6, cape aloes, powdered, 6, black pepper, powdered, 1, rhubarb, powdered, 3, Aleppo scammony, powdered, 2. Triturate the mercury with the honey and half the aloes until no globules are seen; add the remainder of the aloes, then the scammony and the other ingredients. Make into 3-grain pills.

Bello'tas. (Span.) The fruit of the *Ilex major*. Recommended by Spanish physicians in diseases of the chest accompanied with profuse expectoration and hæmoptysis.

Bell'ows. (Sax. *bælig*, a bag. *F. soufflet*; *I. soffietto*; *G. Blasbalg*.) An instrument for producing a current of air.

B. murmur. See *Murmur*, *bellows*.

B. sound. See *Murmur*, *bellows*.

B. sound, funic. See *Murmur*, *funic*.

B. sound, placen'tal. See *Murmur*, *placental*.

Bell'usæ. (*L. bellua*, a beast of large size or of great ferocity.) One of the eight Orders of *Mammalia*, according to Linnæus; it included the elephant.

Bell'us. Hungary; County Trentschin. A diuretic and stimulating mineral water, containing calcium sulphate and sulphide, sodium sulphate and sulphide, a little iron, and large quantities of carbonic acid and hydrogen sulphide.

Bell'wort, smaller. The *Oularia perfoliata*.

Bell'worts. The plants of the Order *Campanulaceæ*.

Belly. (Sax. *bælig*.) The abdomen; the womb; formerly applied generically to the cavities of the head, thorax, and abdomen. See *Abdomen*, *Alvus*, *Venter*, *Cælia*.

B., bound. The *Alvus stricta*.

B., lax. The *Alvus fluida*.

B. of a mus'cle. The fleshy part of a muscle.

Bellyroot. The *Ligusticum actæifolium*.

Belmos'chus. The *Hibiscus abelmoschus*.

Bel'nileg. A name for the *Myrobalanus*.

Belogloss'us. (*Βέλος*, a dart; *γλῶσσα*, the tongue. *F. béglosse*; *G. pfeilzungig*.) Applied by Ranzani to a Family of the *Scamnores*, having the tongue lumbriciform, very long, and protractile, as the magpie.

Bel'oid. (*Βέλος*, an arrow, a dart; *ειδος*, form.) Dart-shaped.

B. pro'cess. A synonym of *Styloid process*.

Bel'onô. (*Βελόνη*, a sharp point.) A needle.

Bel'o'nia. A Genus of the Nat. Order *Gentianaceæ*.

B. as'pera. (*L. asper*, rough.) Hab. Antilles. The bark is used as an astringent and febrifuge.

Bel'onoid. (*Βελονοειδής*, pointed, needle-shaped. *L. belonoides*, *belonodes*; *G. nadelformig*.) Arrow- or needle-shaped.

B. pro'cess. The styloid processes of the temporal bone and of the radius.

Belonos'pasis. (*Βελόνη*, a needle; *σπάσις*, a drawing. *F. belénospasis*.) Term for the irritation produced by applying needles, or Perkins's metallic tractors, upon the skin.

Bels'eye. A synonym of *Belloculus*.

Belt. (Sax. *belt*. *L. balteus*, *cingulum*; *Gr. ζώνη*; *F. ceinture*; *I. cintola*, *cintura*; *G. Leibbinde*.) A girdle round the waist or abdomen.

B., abdom'inal. A broad elastic girth fitted to the abdomen, and worn during pregnancy or for abdominal enlargements, generally to support the muscles and viscera.

B., Hil'dan's. A leathern waistband, which was formerly used in the reduction of dislocations and fractures of the limbs, whether thoracic or abdominal.

B., hydropath'ic. A belt of linen or other material, enclosing lint to be wetted with water, and covered with oil silk on the outside. Used as a compress in hepatic or other disease.

B., hypogas'tric. A narrow abdominal belt making pressure only in the hypogastric region.

B., mercu'rial. A woollen waistband, spread with mercurial ointment; used in syphilis and where a mercurial action was desired.

Belturbet. Ireland; Co. Cavan. A pleasant district near Lough Erne. A chalybeate water.

Belu'ga. The white whale, *Delphinapterus leucos*. Also, a term formerly applied to the sturgeon, *Acipenser huso*.

Belu'cum. (Βέλος, a dart; ἔλκω, to draw out.) An instrument for extracting arrows or darts; it was of various figure; described by Ambrose Paré, *Chirurg.* x, 18.

Belvisia'cea. (From Beauvois, the discoverer of the genus.) An Order of epigynous, calycifloral Exogens, having a superior, coriaceous, valvate calyx; a corolla consisting of three whorls of united petals; indefinite monodelphous stamens; a plurilocular ovary; and large, reniform, exalbuminous seeds, with amygdaloid cotyledons.

Belvisia'ea. Same as *Belvisiacea*.

Bel'zoe. A synonym of *Benzoin*.

Bel'zoin. A synonym of *Benzoin*.

Belzoinum. Same as *Benzoinum*.

Bentamara. Same as *Bentamara*.

Ben, oil of. The thick, inodorous, transparent oil expressed from the seeds of *Moringa pterygosperma*. Used externally in pains in the limbs, gout, and rheumatism; internally as a purgative.

B. mag'num. (L. *magnus*, great.) The fruit of the *Jatropha multifida*.

B. moon'ja. Name of a tree of Malabar, a decoction of the roots of which is held by the natives to be efficacious in malignant fevers; its bark in decoction, with sweet flag and rice, is said to stop immediately the vomiting caused by the bite of poisonous serpents.

B. nut. The seeds of *Moringa pterygosperma*.

B. of judæ'a. Benzoin.

Ben'ath. A term for a pustule. (Dunglison.)

Ben'birn. A name of *Osteocolla*.

Benga'o de De'os. The *Abutilon esculentum*.

Beneool'en cloves. The unexpanded flowers of *Caryophyllus aromaticus*, from Sumatra.

B. tea. The produce of *Glaphyria nitida*.

Ben'dee. The *Abelmoschus esculentus*.

Ben'di-kai. The fresh capsules of *Abelmoschus esculentus*.

Benedekfal'va. Hungary; County Liptau. An alkaline spring containing carbonic acid.

Ben'eden, Von. A Dutch physiologist.

B's classification of animals. 1. *Hypocotyle*, the vitellus re-entering by the inferior surface of the body—Mammals, Birds, Reptiles, Amphibia, and Fishes. 2. *Epicotyle*, the vitellus re-entering by the superior surface of the body—Insects, Myriapoda, Arachnids, Crustaceans, and Rotifers. 3. *Allocootyle*, the vitellus re-entering on neither surface—Molluscs, Worms, Echinoderms, Polyps, and Protozoa.

Benedenia el'egans. (Beneden; L. *elegans*, elegant.) A sexually mature form of Trematode worm, found amongst the scales of *Solea aquila*.

Benedetti, Alexan'der. An Italian physician, known as Benedictus, who died in Venice in 1525. He wrote on the plague and on anatomical subjects, and was the first to recognise the mode of formation of biliary calculi.

Benedicta herba. (L. *benedictus*, blessed; *herba*, a herb.) The *Gum urbanum*.

B. laxat'iva. (L. *laxo*, to loosen.) The *Confectio sennæ*.

B. sylvest'ris. (L. *sylvestris*, belonging to a wood.) The *Gum rivale*.

Benedictus. (L. *benedico*, to bless.) Blessed. This term was anciently much used in reference to the milder purgative medicines, as rhubarb; also, applied to substances of different qualities, as *Vinum benedictum*, antimonial wine. Also, a name of *Benedetti*.

Beneficium naturæ. (L. *beneficium*, a favour; *natura*, nature. F. *benefice de la nature*.) A benefit of nature. Applied to spontaneous recovery from disease without the aid of medicine.

Benel. The *Croton racemosus*.

Beneolens. (L. *bene*, well; *oleo*, to smell.) A fragrant medicine, such as many of the balsams.

Benetutti. Italy; on the bank of the Tisri. A sulphuretted water, of a temperature of 38° C. (100·4° F.)

Benevivum. Same as *Benzoinum*.

Benevolence. (L. *bene*, well; *volo*, to wish.) That sort of love which disposes one man to confer a kindness upon another; goodwill. Term for a faculty, found also in the lower animals, but in them limited in a great degree to the production of passive mildness of disposition, producing the desire of the happiness of others, and disposing to compassion and active benevolence. Its organ is, according to the phrenologists, at the upper part of the frontal bone, immediately before the fontanelle.

Beng. A term for Indian hemp.

Bengal cardamom. The fruit of *Amomum maximum*, cultivated in the mountains of Nepaul.

B. catechu. A variety of catechu, in quadrangular cubes, imported from Calcutta.

B. c'emi. The produce of *Canarium commune*.

B. gram. The *Cicer arietinum*.

B. ipocacuan'ha, white. The root of *Tylophora levigata*.

B. k'ino. The *Butea kino*.

B. mad'der. The produce of *Rubia munjita*.

B. o'pium. The opium produced in Behar and Benares.

B. quince. The *Egle marmelos*.

B. root. A name of *Cassumunar*.

Bengalé indorum. A term for *Cassumunar*.

Beng'i. The henbane, *Hyoscyamus niger*.

Beng'iri. The *Sapium aucuparium*.

Ben-ha'roun. Algeria; Kabylia. Waters containing sodium chloride and bicarbonate, of 18° C. (64·4° F.) Used in dyspepsia, urinary deposits, malarial cachexia, and enlargements of the liver.

Ben'ic acid. C₂H₄O₂. An acid, according to Völcker, obtained by saponification from a peculiar fatty matter contained in the oil of ben. Shining white needles, fusing at 76° C. (169° F.)

Benign. (L. *benignus*, kind; contraction of *benigenus*; from *beni*, a form of the stem of *benus*, or *bonus*, good; and *genus*, from *geno*, to beget. *Εὐρίθης*; F. *benigne*; I. *benigno*; G. *gutartig*.) Mild; gentle. Applied formerly to medicines gentle in their operation. Applied also to the mild form of a disease, as opposed to the malignant.

Benignity. (Same etymon.) A term

applied in recognition of the mildness and favourable progress of a disease; and also to a tumour which is not cancerous or malignant.

Benincasa. A Genus of the Nat. Order *Oucorbitaceae*.

B. cerifera. (L. *cera*, wax; *fero*, to bear.) The white gourd eaten throughout India. The ripe fruit is said to be alexipharmic, and, mixed with oil, is given in dysuria; it is looked on as a specific in hemorrhages from the internal organs.

Benjamin. A synonym of *Benzoin, gum*.

B. bush. The *Benzoin odoriferum*.

B. flowers. A synonym of *Benzoic acid*.

B. tree. The *Styrax benzoin*.

Benja'oy. A synonym of *Benzoin, gum*.

Benjoin. A synonym of *Benzoin, gum*.

Benjui. A synonym of *Benzoin, gum*.

Benne leaves. The leaves of the *Secum indicum* and *S. orientale*. They abound in mucilaginous matter. One or two leaves are stirred about in eight ounces of tepid water. Used as a demulcent in diarrhoea and urinary diseases; also, as poultices.

B. oil. The oil of the seeds of the *Secum indicum* and *S. orientale*. Bland and inodorous; solidifies at -5°C . (23°F). Laxative. See *Oleum sesami*, U.S.

Ben'net. (Dim. of *benedictus*, blessed.) The *Gum urbanum*, or herb *avena*; also the *Gum virginianum*.

Bent. (Eng. part. of *bend*; from Sax. *bendan*, to bend.) Hanging down; curved; applied to flowers on curved peduncles that hang towards the ground.

Bent-grass. (Sax. *beonet*.) The grass *Agrostis*.

Bentam'ara. The *Nymphaea nelumbo*.

Benth'am and Hook'er's Classification of Plants. Subkingdom I. Phanerogamia. Class I. Dicotyledones. Subclass I. Angiospermæ. Division I. Polypetals. Series 1. Thalamifloræ. Series 2. Discifloræ. Series 3. Calycifloræ. Division II. Monopetals. Series 1. Epigynæ. Series 2. Hypogynæ v. Perigynæ. Division III. Apetals. Series 1. Hypogynæ. Series 2. Epigynæ v. Perigynæ. Subclass II. Gymnospermæ. Class II. Monocotyledones. Series 1. Epigynæ. Series 2. Coronariæ. Series 3. Nudifloræ. Series 4. Glumales.

Subkingdom II. Cryptogamia. Class III. Acrogens. Class IV. Thallogens.

Subordinate to the "series" are "cohorts," or groups of orders of equal value, though with different limitations, to the "alliances" in Lindley's 'System.'

Ben'ys. Hungary; County Sohl. An alkaline saline water, with carbonic acid, springing from the granite.

Benz'alcohol. A synonym of *Benzyl alcohol*.

Benz'alcohol. Same as *Benzyl alcohol*.

Benz'aldehyde. Bitter almond oil. See *Aldehyde benzoic*.

Benzamide. $\text{C}_7\text{H}_7\text{NO}$. White, flaky crystals, nearly insoluble in cold water, soluble in boiling water, alcohol, and ether; melts at 125°C . (257°F .), volatilises at 290°C . (554°F .) Formed by the action of ammonia on benzoyle chloride. It is contained in the crude oil of bitter almonds.

Ben'zene. C_6H_6 . Formed in the dry distillation of many organic substances, and chiefly found in coal-tar oil. It is limpid, colourless, of a strong aromatic odour. Sp. gr., at 15.5°C .

(60°F .), 0.885, boils at 80.5°C . (176.9°F .), and crystallises at 0°C . (32°F .) Nearly insoluble in water; mixes with alcohol and ether; easily dissolves fats and resins, also iodine, sulphur, and phosphorus. Used to remove grease stains; destroys episcas. Vapour used in whooping-cough. As an external application in rheumatism and neuralgia; internally in trichiniasis. Its vapour is an active narcotic poison.

Ben'idam. A synonym of *Asithin*.

Ben'zin. A synonym of *Benzene*.

Benzinum nitro'sum. A synonym of *Nitrobenzol*.

B. petrolei. The benzene of petroleum. See *Benzene*.

Ben'zo-. This word, used as a prefix in compound terms, means that benzoic acid forms a constituent of the substance denoted.

Benzo'as. Benzoate; a salt of benzoic acid.

B. ammoniacus. Benzoate of ammonia.

B. lith'ous. A synonym of *Lithium benzoate*.

B. sod'icus. Benzoate of soda.

Benzo'ate. A salt of benzoic acid.

B. of ammonia. See *Ammonia benzoas*.

B. of lime. See *Calcium benzoas*.

B. of lith'ia. See *Lithium benzoas*.

B. of soda. See *Sodium benzoas*.

Ben'zoted. Mixed or charged with benzoic or benzoic acid.

B. lard. See *Adipe benzoatus*.

Ben'zoe. The former pharmacopoeial name of *Benzoinum*. (D.)

B. amygdalof'ea. (*Ἀμυγδαλῶν*, an almond; *είδος*, likeness.) A variety of benzoic, consisting of whitish tears, united by a reddish-brown material, and so called from the resemblance of the white grains to fragments of blanched almonds. A variety of Sumatra benzoic.

B. in sort'is. (L. *in*, in; *sortis*, a lot.) Benzoic in sorts. The variety which consists of brown or blackish masses, without tears, and usually containing impurities. A variety of Sumatra benzoic.

Benzo'enil. A synonym of *Vanilla*.

Ben'zoe's flores. (L. *flor*, a flower.) Flowers of benzoic, benzoic acid.

Benzo'ic. Of, or belonging to, benzoic.

B. acid. (*Acidum benzoicum*, flowers of benzoic or Benjamin; F. *fleurs de benjoin*; G. *Benzoësaure*, *Benzoëblumen*.) $\text{C}_7\text{H}_5\text{O}_2$. Exists in many balsams, but chiefly in gum benzoic, from which it is obtained by sublimation, and occasionally in the urine of the herbivora. Prepared on a large scale by boiling the urine of cows and horses, which contains hippuric acid, with strong hydrochloric acid. It consists of soft, white, flexible crystals, somewhat nacreous, of a slightly balsamic odour when warmed, melting at 120°C . (248°F .), subliming a little above, and boiling at 250°C . (482°F .) Dissolves in 200 parts of cold and in 25 parts of warm water; very soluble in alcohol. It is not affected by nitric acid. One part benzoic acid and one part of borax dissolve in 100 parts of water. When taken into the system it unites with glycocine and appears in the urine as hippuric acid, and sometimes as succinic acid, except when taken in very large quantities, when some appears unconverted. Its influence on the excretion of urea and uric acid is doubtful. Contained in Tinct. Camph. co. and Tinct. Opti. Ammoniata, B. Ph. Given sometimes in chronic

BENZOIFERA—BERBERIN.

bronchitis; chiefly used in vesical catarrh, when, by increasing the acidity of the urine, it causes the phosphates to be dissolved. Its utility in uric acid deposits is doubtful. Dose, 10—30 grains.

B. aldehyde. See *Aldehyde, benzoic*.

B. ether. $C_{11}H_{12}O_2$ or $C_7H_5O_2.C_4H_7$. One of the constituents of the essential oil of the balsams of Peru and Tolu.

Benzoifera. (*Benzoinum*, benzoin; *fero*, to bear.) A name for the *Styrax benzoin*.

Benzoin. $C_{11}H_{12}O_2$. Prepared by mixing oil of bitter almonds with an alcoholic solution of potassium cyanide. Brilliant crystals, melting at $213^\circ C.$ ($407.4^\circ F.$), and dissolving sparingly in water, freely in hot alcohol.

Also, a name of gum benzoin.

B., berry. A term applied to benzoin obtained during the fourth to the twelfth year of the life of the tree producing it; it is brown, and not so much valued as the *B., head*.

B., flowers of. (*F. fleur de benjoin*; *G. Bensoëblumen*.) A term for benzoic acid when prepared by sublimation.

B., foot. A common kind obtained by splitting the tree and scraping the branches; it is mixed with bark and *débris*.

B., gum. (Arab. *Benzoah*. *L. benzoinum*; *F. benjoin*; *I. belzuino*; *S. benjut*; *G. Benzoe*.) The resin of *Styrax benzoin*, which exudes from incisions made in the bark. Imported from Sumatra, Java, and Siam. It consists of brownish masses, with or without white tears, of fragrant odour, and somewhat acid taste. It contains benzoic acid, benzoin, and resin. Cinnamic acid is said to be found in some specimens. It is added to lard (*Adeps benzoatus*, *B. Ph.*), to prevent it turning rancid, and is contained in Tinct. Benzoini comp. Said to be useful as a fumigation in whooping-cough. Given in chronic bronchitis with profuse secretion; seldom used. Dose, 5—30 grains.

B., head. The benzoin which is furnished during the first three years of the growth of the tree.

B., laurel. The *Styrax benzoin*.

B., Penang. A variety with white tears and a pleasant smell.

B., Siam. (*F. benzoin à odeur de vanille*.) The most esteemed kind. It occurs in flattened tears or drops, white, opaque, and smelling of vanilla.

B., Sumatra. Occurs in aggregated tears, adherent by means of a reddish matter, and opaque. Its varieties are *Benzoe amygdaloides* and *B. in sortis*.

Benzoin. A Genus of the Nat. Order *Lauroceae*.

B. odoriferum. *Nees*. (*L. odorifer*, fragrant. *F. laurier benzoin*; *G. Benzoeodorbeer*.) Spice wood, spice bush, wild allspice, fever bush. *Hab.* United States. The flowers appear early in spring before the leaves, and are succeeded by clusters of bright crimson berries. All the parts have a balsamic odour. An infusion of the twigs is used as a stimulating aromatic in low fevers, and as a vermifuge; the bark has been used in *ague*. The berries have been used as an aromatic condiment; they contain a fragrant oil of the *cinnamyl* series, which is used externally in rheumatism, contusions, and flatulent colic.

Benzoinum. Gum benzoin. See *Benzoin, gum*.

Benzol. A synonym of *Benzene*.

B. nitrate. Same as *Nitrobenzol*.

Benzoline. A light hydrocarbon obtained by the fractional distillation of crude petroleum. It is used for lighting purposes.

Benzolium. A name of *Benzene* in the U.S. Ph. and others.

Benzotric acid. A synonym of *Hippuric acid*.

Benzoyl. C_7H_5O . The hypothetical radical of benzoic aldehyde and benzoic acid.

B. hydrate. A synonym of *Benzoic acid*.

B. hydride. A synonym of oil of bitter almonds, *Benzoyl aldehyde*.

Benzoylglyccool. A synonym of *Hippuric acid*.

Benzyl alcohol. C_7H_5O , or $C_6H_5.CH_2.OH$. A colourless, strongly refracting, faintly aromatic oil, of sp. gr. 1.051 at $14^\circ C.$ ($57.2^\circ F.$), and boiling at $207^\circ C.$ ($404.6^\circ F.$) It is insoluble in water, soluble in ether, alcohol, and acetic acid. It is formed by the action of nascent hydrogen on benzoic or hippuric acid, and is contained in the balsams of Peru and Tolu.

B. cinamate. $C_9H_7O_2.C_6H_5$. Brilliant prismatic crystals, melting at $39^\circ C.$ ($102.2^\circ F.$) Found in Peru and Tolu balsams and in storax.

B. cyanide. $C_6H_5.CH_2.CN$. A colourless liquid which forms a large part of the volatile oils of the nasturtium, *Tropaeolum majus*, and the garden cress, *Lepidium sativum*. It boils at $232^\circ C.$ ($449.6^\circ F.$)

Benzyl'ic alcohol. See *Benzyl alcohol*.

B. benzoate. $C_7H_5(C_6H_5O)_2$. A colourless oil found in balsam of Peru. It boils at $340^\circ C.$ ($644^\circ F.$)

B. cinamate. See *Benzyl cinamate*.

Ber. The fruit of *Zizyphus jujuba*.

Beras as'ed. Arabic name for a species of the *Lepra judaica*.

B. be'jas. Same as *Beras as'ed*.

Ber'at. (Ar. signifying white spot.) An old term for leprosy.

B. co'cha. The dark form of leprosy.

B. lebe'na. The white form of leprosy.

Berberal alliance. Same as *Berberales*.

Berberales. (*Berberis*.) The Berberal Alliance, according to Lindley. Hypogynous Exogens, with monodichlamydeous flowers, unsymmetrical in the ovary, sutural parietal, or axile placentæ; definite stamens; and embryo enclosed in a large quantity of fleshy albumen. It includes the Nat. Orders *Droseraceae*, *Fumariaceae*, *Berberidaceae*, *Vitaceae*, *Pittosporaceae*, *Oleaceae*, and *Cyrtillaceae*.

Berberia. Same as *Berberis*.

Berberidaceae. A Nat. Order of shrubs or herbaceous plants. Leaves alternate, compound, with stipules often persistent and spiny; flowers generally yellow; sepals 3, 4, or 6, deciduous in two whorls; petals equal to sepals, or double in number, hypogynous; stamens of same number as petals, hypogynous; anthers 2-celled; carpels solitary, free, 1-celled; stigma orbicular; ovules anatropal; fruit baccate, or dry and capsular, unilocular, indehiscent; albumen fleshy or horny.

Berberid'ees. A Tribe of the Nat. Order *Berberidaceae*.

Also, the same as *Berberidaceae*.

Berberids. The plants of the Nat. Order *Berberidaceae*.

Berberin. $C_{20}H_{17}NO_4$. Consists of a yellow powder, or bright yellow, needle-like

BERBERINA—BERG.

crystals, obtained from the root of the *Berberis vulgaris*, also ascertained to exist in the calumba root, *Cocculus palmatus*, and in calumba wood of Ceylon, *Menispermum fenestratum*, in *Hydrastis canadensis*, in *Xanthorrhiza apiifolia*, in the *Ranunculaceæ*, in *Anona polycarpa*, in *Podophyllum*, and in many other species belonging to the *Berberaceæ*, *Menispermaceæ*, and *Ranunculaceæ*. Berberin is of bitter taste, slightly soluble in alcohol and cold water, freely in hot water. Forms, with acids, yellow crystalline salts, which in alcoholic solution yield, with a solution of iodine and potassium iodide, dark green, metallic-looking, dichroic scales. Produces in dogs convulsive tremblings, thirst, and paralysis of the hind legs. Given as a bitter tonic in dyspepsia and mucous diarrhœa, and in enlarged spleen. Dose, 2—6 grains.

B. chloride. Has been recommended as an antiperiodic in miasmatic fevers. Dose, 1 to 10 grains.

B. hydrochlorate. Same as *B. chloride*.

B. hypophosphite. An aqueous solution of berberin sulphate is heated with litharge for six to twelve hours at 82.2° C. (180° F.), when the liquid is filtered from the resulting plumbic sulphate; any lead left is removed by hydrogen sulphide and filtering; hypophosphorous acid in slight excess is added after evaporation, and the resulting crystals are dried. Used as the other salts.

B. phosphate. A canary-yellow powder easily soluble in water, slightly in alcohol. Used as a local application in inflammations of the mucous membranes.

B. tree. The *Cælocline polycarpa*.

Berberi'na. Same as *Berberis*.

Berberi'num. (*Berberis*.) Berberin.

B. phosphoricum. The *Berberis phosphate*.

Berberis. (G. Berberitze, Sauerdorn.) A Genus of the Nat. Order *Berberidaceæ*. Sepals 6, with interior scales; petals 6, with 2 glands at the base; stamens 6, without denticulations; pericarp fleshy, oblong, 2- or 3-seeded; seeds erect, oblong, with a crustaceous skin.

Also, U.S. Ph. (*F. corce de racine de berbérède*; G. *Berberitzenwurzelrinde*) the bark of the root of *B. vulgaris*. It is rather thin, yellowish grey externally, orange-yellow on its inner surface, nearly inodorous, bitter, and when chewed makes the saliva yellow. It contains berberin and oxycanthin.

B. aquifolium, Pursk. (*L. aquifolium*, the holly.) The bark and root used as that of *B. vulgaris*.

B. aristata, De Cand. (*L. aristatus*, awned.) India. Root bark used in ague and remittents.

B. asiatica, De Cand. Root bark used as a tonic.

B. canadensis. American berberry. Hab. North America. Used in jaundice, diarrhœa, and dysentery.

B. dumetorum. (*L. dumetum*, thorn bushes.) The *B. vulgaris*.

B. kunawuren'sis, O'Shaug. A species used for making *Rusot*.

B. lycium, Royle. (*L. Lycium*, belonging to *Lycium*, a country of Asia Minor.) Raisin berberry. India. The *Lycium indicum* of Dioscorides. An extract of the root and stem, *Rusot*, or *Ruscut*, is used in India in eye diseases. The

tincture, which contains berberine, is used in fevers of all kinds.

B. nepaulensis. Hab. Northern India. Used as *B. lycium*.

B. nervosa, Pursk. (*L. nervosus*, having veins.) Bark contains bebeerin. Used as *B. vulgaris*.

B. oxycantha. (Ὠξύς, sharp; ἀκάρθα, a thorn.) The *B. vulgaris*.

B. repens, Lindl. (*L. repens*, part of *repo*, to creep.) Root and bark used as an antiperiodic.

B. sinensis. (Mod. *L. sinensis*, Chinese.) Hab. Northern India, China. Used as *B. lycium*.

B. tinctoria, Leach. (*L. tinctorius*, belonging to a dyer.) Dyers' berberry. Hab. Southern India. Used in intermittent fevers.

B. vulgaris, Linn. (*L. vulgaris*, common. *F. epine vinette*; G. *Berberitze*, gemeine *Sauerdorn*.) Barbary. Europe. Spines 3-parted; leaves obovate, with small teeth; racemes drooping, many-flowered; petals entire; berries scarlet. The berries are gratefully acid and moderately astringent, containing malic and citric acids. The root and bark contain berberin. Tonic and aperient; formerly given in jaundice.

B. Wallichiana. Hab. Nepaul. Used as *B. lycium*.

Berberry. The *Berberis vulgaris*.

B. blight. The *Ecidium berberidis*, a form, on the berberry, of the *Puccinia graminis*.

B. dyers'. The *Berberis tinctoria*.

B. raisin. The *Berberis lycium*.

Berbers. A branch of the Hamite family of the Mediterranean race of men. They are scattered over Northern Africa, were the aborigines of the Canary Islands, and were the oldest inhabitants of parts of Spain, the basin of the Garonne, and the Mediterranean islands.

Berbina. The *Berberis vulgaris*.

Also, a synonym of *Oryacanthin*.

Berchakund. A Species of *Batatas*. Used in India in affections of the bladder, and to increase the secretion of milk.

Beroche'mia. A Genus of plants of the Nat. Order *Rhamnaceæ*.

B. lineata. (*L. lineæ*, a line.) Used in China as a hydragogue.

B. lowreiana. Hab. Cochin China. Used as a deobstruent and diuretic. (Waring.)

B. volubilis, De Cand. (*L. volubilis*, that which is rolled round.) Hab. North America. Used as an alterative in syphilitic and cachectic affections.

Berchoon'ee. The dried and powdered fruit of *Zizyphus jujuba*.

Bere. (Sax. *ber*.) A name of spring barley, *Hordeum vulgare*.

Berencze. Hungary; County Neograd. A chalybeate water.

Berendaros. The *Ocimum basilicum*.

Berengario. A celebrated Italian anatomist, born at Carpi in 1470, died about 1550.

Berenic'e. A term for amber; from a city of that name, whence it was brought.

Berenicium. An old term for potassium nitrate.

Berenise'cum. The *Artemisia vulgaris*.

Berg. Wurttemberg. A chalybeate water, containing sodium chloride, of a temperature of 20° C. (68° F.) Baths and drinking. Diuretic, tonic, and laxative. Used in chronic disturbances of the digestive organs.

Berg Giesshübel. See *Giesshübel*.
Bergamot. (1. *bergamotta*, from Turk. *beg-armudi*, from *beg*, prince; *armud*, pear. G. *Fürstenbirn*.) A fine kind of pear.

Also (perhaps from *Bergamo*, an Italian town), the *Citrus bergamia*.

B. camphor. Same as *Bergaptena*.

B. essence of. The *B.* oil of.

B. lemon tree. The *Citrus bergamia*.

B. mint. The *Mentha aquatica*, subsp. *hirsuta*, var. *citrata*.

B. oil of. $C_{10}H_{16}$. An essential oil contained in the rind of the fruit of the *Citrus bergamia*, and obtained by rasping it in a kind of mill. The oil is of a greenish-yellow colour, fragrant odour, and bitter pungent taste; its sp. gr. is 0.88. Its only use is to give a perfume to external applications.

B. pear essence. Fifteen parts of acetate of amylic ether and half a part of acetic ether dissolved in 100 parts of alcohol.

B. wild. The *Monarda fistulosa*.

Bergaptena. $C_9H_8O_2$. A waxy matter, which deposits on standing, from *Bergamot oil*; it crystallises from its solution in alcohol in silky, colourless, inodorous, tasteless needles.

Bergera. A Genus of the Nat. Order *Aurantiaceae*.

B. Koenigii, Linn. Curry-leaf tree. Hab. Bengal. A small tree, with pinnate leaves, and small white flowers in panicles. Bark, root, and leaves are used as a tonic and stomachic; the root is laxative. The leaves, boiled in milk and bruised, are used as a poultice in poisonous bites. The fresh leaves are eaten in dysentery.

Beriberi. (*Beri*, a Cingalese word for weakness, and, by reduplication, signifying great weakness.) A disease, chiefly of the North of Madras, the Malabar coast, and Ceylon, most fatal among Europeans. The term has been made to include a large number of different diseases, where there is great weakness, by many writers. Beriberi is distinguished by the following features:—It commences with anæmic symptoms, cold pale surface, dyspnoea and palpitation on exertion, scanty urine, pallid tongue; then severe general oedema, with stiffness of limbs, anæsthesia, and sometimes paralysis of lower extremities. Effusions into brain, pleura, or pericardium, generally precede death. Usually there is ascites; it may be acute or chronic. After death the connective tissue everywhere and the viscera are found infiltrated with fluid, and the serous cavities also. The spinal cord is oedematous or congested; cause unknown. The relation to *barbieri* is unsettled.

Beriberia. Same as *Beriberi*.

Bericocoe. A name for the apricot.

Beringerbrunnen. Saxony; at the foot of the Ramberg, 6000 feet above sea level, in a mild climate. A mineral water, containing sodium chloride 87 grains, calcium chloride 78, magnesium chloride 3.2, aluminium chloride 2.4, and a minute quantity of bromine, in 16 ounces. Temperature 9° C. (48.2° F.) Used in scrofula, glandular swellings, and skin diseases.

Berka. Germany; Saxe-Weimar. Artificial sand baths. Sulphuretted waters, containing calcium sulphate and carbonate. Used in chronic rheumatism. There is also a chalybeate spring.

Berkley springs. See *Bath springs*.

Berlin blue. (G. *Berliner Blau*.) Same as *Prussian blue*.

Bermondsey. England; a suburb of London, on the south bank of the Thames. It

possessed a weak chalybeate water, which is now unknown.

Bermuda. An island in the North Atlantic. Climate hot, equable, and rather limited. Hottest month, July; coldest, February. Sanitary condition formerly bad; now much improved. Yellow fever occasionally appears. Continued fevers, probably chiefly typhoid, very prevalent. Phthisis, diarrhoea, and dysentery, have much decreased. Pulmonary invalids are sent from the United States; the chief objection being the dry, sharp north-west winds during winter and spring.

B. berry. The soap-nut, or soap-berry produced by the *Sapindus saponaria*.

Bernard, Claude. A French physiologist; born 1813, died 1878.

B.'s canal. A supplementary duct of the pancreas, also called *Santorini's canal*.

Bernardino, San. Switzerland; Canton Graubünden, on the Splügen route. Scenery very grand; 5000 feet above sea level. A carbonated water, containing, in 16 oz., sodium sulphate 5.13 grains, calcium carbonate 3.93, calcium sulphate 11.9, magnesium carbonate 1.37, and iron carbonate .21. Used in catarrhs, lymphatic diseases, nervous affections, and skin complaints.

Berna'vi. An electuary used formerly by the Egyptians, but its composition is unknown. It is highly intoxicating, and produced extraordinary symptoms; mentioned by Prosp. Alpinus (Hooper.)

Berolinen'sis. Belonging to Berlin.

Berol'num. Berlin.

Berries, Indian. A synonym of *Cocculus indicus*.

B., yellow Turkey. The dried fruit of the *Rhamnus catharticus*, often substituted for cubebs.

Berry. (Sax. *berige*, from *beran*, to bear. L. *bacca*; Gr. *kókkos*; F. *baie*; I. *bacca*; S. *baya*; G. *Beers*.) A pulpy, indehiscent, one or more celled, many-seeded pericarp, with parietal placenta, which produce the pulp, and to which the seeds are at first attached; these ultimately lie loose in the pulp. Examples are the grape, gooseberry, and banana.

Bers. An exhilarating electuary formerly used by the Egyptians; composed of white pepper, white henbane seeds, opium, spikenard, euphorbium, pyrethrum, saffron, and honey; described by Prosp. Alpinus, *de Med. Egypt.*, iv, 122, a.

Bertholletia. A Genus of the Suborder *Tubulifloræ*, Nat. Order *Compositæ*.

B. indica. The *B. lanceolata*.

B. lanceolata. (L. *lanceolatus*, lance-shaped.) Hab. India. Leaves apert.

Berthollet. A French chemist; born 1748, died 1822.

B.'s neutral carbonate of ammonia. A name of ammonium bicarbonate.

B.'s salt. Potassium chlorate.

Bertholletia. A Genus of the Nat. Order *Lecythidaceæ*.

B. excel'sa. Humb. and Bonpl. (L. *excelsus*, lofty.) Hab. Brazil, Guiana. The fruit is of the size of the human head, and contains a number of triangular seeds, the Brazil nuts.

B. nob'lis. (L. *nobilis*, noble.) The *B. excelsa*.

Berthollim'trum. The *Chlorometrum*.

BERTIN—BETAINE.

Bertin. A French anatomist; born 1712, died 1781.

B., bones of. The sphenoidal spongy bones.

B., columns of. The prolongations inwards of the cortical substance of the kidney between the pyramids; they extend as far as the sinus and the bases of the papillæ.

Bertini septa. (*L. septum*, a division.) The same as *Bertia*, columns of.

Bertram. (A corruption of *L. parthenium*.) The *Pyrethrum parthenium*.

Bertrich. Germany; in a wooded valley in the Kifel district, a little distance from the Moselle. A charming district; very quiet. Waters almost indifferent, of a temperature of 32.6° C. (90.6° F.), containing a little sodium sulphate, chloride, and carbonate. Used in hysteria and nervous affections.

Bertu's. Spain; near Corunna. A hot mineral water containing sulphur. Used in rheumatism and skin diseases.

Betu. France; Champagne. Mild chalybeate waters.

Berula. The *Veronica beccabunga*.

B. angustifolia. (*L. angustus*, narrow; *folium*, a leaf.) The *Sium nodiflorum*.

B. gallica. (*L. gallicus*, Gallic.) *Sium nodiflorum*, or creeping water parsnip.

Beryl. (Βήρυλλος, from Arab. *bilawr*, or Pers. *bulār*.) A pellucid gem or stone of a greenish colour; anciently supposed to have power against disease of the liver, short breathing, eruptions, fluxion of the eyes, and contusions. It is a variety of the emerald containing no chromium.

Berylla. BeO. Oxide of beryllium, or glucina. A white powder very like alumina.

Beryllium. (*F. beryllium*.) Name by the Germans, because of its existence in beryl, for *Glucium*, or *Glucinum*. Atomic weight 9. Symb. Be. Occurs as a silicate in beryl, emerald, and other stones. Beryllium is a white metal of sp. gr. 2.1. It is rare. Its salts are sweet and colourless, and are distinguished from those of aluminium by not yielding a blue colour when heated with cobalt nitrate under the blow-pipe.

Berytion. (Βήρυτιον; from its inventor, *Berytius*.) A collyrium in ancient use, described by Galen, *de C. M. sec. Loc.* iv. 7; also a pastile, which was of great efficacy against dysentery. (Gorræus.)

Berzelius. A Swedish chemist, born at Westerlösa in 1779, died in 1848. His researches in electro-chemistry were of chief value.

Bes. (*L. bis*, twice; because it is twice the *triens*, or third part of the *as*, or pound of twelve ounces.) An eight ounce weight or measure of former times, mentioned by Celsus; Rhodius, *de Pond. et Mens.* p. 40.

Besa'char. Arabic for fungus. (Dornæus, Ruland, and Johnson.)

Besanna. *Fungus muscarum*, by which is supposed to be meant sponge.

Besa'sa. The *Ruta graveolens*.

Besenna. The bark of the *Albizia anthelmintica*. Used as a remedy for tapeworm, in doses of two ounces. Also called *Mussenma*.

Besenyöfal'va. Hungary; County Liptau. A mineral water containing earthy and iron carbonates, with free carbonic acid. Used in abdominal congestions, spleen and liver enlargements, and other results of ague.

Bes'sanen. Redness of the external parts, like that preceding leprosy, occupying the face and extremities; supposed to be what are now called chilblains.

Bes'se. France; Departement Puy de Dôme. Cold weak chalybeate waters. Used in anæmic conditions.

Bes'sis. Same as *Bes*.

Besteria. A Genus of the Nat. Order *Gesneraceæ*.

B. violacea. Plum. (*L. violaceus*, violet-coloured.) A species of tropical America, the berry of which is used as food.

Bestia. (*L. bestia*, a beast.) One of the eight Divisions of Mammalia, according to Linnaeus; it included the ox and such like.

Bestiality. (*L. bestia*, a beast.) Unnatural sexual intercourse with an animal.

Bes'te. The *Saxifraga granulata*.

Bestucheff's tincture. The *Tinctura ferri chlorati atheræ*.

Beta. (*L. beta*. Gr. τῆτιλον; *F. betta*; *L. betula*; *S. acelig*; *G. Mangold*.) A Genus of the Nat. Order *Chenopodiaceæ*.

B. alba. (*L. albus*, white.) White beet, a variety of the *B. rubra*. The leaves are eaten like spinach, and the root yields sugar; the juice and powdered root are said to form a good errhine.

B. altissima. (*L. altissimus*, superl. of *altus*, high.) The *B. hybrida*.

B. campestris. (*L. campester*, belonging to a field.) Mangold wurzel, the *B. hybrida*.

B. cycla. (Κύκλος, a globe. *F. cardis poirræ*; *L. beta*; *S. acelig*; *G. Mangold*, *Emischer Spinat*.) White garden beet. The leaf-stalks and mid-ribs are boiled and used as food. The leaves are used as an emollient poultice. The juice and the dried root were used as an errhine.

B. hybrida. (*L. hybrida*, a mongrel.) The plant affording the root of scarcity, *Mangold wurzel* of the Germans. The root is very large, and cultivated for cattle; it contains much of the saccharine principle, is very nutritious, and in times of scarcity forms a valuable substitute for bread. It is used externally as a poultice to cleanse foul ulcers.

B. maritima. Linn. (*L. maritimus*, belonging to the sea.) A species which is supposed to have been the origin of the *B. vulgaris* and *B. hybrida*. The leaves are boiled and used as spinach.

B. rapa. (*L. rapa*, a turnip.) The bett-rave. A species grown in France for its sugar.

B. rubra. (*L. ruber*, red.) Red beet, the root of which is used indifferently with that of the *B. vulgaris*; also used to improve the colour of their claret, by the French.

B. vulgaris. Linn. (*L. vulgaris*, common. *F. bette ordinaire*; *G. Runkelrübe*.) Common beet, the root of which forms a well-known article of diet. The root and leaves were formerly used as emollient applications, and are still employed as a dressing for blisters in France. It affords a considerable portion of sugar, and when dried like malt, after great part of the juice is expressed, is used for the making of beer.

Betaille. France; Departement de la Conèze. A mild sulphur water, with some iron.

Betaïne. $C_2H_7NO_2$. An alkaloid obtained from beet-root juice. It is contained originally in the plant, and is said to be identical with lycin from *Lycium barbarum*. It crystallizes

from alcohol in shining deliquescent crystals, having a neutral reaction and a sweetish taste.

Betayne. The *Betonica officinalis*.

Betel. (Tam. *ettile*. G. *Betelpfeffer*.) A preparation of an Eastern masticatory, made of the leaves of the *Piper betle*, areca nuts, and lime. It is excitant to the digestive canal, and is supposed to increase the power of endurance, to act as a tonic and as an aphrodisiac, and to be a remedy against climatic evils. It reddens the saliva. See *Piper betle*.

B. leaf pepper. The *Piper betle*.

B. nut. The *Areca nut*.

B. nut palm. The *Areca catechu*.

B. pepper. The *Piper betle*.

B. vine. Same as *B. pepper*.

Bethelsdorp al'oes. See *Aloes, Bethelsdorp*.

Bethroot. The *Trillium erectum*.

B., broadleaf. The *Trillium latifolium*.

Betonica. (As if *Vetonica*, from *Vetones*, a people in Spain, by whom it was discovered.) A Genus of the Nat. Order *Labiata*. Calyx ten-ribbed; corolla exserted; stamens two, anterior longest; anthers opening longitudinally.

B. aquatica. (*L. aquaticus*, living in water.) The water betony, the *Scrophularia aquatica*, or greater water-flwort.

B. coronaria. (*L. coronarius*, pertaining to a wreath.) A name for the *Dianthus caryophyllus*.

B. officinalis. Linn. (*L. officina*, a shop. *F. betoine*; *I. betonica*; *S. betonica*; *G. Gliedkraut*, *Wiesen Betonie*.) Wood betony, also called *Stachys betonica*. The leaves and tops have an agreeable smell, a slightly warm taste, with some degree of astringency and bitterness; the leaves are smoked like tobacco, and when dried their powder is used as a sternutatory; the roots are bitter and nauseous, strongly emetic and cathartic; a decoction of the flowers and leaves was anciently an esteemed remedy in gout, sciatica, headache.

B. Pauli. See *Betony, Pauli*.

B. purpurea. (*L. purpureus*, purple.) The *B. officinalis*.

B. sylvestris. (*L. sylvestris*, living in the woods.) The *B. officinalis*.

B. vulgaris. (*L. vulgaris*, common.) The *B. officinalis*.

Betony. The *Betonica officinalis*.

B. Pauli. A synonym of *Lycopus virginianus*, *L. sinuatus*, and of *Veronica officinalis*.

B. water. The *Scrophularia aquatica*.

B. wood. The *Betonica officinalis*.

Betterave. The *Beta rapa*.

Betula. (Said to be from *L. batula*, from *betuo*, to beat; because of it were made the fasces of the Romans.) A Genus of the Nat. Order *Betulaceae*. Male flowers with no perianth; 8—12 stamens; female flowers, scale of catkin 3-lobed, 2—3-flowered; fruit with a membranaceous margin.

B. alba. Linn. (*L. albus*, white. *F. bouleau blanc*; *I. betulla*; *S. abudul*; *G. Weissbirke*.) Silver birch. Leaves ovate-deltoid, acute, doubly serrate; fruit broadly obovate, with a broad margin. The leaves have been used as an antiseptic and detergent in ulcers. The inner bark is bitterish and astringent, and has been used in intermittent fevers. The young shoots and leaves are applied as an antiseptic and detergent in ulcers; and as decoction in gout, rheumatism, dropsy, and cutaneous diseases. The tree yields very freely a

saccharine juice, which is used in urinary diseases, and when fermented is drunk as a stimulant. An oil distilled from the bark gives the odour to Russia leather, and is used in skin diseases. The bark contains *betulin*.

B. alnus. Linn. (*L. alnus*, the alder tree.) The *Alnus glutinosa*.

B. emarginata. (*L. emargino*, to deprive of its edge.) The *Alnus glutinosa*.

B. glutinosa. (*L. glutinosus*, gluey.) The *Alnus glutinosa*.

B. lenta. Linn. (*L. lentus*, tenacious, sticky.) Sweet birch. Bark and leaves have an aromatic flavour, and are stimulant and diaphoretic. An oil is obtained from the bark like oil of gaultheria; it is a product of decomposition, like oil of bitter almonds, and does not exist naturally in it. The analogue of amygdalin in this case is *Gaultherin*.

B. nigra. (*L. niger*, black.) Hab. North America. Used in decoction in putrid sore throat.

Betulaeae. A Nat. Order of monochlamydeous Exogens. Trees or shrubs. Leaves simple, alternate, with deciduous stipules; flowers unisexual, amentaceous, with scaly bracts; male flowers with 2 or 3 stamens; female flowers with a 2-celled ovary, and one pendulous ovule in each cell; fruit dry, indehiscent, 1-celled, 1-seeded, without a capsule; seed pendulous, exalbuminous; radicle superior.

Betulin. $C_{26}H_{50}O_2$. (*G. Birkenkampher*.) A substance discovered in the bark of the *Betula alba*, of a white colour, in very light, long, needle-like crystals, insoluble in water, or alkaline solutions, but soluble in concentrated sulphuric acid, ether, alcohol, and the fixed and volatile oils.

Betulin'ess. The same as *Betulaceae*.

Betulin'eous. Having an arrangement of parts as in the genus *Betula*.

Betulla. Same as *Betula*.

Betuloretic acid. $C_{26}H_{50}O_3$. A white resin which covers the young shoots and upper surface of the young leaves of *Betula alba*.

Betulah. England; near London. A saline water, never much used, containing magnesium and sodium sulphate.

Beur'on. Germany; in Hohenzollern Sigmaringen, 1850 feet above sea level on the Danube. A health resort, in a very mild and stable climate, for lung and laryngeal diseases.

Bevilacqua. The *Hydrocotyle asiatica*.

Bex. Switzerland; in the Rhone Valley; 1259 feet high. Pleasant climate, but hot in summer; sheltered; beautiful neighbourhood; large salt mines. Waters contain large quantities of sodium chloride, and are cold. Used in scrofula and skin diseases. The grape cure is much employed here.

Bex. (Bâç, a cough.) A cough; sonorous and violent expulsion of air from the lungs.

B. convulsiva. (*L. convulsio*, a convulsion.) A synonym of *Whooping-cough*.

B. humida. (*L. humidus*, moist.) A synonym of *Expectoration*.

According to Mason Good, common cough, accompanied with an expectoration of a mucous or serous fluid.

B. sicca. (*L. siccus*, dry.) Cough unaccompanied with expectoration.

B. theriodes. (Θρηιδης, beast-like.) A synonym of *Whooping-cough*.

Bexaguillo. White ipecacuan of Peru.

Bexis. (Same etymon as *Bex*.) A cough.
Bexugo. A purgative root, formerly imported from Peru, supposed to have been a species of *Hippocratea*. (Quincy.)

Boya. (Arab.) Alchemical name for *Acetum philosophicum*, or *Mercurius philosophorum*. Also for *Aqua mercurialis*. See *Gabricus*.

Boyar y Montemayor. See *Montemayor y Boyar*.

Boza. An Abyssinian name for favus.

Bozetta cœrulea. (*L. cœruleus*, dark blue.) The *Croton tinctorium*, or litmus plant.

Bozoar. (Pera. *Pa-zahar*, from *pa*, against; *zahar*, a poison. *F. bezoar*; *I. belsuar*; *S. bezoard*; *G. Bezoarstein*.) A concretion found in the intestines of certain land animals, and formerly used as a medicine against poisons and infectious diseases; bezoars were also worn as amulets. A false bezoar was made with crayfishes' eyes, crabs' claws, bruised and mixed with musk, ambergris, ox-gall, and such like; there are eight species.

B. bovinum. (*L. bovinus*, belonging to cattle.) The bezoar of the ox, found in the abomasum and gall bladder.

B. equinum. (*L. equinus*, belonging to horses.) The bezoar of the horse.

B. fossilis. (*L. fossilis*, dug up.) A small hollow body from Italy, found in sand and clay-pits, of a purple colour, with a rough surface, the size of a walnut, and light. The shell contains a fine greenish white earth, which was used as an alexipharmic.

B. germanicum. (*Egagropilus*; *F. egagropilis*; *I.* and *S. egagropilo*; *G. Gemenkugel*.) The German bezoar; the bezoar of the chamois; composed of felted hair which has been licked off and vegetable and calcareous matters.

B. hominis. (*L. homo*, a man.) The human bezoar, of doubtful existence. See *Bezoardium humanum*.

B. hystrius. (Ἵστριξ, a porcupine.) The bezoar of the porcupine, said to be found in its gall-bladder, particularly in the province of Malacca. It is intensely bitter, and on being steeped for a time in water, it impregnates it with its bitterness, and with aperient, stomachic, and supposed alexipharmic virtues.

B. microcosmicum. (Μικρός, little; κόσμος, the world; man was called μικρός κόσμος.) The calculus found in the human bladder.

B. mineral. The *Antimonium diaphoreticum*.

B. nut. The *Guilandina bonducella*.

B. occidentalis. (*L. occidentalis*, western.) The occidental bezoar, found in the abomasum of the chamois, or wild goat of Peru. It is larger than the oriental bezoar, and sometimes as big as a hen's egg, is of a rough surface, and green, greyish, or brown.

B. of cayman. Formerly much esteemed, now unknown.

B. of chamœis. The *B. germanicum*.

B. of deer. An odoriferous waxy substance secreted by a sebaceous gland, the lachrymal sinus, situated below the orbit. Used as an antispasmodic.

B. of Indian porcupine. The *B. hystrius*.

B. of monkey. See *Bezoar simia*.

B. orientalis. (*L. orientalis*, eastern.) The oriental bezoar, found in the abomasum of the *Capra agagrus*, which inhabits the mountains of Persia. It is about the size of a kidney bean,

roundish or oblong, smooth, and of a shining olive or dark greenish colour; also called *Lapis bezoar orientalis*.

B. porcinum. (*L. porcinus*, of a hog.) The *B. hystrius*.

B. simia. (*L. simia*, an ape.) The bezoar of the monkey; also called *Lapis simia*.

B. vegetable. The *Caleppita*.

B. western. The *B. occidentalis*.

Bezoard. Same as *Bezoar*.

Bezoardic. (*F. bezoardicus*.) Of, or belonging to, or having the properties of, the bezoar.

B. ac'id. Same as *Ellagic acid*.

Bezoardica radix. (*L. radix*, a root.) The *Dorstenia contrayerva*.

Bezoardium humanum. (*L. humanus*, belonging to man.) An old term for human urinary calculi; they were highly esteemed as alexipharmics.

B. joviale. (*L. jovialis*, belonging to Jupiter, an old name of tin.) An old preparation made by fusing regulus of antimony with tin in a crucible, reducing to powder when cold, mixing intimately with corrosive sublimate, distilling the mixture after some days, and mixing the distilled liquor with a large quantity of water, by which a white powder is precipitated, washing the precipitate repeatedly, drying it and detonating with nitre, again carefully washing and drying; it is powerfully diaphoretic in doses of 10 grs. to 1 scruple.

B. lunare. (*L. lunaris*, belonging to Luna, the moon, an old name of silver.) A medicine made by distilling butter of antimony with a solution of nitrate of silver; deemed of great efficacy in epilepsy and various affections of the head. Dose 6 to 12 grs.; also applied as a name for the *Pulsis Viennensis albus virginus*.

B. martiale. (*L. martialis*, belonging to Mars, an old name of iron.) An old preparation made in the same way as the *B. joviale*, only substituting iron for tin. Formerly used as tonic and diaphoretic. Dose 15 to 25 grs.

B. mercuriale. (*L. mercurialis*, belonging to Mercury, the name by which quicksilver is now commonly known.) An antisyphilitic made with chloride of mercury, butter of antimony, and nitric acid.

B. minera'le. (Eng. *mine*, from Welsh *maen*, a stone.) An old preparation of antimony made by detonating powder of algaroth with nitre, and washing the product, which is a deutoxide of antimony.

B. saturni. (*L. Saturnus*, Saturn, an old name of lead.) An old preparation made by distilling protoxide of lead and butter of antimony with nitric acid. Formerly given, in doses of 6 grs., in diseases of the spleen.

B. solare. (*L. solaris*, belonging to Sol, the sun, an old name of gold.) A diaphoretic made with gold filings, butter of antimony, and nitric acid.

B. ven'eri. (*L. Venus*, the goddess of love, an old name of copper.) Copper filings, butter of antimony, and nitric acid. Used in lepra and brain diseases.

Bezoardicus lapis. (*L. lapis*, a stone.) The *Bezoar*.

Bezoaric acid. A synonym of *Ellagic acid*.

Bhadigan kutai. Hindustani name of the star anise, *Illicium anisatum*.

Bhad'lee. The seed of *Panicum pilosum*. Used in India as food.

Bha-khoomb'a. (Hind.) The dried flowers of *Tricosanthes cordata*. Used as a stimulant. (Waring.)

Bhang. The Hindustani name of the Indian hemp, *Cannabis sativa*.

Bhastrmon. A preparation used in Southern India as a remedy in leprosy, and composed of copper, egg shells, sal ammoniac, corrosive sublimate, borax, orpiment, mercury, and lime.

Bhee Dana. (Hind.) The common quince seed, *Cydonia vulgaris*. Used as a demulcent in diarrhoea and dysentery. (Waring.)

Bhij-bund. (Hind.) Small, shining, angular seeds, probably of *Coldenia procumbens*. Used as an aphrodisiac.

Bhila. A widely-distributed mixed race of men, with coarse features, flat noses, and high cheek-bones, belonging to the Munda division of the Dravidian stock of Indians living in Rajputana, and in the high grounds near the rivers Tapti, Narbadda, and Mahi. They extend eastward to Varada and southward to the Western Ghats as far as Poonah and Daman, but occur also in the mountains of Gujerat. They are supposed to be the aboriginals of India.

Bhoji-dan. (Hind.) The white root of *Colchicum byzantinum*, imported into upper India from Cabul. Used as a stimulant and aphrodisiac.

Bhoot. The Indian name of the bean of the *Soja hispida*.

Bhu'midsch. A race of men, belonging to the Dravidian stock, inhabiting Lower Bengal from the Ganges to the river Baitarni.

Bi. (L. *bis*, twice.) A prefix signifying twice or double, as *biceps*, two-headed; *bicuspid*, two-pointed; *bicarbonate*, a carbonate, with two equivalents of carbonic acid to one of base.

Bia. (*Bia*, strength. G. *Geuall*.) Brute force.

Biac'ca. (It.) Lead carbonate.

Biacuminate. (L. *bis*, twice; *acuminatus*, pointed.) Doubly pointed, with the points diverging.

Biadschu. A Malayan race of men inhabiting the southern coast of Borneo.

Biafada. A race of African Negroes inhabiting both banks of the river Geba, and the right bank of the Rio Grande.

Biafars. The same as *Biafada*.

Bialate. (L. *bis*, double; *ala*, a wing. F. *biailé*; G. *zweiflügelig*.) Having two wings or appendages.

Biantheriferous. (L. *bis*; *anthera*, anther; *fero*, to bear.) Bearing two anthers.

Biapiculate. (L. *bis*; *apiculum*, dim. of *apex*, a point. G. *biapiculirt*, *zweispitzig*, *zweispitzig*.) Having two apices.

Biappendiculate. (L. *bis*; *appendix*, an appendage. G. *doppeltbeinhängsel*.) Having two appendages.

Biarghetun'sim. (Arab.) Alchemical name for *Cerussa*. (Ruland)

Biaristate. (L. *bis*; *arista*, an awn. G. *zweigrannig*.) Having two awns or beards.

Biarritz. France; on the shores of the Mediterranean. A pleasant summer sea-bathing place. Has been recommended as a winter resort for consumptives, for which it does not appear to be well fitted from its uncertain climate and the frequent rainy days at that season.

Biarticulate. (L. *bis*, twice; *articulatus*, jointed. G. *doppelgelenkig*.) Two-jointed.

Biatom'ic. (L. *bis*; *atom*.) Term applied in Chemistry to a body which, having the same composition as another, contains in the same volume double the number of atoms.

Biat'orine. (From the Genus *Biatora*.) A condition of the apothecium of lichens when the margin is of a different colour to the epithecium, or is absent, or is pale internally.

Biauric'ulate. (L. *bis*; *auricula*, the external ear.) Two-lobed, as of the base of leaves.

Also, applied to the heart of those mammals which have two auricles.

Biauritus. (L. *bis*; *auris*, ear. G. *zwei-ohrig*.) Provided with two ears.

Biax'ial. (L. *bis*; *axis*, an axle-tree.) Having two axes.

B. crystal. A crystal possessing two optic axes; a ray of light passing through the crystal in any other direction than one coinciding with one of the optic axes bifurcates.

Bibas'ic. (L. *bis*, twice; *basis*, a base. F. *bibasique*.) Having two bases, or two equivalents of the same base.

Bib'ech. Cough.

Bib'eron. (S. *biberon*, from L. *bibo*, to drink. F. *biberon*; I. *zampilletto*; G. *Saugflaschen*.) A feeding-bottle for infants.

Biblen. The name in Thibet of *Piper longum*, which, mixed with brandy, is used as a stomachic and vermifuge.

Bibinella. Same as *Pimpinella*.

Bibi'rin. Same as *Bebeerin*.

Bibi'ru. Same as *Bebeeru*.

Bibitorius. (L. *bibitor*, a drinker.) Of, or belonging to, a drinker. A synonym of the *Rectus internus oculi*, because when exerted it draws the eye towards the nose, like that of a drinker looking into his cup.

Bib'us. (Βίβλος, bark.) The bulrush of the Nile, *Papyrus antiquorum*. A plant of Egypt, upon the leaves of which the Egyptians wrote.

Biboras. Same as *Biborate*.

B. na'tricus. (*Natrium*.) Borax, sodium biborate.

Bibo'rate. A salt of boric acid, having two equivalents of acid to one of base.

Bibract'ate. (L. *bractea*, a thin plate of metal, a bract.) Having two bracts.

Bibract'olate. (L. *bis*; *bracteola*, dim. of *bractea*, a bract.) Provided with two bracteoles.

Bibro'mide. A salt having two equivalents of bromine to one of base.

Bibron. A French naturalist, born 1806, died 1848. He wrote on reptiles.

B.'s ant'dote. Potassium iodide 4 grs., mercury bichloride, bromine 5 drs.; mix. Ten drops in a tablespoonful of wine or brandy, to be repeated if necessary. Used in snake bites, and said to have been efficacious.

Bibulous. (L. *bibo*, to drink. F. *spongieux*; G. *einsaugend*.) Attracting moisture; absorbent.

B. pa'per. (G. *Flüsspapier*, *Löschpapier*.) Blotting paper, filtering paper.

Bibulus la'pis. (L. *bibo*, to drink; *la'pis*, a stone.) The pumice-stone, from its absorbent power.

Bica. The name of a Terebinthaceous plant growing in the region of the Argentine Confederation, which, when incised, yields a gum resin, of

BICAHYBA FAT—BICHO DI CULO.

sweet taste, reddish colour, transparent, and resembling gum arabic.

Bicahyba fat. An oily substance obtained from *Myristica bicahyba*, and resembling nutmeg balsam.

Bicallose. (L. *bis*, twice; *callosus*, thick-skinned. G. *swetschwaidig*.) Having two callosities.

Bicapitate. (L. *bis*; *capitatus*, having a head. F. *bicipité*; G. *swetköpfig*.) An organ or body terminating in two heads.

Bicap'sular. (L. *bis*, twice; *capsula*, a capsule. F. *bicapsulaire*; G. *swetfächerig*.) Having two capsules; applied to pericarpa.

Bicarbonas. Same as *Bicarbonata*.

B.kalicus. (Kalium.) Kalic or potassium bicarbonate.

B.lxiv'iss. (L. *lxivium*, lye.) Potassium bicarbonate.

B.na'tricus. (Natrium.) Natrio or sodic bicarbonate.

B.potas'sicus. Potassic bicarbonate.

B.sod'icus. Sodium bicarbonate.

Bicarbonate. (Same etymon. F. *bicarbonat*; G. *doppeltkohlen-saures*.) A salt in which there are two equivalents of carbonic acid to one of base.

Bicarinat. (L. *bis*; *carina*, a keel. G. *beiderseits gekielt*.) Two-keeled.

Bicarpellary. (L. *bis*; *carpel*.) Having two carpels.

Bicaudalis. (L. *bis*, double; *cauda*, a tail. F. *bicaudé*; G. *swetschwänzig*.) Having two tails; applied sometimes to the posterior auris, or retrahens auris muscle, which consists of two small bundles or fasciculi of fibres.

Bicaudate. (L. *bicaudatus*, from *bis*; *cauda*, a tail.) Having two tails.

Bicavitary. (L. *bis*; *cavus*, hollow.) Containing two cavities.

Bic'co. The same as *Biccho*.

Bicephalum. (L. *bis*, double; *κεφαλή*, the head. G. *Doppelkopf*.) A large sarcoma on the head, as if another head were grown upon it. Also, a two-headed monster.

Bicephalous. (Same etymon. G. *swetköpfig*.) Having two heads.

Bicephalum. (L. *bis*; *κεφαλή*, the head.) Term in Botany for an ovary composed of two carpels, separate from each other in their upper part.

Bicephalus. (L. *bis*, twice; *κεφαλή*, the head.) A monster with two heads.

Biceps. (L. *bis*, twice; *caput*, the head. F. *biceps*; I. *bicipite*; G. *swetköpfig*.) Having two heads. Applied to certain muscles that divide into two portions.

B.ancone'us. (Ἀγκών, the elbow.) The anconeus muscle; so called from its two-headed insertion.

B.brachii. (L. *brachium*, the arm.) The *Biceps flexor cubiti* muscle.

B.cru'is. (L. *cruis*, the leg.) The *Biceps flexor cruris* muscle.

B.cu'biti. (L. *cubitus*, the forearm.) The *Biceps flexor cubiti* muscle.

B.exten'sor. (L. *extendo*, to extend.) A synonym of the triceps extensor; one head arising from the scapula, the other (now usually described as two) from the humerus.

B.externus. (L. *externus*, outward.) The two portions of the *Triceps extensor cubiti*, otherwise called *Anconeus major*, and *A. extensus*.

B.fem'oris. (L. *femur*, the thigh.) The *B. flexor cruris*.

B.flexor cru'is. (L. *flexo*, to bend; *crus*, the leg. F. *biceps femoral*, *ischio-femoropersonien*, Chaussier; G. *swetköpfiger Schenkel-muskel*.) A muscle on the outer and back of the thigh, arising by a long head from the tuberosity of the ischium and by a short head from the lower part of the outer branch of the linea aspera of the femur; its tendon forms the outer hamstring, and is inserted into the outer side of the head of the fibula. It flexes and slightly rotates outwards the leg. It is supplied by the great sciatic nerve.

B.flexor cu'biti. (L. *flexo*; *cubitus*, the forearm. F. *biceps brachial*, *scapulo-radial*, Chaussier; G. *swetköpfiger Armmuskel*.) It arises by a short head from the apex of the coracoid process of the scapula, and by a long head from the upper edge of the glenoid cavity of the scapula, and forming the chief mass of the muscular structure of the upper arm is inserted by a broad and thin tendon into the posterior part of the tuberosity of the radius; from the inner side of the tendon and the lower end of the muscle an aponeurotic band, the semilunar fascia, runs to join the deep fascia of the forearm. It flexes and supinates the forearm. It is supplied by the musculocutaneous nerve.

B.hum'eri. (L. *humerus*, the arm.) The *B. flexor cubiti*.

B.internus. (L. *internus*, inner.) The *Biceps flexor cubiti* muscle.

B.man'us. (L. *manus*, the hand.) The *Biceps flexor cubiti* muscle.

Bich. The *Aconitum ferox*.

B'chat. A French anatomist, born 1771, died 1802.

B., canal' of. (F. *canal de Bichat*.) A small canal leading forwards beneath the *velum Galeni* and *velum interpositum*, and above the pineal gland, and opening into the third ventricle of the brain, first described by Bichat. The existence of this canal is not now admitted. Also termed the arachnoid canal.

B., sa'sure of. (F. *grande fente cerebrale de Bichat*.) The transverse or great horizontal fissure of the cerebrum. See *Fissure of cerebrum, transverse*.

B., tunic of. The inner coat of blood-vessels.

Bichich'iss. (Perhaps from *βηχια*, relating to a cough.) Pectoral troches made of juice of liquorice, sugar, starch, tragacanth, almonds, and mucilage of quince seeds, according to Rhazes, ix, 55.

Bichios. A Portuguese name for the *Dracunculus medinensis*.

Bichlore'tum hydrarg'yril. The *Hydrargyri perchloridum*.

Bichloride. (L. *bis*, twice; *chloride*.) A salt in which there are two equivalents of chlorine to one of base.

B.of meth'ylene. See *Methylene bichloride*.

Bichloroacetic acid. See *Chloroacetic acid*.

B'cho. Cough; supposed to be a corruption of *Bibech*.

Also, the *Dracunculus medinensis*.

Bicho di culo. (Span., worm in the anus.) A very fatal disease endemic in Brazil, causing gangrene of the rectum; said to arise from bad food and the use of pimento.

BICHOS—BIDENS.

According to some authorities, it is not a special disease peculiar to the negro race in hot countries, but a condition of ulceration and gangrene of the rectum, to which piles, chronic dysentery, the abuse of purgatives, injections, and hot hip-baths, and unnatural crimes conduce.

Bichos. The same as *Bichios*.

Bichromas potassæ. The Potassium dichromate.

Bichromate. A salt in which there are two equivalents of chromic acid to one of base.

Bichromicus. (L. *bis*; chromic acid.) Bichromate.

B. potassicus. Potassium dichromate.

Bicion. (Dim. of *Bikos*, a wine-jar.) The vetiv, *Vicia faba*, from the shape of its pod.

Bicipital. (L. *bis*, twice; *caput*, a head. F. *bicipital*; G. *zweiköpfig*.) Of, or belonging to, the *Biceps*.

B. eminence. Same as *B. tuberosity*.

B. groove. (F. *gouttière*, or *coulisse bicipitale*; I. *scanalatura*, or *gronda bicipitale*.) A longitudinal groove between the tuberosities of the humerus, and occupying the upper third of the bone. It contains the long tendon of the *biceps*, and receives the insertion of the *latissimus dorsi*.

B. tuberosity. (F. *tuberosité bicipitale*.) The elevation above the neck of the radius on its inner and anterior surface for the insertion of the *biceps* tendon.

Bicolligate. (L. *bis*; *colligo*, to gather together.) United to each other, as in certain birds, in which the anterior toes are united by a basal web.

Bicolor. (L. *bis*; *color*, colour. G. *zweifärbig*.) Presenting two colours; particoloured.

Bicol'orin. (L. *bis*; *color*, colour.) A name given by Raab to a supposed substance which produced the blue colour in a solution of sulphate of quinine and other bodies when viewed by reflected light; now known to be dependent on the optical condition called *Fluorescence*.

Also, a synonym of *Æsculin*.

Bicomis. (L. *bis*; *coma*, hair. G. *beiderseits behaart*.) Hairy on both sides.

Biconcave. (L. *bis*; *concauus*, completely hollow, concave. G. *beiderseits concav*.) Doubly concave; applied to a disc or lens of which both surfaces are concave.

Bicongium. (L. *bis*, twice; *congius*, a measure about equal to a gallon.) A measure containing two congi, or twelve sextarii.

Bicongregate. (L. *bis*; *congrego*, to collect together.) Applied to leaflets when arranged in two pairs.

Biconjugate. (L. *biconjugatus*, from *bis*; *conjugo*, to join together. F. *biconjugé*; G. *doppeltgepaart*.) Doubly paired, as two secondary petioles, each bearing a pair of leaflets.

Biconjugatopinnate. Same as *Bidigitipinnate*.

Bicontorted. (L. *bis*; *contortus*, from *contorqueo*, to twist.) Twice twisted.

Biconvex. (L. *bis*; *convexus*, vaulted, convex. G. *beiderseits convex*.) Doubly convex; applied to a disc or lens, the two surfaces of which are each convex.

Bicornate. (L. *bicornis*; *bis*, twice; *cornu*, a horn. F. *bicorne*; G. *zweihörnig*.) Two-horned; having the likeness of two horns.

Bicornis. (Same etymon.) Two-horned; having two terminations. A term sometimes applied to the hyoid bone.

Also, for the same reason, to the flexor carpi radialis, and the extensor carpi radialis.

Bicornous. (Same etymon.) Having two horns.

Bicornute. (L. *bicornis*, from *bis*; *cornu*, a horn. G. *zweihörnig*.) Two-horned.

Bicoronate. (L. *bis*; *corona*, a crown. F. *bicouronné*.) Name applied by Cassini to capitula of flowers supporting three different kinds of flowers, external, internal, and intermediate.

Bicorporate. (L. *bis*; *corpus*, a body.) Having two bodies.

Bicos'tate. (L. *bis*; *costa*, a rib.) Having two ribs. Generally applied to fruits.

Bicrenate. (L. *bis*; *crena*, a notch. G. *doppeltgekerbt*.) Doubly crenate. Applied to the margin of a crenate leaf when the teeth are themselves crenate.

Bicristate. (L. *bis*; *crista*, a crest.) Having two crests.

Bicrural. (L. *bis*; *crus*, the leg. G. *zweischenklig*.) Having two legs or supports.

Bicucullatus. (L. *bis*, twice; *cucullus*, a hood.) Having a double hood or cowl.

Bicurvate. (L. *bis*; *curvus*, crooked. G. *doppelt gekrümmt*.) Doubly curved.

Bicuspid. Same as *Bicuspidate*.

B. tooth. See *Tooth, bicuspid*.

B. valve. The mitral valve of the heart.

Bicuspidate. (L. *bicuspidatus*; *bis*, twice; *cuspid*, a point of a spear. F. *bicuspidé*; G. *zweispitzig*.) Having two points.

Bicuspides. (Same etymon.) The bicuspid teeth.

Bicyanide. A haloid salt in which there are two equivalents of cyanogen to one of base.

Bicyanure'tum hydrarg'ryi. Cyanide of mercury.

Bidder. A German anatomist.

B.'s ganglion. A ganglionic mass in the frog's heart lying embedded in the auriculo-ventricular septum.

Bidens. (L. *bis*, double; *dens*, tooth. G. *Zweizahn*.) A Genus of the Suborder *Tubuliflora*, Nat. Order *Compositæ*. Pappus of 2—5 persistent awns; receptacle chaffy; involucre many scaled.

B. acmella. The *Spilanthes acmella*.

B. bipinna'ta. Linn. (L. *bis*, twice; *pinnate*.) Spanish needles. Hab. United States and West Indies. Root and seeds emmenagogue and expectorant. Used in retention of urine and dysentery. Applied in cornal opacities.

B. cernua. Linn. (L. *cernuus*, bending down.) Bur marigold. Hab. Europe. A sialagogue.

B. chrysanthemoides. Michx. (*Chrysanthemum*; *ëidos*, form.) Found in the rice grounds and swamps of Carolina. Acid and sialagogue.

B. fer'vida. Lamb. (L. *fervidus*, glowing.) The *Spilanthes oleracea*.

B. frutes'cens. (L. *frutex*, a shrub.) The *Elephantopus scaber*.

B. grave'olens. (L. *graveolens*, strong smelling.) Hab. Brazil. Contains a resinous principle; is mucilaginous and antiscorbutic. Used locally to ulcers and tumours of the breast. (Waring.)

B. hirsu'ta. (L. *hirsutus*, hairy.) Hab. Jamaica. Used as a vulnerary. (Waring.)

B. leuca'ntha. (*λευκός*, white; *άνθος*, a flower.) Hab. Brazil. Used as *B. graveolens*.

BIDENTAL—BIGBONE.

B. panicula'ta. (*L. panicula*, a tuft, a panicle.) A native of Otaheite, where it is infused in cocoa-nut milk and used as a cathartic. (Waring.)

B. pilosa. (*L. pilosus*, shaggy.) Hab. Brasil. Used as *B. graveolens*.

B. tripartita. Linn. (*L. tris*, thrice; *partitus*, divided. *F. chauvros aquatilis*; *G. Wasserhanf*.) Hemp-agrimony. Formerly used as a diuretic, sudorific, and vulnerary.

Bident'al. The same as *Bidentata*.

Biden'tate. (*L. bidentatus*, from *bis*, twice; *dens*, a tooth. *F. bidentis*; *G. zweizähig*.) Having two teeth.

Bidentid'ese. (*Bidens*.) A Tribe of the Nat. Order *Compositae*.

Bidet. (Fr.) A vessel on a low, narrow stand, which can be bestridden. Useful for bathing the perineum and the adjacent parts.

Bidigit'ate. (*L. bidigitatus*; *bis*, double; *digitus*, a finger. *F. bidigité*.) Having two fingers. Applied to a leaf having two leaflets at the extremity of the common petiole, as in the *Zygophyllum fabago*.

Bidigitipinn'ate. (*L. bidigitipinnatus*; *bis*, twice; *digitus*, a finger; *pinnatus*, pinnate. *F. bidigitipenné*.) Applied to a pinnate leaf having two leaflets at the extremity of the common petiole, as in the *Mimosa purpurea*.

Bidjage. A name given by the Foulhas to a Euphorbia, the juice of which they employ to poison their arrows.

Bid'loo, God'frey. A Dutch anatomist, born at Amsterdam in 1649. He was physician to William III of England. His great work on anatomy contains numerous very accurate plates.

Bid'loo, Lambert. Physician and botanist, born in Amsterdam 1633, died in same city, 1724.

Bidua'nus. (*L. biduum*, the space of two days. *G. zweitägig*.) Lasting two days.

Biductulose. (*L. bis*, double; *ductulus*, dim. *ductus*, a lending. *F. biductuleux*.) Applied to a leaf on which are two nervures, as in the *Peltichium biductulosum*.

Biduum. (Lat.) A period of two days.

Bidu'us. (*L. bis*; *dies*, a day. *G. zweitägig*.) Continuing two days only.

Bieberstein'ese. A synonym of *Rutaceae*.

Bie'cho. Same as *Bische*.

Bie'co. Same as *Bicho di culo*.

Biennial. (*L. biennis*; *bis*, twice; *annus*, a year. *F. biennial*; *G. zweijährig*.) Of two years' duration. Plants which live two years, producing flowers in the second year only.

Bieremate. (*L. bis*, double; *eremus*. *F. bierémé*.) Applied by Mirbel to a fruit composed of two eremi (carpi), as the cenobium of the *Cerinthia major*.

Bifaribran'chiate. (*L. bifarius*, double; *βράχια*, the branchiæ. *F. bifari-branche*.) Applied by Latreille to a Family of the *Gasteropoda*, having the branchiæ situated on the two lower sides of the body.

Bifari'ous. (*L. bifarius*; from *bis*; *for*, to speak. *F. bifarié*; *G. zweireihig*.) In two rows.

Bifemorocalca'neus. (*L. bis*, double; *femur*, the thigh; *calcaneum*, the heel. *F. bifemorocalcanien*; *G. äusserer zweiköpfiger Wadenmuskel*.) Chaussier's name for the gastrocnemius muscle.

Biferous. (*L. bifer*, bearing twice or twofold; from *bis*, twice; *fero*, to bear. *F. bifera*.) Plants that bear fruit and flowers twice in the year.

Bif'fin. An apple dried and flattened.

Bif'id. (*L. bifidus*; *bis*, twice; *fido*, to cleave. *F. bifido*; *G. zweispaltig*.) Forked; divided into two; cleft.

Bifa'tulous. (*L. bis*; *fistula*, a pipe. *G. zweiröhrig*.) Having two channels.

Biflex'ed. (*L. bis*, twice; *flectus*, bent.) Doubly bent.

B. canal. See *Canalis biforus*.

Bifo'rate. The same as *Biflorus*.

Bifa'rous. (*L. biforus*, from *bis*, twice; *foris*, a flower. *F. bifore*; *G. zweiblühig, zweiblümig*.) Two-flowered. Having two flowers upon one stalk or peduncle.

Bifoliate. (*L. bis*; *folium*, a leaf. *G. zweiblättrig*.) Having two leaflets springing from a common point.

Bifoliolate. (*L. bis*; *foliolum*, dim. of *folium*, a leaf.) Having two leaflets.

Bifolium. (*L. bis*, twice; *folium*, a leaf.) The *Ophrys ovata*, double-leaf, or tway-blade.

Bifollicular. (*L. bis*; *folliculus*, a small bag.) Having two follicles.

Bifo'ra. The same as *Biphora*.

Bifo'rate. (*L. biforus*, from *bis*, double; *foris*, a door. *F. biford*; *G. zweiocherig*.) Having two apertures. Applied to anthers having two pores, *Anthera bifora*, like those of the *Heaths* and *Myrtles*.

Also (*G. zweiklappig*), applied to a pericarp with two valves.

Biforine. (*L. bis*; *foris*, a door.) A raphidiferous cell, which, when placed in water, bursts and discharges its raphides by an opening at each end.

Biforipalla. (*L. biforus*, having two openings; *pallium*, a mantle. *F. biforipalle*.) Applied by Latreille to an Order of the *Conechifera*, the mantle of which has two openings, one for the passage of the feet, the other for dejections.

Biformis. (*L. bis*, double; *forma*, shape. *G. zweigestaltig*.) Having two shapes or forms.

Bifo'rous. Same as *Biforate*.

Bifrons. (*L. bis*; *frons*, the forehead. *G. doppelstirnig*.) Having two faces or aspects.

Bifurcate. (*L. bis*; *furca*, a fork. *F. bifurqué*; *G. zweizackig, gabelig*.) Two-forked; dividing into two, like a fork. Having, or separating into, two branches; forked; dichotomous.

Bifurcation. (*L. bis*, two; *furca*, a fork. *F. bifurcation*; *G. zweispitzige Endtheilung, Gabeltheilung*.) A dividing into two, as the body of a fork into its prongs. Applied to a division of the trunk of vessels, or of the stem of a plant.

Also, to that splitting into two of a ray of light when it enters a doubly refracting crystal.

Bifu'siform. (*L. bis*; *fusus*, a spindle; *forma*, shape.) Term applied to spermatie filaments attenuated in their centre, as though consisting of two fusiform filaments united.

Bigarade. The bitter orange, *Citrus vulgaris*, var. *bigaradia*.

Bigaradia myrtifolia. See *Citrus bigaradia myrtifolia*.

Bigas'ter. (*L. bis*, twice; *γαστήρ*, the belly.) Same as *Digastric*.

Big'bloom. The *Magnolia macrophylla*.

Big'bone. See *Kentucky, mineral waters of*.

BIGELOVIA VENATA—BIJODURETUM HYDRARGYRI.

Bigelo'via ven'a'ta, Gray. (L. *vena*, a vein.) The *Haploppappus discoides*.

Big'elow, Y-ligament of. The ilio-femoral ligament.

Bigem'ine eminent'ia. (L. *bis*, twice; *geminus*, to double; *eminentia*, a prominence.) A synonym of the *Corpora quadrigemina*.

Bigem'inal bod'ies. (L. *bis*, twice; *geminus*, to double.) The *Corpora quadrigemina*.

Bigem'inate. (L. *bis*; *geminatus*, doubled. F. *bigéminé*; G. *doppeltgezweit*.) Double-paired. Twice paired. Applied to a forked footstalk which has two little leaves on the apex of each division.

Bigem'mate. (L. *bis*, double; *gemma*, a bud.) Having two buds or branches.

Big'ener. (L. *bis*; *genus*, race. G. *doppelgeschlechtig*, bastard.) A plant hybrid, which has been produced from two allied genera.

Big'en'er'is. (L. *bis*, double; *genus*, a race. F. *bigénère*.) Applied by Linnaeus to hybrids born of individuals belonging to two different races, as the mule.

Big'e'nus. (L. *bis*, double; *geno*, to beget. F. *bigène*.) Applied by Nees von Esenbeck to trees that at the end of summer produce a second but feeble shoot of leaves, as the *Pyrus*.

Bigg. The winter barley, *Hordeum hexastichon*.

Bigib'bose. (L. *bis*; *gibbosus*, hump-backed.) Having two protuberances.

Bigib'bous. Same etymon and meaning as *Bigibbose*.

Big'leaf. The *Magnolia macrophylla*.

Big'no'nia. (After the Abbé Bignon, a celebrated author, and librarian to Louis XIV.) The trumpet-flower. A Genus of the Nat. Order *Bignoniaceae*.

B. sequinoctia'lis, Linn. (L. *æquinoc-tialis*, belonging to the equinox.) Hab. West Indies. Applied to tumours of the feet and to wens. An infusion of the flowers is given in angina, in affections of liver and spleen, and in hemorrhages.

B. allia'cea. (L. *allium*, garlic.) This plant, called the "garlic shrub" from its powerful odour, is used as a febrifuge.

B. antisyp'hilit'ica, Mart. (Avri, against; *syp'hilis*.) A Brazilian tree used in syphilitic disorders.

B. capreola'ta, Linn. (L. *capreolus*, a tendril.) Hab. Southern United States. Detergent, alterative, aperient, diuretic, and sudorific. Used instead of sarsaparilla. Used in syphilis, chronic rheumatism, and cachexia.

B. catal'pa. The *Catalpa bignonioides*.

B. cheloni'des. (Χελώνιον, the cyclamen; or χελών, a tortoise; είδος, likeness.) The flowers are used in Malabar as a perfume. An infusion is used as a cooling drink in fevers, and the juice is given in mania.

B. chi'ca, Humb. et Bonpl. (An Indian word, *chica*, a pretty girl; or *chico*, small.) A South American species, the leaves of which yield a fine red colouring matter.

B. chrysan'tha. (Χρύσεος, golden yellow; άνθος, a flower.) Grows in the Caracaeas. The bark is purgative. (Waring.)

B. copa'ia, Aubl. Caroba. Hab. Guiana. The fruit is used as an antisyp'hilitic and in diarrhoea, and externally in yaws; the bark is emetic and purgative.

B. crucig'era. (L. *crux*, a cross; *gero*, to bear.) The *B. capreolata*.

B. echina'ta, Willd. (L. *echinatus*, prickly.) A climbing shrub of Guiana. Said to be an adulterant of sarsaparilla.

B. gu'y'ra. Hab. South America. Root is purgative.

B. in'dica. (L. *indicus*, Indian.) The *Calosanthé indica*.

B. leucox'y'lon, Willd. (Λευκός, white; ξύλον, wood. F. *bois d'ébène vert*.) White-wood tree. The juice is said to be an antidote to the Manchineel poison.

B. longi'ssima. The *Catalpa longissima*.

B. obli'qua. (L. *obliquus*, slanting.) A South American climbing shrub. Used in dysentery. (Waring.)

B. ophthal'mica. (Οφθαλμικός, relating to the eyes.) A name given, with doubtful propriety, to a plant used in the West Indies in eye diseases.

B. rad'icans, Willd. (L. *radico*, to strike root.) The *Tecoma radicans*.

B. semperv'rens, Linn. (L. *semper*, always; *vireo*, to be green.) The *Gelsæmium sempervirens*.

B. triphyl'la, Willd. (Τρεῖς, three; φύλλον, a leaf.) The *B. chica*.

B. tulipif'olia. (Tulip tree; L. *folium*, a leaf.) Hab. Guinea. Used in dysentery.

B. un'guis ca'ti, Linn. (L. *unguis*, a nail; *catus*, a cat.) Cat's-claw trumpet flower. Hab. West Indies. Believed to be an alexipharmic, and used in snake bites.

B. xylocar'pa. (Ξύλον, wood; καρπός, fruit.) Hab. India. An oily substance distilled from the wood is used in skin diseases.

Bignonia'ceæ. A Nat. Order of epipetalous corollifloral *Exogens*. Trees or shrubs often twining. Leaves exstipulate; inflorescence terminal; calyx entire or divided; corolla 4—5-lobed; stamens 2 or 4; anthers 2-celled; ovary 2—4-celled; placentas axile; style one; fruit 2-valved, capsular, 2—4-celled; seeds sessile, winged; albumen none; embryo with large leafy cotyledons.

Bignonia'ceous. Having an arrangement of parts as in the Genus *Bignonia*.

Bignoni'æ. Same as *Bignoniaceæ*.

Bignonia'li all'i'ance. Same as *Bignoniales*.

Bignonia'les. In Lindley's system perigynous *Exogens*, with dichlamydeous, monopetalous, unsymmetrical flowers, capsular or berried fruit, having its carpels quite consolidated, parietal, free, central or axile placentas, and an embryo with little or no albumen.

Bigor'ro. See *Baquières de Bigorre*.

Bih. The same as *Bikh*.

B'hai. The edible fruit of a species of *Heliconia*.

Bih'er'nious. (L. *bis*, double; *hernia*, a rupture.) Having a hernia or rupture on each side of the scrotum.

Bih'orius. (L. *bis*, double; *hora*, an hour.) Lasting two hours. Employed in prescriptions to express a stated period or interval of two hours, and usually put in the neuter to agree with *intercallum* (understood), a space or interval.

Bijoda'tum hydrarg'yri. The *Hydrargyri iodidum rubrum*.

Bijodure'tum hydrarg'yri. The *Hydrargyri iodidum rubrum*.

Bijou. A name for the turpentine of the *Pinus sylvestris*.

Bijugate. (L. *bijugatus*, from *bis*, double; *jugum*, a yoke. F. *bijugué*; G. *zweijochig*, *zweiparig*.) Double-yoked, doubly-paired; arranged in two pairs. Applied to a winged leaf bearing two pairs of leaflets, with a pair of secondary petioles, each bearing a pair of leaflets.

Bijugous. Same etymon and meaning as *Bijugate*.

Bikh. The Assamese name of the root of the *Aconitum ferox*, and other species of *Aconitum*. Used for poisoning arrows when mixed with the fresh juice of the fruit of *Dillenia speciosa*. It is conical, 2"—4" long, 1" broad, wrinkled longitudinally, brownish black externally, internally whitish, and of acrid taste. Acute pain, local inflammation, and dysentery, is produced by the introduction into a wound. Saltpetre is used in the treatment and the cupping glasses.

Biks'ad. Hungary; County Szathmar, in a mountainous district. Three mineral springs, containing sodium chloride 15.2 grains, sodium carbonate 24.5, calcium carbonate 3.14, and iron carbonate .14, in 16 ounces. Used in abdominal congestions, scrofulous diseases, and menstrual obstructions.

Bilabe. (L. *bis*, double; *λάβω*, to lay hold on.) An instrument for extracting foreign bodies of sufficiently moderate size from the bladder, through the urethra, having two branches capable of being expanded in the bladder after introduction, and then closed on the object to be withdrawn.

Bilabiate. (L. *bilabiatus*, from *bis*, double; *labium*, a lip. F. *bilabé*; G. *zweilippig*.) Having two lips.

Bilaciniate. (L. *bilaciniatus*, from *bis*, double; *laciniatus*, fringed. G. *doppeltgeschnittet*.) Double-fringed. Applied to leaves which have their margins cut into segments.

Bladen. Chalybs, or steel. (Castellus, Quincy.)

Bilamellar. Same as *Bilamellate*.

Bilamellate. (L. *bilamellatus*, from *bis*, twice; *lamellatus*, having little plates. F. *bilamellé*; G. *zweiplattig*.) Having two layers of little plates. Applied to parts of plants.

Bilate. A salt of the supposed *Bilic acid*.

B. of soda. A term formerly applied to a supposed salt found in the bile, now known to be a mixture of sodium glycocholate and taurocholate.

Bilateral. (L. *bis*, double; *latus*, the side. F. *bilatéral*; G. *zweiseitig*.) Having two symmetrical sides. Applied to leaves or other parts which proceed from different points as well as different sides, and so somewhat distinct from opposite.

B. lithotomy. See *Lithotomy, bilateral*.

B. operation. See *Lithotomy, bilateral*.

B. symmetry. See *Symmetry, bilateral*.

Bilazais. France; Département de Deux-Sèvres. A sulphurous water of 18° C. (64.4° F.) Used in chlorosis and skin diseases.

Bilberry. (Dan. *billeber*, dark berry, or ball berry.) The fruit of the *Vaccinium myrtillus*.

B. bear's. The *Arctostaphylos uva ursi*.

B. com'mon. The *Vaccinium myrtillus*.

B. great. The *Vaccinium uliginosum*.

B. red. The *Vaccinium vitis-idaea*.

Bilbilla. The same as *Belbella*.

Bilbita. The same as *Belbella*.

Bile. (L. *bilis*. Gr. *χολή*; F. *bile*; L. *bile*; S. *bilis*; G. *Galle*.) The secretion of the liver. A mucilaginous fluid, golden brown in man, golden red in carnivora, brownish green in herbivora, bright green in birds, of bitter taste, and peculiar odour, of sp. gr. 1026—1033 in the gall-bladder, 1010—1011 as collected from a biliary fistula in man, of feebly alkaline or sometimes neutral reaction, without morphological elements, and uncoagulable by heat. After death, in man, it has been found of various shades of colour, from pale yellow to almost black, and of various densities; crystals of cholesterol and of calcium and ammonio-magnesium phosphate have been observed. The following constituents have been found in the bile of animals:—Water, taurocholic acid, glycocholic acid, hyotaurocholic acid, hyglycocholic acid, taurochenocholic acid (these acids partly in combination with sodium, partly with potassium), choline, bilirubin, biliverdin, bilifuscin, biliprasin, urobilin, cholesterol, palmitic, stearic, and oleic glycerides, palmitates and oleates of sodium and potassium, lecithin, urea in the bile of cattle and pigs, mucus from the bile channels, sodium and potassium chlorides, sodium carbonate, sodium, calcium, and magnesium phosphates, traces of iron, manganese and silica, and carbonic acid gas. Glucose has been found in human bile, as well as traces of leucin, and in the foetus albumen; and copper has been noticed. From change of the normal constituents choleic acid, cholic acid, dyslysin, taurin, and ammonia appear; and as products of decomposition trimethylamin, sulphur acids, fatty acids, as acetic and valeric acids, ammonium and sodium sulphate, ammoniaco-magnesian phosphate, and calcium phosphate.

The bile of oxen consists essentially of sodium glycocholate and taurocholate, and contains, besides cholesterol, cholin, urea, fats, acetic and propionic acids, as glycerides and as salts, colouring matters, mucus, and inorganic salts.

Human bile contains sodium taurocholate and glycocholate, cholesterol, fats, mucus, colouring matters, especially bilirubin and biliverdin, lecithin, inorganic salts, and traces of copper.

Pigs' bile contains sodium hyotaurocholate and hyglycocholate, and the same constituents as human bile, cholin, a glyceride of phosphoric acid, originating probably in lecithin, a phosphorylated fat and urea.

Dogs' bile contains sodium taurocholate as the only bile salt.

Sheep's bile contains both sodium taurocholate and glycocholate.

Goose's bile contains sodium chenotaurocholate.

Fishes' bile consists almost entirely of taurocholates; in sea-water fishes the potassium salt is by far the most plentiful, little of the sodium salt being found, whilst in fresh-water fishes the sodium salt exists in equal or even greater quantity.

Serpents' bile is said to contain only the sodium taurocholate.

In pathological conditions lactic acid has been found; leucin and tyrosin in typhus fever; blood and albumen; sugar in diabetes mellitus, and the following after administration:—Antimony, arsenic, copper, potassium iodide, potassium ferrocyanide, and zinc.

Alcohol and acetic acid throw down from bile the mucus more or less coloured; sulphuric acid causes the formation of crystals of stearic and, in

BILEN—BILHARZIA.

ox bile, palmitic acids; fresh gastric juice produces a precipitate, but only when free from peptones. The albuminoid, and probably the starchy matters, of the food are not affected by bile, but some have said that fresh human bile converts starch into sugar; blood-corpuscles are dissolved by it; bile, when shaken with neutral fats and warmed, has an emulsive action, and causes a separation into minute masses, when the fatty acids decomposing the soda salt of the bile form an envelope of soap, in which are set free the bile acids; admixture with pancreatic juice largely aids this emulsifying action. Oil passes easily through membranes moistened with bile, especially if it is alkaline. The daily amount of bile secreted in man is said to be two or three pounds; the evidence is insufficient. The proportions of the bile constituents vary; the bile of the gall-bladder contains more mucus and less water than that of the hepatic ducts. The following analysis by Frerichs may be taken as a probable mean:—Water 859.2, mucus and colouring matter 29.9, cholesterol 2.6, fat 9.2, salts of bile acids 91.4, inorganic salts 7.7, in 1000 parts. Recent analyses have shown a striking variation in the proportion of the two bile acids, probably depending upon variations of diet. In cholera and febrile diseases the water of the bile is much reduced; in hydrothorax and in Bright's disease cholesterol crystals have been found; in a case of empyema and tuberculosis fatty masses have been seen, and also in typhus.

The bile salts and the colouring matter are the essential elements of the bile, and are formed in their completeness by the liver, but from what constituents is not yet proved, neither is the action of the bile on the food by any means accurately known.

B. acids. Term applied to the glycocholic, taurocholic, and other similar acids, which in combination with sodium and potassium in the bile; when present in the urine they may be detected by Pettenkofer's test. See *B., tests for.*

B., bear's. Formerly used against epilepsy.

B., black. Same as *Atrabilis*.

B., blue. Cases have been rarely recorded in which blue material has been vomited which gave the reactions of bile. The blue material under the spectroscope seems related to the oxidation products of bilirubin and biliverdin, and to a black pigment found naturally in human bile.

B., crystallized. A term applied by Plattner and Verdel to the crystals of taurocholate and glycocholate of soda, which they obtained by treating the alcoholic extract of bile with chloroform.

B., cystic. Bile obtained, in a somewhat concentrated condition, from the gall-bladder.

B.-duct, common. (*F. conduit cholédogue*; *I. condotto epatico*; *G. der gemeinschaftliche Gallengang*.) The duct which proceeds from the union of the hepatic and cystic ducts to open into the duodenum. It is 3" long, and 2"—3" wide; it passes downwards and backwards in the substance of the gastro-hepatic omentum, having the vena portæ behind and the hepatic artery on its left, and the first part of the duodenum in front; after running along the inner and posterior face of the descending portion of the duodenum in the head of the pancreas, it perforates the muscular wall of the intestine, runs in it for .75", and opens generally, by a common orifice, with the

pancreatic duct on the inner surface of the duodenum, 3"—4" below the pylorus. Sometimes the pancreatic orifice is a distinct one.

B., col's. Formerly used to facilitate labour.

B., inspissated. Ox bile warmed, strained, and evaporated. See *B., purified*.

B., ox's. Formerly used in earache, amenorrhœa, and in aid of labour. Locally as a detergent; later as a stomachic and anthelmintic, and in indolence of liver and constipation. See *B., purified*.

B., pig's. Used and prepared as *B., ox's.*

B., pigment. (*L. pigmentum*, a paint.) The colouring matter of bile, consisting of bilirubin, bilifuscin, biliverdin, biliprasin, and bilihumin. When present in the urine, bile pigment may be detected by the yellow colour it gives to white filtering paper when dipped in the urine and dried, and by the placing of a drop or two of nitric acid and of urine side by side on a white porcelain plate, when, on causing them to touch, a play of colours at the point of contact from violet through green to red is seen; the colours soon disappear.

B., purified. *Fel bovinum purificatum*. Fresh bile of the ox, *Bos taurus*, mixed with double its quantity of spirit, the clear solution decanted after twelve hours, and evaporated. Used when the liver secretion is deficient and in constipation. Dose, 10—60 grains. See *B., ox's.*

B. res'in. The bile acids.

B., tests for. Pettenkofer's test:—A grain of sugar added to a solution containing bile which has been mixed with about half its bulk of strong sulphuric acid gives a purplish crimson colour.

Heller's test:—When albumen is shaken with a solution containing bile and nitric acid added, the coagulum thrown down is of a dull green or bluish colour.

Gmelin's test:—When a few drops of a solution containing bile is poured upon a white plate and strong nitric acid dropped into it, the liquid acted on becomes successively pale green, violet, reddish, and a dirty yellow.

Bilen. Hungary; County Marmoros. Three springs of mineral water, containing sodium and calcium carbonate, with a little iron and much free carbonic acid. Used in disorders of digestion, enlargements of the liver and spleen, and in gouty conditions.

Bilharzia. (*Bilharz*, the name of the naturalist who discovered it in 1851.) A Genus of the Order Trematoda, Class Scolecida.

B. hæmato'bia. (*Alua*, blood; *Bios*, life.) Bisexual. Male: Body soft, whitish, filiform, 3—4 lines long. The anterior part or trunk, an eighth of the whole length, is flattened and lanceolate, having at its extremity an oval sucker, triangular; the remainder, the tail, is circular, contains a longitudinal canal, the gynæcophoric canal; at the junction of the tail with the trunk is the ventral sucker, circular; genital pore situated between the ventral sucker and the origin of the gynæcophoric canal.

Female: Longer and much thinner than the male; body soft, transparent, pointed in front, without any longitudinal canal; suckers like the male; genital pore united with the posterior margin of the ventral sucker; ova oval, often with a more or less pointed extremity, which represents a rudimentary anchor. The female is received into the gynæcophoric canal of the male

BILIARIS—BILIRUBIN.

during impregnation. The embryo whilst in the ovum is covered with cilia; when free it is at first hourglass-shaped, but it subsequently becomes cone-like. This parasite is common in Egypt and at the Cape of Good Hope; the embryos have been found in drinking water, and Professor Cobbold states that its development is more rapid in proportion to the purity of the surrounding medium. It is found in the portal and mesenteric veins, and in the kidney and urinary passages of man, ape, ox, and sheep. It produces hæmaturia and anæmia, retention of urine from blood clots and pyelitis; dysentery is not infrequent. The intermediate host is not known; the higher larval forms are probably ingested with stagnant water.

Bilia'ris. (L. *bilis*, bile.) Serving to convey or retain the bile.

Biliary. (L. *bilis*. Gr. *χολῶδης*; F. *biliaire*; I. *biliare*; S. *biliar*; G. *zur Gallen-gehörig*.) Of, or belonging to, bile.

B. acids. These acids were discovered by Strecker, and are the glycocholic, the taurocholic, the cholic or cholalic, the hyoglycocholic, the hyotaurocholic, and the chenotaurocholic. They are all soluble in water and in alcohol, but are nearly insoluble in ether.

B. apparatus. The liver, and its blood-vessels and excretory ducts.

B. artery. An old name for that division of the cystic branch of the hepatic artery which ramifies between the gall-bladder and the liver, and supplies the latter.

B. asparagin. A synonym of *Taurin*.

B. calculi. (L. *calculus*, a small stone.) Same as *Gall-stones*.

B. cells. See *Liver, cells of*.

B. concretions. A synonym of *Gall-stones*.

B. ducts. (L. *pori* or *ducti biliarii*; F. *voies biliaires*; I. *condotti biliar*; G. *Gallen-gänge*.) The canals which arise from the secreting structure of the liver, gradually converging towards its under surface, till they at last form a single trunk, the ductus hepaticus. See *Liver*.

B. fistula. (F. *fistule biliaire*; I. *fistola biliare*; G. *Gallenfistel*.) See *Fistula, biliary*.

Bilia'tion. (L. *bilis*, bile.) The production or secretion of bile.

Bilic acid. (L. *bilis*.) Described by Liebig. It is a mixture of cholic and choletic acids.

Bilicholin'ic acid. (L. *bilis*; *χολή*, bile.) This name has been given to a combination of cholinic acid with undecomposed bilin, forming an acid compound, which is now known to be a mixed body.

Bilicyanin. (L. *bilis*; *cyaneus*, dark blue.) An imperfectly known blue pigment obtained by the action of oxidising agents on bilirubin, and said also to have been found in gall-stones and in icteric urine.

Bilifellin'ic acid. (L. *bilis*; *fel*, bile.) A name given to a combination of fellinic acid with undecomposed bilin, forming an acid compound, which is now believed to be a mixed body.

Biliful'vic acid. The same as *Bilifulvin*.

Biliful'vin. (L. *bilis*; *fuleus*, tawny. G. *Gallgelb*.) A mixture of some of the colouring matters of the bile.

Also, a synonym of *Bilirubin*.

Bilifus'cin. (L. *bilis*, bile; *fuscus*, brown.) $C_{16}H_{25}N_2O_2$. A dark green, almost black substance contained in very small quantities in biliary calculi; insoluble in water, chloroform, and ether, soluble in alcohol and alkalies. Reaction with nitric acid as bilirubin.

Bilithu'min. (L. *bilis*, bile; *humus*, earth.) The insoluble, blackish-brown residue left after bile has been exhausted by ether, water, chloroform, alcohol, and diluted acids.

Bilim'bi. (Ind.) A tree, *Averrhoa bilimbi*, which yields a juice used by the natives of India, for curing itch and other skin diseases, by wearing linen dipped in it and applied to the part.

Bilim'bing te' res. The *Averrhoa bilimbi*.

Bilin'. Austria; Bohemia, near Töplitz. An interesting neighbourhood. An alkaline water, containing a large amount of sodium carbonate, 23 grs. in a pint, with a little lithium and calcium carbonate, and some sodium sulphate; not much used in the place, but exported largely. Used in urinary disorders, Bright's disease, jaundice, gout, and rheumatism.

Bilin. (L. *bilis*, the bile.) A gummy, pale yellow mass, which, when quickly dried and pulverised, yields a white powder, inodorous and of a sweetish bitter taste, formerly considered to be the principal and most important constituent of the bile; now known to be a mixture of sodium glycocholate and taurocholate.

Bilineu'rine. (L. *bilis*; *νῦρον*, a nerve.) A synonym of *Choline*. It obtained this name from being found both in the bile and the brain.

Bilingi billing-bing. Indian name for the *Malus indica*, or Indian apple tree.

Bilious. (L. *biliosus*; Gr. *χολῶδης*; F. *bilieux*; I. and S. *bilioso*; G. *gallicht*, *gallesüchtig*.) Having much, full of, or relating to, the bile. Applied generally to disorders arising from too great a secretion of bile, as bilious diarrhoea.

B. colic. See *Colic, bilious*.

B. diarrhoe'a. See *Diarrhoea, bilious*.

B. fever. A term which has been very loosely used. In a large number of instances bilious fever meant enteric fever, but it has been used to describe certain malarious fevers in tropical countries with hepatic disturbance.

B. temperament. See *Temperament, bilious*.

B. vom'iting. See *Vomiting, bilious*.

Biliphæ'in. (L. *bilis*; *φαῖός*, tawny.) Formerly believed to be the colouring principle of the bile, now known to be of a mixed character; also termed cholepyrrhin.

Also, a former name of *Bilirubin*.

Biliphe'in. Same as *Biliphæ'in*.

Bilipras'in. (L. *bilis*, bile; *πράσον*, a leek.) $C_{16}H_{22}N_2O_6$. A brittle, shining, dark green substance obtained from bile; insoluble in ether and chloroform, soluble in alcohol and alkalies. The alcoholic solution becomes brown on the addition of ammonia. Reaction with nitric acid as bilirubin, with the exception of the blue colour. It has been found in small quantity in human biliary calculi.

Bilipyr'rhine. (L. *bilis*; *πυρρός*, yellowish red.) A mixture of some of the colouring matters of bile.

Biliru'bin. (L. *bilis*, bile; *ruber*, red.) $C_{16}H_{18}N_2O_6$. The principal colouring matter of bile. Consists of dark red prisms, insoluble in water, soluble in alcohol and ether, very soluble in chloroform. Nitric acid of commerce contain-

BILIS—BINDWEED.

ing nitrous acid produces a change of colours through green, blue, violet, red, to a dull yellow. Obtained as an amorphous powder by precipitation from the chloroform solution by means of alcohol.

Bilis. (As if *bis lis*, double strife; because choler (from *χολή*, bile) or anger was conceived to be greatly heightened by the excitement of the bile. *Nervius*.) See *Bile*.

B. bubula. (*L. bubulus*, belonging to oxen.) A synonym of *Fel bovinum*, ox-gall.

B. fluxio. (*L. fluxio*, a flowing.) A synonym of *Cholera*.

Biliticus. (*L. bilis*.) Causing a flow of bile.

Biliverdin. (*L. bilis*, bile; *viridis*, green. *G. Gallengrün*.) $C_{42}H_{18}N_2O_6$, according to Maly; $C_{42}H_{18}N_2O_6$, according to Städeler; and $C_{42}H_{18}N_2O_6$, according to Thudichum. Formed when air is passed through an alkaline solution of bilirubin. A green amorphous body, insoluble in water, ether, and chloroform; soluble in alcohol. Reaction with nitric acid as bilirubin. It has been found in the placenta of the bitch, and in the bile of several animals; it is doubtful if it has been found in man, although some have professed to have discovered it in the urine of jaundice.

Bill. (*Sax. bile*, a bird's bill.) Same as *Beak*.

B. trout. See *Trout, bill*.

Billardiera. A Genus of the Nat. Order *Pittosporaceae*.

B. mutabilis. (*L. mutabilis*, changeable.) A species the fruit of which has a pleasant sub-acid taste, and is eatable.

B. scandens. *Smith.* (*L. scando*, to climb.) *Hab.* New Holland. Flesh of the berry esculent.

Bilna. The same as *Pilna*.

Bilobate. (*L. bis*; *λοβός*, the tip of the ear. *G. zweilappig*.) Having two lobes.

Bilobed. (*L. bis*, twice; *λοβός*, the tip of the ear. *F. bilobe*; *G. zweilappig*.) Two-lobed. Having two divisions separated by a cleft. A synonym of *Dicotyledonous*.

Bilobular. (*L. bis*; *lobulus*.) Having two lobules.

Bilocellate. (*L. bis*; *locellus*, a little place.) Having two locelli.

Bilocular. (*L. bilocularis*; *bis*, twice; *loculus*, partition. *F. biloculaire*; *G. zweifächerig*.) Two-celled; divided into two cavities.

Bilton. Yorkshire; near Harrogate. A mild sulphur water.

Bilumbi biting-bing. The *Malus indica*.

Bilva. The *Agle marmelos*.

Bimana. (*L. bis*, two; *manus*, hand. *F. bimanus*; *I.* and *S. bimano*; *G. Zweihänder*.) An Order of the Division *Mammalia*, according to some, or, according to other classifications, a Family of the Order *Primates*. It includes man only. Distinguished by the erect posture, bipedal walk, opposable thumb, prehensile hands, fingers with nails, foot broad, plantigrade; unopposable hallux; toes with nails; thirty-two teeth close to each other; mammae pectoral; placenta discoidal, deciduate; hair only local; brain large and convoluted. Psychological conditions absolutely different to those of all other animals.

Bimanous. (*L. bimanus*; *bis*, double; *manus*, hand. *F. bimanus*; *I.* and *S. bimano*; *G. zweihändig*.) Having two hands.

Bimanual. (Same etymon.) Two-handed.

B. palpation. (*L. palpo*, to touch softly.) A mode of examination of the pelvic organs by means of one or more fingers of one hand in the vagina and the other hand on the abdomen.

B. turning. See *Turning, bimanual*.

B. version. The same as *Bimanual turning*.

Bimeconate. A salt of meconic acid with two equivalents of acid to one of base.

Bimeridae. A Family of the Suborder *Gymnoblastera*, Order *Hydroidea*, Class *Hydro-medusae*, Subkingdom *Celenterata*. Ramified colonies, invested with a perisarc, with sessile sexual buds; polypes crowned with simple tentacles.

Bimestris. (*L. bis*, double; *mensis*, a month. *G. zweimonatlich*.) Of two months' duration; two months old.

Bimethylacetone. A synonym of acetone, on the supposition that its constitution is $CH_3.CH_3.CO$.

Bimus. (*Lat. bimus*. *G. zweijährig*.) Continuing two years.

Bin- (*L. bini*, two.) A prefix signifying twice or double; used before a vowel. See *Bi-*.

Bina. (*Bövm, malt*.) Probably a misspelling for *Byne, malt*.

Binary. (*L. binarius*; *binus*, by couples. *F. binaire*; *I.* and *S. binario*; *G. binär, gezwelt*.) Compounded of two; twofold. Branches of vessels and of plants that separate into two, and each of these again into two, or, as it is expressed, in binary order.

B. compound. Compounds which consist of two elements or radicals.

B. theory. A theory of the composition of salts, which were all regarded as double compounds, whether they were made up of two simple elements, as Na and Cl, or whether a compound radical, as SO_4 , occupied the place of Cl; this compound radical was regarded as a unit. When salts are decomposed by the electric current they split up in accordance with this theory; $CuSO_4$ splits up into Cu and SO_4 .

Binate. (*L. binatus*; *binus*, by couples. *F. biné*; *G. gepaart*.) In pairs. Leaves divided almost from base to apex, as the *Drosera binata*. Compound leaves having two leaflets on one stalk, as in *Hardwickia binata*.

Binaural. (*L. bis*; *auris*, the ear.) Having two ears; or relating to both ears.

B. audition. (*L. auditio*, the hearing.) The hearing with both ears.

Binaxial. (*L. bini*, two; *axis*, the whirl of a spindle.) Having two axes.

Bindaal. (*Hind.*) The fruit of the *Luffa bindaak*. Used in India with black pepper in hydrophobia and epilepsy.

Bind'er. (*Sax. bindan*, to fasten.) A folded tower, or piece of calico, or a special apparatus, put round the abdomen of women during, or immediately after, labour, to support the contents.

Bindweed. The species of *Convolvulus*.

B. blue. The *Solanum dulcamara*.

B. addie-leaved. The *Convolvulus panduratus*.

B. great. The *Convolvulus sepium*.

B. hedge. The *Convolvulus sepium*.

B. larg'er. The *Convolvulus sepium*.

B. lavender-leaved. The *Convolvulus cantabrica*.

B. rough. The *Smilax aspera*.

BINDWEEDS—BIOLYSIS.

B., sea. The *Convolvulus soldanella*.
B., small. The *Convolvulus arvensis*.
B., Virginian. The *Convolvulus panduratus*.

Bindweeds. The plants of the Nat. Order *Convolvulaceae*.

Bindwitho. (Eng. *witho*, a willow twig.) The *Clematis vitalba*.

Bindwood. The *Hedera helix*.

Binelli, water of. Water containing a little empyreumatic oil. A secret remedy of Dr. Binelli, which about the year 1830 was in great repute as a styptic.

Binervate. (L. *binervatus*; *binerviis*, from *bis*, double; *nervatus*, nerved. F. *binervé*; G. *zweinervig*.) Having two nerves. Applied to leaves which have two longitudinal nerves or ribs.

Binervious. Same as *Binervate*.

Bingen. Germany; at the junction of the Nahe with the Rhine. The grape cure is carried on here.

Binl. (L. *bini*, two.) Twin.

Biniflorous. The same as *Biflorus*.

Biniodide. (L. *bini*, two; *iodine*.) A haloid salt in which there are two equivalents of iodine to one of base.

Biniodidum. (Same etymon.) Biniodide.

B. hydrargyri. See *Hydrargyri iodidum rubrum*.

Binkohumba. The *Phyllanthus urinaria*.

Binocular. (L. *bini*, double; *oculus*, the eye.) Relating to both eyes.

B. microscope. See *Microscope, binocular*.

B. ophthalmoscope. See *Ophthalmoscope, binocular*.

B. vision. See *Vision, binocular*.

Binoculus. (L. *bini*, double; *oculus*, the eye. F. *binocle*.) Term for an X-shaped bandage for maintaining dressings on both eyes; also called *Diopthalmos*.

Binodal. (L. *bis*; *nodus*, a knot.) Having two nodes.

Binomial. (L. *bis*; *nomen*, a name.) Having two names.

B. nomenclature. (L. *nomenclatura*, a calling of name, from *nomen*, a name; *calo*, to call.) The mode of description of an animal or plant by two names, one denoting the genus, the other the species.

B. system. Same as *B. nomenclature*.

Binous. (L. *binus*, double.) Double; in pairs. Applied to leaves when there are only two on a plant, as *Galanthus nivalis*, snowdrop.

Binoxalate. (L. *bini*, double; *oxalas*, an oxalate.) A combination of oxalic acid with a base, in which only half the hydrogen is replaced by a metal, oxalic acid being a bibasic acid.

Binoxystrychnia. A name given by Schutzenberger to an alkaloid resulting from the oxydation of strychnia when ammonia is added to a boiled aqueous solution of sulphate of strychnia and potassium nitrate.

Binsica. A Rabbinical term for mental disease, and, in particular, atrophy of the organ of fancy. (Helmontius.)

B. mors. (L. *mors*, death.) Death following disorders of the mind, such as are produced by the bite of a mad dog. (Parr.)

Binucleate. (L. *bis*, twice; *nucleus*, a kernel.) Having two nuclei.

Binucleolate. (L. *bis*; *nucleolus*, dim. of *nucleus*.) Having two nucleoli.

Bio. France; Département du Lot. A cold mineral water, containing calcium sulphate, only used in the locality.

Biochemicus. (*Bios*, life; *χημία*, chemistry. F. *biochimique*.) Applied by Harless to the action which odorous bodies exercise upon animal organic matter, and upon the nervous power, in order to produce the sensation of odours.

Biochymia. (*Bios*, life; *χημία*, chemistry.) The chemistry of living or once living things.

Biochymus. (*Bios*, life; *χῆμος*, juice. F. *biochyme*; G. *Lebenssaft*.) The sap of plants.

Biocratics. (*Bios*, life; *κράτις*, to rule.) Therapeutic agents which influence the economy by modifying the rhythm, or the mode of being, of the functions of the body by stimulating, depressing, or regulating them.

Bi'od. (*Bios*, life.) Reichenbach's term for vital force; the force special and peculiar to living beings.

Biodesmus. (*Bios*, life; *δεσμός*, a tie. F. *biodesme*; G. *Lebensband*.) The general and special tie or fundamental condition of life.

Biodynamics. (*Bios*, life; *δύναμις*, power. F. *biodynamique*; G. *Biodynamik*.) The doctrine of living action. See *Biosophia*.

Biogamia. (*Bios*, life; *γάμος*, marriage.) A term given to the series of phenomena otherwise called *Animal magnetism*.

Biogen. (*Bios*, life; *γεννάω*, to generate.) The same as *Bioplasm*.

Biogenesis. (*Bios*, life; *γένεσις*, an origin.) The doctrine of the generation of living things from living parents only, as contra-distinguished from *Abiogenesis*.

Biogenetic. (Same etymon.) Belonging to the development of life.

Also, belonging or relating to biogenesis.

B. fundamental law. (G. *biogenetische Grundgesetz*.) A statement or position laid down by Hæckel that germ history, ontology, is a short repetition of race history, phylogeny.

Biogno'sis. (*Bios*, life; *γνώσις*, knowledge. F. *biognose*.) The investigation or knowledge of life.

Biological. (*Bios*, life; *λόγος*.) That which has reference to living beings.

Biology. (*Bios*, life; *λόγος*, a discourse. L. *biologia*; F. *biologie*; I. and S. *biologia*; G. *Biologie, Lebenslehre*.) The science which deals with living things, their organisation, and their manifestations. Sometimes improperly used as synonymous with physiology. Mental operations are not included in this term generally, but form a science apart, Psychology; and the habits of man as a social being also form a separate science, now named Sociology. Biology is divisible into *Morphology, Distribution, Physiology, and Etiology*.

The term has also been used as synonymous with *Animal magnetism*.

Biolychnium. (*Bios*, life; *λύχνος*, a lamp.) Used by Charlton and others for vital heat.

Also, for a mysterious secret preparation from human blood, alluded to by several ancient writers, according to Beguinus, *Tyrocin*. iii, 1.

Biolysis. (*Bios*, life; *λύω*, to loosen.) The destruction of life by internal agents, natural or artificial.

BIOLYTIC—BIPARTITE.

Biolytic. (Same etymon.) Having relation to, or producing, *Biolysis*.

Biomagnetism. (*Bios*, life; *magnetismus*.) Same as *Animal magnetism*.

Bioman'tia. (*Bios*, life; *μαντεια*, divination. *G. Lebensprophesezung*.) The divination of that which relates to life.

Bioman'tic. (Same etymon.) Relating to bioman'tia.

B. symbol'ic mon'ochord. A representation of the pulse beats according to the rules of musical harmony.

Biom'etry. (*Bios*, life; *μετρία*, to measure. *F. biometrie*; *G. Lebensmesskunst*.) The art of computing and reckoning the duration of life.

Bion'omy. (*Bios*; *νόμος*, custom, law.) The knowledge of the laws of life; physiology.

Bion'ta. (*Bios*, life; *ὄντα*, the things which exist.) Living, or once living, individuals.

Bion'tic. (Same etymon.) Relating to living things.

B. devel'opment. Term employed by Hæckel to indicate the entire series of morphological changes which are undergone in the whole course of life by each individual or bion, or by the cycle of generation of several bionta.

Biophenomenology. (*Bios*, life; *phenomenologia*.) A treatise on the phenomena of life.

Bioph'agous. (*Bios*; *φαγῖν*, to eat.) Feeding on living things. A term applied to certain plants which are able, by their leaves, to kill, dissolve, and absorb the bodies of small animals.

Biophil'ia. (*Bios*, life; *φιλία*, love.) The instinct of self-preservation.

Bioplas'm. (*Bios*; *πλάσμα*, anything formed, from *πλάσσω*, to form.) Living or germinal matter possessing formative power. Upon it all germination, growth, and multiplication depend; it is the elementary part of every living tissue, as distinguished from the formed part or material. (Beale.)

Bioplast. (Same etymon.) An individual mass of bioplas'm forming a living unit.

B. conta'gious. According to Dr. Beale, a living particle, consisting of bioplas'm, seldom more than a 100,000th of an inch in diameter, colourless and structureless, insoluble in water, tenacious of life, capable of being propagated in certain fluids, as milk, out of the body, and very rapidly in the blood and some other fluids of the animal body to which it has gained access, derived from direct descent from the bioplas'm of the body, and each kind capable of manifesting only its own specific action; that is, originating its own special disease, as smallpox or measles.

Bioplas'tic. (Same etymon.) Of, or belonging to, *Bioplas'm*.

Bioscope. (*Bios*, life; *σκοπῖω*, to look at, to examine.) A kind of hygrometer intended to prove the existence of life by demonstrating the persistence of the secretion of sweat.

Bios'copy. (*Bios*, life; *σκοπῖω*, to behold. *F. bioscopie*; *G. Bioskopie*.) Term for an exploration or examination of life.

B. leg'al. A term for *Forensic medicine*.

Biosis. (*Biosis*, life. *F. biosis*.) The progress or formation of life; also the processes of life; the act of living.

Biosoph'ia. (*Bios*, life; *σοφία*, skill.) Töpler's term for *Biodynamics*.

Biosphere. (*Bios*, life; *σφαῖρα*, a sphere. *F. biosphere*; *G. Lebenskugelchen*.) The granules of the protoplasm of plants.

Biostat'ics. (*Bios*; *στατική*, statics, from *ἵστημι*, to make to stand. *F. biostatique*; *G. Biostatik*.) The doctrine of the physical phenomena of organised bodies.

Biostatist'ics. (*Bios*; *L. status*, a condition.) A term for vital statistics.

Biotaur'a. (*Biotos*, life; *aura*, air. *G. Lebenshauch*.) Vital air, oxygen.

Biotary. (*Bios*, life; *τάξις*, an arranging. *F. biotaxie*; *L. biotaxia*; *G. Biotaxie*.) A synonym of *Taxonomy*.

B. pathol'ical. A synonym of *Tera'tology*.

Biothal'mius. (*Βιοθάλμιος*, hale, from *bios*, life; *θάλλω*, to be luxuriant.) One who is long lived, or who is in robust health.

Biothanatol'ogy. (*Bios*, life; *θάνατος*, death; *λόγος*, a word.) The doctrine of life and death.

Biothan'atos. (*Bia*, violence; *θάνατος*, death.) Term used by Forestus, in *Schol. ii. l. i, Obs. 1*, for one who dies a violent death, whether by his own hand or otherwise.

Biotic. (*Biotos*, life.) Pertaining to life.

B. prin'ciple. The supposed vital principle.

Biotics. (Same etymon.) Physiology.

Biotomy. (*Bios*, life; *τομή*, a cutting, from *τίμνω*, to cut.) A term given to the dissection of or cutting into living animals; vivisection.

Biovulate. (*L. bis*, twice; *ovum*, an egg.) Having two ova, as of an ovary of a plant, or one of its cells, as in the *Acanthus*.

Bipaleolate. (*L. bis*; *palea*, chaff.) With two paleæ.

Bipalmate. (*L. bis*; *palma*, the palm.) Doubly palmately compound.

Biparasitic. (*L. bis*; *parasiticus*. *F. bi-parasite*.) A plant that lives parasitically on another parasite plant, as the *Tremella parasitica* on the stipes of the *Agaricus parasiticus*.

Bipari'etal. (*L. bis*, twice; *parietalis* os, the parietal bone.) Having relation to both parietal bones.

B. diam'eter. A measurement of the foetal head, being an imaginary line drawn through the cranium from one parietal protuberance to the other, of which the average length is three inches and a half.

B. obli'quity. A position of the foetal head during its passage through the pelvis in natural labour, in which it is somewhat bent on one side, so that the horizontal plane of the cranium is not at right angles to the axis of direction. At one time this was very generally believed to be the natural position in ordinary labour, but latterly the statement is rejected by many authorities.

B. su'ture. A synonym of the *Sagittal suture*.

Bipar'ous. (*L. bis*; *pario*, to bring forth.) Bringing forth two at a birth.

Also, in Botany, applied to a cyme in which the axis gives rise to two bracts, from each of which a second axis is developed.

Bipart'ite. (*L. bipartitus*; *bis*, twice; *partio*, to divide. *F. biparti*; *G. zweitheilig, zweifach getheilt*.) Divided deeply into two. The depth of division distinguishes bipartite from the less deeply cleft bifid.

BIRDS—BISFAYAR.

Birds. (Same etymon as *Bird*.) See *Aves*.
Birefringent. (L. *bis*, twice; *refringo*, to break back.) Doubly refracting. Applied to crystals.

Birethus. (*Biropos*. L. *birrus*, a priest's hood.) A cap lined with odoriferous drugs and applied to the head. Also called *Cucupha*.

Birhur. A nomad race of men inhabiting the southern highlands of Tschota Nagpur, and belonging to the Dravidian stock.

Birmansdorf. Switzerland; in Canton of Aargau. A mineral water, springing from the Jura formation, and containing, in 16 oz., magnesium sulphate 169, sodium sulphate 54, potassium sulphate 79, calcium sulphate 9.64, magnesium chloride 3.53, calcium carbonate .1, magnesium carbonate .24, and iron oxide .08 grains. It is a purgative.

Birostrate. (L. *birostratus*; *bis*, double; *rostrum*, a beak.) Having two beaks; double-beaked.

Biros'tris. Same as *Birostrate*.

Bir'um-ja-sif. (Hind.) The dried leaves and flowers of *Artemisia vulgaris*. Used in India as a stomachic, deobstruent, and antispasmodic.

Birsen. (From Heb. *birzin*. pl. of *baraz*, an aperture.) A deep ulcer or imposthume in the breast.

Bir'. (Sax. *byrd*, beorth, from *beran*, to bear. L. *nativitas*; Gr. *tokos*; F. *naissance*; I. *nascita*; S. *nacimiento*; G. *Geburt*.) The bringing forth of offspring.

B., concealment of. See *Concealment of birth*.

B., cross. A synonym of *Transverse presentation*.

B., entire. The complete extrusion of a child from its mother; a condition which is required by the English law in order that the child may inherit and transmit property.

B., monstrous. The birth of a child with great deformity of body. No precise definition of a monster is given by the law of England.

B., partial. The incomplete extrusion of a child from its mother; a condition which, even if the child be living, does not confer the right to inherit and transmit property.

B., plu'al. The birth of twins or more.

B., posthumous. (L. *postumus*, the last, superl. of *posterus*, coming after.) A child born after the death of its father.

B., pre'mature. See *Labour, premature*.

B., pro'tracted. Same as *Gestation, protracted*.

B., still. The birth of a dead child. See *Stillborn*.

Bir'. The *Trillium erectum*.

Bir'. The species of *Aristolochia*.

B., climb'g. The *Aristolochia clematitidis*.

B., long-root'ed. The *Aristolochia longa*.

B., round. The *Aristolochia rotunda*.

B., snake-killing. The *Aristolochia anguicida*.

B., snake-root. The *Aristolochia serpentaria*.

B., three-lo'bed. The *Aristolochia trilobata*.

B., up'right. The *Aristolochia clematitidis*.

Bir'. The plants of the Nat. Order *Aristolochiaceae*.

Bis. Twice, or double. The Latin root of the prefix *Bi-*, or *Bin-*.

Bisaccate. (L. *bis*; *saccus*, a bag. G. *Zweisackig*.) Having two sacs.

Bisalt. (L. *bis*; *salt*.) A salt, in which one of the two equivalents of hydrogen only is replaced by a base.

Bis'am. A synonym of *Moschus*.

Bisay'as. A Malayan race of men inhabiting the Philippine Islands.

Also, a race of Dyaks in Northern Borneo.

Bis'charis. A section of the Bedschan nation, about 200,000 in number, occupying the northern part of Abyssinia and the east of Nubia, between 16° and 23° lat. Their language is widely spoken. They are sometimes named *Bed-scha*.

Bischo. The same as *Bicho di culo*.

Also, a local name for a severe form of dysentery prevalent in Trinidad.

Bis'choff, Th. Ludwig Wilhelm. A distinguished professor at Giessen of the present century. His embryological researches have a high authority.

Biscoctus. (L. *bis*; *coctus*, cooked, from *coquo*, to cook.) A name given to biscuit.

Biscuit. (F. from *bis*, twice; *cuire*, to bake. I. *biscotto*; S. *biscocho*; G. *Zwieback*.) Unleavened dough of flour and water, to which butter, eggs, or sugar, are added to form the varieties, rolled thin and baked. Biscuits are made medicinal by the addition of mercuric chloride, jalap, charcoal, and other matters.

B. root. The bulb of *Camassia esculenta*.

Bise. A term of doubtful etymology. Applied in France to a north or north-east wind, which in winter is cold and biting, in summer hot and dry, and in both cases prejudicial to health.

Bisection. (L. *bis*; *seco*, to cut.) A cutting in two, as of the child when impacted in the pelvis; the operation may be performed at the neck, decapitation, or through the trunk, *spondylotomy*.

Bisectus. (L. *bis*; *seco*, to cut.) Divided into two parts or segments. Applied chiefly to spores separated from each other by two transverse septa.

Bisematum. The lightest, palest, and basest lead. (Quincy.)

Bisen'na. The same as *Musenna*.

Bisep'tate. (L. *bis*; *septum*, a partition.) Having two partitions.

By some botanists this term is used (G. *zweikammerig*) to denote the division of a cavity into two by a septum.

Biser'ial. (L. *bis*; *series*, an order. G. *zweireihig*.) Arranged in double order; in two rows.

Biser'iate. (L. *bis*; *series*.) In two series or rows.

Biserm'as. The *Salvia sclarea*.

Biserr'ate. (L. *bis*; *serratus*, jagged.) A serrate leaf in which the teeth are themselves serrate.

Biset'ose. (L. *bis*; *seta*, a bristle. G. *zweiborstig*.) Having two setæ or bristles.

Biset'ous. Same etymon and meaning as *Bisetose*.

Bisexual. (L. *bis*, double; *sexus*, sex.) Being of both sexes; hermaphrodite.

B. flowers. Flowers possessed of both male and female organs of generation.

Bisfayar. (Hind.) The root of the *Poly-*

BISFERIOUS—BISMUTHI CARBONAS.

polium vulgare. Used in India as a stimulant in flatulent indigestion. Dose, 5–20 grains. (Waring.)

Bisferious. (L. *bis, ferio*, to strike.) A term synonymous with *Dermite*.

Bish. A native name of the *Aconitum ferox*.

Bishnukrantha. (Hind.) Probably the *Erodia cicutaria*. Used in India as a vermifuge, and in boils, eruptions, and mucous disorders. (Waring.)

Bishop's leaves. The *Scrophularia aquatica*.

B.'s weed. The *Amorcanthus*.

Bisulfate. (F. *bisulfate*.) A salt of sulfuric acid containing two equivalents to one of base.

Blak. A native name of the *Aconitum ferox*.

Biskra. Algeria. Indifferent hot waters, containing a very small amount of iron.

B. button. (F. *Bouton de Bisbent*.) African date-mark. A disease observed in Algeria, probably the same as *Algerian* and *Leishman*. It begins as an itching papule, which soon becomes pustular, then covered with crusts, under which ulceration progresses, sometimes in a serpiginous form; it is inveterate, lasts about six months, and leaves deep, dark, or white; it may recur. By some it is supposed to depend on a fungous growth, which is described by Dr. Carter as consisting of a mycelium arranged in open and angular meshes, with a mass in the free ends; at a subsequent stage bright orange-stained part dies, forming an epithelium, or a group of these, some seen, and are supposed to be a further stage of development. Bismuth button is seen in animals, especially in the nose of dogs.

Bislangua. (L. *bis, lingua*, tongue, a tongue.) Bislangua. A name for the *Amorcanthus* because it has a smaller leaf on each primary one.

Bislumbhi. The *Amorcanthus*.

Bismal va. The *Amorcanthus*.

Bismuth. (F. *Bismuth*.) A metallic element, symbol *Bi*, atomic weight 208. It is a heavy, bluish-white metal, m.p. 271°C. It is used in the manufacture of alloys, and in the preparation of bismuth compounds. It is also used in the preparation of bismuth salts, which are used in medicine and in the dye industry.

B. and ammonium citrate. See *Bismuthi citras*.

B. carbonate. See *Bismuthi carbonas*.

B. citrate. See *Bismuthi citras*. A compound of bismuth and citric acid, used in medicine.

B. flowers of. See *Bismuthi flores*. A compound of bismuth and sulfur, used in medicine.

B. lactate. See *Bismuthi lactas*. A compound of bismuth and lactic acid, used in medicine.

B. lozenges. See *Bismuthi lozenges*. Lozenges containing bismuth, used in medicine.

B. magistery of. See *Bismuthi magistery*. A preparation of bismuth, used in medicine.

B. nitrate. See *Bismuthi nitras*. A compound of bismuth and nitric acid, used in medicine.

B. nitrate, basic. See *Bismuthi nitras, basic*. A compound of bismuth and nitric acid, used in medicine.

B. oxide. See *Bismuthi oxide*. A compound of bismuth and oxygen, used in medicine.

B. oxide of white. See *Bismuthi oxide, white*. A compound of bismuth and oxygen, used in medicine.

B. oxychloride. See *Bismuthi oxychloride*. A compound of bismuth, oxygen, and chlorine, used in medicine.

of sodium chloride. A white powder, used as a cosmetic.

B. oxyhydrate. A term applied to the oxide of bismuth when the water is removed from a solution of a bismuth salt by carbonic acid. Used as carbonate of bismuth.

B., purified. Bismuth freed with potassium nitrate to remove impurities. See *Bismuthi purificatum*.

B., regulus of. The metal bismuth.

B. subcarbonate. Same as *Bismuthi carbonas*.

B. subnitrate. See *Bismuthi subnitras*.

B. tannate. See *Bismuthi tannas*.

B. teroxide. See *Bismuthi teroxide*.

B. trihydrate. *Bi(NO₃)₃·3H₂O*. Obtained in large, transparent, rhombic crystals when a solution of bismuth in nitric acid is evaporated. The crystals are very deliquescent; they are soluble in glycerin, and when thus dissolved are miscible in water with a precipitate.

B. trioxide. *Bi₂O₃*. A white powder, used in the manufacture of bismuth compounds. It is a yellow powder of sp. gr. 8.0 when pure, and it occurs in minor quantities when obtained by the precipitation of a solution of a bismuth salt with potash. Used as the carbonate, 10 s. 5–15 grains.

B. trihydrate. A former name of *Bismuthi trihydrate*.

B. valerianate. See *Bismuthi valerianas*.

B. white. Same as *Bismuthi oxide, white*.

Bismuthi carbonas. (F. *Bismuthi carbonas*.) A compound of bismuth and carbon, used in medicine. It is a white powder, used in the manufacture of bismuth compounds. It is a yellow powder of sp. gr. 8.0 when pure, and it occurs in minor quantities when obtained by the precipitation of a solution of a bismuth salt with potash. Used as the carbonate, 10 s. 5–15 grains.

B. et ammonium citras. (F. *Bismuthi et ammonium citras*.) A compound of bismuth and ammonium citrate, used in medicine. It is a white powder, used in the manufacture of bismuth compounds. It is a yellow powder of sp. gr. 8.0 when pure, and it occurs in minor quantities when obtained by the precipitation of a solution of a bismuth salt with potash. Used as the carbonate, 10 s. 5–15 grains.

B. nitras. See *Bismuthi nitras*. A compound of bismuth and nitric acid, used in medicine.

B. oxidum. See *Bismuthi oxide*. A compound of bismuth and oxygen, used in medicine.

B. subcarbonas. See *Bismuthi carbonas*. A compound of bismuth and carbon, used in medicine.

B. subnitras. See *Bismuthi subnitras*. A compound of bismuth and nitric acid, used in medicine.

B. tannas. See *Bismuthi tannas*. A compound of bismuth and tannic acid, used in medicine.

B. teroxide. See *Bismuthi teroxide*. A compound of bismuth and oxygen, used in medicine.

B. trihydrate. See *Bismuthi trihydrate*. A compound of bismuth and water, used in medicine.

B. trioxide. See *Bismuthi trioxide*. A compound of bismuth and oxygen, used in medicine.

B. valerianas. See *Bismuthi valerianas*. A compound of bismuth and valerianic acid, used in medicine.

B. white. See *Bismuthi oxide, white*. A compound of bismuth and oxygen, used in medicine.

B. yellow. See *Bismuthi oxide, yellow*. A compound of bismuth and oxygen, used in medicine.

B. zinc. See *Bismuthi zinc*. A compound of bismuth and zinc, used in medicine.

B. zircon. See *Bismuthi zircon*. A compound of bismuth and zirconium, used in medicine.

BISMUTHIC ACID—BISTRATA.

mixed with three ounces of distilled water; when effervescence has ceased it is heated for ten minutes, decanted, and evaporated to two ounces; this being poured into a gallon of distilled water, a precipitate is formed, which is washed, collected, and dried at a temperature of 65-5° C. (150° F.) A white, heavy powder, in minute crystalline scales. It is blackened by hydrogen sulphide, and insoluble in water. Used in gastrodynia. Dose, 6-20 grains or more.

B. tannas. (*F. tannate de bismuth*; *G. Gerbsaureswismuth*.) Tannate of bismuth. Forty-four parts of subnitrate of bismuth are dissolved in equal parts of nitric acid and water, and poured into a solution of soda; the precipitate is washed, triturated with twenty parts of tannic acid mixed with water, strained, and dried with a moderate heat. It is a light yellow, tasteless powder, insoluble in water and alcohol. Used internally as an astringent in diarrhoea, and externally in gonorrhoea, leucorrhoea, and ophthalmia.

B. trinitras. Same as *B. subnitrates*.

B. valerianas. $C_2H_5O_2BiO$. A solution of oxide of bismuth in nitric acid mixed with sodium valerianate; a precipitate forms, which is washed and dried. Used in gastrodynia and neuralgia. Dose, 1-2 grains, three times a day.

Bismuthic acid. $HBiO_3$. A red powder, obtained by passing a current of chlorine through a boiling solution of caustic potash, holding bismuth trioxide in suspension.

Bismuthides. (*F. bismuthides*.) Name by C. Pauquy for a family of ponderable bodies; by Beudant for a family of minerals, having bismuth for their type.

Bismuthous nitrate. A synonym of *Bismuth trinitrate*.

B. oxide. A synonym of *Bismuth trioxide*.

Bismuthum. The metal *Bismuth*.

B. album. The *Bismuthi subnitrates*.

B. carbonicum. The *Bismuthi carbonas*.

B. citricum ammoniacale. The *Liquor bismuthi et ammoniac citratis*.

B. depurgatum. Belg. Ph. (*L. depurgo*, to cleanse.) The same as *B. purificatum*.

B. hydroneuricum. A synonym of *Bismuthi subnitrates*.

B. hydronitricum. The *Bismuthi subnitrates*.

B. hydro-oxidatum. See *Bismuth oxyhydrate*.

B. lacticum. See *Bismuth lactate*.

B. nitricum. The *Bismuthi subnitrates*.

B. nitricum basicum. The *Bismuthi subnitrates*.

B. oxidatum. Same as *Bismuthi oxidum*.

B. oxydatum album. (*L. albus*, white.) The *Bismuthi subnitrates*.

B. purificatum. B. Ph. (*L. purificatus*, from *purifico*, to make clean.) Bismuth, ten ounces, is fused with an ounce of potassium nitrate for fifteen minutes; the slag from the surface is removed and another ounce of potassium nitrate added to the metal, and again fused. Used in making carbonate and subnitrate of bismuth.

B. repurgatum. Fr. Codex. (*L. repurgo*, to cleanse again.) Same as *B. purificatum*.

B. subcarbonicum. See *Bismuthi subcarbonas*.

B. subnitricum. The *Bismuthi subnitrates*.

B. tannicum. See *Bismuthi tannas*.

B. valerianicum. The *Bismuthi valerianas*.

Bismutum. The same as *Bismuthum*.

Bison. (*Biœuv*.) The *Bos bison*; its flesh is said to be better than ox-beef; the hump is highly esteemed.

Bispenil. (*L. bis*, twice; *penis*. *F. bispinien*.) Applied by Blainville to an Order of the *Reptilia*, the males of which have the penis double.

Bispinose. (*L. bis*; *spina*, a spine.) Having two spines.

Bispirous. (*L. bis*; *spiro*, to breathe.) Having two outlets, as of a wound.

Bissa-bol. A gum, resembling myrrh, imported from Arabia. It is of African origin, but its source is unknown.

Bissectus. (*L. bis*, twice; *seco*, to cut. *F. biséqué*.) Applied to an insect, the head and trunk of which are not separated by a suture, so that the body seems formed of two pieces only, as the *Aranea*.

Bissum. The *Hydrangea arborescens*.

Bistort. (*L. bis*, twice, or double; *torgueo*, to twist, from the appearance of its roots. *F. bistorte*; *L. and S. bistorta*; *G. Natterwurcz*, *Schlängencurcz*.) The root of the *Polygonum bistorta*. Used as an astringent. See *Bistorta*.

B. officinal. The *Polygonum bistorta*.

B. virginian. The *Polygonum virginianum*.

Bistorta. (*F. bistorte*, *couleuvreine*; *L. serpentina*; *G. Wiesenknöterich*, *Natterwurcz*.) Bistort, snake-weed; the rhizome of *Polygonum bistorta*. It is flattened on one side, rounded on the other, bent twice on itself, partly annulated with leaf-scars, and marked with rootlet-scars; blackish brown on the outside, brownish red within, with a large central pith. It contains tannin and some gallic acid. Used in powder, decoction, or extract, as an astringent in diarrhoea, leucorrhoea, hæmorrhage, and relaxations of mucous membrane.

Bistouri caché. (*F. bistouri*; *cacher*, to hide.) A name for an old French bistoury, the blade of which is contained in a sheath, and starts out on pressing a spring. It was used in the operations for stone in the bladder and hernia.

Bistoury. (*F. bistouri*, an incision-knife; from *Pistorium*, now *Pistoja*, a town once celebrated for the manufacture of such instruments. *L. bistori*; *S. bisturi*; *G. Bisturi*, *Einschnittmesser*, *Ritzmesser*.) A small knife, or scalpel, for surgical purposes; there are three forms in which it is made, the straight, the curved, and probe-pointed, which is also curved.

B. curved. (*F. bistouri à tranchant concave*; *L. bistori falcato*; *G. concave-schneidiges*, or *krummes Bistouri*.) A sharp or blunt-pointed bistoury, with a concave cutting edge.

B. probe-pointed. (*F. bistouri boutoné*; *L. bistori bottonato*, *amuso*, or *ottuso*; *G. köpfiges* or *geknöpftes Bistouri*.) A straight or curved narrow knife, the extremity of which ends in a knot or button. It has the advantage that it can be made to travel along a groove or sinus, without injuring the tissues.

B. straight. (*F. bistouri droit*; *L. bistori retto*; *G. Spitz*, or *Einstichmesser*.) A long, straight, narrow, and sharp-pointed knife.

Bistrata. (*L. bis*, twice; *stratum*, a

BISTRITZ—BITTER.

layer.) Term applied by Jäger to those mature animals and to those stages of development which present only two layers of blastides.

B. solida. (L. *solidus*, solid.) Those forms which present a layer of limiting cells (exoderm), and a solid mass of cells of a different kind within.

B. ca'va. (L. *cavus*, hollow.) Those forms which have a cavity in their interior surrounded by two layers of blastides, the outer one forming an exoderm, and the inner one an entoderm, as the gastrula of Hæckel.

Bistriz. Austria; near Olmütz. A whey cure place in a fair climate.

Bisul'cate. (L. *bis*, twice; *sulcus*, cleft. G. *zweispaltig*, *gespalten*.) Cloven-footed, as the ox.

Also, in Botany especially, two-grooved.

Bisul'phate. (L. *bis*, double; *sulphas*, a sulphate.) A salt of sulphuric acid, in which one atom only of hydrogen is replaced by a base.

Bisul'phide. A compound having two equivalents of sulphur to one of base.

B. of carbon. Same as Carbon disulphide.

Bisul'phite. (L. *bis*, double; *sulphis*, a sulphite.) A salt of sulphurous acid, in which one atom only of hydrogen is replaced by a base.

Bisul'phuret. A compound having two equivalents of sulphur to one of base.

Bisz'tra. Hungary; County Marmaros. An alkaline chalybeate water.

Bitartras. Bitartrate.

B. ka'licus. Potassium bitartrate.

B. potas'sious. Potassium bitartrate.

Bitar'trate. (L. *bis*; *tartras*, a tartrate.) A salt of tartaric acid, in which there are two atoms of acid to one of base; in other words, in which only one hydrogen radicle is replaced by a metal.

Biternate. (L. *biternatus*, from *bis*, twice; *terni*, three each. F. *biterné*; G. *doppeltgedreit*, *doppelt dreizählig*, *doppelt dreitheilig*.) Twice ternate, or doubly threefold, compound leaves, the common petiole of which bears three secondary petioles, on each of which are three leaflets.

Biterna'tisect. (L. *bis*; *terni*; *seco*, to cut. G. *doppelt dreischnittig*.) Doubly ternate; each half divided into three.

Bithynmal'ca. (Heb. *beten*, *bitni*, stomach; *malkah*, queen.) Old term, according to Dolaus, in *Encyclopæd. Med.* l. iii, c. i, 3 and 4, for a supposed peculiar active principle in the stomach, and presiding over chylification; also called *Gasteranax*.

Bithyn'ians. The inhabitants of Bithynia, in the north of Asia Minor. They are descended from the Thracians.

Bithynos. (Βιθυνός.) Old name for a plaster, described by Galen, de C. M. sec. Loc. ix, 3, and recommended as efficacious against dropsy; also, for a certain pastil or troch, de C. M. per Gen. v, 12, Gorræus.

Biting persicaria. The *Polygonum hydropiper*.

B. stone'crop. The *Sedum acre*.

Bitos de kis. An African synonym of *Prolocace*.

Bit loban. A preparation made by the Hindoos, being a white saline substance, called in the country *Tubanoon*, *Sacherloon*, and popularly *Khalu minue*, or black salt. It is impure sodium chloride mixed with a little iron sulphide, and is made by melting three parts of the salt of

Lake Samur, with one part of myrobalan. It has been long used in India, and applied to many purposes, to improve digestion, and as specific in obstructions of the liver and spleen, the results of malarious poisoning, in paralysis, cutaneous diseases, worms, rheumatism; in short, in all chronic affections of man and beast.

Bit-noben. The *Bit-loban*.

Bit'ten. (Eng. part. of *bite*, from Sax. *bitan*. G. *geschnitten*.) Having irregularly-shaped serrations, as in certain leaves.

Bit'ter. (Sax. *biter*, from *bitan*, to bite. L. *amarus*; Gr. *πικρός*; F. *amer*; I. *amaro*; S. *amargo*; G. *bitter*.) A well-known taste.

B. al'mond. The *Amygdala communis*, var. *amara*. See *Amygdala amara*.

B. apple. The plant and the fruit of the *Citrullus colocynthis*.

B. ash. The *Pieræna excelsa*.

B. bark. The *Pinckneya pubens*.

B. blain. The *Vandellia diffusa*.

B. bloom. The *Chironia angularis*.

B. bush. The *Eupatorium nervosum*.

B. can'dyft. The *Iberis amara*.

B. cassa'va. The *Manihot utilisima*.

B. cress. The *Cardamine amara*.

B. cu'cumber. Same as *B. apple*.

B. cup. A cup made of quassia wood. Used for the administration of the drug by putting water into it, and drinking it in a short time when it has dissolved some of the bitter principle.

B. earth. A synonym of *Magnesia*.

B. gourd. Same as *B. apple*.

B. grass. The *Aletris farinosa*.

B., ho'ly. The *Puleis aloes cum canella*.

B. king. The *Soulamea amara*.

B. kino'va. A synonym of *Kinovic acid*.

B. or'ange. The *Citrus vulgaris*.

B. parei'ra. The *Abuta amara*.

B. poly'ala. The *Polygala rubella*.

B. principle. A neutral substance of indefinite chemical constitution, varying in composition in different plants, on the presence of which the bitter quality of certain vegetables is said to depend.

B. purg'ing salt. A synonym of *Magnesia sulphas*.

B. purple wil'low. The *Salix purpurea*.

B. quino'a. A term applied to the seeds with the husks of the *Chenopodium quinoa*.

B. red'berry. The *Cornus florida*.

B. root. The *Apocynum androsæmifolium*, the *Gentiana catesbæi*, and the *Menyanthes verna*.

B. simaru'ba. The bark of the root of *Simaruba officinalis*.

B. sorin'jan. See *Sorinjan tulk*.

B. sweet. The *Solanum dulcamara*.

B. sweet, false. The *Celastrus scandens*.

B. sweet night'shade. The *Solanum dulcamara*.

B. sweet vine. The *Solanum dulcamara*.

B. tincture. The *Tinctura amara*.

B. vetch. The *Ervum ervilia*; also, the *Orobis tuberosus*.

B. vetch, black. The *Orobis niger*.

B. vetch, wood. The *Orobis sylvestris*.

B. wa'ters. A term applied to those mineral waters which contain considerable amounts of sodium or magnesium sulphate.

B., Wel'ter's. (F. *amer de Weller*.) *Pierie acid*.

B. wine of i'ron. See *Iron, bitter wine of*.

BITTERA FEBRIFUGA—BIXACEÆ.

B. winter cross. The *Barbarea vulgaris*.
Bitte'ra febrifu'ga. (L. *febris*, fever; *fugio*, to put to flight.) The *Picrena excelsa*.

Bitterin. A synonym of *Quassia*.

Bittern. The water remaining after the crystallisation of common salt from sea-water, or from the water of salt springs, and containing some sodium chloride and large quantities of potassium, calcium, and magnesium chloride and sulphate, along with some iodine and bromine. Called also, mother water and mother lye.

Bitterness. (Same etymon as *Bitter*. L. *amaritudo*; F. *amertume*; I. *amarezza*; G. *Bitterkeit*.) A bitter quality of a thing as recognised by the taste.

Bitters. Term applied to several medicinal substances, expressing their quality as particularly perceptible to the taste, and which are further distinguished into the aromatic, pure, and styptic bitters.

B., colum'bo. Tinctura calumbæ.

B., spir'it. Tinctura gentiane.

B., wine. Vinum gentianæ compositum.

Bittersweet. The *Solanum dulcamara*; also, a variety of the *Pyrus malus*.

Bitterweed. The *Ambrosia trifida*.

Bitterwood tree. The *Picrena excelsa*.

Bitterwort. (G. *Bitterwurz*.) The gentian root.

Bitto's. A disease in which the chief symptom is acute pain in the anus. (Dunglison.)

Bitumen. (L. *bitumen*. Gr. ἀσφαλτος; F. *bitume*; I. *bitume*; S. *betun*; G. *Erdpech*, *Erdharz*, *Bergtheer*.) A generic name for certain mineral inflammable substances which have different names. Bitumens are solid, semi-solid, or liquid; very combustible, have when heated a peculiar smell, and are bitter to the taste and stimulating. Bitumens are of several kinds:—*Naphtha*, liquid and transparent; *Petroleum*, more oily; *Maltha*, or *Mineral tar*, blackish and of the consistence of honey; *Pissasphalte*, black and soft; *Asphalte*, black and solid. *Amber* is classed among bitumens by some.

B. barbadens'e. Barbadoes tar.

B. fagi. (L. *fagus*, a beech tree.) See *Pis fagi liquida*.

B., glu'tinous. See *Pissasphalte*.

B. juda'icum. (L. *judaicus*, Jewish.) Same as *Asphalt*.

B. liq'uidum. Liquid bitumen; petroleum.

B. of Barba'does. See *Barbadoes tar*.

B. of Jude'a. Same as *Asphalte*.

B. of Malta. Same as *Pissasphalte*.

B., salt of. Same as *Bit-loban*.

B., sol'id. Same as *Asphalte*.

Bituminat'ed. (L. *bitumen*.) Charged with bitumen.

Bituminiferous. (L. *bitumen*; *fero*, to bear. F. *bituminifere*; G. *erdpechtragend*.) Impregnated with bitumen.

Bituminisa'tion. (L. *bitumen*.) Term for the transformation of organic matter into bitumen, as wood into coal, and the remains of vegetable substances into peat.

Bitu'minised. (Same etymon.) That which is changed into bitumen.

Bituminous. (L. *bituminosus*. F. *bitumineux*; I. and S. *bituminoso*; G. *erdpechartig*.) Belonging to, or of the nature of, bitumen.

Biuret. C₂H₅N₃O₂. A substance formed

by heating urea to 150° C.—160° C. (302° F.—320° F.) It forms long, white, needle-shaped crystals. An aqueous solution of biuret in water, when a few drops of a solution of cupric sulphate, and then an excess of caustic soda, are added, becomes of a red colour, changing to violet, according to the quantity of copper.

Bivalence. (L. *bis*; *valco*, to have power.) The property possessed by some elements of replacing two atoms of hydrogen in a compound.

Bivalent. (Same etymon.) Possessing the property of *Bivalence*.

Bi'valve. (L. *bivalvis*, from *bis*, double, *valvæ*, the leaves of a door. F. *bivalve*; I. *bivalve*, *conchiglie*; G. *Zweiklappig*, *Zweischalig*.) Having two valves.

Bival'via. (Same etymon.) A synonym of the *Lamellibranchiata*, from being enclosed in a bivalve shell.

Bivalvulate. (L. *bis*; *valvula*, dim. of *valvæ*, the leaves of a door. F. *bivalvul*; G. *zweischalig*, *zweiklappig*.) Having two valvules.

B. an'thers. Those having two pores closed by valves.

Bivenate. (L. *bis*; *vena*, a vein. G. *zweiaderig*.) Having two veins or nervures.

Biventer. (L. *bis*, double; *venter*, the belly.) Double belly; the digastric muscle.

B. cervic'is. (L. *cervix*, the neck.) So called from its fleshy ends and tendinous middle. The part of the complexus muscle which arises by three or four slips from the transverse processes of as many upper dorsal vertebrae, and is inserted into the superior curved line of the occipital bone. It is supplied by the posterior branches of the cervical nerves from the first to the eighth.

B. mandibulæ. (L. *mandibula*, the lower jaw.) A synonym of the digastric muscle.

B. maxillæ. (L. *maxilla*, the jaw.) The digastric muscle.

B. maxillæ inferio'ris. (L. *maxilla*, the jaw; *inferior*, lower.) A synonym of the digastric muscle.

Biventral. (Same etymon.) Having two bellies.

B. lobe of cerebellum. See *Digastric lobe of cerebellum*.

Bivittate. (L. *bis*; *vitta*, a fillet, a band.) Having two vittæ, or furrows.

Bivium. (L. *bivium*, a place with two ways, or where two roads meet.) The two hinder ambulacra of Echinoderms.

Bivuto di Termini. Italy; near Palermo. A cold water, containing calcium and magnesium carbonate, calcium and sodium sulphate, and magnesium and sodium chloride.

Bixa. A Genus of the Nat. Order *Bixaceæ*.

B. america'na. The *Bixa orellana*.

B. orell'ana. (Mod. L. *orellana*, from *orleana*, belonging to Orleans. G. *orleanobaum*; Beng. and Hind. *Lutkun*; Hind. *Gau-purgee*; By. *Kisree*; Can. *Kuppa manhala*; Mal. *Korungoomunga*; Tam. *Kooragoomangul*; Tel. *Jafra*; Ceyl. *Kaha-gaha*.) The heart-leaved annatto tree. Hab. Hindostan and South America. The reddish pulp surrounding the seeds furnishes *Annotto*. The seeds are cordial, astringent, and febrifuge.

Bixa'ceæ. Small trees or shrubs. Leaves alternate, exstipulate; sepals 4—7; petals hypogynous, distinct, equal in number to the sepals, sometimes absent; stamens hypogynous, equal to, or some multiple of, stamens; ovary one or more

BIXADS—BLACK.

celled; placentas two or more, parietal; fruit one celled, with a thin pulp; seeds many; albumen fleshy-oily; embryo straight, axial; radicle turned to the hilum. Also called *Flacourtiaceae*.

Bix'ads. The plants of the Nat. Order *Bizaceae*.

Bix'ees. A Tribe of the Nat. Order *Bizaceae*, having the style simple and the fruit splitting.

Bix'in. $C_{15}H_{15}O_4$, Stein; or $C_{20}H_{25}O_5$, Eng. A bright red colouring matter found in annatto, the product of *Bixa orellana*. It is easily soluble in alkalies, sparingly in cold alcohol and ether; sulphuric acid turns it blue, nitric acid produces a yellow substance of musky smell.

Bixin'ees. Same as *Bizaceae*.

Blabero'pus. (Βλαβηρός, hurtful; δρός, juice.) A Genus of the Nat. Order *Apocynaceae*, separated by A. de Candolle from the Genus *Alstonia*; it is not recognised by all botanists. The plants have a milky irritant juice, which is used to poison arrows with, and is fatal to man.

Blac'cies. A term by Rhazes for measles.

Blach'mal. Alchemical term for a substance formed by pouring a mixture of several fused metals upon sulphur. (Johnson.)

Blac'ia. (Βλακία, laziness.) A term for debility.

Black. (Sax. *blac*. L. *niger*; F. *noir*; I. and S. *negro*; G. *schwarz*.) The appearance of an object from which no light is reflected, or through which no light is transmitted.

B. al'der. The *Alnus serrulata*, the *Rhamnus frangula*, and also the *Prinos verticillatus*.

B. an'timony. Sulphuret of antimony, or *Antimonious sulphide*.

B. ash. A synonym of *British barilla*.

B. assi'ze. (Old F. *assis*, an assembly of judges; from L. *assideo*, to sit at, or near.) The assizes at Oxford in July, 1577, at which jail or typhus fever was so fatal to those who were present.

B. bals'am. A synonym of *Balsam of Peru*.

B. basil'icon. The *Unguentum basilicum nigrum*.

B. bear'berry. The *Arctostaphylos alpina*.

B. bile. Same as *Atrabilis*.

B. birch. The *Betula lenta*.

B. bird-weed. The *Polygonum convolvulus*.

B. bit'ter vetch. The *Orobis niger*.

B. blood. Venous blood.

B. bot'tle. The *Infusum sennæ compositum*.

B. boy gum. The red resin of New Holland. An exudation from the *Xanthorrhæa hastilis* or *X. arborea*.

B. boy res'in. Same as *B. boy gum*.

B. bry'ony. The *Tamus communis*.

B. bul'ly. The wood of the *Achras sapota*.

B. caca'o. The *Colecasia esculenta*.

B. can'cer. A synonym of *Melanosis*.

B. can'tharis. The *Cantharis atrata*.

B. car'away seed. The fruit of *Carum nigrum*. Used in India as a condiment.

B. catechu. See *Catechu nigrum*.

B. champi'gnon. The *Boletus aërius*.

B. cincho'na. The *Cinchona condaminia candellii*.

B. cock. The *Tetrao tetrix*, or black grouse. Used as food.

B. co'hosh. The *Actæa* or *Cimicifuga racemosa*.

B. coral. The *Corallium nigrum*, or *Gorgonia antipathes*.

B. cum'min. The seeds of the *Nigella sativa*, the small fennel flower, or the allied species. It is the *μελάνθιον* of Hippocrates and Dioscorides.

B. cur'rant. The *Ribes nigrum*.

B. dam'mar of Mal'abar. (Hind. *Dhoop Googul*.) An aromatic and, when fresh, yellow resin, obtained from *Canarium strictum*.

B. damp. A synonym of *Methane*.

B. death. The *Pestis nigra*, or black plague.

B. disea'se. A synonym of *Melana*.

B. dog. A synonym of *Hypochondriasis*.

B. dog'wood. The wood of *Rhamnus frangula*.

B. dose. The *Mistura sennæ composita*.

B. draught. A solution of sulphate of magnesia, or Epsom salts, in an infusion of senna, or *Mistura sennæ composita*.

B. drink. A decoction of the toasted leaves of *Ilex vomitoria*. Used by Indian tribes at the opening of their councils; it acts as an emetic.

B. drop. (F. *gouttes noires anglaises*; I. *goccia nera*; G. *schwarze Tropfen*.) Opium $\frac{1}{2}$ lb., verjuice 3 pints, nutmegs $\frac{1}{2}$ ounce, saffron $\frac{1}{2}$ ounce, boil, then add sugar $\frac{1}{2}$ lb., yeast 2 drachms; keep warm for six weeks, and decant.

B. Egypt'ian bean. The *Lablab vulgaris*.

B. elm. The *Ulmus effusa*.

B. eye. Echemosis of the eyelids and surrounding structures from a blow.

B. flux. See *Flux, black*.

B. gen'tian. The *Scutellaria libanotis*.

B. gin'ger. The root of *Zingiber officinale* when scalded without being scraped.

B. gram. (Sansk. *Mudga parvi*; Beng. *Krishna-moog*, *Kala moog*; Tam. *Karuppayara*; Tel. *Nella pessara*; Arab. *Morah*; Pers. *Benoomash*.) The seed of *Phaseolus Max*. The hairy-podded kidney bean.

B. grouse. The *Tetrao tetrix*.

B. haw. The *Viburnum prunifolium*.

B. hel'lebo're. The *Helleborus niger*.

B. horse'hound. The *Ballota nigra*.

B. indura'tion. See *Induration of lungs*, black.

B. ipecacuan'ha. The *Psychotria emetica*.

B., i'vory. Animal charcoal from charred ivory.

B. Jack. Blende.

B. jaun'dice. (F. *mélasictère*; G. *schwarze Gelbsucht*.) A name for *Icterus*, when the disease being severe or of long duration, the colour becomes dark.

B. jet. Sulphuret of zinc, found in the mines. See *Blende*.

B., lamp. Charcoal obtained by the burning of resinous or oily substances.

B. lead. Same as *Plumbago*.

B. leg. A synonym of *Purpura*, when of a severe character, and accompanied by discolouration. It is said to be caused by eating salt meat, having an excess of saltpetre.

B. lep'rosy. A variety of *L. prs.* the *L. nigricans*, in which the colour of the patches is dark and livid.

B. lion. A term given by the British

BLACK, JOSEPH—BLADDER.

troops to a phagedenic chancre from which they suffered when in Portugal.

B. magnesia. A synonym of *Manganese dioxide*.

B. maidenhair. The *Asplenium adiantum-nigrum*.

B. mas'terwort. The *Astrantia major*.

B. meas'les. See *Rubeola nigra*.

B. med'ick. The *Medicago lupulina*.

B. mercur'ial lot'ion. Black wash, *Lotio hydrargyri nigra*, B. Ph.

B. mul'berry. The *Morus nigra*.

B. mullein. The *Verbascum nigrum*.

B. mus'tard. The *Sinapis nigra*.

B. myrob'alana. The fruit of *Terminalia chebula* gathered before it is ripe.

B. nightshade. The *Solanum nigrum*.

B. non'such. The *Medicago lupulina*.

B. oak. The *Quercus tinctoria*.

B. oak bark. The bark of *Quercus tinctoria*.

B. oxide of cop'per. The *Copper mon-oxide*.

B. oxide of iron. Ferroso-ferric oxide. See *Iron, magnetic oxide of*.

B. oxide of man'ganes. The *Manganese dioxide*.

B. oxide of mer'cury. The *Mercurous oxide*.

B. pep'per. The *Piper nigrum*.

B. pep'per vine. The *Piper nigrum*.

B. pest'iference. The *Pestis nigra*.

B. phth'isis. A synonym of *Miners' asthma*.

B. pitch. See *Pix nigra*.

B. plague. The *Pestis nigra*.

B. peck. The *Hæmorrhagic smallpox*.

B. pep'lar. The *Populus nigra*.

B. pep'py. A variety of *Papaver somniferum*.

B. ram'thorn. The *Rhamnus lycoides*.

B. root. The *Aletris farinosa*, the *Pterocaulon pycnostachyum*, and also the *Leptandria purpurea*.

B. salts. The black mass obtained during the manufacture of potash when the lixiviated salts have been evaporated.

B. seed'ed dol'ichos. (Bomb. Simbi, *Nisepa*, Bullar, *Saim-ke-pullea*, *Walpapree*; Tam. *Mutekeh*; Pers. *Lobiya*; Egypt. *Liblah*.) The seed of the *Labiab vulgaris*. A kind of lentil, widely cultivated in India.

B. snake-root. The *Actæa racemosa*, or rich-weed.

B. snake'weed. The *Asarum virginianum*.

B. spitt. The expectoration of mucus or other material, tinged with grey or black from the inhalation of air charged with minute carbonaceous particles, in the form of smoke or coal dust in a mine.

B. spleen'wort. The *Asplenium adiantum-nigrum*.

B. spruce. The *Abies nigra*.

B. stalk'ed spleen'wort. The *Asplenium adiantum-nigrum*.

B. sug'ar. The extract of liquorice.

B. sulphur. Same as *Sulphur virum*.

B. sulphuret of mer'cury. The *Mercurous sulphide*.

B. tam'arinds. Tamarinds with the skin removed and salt added to preserve the pulp.

B. tang. The *Fucus vesiculosus*.

B. thorn. The *Prunus spinosa*.

B. thrush. Aphtha accompanied by great debility and black sordes.

B. tur'p. The *Leontice leontopetalum*.

B. tur'peth. A synonym of *Mercurous oxide*.

B. ur'ine. Urine assuming a black appearance from blood, or a large quantity of bile, or, according to Dr. Marcet, from melanic acid.

B. var'nish of Sy'net. A resinous juice, obtained from the *Semecarpus anacardium*.

B. vom'it. The dark coloured matter, like coffee grounds, vomited in the last stage of yellow fever; also, applied to the fever itself.

B. wal'nut. The *Juglans nigra*.

B. wash. Calomel 30 grains, lime water 10 ounces; mix. Also called grey lotion.

B. wa'ter. The *Pyrosis*, or water-brash.

B. wax. An uncertain product, imported from India and the Pacific Islands.

B. whortleberry. The fruit of *Vaccinium myrtillus*.

B. wood. The wood of the *Dalbergia latifolia* and *D. sisoides*.

B. worts. The *Vaccinium myrtillus*.

Black, Joseph. A celebrated English chemist, born at Bordeaux in 1723, died in Edinburgh 1799. He discovered the presence of fixed air or carbonic acid in the carbonated alkalies. His theory of latent heat, and his other researches, changed the whole aspect of chemical enquiry.

Blackberry. The *Rubus fruticosus*.

B., American. The *Rubus villosus*.

B., creep'ing. The *Rubus canadensis*.

B., low. The *Rubus canadensis*.

Blackcock. The *Tetrao tetrix*.

Blackfeet Indians. (G. *Schwarzfüsse*.) A north-western tribe of the Algonkins, inhabiting the district between 46° and 52° N. lat. on the Saskatchewan, extending to the Missouri and the Yellow Stone River.

Black-Jack. The Derbyshire miner's term for *blende*, or zinc sulphide.

Blackstonia. The yellow centaury.

Blactera. Cerussa, or plumbic carbonate. (Ruland.)

Blact'is. Rubeola or measles.

Blad'da. A term for buttermilk.

Blad'der. (Sax. *blædr*, from *blasen*, to blow.) A membranous bag. The urinary bladder.

B., air. See *Air bladder*.

B., cal'culus of. (G. *Blasenstein*.) See *Calculus, urinary*.

B. camp'ion. The *Silene inflata*. The young shoots have a combined flavour of asparagus and peas.

B., catarrh' of. (G. *Blasenkatarrh*.) Same as *Cystitis, chronic*.

B., colum'nar. (L. *columna*, a pillar.) Same as *B., fasciculatæ*.

B., contract'ile. A vesicular organ of the Rotifers lying close to the cloaca, which contracts and dilates rhythmically. It gives off the two respiratory tubes which run along the sides of the body. The functions of the organ are not surely known, but Mr. Gosse believes that the respiratory tubes represent the kidneys, and that the contractile sac is a true urinary bladder.

B. dopk. The *Rumex vesicarius*, which in India is eaten as a garnish.

B., ex'trophy of. (Εξ, out; στρίφω, to turn.) Same as *B., extroversion of*.

B., extroversion of. (L. *extra*, on the

BLADDERED—BLÆSUS.

outside; *erect*, to turn. *G. Blasenpalte*.) An arrest of development of the lower part of the abdominal wall, with deficiency of the anterior wall of the bladder, so that its posterior wall protrudes as a red, papillated tumour. The umbilicus is usually wanting. It is most common in males in whom there is generally also epispadias.

B., fasciculated. (*L. fasciculus*, a small bundle.) A condition of rugosity of the inner surface of the urinary bladder depending on hypertrophy of bundles of muscular fibre, between which calculi occasionally become impacted.

B.-fern, brittle. The *Cystopteris fragilis*.

B.-fern, toothed. The *Cystopteris fragilis*, var. *dentata*.

B. fu'cus. The *Fucus vesiculosus*.

B., gall. (*G. Gallenblase*.) See *Gall-bladder*.

B. herb. The *Physalis alkekengi*.

B., hia'tus of, congen'ital. (*L. hiatus*, an opening; *congenitus*, born at the same time.) Same as *B., extroversion of*.

B., inflammation of. (*G. Blasenentzündung*.) See *Cystitis*.

B. in the throat. Old American term for *cynanche*.

B., ir'ritable. A condition in which there is a frequent desire to pass urine, generally with more or less pain.

B. nut. The *Staphylea pinnata*.

B.-nut tree. The *Staphylea trifolia*.

B.-nuts. The Nat. Order *Staphyleaceae*.

B.-pod'ded lobe'lia. The *Lobelia inflata*.

B., sac'culated. (*L. sacculus*, a little sac.) A condition in which the walls of the bladder protrude in the form of pouches between the hypertrophied bundles of muscular fibres, so that the walls there consist usually of the mucous and peritoneal coats only. The sacculi are most frequent on the posterior wall and, retaining urine till it decomposes, originate cystitis, and sometimes ulceration of the mucous membrane, and peritoneal inflammation and adhesion on the other side; they may also enclose a calculus. The pouches are produced by over-distension of the walls of the bladder, in consequence of obstruction to the escape of the urine.

B. sen'na. The *Colutea arborescens*.

B., swim. (*G. Schwimmblass*.) A synonym of *Air-bladder*.

B., u'ri'ary. (*F. vessie urinaire*; *I. vesica orinalis*; *S. vesiga*; *G. Harnblase*.) The bladder is a bag composed of unstriated muscular tissue, the upper part of which only is covered with peritoneum. It is situated in the fore part of the pelvis, immediately behind the ossa pubis and in front of the rectum, in the male, and of the vagina and uterus in the female. It is of round or oval form, holds from two to three pints (500—600 cubic centim.), and when distended rises into the abdominal cavity. The upper part is named the vertex, and presents the remains of the allantois, which is termed the urachus. The middle part is the body, and the lower part is the fundus, which is slightly prolonged in front to form the neck, and is in relation with the prostate gland. The bladder has three openings into it. Two are those of the ureters, which, after a course of a third of an inch through the walls, open by a valve-like aperture, 2 mm. in length, 14 mm. distant from each other, and 18 mm. behind the third opening,

which is that of the urethra. The triangular space bounded by the three openings is named the trigonum vesicale, and the mucous membrane is here smooth. The muscular layers of the bladder are an external longitudinal layer, a middle layer composed partly of circular and partly of oblique fibres, and a thin internal longitudinal layer. The outer layer constitutes the detrusor urinae. It is continuous anteriorly and below with the musculus pubo-vesicalis or levator prostatae, and behind with the musculus recto-vesicalis. The middle circular layer becomes thicker below, and forms the sphincter vesicae. The mucous membrane is pinkish-white, thick, and in the contracted condition presents numerous rugae, which disappear when it is distended. It has small crypts and some acinous glands. The bladder is supplied by three sets of arteries—the superior vesical, arising from the obliterated umbilical; the posterior, from the middle haemorrhoidal, the uterine, and vaginal; and the anterior, from the internal pudic, and sometimes from the obturator. The nerves come from the hypogastric plexus, and primarily from the lumbar region of the spinal cord.

B. worm. (*G. Blasenwurm*.) The *Cysticercus*.

B. wrack. The *Fucus vesiculosus*.

Blad'dered. (Same etymon.) Having bladders or vesicles.

B. fu'cus. The *Fucus vesiculosus*.

Blad'dery. (Same etymon.) Full of bladders or vesicles. Applied in Botany to structures which are thin and inflated.

B. fe'ver. A synonym of *Pemphigus*.

Blade. (*Sax. blad*, a leaf.) The expanded portion or lamina of a leaf, or of a petal.

Blade'bone. The scapula.

Blad'och. A term for butter-milk.

Blad'on springs. United States. Mineral springs in Alabama, about 85 miles from Mobile, which are said to be similar in composition to those of Seltzer, Spa, and Aix-la-Chapelle. (Dunghison.)

Blad'um. A low Latin term for corn, especially wheat.

Blæ'berry. The *Vaccinium myrtillus*.

Blæs, Gerald. A Dutch physician, usually known as Blasius, who died in 1682. He was a great pathologist and comparative anatomist. He described very accurately the structure of the lungs, demonstrated the existence of valves in the lacteals, and wrote many works.

Blæs'itas. (*Βλαῖστός*, one with distorted legs; crooked. *F. blæsté*; *G. Lispeln*.) Term for the defect of speech named stuttering or stammering, according to some authors; but more properly it signifies that defect of speech which consists in substituting a soft for a harder consonant. See *Psellismus*.

Blæsop'odes. (*Βλαῖστός*, bandy-legged; *πούς*, a foot.) A synonym of *Talipes varus*.

Blæs'opus. (Same etymon.) Having outward-bending feet. A synonym of *Talipes varus*.

Blæs'otes. (*Βλαῖστότης*. *F. blæstets*.) Crookedness of the legs.

Blæs'us. (*Βλαῖστός*, having distorted limbs.) Having a distortion of the limbs, especially an outward bend of the legs; also, an angular curvature of the spine; also, a paralytic person, and one who stammers in his speech.

Also, a synonym of Good's genus *Euphlypsa*.

BLAFARDS—BLASTIDE.

Blafards. The name given to the Albino Indians of the Isthmus of Panama.

Blain. (Sax. *blagen*.) A blister, pustule, or boil.

Blainville, Henri Marie Ducrotat de. A French naturalist, born at Dieppe 1777, died 1850.

Bl's classification of animals. Subkingdom I. Artiomorpha. Type 1. Osteozoa, containing all vertebrates. Type 2. Entomozoa, containing Arthropods and some Molluscs. Type 3. Malacozoa, containing some Molluscs. Subkingdom II. Actinomorpha, with the Type 4, containing Actinozoa, Polyps, and Zoophytes. Subkingdom III. Heteromorpha, with Type 5, Amorphozoa, including the sponges.

Blakea parasitica. (*L. parasiticus*, parasitical.) Nat. Order Melastomaceae. A plant indigenous in Guiana, yielding a red dye.

Blanca. (F. *blanc*, white.) Cerussa, or plumbic carbonate. (Ruland.)

Also, a medicine described by Nicolaus, in *Antidotaria*, which was supposed to purge the body of the phlegmatic humours; it was formerly of three kinds, the great, the less, and the middle; consisting of turpentine, fetid gums, euphorbium, colocynth, antimony, and many aromatics.

B. mulierum. (L. *mulier*, a woman.) Leucorrhœa, or the whites.

Blancard's pills. The *Pilula ferri iodidi*.

Blanch. (F. *blanchir*, to whiten, from *blanc*, white; Teuton. *blank*, white, shining. I. *blanchire*, *far impallidire*; G. *weiss machen*, *bleichen*.) To make white.

Blanch'ed. (Same etymon.) Made white.

B. almonds. Almonds deprived of their outer skin, by soaking for a short time in hot water, and then peeling it off.

Blanch'ing. (Same etymon. F. *blanchiment*; G. *bleichen*.) Whitening; making white.

Applied (G. *Weissieden*) to the purifying or whitening of metal.

Also, see *Etiolation*.

B. of the hair. See *Canities*.

Blanchinin. An alkaloid discovered by N. Mill in the *China bianca* (*Cinchona macrocarpa*).

Blanchon oriba'sii. The *Aspidium filix-mas*.

Blanc-rai'sin. The same as *Blanc rhæsis*.

Blanc-rhæ'is. (F. *blanc*, white; *Rhazes*, an Arabian physician.) An ointment composed of white lead, white wax, and olive oil.

Blanc. (L. *blandus*, agreeable. F. *doux*; I. *dolce*, *blando*; G. *mild*.) Mild, soft, unirritating. Applied to soothing medicines and applications, and to unstimulating food.

Blankenburg. Germany; not far from Weimar. A pine-leaf bath used in skin diseases, nervous diseases, chronic bronchial catarrh, bronchiectasia, and the later stages of hooping-cough.

Blanket. (F. *blanchet*, dim. of *blanc*, white.) A woollen covering, originally white.

B. bath. The packing of a person in a hot and dry blanket for the purpose of inducing perspiration.

Blanks. A popular name for epileptic vertigo.

Blaps. A Genus of the Family *Pimeliidae*, Group *Heteromera*, Order *Coleoptera*.

B. mortisa'ga. (L. *mors*, death; *sagas*, predicting.) A species the larva of which has several times been found as a human parasite.

B. sulcata. (L. *sulcatus*, furrowed.) A species eaten by Egyptian women in order that they may grow fat and bear children; it is also applied in earache and bites of scorpions.

Blas. An unmeaning term first applied to the local and alterative movements of the stars; then, in imitation, it was used in reference to the same in men and brutes. Those who are curious to pursue the absurdity may consult Van Helmont's 'Blas Humanum' and 'Blas Meteoron.'

B. alterativum. (L. *alter*, another.) Plastic force.

Blasius. See *Blass*.

B's ointment. Oxide of manganese one part, lard four parts. Used in scabies.

Blast. (Sax. *blast*.) A puff of wind. A sudden attack of a disease, popularly believed to be produced by some poison or miasm in the air.

Blastæ'a. A synonym of *Blastoderm*.

Blast'e. (Βλάστη, increase. G. *Keim*, *Spross*.) A bud, a germ.

Blastema. (Βλάστημα, increase; from *βλάσταιναι*, to bud.) Term used by Hippocrates, *de Uter. l. x. v. 3*, for any foul or morbid humour given out by the blood-vessels on the surface of the body, or of a particular organ, causing pustules, crusts, or other diseases to arise.

Also (F. *blastème*; I. *blastema*; G. *Blastem*, *Keimstoff*, *Wurzelkeim*.) The embryo of plants, including the radicle, the plumule, and the part of the axis to which the cotyledons are attached.

The elementary basis of any vegetable structure, organ, or part of an organ, is also included under this term.

In Physiology, the word had a special signification, but it is now little used. It signified the pabulum of the structures; that special nutrient element brought to each organ by the blood-vessels which is fitted for assimilation into its structure, and which, in the lowest forms of life, makes up the whole substance of the body. A further statement is to be found under the word *Protoplasm*. See also, *Sarcodæ*, *Cytoplasm*, and *Bioplasm*.

B. dentis. (L. *dens*, a tooth. G. *Zahnkeim*, *Zahnkern*.) The pulp of the tooth.

B. pil'i. (L. *pilus*, a hair.) The papilla of the hair-follicle.

B. subperioste'al. (F. *blastème sous-périoste'al*, *couché ostéogène*.) A supposed protoplasmic layer, under the periosteum of a developing bone, in which ossification takes place, so as to increase the thickness of the bone.

Blastem'al. (Same etymon.) Of, or belonging to, *Blastema*.

Blastematic. (Same etymon.) Relating to, or proceeding from, *blastema*.

B. mass. A name given by some embryologists to organs still in a state of imperfect development.

Blaste'is. (Βλάστησις, a budding, growth.) A term used in the same sense as *Blastema*.

Also (F. *blastèse*), a name by Wallroth for the development of lichens.

Blastide. (Βλαστής, a sprout.) The clear space in each segment of a dividing impregnated ovum which precedes the appearance of a nucleus.

BLASTING—BLASTOSPHERE.

Blasting. (Sax. *blast*, blowing.) The blowing up of rocks.

B. cell. A synonym of *Nitro-glycerin*.

Blastia. (Βλαστός, a sprout; *lós*, poison. G. *Keimgift*.) A term for contagion by means of germs.

Blastocardia. (Βλαστός, a sprout, a shoot; *καρδία*, the heart. F. *blastocardie*; G. *Keimhern*, *Keimstock*.) A term for the *Germinal spot*.

Blastocarpous. (Βλαστός, a sprout; *καρπός*, fruit. F. *blastocarpe*; G. *sprossfruchtig*.) A seed which germinates and begins to be developed before escaping from the pericarp.

Blastocoele. (Βλαστός, a sprout; *κύλις*, a spot. F. *blastocoele*; G. *Keimstock*.) Term for the *germinal spot*.

Blastocheime. (Βλαστός; *δχημα*, that which bears.) A term applied to those Medusæ in which a generative body is developed in the radiating canals.

Blastochyle. (Βλαστός, a sprout; *χῦλος*, juice. F. *blastochyle*; G. *Keimfruchtigkeit*, *Keimsaft*.) The mucilaginous, colourless, homogeneous, nutritive fluid, which occupies the embryonal sac of the ovule of plants.

Also, the fluid contained in the vesicular blastoderm of mammals.

Blastocoele. (Βλαστός; *κοίλος*, hollow.) The central cavity which gradually forms in the morula, or the ovum, after segmentation.

Blastocolla. (Βλαστός, a bud; *κόλλα*, glue.) The gummy substance which coats the buds of certain plants, as those of the horse-chestnut.

Blastocyst. (Βλαστός; *κύστις*, the bladder, a bag.) A term for the *Germinal vesicle*.

Also, a synonym of *Sporocyst*.

Blastocystinx. (Βλαστός; *κύστις*, a little bladder, dim. of *κύστις*.) A term for the *Germinal vesicle*.

Blastoderm. (Βλαστός, a sprout; *δέρμα*, the skin. F. *blastoderm*; G. *Keimhaut*.) A membrane contained in the impregnated living ovum, produced by segmentation, and forming the rudiment of a new animal. In birds it is a discoidal double layer of cells produced by the segmentation of the cicatrícula or germinal disc of the impregnated egg during its passage through the oviduct previously to incubation. The blastoderm of birds, or germinal area, is thin in the centre, the *transparent area*; thicker in the periphery, the *opaque area*. In mammals it is a stratum of cells, appearing after impregnation, surrounding the yolk, and hence called the *vesicular blastoderm*; this soon consists of two layers. The difference between transparent and opaque area does not exist, but there arises a thickened opaque disc, the *embryonal spot*. Soon a third layer makes its appearance, how is not quite certain, and the layers are now known as the *ectoderm*, or *epiblast*, on the outside; the *mesoderm*, or *mesoblast*, in the middle; and *endoderm*, or *hypoblast*, on the inside. From the *epiblast* proceed the epidermis and its appendages, the nervous centres, the principal parts of the eye, ear, and nose, one layer of the amnion and yolk-sac, and, in mammals, probably the outer layer of the permanent chorion. From the *hypoblast* proceed the epithelium of the alimentary canal, with the exception of the mouth, and of the ducts of its glands, the epithelium of the respiratory tract, and the deep layer of the

yolk-sac and allantois. From the *mesoblast* are formed, by an axial part, the rudiments of the protovertebral segments of the body; and by an upper lateral part, the walls of the body, bones, muscles, true skin, and peripheral nerves, the somato-plalear elements; and by a lower lateral part, the splanchno-plalear elements, as the walls of the alimentary canal, the heart and blood, the parenchyma of many glands, and the genito-urinary system; the space formed by the separation of these two sets of parts is the visceral or pleuro-peritoneal cavity. From the *mesoblast* proceed also the outer layer of the amnion, the vascular layers of the yolk-sac, the allantois and the chorion, and the fetal part of the placenta.

B. vesicular. (L. *vesicula*, a little bladder.) The mammalian blastoderm.

Blastodermis. (Same etymon.) Belonging, or relating, to the blastoderm.

B. cells. The cells which, by a process of segmentation after impregnation, form an investment of the yolk, and become part, at least, of the vesicular blastoderm.

B. membrane. The blastoderm.

B. vesicle. The vesicular blastoderm of mammals.

Blastodisc. (Βλαστός; *δίσκος*, a disc.) The germinal disc of the ovum of birds.

Blastogenesis. (Βλαστός, a sprout; *γένεσις*, generation. F. *blastogénésie*.) Term by Dupetit-Thouars for the multiplication of plants by means of buds.

Blastography. (Βλαστός, a sprout; *γράφω*, to write. F. and G. *blastographie*.) Term by Dupetit-Thouars for the consideration of the bud of plants, its appearance, essence, and development.

Blastoides. (Βλαστός, a bud; *είδος*, likeness.) An extinct Order of the Class *Oriinoides*, Subkingdom *Echinodermata*. Body rounded, enclosed in solid calcareous polygonal plates, and having a jointed stem. The calyx is composed of three basal, five deeply grooved radial or ambulacral, and five interradial or interambulacral plates, or areas. They are found in the Upper Silurian, the Devonian, and the Carboniferous formations. The members of this order are known as *Pentremites*.

Blastomere. (Βλαστός; *μέρος*, a part.) A term applied to each of the segments into which the impregnated ovum, or cytode, first divides when it has become a morula.

Blastophor. (Βλαστός; *φέρω*, to bear.) A central or eccentrically placed portion of the spermatospore, which is not used up in the process of division to form spermatoblasts. It may or may not be nucleated; it remains passive, and serves to carry the spermatoblasts.

B. sperm. The same as *Blastophor*.

Blastophoral cell. The same as *Blastophor*.

Blastophore. (Βλαστός, a sprout; *φέρω*, to bear. F. *blastophore*; G. *Keimträger*, *Sprossträger*.) Name by L. C. Richard for the part of the embryo with a large radicle which bears the bud. (L. C. Richard.)

Blastopore. (Βλαστός; *πόρος*, a passage.) The orifice produced by the invagination of a point on the surface of a blastula, or blastosphere, to form the enteron.

Blastosphere. (Βλαστός; *σφαίρα*, a globe.) The condition of the impregnated ovum when, after undergoing segmentation and at-

BLASTOSPORÆ—BLENNA.

taining the moru'a condition, it acquires a central cavity, called the blastocoel, and a wall consisting of one layer of blastomere, constituting the blastoderm.

Also, a synonym of the *Blastodermic vesicle*.

Blasto'sporæ. (Βλαστός, a sprout; σπόρα, a seed. *F. blastosporæ*; *G. sprosskeimkornig*.) Applied by Reichenbach to a Section of the *Lichenes gymnosporæ*, comprehending the *Pulcerariæ* and *Coniocarpeæ*.

Blastostroma. (Βλαστός; στρώμα, anything spread or laid out for lying upon, a bed. *F. blastostroma*; *G. Keimschicht*.) Term for the germinal area.

Blastostyle. (Βλαστός, a bud; στύλος, a pillow.) A stalk upon which generative buds or gonophores are developed in the Hydrozoa.

Blastous. (Βλάστος. *F. blasteux*.) Belonging to a bud or germ.

B. tis'sue. (*F. tissu blasteux*.) A tissue from which another tissue or an organ springs.

Blastula. (Dim. from βλαστός.) The same as *Blastosphere*.

Blastus. (Βλάστος, a sprout. *F. blaste*; *G. Spross, Keim*.) Applied by L. C. Richard to the part of an embryo with a large radicle susceptible of being developed by germination, as the external part of the embryo of the *Zea*.

Blatta. (*L. blatta*, a cockroach.) A Genus of the Family *Blattida*.

B. orientalis. (*L. orientalis*, eastern. *F. blatta des cuisines, bête noir, panetière, cafard*; *L. piatto, blatta*; *G. Schabe, Brotschabe, Kellerassel*.) The common cockroach. Used formerly in decoction, with oil, to drop into the ear for earache. It has latterly been recommended as a vesicant, and as a diuretic.

Blatta byzantia. (*L. blatta*, a clot of blood; *byzantium*, byzantine. Gr. ὄνυξ.) Used by Dioscorides, ii, 10, for a marine substance employed as a remedy for epilepsy, hysteria, &c.; of a reddish-brown colour, pleasant odour, and shaped like a finger-nail, whence it was also called *Unguis odoratus*.

Also, a term for the oblong operculum of certain shell-fishes.

Blattaria. (*L. blatta*, a moth. *G. Schabenkraut*.) The moth mullein, *Verbascum blattaria*.

B. lu'tea. (*L. luteus*, yellow.) The *Verbascum thapsus*, or yellow mullein.

Blattidæ. (*L. blatta*, a cockroach.) A Family of the Group *Cursoria*, Suborder *Orthoptera propria*, Order *Orthoptera*. Body flat, long; prothorax scutiform; antennæ long, many-jointed; feet strong; head protected by a thoracic plate, generally without ocelli; external lobe of the maxilla prolonged into a rostrum; posterior wings mostly wanting in the females; abdomen with two anal appendages.

Bland. A French physician, born 1774, died 1858.

B.'s ferru'ginous pills. Fr. Codex. Powdered ferrous sulphate, potassium carbonate, of each 30 grammes, mixed with mucilage of gum arabic, and divided into 120 pills. Used in amenorrhœa and leucorrhœa.

Blawort. The *Centauria cyanus*.

Blazing star. A popular name for the *Chamelirium luteum*, the *Liatris scariosa*, the *Liatris squarrosa*, and also the *Aletris farinosa*.

Blackberry. The *Vaccinium myrtillus*.

Bleach. (Sax. blæcian, to grow pale. *F.*

blanchir; *L. bianchire*; *G. bleichen*.) To make, or to grow, white or pale.

Bleaching. (Same etymon. *F. blanchiment*; *G. Bleichen*.) The removal of colour; the act of making white.

B. liquid. The *Eau de javelle*.

B. powder. (*F. poudre de blanchiment, poudre de Tennant, poudre de Knox*.) A synonym of *Chlorinated lime*.

Bleak. (Eng. *bleak*, pale; from Sax. *blæc*, shining.) The *Cyprinus alburnus*, so named from its pale colour.

It has been supposed that this fish may be the source of the *Bothriocephalus latus* in man.

Blear-ey edness. (Dan. *pliiroiæt*, bleary-eyed, from *plire*, to blink.) Lippitudo. Chronic inflammation of the tarsal margins of the eyelids.

Bleb. (Probably from the same root as *Bladder*.) A watery vesicle. See *Bulla*.

B. water. A synonym of *Pompholyx*.

Blechnon. The *Aspidium filix-mas*.

Blechnum. (Βλέχων, a kind of fern.) A Genus of the Nat. Order *Filices*, Suborder *Polypodiæ*.

B. borea'le. (*L. borealis*, northern.) A synonym of the *Lomaria spicant*.

B. linguifolium. (*L. lingua*, the tongue; *folium*, a leaf.) The *Scolopendrium vulgare*, or common hart's tongue.

B. squamosum. (*L. squamosus*, scaly.) The *Asplenium ceterach*, or spleenwort.

Blechnopyra. (Βληχρός, dull, sluggish; πυρ, fire, fever.) A slow fever. A term applied to the fever formerly called typhus mitior.

Blechnopyrus. (Βληχρός, weak; πυρ, a fever. *F. blechnopyre*.) A low nervous fever.

Ble'chros. (Βληχρός, sluggish.) Weak, feeble. An epithet applied to certain diseases, as fever, or to certain conditions, as the pulse.

Blechnrosphygmia. (Βληχρός, weak; σφυγμός, the pulse. *F. blechnrosphygmie*.) Term for a weak pulse.

Ble'doch. A term for buttermilk.

Bleed'er. (Sax. *blædan*, to bleed.) A person the subject of the hæmorrhagic diathesis. See *Hæmophilia*.

Bleeding. (Same etymon.) Hæmorrhage, bloodletting.

The escape of sap (*G. Saftflüsse*) from a wound of the bark of a plant.

B. boist. A term for a cupping-glass.

B. from the nose. See *Epistaxis*.

B. heart. The *Cypripedium luteum*. Also, the *Cheiranthus cheiri*.

Ble'fed. A sickness or plague, producing yellowness of the skin, which prevailed in Ireland during the sixth century. (Dunglison.)

Bleichbad. Switzerland, Canton St. Gall, in the Rhine Valley, 1450 feet above sea level. A mineral water, containing iron, calcium chloride and carbonate, and sulphuretted hydrogen. Used in chronic rheumatism and gout, neuralgia, and skin diseases.

Blende. (*G. blenden*, to dazzle.) Applied to minerals having a peculiar lustre, as *horn-blende*, *zinc-blende*, &c., but particularly to a metallic ore of zinc, the sulphuret, or "black-jack" of the English miner.

Blennorrhœa. Piorry's term for *Metrolennorrhœa*.

Blenna. (Βλέννα, mucus. *G. Schleim, Rotz*.) Used by Hippocrates for *Mucus*, also called phlegm, by Galen, *de Fac. Nat.* ii, 9.

BLENNADENITIS—BLENNORRHOEA.

B. narium. (L. *navis*, the nose.) Nasal mucus.

Blennadenitis. (Βλίννα; ἀδήν, a gland. F. *blennadenitis*; I. *blennadenitis*; G. *Schleimdrüsenentzündung*.) Inflammation of the mucous glands.

Blennaxemia. (Βλίννα; χμία, loss.) Excessive secretion of mucus.

Blennelytria. (Βλίννα; ἑντρον, a sheath, and so the vagina.) Leucorrhœa.

Blennemesis. (Βλίννα; ἑμεσις, vomiting. F. *blennémies*; G. *Schleimerbrechen*.) A vomiting of mucus.

Blennenteria. (Βλίννα; ἑντρον, an intestine. F. *blennenterie*; I. *blennenteria*; G. *Darmschleimfluss*.) A mucous flow from the intestines. Alibert's term for dysentery.

Blennenteritis. (Same etymon. F. *blennenterite*.) Mucous enteritis.

Blenniidae. (Βλίννα, mucus, and so, the blenny.) A family of the Group *Acanthoptera*, Suborder *Acanthopterygii*, Order *Telostei*, Class *Pisces*. Body long, cylindrical; skin soft and mucous; dorsal fin occupying the greater part of the back; anal fin long; abdominal fins very small or absent; pectoral fins large and powerful; pseudobranchiae generally present; swim bladder absent; males with a sort of penis. Mostly marine.

Blenniisthmia. (Βλίννα, mucus; ἰσθμός, a narrow passage. F. *blenniisthmie*.) Excessive catarrhal secretion from the mucous membrane of the throat.

Blennochesia. (Βλίννος, mucus; χέω, to ease one's self. F. *blennochésie*.) A mucous evacuation from the bowels.

Blennochesia. Same as *Blennochesia*.

Blennocystia. (Βλίννος, mucus; κύστις, a bladder.) A *Bursa mucosa*.

Blennocystitis. (Same etymon. F. *blennocystite*.) Mucous cystitis.

Blennodes. (Βλιννώδης, alimy.) Mucous.

Blenneomesis. Same as *Blennemesis*.

Blennogenic. (Βλίννος, mucus; γίνομαι, an origin. F. *blennogène*; G. *schleimzeugend*.) Generating or producing mucus; muciparous.

Blennogenous. (Βλίννος; γινώω, to produce.) Mucus producing.

B. apparatus. Name given by Breschet to a supposed organ of secretion in the corium, with excretory ducts, which convey the mucus, from which the epidermis is formed, to the base of the papillæ.

Blennohymenitis. Same as *Blenny-menitis*.

Blennoid. (Βλίννος, mucus; εἶδος, likeness. G. *Schleimartig*.) Resembling mucus.

Blennoides. (Same etymon.) Mucoid.

Blennoma. (Βλίννος, mucus. F. *blennôme*; G. *Schleimgewächs*.) A mucous tumour, such as a polypus.

Blennometritis. (Βλίννος; metritis. F. *blennométrite*.) Metritis, with much mucous secretion.

Blennometrorrhœa. (Βλίννος, mucus; μήτρα, womb; ῥέω, to flow.) Uterine leucorrhœa.

Blennophlogosis. (Βλίννος; φλόγσις, burning, inflammation.) Inflammation of a mucous membrane.

Blennophthalmia. (Βλίννος; ὀφθαλμία, inflammation of the eyes. F. *blennophthalmie*; I. *blennophthalmia*; G. *Augentripper*.)

Inflammation of the mucous membrane of the eye, the conjunctiva.

Blennoptysis. (Βλίννος; πτύειν, a spitting. F. *blennoptysie*; G. *Schleimspöten*.) Mucous expectoration.

Blennopyria. (Βλίννος; πυρ, a fever. F. *blennopyrie*; I. *blennopyria*; G. *Schleimfieber*.) Fever, according to Alibert, with mucous complications, probably generally cases of enteric fever.

Blennorrhagia. (Βλίννος, mucus; ῥέγνυμι, to burst asunder. G. *Schleimfluss*.) A discharge of mucus. Also, synonymous with *Gonorrhœa*.

B. anus. (L. *anus*, the fundament.) Mucous inflammation of the rectum and anus, from worms, piles, oedema, gonorrhœa, or sedomy.

B. balan. (Βδλανος, an acorn, the glans penis.) A synonym of *Balanitis*, with much discharge.

B. buccalis. (L. *bucca*, the cheek.) Mucous inflammation of the mouth.

B. genitalium. (L. *genitale*, the genital member.) A synonym of *Leucorrhœa*.

B. nasalis. (L. *nasus*, the nose.) A synonym of *Coryza*.

B. ne'tha. (Νέθος, spurious.) A synonym of *Balanitis*.

B. ocularis. (L. *ocularis*, belonging to the eye.) Gonorrhœal ophthalmia.

B. of the glans. A synonym of *Balanitis*.

B. pulmonaria. (L. *pulmo*, the lung.) A synonym of *Bronchorrhœa*.

B. spuria. (L. *spurius*, false.) A synonym of *Balanitis*.

B. syphilitica. Gonorrhœa produced by urethral chancre.

Blennorrhagic. (Same etymon.) Of, or belonging to, *Blennorrhagia*.

B. arthritis. (Ἀρθρον, a joint.) Gonorrhœal rheumatism.

B. epididymitis. (Ἐπιδιδυμίς.) Same as *Orchitis*, gonorrhœal.

B. ophthalmia. (Ὀφθαλμία, inflammation of the eyes.) Gonorrhœal ophthalmia.

Blennorrhina. (Βλίννος; ῥίς, the nose.) Alibert's form of *Rhinoblenorrhœa*, nasal catarrh.

Blennorrhœa. (Βλίννος, mucus; ῥέω, from ῥίω, to flow. G. *Schleimfluss*.) Excessive secretion from mucous glands in any situation, but most generally applied to *Gonorrhœa*.

B. chronica. (Χρόνος, time.) Same as *Gleet*.

B. ciliaris. (L. *cilium*, an eyelid, an eyelash.) See *Tinea ciliaris*.

B. genitalium. (L. *genitale*, the genital member.) See *Leucorrhœa*.

B. lucida. (Luce; ᾤδης, a suffix signifying fulness, or for *aldis*, likeness.) Same as *Gonorrhœa*.

B. nasalis. (L. *nasus*, a nose.) Nasal catarrh.

B. oculi. (L. *oculus*, the eye.) Same as *Ophthalmia*, purulent.

B. oculi gonorrhœica. (L. *oculus*; gonorrhœa.) See *Gonorrhœal ophthalmia*.

B. oculi neonatorum. (Νέος, new; L. *natus*, part. of nascor, to be born.) Same as *Ophthalmia*, purulent.

B. oculi purulenta. (L. *purulentus*, full of pus.) Same as *Ophthalmia*, purulent.

BLENNORRHOIC—BLEPHARITIS.

B. of lachrymal sac. Inflammation of the lachrymal sac.

B. simplex. (L. *simplex*, simple.) Simple blennorrhœa is a term for a simple increased secretion of mucus from the urethra, proceeding generally from local irritation alone, unconnected with contagion or virulence of any kind, and existing in persons in whom the affected organ is in a state of debility; caused by excess of venery, or of indulgence in spirituous liquors, by cold, violent exercise, gout, rheumatism; the discharge is mild, like pure mucus, ropy, produces no excoriation, pain in micturition, or other disquiet, and does not communicate infection. (Mayne.)

Also, a synonym of *Gleet*.

B. urethralis. (Ουρήθρα, the urethra.) Same as *Gonorrhœa*.

B. venerea. (L. *venereus*, venereal.) Same as *Gonorrhœa*.

B. vesicæ. (L. *vesica*, the bladder.) Same as *Cystitis*, chronic.

Blennorrhœo. (Βλίννος; *πίω*, to flow.) Relating to mucous discharges.

Blennosæ. (Βλίννος.) The class of diseases of mucous membrane.

Blennosis. (Βλίννος. F. *blennose*; G. *Schleimkrankheit*.) Mucous disease, or that of mucous membranes, as catarrhal affections.

Blennos'tasis. (Βλίννος; *στάσις*, a standing. F. *blennostase*.) Suppression of the secretion and excretion of mucus.

Blennothorax. (Βλίννος; *θώραξ*, the chest. F. *blennothorax*; G. *Schleimbrust*.) An accumulation of mucus in the thorax; chronic bronchitis.

B. chronicus. (Βλίννος; *χρόνος*, time.) A term for those cases of bronchial asthma formerly called *Asthma humidum*.

Blennorrhœa. (Βλίννος; *otorrhœa*.) Alibert's term for *Otorrhœa*.

Blennozemia. (Βλίννος; *ζημία*, loss.) A synonym of *Blennorrhœa*.

Blennurethria. (Βλίννα, mucus; *οὐρήθρα*, the urethra. F. *blennurethrie*.) A mucous discharge from the urethra, applied to gonorrhœa of the male.

Blennuria. (Βλίννα; *οὐρον*, the urine. F. *blennurie*; G. *Schleimharnen*.) A discharge of mucus with the urine.

Blenny men. (Βλίννα; *ὑμὴν*, a membrane. F. *blennymen*; G. *Schleimhaut*.) A mucous membrane.

Blennymenocrysipelas. (Blenny men; *erysipelas*. F. *blennymenocrysipèle*.) Erysipelas of a mucous membrane.

Blennymenitis. (Blennymen. F. *blennyménite*.) Inflammation of a mucous membrane.

Blennymenoid. (Βλίννα; *ὑμὴν*, a membrane; *εἶδος*, likeness. G. *schleimhautähnlich*.) Resembling a mucous membrane.

Blepharadenes. (Βλῑφαρον, an eyelid; *ἀδὴν*, a gland. G. *Augenliderdrüsen*.) The Meibomian glands.

Blepharadenitis. (Βλῑφαρον, the eyelid; *ἀδὴν*, a gland. G. *Augenliderdrüsenentzündung*.) Inflammation of the Meibomian glands.

Bleph'aral. (Βλῑφαρον.) Pertaining to the eyelids.

Blepharanthracosis. (Βλῑφαρον, the eyelid; *anthracosis*. F. *blepharanthracosis*;

G. *Augenliederbrand*.) Carbuncle of the eyelid.

Blephareceopæus. (Βλῑφαρον; *ἐκκοπίς*, a knife for cutting out.) A knife used for cutting out a piece of the eyelids for the cure of trichiasis.

Blepharolo'sis. (Βλῑφαρον, the eyelid; *εἶλω*, to roll up.) A rolling up of the eyelids. A synonym of both *Entropion* and *Ectropion*.

Blepharemphyse'ma. (Βλῑφαρον; *ἐμφύσημα*, from *ἐμφυσάω*, to inflate. G. *Augenliederwindgeschwulst*.) Emphysema of the eyelids.

Blepharhelo'sis. A false spelling of *Blepharolosis*.

Blephar'ic. (Βλῑφαρον, the eyelid.) Palpebral. Relating to the eyelids.

Blepharides. (Plural of *βλεφαρίς*, an eyelash.) The eyelashes; also, the tarsal edges of the eyelids.

Blepharidoplas'tica. (Βλῑφαρον, the eyelid; *πλάσσω*, to form.) The plastic operation for an eyelid.

Blepharis. (Βλεφαρίς, an eyelash.) A Genus of the Nat. Order *Acanthaceæ*.

B. Boerhaavise'folia. (*Boerhaavia*, the plant of that name; *folium*, a leaf.) Hab. India. Used in dysmenorrhœa. (Waring.)

Blepharis'mus. (Βλῑφαρον, the eyelid.) Winking; nictitation; spasm of the eyelids.

Blepharitis. (Βλῑφαρον, the eyelid. G. *Augenliderentzündung*.) Inflammation of the eyelids.

B. angula'ris. (L. *angularis*, from *angulus*, a corner.) A synonym of *B. marginalis*.

B. cilia'ris. (L. *cilium*, an eyelash. I. *ottalmia secca*.) The seat of this form of blepharitis is in the hair-follicles of the cilia. The roots of the cilia first become affected, the bulbs becoming pigmented and swollen.

B. gangrenosa. (Γάγγραινα, gangrene.) Same as *Blepharanthracosis*.

B. glandula'ris. (L. *glandula*, glands. I. *blepharite ghiandolare*.) A synonym of *B. ciliaris*.

B. hypersecreto'ria. (Υπίρ, over; L. *secretus*, from *secreo*, to secrete.) The seat of this form of blepharitis is in the follicles, and especially in the glands opening into the hair-follicles. The secretion accumulates at the base of the cilia, in the form of greenish crusts.

B. lymphat'ica. (Lymphatic. I. *blefarite linfatica*.) A synonym of *B. ciliaris*.

B. margina'lis. (L. *margo*, an edge.) This form affects the integument of the intermarginal part of the border of the lids, which here forms a very thin lamina, connecting the skin with the mucous membrane. Excoriations and fissure are produced as a consequence of some persistent irritation, and the inferior puncta lacrymalia become everted.

B. phlegmono'sa. (Φλεγμονή, inflammation beneath the skin. G. *Lid-abscess*.) Abscess of the eyelids.

B. scrofulosa. (L. *scrofula*, a swelling of the cervical glands. I. *blepharite scrofolosa*.) A synonym of *B. ciliaris*.

B. simplex. (L. *simplex*, simple.) The seat of this, which is the commonest form of blepharitis, is in the skin of the margin of the lids, especially near the roots of the cilia. The skin is red, and covered with epithelial scales.

BLEPHAROADENTITIS—BLEPHARORRHOEA.

The cilia are imperfectly developed, and easily fall out. It often occurs in scrofulous persons.

B. ulcero'sa. (L. *ulcerosa*, full of sores.) A form of blepharitis chiefly affecting the ciliary region of the lid. The inflammation proceeds to ulceration, which extends to the follicles. It usually occurs as a sequel of catarrhal conjunctivitis, or blepharitis of the lacrymal sac, and is, therefore, often unilateral.

Blepharoadentitis. Same as *Blepharitis*.

Blepharoblenorrhoea. (Βλεφαρον, the eyelid; *blennorrhoea*, a flow of mucus. G. *Augenhäutentzündung*.) The first stage of puro-mucous inflammation of the conjunctiva.

B. gonorrhoea. Gonorrheal ophthalmia.

B. maligna. (L. *maligna*, of an evil nature.) Gonorrheal ophthalmia.

B. neonatorum. (N^{ov}, new; L. *natus*, part of *nascor*, to be born.) The ophthalmia of newborn children.

Blepharocarcinoma. (Βλεφαρον; *carcinoma*, a cancer. G. *Augenhäutkrebs*.) Cancer of the eyelids.

Blepharocyclotoma. (Βλεφαρον, the eyelid; *κύκλος*, holding fast. F. *blepharocyclotomie*; G. *Augenlidhalter*.) An instrument for fixing the eyelid.

Blepharocyclosis. (Βλεφαρον, the eyelid; *κύκλος*, a shutting up. F. *blepharocyclotomie*.) Oculosis, or growing together, of the eyelids.

Blepharocyclophora. (Βλεφαρον; *cyclophora*, the part taken away in mutilation.) *Cyclophora* of the eyelids.

Blepharocconjunctivitis. (Βλεφαρον, the eyelid; *conjunctivitis*. G. *Augenhäutentzündung*.) Inflammation of the mucous membrane of the eyelids, the conjunctiva.

Blepharodyschromia. (Βλεφαρον; *dys*, an inseparable prefix meaning bad; *χρῶμα*, colour.) Nervus of the eyelid.

Blepharodema. (Βλεφαρον; *οἰδήμα*, a swelling.) Edema of eyelids.

Blepharomphycema. Same as *Blepharomphycema*.

Blepharometer. (Βλεφαρον; *μέτρον*, a measure. F. *blepharometre*, *blepharopoeie*; G. *Augenliedmesser*.) An instrument of Buzzi for the cure of trichiasis, by cutting out a piece of the eyelid.

Blepharon. (Βλεφαρον.) The eyelid.

B. atonia'ton. (ἄτῳα, slackness.) A synonym of *Pto'sis*.

Blepharonco'sis. (Βλεφαρον; *γκῶσις*, the act of increasing in bulk.) The formation of a tumour of the eyelid.

Blepharoncus. (Βλεφαρον, the eyelid; *γκῶσις*, a swelling. G. *Augenhäutgeschwulst*.) Term for a tumour on the eyelid.

Blepharophimo'sis. (Βλεφαρον; *φίμωσις*, a stopping up an orifice, from *φίμα*, to shut up, as with a muzzle.) Congenital smallness of the palpebral fissure.

Blepharophthalmia. (Βλεφαρον, the eyelid; *ὀφθαλμία*, inflammation of the eye.) Inflammation of the conjunctiva and of the eye and the eyelids co-existing.

B. neonatorum. (N^{ov}, new; L. *natus*, part of *nascor*, to be born.) Purulent ophthalmia of children.

B. purulenta. (L. *purulentus*, full of pus.) Purulent ophthalmia.

B. ulcero'sa. (L. *ulcerosa*, ulcerous.) Same as *Trachoma ciliaris*.

Blepharophthal'mic. (Same etymon.) Of, or belonging to, *Blepharophthalmia*.

Blepharophthalmi'tis. (Βλεφαρον; *ὀφθαλμία*, the eye.) Inflammation of the eyelids, and of the globe of the eye.

B. glandulo'sa. (L. *glandulosus*, full of glands.) Purulent ophthalmia of children.

Blepharophthal'mo-blennorrhoea. (Βλεφαρον, ὀφθαλμός; *βλεννορραγία*, *ρῖα*, to flow.) Puro-mucous inflammation of the conjunctiva in its fully formed state.

Blepharophthorriasis. (Βλεφαρον; *φθορία*, the lousy disease. G. *Augenhäutentzündung*.) The presence of pediculi among the eyelashes.

Blepharophyma. (Βλεφαρον; *φύμα*, a swelling. G. *Augenhäutgeschwulst*.) Tumour of the eyelid.

Blepharophysa'ma. (Βλεφαρον; *φύσημα*, that which is blown up. G. *Augenhäutgeschwulst*.) Emphysema of the eyelids.

Blepharoplas'tic. Of, or belonging to, the operation of blepharoplasty.

Blepharoplas'tice. Same as *Blepharoplasty*.

Blepharoplasty. (Βλεφαρον, the eyelid; *πλάσσω*, to form. G. *Augenlidverbildung*.) The operation of supplying any deficiency caused by lesion, or wound of the eyelids, by taking a flap from the sound parts contiguous, or by transplantation.

In Dieffenbach's operation for restoring the lower lid, a V-shaped incision is made from the angles of the lid downwards to an extent sufficient to include the whole scar, and the part included between the arms of the V is cut away or refreshed; a horizontal cut is now made from the outer canthus towards the temple, to the extent of an inch or more, and from the outer extremity of this a vertical cut is made parallel to the outer cut of the V. The quadrilateral flap thus formed is separated from its attachments except below, and shifted inwards, so as to cover the raw surface included between the arms of the V. The exposed surface left by its transposition may be left to granulate, or slightly drawn with sutures towards the flap.

In Szymanowski's modification of this operation the incision from the outer canthus, instead of being horizontal, is carried upwards, so as to form an acute angle externally.

Blepharople'gia. (Βλεφαρον, the eyelid; *πλῆξις*, a stroke. L. *blepharoplegia*; G. *Augenhäutlähmung*.) The falling down of the upper eyelid from paralysis of the levator muscle.

Blepharopsalis. (Βλεφαρον; *ψάλλω*, a pair of scissors.) Same as *Blepharometer*.

Blepharopto'sis. (Βλεφαρον, the eyelid; *πτῶσις*, a fall. G. *Augenhäutverfall*.) Falling of the upper eyelid. See *Pto'sis*.

The phrase also included any distortion of the eyelids.

B. ectro'ptum. Same as *Entropium*.

B. entrop'tum. Same as *Entropium*.

Blepharopyorrhoe'a. (Βλεφαρον; *ρῖον*, pus; *ρῖα*, to flow. L. *blepharopyorrhis*; G. *Augenhäutentzündung*.) A secretion of pus from the eyelids. Purulent ophthalmia.

B. neonatorum. (N^{ov}, new; L. *natus*, born.) Purulent ophthalmia of infants.

Blepharorrhoe'a. (Βλεφαρον; *ρῖον*, to

BLEPHAROSAROTHRUM—BLISTERING.

flow. *G. Augenliederfluss*.) Discharge of mucus or pus from the eyelids.

Blepharosarothrum. (Βλέφαρον; σάρωτρον, a sweeping broom.) A name of the instrument also called *Blepharozystia*.

Blepharospasm. (Βλέφαρον, the eyelid; σπασμός, a spasm. *G. Augenliderkrampf*.) Spasm of the orbicularis palpebrarum.

Blepharostat. (Βλέφαρον; στατικός, from ἵστημι, to cause to stand.) An instrument for fixing the eyelids in operations on the eye.

Blepharostenosis. (Βλέφαρον; στένσις, narrowing.) Diminution of space between the eyelids.

Blepharosyndesmitis. (Βλέφαρον; συνδεδσμος, a ligament.) Inflammation of conjunctiva of eyelids.

Blepharosynechia. (Βλέφαρον; συνήγεια, continuity.) Adhesion of the eyelids.

Blepharotis. Same as *Blepharitis*.

B. glandularis contagiosa. (*L. glandula*, glands; *contagiosus*, contagious.) A synonym of Egyptian ophthalmia.

Blepharotitis. (Βλέφαρον.) Same as *Tinea ciliaris*.

Blepharotoxis. (Βλέφαρον.) Same as *Ectropium*.

Blepharoxystis. (Βλέφαρον; ξύω, to scrape. *G. Augenliderkratzer*.) An instrument for removing granulations from the surface of the palpebral conjunctiva.

Blepharoxystum. Same as *Blepharoxystia*.

Blepharydatis. (Βλέφαρον; ύδατις, an hydatid.) Hydatid of the eyelids.

Blephilia. A Genus of the Nat. Order *Labiata*.

B. hirsuta. (*L. hirsutus*, hairy.) Hab. United States. A plant having the aromatic properties of mint.

Blessed. (Part. of *E. bless*, from Sax. *blæsan*, to bless.) Made happy.

B. herb. The *Genum urbanum*.

B. this'tle. The *Centaurea benedicta*.

Blestrismus. (Βλῆστρίζω, to throw with force.) Used by Hippocrates for a constant and vehement tossing of the body; jactitation.

Bleta alba. Used by Paracelsus for milky urine proceeding from diseased kidneys.

Bletia. A Genus of the Nat. Order *Orchidacea*.

B. campanulata. (Low Lat. *campanula*, a little bell.) A Mexican species, used in dysentery.

B. verecunda. (*L. verecundus*, modest.) Hab. West Indies. Root fleshy, transparent, of bitterish taste. Used as a stomachic.

Blets. The spots on over-ripe fruit.

Blotting. The process of oxidation which succulent fruits undergo after they are ripe; it is a state intermediate between maturity and decay.

Bletus. (Βλητός, stricken; from βάλλω, to throw.) Used to describe one suddenly seized with difficulty of breathing.

Also, applied to a livid spot on the chest, as if from a blow, supposed formerly to accompany pleurisy.

Bléville. France; département Seine Inférieure. A village near Havre possessing a mild chalybeate water.

Bley. The bleak, *Cyprinus alburnus*.

B. sap'ida. Koenig. (*L. sapidus*, savoury.) Hab. Guinea. In Ashantee a decoction of the

bark is used as an antisyphilitic. Its succulent aril, boiled, is used for food.

Blighia. A Genus of the Nat. Order *Sapindaceæ*.

Blight. (Probably from Sax. *blican*, to shine.) A blast; mildew.

A vernacular term in America for a form of lichen urticatus.

Also, a term for facial palsy arising from cold.

B. in the eye. Extravasion of blood under the conjunctiva.

Blighted. (Same etymon.) Blasted, mildewed.

B. ovum. See *Ovum, blighted*.

Blimbing-bula. The *Acerrhoa caram-bola*.

Blincta. Old term for red earth. (Rural.)

Blind. (Sax. *blind*.) Deprived of sight.

B. astula. See *Fistula, blind*.

B. nettle. The *Lamium album*.

B. piles. Piles which do not bleed.

B. spot. An area in the field of vision corresponding to that part of the retina where the optic nerve enters, and where rays of light give rise to no sensations.

B. worm. The *Anguis fragilis*.

Blindness. (Sax. *blind*. *L. cæcitas*; Gr. τυφλότης; *F. cécité*; *I. cecita*; *S. cegwedad*; *G. Blindheit*.) A deprivation or want of sight, depending on some pathological condition of the nervous or optical apparatus of the eye.

B. colour. See *Achromatopsia*.

B. day. See *Nyctalopia*.

B. moon. Same as *Hemeralopia*.

B. nervous. See *Amaraosis*.

B. night. See *Hemeralopia*.

B. nocturnal. Same as *B. night*.

B. snow. See *Snow blindness*.

Blister. (Sax. *blæsan*, to blow. *L. pustula*; *F. vésicatoire*; *I. vesicatorio*; *S. vesigatorio*; *G. Blase, Blatter*.) A vesicle caused by a deposition of serous fluid beneath the cuticle, the consequence of a burn, the application of a vesicatory, disease, or friction.

Also, the medium, as cantharides, by which the blister is produced.

B.-beetle. The *Cantharis vesicatoria*.

B. fever. A term applied to feverish condition accompanied by herpes labialis.

B.-fly. Same as *B.-beetle*.

B. flying. A blister applied for a short time only, so as not to produce vesication.

B. magistral. (*L. magistral*. *F. vésicatoire magistral*.) Equal parts of powdered cantharides and of wheat flour, mixed with a sufficient quantity of vinegar to form a soft paste.

B. perpetual. A blister which, after the removal of the cuticle, is dressed with savine ointment or other irritant to keep up a continual discharge.

B. plaster. The *Emplastrum cantharidis*.

Blistered. (Same etymon.) Having blisters or vesicles.

B. umbilicaria. The *Umbilicaria pustulata*.

Blistering oerate. The *Emplastrum cantharidis*.

B. ammannia. The *Ammannia vesicatoria*.

B. collodion. The *Collodium cum cantharide*.

BLISTERS—BLOOD.

B. an'id. The *Liquor epispasticus*.
B. fly. The *Cantharis vesicatoria*.
B. liq'uid. The *Liquor epispasticus*.
B. pa'per. The *Charta epispastica*.
B. plas'ter. The *Emplastrum cantharidis*.

B. tis'sue. The *Charta epispastica*.
Blist'ers. See *Epispastica*.
Blist'erweed. The *Ranunculus acris*.
Blite. The *Chenopodium bonus-Henricus*, and also the *Amaranthus blitum*.
B., great white. The *Amaranthus viridis*.

B., red. A variety of *Amaranthus viridis*.
B., up'right. The *Amaranthus blitum*.
Blit'um. (Bl'rov, an insipid potherb; thought to be a kind of spinach or beet.) Blit or blite. See *Amaranthus blitum*.

A Genus of Nat. Order *Chenopodiaceæ*.

B. al'bum. (*L. albus*, white.) A variety of *Amaranthus viridis*.

B. america'num. The *Phytolacca decandra*.

B. capita'tum. (*L. capitatus*, having a head.) Mulberry-blite, strawberry spinach. Emollient and laxative.

B. fo'e'tidum. The *Chenopodium fatidum*, or *C. vulvaria*.

B. mi'nus. (*L. minor*, less.) The *Amaranthus blitum*.

B. ru'brum. (*L. ruber*, red.) A variety of *Amaranthus viridis*.

Blackwood. A synonym of *Logwood*.

Blom'fontein. South Africa. A district much recommended as a residence for consumptive people, in consequence of the dryness and purity of the air.

Blood. (Sax. *blôd*; from *blôcan*, to bloom, to flourish. *L. sanguis*; Gr. *αἷμα*; F. *sang*; I. *sanguis*; S. *sangre*; G. *Blut*.) The red fluid which circulates through the heart, arteries, capillaries, and veins, which supplies nutritive material to all parts of the body, and which conveys the waste matters of the different tissues to the special organ by which they are removed. Human blood is bright red in the arteries, dark in the veins, of an average sp. gr. of 1055, of a saltish taste, a faintish odour, an alkaline reaction, and of a temperature of 37·8° C. (100° F.) in the interior of the body, lower in the extremities and on the surface. It consists of a colourless transparent liquid, the liquor sanguinis or plasma, which carries a multitude of reddish-yellow discs, the red corpuscles, and a much smaller number of colourless, granular, irregular spherules, the white corpuscles. When withdrawn from the body it coagulates, separating into a solid red substance, crassamentum or clot, and a straw-coloured fluid, serum; as it cools it gives off a watery vapour, halitus. When evaporated, blood yields on an average 790 parts of water and 210 of solid residue, which has nearly the same ultimate composition as dried flesh. The chemical constituents of blood vary in proportion, but on an average there are in 1000 parts, by weight, water 795, fibrin 2, albumin 70, hæmoglobin 120, fatty matters 2, extractives 3, inorganic residue 8. In addition, it contains, in 100 parts, by volume, 30—35 of carbonic acid in arterial, 40—50 in venous, blood; 16—20 of oxygen in arterial, 12 in venous, blood; 1—2 of nitrogen in both, and traces of ammonia and, perhaps, hydrogen. The ash contains, on an average, sodium chloride 59, soda 4·4, potash 12, magnesia 1·2, sulphuric acid 1·7, phos-

phoric acid 8·7, calcium phosphate 3·4, ferric oxide 8·4, carbonic acid 1·2 per cent. Silica, lead, copper, and manganese have also been described. The mode in which these elements are grouped is not known, but it would appear that the iron, potash, and most of the phosphates, are contained in the corpuscles, and the sodium salts in the liquor sanguinis. The fatty matters consist of saponifiable fats 1·5, phosphorised fats 4, cholesterin 0·8, and serolin 0·2, in 1000 parts of blood. The fats vary much, and are much greater after a meal. The extractives consist of sugar, urea, creatin, creatinin, uric acid, lactic acid, hippuric acid, leucin, tyrosin, hypoxanthin, and xanthin, colouring and odoriferous matters.

The *liquor sanguinis* or *plasma* consists of water holding in solution the substances which form fibrin, albumin, serum-casein, and salts, of which the chief is sodium chloride; in coagulation it gives up the fibrin to the clot. Its sp. gr. is 1028.

The red corpuscles (*F. globule rouge, hématies*; G. *rothen Blutzellen*) are yellowish, biconcave, circular, flat discs, homogeneous, flexible, elastic, probably without a cell-wall, from 1·3500th to 1·3200th of an inch in diameter, 1·12,400th inch thick, and of sp. gr. 1083. The red corpuscles of camels are elliptical, thus varying from all other mammals. In birds, reptiles, and most fishes, they are oval, with a central elevation on both sides. The size varies; they are larger in birds than mammals, largest of all in the naked Amphibia. They consist of a colourless stroma, infiltrated with the semifluid coloured matter. The stroma consists of paraglobulin, cholesterin, lecithin, and neurin. The colouring matter is hæmoglobin, an albuminous compound containing iron. They also contain, in yet unknown quantities, potash and lime salts, chiefly of carbonic and phosphoric acids. Their average number in man is about five millions in a cubic millimeter; in other mammals it varies from three to eighteen millions.

The white corpuscles (*F. globules blancs, leucocytes*; G. *Lymphkörperchen*) are rounded, slightly flattened, bi- or tri-nucleated cells, with thin walls, and generally granular contents, possessing great contractile power, so as to be capable of altering their shape and their position, and of throwing out of arms; of various sizes, the average being 1·2500th inch. They are much fewer in number than the red corpuscles, being in the proportion of 2·5 to 1000. They circulate more slowly than the red corpuscles, keeping to the outside of the stream and clinging, as it were, to the walls of the blood-vessels. They are more numerous in venous than arterial blood, most numerous in the splenic and hepatic veins. Clear round spaces, *vacuoles*, are seen in them; they are of two kinds, one finely granular, the other containing coarse granules; they can take up small solid particles from the blood; they probably contain albuminoid matters of several kinds, lecithin, glycogen, potassium salts, and phosphates. Other bodies have recently been described. See *B. corpuscles, transparent*.

Serum.—A straw-coloured liquid, occasionally turbid from fatty particles; sp. gr. 1·027, alkaline; contains much albumin, which differs from that of egg in not being precipitated by ether; paraglobulin, fatty matters, extractives, soda, and potash, combined with lactic, carbonic, phosphoric, sulphuric, and fatty acids; ammonia com-

BLOOD.

bined with lactic acid and lime and magnesia with phosphoric, carbonic, and sulphuric acids. In coagulation the fibrin of the serum solidifies.

Crassamentum.—The crassamentum or clot is formed by the entanglement of the blood-corpuscles in the solidifying fibrin, which, gradually shrinking, squeezes out the serum, and separates itself. The upper surface of the clot is generally cupped. See *Coagulation*.

Development.—In Batrachians the blood-corpuscles appear to be modifications of the early embryonic cells, and to be produced by segmentation. They are rounded, unvalled cells, having granular contents and a pellucid globular nucleus, containing one or two clear specks, which gradually contract and become oval, flattened, less granular, and red; they are the red corpuscles.

In the bird the blood-corpuscles are first formed, at the same time as the blood-vessels, from the middle layer of blastoderm, and subsequently in the different structures of the body.

In mammalia the subject is not so well known, but the first blood-corpuscles are nucleated spheroids, probably embryonic cells, which have undergone some change. Then, when the liver comes into existence, colourless nucleated bodies are produced by it, and subsequently by the spleen, lymphatic glands. These undergo fissiparous increase and become coloured, but still nucleated: whether they are converted into, or replaced by, non-nucleated red blood-discs is uncertain. Red blood-discs are also produced in the different developing structures of the body.

The blood corpuscles are continually during life being used up and developed, precisely how is not known. It is usually thought that the white corpuscles of the blood are developed from the corpuscles of the lymph and chyle, and themselves become converted into the red corpuscles. The same process is believed to go on in the spleen and, according to late observations, in the medulla of bones.

The red corpuscles are, according to one view, shrunken white corpuscles, with colour change in their contents; according to another, they are represented by the nucleus only of the white corpuscles, which undergoes changed development.

B., arterial. (*G. Schlagaderblut.*) The blood contained in the systemic arteries, the pulmonary veins, and the left heart. It is bright scarlet, contains 5 per 1000 parts more water, has a lower specific gravity, has more fibrin, and so coagulates more quickly, less albumin and fat, more extractive and salts, more oxygen and less carbonic acid, than venous blood. Its temperature is higher.

Blood is frequently used as food; when fresh and warm from a recently killed animal it has been lately extolled as a cure of anæmia and of phthisis and other wasting disorders; and the serum has been recommended as an anthelmintic.

B., black. A synonym of venous blood.

B., buffy coat of. See *Buffy coat*.

B. ca'culus. A synonym of *Phlebolith*.

B. ca'sein. The colourless substance which remains after the removal of the hæmoglobin from the blood. A mixed substance.

Also, a synonym of *Globulin*.

B. casts. See *Casts, urinary*.

B. cells. The red corpuscles and white corpuscles of the blood.

B. charcoal. See *Charcoal, blood*.

B. circulation. See *Circulation of blood*.

B. clot. See under *Blood*, and *Coagulation*.

B., colouring matter of. See *Hæmoglobin*.

B. corpuscle-holding cells. A term applied to certain large, more or less spherical, bodies seen in the blood of mammals, in many cases being agglomerated blood-corpuscles; in some probably a group of blood-corpuscles surrounded by fibrin or enclosed in leucocytes, and in that condition undergoing degeneration.

B. corpuscles. (*L. corpusculum*, a little body.) The red and white corpuscles of the blood. See *Blood*.

B. corpuscles, transparent. Certain corpuscles, of the size of the red corpuscles, believed by Professor Norris to exist in blood, but which under ordinary circumstances are invisible in consequence of their refracting index and colour being the same as those of the plasma.

B. crystals. A term for crystalline *Hæmatoidin*.

B. cysts. Same as *Hæmatoma*.

B. cysts, sarcomatous. A sarcoma containing effused blood which has broken down its structure.

B. discs. The red corpuscles of the blood.

B. discs'ees. A generic term, of loose application and uncertain pathology, serving to denote a class of disorders which are supposed to depend upon alterations of the constitution of the blood or poisonous matters absorbed into it, such as pyæmia, anæmia, metallic poisoning, and such like.

B., dragon's. See *Dragon's blood*.

B., dried. Dried goat's blood was used as a sudorific, dried human blood in epilepsy, and dried bullock's blood in anæmia.

B., excessive discharge of. Same as *Hæmorrhage*.

B., flow of. A synonym of *Hæmorrhage*.

B.-flower. See *Hæmanthus*.

B., gases of. Arterial blood contains, at 0° C., 47.3 per cent. of gases, in the following proportions:—Oxygen 16.9 per cent., carbonic acid 29.2 per cent., and nitrogen 1.4 per cent., the two former partly in solution, partly in loose combination, a small quantity of ammonia, and perhaps hydrogen. The quantity of gases in venous blood, at 0° C. and 1 m. pressure, varies to some extent. The quantity of oxygen may be as low as 6 per cent., and of carbonic acid 35 per cent., in the blood returning from muscle at rest.

B.-glands. A generic name for the spleen, thyroid, thymus, and supra-renal bodies.

B.-glob'ules, defic'ency of. See *Aglobulia* and *Anæmia*.

B.-heat. In the interior of the body 100° F., though commonly marked on the thermometers at 98.6° F.

B., hepatic. The blood of the hepatic veins contains a greater proportion of corpuscles, and more of the white than the red. It contains sugar.

B., impurity of. See *Acatharsia*.

B., inflammation of. See *Hæmitis*.

B., inflamm'atory. Blood was formerly described as inflammatory when it exhibited a firm clot and a buffy coat.

B., loss of. See *Hæmorrhage*.

B., men'strual. See *Menstrual blood*.

B. murmurs. Anæmic and other vascular murmurs.

BLOODLIQUOR—BLUE

lungs, where, again, there is over-distension of right side of heart.

Local bloodletting is seldom wrong in inflammation of external parts, or of the pleura, or peritoneum, or of the organs of sense, in a previously healthy person, and it may often be resorted to advantageously in the less strong.

In both cases the importance and the extent of the organ affected, and the physical condition of the patient, are main factors in the determination.

B., capillary. See *Scarification, Cupping, and Leeching*.

B., depletive. When the object is to diminish the amount of blood in the body.

B., derivative. When blood is taken from a vessel near to the inflamed part.

B., evacative. When it is intended to reduce the quantity of blood.

B., general. A term for *Arteriotomy*, or *Phlebotomy*.

B., lateral. A term used to express the views of those who recommend that blood should be let on the same side of the body as the disease.

B., local. A term for *Cupping, Leeching, and Scarification*.

B., revulsive. When the blood is taken from a vessel far from the inflamed part.

B., spoiliative. When the blood is let to diminish the number of red corpuscles.

Bloodliq'or. The *Liquor sanguinis*.

Bloodroot. The *Sanguinaria canadensis*, and the *Potentilla tormentilla*.

Bloodshot. Echemosed; hyperemic.

Bloodstone. See *Hematites* and *Heliotropium*.

Also, a term used by the Australian miners for the basaltic lava which often overlies auriferous drift.

Bloodstroke. A synonym of *Apoplexy*. According to some, sudden congestion of the whole brain with rupture of bloodvessel.

Bloodvesicles. The corpuscles of the blood.

Bloodvessel. (G. *Blutbehälter*.) A general term for artery, vein, or capillary.

B., breaking of. Hemorrhage. Usually applied to hemorrhage from the lungs or stomach.

Bloodweed. The *Asclepias curassavica*.

Bloodwort. The *Hieracium renosum*, the *Rumex sanguineus*, and the *Sanguinaria canadensis*.

Bloody. (Same etymon as *Blood*.) Containing, or tinged with, or the colour of, blood.

B. crane's-bill. The *Geranium sanguineum*.

B. dock. The *Rumex sanguineus*.

B. sax. A term for *Dysentery*.

B. man's anger. The *Arum maculatum*.

B. small'pox. Same as *Smallpox*, *hemorrhagic*.

B. sweat. Same as *Ephidrosis cruenta*. Also see *Hamathidrosis*.

B. urine. Same as *Hematurin*.

B. warrior. The *Cheiranthus cheiri*.

Bloom. (Icel. *blóm*, a blossom.) A flower, a blossom. The whitish or bluish cloudy or powdery appearance on fruits and leaves; it is of a waxy character.

B., honey. The *Apocynum androsaefolium*.

Bloom'ing. (Part. of *E. bloom*, from Icel. *blóm*, a blossom.) Producing or bearing flowers.

B. spurge. The *Euphorbia corollata*.

Bloss'burgh mineral springs. In Tioga County, Pennsylvania. The water contains free sulphuric acid, with iron, aluminum, and magnesium sulphates. They are astringent and tonic. (Dunglison.)

Blos'som. (Sax. *blōstma*.) The corolla of a flower.

Blot. A French obstetrician now living.

B.'s perforator. (F. *perce crâne de Blot*.) An instrument used in craniotomy. It consists of two blades which, when closed, overlap each other in such a manner that the blunt back of each protects the cutting part of the other.

Blō'ta al'ba. See *Blata alba*.

Blotch. (Formed from *E. black*.) A mark on the skin.

Blow. (Arian root *bhlagh*, to strike.) A stroke; the result of a blow is a contusion.

Blow ball. The *Taraxacum officinale*.

Blow'fly. The *Musca vomitoria*.

Blowing. (E. *blow*, to puff, from Sax. *blāwan*, to puff up.) The act, or the sound produced by the act, of more or less forcibly emitting air; the noise of wind.

B. respira'tion. An altered condition of the respiratory murmur, in which it becomes rougher, harder, more intense, more or less metallic, and of a higher pitch, and seems as if drawn from the point of the chest where the ear or the stethoscope is applied; both inspiration and expiration are affected, and the latter is also prolonged. Its varieties are described as diffused and tubular.

B. sound. See *Murmur*.

Blow-pipe. (F. *chalumeau*; I. *cannello*; G. *Lothrohr*.) A tapering tube of metal used for the purpose of inflation in anatomical investigations.

Also, an instrument through which a stream of air from the lungs, or bellows, may be directed into a flame, which thus assumes a conical form, at the point of which the heat is very intense.

Blubber. (Eng. *blow*, to puff up; from *blāwan*, to swell.) The subcutaneous fat of the whale, seal, and such like.

Blue. (Icel. *blár*, livid. F. *bleu*; I. *turchino*, *azzurro*; G. *Blau*.) One of the primary colours. Originally it meant livid.

B., an'lin. See *Anilin dyes*.

B. bell. The *Scilla nutans*, the *Gentiana calebai*, and the *Campanula rotundifolia*.

B., Berlin. A synonym of *Prussian blue*.

B. berry. The *Caulophyllum thalictroides*, an American species of *Lantana*.

B. berry, low. The *Vaccinium pennsylvanicum*.

B.-blaw. The *Centaurea cyanus*.

B. bon'nets. The *Centaurea cyanus*.

B. bot'tle, corn. The *Centaurea cyanus*.

B.-bot'tle, great. The *Centaurea montana*.

B. caps. The *Scabiosa succisa*, and the *Knautia arvensis*.

B. cardinal flower. The *Lobelia syphilica*.

B. co'hoosh. The *Caulophyllum thalictroides*.

B. copp'peras. Cupric sulphate.

B. disc'a'se. A synonym of *Cyanosis*.

BLUELICKS—BOBERRI.

B. dove's-foot. The *Geranium sylvaticum*.

B. flag. The *Iris versicolor*.

B. fleabane. The *Erigeron acris*.

B. gentian. The *Gentiana catesbei*.

B. gum. (G. *schiefergrauer Zahnfleisch-rand*.) A blue condition of the free edges of the gums, seen in lead poisoning. It is believed to depend on the deposit of plumbic sulphide in the tissues from the action of sulphuretted hydrogen developed in the decomposing substances about the edges of the gums and the tartar on the teeth.

B. gum suc'cory. The *Catananche cærulea*.

B. gum tree. The *Eucalyptus globulus*.

B. John. Blue fluor, or Derbyshire spar.

B. line. See *B. gum*.

B. lit'mus pa'per. See *Litmus paper*.

B. mass. A term for *Pilula hydrargyri*.

B. melilot. The *Melilotus cærulea*.

B. mould. The *Aspergillus glaucus*.

B. moun'tain. Cupric carbonate.

B. ointment. The *Unguentum hydrargyri*.

B., Par'is. Same as *Prussian blue*.

B. pill. The *Pilula hydrargyri*.

B., Prus'sian. (F. *bleu de Prusse*; I. *azzurro de Berlino*; G. *Berlinerblau*.) $\text{Fe}_2\text{Cy}_{18}$. Ferric ferrocyanide.

B. pus. See *Pus, blue*.

B. rock'et. The *Aconitum napellus*.

B. skin. Same as *Exangia cyania* of Mason Good.

B. stone. Cupric sulphate.

B. suppuration. See *Pus, blue*.

B. sweat. See *Cyanhidrosis*.

B. vitriol. Same as *B. stone*.

B. weed. The *Echium vulgare*.

B. wolf'sbane, ear'ly. The *Aconitum napellus*.

Bluelicks. United States; Kentucky, on the Licking River. Sulphurous saline waters. (Dunglison.)

Blumea. A Genus of the Nat. Order *Compositæ*. Small plants, chiefly intertropical; several species of which have a camphoraceous odour.

B. balsamifera, De Cand. (L. *balsamum*, a fragrant gum; *fero*, to bear.) Hab. Moluccas, Java, Ceylon, India. Has an agreeable balsamic flavour, and a camphoric smell. Used as a sudorific and expectorant, tonic, antispasmodic, and emmenagogue; also, in paralysis and leucorrhœa. It yields on distillation Ngai camphor.

B. grandis, De Cand. (L. *grandis*, great.) Common in the Tenasserim provinces, and yields a good camphor. (Waring.)

B. lacer. (L. *lacer*, bitten, torn.) Hab. Java, China, Bengal. Very aromatic and terbinthinate. Used in dyspepsia.

Blumenbach, Johann Fried'rich. A German naturalist and physiologist, born at Gotha 1752, died 1840. His anthropological researches are of great value.

B.'s norma verticill. (L. *norma*, a pattern; *vertex*, the highest point.) A method of estimating the size and form of a skull by placing it with the malar bones in such a position as it would occupy if the lower jaw were attached and looking at it from above. By this plan a general idea can be obtained of its length, breadth, general form, and facial projection.

Blumenstein. Switzerland; Canton Bern, near Thun. An alkaline saline chalybeate water, of temp. 17° C. (62.6° F.), containing iron carbonate .15 grains, calcium carbonate 3.6, in 16 ounces.

Blumistein. Same as *Blumenstein*.

Blunt. (Icel. *blunda*, to doze; the original meaning being dull.) Having no sharp edge or point.

B. hook. See *Hook, blunt*.

B.-leaved dock. The *Rumex obtusifolius*.

B.-leaved sis'yphus. The *Zisophus jujuba*. The fruit of this plant is eaten in India fresh, and also in pickle and conserve.

B. shield-fern. The *Nephrodium Mixmas*.

Blush. (D. *bloezen*, from *blos*, redness. L. *ruber*; Gr. *ερύθρη*; F. *rougeur*; I. *rossore*; S. *rubor*; G. *Rothe*.) The red colour which is one of the constant phenomena of the inflammatory process, and which is caused by dilatation of the capillaries.

B., cutaneous. (L. *cutis*, the skin.) A more or less extensive redness of the skin.

B., inflam'matory. The redness of skin or mucous membrane produced by inflammation.

Blush'ing. (Same etymon.) The redness of the cheeks caused by shame or confusion, caused by dilatation of the capillaries of the skin from temporary suspension of the action of the vaso-motor nerves of the part.

Boa. (As if *bova*, which signifies a large wine vessel, of a great length and big-bellied; also, the measles.) A papular or vesicular eruption.

A Genus of the Family *Boidæ*. These are among the largest of serpents, and from their excrement uric acid is obtained. The flesh is eaten, the fat is used in bruises, and the freshly flayed skin is applied to the belly in abdominal affections.

B. krait. A synonym of the *Bungarus cæruleus*.

B. linea'ta. (L. *linea*, a line.) A synonym of *Bungarus cæruleus*.

B. u'pas. The upas tree.

Boa-tam-payang. The Chinese name of the fruit of the *Sapindus rubiginosus*. It is of the size of a prune, with a blackish wrinkled epicarp. When soaked in water it forms a gummy transparent jelly. It was used in dysentery, but does not appear to be specially useful.

Boæ. An old term for syphilis.

Boak. (Ar. *boak*.) A species of the white variety of *Lepra vulgaris*.

Boa'la. A term used in Central Europe to denote generally severe eruptions or ulcers; originally, in all probability, it was confined to syphilitic diseases.

Boanthemon. (Βοάνθεμον; from *βοῦς*, an ox; *άνθος*, the name of a flower, probably the chamomile.) The ox-eye, *Chrysanthemum leucanthemum*.

Boar. (Sax. *Bār*.) The male of the swine, *Sus scrofa*.

Boat. (Sax. *bāt*.) A small open ship.

B.-shaped. In Botany, having the form of a boat.

Bo'batsch. Roumania. A mineral spring containing sodium chloride and hydrogen sulphide.

Bober'ri. The *Curcuma longa*.

Bocchegiano. Italy; near Siena. Five mineral water springs, arising from the clay slate, and containing iron, with small quantities of salts. Used in anæmia, chlorosis, and scrofula.

Bocchoe. The buchu, *Barosma betulina*.

Bocco. The Buchu.

Boccone. An Italian naturalist, born at Palermo 1633, died 1704.

Bocconia. (After Boccone.) Nat. Order *Papaveracea*. Hab. Mexico. Herbs with a milky juice.

B. frutescens, Linn. (*L. frutex*, a shrub.) Used as a drastic purgative and a vermifuge. Locally, in ringworm and corneal opacities.

Bocchetum. A secondary decoction of certain woods, as *Lignum vitæ*. (Blasius.)

Bocchium. A synonym of *Bronchocle*.

Boccho. The *Barosma betulina*.

Bocia. A glass subliming vessel, having a round belly and long neck.

Bocium. A synonym of *Bronchocle*.

Bocklet. Bavaria. Height 620 feet. A pleasant village, near to Kissingen. Climate mild. Cold chalybeate waters, with much carbonic acid. A stimulating saline chalybeate, used in anæmic conditions, especially in feeble digestion. Said to cure sterility, and to check the tendency to abortion.

Bocco. The *Robina panacoe*.

Bodach. Hungary; near Weissenburg. A mineral water containing calcium bicarbonate and free carbonic acid. Used in gout, rheumatism, glandular disorders, and chronic bronchitis.

Bodendorf. Germany; near Heidelberg. A climatic cure place for chest and nervous diseases. The grape cure is used.

Bodo, Ehr. A Genus of the Family *Monadina*, Order *Flagellata*, Class *Infusoria*. Some species inhabit the intestinal canal of the frog and salamander, and others are found in the body of some of the Radiata.

B. urinarius, Hassall. (*L. urina*, urine.) A species said to be found in the urine.

Bodroo Pam. The native name of the *Trimerisurus gramineus* and *T. erythrusus*.

Body. (*Sax. bodig.* *L. corpus*; *Gr. σώμα*; *F. corps*; *I. corpo*; *S. cuerpo*; *G. Körper*.) That which is cognisable by the senses. The word is used as a basis of classification in the sciences; as in physics, solid and fluid bodies; in Chemistry, simple and compound bodies.

In human Biology, it is used to distinguish the material from the mental part of man, body and mind.

In Anatomy, it serves to distinguish the basal part of a structure from its appendages, as body of the sphenoid bone. It is also often the base of nomenclature, as pituitary body, pachionian body. It is used in this sense in Biology generally.

In Surgery, it is used with the epithet foreign to signify a substance introduced from without into the tissues or the cavities of the human body, or unnaturally growing there, as bullets, loose cartilages in joints.

B-cavity. (*L. cavitas*, a cavity.) The space in which lie the alimentary canal and its appendages.

B., extreme parts of the. See *Acra*.

B., friction of the. See *Anatropia*.

B-louse. The *Pediculus vestimentarii*.

B. of Rosenmüller. The *Parovarium*.

B., perineal. See *Perinaum*, body of.

B., rectiform. See *Rectiform body*.

B., suprarenal. The *Adrenale*.

B., thyroïd. See *Thyroid body*.

B., Wolfian. See *Wolfian body*.

Boc. The principle of intelligence on Zoroaster's system. See *Akko*.

Boë, François de la. A German physiologist, better known as *Sylrius*, born at Hanau, near Frankfurt, 1614; died 1672.

Boehmeria. (*Bömer.*) A Genus of the Nat. Order *Urticaceæ*. Several species yield valuable fibres for textile fabrics; Chinese grass, Rhea, and Pooah fibre.

B. alienata. (*L. alieno*, to alter the nature of.) Hab. China. Used both externally and internally. It is refrigerant, diuretic, and emollient.

B. caudata, Endl. (*L. cauda*, a tail. *F. boehmeria d. quene.*) A native of Brazil, where the leaves are used as a sudorific and antihæmorrhoidal, a decoction of the leaves being added to a bath.

Boell. A term for the intestines. (Dun-glison.)

Boerhaavia. A Genus of plants of Nat. Order *Nyctaginaceæ*. Chiefly tropical, and possessing emetic and purgative properties.

B. decumbens, Vahl. (*L. decumbo*, to lie down.) Hogmeat. Hab. West Indies and South America. In Guiana its root is called *ipecauanha*, and is an emetic and purgative. Used also in dysentery.

B. dianandra, Aubl. (*Diandrous*.) The *B. decumbens*.

B. diffusa. (*L. diffusus*, part. of *diffundo*, to spread out.) Spreading hogweed, also called hogmeat. Hab. Jamaica. An expectorant; a decoction of the root has also been used in asthma, in gonorrhœa, and in dysentery.

B. hirsuta. (*L. hirsutus*, hairy.) Hab. Jamaica, Brazil. Used in jaundice.

B. insularis. (*L. insularis*, belonging to an island.) The same as *B. diffusa*.

B. laxa, Pers. (*L. laxus*, loose.) The *B. decumbens*.

B. peruviana, Humb. A species used in venereal diseases.

B. procumbens. (*L. procumbo*, to prostrate one's self.) Hab. India. The root is somewhat nauseous and bitter, and is laxative. It is given in dysentery, and is applied locally in skin diseases.

B. prostrata. (*L. prostratus*, part. of *prosterne*, to spread out.) Hab. India. Used in snake-bites.

B. scandens. (*L. scando*, to climb.) Hab. West Indies. Used in gonorrhœa.

B. tuberosa, Lamb. (*L. tuberosus*, full of swellings.) Hab. Peru, where it is called *Yerba de la purgacion*. Purgative and emetic. Eaten as food.

Boers. A term given to the persons of Dutch extract living in South Africa.

Boöthema. (*Boöthia*, to aid.) Term for a remedy. (Castellus.)

Boöthematica signa. (*Boöθημα-τικός*, remedial; *L. signum*, a sign.) Signs of a favourable progress of a disease.

Boëtum. See *Bocium*.

Bof. Quicklime. (Ruland.)

Bofaréira. Name, in the language of the Cape de Verd Islands, for the white species of the *Ricinus communis*, castor-oil plant. See *Ricinus communis*.

Bog. (Irish *bogach*.) A morass.
B. bean. The *Menyanthes trifoliata*, or buck-bean.
B. bean, fringed. The *Villarsia nymphaoides*.
B. berry. The cranberry, *Oxycoccus palustris*.
B. bilberry. The *Vaccinium uliginosum*.
B. moss. A term applied to several species of *Sphagnum*.
B. myrtle. The *Myrica gale*.
B. onion. The *Osmunda regalis*.
B. violet. The *Pinguicula vulgaris*.
B. wort. The cranberry, *Oxycoccus palustris*.
Bogia gummi. Gamboge.
Bogo'ta. South America; a city of the Granadian Confederation.
B. bark. A term applied, from the source of the supply, to one of the kinds of fibrous Carthagena bark.
Bohe'a. (F. *thé boui*.) A name of black tea.
Bohe'ic acid. An acid said by Rochleder to be found in black tea.
Bohe'mians. A name of the Gipsies.
Bö'hrner, Georg Rudolph. A German botanist, born 1723, died 1803.
Bohun upas. The poisonous juice of *Antiaris toxicaria*. See *Upas*.
Boia. See *Boa*.
Boicini'gua. A name for the rattlesnake, *Crotalus horridus*.
Bo'idæ. A Family of the Suborder *Aglyphodontia*, Order *Ophidia*, Class *Reptilia*, comprising the Boas and Pythons. They are the largest of all living snakes; they have strong recurved teeth, but their bite is not venomous; they kill their prey by folding themselves round it. The Pythons have rudimentary hind limbs, terminating in horny anal spurs.
Boil. (Sax. *byl*. L. *furunculus*; Gr. *δοθρίν*; F. *furoncle*; clon; I. *furuncolo*; S. *divieso*; G. *Beule*, *Furunkel*, *Blutgeschwür*.) A circumscribed inflammation of the skin, or of subcutaneous connective tissue, or of a sebaceous gland. Usually some of the affected part sloughs, the core or sefast, and is discharged along with pus through an opening in the skin. Errors in diet, producing an enfeebled condition of system, overtraining for athletics, severe hydropathic treatment, inhalation, and handling of putrefied flesh, and the existence of diabetes, are among the causes of boils. They are sometimes epidemic.
B., blind. A boil where there is little sloughing, no distinct margin or core, and little pus.
B., Bula'ma. See *Bulama boil*.
B., Delhi. See *Delhi boil*.
B., gum. See *Gum boil*.
B., malignant. See *Carbuncle*.
B., wasp's nest. A boil with several loculi, or a small carbuncle.
Boiling. (L. *ebullitio*; Gr. *ἀναίσις*; F. *ébullition*; I. *ebollizione*; S. *ebullición*; G. *Aufsieden*.) The violent movement of a liquid under the influence of such an amount of heat as will serve to convert it into vapour; the movement is caused by the rapid formation of bubbles of vapour of the liquid, which rise and burst on the surface. When a liquid boils the temperature ceases to rise, the additional heat becoming latent in the vapour.

B. point. (G. *Siedepunkt*.) The temperature at which bubbles of vapour are given off from a liquid. This varies for different liquids and for the same liquid under different physical conditions, especially differences of atmospheric pressure; the greater the pressure the higher the boiling point; but the conditions being constant the boiling point is constant.
Bo'ina. (L. *bos*, an ox.) A synonym of *Vaccina*.
Bois-plan. France; south of Chamberry, in Savoy. A mild chalybeate water.
Boisse. France; near Fontenay-le-Compte. Purgative mineral waters, containing calcium sulphate and carbonate and calcium chloride.
Boivin, Ma'da'me. A French female obstetrician, born at Montreuil, near Versailles, in 1775; died 1841. Her obstetrical and gynaecological writings were much esteemed.
Bojanus, organ of. A series of tubes, with numerous blood-channels, found in Molluscs and Cephalopods, and opening on the one side on the exterior of the body, and on the other communicating with some part of the blood-vascular system. It is probably a urinary apparatus.
B., tracheal sacs of. Vesicular sacs attached to the muscular layer of the dermis of nematode worms.
Bola. Myrrh.
Bolar earth. Same as *Armenian bole*.
Bolax. A Genus of the Nat. Order *Umbellifera*.
B. gleba'ria. (L. *glebarius*, belonging to clods.) Hab. Southern Chili, Falkland Isles. A beehive-shaped plant, yielding a white gummy resin, amber-coloured when dry. Used as an application to wounds.
B. gum'mifer. (L. *gummi*, gum; *fero*, to bear.) The *Hydrocotyle gummifera*.
Bol'bitum. (Βόλβιτον. G. *Kuhmist*.) Dung of the ox or cow. Anciently recommended by Hippocrates, *de Nat. Mul.* ii, 17, as a poultice or fomentation in uterine diseases.
Bolbocastanon. Same as *Bulbocastanum*.
Bolbo'des. (Βολβός, a bulb; εἶδος, likeness. G. *zueibelformig*.) Bulbous, ball-shaped.
Bolbomelano'ma. (Βολβός, a bulb; *melanoma*. F. *bolbomelanôme*; G. *Schwarschieamm des Auges*.) *Melanoma* of the eye.
Bolbomelano'sis. (F. *bolbomelanose*.) The progress or formation of *Bolbomelanoma*.
Bol'chon. Used for *Bellium*, according to Dioscorides, i, 80.
Bolde'a. Same as *Boldoa*.
Bol'dine. A bitter alkaloid, discovered by Bourgoin in *Boldo* leaves; it is soluble in alcohol, ether, and caustic alkalies; it is coloured red by nitric and sulphuric acids.
Bol'do. The leaves of *Boldoa fragrans*.
Boldo'a. A Genus of the Nat. Order *Monimiaceæ*. Aromatic fragrant plants.
B. fragrans. Gay. (L. *fragrans*, sweet smelling.) *Boldo*. An Alpine evergreen shrub, growing in Chili. The leaves contain an aromatic oil and an alkaloid, *Boldine*. They are oval-oblong, entire, reddish brown when dry, leathery, glossy above, pale and hairy beneath, with many small glands. They have a fragrant smell and a pungent, aromatic taste.
 Used as a tonic where there is torpidity of the liver, and, especially the oil, in catarrh of the genito-urinary organs.
Bol'dus. The leaves of *Boldoa fragrans*.

BOLE—BOLETUS.

Bole. (Βῆλος, a clod of earth. *F. bol*; *G. Bolerde.*) Name of an argillaceous mineral having a conchoidal fracture, a glimmering internal lustre, and a shining streak; its colour varies from white, through different shades of yellow and brown, to black, and it is translucent or opaque, soft, and easily cut, and capable of being polished; it adheres to the tongue, has a greasy feel, and if immersed in water after it is dried, it falls asunder with a crackling noise; it consists of clay coloured with iron oxide, and often containing chalk and magnesia. Many species were formerly used in medicine; and as they used to be made into little cakes, or flat masses, stamped with certain impressions, they were termed *Terræ sigillatæ*, or sealed earths. Bole was used as an internal astringent, and an absorbent in menorrhagia, hæmoptysis, chronic bronchitis, and diarrhoea. Externally it was used in leucorrhœa, piles, aphthæ, burns, and ulcers. Dose, 5—10 grains.

B., Armenian. See *Bolus armenia*.

B., French. (*F. bol du pays.*) A compact, heavy, soft-feeling earth, found near Blois and Saumur. Used in France as a substitute for *B., Armenian*.

B., red. See *Bolus rubra*.

B., white. See *Bolus alba*.

B., yellow. A bole differing from *Bolus rubra* only in depth of colour.

Bolæchon. Poland. A strong saline or soil mineral water bath.

Bolæsis. An old term for *Coral*.

Bolæson. Balsam.

Bolætic acid. Same as *Fumaric acid*.

Bolætus. (Βῆλος, a mass. *F. bolet*; *G. Kugelknaum, Löcherknaum.*) A Genus of the Family *Hymenomyces*, *Nat. Order Fungi*. Hymenium distinct from the smooth hymenophore; trama none; tubes easily separable from hymenophore. Flesh, terrestrial fungi, of which some are poisonous, many eatable.

B. æneus. Bull. (*L. æneus*, made of bronze.) Esculent. Flesh white, changing to yellow in the air; pileus broad, olive, or black brown; stem yellowish, brownish at the base; tubes sulphur yellow. In woods in summer and autumn.

B. æstivalis. Fr. (*L. æstivalis*, belonging to summer.) Esculent. Pileus silky, soft, pale tan; stem stout, even, white; tubes elongated, small. In woodland pastures.

B. agaricus. (Ἀγανικόν, a tree-fungus.) The *Polyporus officinalis*.

B. albus. (*L. albus*, white.) The *Polyporus officinalis*.

B. annulatus. Pers. (*L. annulatus*, furnished with a ring.) The *B. tuteus*.

B. badius. Fr. (*L. badius*, chestnut-coloured. *G. Maronenpilz.*) Esculent. Pileus pulvinate, soft, viscid, chestnut brown; stem solid, even, brownish yellow; tubes pale yellow, broad, angular. In pine woods.

B. bovinus. Linn. (*L. bovinus*, belonging to cattle. *G. Kuhpilz.*) Esculent. Pileus reddish grey; stem equal, even; tubes angular, greyish yellow, afterwards rusty brown; spore elliptic yellowish; taste and smell fragrant. Heathy firwoods.

B. calopus. Fr. (Καλός, beautiful; ποῦς, a foot.) Suspicious. Scarlet-stemmed boletus. Pileus broad, convex, olive brown, somewhat tomentose; stem reticulated, scarlet; tubes adnate, angular, yellow. In woods.

B. castaneus. Bull. (Κάσταν, chestnuts.) Esculent, but not very good. Pileus convex, velvety, cinnamon coloured; flesh white, unchanging; stem cinnamon; tubes short, white, afterwards yellowish. Woods.

B. cervi. (*L. cervinus*, a stag.) The *Elaphomyces granulatus*.

B. cervinus. (*L. cervinus*, pertaining to a deer.) The *Elaphomyces granulatus*.

B. chirurgorum. (*L. chirurgus*, a surgeon.) The *Polyporus fomentarius*.

B. chrysenteron. Fr. (Χρυσός, golden; ἵντρος, inside. *F. bolet de cuisine, bolet à tache jaunes.*) Poisonous. Pileus soft, reddish brown; stem rigid, scarlet or yellow; tubes rather large, angular, greenish yellow; flesh yellowish white, changing to bluish when cut. In meadows and woods.

B. constrictus. (*L. constrictus*, compressed.) The *B. cyanescens*.

B. crassus. (*L. crassus*, thick; *pes*, a foot.) The *B. edulis*.

B. cupreus. (*L. cupreus*, of copper.) The *B. chrysenteron*.

B. cyaneus. Bull. (Κυάνεος, dark blue. *F. bolet indigotier.*) Doubtfully esculent. Pileus tomentose, tan coloured; flesh compact, white, becoming dark blue when cut; stem ventricose, white; tubes free, minute, round, white, afterwards yellow. In woods.

B. discoides. (Δίσκος, a round plate; αἶδος, likeness.) The *Trametes suareolens*.

B. edulis. Bull. (*L. edulis*, eatable. *F. bolet comestible*; *G. Steinpilz, Herrenpilz, Edel-pilz.*) Esculent. Pileus smooth, amber brown; flesh white; stem whitish brown, reticulated, especially towards summit, ringless; tubes white, afterwards yellowish green. In woods.

B. elegans. Fr. (*L. elegans*, elegant.) Doubtfully esculent. Pileus viscid, golden yellow; flesh pale yellow; stem yellow, afterwards rufous; tubes small, simple golden yellow. Woods.

B. erythropus. Krombh. (Ερυθρόπους, red-footed.) The *B. lupinus*.

B. esculentus. (*L. esculentus*, fit for eating.) The *B. edulis*; also, the *Morchella esculenta*.

B. fellus. Bull. (*L. fellus*, like gall. *F. bolet chicotin.*) Poisonous. Pileus smooth, brownish or reddish grey; flesh flesh-coloured; stem reticulated; tubes adnate, convex, angular, white, afterwards flesh-coloured; spores pink; taste bitter. Woods.

B. flavus. Krombh. (*L. flavus*, golden yellow.) The *B. elegans*.

B. fomentarius. The *Polyporus fomentarius*.

B. fragrans. Vitt. (*L. fragrans*, sweet smelling.) Pileus pulvinate, with an indented margin, submentose, amber brown; stem variegated with red and yellow; tubes semi-free, small, rounded, yellow, becoming green. In woods. Esculent.

B. fulvus. (*L. fulvus*, tawny.) The *Polyporus ignarius*.

B. granulatus. Linn. (*L. granulum*, a little grain. *G. Schmeerling.*) Esculent. Pileus convex, yellowish, with a brownish evanescent gluten; stem ringless, yellowish, with yellowish or brownish granules in the upper part; tubes adnate, simple, yellow. In fir-woods.

B. hippocrepis. (ἵππος, a horse; κρηπίς, a shoe.) The *Polyporus ignarius*.

BOLISMUS—BOMAREA.

B. ignis'rius. The *Polyporus ignarius*.
B. impol'itus. Fr. (*L. impolitus*, rough.) Esculent. Pileus flocculose, pallid, afterwards cracked; stem short, stout, even, pallid; tubes nearly free, very long, large, yellowish. On woodides.

B. lar'icis. (*L. laricis*, a larch tree.) The *Polyporus officinalis*.

B. lup'inus. Fr. (*L. lupinus*, wolfish. *G. Rothfuss*, *Fusspilz*.) Dotted-stem boletus. Pileus convex, tomentose, dry, at first bluish green, then yellowish; stem blood red; flesh yellowish, becoming blue on fracture. Poisonous.

B. lur'idus. Schaff. (*L. luridus*, sallow. *F. bolet pernicius*; *G. Hæmopilz*, *Schusterpilz*, *Judampilz*.) Poisonous. Pileus tomentose, olive umber, getting viscid; flesh when broken changes to blue; stem stout, vermilion red, reticulate or punctate; tubes free, rounded, yellow, then greenish. In the neighbourhood of trees.

B. luteus. Linn. (*L. luteus*, yellowish. *G. Butterpilz*, *Kingpilz*, *Schmalzling*.) Esculent. Pileus gibbous, thin, cushion-shaped, with a brown evanescent gluten; stem whitish, above the white, and afterwards brownish ring, rough, and darkly punctate; tubes adnate, small, simple, yellow. In fir-woods.

B. obtus'us. (*L. obtusus*, blunt.) The *Polyporus ignarius*.

B. officina'lis. (*L. officina*, a workshop.) The *Polyporus officinalis*.

B. pach'ypus. Fr. (*Παχύς*, thick; *πόδις*, a foot. *F. boue de vache*, *côpe-cordon rouge*; *G. Dickfuss*.) Poisonous. Pileus subtomentose, brownish; stem thick, reticulated, yellow and red; tubes rounded, yellow. Woods.

B. pernicio'sus. (*L. perniciosus*, pernicious.) The *B. luridus*.

B. pipera'tus. Bull. (*L. piperatus*, peppered. *G. Pfefferpilz*.) Poisonous. Pileus smooth, slightly viscid, yellow, inclining to reddish grey; stem slender, even, yellow within and at the base; tubes large, angular, ferruginous. In woods.

B. pur'gans. (*L. purgo*, to purge.) The *Polyporus officinalis*.

B. regius. Krombh. (*L. regius*, regal. *G. Königspilz*.) Esculent. Pileus bare, blood red or purple; flesh pale yellow; stem very thick, yellow-veined, on a purple or red ground; tubes golden yellow. In woods. Esculent.

B. ri'bis. See *Polyporus ribis*.
B. rubecola'rius. (*L. rubeo*, to redden.) The *B. luridus*.

B. ruf'us. Schaff. (*L. rufus*, red. *G. Esenpilz*.) Esculent. Pileus dry, scaly at first, then smooth, red or orange brown; flesh white, when broken becoming blue or violet.

B. salic'is. (*L. salix*, the willow.) The *Trametes suaveolens*.

B. sat'anas. Lenz. (*Σατανᾶς*, the devil. *G. Satanpilz*.) Poisonous. Pileus smooth, rather viscid, tan, afterwards white; flesh white, turning reddish, when broken changes to blue; stem firm, reticulated above, blood red; tubes free, minute, yellow. Woods.

B. sca'ber. Fr. (*L. scaber*, rough. *F. bolet orange*, var. *rufus*; *G. Birkenpilz*, *Kapuzinerpilz*.) Esculent. Pileus smooth, viscid when moist, rugulose; margin veiled; stem solid, scaly; tubes free, small, convex, white, becoming dingy. Woods.

B. suave'olens. (*L. suaveolens*, sweet smelling.) The *Trametes suaveolens*.

B. subto'ment'us. L. (*L. sub*, under; *tomentum*, a stuffing for cushions. *G. Stoppelpilz*.) Esculent. Pileus pulvinata, villous-tomentose, olive coloured or reddish brown; stem stout, unequal, roughly punctate, ribbed, yellow, later reddish; tubes adnate, broad, angular, yellow. In woods.

B. sulphu'reus. The *Polyporus sulphureus*.

B. touch'wood. The *Polyporus ignarius*.

B. ungula'tus. (*L. unguatus*, provided with claws.) The *Polyporus tomentarius*.

B. versipe'tilis. Fr. (*L. versus*, part of, *verso*, to turn, to change; *pellis*, the skin.) The *B. rufus*.

Bolism'us. (Βόλος, a mass.) Used by Avicenna, iii, fm. 13, tr. 2, c. 15, 16, for *Bulimia*.

Bol'ites. (Βόλις, a clod.) The mushroom.

Bolivar'ies. The same as *Jasmines*.

Boll. Germany; Wurtemberg. A mineral spring, 1300 feet above sea-level, containing a little sodium carbonate and sulphate, with some hydrogen sulphide. Used in skin diseases, scrofula, leucorrhoea, and chronic cystitis.

Bollet'erie. The indigenous name of the species of gutta percha produced by the *Aletris mulleri*.

Bologn'ian phos'phorus. Sulphate of baryta, mixed with a fifth part of charcoal, ignited, and whilst hot put into a closely-sealed glass tube, is called by this name because, after exposure to the sun's rays, or the magnesium light, it acquires the property of shining in the dark with a bright orange light; also called *Bononiensis lapis*.

B. stone. Same as *Bologn'ian phosphorus*.

Bolorhe'tin. A resinous substance, found in the fresh or fallen leaves of pine trees, and in the fossil firwoods of Danish bogs. Its composition is variable, but it appears to consist of the elements of oil of turpentine with water. It melts at 75° C. (167° F.)

Bolus. (Βόλος, a mass. *F. bol*.) Any roundly formed medicine, larger than an ordinary sized pill, yet small enough to be swallowed.

A kind of argillaceous earth. See *Bole*.

B. ad quarta'mam. (*L. quartana*, the quartan ague.) A febrifuge consisting of quinine, tartar emetic, and potassium carbonate.

B. alba. (*L. albus*, white. *G. weisser Thon*.) A species of a white colour, and containing some magnesia and traces of iron. For properties, see *Bole*.

B. aliment'ary. (*F. bol alimentaire*.) The soft mass formed by the food, after mastication and insalivation have been performed, so as to fit it for its transmission into the pharynx, cesophagus, and stomach.

B. Arme'nise. A variety from Armenia, and other parts; it has a reddish-brown colour, from the presence of iron oxide. Used as a tooth powder. For use, see *Bole*.

B. orienta'lis. (*L. orientalis*, eastern.) The same earth as Armenian bole, but brought from Constantinople

B. ru'bra. (*L. ruber*, red. *G. rother Thon*.) Armenian bole.

Bomarea. A Genus of the Nat. Order *Amaryllidaceae*.

BOMBACEÆ—BONE.

B. salicifolia. A plant used in Chili as a sudorific and in skin diseases.

Bombacæ. (*Bombax*, the silk-cotton tree.) A Tribe of the Nat. Order *Sterculiaceæ*, with palmate or digitate leaves and perfect flowers.

Bombacæous. (Same etymon.) Having an arrangement of parts as in the Genus *Bombax*.

Bombacium. (*G. Baumwolle.*) Cotton wool.

Bombax. A Genus of plants of the Tribe *Bombacææ*, of the Nat. Order *Sterculiaceæ*. Large trees, the seeds of many of which are enveloped in a silky cotton.

Also, a term for cotton.

B. ceiba. Hab. South America. Used in dropsy, tetanus, and chest affections. Locally as a vulnerary.

B. gossypium. The *Cochlospermum gossypium*.

B. heptaphyllum. Cav. (*Έπτά*, seven; *φύλλον*, a leaf.) A tree which affords the substance called moc-main. It consists of the long silky hairs which cover the seeds. The gum resin is said to be astringent, and the root tonic and aphrodisiac. The bark is said to be emetic.

B. malabaricum. See *B. heptaphyllum*.

B. pentandrum. Linn. (*Πέντε*, five; *άνθρ*, a man.) Silk-cotton tree. Bark emetic. A gum which exudes from it is given, with spices, in diarrhoea and dysentery.

Bombay nuts. The *Bonduc* seeds.

Bombic. (*Βόμβιξ*, a silkworm.) Belonging to a silkworm.

B. acida. (*F. acide bombique*; *G. Seidenwürmersäure*.) An acid found in a cavity near the anus of the silkworm, the larva of *Bombyx mori*, now believed to be nearly pure acetic acid.

Bombokulon. A name which Dioscorides is said to have given to mandragora.

Bombus. (*Βομβός*, the buzzing of bees. *F. bourdonnement*; *G. Ohrenbrausen*.) A ringing noise in the ears, otherwise termed *Tinnitus aurium*.

Also, a sonorous movement of flatus in the intestines, otherwise termed *Borborygmus*.

Also, a variety of the *Paracusia illusoria*, of Mason Good; being a dull, heavy, intermitting sound.

Bombycides. (*Βόμβυξ*, a silkworm.) A Family of the Group *Bombycina*, Order *Lepidoptera*. Antennæ of both sexes serrate; palpi hairy; anterior wings with twelve veins and no accessory cell; dorsal vein not bifurcate; posterior wings with two inner marginal veins; larvae hairy.

Bombycines. (*Βόμβυξ*, a silkworm.) A Group of the Order *Lepidoptera*, Class *Insecta*. Moths having a heavy, hairy body, and pectinate antennæ; ocelli absent; wings of females sometimes wanting. Many of the genera produce silk for the envelopment of the cocoons.

Bombylius. (*Βομβυλιός*.) The silk-worm moth, or the pupa, or the larva.

Bombyx. (*Βόμβυξ*.) A Genus of the Family *Bombycida*, Order *Lepidoptera*, Class *Insecta*.

B. mori. (*L. morus*, the mulberry tree. *F. bombyx du mûrier*, *ver à soie*; *G. Seidenwurm*.) The silkworm moth.

B. ptyocampa. (*Πίτυς*, the pine tree; *άκμωρ*, a caterpillar. *F. processionaire du pin*.) Larve, irritating, as *B. processionæ*.

B. processionæa. (*L. processio*, a marching onward, from *procedo*, to go forth; so called from the habits of the larvæ, which are often seen as if in procession. *F. la processionnaire*.) The hairs of the larvæ of these moths are very irritating to the skin; they perforate the cuticle, and are supposed to contain formic acid. Great redness, heat, and itching or smarting is produced, with eczema or urticaria; the conjunctiva may also be affected, with oedema of the lids, and faucial irritation may be set up. Serious constitutional disturbance is said to have been produced.

Bon. The Egyptian name of the coffee tree; also spelled *Ban*.

Bona. The *Phaseolus vulgaris*.

Bona fever. A malignant malarial fever, which severely attacked the French troops at Bona, in Algeria, in 1832-5.

Bonanalis officinalis. *Sinapis alba*.

Bonar. Spain; in the Province of Galicia. A mineral water, temp. 23° C. (73.4° F.), containing iron.

Bona're aloes. A variety very similar to Barbadoes aloes.

Bona'sia. The *Leonurus cardiaca*.

Bonchurch. Isle of Wight. A pleasantly situated place, 150 feet above sea-level. A winter residence.

Bond. (*Sax. bend*, or *band*; *Sans. bandha*, a fetter.) A tie.

B., atomi. See *Atomic bonds*.

Bon'donneau. France; Drôme. A cold alkaline sulphurous water containing iodine. It is employed for drinking, in baths, injections, and douches. Used in scrofula, syphilitic affections, skin diseases, chronic bronchitis, uterine and joint diseases.

Bon'dou gum. A variety of the Senegal gum arabic; it has a bitter taste.

Bonduc. The *Guilandina bonducella*.

B. seeds. Ind. Ph. (*G. Nickersamen*.) The seeds of *Guilandina bonducella*. They are about .75" in diameter, irregularly ovoid, smooth, hard, lead-coloured, and bitter. They contain a fixed oil, and a bitter substance, which can be isolated as an amorphous powder, having no basic properties, but which is, or contains, the active principle. They are tonic and antiperiodic, and have been successfully used in intermittents, and locally in hydrocele and gonorrhœa. Dose, 10-15 grains.

B. tree, smooth. The *Guilandina moringa*.

Bonducellæ semina. (*L. semen*, a seed.) See *Bonduc seeds*.

Bonduch indorum. The fruit of the *Guilandina bonducella*.

Bondue. The *Gymnocladus canadensis*.

Bone. (*Sax. bân*. *L. os*; *Gr. ὀστέον*; *F. os*; *I. osso*; *S. hueso*; *G. Bein, Knochen*.) The framework of the animal body, supporting the softer structures, forming the joints, and protecting the important viscera. The assemblage of bones of an animal is usually called the *skeleton*, but this term has a wider and more scientific signification.

Chemical composition.—Bone has a sp. gr. of 1.898-1.964. It is hard, tough, and somewhat elastic; light pink on the outside, while living, dark red within. It consists of a basis of gelatin impregnated with earthy material; on an average there is in 100 parts—Water and organic matter 33.3, calcium phosphate 51.04, calcium fluoride 2,

BONE.

calcium carbonate 11.3, magnesium phosphate 1.16, sodium chloride 1.2. In rickets, mollities ossium, and caries, the earthy matters are much less. The proportions of the two constituents vary at different ages. The percentage of animal matter is, on the average, in a child 47.2, in an adult 20.18, and in an old person 12.2; of earthy matter, in a child 48.48, in an adult 74.84, and in an old person 84.1. The proportions vary also in different bones; those of the arms contain more earthy matter than those of the legs, and these more than the vertebrae. The petrous bone contains a large amount. The organic matter of bone, bone cartilage, or ossein, when boiled, is converted into gelatin containing, in 100 parts, carbon 50, hydrogen 6.6, nitrogen 18.3, oxygen 25.1.

Structure of bone.—To the naked eye bone is composed of two kinds of structure, an outer or compact layer, dense and firm, and an inner part, the cancellous structure, spongy, the network of which is made up of bony arches, advantageously arranged for mechanical support. Under a low magnifying power a transverse section is seen to be composed of a number of somewhat circular zones, the Haversian system, each having a central opening, the Haversian canal, a series of concentrically arranged, isolated, oblong dark spots, the lacunae or bone-cells, and from them run a number of tortuous, branching, fine lines, the canaliculi, inoculating with their fellows of the lacuna and with the canaliculi of adjacent lacunae. The interspaces between the Haversian systems are occupied by lacunae with their canaliculi, remnants of earlier Haversian systems. If the section be a longitudinal one, the circular systems are not seen, but large branching canals, the Haversian canals, cut along their length with the interspace occupied by lacunae and canaliculi. The Haversian canals are the channels for the blood-vessels, which run more or less regularly in the length of the bone, and so the appearances described are produced. They are from 1-1600th to 1-100th of an inch in diameter. The lacunae are 1-1800th by 1-6000th of an inch in man, larger in reptiles and fish; each is occupied with corpuscles of nucleated germinal matter, with some fibrils, and serves for the nutrition of the surrounding bone. The canaliculi are too small to give passage to blood-corpuscles, but transmit the nutrient fluid materials of the blood; these canals are probably occupied by branches of the lacunar cells. The animal matrix is a fine reticular substance, arranged in lamellar fashion round the Haversian canals, each lamella being often united to its neighbour by perforating fibres; it is brittle and friable. The lacunae are dilated portions of the space between two lamellae.

Classification of bones.—Bones are divided into long, short, flat, and irregular.

Long bones are found in the limbs, and chiefly serve to support the body or to act as levers. They consist of shaft and extremities. The shaft, diaphysis, is long, cylindrical, dense in structure, and hollow; the cavity is the medullary canal. The extremity, epiphysis, is dilated, chiefly composed of cancellous tissue, and forms, with that of its neighbour, a joint.

The short bones, as those of the carpus, have no division into parts; they are cancellous, with a thin outside of compact bone.

The flat bones form the walls of splanchnic cavities; they are made up of two surfaces of dense tissue, enclosing cancellous structure. In

the cranial bones the outer surface is called the outer table; the inner, the inner or vitreous table, and the intervening substance the diploë.

The irregular bones are those which cannot be classed under the other heads.

Covering of bones.—Bones are covered on the outside by a dense fibrous membrane, the *periosteum*, and the medullary cavity is lined in the same way by the *endosteum*, or medullary membrane.

Marrow.—The central cavity of long bones is filled with a fatty matter, the *medulla* or marrow. It contains 96 per cent. of fat.

Bones are freely supplied with blood-vessels from the periosteum, the nutritious artery, and the endosteum; a few nerves and lymphatics can be traced.

Development and growth of bone.—Most of the bones are developed from cartilage, but several of the cranial bones from connective tissue; the process is similar in essence in both cases. Earthy matter is deposited around the blood-vessels, except in the nuclei, which become the lacunae. The detail of the development of bone from cartilage is still wanting in preciseness. The cartilage cells are said to arrange themselves in rows by repeated division, blood-vessels penetrate new ground, intercellular substance develops between the columns of cells, and in it calcareous salts are deposited, which again undergo absorption, and bony spicules are found, which enclose groups of cartilage-cells, and constitute the primary medullary spaces. The cells do not all proceed alike; one set, osteoblasts, undergo calcification and partake in the formation of bone tissue; the other set develop into medullary tissue. Growth in length takes place at the cartilaginous junction of the shaft and joint end; growth in girth takes place from the periosteum. There seems little, if any, interstitial growth. Separate centres of ossification are found in all bones.

B., abscess of. A condition which is usually of slow formation, and occurring in the cancellous structure.

B. ague. Same as *Osteococcus*.

B., aneurysm of. See *Osteo-aneurysm*.

B. ash, B. Ph. (*Os ustum*.) The residue of bones which have been burnt to a white ash in contact with air. Consists principally of calcium phosphate, mixed with about 10 per cent. of calcium carbonate and a little calcium fluoride, and magnesium phosphate. Used to prepare calcium phosphate and sodium phosphate.

B., atrophy of. (*A. neg.*; *roped*, nourishment.) Wasting of bone tissue, so that the bone becomes lighter, but not necessarily smaller.

B., atrophy of, concentric. (*L. con*, for *cum*, together with; *centrum*, the middle point of a circle.) That form in which the whole bone becomes small by absorption of both the compact and cancellous structures, and the shrinking of the medullary canal. It occurs in paralysis and old ankylosis.

B., atrophy of, excentric. (*L. ex*, out of; *centrum*.) That form in which the bone becomes lighter by the gradual transformation of compact into cancellous structure, but does not become smaller. It is a condition of old age and of insanity, is often accompanied by fatty change, and renders fractures very easy.

B., back. (*Back*.) The spine, from its position.

BONEACHE—BONNET.

B., bar. (*E. bar*, a bolt, a stiff rod; from old *F. barre*.) The os pubis, from its position in the pelvic arch.

B., bending of. A condition of bone resulting from injury, occurring in the young, or in diseased bones of adults, in which the bone becomes bent, either without any fracture or with only partial fracture.

B., binder. The *Osteocollo*, or glue-stone.

B., black. Animal charcoal. See *Carbo animalis*.

B., black, artificial. Wood charcoal mixed with 7.5 per cent. of calcium phosphate, digested in a solution of calcium phosphate in hydrochloric acid, evaporated to dryness, and ignited in a covered vessel.

B., blade. (*Blade*.) The scapula.

B., boat-like. The scaphoid bone, from its shape.

B., breast. The sternum.

B., brittleness of. See *Fragilitas osium*.

B., canals. The Haversian canals; also, the veins of the diploë.

B., caries of. See *Caries*.

B., crupper. (*F. croupe*, the rump; from *G. Kropf*, a protuberance.) The coccyx.

B., earth. A synonym of *B. ash*.

B., earth calculeus. A phosphate of lime calculus.

B., enchondroma of. See *Enchondroma*.

B., erectile growth in. A vascular growth in a bone of the character of nevus, consisting of an interlacement of minute blood-vessels.

B., fever. Phlegmonous inflammation of the hand and arm, often seen in workers in bone.

B., fracture of. See *Fracture*.

B., haunch. (*Haunch*.) The ilium.

B., heart. A term wrongly applied to a piece of the fibro-cartilage between the auriculo-ventricular apertures of the heart when it has undergone calcification.

B., hypertrophy of. (*Υπέρ*, above; *τροφή*, nutrition.) A condition of doubtful existence, except in the form of scleritis, as a result of inflammation. Occasionally a bone grows in length at a greater rate than its fellow.

B., inflammation of. See *Ostitis*.

B., interparietal. See *Interparietal bone*.

B., ivory tumour of. See *Exostosis, ivory*.

B., marrow. See *Bone and Medulla*.

B., necrosis of. See *Necrosis*.

B., nippers. Cutting forceps. Used in the removal of bone.

B., oil. A fetid, blackish-brown, thick oil, obtained during the dry distillation of bone; from it is prepared the *Oleum animalis æthereum*.

B., osseous tumour of. Same as *Eros-tosis*.

B., phosphate. The *Calcis phosphas*, *B. Ph.*, or *Calcis phosphas præcipitata*, U.S. Ph. The normal calcium ortho-phosphate, $\text{Ca}_3(\text{PO}_4)_2$.

B., ploughshare. The vomer, from its shape.

B., rump. (*Rump*.) The sacrum.

B., salt of. A synonym of ammonia.

B., sclerosis of. (*Σκληρός*, hard.) A

condition of low inflammation of bone, in which there is increase of bony tissue around the Haversian canals and in the cancelli, so that the bone becomes heavier and denser.

B., screw. (*F. tirefond*.) A small screw, which is introduced into the central bore hole made by a trephine, to enable the round portion of bone isolated by the trephine to be extracted.

B., share. The pubis, from its supposed likeness to a ploughshare.

B., shin. (*Shin*.) The tibia.

B., softening of. See *Mollities ossium*.

B., spirit. An ammoniacal aqueous liquid obtained during the dry distillation of bone.

B., splinter. (*Splinter*.) The fibula.

B., tail. (*Tail*.) The coccyx.

B., ulceration of. A term applied to those cases of caries occurring in persons the subject of constitutional syphilis, affecting the surface and not proceeding rapidly or deeply.

Boneache. Same as *Osteocopyna*.

Bones, cartilaginous. Bones arising from cartilage. They are the basi-occipital, ex-occipital, and part of the squamosal, the sphenoid except the cornua, the petrotic portion of the temporal, the mes-ethmoid, and ethmo-turbinal, the pterygo-palatine, the malleus with Meckel's cartilage, the incus and stapes with the stylohyoid, the thyrohyoid, the vertebrae, the ribs and sternum, the scapula and coracoid, part of the clavicle, and the bones of the upper limb except the sesamoid, the ilium, ischium, pubis, and all the bones of the lower limb except the sesamoid. (Allen Thompson.)

B., membranous. Those arising from fibrous membrane. They are, part of the squamosal bone, the frontal, the parietal, the squamosal, zygomatic and tympanic of the temporal, the nasal and lacrymal, the maxillary and premaxillary, the vomer and cornua sphenoidalia, the inferior turbinal, the malar, the inferior maxillary, the clavicle in front, the marsupial bone, and the smaller sesamoid bones of tendons. (Allen Thompson.)

Boneset. The *Eupatorium perfoliatum*.

B., rough. The *Eupatorium tenebrifolium*.

B., upland. The *Eupatorium sessilifolium*.

Bongardia. A Genus of the Nat. Order *Berberidacea*.

B., chrysogonum. (*Χρυσός*, gold; *γόνος*, offspring.) Hab. Asia. The leaves are eaten as an antispasmodic.

B., Ranoldi. Tubers esculent.

Bonifacia. (*L. bonus*, good; *facio*, to do; from its value.) The *Ruscus hypoglossum*.

Bon'ington. Near Edinburgh. A strong chalybeate water.

Bonn. Switzerland, near Freiburg. A mineral water containing small quantities of sulphates and carbonates of calcium and magnesium, with some hydrogen sulphide. Used in skin diseases.

Bonnes. See *Eaux-Bonnes*.

Bon'net. (*F. bonnet*, a cap; from Low Lat. *bonnetta*, a kind of stuff or cloth.) A cap.

Also, the second stomach of ruminating animals; the *Reticulum*.

B., pepper. The *Capsicum tetragonum*.

Bonnet, Amédée. A French surgeon, born at Amberg in 1802, died at Lyons in 1858.

B.'s capsule. The posterior part of the

BONNET, SAINT—BORATE.

tunica vaginalis oculi, behind the point of perforation of the tendons of the muscles of the eyeball.

Bonnet, Saint. France; Département des Hautes-Alpes. A mineral water, temp. 33° C. (91.4° F.), containing a small quantity of calcium sulphide and some carbonate. Used in skin diseases.

Bononien'sis la'pis. (L. *Bononia*, Bologna; *lapis*, a stone.) See *Bolognian phosphorus*.

Bonpland. A French naturalist, born at Rochelle in 1773, died in Brazil in 1858.

Bonpland'ia. (*Bonpland*.) A Genus of the Nat. Order *Rutaceæ*.

B. angustura. The *Galipæa cusparia*.

B. trifolia'ia. (L. *ter*, three; *folium*, a leaf.) The *Galipæa cusparia*.

Bontia germinans. (*Bontius*.) The *Avicennia tomentosa*.

Bontius. A Dutch physician; died 1599.

B.'s pills. Socotrine aloes, gamboge, gum ammoniacum, of each a drachm, white wine vinegar six drachms; dissolve by means of heat, evaporate to a proper consistence, and divide into four-grain pills. Purgative in dropsy.

Bonus genius. (L. *bonus*, good; *genius*, a tutelary deity.) The *Peucedanum officinale*.

B. Henri'cus. (F. *ansérine*.) English mercury. See *Chenopodium bonus Henri'cus*.

Bony. (F. *osseux*; L. *osseo*; S. *huesoso*; G. *beinig*, *knöchern*.) Of the nature, or quality of, bone.

B. fishes. The *Teleostei*.

Bo'cho. The different species of *Barosma*.

Boole'tace. The name in the Deccan of a species of *Scilignea*, an infusion of the leaves of which are given in rheumatism. (Waring.)

Booko. See *Duchu*.

Bookum wood. The astringent wood of *Cesalpinia sappan*.

Boom'ah nut. The fruit of *Pycnocoma macrophylla*.

Boomee hoomura. The *Trichosanthes cordata*.

Bo'on upas. The *Upas* poison.

Boona. The *Phaseolus vulgaris*.

Boon'dee. A Hindustani remedy containing lead and zinc. Used in ulcers. (Waring.)

Boopid'æ. The same as *Calyceraceæ*.

Bootia vulgaris. The *Saponaria officinalis*.

Boottia. A Genus of the Nat. Order *Hydrocharidaceæ*, some of the species of which are used in India as potherbs.

Bopyridæ. A Family of the Tribe *Enisopoda*, Suborder *Isopoda*, Order *Arthrostraca*, Class *Crustacea*. Parasites in the branchial cavity, or on the surface, of certain of the decapod *Crustacea*. Body of the female discoid, eyeless. Males very small, lengthened, possessing eyes; antennæ short, no palpi; seven pairs of legs, short, and ending in hooks; in the female possessing large lamellæ, which form an incubatory cavity; abdominal legs respiratory.

Bora. A synonym of *Boron*.

Bora. (It., from L. *boreas*.) The north wind, when cold and dry, is so called in Italy.

Borache'vo. The *Datura stramonium*.

Borac'ic. Of, or belonging to, the substance borax. The same as *Boric*.

B. acid. Same as *Boric acid*.

B. anhydride. See *Boric anhydride*.

B. lint. (G. *Borsäurelint*.) Lint soaked in a solution of boric acid and dried. Used as an antiseptic application to wounds.

B. lint, Lister's. Lint spread with *Ceratum acidi boracici*.

Bo'racite. $2Mg_3B_2O_{12} + MgCl_2$. A native borate of magnesia usually associated with gypsum.

Bora'cium. A synonym of *Boron*.

Borades. Limatura, or file dust. (Rusland.)

Bor'age. The *Borago officinalis*.

B., com'mon. The *Borago officinalis*.

B., small wild. The *Asperugo procumbens*.

Bor'ageworts. The plants of the Nat. Order *Boraginaceæ*.

Boragina'ceæ. (*Borago*. F. *boraginacées*; G. *Boretschgewächse*.) Herbs or shrubs with alternate leaves, generally rough; scorpioid inflorescence; symmetrical flowers; persistent, 4—6-partite calyx; regular, 4—6-partite corolla; stamens equal in number to the lobes of corolla, and alternate with them; ovary with four ovules in a separate lobe; style basilar; stigma simple or bifid; fruit 2—4; achenia at the bottom of the persistent calyx.

Boragin'ceæ. Same as *Boraginoideæ*.

Boraginoi'deæ. (*Borago*; *éidos*, likeness.) A Subfamily of the Family *Asperifoliae* or *Boraginaceæ*, in which the style is basal, and the carpels more or less distinct.

Bor'ago. Tournef. A Genus of plants of the Nat. Order *Boraginaceæ*.

B. in'dica. Linn. The *Trichodesma indicum*.

B. officina'lis. Linn. (L. *officina*, a workshop. F. *bourrache*; I. *borragine*; G. *Borretsch*.) Borage. The root is mucilaginous and emollient, and the leaves are reputed cooling in drinks from the possession of potassium nitrate. It was used in intermittent fevers, rheumatism, and exanthemata.

B. zeylan'ica. Linn. A diuretic. Used against snake-bites.

Bo'ras. A borate.

B. natricus. (*Natron*.) Borax.

B. so'dæ. A term of sodium biborate, borax.

B. so'dicus. Borax, sodium biborate.

B. superso'dicus. Sodium biborate or borax.

Bo'ras. Sweden. A carbonated spring.

Boras'seæ. A Tribe of the Nat. Order *Palmaceæ*, having fan-shaped leaves.

Boras'sus. Linn. (*Βόρασος*, the palm fruit.) A Genus of the Nat. Order *Palmaceæ*.

B. æthio'pum. Mart. (*B. æthiops*, Ethiopian.) Fruit esculent, both ripe and unripe; the liquid albumen is said to be aphrodisiac.

B. flabelliformis. Linn. (L. *flabellum*, a small fan; *forma*, shape. G. *Fächerpalme*.) Palmyra palm. Hab. India. The fresh juice is aperient; sugar, called Jaggery, is extracted from it; the fruit is used in chest disorders, and the seed in liver disturbances.

B. gomu'tus. Linn. Sugar is extracted from the sap.

B. sechellen'sis. The *Lodoicea maldivica*.

Borate. A salt of boric acid. The borates are easily decomposed by acids, and if ignited, after mixture with sulphuric acid gas, exhibit the green flame of boric acid.

BORATED—BORIC.

B. of ammo'nia. See *Ammonium bibo-rale*.

B. of mer'cury. A salt which has been recommended in syphilis.

B. of so'dium. A synonym of sodium bibo-rale, *Borax*.

Bor'ated. Containing borax.

Bor'athron. The *Juniperus sabina*.

Bor'ax. (Arab. *buraq*, borax. F. *borate de soude*; I. *borace minerale*; S. *borraj*, *atincar*; G. *borsacres Natron*.) $\text{Na}_2\text{B}_4\text{O}_7 + 10\text{H}_2\text{O}$. Sodium biborate, or sodium pyroborate. Found native, as tincal, in Persia, Thibet, and other places, as a saline incrustation on the shores of lakes; as a crystalline deposit in a lake in California. Prepared by treating crude boric acid with sodium carbonate. It forms large, transparent, hexahedral, flattened, slightly efflorescent, colourless crystals, insoluble in rectified spirit, soluble in water and in glycerin. Borax is used as a local application in aphthae, foul ulcers, chilblains, freckles, pruritus, and leucorrhœa; and generally as a preventive of putrefaction. It is used as an oxytocic, an astringent in uterine hæmorrhage, as an emmenagogue, and as a solvent of uric acid in the urine. Dose, 5–40 grains.

B. anhy'drous. (A. neg.; *öðup*, water.) The same as B., glass of.

B. artifi'cial. Borax prepared by heating native boracic acid with sodium carbonate.

B. depura'ta. (L. *de*, from; *puro*, to purify.) The borax of the Pharmacopœias.

B. glass of. Borax deprived of water by exposure to a red heat, when it melts, and on cooling becomes a transparent, anhydrous, solid substance. It is used as a flux in blowpipe investigations.

B. glycerin of. See *Glycerinum boracis*.

B. honey of. See *Mel boracis*.

B. mol'ite of. The *Mel boracis*.

B. tartarisa'tus. A synonym of *Tartras potassa borazatus*, Ph. Belg.

B. vene'ta. (L. *venetus*, Venetian.) The borax of the Pharmacopœias.

Borax'trion. Sodium biborate or borax.

Borbo'nia. Linn. A Genus of the Nat. Order *Leguminosæ*, named after Gaston de Bourbon, son of Henry IV of France.

B. corda'ta. Linn. (L. *cordatus*, heart-shaped; from *cor*, the heart.) Cape tea. The leaves and flowering tops are used in infusion as a digestive, stomachic, and stimulant.

B. cordifo'lia. Lamk. (L. *cor*; *folium*, a leaf.) The *B. cordata*.

B. parvifo'ra. (L. *parvus*, small; *flos*, a flower.) Hab. Cape of Good Hope. Used in asthma and hydrothorax, and generally as a diuretic.

B. ruscifo'lia. (L. *ruscum*, butcher's broom; *folium*, a leaf.) Hab. Southern Africa. Used as a diuretic in hydrothorax and in asthma.

Bor'bori. A native name in the Moluccas for an oil prepared from the flowers of the *Useria odorata* and other fragrant flowers with oil of coco and turmeric. It is rubbed into the body as a preventive of fevers.

Bor'borus. (Βόρβορος.) Fæces.

Bor'boryg'mus. (Βορβορύγμο, to produce a rumbling in the bowels. F. *borborygme*; I. *gorgogliamento*; G. *Knurren*, *Kollern*.) The gurgling noise produced by the movements of flatus in the intestines.

Bor'cette. Same as *Burtscheid*.

Bor'deaux. France; on the Garonne.

B. turpentine. Common turpentine, obtained from the *Pinus maritima*, growing in the South-west of France.

B. wine. Wine from the district surrounding Bordeaux. The red wine is known as claret; the white as Sauterne, Barsac, and others.

Border. (Old Low G. *bord*, a fringe or edge of a thing. F. *bord*; G. *Rand*.) An edge. Applied to the upper spreading part of the petals of a corolla.

Bordered. (F. *bordé*; G. *gerandet*.) Having a margin or border.

B. pits. (G. *behoften Tüpfeln*.) A term applied to the dilated terminations or bases of pore canals in the structure of plants.

Bordighe'ra. Italy; in the Riviera. Pleasantly situated on the shores of the Mediterranean, with much the same climate as Mentone. Hotel accommodation good.

Bore. A synonym of *Boron*.

Bore'al. (L. *borealis*, from *boreas*, the north wind. G. *nördlich*.) Belonging to the north or to the north wind.

B. pole. A term applied by French writers to the end of the magnetic needle which points south, on the hypothesis that there is a terrestrial magnet, the boreal pole of which points north, and of which, as unlike magnetisms attract each other, the pole of a compass pointing south is the analogue.

Bore'cole. (Dutch *boerskool*, peasant cabbage.) The curled variety of the *Brassica oleracea*. Also called curled kale, or green curled broccoli.

Bore'lli. An Italian physician, born at Naples in 1608, died 1679. He was the first to apply the laws of mechanics to explain the movements of the body.

Bore'tree. The elder tree, *Sambucus nigra*.

Borgo-ma'ro. Italy; Piedmont. A cold sulphur spring used in skin diseases and scrofula.

Bor'haave. A Dutch physician; born 1668, died 1738.

B.'s antiasthma'tic elix'ir. A preparation made of alcohol, aniseed, the roots of orris, asarabacca, liquorice, sweet flag, and elecampane.

B.'s red pill. A preparation chiefly composed of cinnabar.

Bori-bori. See *Borbori*

Boric. (Boron.) Relating to boron.

B. acid. (F. *acid borique*; G. *Borsäure*.) H_3BO_3 , or $\text{B}(\text{OH})_3$. Found in solution in the water of the hot volcanic lagoons of Tuscany, from whence much is obtained; also, native in the volcanic formations in the Lipari Islands, and at Sasso in Italy, whence its name *Sassolite*. Made by adding sulphuric acid to a hot solution of sodium biborate, when transparent, scaly crystals belonging to the triclinic system are formed. It is formed by the union of boron trioxide and water. It is inodorous and has little taste. Heated it loses water and fuses into a transparent glass of boric oxide. It burns with a green flame. It dissolves in 25 parts of cold water, 3 parts of boiling water; very soluble in alcohol. Formerly used as an anodyne and antispasmodic, and was called the sedative salt of Homberg. It is a powerful antiseptic, and a destroyer of bacteria and the lower vegetable growths. As such it has been used in the treatment of wounds, in parasitic disease of the skin, and in eczema.

BORIDE—BORSZEK.

Boride. A compound of boron and a simple element.

Boritis. A name for the philosopher's stone. (Ruland.)

Borium. A synonym of Boron.

Borkhausen's cava. (After Borkhausen, a German botanist; *L. carus*, hollow.) The *Fumaria bulbosa*.

Borkut. Hungary; County Sáros. A sulphur water.

Borla. Italy. A saline chalybeate water, containing sodium chloride 21 grains, iron carbonate one grain, in 16 ounces. Used in diseases of the lymphatic glands.

Bormio. Italy; in the Valtelline, at the foot of the Stelvio Pass. A climatic cure place for lung and nervous disorders, 4300 feet above sea level, somewhat changeable in climate, with a mineral water of a temperature of 28° C. (82.4° F.), but varying much. The solid constituents are small, chiefly sulphate of lime and magnesia. Used in rheumatism, nervous disorders, and anæmia.

Born. (Part. of *B. bear*, to carry, to bring forth; from Sax. *beran*, to carry.) Brought forth from the womb.

B. alive. (Contraction of Sax. *on*, in; *lif*, dative *life*, life.) The condition of the whole body of a live child having been entirely delivered from the body of its mother.

Borneene. $C_{10}H_{16}$. A liquid product, along with water, of the action of phosphoric anhydride on Borneo camphor. Analogous to the essence or terpene of ordinary camphor oil and of valerian oil. It boils at 176° C. (348.8° F.) to 180° C. (356° F.)

Borneo. An island of the East Indian Archipelago between 7° N. and 4° 20' S. lat., and between 109° and 118° E. longitude. It is partly independent, and partly belonging to the Dutch.

B. arrow-poison. See *Dajaksch*.

B. camphor. Same as *Borneol*.

Borneol. $C_{10}H_{16}O$. Borneo camphor; the product of *Dryobalanops camphora*. Formed artificially by treating camphor with sodium. It resembles ordinary camphor, but is harder, and less volatile, sp. gr. 1009, of a mingled camphorous and peppery smell; melts at 198° C. (388.4° F.), and boils at 212° C. (413.6° F.) Borneol is an alcohol which furnishes ethers by losing water when heated with organic acids at 200° C. (392° F.)

Bornesite. A volatile, neutral, saccharine matter found in Borneo caoutchouc.

Borocalcite. (*Boron*; *calcium*.) $CaB_4O_7 \cdot 4H_2O$. A mineral found in the nitre beds of Peru and Chili, from which boric acid is made.

Bor'ron. (*F. bore*; *I. and S. boro*; *G. Boron, Bor.*) At. weight 11. Symb. *B*. Isolated by Gay Lussac, and by Thénard, and by Sir Humphrey Davy, almost simultaneously in 1809. The basis of boric acid. It is prepared by heating potassium and borofluoride of potassium in an iron vessel and washing out the soluble salts. It is allotropic; one form, the amorphous, being a greenish-grey or brown tasteless powder, and inodorous; the other, the crystalline, obtained by melting the amorphous form with aluminium. Its compounds with simple bodies are called *borides*, or *borurets*. It is the only non-metallic element which does not combine with hydrogen.

B., adamantine. (*Ἀδάμας*, not to be broken.) A synonym of crystalline *Boron*.

B., amorphous. (*A. neg.*; *αμορφ.* form.) See *Boron*.

B. atrolcalite. (*L. ater*, black; *calc.*, lime.) A mineral found in the State of Nevada, U.S., containing calcium and sodium biborate, from which boric acid is obtained.

B., crystalline. See *Boron*.

Boros-le'nö. Hungary; County Arad. A little-known spring, said to contain calcium, magnesium, and copper.

Borotartrate of magnesia. Prepared by adding two parts of boric acid to five parts of magnesium tartrate, and adding by degrees four parts of hot water. Then evaporate to dryness over a sand bath.

B. of potash. The *Tartarus borico-potassicus*.

B. of potash and magnesia. Prepared by heating tartarus borico-potassicus with carbonate of magnesia. Used as a laxative.

Borova-hora. Hungary; County Sohl. A sulphur spring.

Boroxail. (Ethiop.) A disease, endemic on the shores of the river Senegal, which affects the genital organs of both sexes, called *Asab* in males, and *Assabat* in females; it is different from syphilis, though arising from venereal excess, and is supposed to be identical with *Frumbasia*, or the yaws; also termed *Zail*.

Borra. Italy; in the Arno Valley. A mineral water containing sodium and iron carbonates.

Borra'go. See *Borago*.

Borre'ra. A Genus of the Nat. Order *Lichenes*.

B. furfuracea. (*L. furfuraceus*, branny.) Hab. Europe. Bitter. Has been used as a febrifuge instead of quinine. Now called *Ervania furfuracea*.

Borre'ria. A Genus of the Nat. Order *Rubiaceæ*.

B. emetica. Mart. (*Ἐμετικός*, provoking sickness.) Hab. Brazil. Root emetic. Used instead of ipecacuanha.

B. ferrugin'ea. De Cand. (*L. ferrugineus*, of the colour of iron rust.) Hab. Brazil. Used as *B. emetica*.

B. poay'a. De Cand. Hab. Brazil. Root used as *B. emetica*. A decoction of the leaves is used in colic.

B. verticilla'ta. Mey. (*L. verticillus*, a whirl.) Hab. Brazil. Same as *B. emetica*.

Borri. (Ind.) An ointment made from the root of the *Curcuma longa*, or turmeric plant, and also the plant itself.

Borriberri. The *Curcuma longa*.

Borro di Caprene. Italy. A mineral spring containing calcium, sodium, magnesium, and iron carbonates.

Borro'ne. Italy; Tuscany. A chalybeate water.

Borrozail. See *Borozail*.

Bor'sa. Hungary; County Marmaros. Three alkaline chalybeate springs. Used in chronic skin diseases, gout, and rickets.

Borschom. Russia; in the Caucasus. Two springs of mineral water, one of a temperature 35° C. (95° F.), the other 23° C. (73.4° F.). They contain sodium carbonate 30 parts, iron carbonate .06, and sodium iodide .003, in 10,000 parts.

Bors'zek. Hungary. Mineral waters from ten or twelve springs, of a temperature of 91° C. (195.8° F.) They contain 11 grains of calcium

carbonate in a pint, and 5 grains of magnesium carbonate. They are used in chronic affections of the mucous passages.

Borum. A synonym of *Boron*.

Boruret. (F. *borure*.) A combination of boron with a simple body.

Bos. (Bov, from *boia*, or *βοία*, to feed, because it fed or supported man by its labours. F. *bois*; I. *bos*; S. *buey*; G. *Ochs*.) The ox or cow. A Genus of the Family *Bovidae*, of the Suborder *Ruminantia*, of the Order *Ungulata*.

B. bubalus. (Βούβαλος.) The buffalo.

B. taurus. Linn. (Ταύρος, a bull.) The common ox.

Bossa. (Egypt.) A name for an inebriating mass made of the meal of darnel, hempseed, and water; also, at the present time, for an acidulated drink often made by fermenting an infusion of millet seed.

Boschesjesmansthee. Bushman's tea. The *Methystophyllum glaucum*.

Boscombe. Hampshire; near Bournemouth. A chalybeate water.

Bösing. Hungary; County Pressburg. A mineral water containing magnesium, calcium, and iron carbonates. Used in chlorosis, leucorrhoea, and convalescence from acute diseases.

Bosjesman. (G. *Buschmänner*.) Woodmen. One of the two great divisions of the Hottentot race. Inhabiting, and probably the aborigines of, the South of Africa. They call themselves *San*. They are of small stature, less than five feet (males 144·4 centim., females 144·8 centim.). The index of breadth of the skull is 73·82, of height 70·23. The women are inclined to steatopygia, and the labia majora and præputium clitoridis are elongated. The men are thin-limbed, pot-bellied, with dry, black skin; beard scanty; hair woolly, short. Their weapon is the bow and poisoned arrow. They are intelligent and musical. They bury their dead, and raise a small cairn over them.

Bosmosos. (Bov, an ox; *μόρος*, a portion; because freed from the chaff by the treading of oxen.) A name for a species of corn.

Boss. (F. *bosse*, a hump; from old High G. *bōco*, a bunch; or Celt. *bos*, a swelling.) A knob, a protuberance.

Bossed. (Same etymon.) Having a boss or central elevation; same as *Umbonate*.

Boston iris. The *Iris virginica*.

Bostrychoid. (Βόστρυχος, a lock of hair; *είδος*, likeness. G. *lockenformig*.) Like a lock of hair.

B. cyme. See *Cyme*, *bostrychoid*.

B. dichotomy. See *Dichotomy*, *bostrychoid*.

Bostrychoid'al. (Βόστρυχος.) Having the appearance of a ringlet or *Bostryx*.

Bostrychopoda. (Βόστρυχος, a lock of hair; *πούς*, a foot. F. *bostrychopode*.) A synonym of the *Cirripedes*.

Bostryx. (Βόστρυχος.) A term applied to a cyme when the lateral axes, as they successively develop, fall always on the same side of the relatively main axis; the uniparous helicoid cyme of *Bravais*; examples: *Hemerocallis* and *Phoridium*.

Boswellia. (After Dr. Boswell, of Edinburgh. G. *Weihrauchbaum*.) A Genus of the Nat. Order *Amyridaceæ*. Several species, growing in Africa and Asia, supply the different kinds of oilibanum, or true frankincense.

B. bhau-dagia'na. Birdwood. A Soumali country species, supplying oilibanum.

B. Carteri. Birdwood. A native of the Soumali country in Africa, the chief source of the African oilibanum.

B. floribun'da. (L. *flos*, a flower; *abundo*, to be very plentiful.) The *B. papyrifera*.

B. Frereana. Birdwood. A species of the Soumali country. Used as a masticatory.

B. gla'bra. Roxb. (L. *glaber*, smooth.) Hab. Coromandel. Yields a resinous substance, *Koondricum*. Used in gonorrhoea, and as a plaster in skin diseases, ulcers, and indolent wounds. Probably the same as *B. thurifera*. It is the same as the *Pimelea glabra* of Blume.

B. mauritia'na. The *Colophonia mauritiana*.

B. papyrifera. Richard. (L. *papyrus*, paper; *fero*, to bear.) A native of Abyssinia and Sennaar. It is identical with the *Plosslea floribunda* of Endlicher. Yields *Oilibanum*.

B. serrata. Roxb. (L. *serratus*, saw-shaped.) The *B. thurifera*.

B. thurifera. Colebr. (L. *thus*, frankincense; *fero*, to bear. Arab. *Luban*, *Cundur*, *Biatuj*; Sansk. *Sallaci*, *Anduri*, *Sarabhi*, *Savana*; Hind. *Salai*, *Gundabara*, *Bau*; Tam. *Paranghi-sambrani*.) Leaves pinnate; leaflets ovate, acuminate, serrate, downy; racemes axillary, simple. An Indian species; the chief source of oilibanum of the ancients.

Bot. (Gael. *botus*, a belly-worm.) A name given to the larva of the Genus *Estrus* found in man as well as other animals.

Also (F. *bout*, an end; from their likeness to the clipped ends of thread), applied to the thread-worm, *Oxyurus vermicularis*.

Botalli, Leonard. An Italian anatomist, who lived in France from A.D. 1561 to 1585.

B. fora'men of. (F. *trou de Botal*.) The foramen ovale of the fetal heart. Erroneously supposed to have been discovered by Botalli. It was first noticed by Galen.

Botanum. The *Plumbum lotum*, or washed lead. (Ruland.)

Botan'icon. (Βοτάνη, a herb.) A plaster made of herbs, described by Paulus Ægineta, vii, 17.

Botanist. (Βοτάνη, a herb. F. *botaniste*; I. *botanico*; G. *Botaniker*.) One who cultivates the science of botany.

Botanology. (Βοτάνη, a herb; λόγος, a discourse. G. *Pflanzenlehre*.) A treatise on plants or Botany.

Botanometry. (Βοτάνη, a herb; μέτρον, a measure.) A synonym of *Phyllotaxy*, or the laws of the arrangement and order of development of leaves.

Botanoph'agous. (Βοτάνη, a herb; φαγέιν, to eat.) Living on vegetables.

Botany. (Βοτάνη, a herb. F. *botanique*; I. and S. *botanica*; G. *Botanik*, *Pflanzenkunde*.) The branch of Biology which relates to the vegetable kingdom extinct and existing.

B. descrip'tive. The section of the subject which relates to the description and nomenclature of plants.

B. fos'sil. (L. *fossilis*, that which is dug up.) Same as *B. palæontological*.

B. geograph'ical. The section of the subject which relates to the present distribution of plants over the world.

B. med'ical. The account of those plants which are used in medicine.

B. morphological. (Μορφή, form;

BOTANY BAY—BOTHRIOCEPHALUS.

λόγος, an account.) That section of the subject relating to the forms of plants and their organs.

Β., palæontological. (Παλαιός, old; ὄντα, things which exist; λόγος, an account.) The section of the subject relating to plants found in the different strata of the earth's crust.

Β., physiological. The section of the subject relating to the functions or actions of plants and their several organs and structures.

Β., structural. The section of the subject which relates to the physical structure of the several tissues of plants.

Β., systematic. The section of the subject relating to different kinds of plants in their relationship to each other.

Botany Bay. An inlet on the Eastern Coast of Australia, south of Sydney.

Β.-bay gum. A yellow gum produced by the *Xanthorrhoea arborescens*, or grass tree of New South Wales.

Β.-bay kino. The concrete juice of the *Eucalyptus resinifera*.

Botargo. A salted preparation made in Italy and the South of France from the roe and blood, after they are somewhat putrescent, of the grey mullet; used as seasoning to other food.

Βόθρ. (Arab. *bodhar*.) A term for an exanthema; also, for an abscess of the nostrils, according to Waltherus, *Sylv. Med.* p. 183. It had three significations among the Arabians: first, all tumours; more strictly, a tumour with solution of continuity; and more strictly still, small tumours or pustules, according to Fallopius, *de Tum.* vol. i. c. 2, p. 619.

Bothrienchyma. (Βόθρος, a pit; ἔγχυμα, to pour in.) A synonym of the variety of the vascular tissue of plants called *Pitted tissue*.

Bothridia. (Βοθροειδής, hollowed. F. *bothridies*.) A name given by Blainville to an entozoon of the Python. An ally of Bothriocephalus.

Also, a term for the fossæ of Bothriocephalus.

Also, a term for the Bothriocephalus in the scæcol state.

Bothridium. (Βοθρίον, a little pit.) A sexually mature form of cestoid worm.

Β., arcuatum. (L. *arcuatus*, bent.) A species found in the intestine of *Morsia epilotæ*.

Bothriocephalus. (Βοθρίον, a little pit; κεφαλή, a head. F. *bothriocéphale*; I. *bothriocéfalo*; G. *Grubenkopfwurm*.) A Genus of the Order *Cestodea*. Body very long, flat, soft, with a large number of segments; head oblong, furnished with two lateral fossæ, but without hooks. The genus comprises a large number of species which chiefly inhabit the alimentary canal of fishes; a few are found in mammals, and three in man. The embryo is cystic.

The following species of Bothriocephalus have been observed in the animal kingdom:

Β. angustatus. (L. *angustus*, narrow.) A species found in the intestine of *Scorparia scrofa*.

Β. angusticeps. (L. *angustus*, narrow; caput, head.) A species found in the intestine of *Sebastes norvegicus*.

Β. antarcticus. (L. *antarcticus*, southern.) A species found in the stomach and intestines of various species of Phoca.

Β. anthocephalus. (ἄνθος, flower;

κεφαλή, head.) A species found in the rectum of *Phoca barbata*.

Β. ardeæ cœrulea. (L. *ardea*, a stork; cœruleus, blue.) A species found beneath the skin and under the muscles of the *Ardea cœrulea*.

Β. belones. A species found in the intestine of *Belone acus*.

Β. callarias. (Καλλιάρης, a kind of cod fish.) A species found in the intestine of *Gadus morhua*.

Β. carpio-nis. A species found in the intestine of *Salmo carpio*.

Β. centrolophi pomptili. In intestine of *Centrolophus pomptilius*.

Β. cepelæ. In intestine of *Cepela rubescens*.

Β. claviceps. (L. *clavis*, a key; caput, head.) In intestine of *Anguilla vulgaris*.

Β. cordatus. Leuckart. (L. *cordatus*, heart-shaped.) A foot long; head short, heart-shaped; anterior part lanceolate; without any marked neck. Met with in Greenland in man and in the dog.

Β. cordiceps. (L. *cor*, the heart; caput, head.) In *Trutta salar*.

Β. crassiceps. (L. *crassus*, thick; caput, head.) In *Merlangus carbonarius*.

Β. cristatus. Davaine. (L. *cristatus*, tufted.) Differs from *B. latius* in that the head is provided with longitudinal projecting lips like crests; the neck is ringed; the strobila are markedly prominent on their posterior border. It is nine or ten feet long. Observed in France.

Β. decipiens. (L. *decipio*, to catch.) In *Felis concolor*.

Β. dendriticus. (Δενδρίτης, a tree.) In *Larus canus*.

Β. ditremus. (Δίς, twice; τρήμα, a hole.) In intestine of *Larus argentatus*.

Β. dubius. (L. *dubius*, doubtful.) A doubtful species, described by Krabbe, in Icelandic dogs.

Β. elegans. (L. *elegans*, choice.) In small intestine of *Phoca cristata*.

Β. eriocis. In intestine of *Salmo eriox*.

Β. falconis. In the kidneys of *Falco spec?*

Β. fasciatus. (L. *fascio*, to swathe.) In intestine of *Phoca anellata*.

Β. felis. In intestine of *Felis domestica*.

Β. fissiceps. (L. *fendo*, to cleave; caput, head.) In intestine of *Sterna hirundo*.

Β. folium. (L. *folium*, a leaf.) In intestine of *Herpistes leucurus*.

Β. fragile. (L. *fragilis*, fragile.) In intestine of *Cyclopterus lumpus*.

Β. fuscus. (L. *fuscus*, dusky.) A species described by Krabbe in Icelandic dogs.

Β. gadibarbati. (L. *barbatus*, bearded.) In intestine of *Gadus morhua*.

Β. gadi morrhuae. In intestine of *Gadus morhua*.

Β. gadi rediani. In intestine of *Gadus minutus*.

Β. gracilis. (L. *gracilis*, slender.) In intestine of *Loligo vulgaris*.

Β. granulata. (L. diminutive form of *granum*, a seed.) In intestine of *Cyprinus spec?*

Β. hi'ans. (L. part. of *hio*, to stand open.) In stomach and small intestine of *Leptonyx monachus*.

BOTHRION—BOTRYOID.

B. imbricat'us. (*L. imbrex*, a gutter-tile.) In intestine of *Halichelys atra*.

B. infundibuliformis. (*L. infundibulum*, a funnel; *formis*, shape.) In intestine and pyloric appendage of *Salmo salcelinus*.

B. labrac'is. In intestine of *Labrax lupus*.

B. lanceola'tus. (*L. lanceolatus*, lance-shaped.) In small intestine of *Phoca carbat'a*.

B. la'ni pomera'ni. In the abdomen of *Lanius rufus*.

B. la'tus. (*L. latus* broad.) Length 25 feet or more; hair-like in front, widening gradually to half an inch, colour brownish grey, sometimes white; head 1-10th inch long, 1-20th inch broad, oblong, with two lateral long suckers; neck short; the earlier segments indicated by wrinkles; the segments gradually increase in size, are usually wider than long, and the latter ones have a central thickening, on the anterior part of which is placed a short, smooth, retractile penis, and immediately below the genital pore the orifice of the uterus. Eggs 1-370th inch to 1-570th inch, oval, brown, and provided with an operculum. The embryo is at first ciliated, then six-hooked; it is supposed to inhabit some fish. This worm is chiefly met with in Russia and Switzerland. It is expelled in longish portions, and not by single segments.

B. longicol'lis. (*L. longus*, long; *collum*, the neck.) In the intestine of *Gallus gallinaceus*.

B. le'phil. (*Lophius*, the fish of that name.) In the intestine of *Lophius piscatorius*.

B. macula'tus. (*L. maculo*, to speckle.) In the intestine of *Felis pardus*.

B. microceph'alus. (*Μικρός*, small; *κεφαλή*, head.) In the stomach, intestines, and branches of *Orthogoriscus mola*.

B. plica'tus. (*L. plico*, to fold.) In rectum of *Xiphias gladius*.

B. podicip'idis. In intestine of *Podiceps minor*.

B. proboscide'us. (*Προβόσκis*, an elephant's trunk.) Two feet long; found in the pyloric appendages of salmon, *Salmo salar* and *S. hueho*.

B. puncta'tus. (*L. pungo*, to prick.) In intestine of *Gadus minutus*.

B. rectang'ulus. (*L. rectus*, upright; *angulus*, angle.) In intestine of *Barbus fluviatilis*.

B. reticula'tus. (*L. reticulatus*, net-like.) A doubtful species of Krabbe in dogs.

B. rugo'sus. (*L. rugosus*, wrinkled.) In intestine of *Labrus maculatus*.

B. salmo'nis um'blis. In intestine of *Salmo salcellinus*.

B. serra'tus. (*L. serro*, to saw.) In small intestine of *Canis azaræ*.

B. sim'ilis. (*L. similis*, like.) In intestine of *Canis lagopus*.

B. specio'sus. (*L. speciosus*, brilliant.) In intestine of *Boleosoma olmedei*.

B. squa'li glauc'. (*L. squalis*, shark; *glaucus*, olive green.) In intestine of *Prionodon glaucus*.

B. stemmaceph'alus. (*Στίμμα*, a garland; *κεφαλή*, head.) In small intestine of *Phocæna communis*.

B. strig'is accipitrinæ. (*L. striz*, an owl; *accipiter*, a hawk.) Under the skin of *Striz accipitrina*.

B. sulca'tus. (*L. sulco*, to furrow.) In small intestine of *Felis pardus*.

B. trop'icus. (*L. tropicus*, tropical.) A name given to a tropical variety of *Tenia medio-cannellata*.

B. variab'ilis. (*L. variabilis*, changeable.) In intestine of *Phoca cristata*.

Both'rion. (*Βόθριον*, a little pit.) Used by Galen, *de Ossib.* v, *An.*, for the alveolus, or socket of a tooth; also, in *Introductio*, c. 15, and by Paulus Ægineta, Adams's Transl. iii, 22, p. 416, vol. i, for a deep ulcer of the cornea.

Both'rion. See *Bothrion*.

Bothroceph'alus. See *Bothriocephalus*.

Both'rops. (*Βόθρος*, a hole; *ὤψ*, the eye.) A Genus of the Family *Crotalidae*, Order *Ophidia*. A small spur at the caudal end; scales carinated; head without large plates, except above the eyes and on the ridge, which runs from the nose to the eyebrows.

B. jarara'ca. A Brazilian species, very poisonous.

B. lanceola'tus. (*L. lanceolatus*, lance-shaped. *F. fer de lance*.) Inhabits Martinique. Length six to seven feet; colour brown or yellow. Death generally occurs some hours, and, occasionally, some days, after the bite.

Both'rus. (*Βόθρος*, a hole.) A depression; a pit.

Both'ryum. Same as *Botryon*.

Bot'ia. Same as *Bocia*.

Bo'tin. Old name for *Terebinthina*, or turpentine; also, for balsam of turpentine. (Ruland.)

Bo'tion. Turpentine.

Bot'ium. See *Bocium*.

Bo'tor. Otherwise *Bothor*.

Botothi'num. An obscure term used by Paracelsus to denote the most striking symptoms of a disease.

Bo'ton. The *Parcira brava*.

Bot'ria. (*Bótrpus*, a cluster of grapes.) See *Vitis botria*.

Bothrioceph'alus. Otherwise *Bothriocephalus*.

Botrophis actæo'idēs. (*Ἀκτρία*, the elder tree; *είδος*, form.) The *Actæa racemosa*.

B. serpenta'ria. (*Bótrpus*, a cluster of grapes; *όφis*, a snake; *L. serpentaria*, snake weed.) The *Actæa racemosa*.

Botrych'ium. (*Βότρυχος*, a grape stalk. *G. Traubenfarn*.) A Genus of the Suborder *Ophioglossæ*, Nat. Order *Filices*.

B. cicuta'rium. (*L. cicuta*, hemlock.) A species used in Hayti as an alexipharmic.

B. luna'ria. Sw. (*L. luna*, the moon. *F. lunaire*; *G. Mondraute*.) Moonwort. A European species formerly used as an astringent.

Botryco'mose. (*Bótrpus*, a cluster of grapes; *cyme*.) Applied to a raceme or any botryose cluster when cymosely arranged.

Botryllidæ. (*Bótrpus*, a cluster of grapes.) A Family of the Order *Synascidiæ*, Class *Ascidiodia*, Subkingdom *Tunicata*. Body simple; viscera situated at the side of the respiratory chamber. Animals compound, fixed, their tests fused, forming a common mass, in which they are imbedded in one or more groups. Individuals not connected by any internal union; oviparous and gemmiparous.

Botry'llus. (*Bótrpus*.) A cluster of small berry-shaped bodies.

Botryoid. (*Bótrpus*, a cluster of grapes; *είδος*, likeness. *G. traubenformig*.) Resembling, shaped, or formed like, a cluster of grapes.

BOTRYOIDAL—BOUGIE.

Botryoid'al. Same as *Botryoid* and *Botryose*.

B. tis'sue. (*Bótrpus*, a bunch of grapes.) Term applied by Ray Lankester to a special form of vaso-fibrous tissue, formerly called hepatic tissue, surrounding the alimentary canal in the leech. The walls of these vessels are composed of a single row of hemispherical cells, with the flat surface internal.

Botryon. (*Bótrpus*, a cluster of grapes. *G. Traubenaugé.*) A synonym of *Staphyloma*.

Botryop'ais. (*Bótrpus*.) A Genus of the Nat. Order *Menispermaceæ*.

B. platyphylla. Miers. (*Πατύς*, broad; *φύλλον*, a leaf.) The *Chondrus nodron tomentosum*.

Botryose. (*Bótrpus*. *G. botrytischen*.) A term for the indeterminate or racemose form of inflorescence, when the lateral axes are terminated by a flower, but not the main axis.

Botrys. (*Bótrpus*, a cluster of grapes, from the likeness of its seeds to this object.) A plant mentioned by ancient writers, which they also called *Ambrosia*, supposed to be the *Chenopodium botrys*.

Also, a synonym of *Raceme*.

B. ambrosioid'es. The *Chenopodium ambrosioides*.

B. america'na. The *Chenopodium ambrosioides*.

B. anthelmint'ica. The *Chenopodium anthelminticum*.

B. mexica'na. The *Chenopodium ambrosioides*, or Mexican tea-plant.

B. vulga'ris. (*L. vulgaris*, common.) The *Chenopodium botrys*, or Jerusalem oak.

Botryta'ceæ. (*Botrytis*.) A synonym of *Hyphomycetes*.

Bot'rytes. (*Bótrpus*.) The cauliflower, from its supposed formation similar to a cluster of grapes.

Botrytis. (*Bótrpus*.) A term for the impure oxide of zinc found in the chimneys of furnaces used for zinc smelting.

Also (*G. Traubenschimmel*), a Genus of *Hyphomycetous* fungi.

B. bassia'na. Montagne. (*Bassi*.) The cause of muscardine, a disease of silkworms; now included under the Genus *Strachylidium*.

B. infes'tans. Montagne. The *Phytophthora infestans*.

Botrytos teophyte. (*Bótrpus*, a cluster of grapes; *όστιον*, a bone; *φυτόν*, a plant. *G. blumenkohlformige Knospenwachts*.) An exostosis of bone of a spongy character.

Botta'cio. Italy; near Castelnuovo. A chalybeate water.

Bott'ger's test. A test for sugar in the urine. A solution of sodium carbonate, 1 to 3, is added in equal quantity to the urine and then some basic nitrate of bismuth; the mixture is boiled, when if sugar be present, a black precipitate is formed.

Bottle. (*F. bouteille*, from Low Lat. *buccula*, from Gr. *βοῦτρυς*, a flask.) A hollow vessel with a narrow neck.

B. brush. The *Equisetum arvense*.

B., feed'ing. A vessel with an artificial nipple attached to it either directly or by means of an elastic tube, for the feeding of infants.

B. gourd. The *Laccaria vulpina*.

B.-nose. A familiar term for *Aene nasacea*.

B.-sha'ped. Shaped like a Florence flask. See *Lageniform*.

B., specif'ic gravity. See *Specific gravity bottle*.

B. stoop. A block of wood with a groove on the upper surface, having a slope so that a bottle may be placed on it in a convenient position for the removal of its contents by a knife.

B., white. The *Silene inflata*.

Botuliform. (*L. botulus*, a sausage; *forma*, likeness.) Having the form of a sausage.

Botulin'ic acid. (*L. botulus*, a sausage.) An acid which has been supposed to exist in decomposing sausages, and to be a cause of their noxiousness.

Botulusmus. (*L. botulus*, a sausage. *G. Wurstergiftung*.) Sausage poisoning. Same as *Allantiasis*.

Botulus. (*L. botulus*. *F. saucisse*; *L. salciccia*; *G. Fleischcurat*, *Blutcurat*, *Wurst*.) A sausage.

Bot'us. A vessel otherwise called *Cucurbita*; also, a vessel above, and communicating with, another vessel named a *Descensorium*. (*Castellus*.)

Botzen. Austrian Tyrol. A pleasantly situated spot, 1120 feet above sea level. Used as a climatic health resort and for the grape cure.

Bou'ba. A local name among the negroes of Rio Janeiro for *Frambesia*.

Boucenna. Same as *Musena*.

Bou'ceras. (*Boûs*, an ox; *κίρας*, a horn.) The Trigonella, from the shape of its pods.

Bouc'emia. (*Boû*, particle of increase; *εμια*, the leg.) Elephantiasis arabum.

Bou'cranion. (*Boûs*, an ox; *κρανιον*, the skull.) A name given by Dioscorides to the *Antirrhinum majus* from the form of its corolla.

Bou'da. A disease said to be prevalent among dissolute Abyssinian women, characterized by severe paroxysms of a cataleptic character.

Boudes. France; Département du Puy de Dôme. Mineral waters containing sodium bicarbonate and a little iron. Used in urinary deposits, and dyspepsia with anemia.

Bou'din's solution. One gramme of arsenious acid boiled with 1000 grms. of water for a quarter of an hour. Fifty grammes contain five centigrammes of arsenious acid.

Bougie. (*F. bougie*, a wax candle. *I. tenta incerta*; *S. candellila*; *G. wachserne Sonde*.) A slender instrument, made of catgut, of elastic gum or wax, with silk, or other such material, or of metal, for introduction into the urethra, rectum, vagina, and œsophagus. It is used for purposes of exploration, dilatation, and medication.

B. à boule. (*F. à*, with; *boule*, a ball.) Same as *B. bulbous*.

B., armed. The common bougie with a piece of the nitrate of silver, or other caustic, fixed within its extremity. Used for the destruction of very close strictures of the urethra.

B., bulb'ous. (*F. bougie à boule*.) An elastic bougie, tapering towards the extremity, which is dilated in the form of a sphere.

B., cal'omel. Made of calomel one part, and white wax 23 parts.

B., camphorated. Mutton suet 500 parts, wax 10, powdered camphor 150. Melted and made into suppositories for the vagina or rectum. Used in piles and uterine discharges.

B., caus'tic. Same as *B., armed*.

BOUHOU—BOURGUIGNON'S OINTMENT.

B., caustic potash. Caustic potash 2 parts, extract of opium 4, water 60, gum a sufficiency. In chronic gleet.

B., coude. (F. *coude*, the elbow; from *L. cubitus*, the elbow.) Same as *B., elbowed*.

B., elbowed. (F. *bougie coudee*.) An elastic bougie with a sharp curve, as a bent elbow, about three quarters of an inch from its extremity. Used when there is an enlarged prostate.

B., filiform. (L. *filum*, a thread; *forma*, shape.) A bougie with a fine, elastic, tapering end.

B., iodurated. Gelatine 2 parts, gum 2, sugar 1, and rose water 4, dissolved in a water-bath with one part of potassium iodide. Formed into bougies to be used in chronic gleet.

B., lead. Yellow wax 25 parts, Goulard's extract of lead 1. A medium strength is made with 6 parts, and a strong form with 3 parts, of wax.

B., medicated. A bougie charged with a sedative or astringent or other drug, for application to the urethra or neck of the bladder.

B., mercurial, of Falk. Turpentine 4 parts, resin 2, mercurial plaster 60, calomel 8, red precipitate 2-5.

B., mercurial, of Plenck. Yellow wax 180 parts, extract of lead 15, calomel 3.

B., mercurial, soluble. Corrosive sublimate 25 parts, extract of opium 4, water 60, gum a sufficiency. Used in chronic gleet.

B., nitrate of mercury. Yellow wax 180 parts, olive oil 30, nitrate of mercury 8.

B., plaster. (F. *bougie emplastique*.) A bougie in which the stiffening material is composed of 6 parts of yellow wax and one of olive oil.

B., uterine. Same as *Sound, uterine*.

Bouhou. A name given in the Sandwich Islands to a fever closely resembling, if not identical with, dengue.

Bouffland. A French physician of the nineteenth century.

B.a. diseaso. A name proposed by Troussan for endocarditis.

Bouka. The Malabar name of *Epidendrum nerite*. Used, in decoction, in baths and lotions for the cure of catarrh. The fruit, externally applied, is regarded as a diuretic.

Boulay's battery. A galvanic battery in which the copper plate is immersed in a solution of equal parts of potassium nitrate and copper sulphate, and the zinc plate in a solution of sodium chloride, with an equal quantity of flowers of sulphur.

Boule gras/seuse de Bi'chat. (F. *boule*, a ball; *grasseux*, fatty.) The mass of fat which occupies the hollow between the buccinator and the masseter muscles.

Boule'sis. (Βούλησις, a willing.) The will, or the exercise of the will.

Boulimia. Same as *Bulimia*.

Boulogne-sur-mer. France; Departement Pas de Calais. A sea-bathing place, very much frequented. Good sands. Town lively, but badly drained. It possesses a chalybeate spring of no great importance.

Boulou, Le. France; Departement Pyrénées-Orientales. A gaseous water, containing sodium bicarbonate and a little iron.

Boumelia. (Βουμελία; from *bov*, a particle of increase; *μελία*, the ash.) The *Frazinus excelsior*.

Bou-nafa resin. An amber-yellow resin prepared in Algeria from the *Thapsia garranica*, which has a powerfully irritant action on the skin and intestinal mucous membrane. It is highly esteemed by the Arabs as a purgative and revulsive in rheumatic and other pains.

Bouncing bet. The *Saponaria officinalis*.

Boun'dou. Same as *Akazga*.

Bouquet. (F. from *bosquet*, a little wood; from low *L. boscum*, a wood.) A nosegay.

The special characteristic smell and flavour of wines. Supposed to depend on the presence of small quantities of various ethers, and especially ænanthic ether, formed during the slow chemical change which is constantly going on in wine while in cask or bottle.

Also, used by French authors to denote a cluster.

B. fe'ver. A synonym of *Dengue fever*.

B. of Bi'olan. The cluster of muscles and ligaments attached to the styloid process of the temporal bone.

Bourane. The juice of the *Erythrophloeum guineense*. An arrow poison of Senegambia. It produces suffocation and retention of urine.

Bourbon. An island off the east coast of Africa; now called Réunion.

B. tea. The leaves of *Angræcum fragrans*.

Bourbon-Lan'cy. France; Departement Saône et Loire. A bath in the time of the Romans. Water of 40° C. (104° F.) to 60° C. (140° F.), containing sodium chloride. Used in rheumatism and chronic paralysis.

Bourbon l'Archambaut. France; Departement Allier. Water of 52° C. (125-6° F.), containing sodium chloride; one spring is ferruginous. Used in scrofula, paralysis, gout, and rheumatism.

Bourbonne-les-Bains. France; Departement Haute Marne. Height 900 feet. Pleasant little town on the slopes of the Vosges. Saline waters, with nitrogen and much carbonic acid, varying from 46° C. (114-8° F.) to 64° C. (147-2° F.) Used in much the same cases as Wiesbaden, to stimulate the gastro-intestinal mucous membrane, and to increase the elimination of used-up material by the kidneys in gout, rheumatism, torpid liver, and the results of malarious fevers and in gunshot injuries.

Bourboule. France; in the Auvergne, near Mount Dore. Height 2600 feet. Alkaline saline waters, containing arsenic, of 44° C. (111-2° F.) to 52° C. (125-6° F.) Used in rheumatism and gouty thickenings of joints; in chronic bronchitis. In virtue of the arsenic, which is said to be present in the form of one tenth of a grain of sodium arsenate to a pint, they are used in the sequelæ of intermittent fevers, rheumatism, skin diseases, phthisis, and scrofula.

Bourdonnement. (F. *bourdonner*, to buzz.) A French term for buzzing in the ears.

Also for the continuous buzzing murmur which is heard on applying the stethoscope to any part of the body; and which appears to depend on contraction of the muscular fibrils.

B., amphoteric. (G. *amphorisches Sausen*.) Same as *Amphoric resonance*.

Bourg d'oisans. France; Departement de l'Isère. Feeble sulphurous waters.

Bourguignon's ointment. An ointment for scabies, consisting of oils of lavender, mint, cloves, and cinnamon, of each 20 minims,

BOURNAND—BOYLE'S FUMING LIQUOR.

tragacanth 1 dr., carbonate of potassium 1 oz., flowers of sulphur 3 oz., and glycerine 6 oz.

Bourmand. France; Département de la Vienne. Feeble sulphurous waters.

Bourne-mouth. England; Hampshire. A winter sea-side residence, pleasantly situated among pinewoods, on a sandy soil, with a moderately moist and mild climate. East winds are somewhat broken by surrounding hills.

Bourrasol. France; Département Haute-Garonne. Cold carbonated chalybeate water. Used in chlorosis and enlargements of lymphatic glands.

Bous'san. France; Département de la Haute Garonne. A mineral water containing calcium and sodium bicarbonate in small quantities. Used in disorders of the alimentary canal and rheumatism.

Bouton. (F. bouton, from bout, an end.) A pimple.

B. d'Alep. The Aleppo evil.

B. de Biskra. See Biskra button.

Boutonnière operation. (F. boutonnière, a button-hole.) An operation for impervious urethral stricture. A curved catheter, after being passed down to the stricture, is turned with its convexity the opposite way, so that the point projects into the perinæum; this is cut down upon and the urethra opened, the sides of the aperture are held apart by a hook so as to expose the stricture, in order that a fine probe may be passed along it, upon which the stricture is divided; the catheter is then passed on into the bladder and fixed there.

B. operation, palatine. An operation, proposed by Maisonneuve, for the removal of a posterior nasal polypus by making a button-hole-like incision into the soft palate, drawing the polypus into the mouth through it, and tying or removing with the écorseur.

Bouza. Name of a beer brewed by the Tartars, probably from a species of *Eleusine*.

Bovache'vo. The *Datura sanguinea*.

Bovides. (L. bos, an ox.) A Section of the Family *Cavicornia*, of the Group *Ruminantia*, of the Order *Ungulata*. Having simple, rounded non-apical horns, and no lachrymal sinuses.

Bovillæ. (L. bos, bovis, an ox; because cattle were supposed liable to it.) Rubecula or measles. Raym. Vinarius, *de Peste*, l. iii.

Bovina fames. (L. bovinus, pertaining to cattle; fames, hunger.) Same as *Bulimia*.

Bovista. The puff-ball, *Lycoperdon bovista*, *Bovista nigrescens*, and other species.

Also, a Genus of the Order *Trichogastres*, Family *Gasteromycetes*. Or a Genus of the Family *Lycoperdacei*, Suborder *Gasteromycetes*, Order *Basidiomycetes*.

B. gigante'a. (L. giganteus, belonging to the giants.) The *Lycoperdon bovista*.

B. nigrescens. Pers. (L. nigresco, to become black.) Puff-balls. Egg-shaped, white, later yellowish grey, then blackish. Spore dust has been used as a styptic. Its smoke is probably narcotic.

Bow. (Sax. *būgan*, to bend.) To bend.

B. leg. (F. *genou arqué*; l. *gambe storte*; G. *Subelbein*.) Bending outwards of the lower limbs.

Bowdich'ia. A Genus of trees of the Suborder *Papilionacea*, Nat. Order *Leguminosæ*.

B. ma'jor. (L. *major*, greater.) Hab. Brazil. The bark is bitter and acid, containing

much tannin, and is the Brazilian Aloe-nogue bark of commerce. It is diaphoretic and tonic, and used in rheumatism, gouty swellings, syphilis, dropsy, and impetigo.

B. pe'via. The bark is said to stimulate the lymphatics. The roasted seeds are used instead of coffee. (Waring.)

B. virgillæ'dea. Also yields the Aloe-nogue bark. Was once used in phthisis, and as a substitute for ipecacuanha.

Bowed. (Sax. *būgan*, to bend.) Curved or arched. See *Arcoate*.

Bowels. (L. *botellus*, a small sausage. F. *boyau*.) The intestines.

Bowman. An English anatomist and ophthalmic surgeon, now living.

B's. caps'ule. The capsule of the Malpighian corpuscle of the kidney.

B's. discs. The discs formed by the transverse cleavage of the muscular fibres.

B's. glands. Glands of the olfactory mucous membrane, chiefly situated on the septum nasi, and more distinct in the lower animals, to which this name is usually restricted. They are sometimes tubular, sometimes flask-shaped, sometimes bifurcated; they are crowded with epithelium, spherical at the base, polyhedral towards the opening of the gland.

B's. lamellæ. (L. *lamella*, a small plate.) The sixty or more lamellæ which he supposed to make up the substance of the human cornea.

B's. probe. A fine silver probe of several sizes, used for introduction into the nasal duct.

B's. sarco'us elements. See *Sarvous elements*.

Bowman's root. The *Euphorbia corollata*, U.S.A. Fl. Also, the *Gillenia trifoliata*, and *Leptandra purpurea*.

Box. (L. *buxus*, the box tree.) The box tree, *Buxus sempervirens*.

B. berry. The *Gaultheria procumbens*.

B. hol'y. The *Ruscus aculeatus*.

B., mount'ain. The *Arbutus uva ursi*.

B. splint. This is composed of a hollow piece of wood or metal, on which the leg rests, and to which a thigh piece is often jointed, the angle of the leg and thigh pieces being capable of variation. The limb is further enclosed by two side pieces on hinges, to allow of the application of dressings to wounds or ulcers. At the extremity is a foot piece; the inclination can also be varied. The whole is softly padded.

B.-tree. The *Buxus sempervirens*.

B.-tree, dwarf. The *Polygala chama-buxus*.

Boxwood. The *Cornus florida*.

Boys' love. The southernwood, *Artemisia abrotanum*.

Boyer, Alex'is. A French surgeon, born at Uzereches in 1767, died 1833.

B's. splint. A straight splint for fracture of the neck of the femur, with a foot-band and an extending screw.

Boyle, Robert. A celebrated physicist, born at Lismore Castle, in Ireland, January 26th, 1627, died in London, December 30th, 1691.

B's. law. The statement that the volume of a given quantity of any gas varies inversely as the pressure, the temperature being the same.

Boyle's fuming liquor. Prepared by Beguin in 1650. Boyle's formula was sulphur and sal ammoniac, of each 5 oz., quinquæfens mix and distil. It is ammoniacum persulphuric of uncertain composition. It is an orange oil.

BOZEMAN'S APPARATUS—BRACHIAL.

fetid liquid, useful for wounds or ulcers, according to Beguin. See *Beguin's fuming liquor*.

Bozeman's apparatus. See *Apparatus, Bozeman's*.

Brabejum. A Genus of the Nat. Order *Proteaceae*.

B. stellatum. (*L. stellatus*, set with stars.) The seeds are roasted and eaten; the shells are used instead of coffee.

Brabylon. (*Βράβυλον*.) The dried damson plum, *Prunum damascenum*.

Also (*G. Schlehen*), the fruit of the aloe, *Prunus spinosa*.

Braccate. (*L. braccæ*, trousers.) Having the legs covered with feathers, as in certain birds.

Brachel'ytra. (*Βραχύς*, short; *ἔλυτρον*, the wing-case of insects.) A Subsection of the Section *Pentamera*, Order *Coleoptera*. Elytra not covering the abdomen; antennæ short; two anal appendages.

Brachelytrous. (*Βραχύς*, short; *ἔλυτρον*, the wing-case of insects.) Having short elytra.

Bracheriolum. A truss.

Brachierium. (*L. brachium*, an arm; because it embraces the part on which it is applied like an arm; or from *braccæ*, trousers, because it was worn under them. *F. brayer*; *G. Bruchband*.) Used by the older writers to signify a truss.

Brachia. (*L.* plural of *brachium*, an arm.) A term sometimes used in Anatomy to denote connecting cords with the outstretched appearance of arms.

B. anteriora. See *Brachium conjunctivum anterius*.

B. conjunctiva. (*L. conjungo*, to join together.) Two rounded fasciculi given off laterally and externally from the corpora quadrigemina. See *Brachium conjunctivum anterius* and *B. conjunctivum posterius*.

B. conjunctoria. (*L. conjungo*, to unite together.) A synonym of *Processus cerebelli ad testes*.

B. copulativa. (*L. copulo*, to couple.) The *Processus cerebelli ad testes*.

B. corporum quadrigemini. (*L. corpus*, a body; *quadrigeminus*, fourfold.) Two flat bands of white fibres, of which one connects the nates with the corpus geniculatum internum of the optic thalamus, and the other, the corpus geniculatum externum with the testis. See *Brachium conjunctivum anterius* and *B. conjunctivum posterius*.

B. of optic lobes. See *Brachium conjunctivum anterius*, and *B. conjunctivum posterius*.

B. pontis. (*L. pons*, a bridge.) The middle peduncles of the cerebellum; the *Processus cerebelli ad pontem*.

B. posteriora. (*L. posterior*, behind.) See *Brachium conjunctivum posterius*.

Brachiasus. (*L. brachium*, the arm.) Of, or belonging to, the arm. Formerly used in the same way as *Brachialis*.

B. externus. Same as *Brachialis externus*.

B. internus. (*L. internus*, internal.) Same as *Brachialis anticus*.

B. musculus. (*L. musculus*, a muscle.) Same as *B. internus*.

Brachial. (*L. brachialis*, belonging to the arm. *F. brachial*; *S. braquial*.) Of, or belonging to, the arm.

B. aponeurosis. (*F. aponeurosis brachialis*.) The layer of fibrous membrane under the skin, which covers the muscles on the front and back of the arm, and sends processes between them. It varies in thickness, is denser on each side of the muscle, and is especially strengthened at the bend of the elbow, where it covers the brachial artery by a slip from the biceps tendon. It is attached to a ridge at each side, which occupies the lower third of the humerus from the condyles, and forms the intermuscular septa. It extends into the forearm and into the axilla, and is strengthened by fibres from the latissimus dorsi, the pectoralis major, and the teres muscles. It is very thick at the back of the arm, and is attached above to the spine of the scapula, and below to the olecranon and neighbouring parts.

B. artery. (*F. artere humerale*; *G. Armschlagader*.) The continuation of the axillary artery; it runs along the inner side of the arm from the lower border of the teres major tendon to a short distance below the bend of the elbow, where it divides into the radial and ulnar arteries. It lies along the inner border of the coraco-brachialis above and the biceps below, having behind it at the upper part the long head of the triceps and the musculo-spiral nerve, then the inner head of the triceps, and below this the insertion of the coraco-brachialis and brachialis anticus muscles. It is accompanied by two venæ comites; the basilic vein is above it in its lower half; the median nerve crosses over it from the outer to the inner side lying in front of it for some distance, and on its inner side for the upper part of its course it has the internal cutaneous and ulnar nerves. At the elbow it is separated by the bicipital fascia from the median basilic vein. Its branches are the superior profunda, nutrient artery of humerus, inferior profunda, and anastomotica magna.

In the sloths and lemurs the brachial artery breaks up into several parallel branches.

B. bones. A term for the four or five bones which support the rays of the pectoral fin of fishes. Same as *B. rays*.

B. diplegia. (*Δίς*, twice; *πληγή*, a stroke.) A term applied to those cases of paralysis in which, from local and limited disease of the cervical portion of the spinal cord, the arms only are affected.

B. glands. The lymphatic glands of the arm; they consist of a series on the inner side of the brachial artery, a few accompanying the radial and ulnar vessels, two or three in front of the elbow, and one or two above the inner condyle of the humerus.

B. muscle, anterior. The *Brachialis anticus*.

B. muscle, posterior. The *Triceps extensor cubiti*.

B. plexus. (*F. plexus brachial*; *G. Armgeflecht*.) This plexus is formed by the anterior branches of the fifth, sixth, seventh, and eighth cervical nerves and the first dorsal nerve, with a small twig from the fourth cervical nerve. Walsh has given the best description of it. The fifth cervical, after receiving a small filament from the fourth, near its exit from the intervertebral foramen, unites with the sixth at the outer border of the scalenus anticus. The fifth, just as it comes into contact with the sixth, gives off from its inner side a small fasciculus, which runs downwards and across the latter nerve to

BRACHYGNATHUS—BRADYCROTE.

Brachygnathus. (Brachys; γνάθος, jaw.) A malformation in which the maxilla is too short.

Brachymetropia. (Brachys; μέτρον, a measure; ὤψ, the eye.) A synonym of myopia.

Brachynosis. (Brachys, to shorten.) Unnatural shortness of an organ.

Brachynsis. (Brachys, to shorten. G. Verkürzung.) Shortening.

Brachyotous. (Brachys; ὅτι, the ear. G. Kurzhörig.) Short-eared.

Brachypetalous. (Brachys; πέταλον, a leaf.) Short-petaled, as of a flower.

Brachypneuma. (Brachys; πνεύμα, wind. G. kurzer Athem.) Short-windedness.

Brachypneumatic. (Same etymon. G. Kurzatmig.) Short-winded.

Brachypnoea. (Brachypnoia; Brachys, short; πνέω, to breathe. F. brachypnée; S. brachypnoea; G. Kurzatmigkeit, Engbrüstigkeit.) Term used by Galen, de Diff. Respir. iii, 8, for that state of breathing in which the inspirations are short, with long intervals between.

Brachypodous. (Brachys; πούς, a foot. G. Kurzfüssig.) Short-footed.

Brachypotus. (Brachys; πότις, a drinker.) An epithet used by Galen to one who in a high fever drinks little.

Brachyptera. (Brachys; πτερόν, a wing. G. Kurzflügel.) Birds with short wings.

Brachypterous. (Brachys, short; πτερόν, a wing. F. brachyptère; G. kurzflügelig.) Having small or short wings.

Brachyris. A Genus of the Nat. Order Compositae.

B. euthamiae. (E3, abundantly; θαμέ, in crowds.) Hab. America. An aromatic, pleasant smelling plant, having diuretic properties.

Brachyrrhina. (Brachys; ρίς, the nose.) Shortness of the nose, snout, or trunk.

Brachyrrhynchus. (Brachys; ρύγχος, a snout.) A malformation in which the nose is too short.

Brachyscil. (Brachys, short; σκιά, a shade. F. brachyscien; G. Kurzschattige.) Applied to the inhabitants of regions where the sun never reaches the zenith, because their bodies cause a very short shadow.

Brachysmus. (Brachys.) Shortening.

Brachystocephalus. (Brachys, short; κεφαλή, the head.) A term of Huxley, having the same signification as *Brachycephala*, but including those skulls only which have a cephalic index of 86 or more.

Brachystomata. (Brachys, short; στόμα, the mouth.) A Subsection of the Section *Obiecta*, Suborder *Ovipara*, Order *Diptera*, having the proboscis short.

Brachyura. (Brachys, small; οὐρά, a tail.) A Tribe of the *Podophthalmia* Division of the Subclass *Malacostraca*, of the Class *Crustacea*. Crabs. Abdomen short, withdrawn into cephalothorax; no abdominal appendage; limbs fitted for walking.

Also, a Family of the Suborder of insectivorous bats.

Brachyurous. (Same etymon.) Having a short tail.

Bracium. A term for copper. (Ruland.)

Bracken. (Sax. bracce, a fern.) The *Pteris aquilina*.

B. rock. The *Polypodium vulgare*, and also the *P. incanum*.

B. root. The root of *Polypodium vulgare*.

Brack'ish. (Dutch brak, briny.) Salty.

B. water. Water in the neighbourhood of the sea or salt springs, containing a considerable quantity of sodium chloride, and some magnesium chloride; when drunk it often produces diarrhoea.

Bracon. A Genus of the Family *Bracidae*, Subgroup *Entomophaga*, Group *Tetraneura*, Order *Hymenoptera*. A near ally of the *Ichneumon* fly, which deposits its eggs in coleopterous larvae, and has been known as a parasite of the skin of man, producing intolerable itching and a vesicular rash resembling scabies.

Bract. (L. bractea, a thin leaf, from Brachys, to rattle. F. bractée; L. bractea; G. bractee; G. Nebenblatt, Deckblatt.) A floral leaf, from the axils of which the flower-stalk rises, generally of a different shape and colour from the other leaves of the plant.

The term is applied to every modification of a leaf which lies between the true leaves and the calyx. A bract may approach in structure to a leaf on the one hand, or to the petal of a flower on the other.

A term applied to the overlapping protective leaf-like appendage to the peduncle of the polypite in certain Hydrosoc; it is also called *Hydrophyllium*.

B.-region. A synonym of the *Inferocanum* of a plant.

Bractea. (Same etymon.) A bract.

Bracteate. (L. bractea. F. bractéifère.) Having bracts.

Bracteated. Same etymon and meaning as *Bracteate*.

Bracteiferous. (L. bractea; fero, to bear. F. bractéifère; G. nebenblättertragend.) Bearing bracts.

Bracteiform. (L. bractea, a floral leaf; forma, resemblance. F. bractéiforme; G. deckblattförmig.) Resembling a bract.

Bracteolate. (L. bractea, dim. of bractea, a thin leaf.) Furnished with bracteoles.

Bracteole. (L. dim. of bractea. F. bracteole; G. Deckblättchen.) A little floral leaf. Applied to leaflets that are between the bractea and calyx, or on pedicels.

Bracteose. (L. bractea.) Having many or conspicuous bracts.

Bracteous. (L. bractea, a thin leaf. G. deckblattreich.) Having many or conspicuous bracts.

Bractlet. (Dim. of bract.) Same as *Bracteole*.

Bradæsthesia. (Bradys, slow; αἴσθησις, perception.) Slowness of perception and response.

Bradysarthria. (Bradys, slow; ἀρθρία, to utter distinctly.) The same as *Bradysyllis*.

Bradybolis mus. (Bradys, slow; βολή, to throw. F. bradybolisme.) Slow ejaculation of the semen.

Bradycanuma. (Bradys, slow; αἴμα, burning heat. F. bradycanum; G. Moxabündwunde.) A wound caused by slow burning, as by the *Moxa*.

Bradycanthis. The act of slow burning.

Bradycantherium. (Bradys, slow; καντήριον, a brand.) The *Moxa*.

Bradycrote. (Bradys; κροτή, to

BRADYECOLIA—BRAIN.

strike.) A drug that diminishes the frequency of the heart's contractions. (Dunglison.)

Bradyecolia. (*Bradús; ακοή, hearing. G. Schwerhören.*) Dulness of hearing.

Bradyfibrin. (*Bradús; fibrin.*) A name given to a supposed variety of fibrin which caused the buffy coat of coagulated blood.

Bradyglossia. (*Bradús; γλῶσσα, the tongue.*) Short-tonguedness; slowness of speech.

Bradylalia. (*Bradús; slow; λαλιά, babbling.*) Disorder of speech accompanying insular sclerosis of the brain and cord, and usually indicating glosso-pharyngeal paralysis. The power of modulation is lost, the voice is pitched in a monotone, and is occasionally nasal. Utterance is not indistinct, it is merely slow, notwithstanding an unusual expenditure of effort. Letters and syllables, though correctly formed, are separated from each other by pauses. The slowness of speech depending on a hindrance to the articulation. See *Bradyphrasia*.

Bradylogia. (*Bradús; λόγος, speech.*) Difficulty or slowness of speaking.

Bradymasosis. (*Bradús; μάσησις, from μάσσωμαι, to chew. G. das beschwerliche Kauen.*) Difficulty of mastication.

Bradymasosis. Better spelt *Brady-masosis*.

Bradymastosis. A synonym of *Brady-masosis*.

Bradynosis. (*Bradús; slow; νόσος, a disease. F. Bradynose.*) Slow or chronic disease.

Bradypepsia. (*Bradús; slow; πέψις, to concoct. F. bradypepsie; G. Schwerverdau-lichkeit.*) Weak or slow digestion. (Quincy.)

Bradyphasia. (*Bradús; φάσις, a saying, from φημί.*) Slowness of speech generally. Special forms are denoted by *Bradylalia* and *Bradyphrasia*.

Bradyphrasia. (*Bradús; slow; φράσις, speech.*) Morbid slowness of speech, the result of over-fatigue or inertia of the nervous system. The slowness of speech depending on slowness of mental operation. See *Bradylalia*.

B. interrupta. (*L. interruptus, part. of interrompo, to break asunder.*) Slow speech, with longer or shorter distinct pauses.

Bradypnea. (*Bradús; slow; πνέω, to breathe. F. bradypnée.*) Slow and difficult breathing.

Bradypodidae. (*Bradús; slow; ποῦς, a foot.*) The sloths. A Family of the Order *Bruta*, Class *Mammalia*. Head round; face short; auricle hidden; eyes anterior; fore limbs the longest; feet having long curved claws for suspension; mammae pectoral; stomach compound; cervical vertebrae numerous.

Bradyspermatisms. (*Bradús; slow; σπέρμα, seed. F. bradispermatisme; I. and S. bradispermatismo.*) Too slow emission of the semen.

Bradysuria. (*Bradús; slow; οὐρῶν, the urine. F. bradyurie.*) A slow and difficult excretion and evacuation of urine.

Bradytocia. (*Bradús; τόκος, birth.*) Lingering labour.

Bracmar. Scotland; Aberdeenshire, near the Dee, amongst magnificent scenery. A famed air-cure place.

Bragantia. A Genus of the Nat. Order *Aristolochiaceae*. Tropical shrubs of bitter taste.

B. tomentosa. Blume. (*L. tomentum, a*

stuffing for cushions.) Hab. Java. Used as an emmenagogue.

B. Wallichii. R. Brown. Hab. Malabar. The fruit, boiled in oil, is used as an application in scabies and chronic ulcers. The juice of the leaves is regarded as an antidote to snake bites.

Braggat. A pisan of honey and water. (Quincy.)

Brahoes. One of the races inhabiting Beloochistan. They have short, thick bones, with round, flat faces.

Braid, James. An English surgeon, born 1795, died 1860. See *Braidism*.

Braidism. A synonym of *Hypnotism*, to commemorate the name of Mr. Braid, of Manchester, who devoted great attention to the subject, especially in its medical aspects.

Brain. (*Sax. dragen. Gr. ἑγκέφαλος; L. cerebrum; F. cerveau; I. cervello, cerebro; S. cerebro; G. Gehirn, Hirn.*) A generic term for the central nervous mass contained within the cranium. The word is also used synonymously with cerebrum. *Encephalon, Cerebrum, Cerebellum, Medulla oblongata, Nervous system*, are some of the headings under which further detail may be found.

The term Brain has more than one signification. In its widest acceptance it represents that nerve-cell, or collection of cells, in which the will of the animal resides, and by which its movements are guided and its functions regulated. It may hence be applied to the single or double ganglion cell of the lower Vermes, the cephalic ganglia of the Mollusca and Insecta, and to the entire contents of the skull in the higher Vertebrata. But there is a more limited signification, in which the term is applied to the encephalon of Vertebrata alone, and which includes the cerebrum and cerebellum, the ganglia at the base of the brain, the pons Varoli, and the medulla oblongata. Lastly, there is a still narrower meaning, in which it is restricted to the cerebrum proper, or cerebral hemispheres, and the immediately sub-jacent ganglia, excluding the cerebellum and medulla oblongata. Taking the term Brain in its widest signification, it is represented in the lowest classes of the animal kingdom only by one or two nerve-cells, with centripetal and centrifugal nerve-fibres connected with them, which minister to the sensations of contact and of light, and to movements executed in response to those stimuli. In the Asteriadae, a multiplication of such cells, forming groups or ganglia, at the base of the arms and connected with each other, so as to form a ring round the mouth, is observed surrounding the anterior part of the intestinal canal. The presence of this ring is noticeable throughout the Mollusca and Insecta, the part above the oesophagus becoming gradually more and more complex, and giving off branches, which supply the organs of sense, as the eyes, tentacles, and antennae, whilst the suboesophageal ganglion supplies the parts about the mouth. The first rudiment of a cranium, protecting or supporting the brain, is found in the Cephalopoda.

In Fishes, whilst considerable differences exist, the general type is that there are two symmetrical cerebral hemispheres, which pass in front into the olfactory lobes, and which constitute the prosencephalon, or forebrain; immediately behind these is the thalamencephalon, which is often almost entirely concealed by the optic lobes, or mesencephalon. Behind these is the cerebellum, or metencephalon, and the medulla oblongata.

BRAIN.

The brain of Amphibia presents a prosencephalon divided into two hemispheres, and having two lateral ventricles, which are prolonged into the olfactory lobes. Behind this is the mesencephalon, with the pineal gland, which is again succeeded by the optic lobes, a small fillet-like cerebellum bridging over the fourth ventricle, and the medulla oblongata.

In Reptiles, the same parts remain, but the prosencephalon is larger, covering the thalamencephalon. The lateral ventricles are also bigger, and communicate posteriorly with the third ventricle, which is placed between the two halves of the thalamencephalon, and has a large infundibulum. The mesencephalon is divided by a groove into two halves, which sometimes project far forwards. The metencephalon is small and fillet-like in Ophidia and Sauria, but broader and larger in Chelonina and Crocodilia.

The brain of Birds resembles that of Reptiles, but is distinguished by the greater proportional size of the prosencephalon, the hemispheres of which are often of considerable width. They are connected by a small anterior commissure. The thalamencephalon is small, has a divided roof, and is entirely concealed by the prosencephalon. The mesencephalon is divided, and the halves are pushed down to the sides of the brain. The large median portion of the cerebellum is transversely laminated, and covers the whole of the myelencephalon.

In regard to the brain of Mammals, the olfactory lobes are covered by the prosencephalon, which gradually increases backwards in the different classes, from the Marsupials, and Rodents, and Insectivora, in which it scarcely reaches to the corpora quadrigemina, to man, in whom it entirely covers the metencephalon. It consists of two halves, separated by a deep fissure, and connected in the mature state by a system of commissures, named the corpus callosum, the fornix, and the anterior commissure. The hemispheres of the prosencephalon are smooth in many mammals, presenting in this respect embryonic characters; in the higher classes gyri are developed, which attain their highest degree of complexity in man. They present two cavities, named the lateral ventricles, which communicate with each other through the primitive cerebral cleft. Into the interior of these ventricles project the corpora striata. The thalamencephalon is divided into two masses, which lie immediately behind the corpora striata, and are named the optic thalami. The space between these, constituting the third ventricle, is continued downwards into the infundibulum, and backwards through the aqueduct of Sylvius into the fourth ventricle, which is the dilated and exposed central cavity of the spinal cord. The third ventricle is traversed by the soft commissure. The mesencephalon has its primitive lumen reduced to a narrow tube, the aqueduct of Sylvius; and the upper surface presents an antero-posterior and a transverse sulcus, which mark the limits of the corpora quadrigemina. The metencephalon presents median and lateral portions, and is nearly or altogether free.

B., abdominal, of Wrisberg. The solar plexus.

B., abscess of. See *Cerebral abscess*.

B., anæmia of. See *Cerebral anæmia*.

B., aneurysm of. The cerebral arteries of the base of the brain are those most frequently affected, but the disease is rare.

B., atrophy of. (*G. Gehirnatrophie*.)

The condition in which the whole or part of the brain is less than normal; it may be congenital, and in this case is most commonly on the left side; or acquired, the result of pressure of tumour, apoplexy, obstructed circulation, and such like.

B., base of. (*G. Gehirngrund, Hirnbasis*.)

A term applied to the whole under surface of the encephalon.

B., cancer of. The several forms of cancer are each found in the brain, encephaloid being most frequent; it may be secondary or primary, single or multiple.

B. case. The calvarium, or skull.

B., cholesteatoma of. A small, white, glistening mass like a pearl, or a collection of them, consisting of layers of epithelial cells, enclosed in a delicate membrane, and composed chiefly of cholesterol.

B., circulation in. The brain receives a remarkably large supply of blood through the two internal carotids and the two vertebrals. The primary branches of these vessels freely anastomose at the base of the brain, and in some animals form a rete mirabile before penetrating the cerebral substance. The capillaries are long, delicate, and numerous; the veins are thin-walled, and discharge their contents into the sinuses of the dura mater. The circulation presents some peculiarities, for the brain being enclosed in an unyielding bony case, and being itself incompressible, no additional quantity of blood can be introduced, nor any abstracted, without either the withdrawal of a portion of the contents in the former case, or the introduction of some material from without in the latter case. The means by which the variations in the quantity of blood contained in the brain are compensated for is probably the cerebro-spinal fluid.

B., composition of. See *Nervous tissue*.

B., compression of. See *Compression of brain*.

B., concussion of. See *Concussion of brain*.

B., congestion of. Same as *Cerebral hyperæmia*.

B., cysticercus in. The *Cysticercus cellulosæ*, the scolex of the *Tænia solium*, has been not infrequently found in the grey matter of the human brain.

B., cysts in. (*Κύστις*, a bladder.) Cavities with a definite wall, and containing serous fluid, usually resulting from apoplectic effusions, but occasionally dermoid in character, and containing hair. Other cysts are the so-called hydatid cysts and the cysticercus.

B., development of. The brain is developed from the epiblast. This layer of the blastoderm, about the twentieth hour of incubation in the chick, is raised into two folds, the laminae dorsales, the groove between which is the medullary groove. The folds arch over the groove, and meeting convert it into a tube, named the medullary canal. Beneath the groove is the notochord, formed of mesoblastic cells. Very soon the front end of the tube dilates into a small bulb, which is the first cerebral vesicle, or forebrain, and behind this the second (midbrain) and third (hindbrain) cerebral vesicles are successively formed. About the middle of the second day the first cerebral vesicle enlarges laterally, the lateral portions forming the optic vesicles, which become separated from the forebrain by

BRAIN.

constriction. By the end of the second day the vesicles of the cerebral hemispheres begin to appear as projections of the front part of the forebrain. In the course of the third day the forebrain and cerebral hemispheres bend downwards. The cerebral hemispheres are hollow, and their cavities constitute the lateral ventricles, each of which is continuous with the cavity of the forebrain. The cavity of the forebrain subsequently corresponds to the third ventricle, or the 'tween brain, and is prolonged downwards into the infundibulum, as far as the pituitary body. Above the 'tween brain is the rudiment of pineal gland. The midbrain now increases in size, its roof develops into the corpora bigemina in birds, or corpora quadrigemina in mammals; the floor forms the crura cerebri, and its cavity becomes reduced to the narrow iter a tertio ad quartum ventriculum. The hindbrain becomes marked off during the third day from the rest by a slight constriction. This separates the hindbrain into the cerebellum in front, and the medulla oblongata behind. The walls of the cerebellar portion of the hindbrain become much thickened, but the roof of the medulla oblongata portion thins out into a membrane, which covers the fourth ventricle. In the subsequent development the parts already mentioned increase in size, and become more and more distinctly differentiated and specialised.

The eye is, in regard to the retina and optic nerve, an outgrowth from the anterior cerebral vesicle.

The ear makes its appearance on either side of the hindbrain as an involution of the epiblast, which becomes converted into a closed sac, the otic vesicle, surrounded by mesoblast.

E., ecto'pia of. (Εκ, out; τόπος, a place.) Protrusion or displacement of the brain, or a part of it, from malformation, or defect of the cranial bones and integuments.

E., embolism in. (Εμβολισμός, that which is put in.) The plugging of one or more blood-vessels by a piece of detached clot or other matter, carried to its seat by the current of blood; softening follows more or less speedily in proportion to the greater or less obstruction of the blood-vessels, and the amount of the consequent thrombosis.

E., extravasa'tion of. (L. *extra*, out of; *vas*, a vessel.) The effusion of blood into, or on, the surface of the brain from rupture of a blood-vessel, the result of injury or disease.

E. sag. (From E. *sag*, to be weary; from Dutch *saggeren*, to hang loose.) A term which has been used to denote the collection of symptoms which depend on over-work with over-worry of nervous system.

E., fatty degenera'tion of. (L. *degenero*, to be unlike its kind.) The morbid condition occurring in softening of the brain, and consisting of degradation of the cerebral tissues, grey and white, the neuroglia cells, and the blood-vessels, by their conversion into fat granules, and the granular bodies called exudation corpuscles.

E. fe'ver. A term for meningitis, and also for other fevers, as typhus, with brain complications.

E., fibro'ma of. A tumour, consisting of fibrous tissue, originating in the connective tissue.

E., fibrous tu'mour of. A term which probably includes the hard forms of glioma of the brain, as well as true fibromata.

E., fissures of. See *Fissures of brain*.

E., fun'gus of. (L. *fungus*, a mushroom. G. *Hirnschwamm*.) A term applied to the fungoid growth which projects from the interior of the skull when a meningeal cancer has perforated the bones and integuments.

Also, the protrusion of a dark reddish-looking mass of broken-up and infiltrated brain substance which is occasionally seen in fractures of the skull, accompanied by laceration of the cerebral membranes; called also hernia of the brain.

E., gli'o'ma of. (Γλία, glue.) A new growth arising in the neuroglia, occurring in the brain substance, and having no definite outline. It is soft to the feel, yellowish or greyish red, and consists of a finely reticulated substance with nuclei.

E., grey degenera'tion of. Same as *B., sclerosis of*.

E., hæm'orrhage of. See *Cerebral hæmorrhage*.

E., hem'ispheres of. See *Cerebral hemispheres*.

E., her'nia of. (G. *Gehirnbruch*.) The projection of a portion of brain from the skull cavity, the result of injury or disease.

E., hydat'ids in. Hydatid cysts usually occur on the surface of the brain, and seldom contain the hooklets of *Echinococcus hominis*, the larval form of the *Tænia echinococcus*. They are the abortive cysts known as *Accephalocysts*.

E., hyperæ'mia of. See *Cerebral hyperæmia*.

E., hyper'trophy of. (Υπέρ, in excess; τροφή, nutrition.) Increase of size of the brain, probably caused by increase of the neuroglia, or an infiltration of the white matter. The so-called partial hypertrophies are probably morbid deposits.

E., indura'tion of. (L. *induro*, to harden.) Too great firmness of brain structure, dependent usually on altered conditions of the neuroglia.

E., inflamma'tion of. See *Cerebritis* and *Meningitis*.

E., lardo'ceous tu'mour of. (L. *lardum*, the fat of bacon.) A term which has been applied to a sebaceous cyst growing from the dura mater.

E.-like can'cer. A term for encephaloid cancer.

E., lipo'ma of. (Λίπος, fat.) A fatty tumour arising from the dura mater.

E., lit'tle. The cerebellum.

E., lobes of. See *Cerebrum, lobes of*.

E., margaroid tu'mour of. (Μαργαρίτης, a pearl.) Same as *B., cholesteatoma of*.

E., melano'ma of. (Μέλας, black.) A term applied to a cancerous tumour containing much pigment; or to a melanotic sarcoma.

E., myxo'ma of. (Μύξα, mucus.) A tumour consisting of branching cells, with a soft mucoid intercellular substance, arising from the connective tissue of the brain.

E., neuro'ma of. (Νεύρον, a nerve.) A small tumour, consisting of ordinary white nerve fibre and connective tissue, found on the surface of the convolutions, in the ventricles, and in the white matter of the brain.

E., oede'ma of. (Οίδημα, a swelling. F. *oedème de cerveau*.) An accumulation of fluid in the ventricles and the subarachnoid cavity of the brain, with anæmia and softening of the fornix, caused by pressure on the veins of Galen.

Also, generally, the presence of an excess of

BRAINLESS—BRAN,

fluid in the brain structure, as frequently occurs in typhus, anasarca, mania, and other diseases.

B. pan. (Sax. *panna*, a pan; from *L. patina*, a shallow bowl.) The cranium.

B. paralysis of. See *Paralysis of brain*.

B. petrified. (*L. petra*, a rock; *no*, to make.) Exostoses in animals.

B. protrusion of. (*L. protrudo*, to thrust forth.) Same as *B. hernia of*, and *B. ectopia of*.

B. psammoma of. (Ψάμμος, sand. *G. Gehirn- und Geschwulst*.) A small, smooth, white tumour arising from the membranes of the brain, or from the choroid plexus, and consisting of corpora amylacea containing calcareous granules, and embedded in a cellular and fibrillated growth.

B. ramollissement. (*F. ramollir*, to soften.) Same as *B. softening of*.

B. sand. The sabulous matter found in and about the pineal gland.

B. sarcoma of. (Σάρξ, flesh.) A roundish tumour, of varying density, often contained in a sort of vascular capsule, whitish or reddish on section, and consisting mainly of spindle-shaped cells.

B. sclerosis of. (Σκληρός, hard.) Atrophy and degeneration of the grey and white matter of the brain, with thickening of the neuroglia; generally in hardened patches. See *Sclerosis*.

B. sinuses of. See *Sinuses of brain*.

B. softening of. (*F. ramollissement du cerveau*; *G. Gehirnerweichung*.) A morbid diminution of the consistence of the brain structure from a slight degree to complete diffuence, resulting usually from thrombosis or embolism. Softening of the brain is commonly arbitrarily divided into three varieties—red, white, and yellow; the red variety is occasionally inflammatory.

B. softening of, red. The form which is sometimes inflammatory, sometimes supervenes on white softening from giving way of minute vessels, but most frequently is caused by embolism or thrombosis. In addition to the microscopic characters of white softening, altered blood-corpuses and plugged capillaries are seen, with, in older cases, crystals of hæmatoidin.

B. softening of, white. The form in which there is little change of colour, in consequence, apparently, of its arising from slowly progressing disease of the small blood-vessels without any accompanying congestion or thrombosis. It is occasionally somewhat rapidly produced by embolism of a large artery.

B. softening of, yellow. A form in which the colour is rendered yellowish by the colouring matter of effused blood, or by a gelatinous edematous condition of brain structure.

B. specific gravity of. According to Dr. Bastian, the sp. gr. of the grey matter is 1.030, and that of the white matter is 1.040.

B. suppuration in. (*G. Gehirn-eiterung*.) See *Cerebral abscess*.

B. syphiloma of. A cerebral tumour, of syphilitic origin, of greyish semi-translucent matter, and often found undergoing caseous degeneration.

B. tapping of. A synonym of *Paracentesis capitis*.

B. thrombosis of. (Θρόμβωσις, a becoming curdled.) The coagulation of blood in

the blood-vessels of a more or less limited part of the brain, generally depending on degeneration of the arterial coats. It is a frequent cause of softening of the brain.

B. tubercle of. (*Dim. of L. tuber*, a swelling.) A roundish, pale yellow or greenish, firm mass, from the size of a hempseed to a hazel nut, or larger, usually occurring, especially in scrofulous children, at the base of the cerebrum or cerebellum, and having the usual characteristics of tubercle.

B. tyroma of. See *Tyroma*.

B. ventricles of. See *Ventricles of brain*.

B. weight of. The average brain weight of male Europeans, from twenty to sixty years of age, is 49 oz. (Welcker); of English, 47.8 oz. (Boyd), 49 oz. (Peacock); of French, 47.9 oz. (Parchappe); of Germans, 48.8 oz. (Wagner); of Scotch, 50 oz. (Peacock); of Negroes, 44.3 oz. The difference between the average weight of the male and female brain is 4.94 oz. (Welcker), 5.3 oz. (Peacock). The relative weight of the different elements of the human encephalon, estimating the whole at 204, is—cerebrum 170, cerebellum 21, and peduncles, corpora striata, optic thalami, pons Varolii, and medulla oblongata, collectively, 13.

B. worm. Same as *Hungarian fever*.

Brainless. (*G. gehirnlös*.) Having no brain.

Brake, common. (Sax. *bracca*, a fern.) The *Pteris aquilina*.

B. rock. The *Polypodium inaequum* and *P. vulgare*.

Brake-root. The *Polypodium vulgare*.

Bramble. (Sax. *bremel*. *F. ronce*; *G. Brombeerstrauch*.) The *Rubus fruticosus*.

B. American hairy. The *Rubus villosus*.

B. berry. The fruit of *Rubus fruticosus*.

B. small. The *Rubus cæsius*.

B. stone. The *Rubus saxatilis*.

Bra'mia. A Genus of the Nat. Order *Scrophulariaceæ*.

B. serrata. (*L. serratus*, saw-shaped.) Used in rheumatism, infused in the water of a bath.

Bran. (Old *F. bran*, from Bret. *brann*; Welsh *brav*. *L. furfur*; Gr. *νίτροπος*; *F. son*; *L. crusca*; *S. salvado*; *G. Kleis*.) The epidermic covering of the seeds of cereals, notably of wheat, sifted out, when ground, to make white flour. Bran constitutes about 20 per cent. of the grain; it contains a large amount of nitrogenous matter, notably *oveline*, a diastase-like substance, which is able to effect the conversion of starch into dextrin; it also contains a large proportion of the salts of the grain. It is unwise in most cases to have it entirely removed, for reasons of nutriment, and also because it serves by the mechanical influence of its undigested part, the woody matter, to promote intestinal action. The analyses of bran vary. The following is from Poggiale:—Albumen and gluten 13, starch 21.7, sugar 1.9, gum 7.9, fat 2.9, water 12.7, woody matter 34.6, mineral matters, consisting chiefly of silica, magnesium phosphate, potassium chloride, and sulphate and calcium carbonate, 5.6 per cent.

B. bath. See *Bath, bran*.

B. biscuits. Same as *B. cakes*.

B. bread. Used as an article of diet in constipation. Same as *B. cakes*.

BRANCA—BRANCHIAL.

B. cakes. Finely ground bran made into cakes with eggs and butter, and baked in a quick oven. Used in diabetes.

B. loaf. Same as *B. bread*.

B. tea. A decoction of bran, sweetened or not, used as a demulcent in coughs.

Bran'ca. (*I. branca*, a paw.) A term applied to certain herbs, some part of which was supposed to resemble the paw of a particular animal, as *Branca leonis*, the foot of the lion.

B. german'ica. (*L. germanicus*, German.) The *Heracleum spondylium*.

B. ursina. (*L. ursinus*, belonging to a bear.) The *Acanthus mollis*.

B. vera. (*L. verus*, true.) The *Acanthus mollis*.

Bran'card. (*F. brancard*, a handbarrow, from *branche*, a bough.) A means devised for carrying sick or injured persons readily and painlessly. Great divergence of opinion and practice exists as to the best method of fulfilling these objects, and the contrivances for this purpose are very various in material and plan of construction.

Branch. (Bret. *branc*, an arm; Welsh *brach*, a branch. *L. ramus*; Gr. *κλάδος*; *F. branche*; *I. and S. ramo*; *G. Ast, Zweig*.) A name given to the divisions of blood-vessels, lymphatics, or nerves.

In Botany, the divisions of the stem or axis.

B. system, monopodial. (*Μόνος*, alone; *πούς*, a foot.) That form of branching in which the apex continues to grow vertically, producing lateral branches in acropetalous succession.

B. spine. (*G. Zweigdorn*.) In Botany, a spine or thorn attached to a stem, in contradistinction to a leaf spine.

B. system. An axis of a plant with its branches; or a branch with its branches.

B. system, dichotomous. (*Δίχα*, doubly; *τίμνω*, to divide.) That form of branching in which the axis ceases to grow apically, but gives rise to two new divergent growing points.

Branch'æ. (*Βράγχας*, hoarseness, which is an effect produced.) Swelling of the tonsils. *Rolandus, M. M. ii, 16.*

Branch'ed. (*Branch. L. ramosus*; *F. ramosus*; *I. and S. ramoso*; *G. astig*.) Having branches or boughs; ramified.

B. muscular fibre. A variety of striped muscular fibre seen in the heart, the tongue, and in the facial muscles of some mammals, in which the fibre divides into two or more branches, which either join with others, as in the heart, or gradually become smaller, and are ultimately attached to the under surface of the corium of the skin or mucous membrane, as in the face and tongue.

Branch'i. Same as *Branchæ*.

Branchiæ. (*Βράγχια*, the gills of a fish. *F. branchie*; *I. branchie*; *S. branginas*; *G. Kiemen*.) Gills. The organs of respiration in water-breathing animals, consisting of filamentous or lamellar processes of integument, permeated by blood-vessels, so as to expose the blood to the air dissolved in the water for the purposes of oxygenation. In Annelida they are filamentous, ciliated, and often branched, and traversed by pseud-hæmal vessels. In Crustacea they are abundantly supplied with bloodvessels, but not ciliated; they are attached to a limb, or to a maxilla. In the land Crabs they are also used for air breathing, and are kept moist in a large

chamber. In some Molluscs the branchiæ are contained in the mantle. In all these animals the branchiæ obtain their blood as it flows back to the heart. In adult Urodela, and in the larval condition of Amphibia, the branchiæ are attached to some of the visceral arches, and project externally. In Fishes the branchiæ are covered by an operculum, and are internal; they are supplied with blood by branches of the cardiac aorta.

Branch'ial. (Same etymon.) Having, or relating to the, branchiæ, or gills.

B. an'imals. A term for the Crustacea.

B. arch'es. (*G. Kiemenbogen*.) The visceral arches after the hyoidean arch; persistent in fishes. In osseous fishes the arches are made up of a median ventral bone, the basibranchial, the first of which is attached above to the glossohyal, and below to its successor, the remainder to their fellows above and below; on each side rise the hypobranchials; to these succeed the ceratobranchials, then the epibranchials; and the arch is completed by the palatobranchials, which are attached to the pharyngeal bones; on their outer convex side are attached the gills. The branchial-arch bones are often incomplete. In the human fœtus they are also called *Subcranial plates*.

This term (*G. Kiemengefässbogen*) is sometimes used as synonymous with *Aortic arches*, to describe vascular structures, but this use is confusing.

B. ar'teries. (*G. Kiemenarterien*.) The arteries which, arising from the aortic bulb in the embryo of Vertebrata, and in adult fishes and Amphibia, supply the branchiæ.

B. cham'ber. The chamber or space in which the gills of fishes lie.

B. cleft. A parallel series of four to six depressions or fissures occurring in the transverse diameter of the neck of the embryo of vertebrates about the third or fourth day, and ultimately penetrating to the throat. The upper edge becomes thickened and forms the branchial fold. See also *Visceral cleft*.

B. fis'sure. (*G. Kiemenpalte*.) The space between the lower subcranial plates of the human fœtus; sometimes persistent as a malformation. Same as *B. cleft*.

B. fis'tula. (*G. Kiemenfistel*.) A persistent opening in the side of the neck, and having a communication with the throat below the tonsil. It is a fœtal relic, the remains of a branchial fissure.

B. fold. The thickened upper or cephalic border of a *B. cleft*.

B. gang'lia. A term for the parietosplanchnic ganglia of Mollusca.

B. heart. A contractile cavity at the base of each branchia in cuttle fishes, which sends the venous blood, returned from the body, through the branchiæ.

B. oper'culum. The Operculum.

B. rays. (*G. Kiemenstrahlen*.) A series of rods projecting from each branchial arch in the dogfish and other Elasmobranchs.

B. sac. The respiratory sac of Tunicata, called also the pharynx. It has an external aperture, sometimes called the mouth, and an internal inferior one, the true mouth, opening into the pharynx. It is the homologue of the branchiæ of other Molluscs, and has vessels in its walls, which cross each other at right angles and are furnished externally with cilia.

A dilated chamber, into which the mouth opens in Amphioxus, called also the pharyngeal sac.

BRANCHIATA—BRANDY.

It contains cartilaginous rods in its walls, between which are ciliated clefts.

B. slit. A term in the adult for the branchial cleft of the embryo.

B. veins. The vessels which collect the blood from the branchia of fishes and Amphibia and return it to the dorsal aorta.

Branchiata. (*Brachyia*.) A synonym of *Branchifera*. It also forms an Order of the Subclass *Gastropoda*, which includes those animals which live in water and have a veliferous larva.

Also, a Section of the *Amphibia*, including the tube-worms and sand-worms, which have external branchia.

Also, a Section of the Subkingdom *Vertebrata*, including Amphibia and fishes, which at some period of their life possess branchia.

Branchiate. (Same etymon.) Having branchia or gills.

Branchifera. (*Brachyia*, gills; *φίση*, to bear.) A Subclass of the Class *Gastropoda*, of the Division *Mollusca*. Respiration aquatic by means of the walls of the mantle cavity, or by external branchia, or by pectinated branchia, contained in a branchial chamber. First fissure of the intestine towards the heart side of the body terminal.

Branchiobdellid. (*Brachyia*, gills; *βίλλα*, a bristle.) A Family of the Subclass *Herudinea*, Class *Annelida*. Body nearly cylindrical when extended, composed of unequally ringed segments; cephalic lobe double; no eyes; a sucking disc at the posterior extremity; pharynx without a trunk, with two flattened masticatory apparatus, one above the other.

Branchionardiac. (*Brachyia*; *καρδία*, the heart.) Belonging to the gills and the heart.

B. canals. The branchial veins of Crustacea conveying the blood from the gills to the heart.

Branchiodelous. (*Brachyia*; *δῆλος*, manifest. *F. branchiodela*.) Having branchia visible externally.

Branchiogastropoda. (*Brachyia*, the gills; *γαστήρ*, the stomach; *πόδι*, foot.) Another term for *Branchifera*.

Also, a synonym of *Gastropoda*.
Branchioid. (*Brachyia*; *εἶδος*, likeness. *G. kumanukhich*, *kumanaring*.) Resembling gills.

Branchiopnea. (*Brachyia*; *πνοή*, breath.) A synonym of *Crustacea*.

Branchiopoda. (*Brachyia*, the gills; *πόδι*, a foot. *F. branchiopoda*.) Gill-footed. A Division of the Subclass *Entomostraca*, of the Class *Crustacea*. Legs numerous, adapted for swimming, either flattened out, so as to become branchia, or have branchia attached to them; body having a carapace or naked, many segmented, mouth with masticatory organs, antennae small, one or two pairs, eyes two or three.

Branchiopodous. (Same etymon.) Gill-footed, having the same characters as the *Branchiopoda*.

Branchiostegal. (*Brachyia*, the gills; *στέγαν*, to cover.) Covering the gills.

B. membrane. A membrane which assists to close in the branchial chamber. It is attached to the hyoid bone, and is supported and spread out by the branchiostegal rays.

B. rays. Parallel rod-like ossifications supporting the opercular or branchiostegal mem-

brane in fishes with ossified skeletons. They vary from one or two to upwards of twenty, their normal number in *Teleostei* being seven. They are only attached to the lower and inner part of the hyoid arch, the outer margins of the cornu-hyal and epihyal bones, as the upper and outer part of this arch carries the mandibular arch and the broad opercular bone. These latter belong to the same category, for in bony fishes the operculum is wrought into two large folds, the upper and outer carrying the broad opercular, and the lower and inner the branchiostegal rays.

Branchiostegite. (Same etymon.) A term applied to the free, even-edged, hair-margined covering of the gills of *Mastura*. It is a lateral prolongation of the *omostegite*.

Branchiostegous. Same etymon and meaning as *Branchiostegal*.

Branchiostoma. (*Brachyia*, the gills; *στόμα*, a mouth.) Having bony gills. Formerly applied to certain fishes which have gills with bony rays.

Branchiotoma. (*Brachyia*; *στόμα*, a mouth.) One term for the *Amphioxus*, and for the class of which it is the sole representative, in consequence of its dilated pharynx having a series of transverse clefts lined with a ciliated mucous membrane, which are believed to act as branchia.

Branchiotroch. (*Brachyia*, the gills of fishes; *τροχός*, a wheel.) Term applied by Ray Lantester to that division of the *Architroch*, or primitive ciliated band of invertebrate embryos, from which ciliated branchial filaments are most constantly developed.

Branchiule. (*Brachyia*.) Term applied by v. Beneden to the hollow, oval, ciliated tentacles of the Bryozoa.

Branchiura. (*Brachyia*; *ουρά*, a tail.) A Suborder of the Order *Copepoda*, Class *Crustacea*. Cephalothorax buckler-shaped, abdomen two-lobed, a long protractile style in front of the mouth; four pairs of burrowing swimming feet.

Branchlet. (Dim. of *Branch*.) A little or secondary branch. The ultimate divisions of an axis.

Branchus. (*Brachyia*, hoarseness. *G. Hæuerkrit*.) Term used by Galen, *de San. Tu. v. 8*, and *de Symptom. Caus. iii*, for a species of catarrh, also, hoarseness.

Branch. Quinsy.

Branch. Glass.

Brand. (Sex. *brand*, from *brannen*, to burn. *F. charbon*, *uselle*; *I. carbone*, *galpa*; *B. nequilla*; *G. Brand*.) A term for parasitic fungi of the Order *Puccinia*, which, growing on living leaves, give to them an appearance of burnt patches.

Brand's, extemporised cautery of. A portion of telegraph wire, one end of which is rolled up in a spiral form, whilst the other is filed to a point and inserted into a piece of wood to serve as a handle.

Brand's solution. See *Liquor potassæ Brandii*.

Brandy. (Dut. *brandewyn*; from *brandt*, burnt, *wijn*, wine, *branden*, means to distil as well as to burn. *F. eau de vie*, *cognac*, *I. acquavita d'Inghilterra*, *G. Brantwein*.) An alcoholic liquor obtained by distillation from the wine of grapes. It is colourless when distilled, and is kept in oak casks to obtain the pale colour, brown brandy is coloured with burnt sugar or catechu. It consists of 44 to 56 per cent. of absolute alco-

BRANK—BRASSICA.

hol, with small quantities of a volatile oil, acetic ether, ananthic ether, tannin, and the colouring matter and water.

B. mixture. The *Mistura spiritus vini gallici*.

Brank. A name for buckwheat, *Fagopyrum esculentum*.

Branks. (Lowland Scot. *brank*, to bridle.) The *Cynanche parotidea*, or mumps, from its interference with the motion of the jaw.

Brankursine. The *Acanthus mollis*.

Bran'ny. (*Bran*.) Having the appearance of bran.

B. borre'ra. The *Borreria furfuracea*.

B. tetter. A synonym of *Pityriasis*.

Br'que. Spain. A saline spring, containing a little hydrogen sulphide.

Braricia. *Vitrum*, or glass. (Ruland.)

Bras. The Malay name for rice deprived of the husk.

Bră'se. Roumania. Two mineral springs, containing hydrogen and iron sulphide, with sodium and magnesium sulphate.

Bras'dor, Pierre. A French surgeon, born 1721, died 1797.

B., cor'set de. A bandage employed by Brador in fractures and dislocations of the clavicle.

B.'s operation. Ligation of the artery in aneurism on the distal side.

Bras'e'ma hydropel'tis. The *Hydropeltis purpurea*.

B. pelt'a'ta. The *Hydropeltis peltata*.

Brash. (Perhaps from the same root as *brackish*, or from Dutch *braken*, to vomit.) A common term indicating some disorder of the alimentary canal.

B., wa'ter. A synonym of *Pyrosis*.

B., wean'ing. Diarrhoea produced by change of food in weaning a child.

Brasile'tto. Logwood.

Brasil'ia. Old name for the wood of the Genus *Cesalpinia*, or Brazil-wood.

Brasilien'sis ra'dix. (*L. radix*, a root.) A synonym of *Ipecacuanha*.

Bras'lin. $C_{12}H_{10}O_7$, or $C_{12}H_{12}O_7$. The crystallisable colouring matter of Brazil wood. It is colourless or of a sulphur-yellow colour, rapidly changing to red in the sunlight.

Bras'ium. Old name for *Malt*.

Bras'ma. Immature black pepper.

Bras'mos. (*Brá'w*, to ferment.) Used by the ancient Greek author Pharnuthus for fermentation, or zymosis.

Brass. (Sax. *bras*. *L. æs*; Gr. *χαλός*; *F. sirain*; *I. rame*; *S. alambre*; *G. Messing*, *Erz.*) An alloy of copper, with 28 to 34 per cent. of zinc.

Brassadella. The *Ophioglossum spicatum*, or adder's tongue.

Brassatella. Same as *Brassadella*.

Brass'founders' a'gue. See *Ague*, *brassfounders'*.

Bras'sic acid. (*F. acide brassicique*) $C_{12}H_{12}O_7$. An acid existing as a glyceride in colza oil, probably identical with *Erucic acid*.

Bras'sica. (*L. brassica*. As if *præsica*, from *præsecq*, to cut in pieces, because it is cut off by the stem; or from *πρασία*, a garden plot.) The cabbage or colewort. A Genus of plants of the Nat. Order *Crucifere*.

B. acidula'ta. (*L. acidulus*, sourish.) The acidulated cabbage; a name for the culinary preparation called *Sour crout*.

B. al'ba. (*L. albus*, white.) The white cabbage plant.

Also, the *Sinapis alba*.

B. apia'na. (*L. apianus*, belonging to bees.) The jagged or crimped colewort.

B. asparago'ides. (*Ἀσπάραγος*, asparagus; *είδος*, form.) The broccoli.

B. asperifo'lia. Lam. (*L. asper*, rough; *folium*, a leaf. *F. chou rude*.) The wild turnip.

B. asperifo'lia esculen'ta. (*L. esculentus*, eatable. *F. ravigole*, *grosse rave*.) The turnip.

B. asperifo'lia oleif'era. De Cand. (*L. oleum*, oil; *fero*, to bear. *F. navette*.) The navew.

B. bot'rytis. (*Βότρυς*, a bunch of grapes. *F. chou-fleur*.) The cauliflower.

B. bot'rytis cymo'sa. (*Βότρυς*; *L. cyma*, a young sprout of cabbage, a cyme.) Broccoli.

B. campe'stris. Linn. (*L. campester*, belonging to a level field. *F. chou-colza*.) Coleseed. Cultivated for the seeds, which yield colza oil.

B. cani'na. (*L. caninus*, belonging to a dog.) The *Mercurialis perennis*, or dog's mercury.

B. capita'ta. (*L. capitatus*, having a head. *F. chou pommé*.) Headed colewort; the systematic name of the cabbage.

B. caulifo'ra. (*L. caulis*, a stem; *flor*, a flower. *F. chou-fleur*.) The cauliflower.

B. caulora'pa. (*L. caulis*, a stem; *rapa*, a turnip.) The Kohl-rabi.

B. cuma'na. (*L. cumanus*, of Cumæ.) The systematic name of the red cabbage.

B. eru'ca. (*L. eruca*, a kind of colewort. *F. roquette sausage*.) The garden rocket, which affords the *Semen eruca*; these with the seeds of the wild rocket (*Bruca sylvestris*) have an acrid taste, and are eaten by the Italians in their pickles; they are said to be aperient and antiscorbutic, but are chiefly esteemed for their supposed aphrodisiac qualities; also called Roman rocket, and rocket gentle. The Romans ranked the rocket as aphrodisiac.

B. erucas'trum. Same as *B. eruca*.

B. flor'ida. (*L. floridus*, flowery.) The systematic name of the cauliflower.

B. his'pida. (*L. hispidus*, rough.) The *B. eruca*.

B. ital'ica. (*L. italicus*, Italian.) The *B. florida*.

B. jun'cea. Hook. (*L. junceus*, like a rush.) Hab. Southern Russia, India, and Africa, where it is extensively cultivated. Seeds used as those of the *Sinapis nigra*.

B. lactur'ia. The systematic name of the Savoy plant; also called *B. sabauda* and *B. oleracea bullata*.

B. mari'na. (*L. marinus*, belonging to the sea.) The *Convolvulus soldanella*, or sea convolvulus.

B. medullif'era. (*L. medulla*, marrow; *fero*, to bear. *F. chou-fleur*; *G. Blumenkohl*.) The cauliflower.

B. napobras'sica. (*L. napus*, a kind of turnip; *brassica*, a cabbage.) The Swedish turnip.

B. na'pus. (*L. napus*, a kind of turnip. *F. chou navet*; *G. Rübsamen*.) Rape. The seeds yield, on expression, a large quantity of oil, called rape oil, sometimes used in stimulating liniments. The seeds were thought to be alexipharmic. The

BRASSICACEÆ—BRAZIL COCOA.

expressed juice is said to be expectorant. The leaves of the wild species when used for long appear to produce gangrene of the extremities.

B. napus esculenta. (*L. esculentus*, eatable. *F. navet*; *G. Raps*.) The navew, or French turnip. A variety with a fleshy fusiform root.

B. napus oleifera. (*L. oleum*, oil; *fero*, to bear. *F. colza*.) A variety cultivated for sheep food, and for its oil-yielding seeds.

B. nigra. (*L. niger*, black.) The *Sinapis nigra*.

B. oblonga. (*L. oblongus*, oblong.) The *B. rapa*.

B. oleracea. Linn. (*L. oleraceus*, herb-like. *F. chou potager*; *I. cavolo*; *S. col*; *G. Kohl*, Gaelic *gabaisde*; *Port. couvo, repolho*; *Arab. Krumb Kiriub*; *Pers. Kullam*; *Beng. and Hind. Kopee*.) The systematic name of the wild cabbage; indigenous on our coast and the parent of all our garden cabbages, however varied in their appearance, as common cabbage, red cabbage, broccoli, cauliflower. Pickled cabbage is considered wholesome and antiscorbutic.

B. oleracea acephala. (*A neg.*; *κεφαλή*, the head. *F. chou vert*; *G. Grünkohl*.) The variety called Scotch kale or borecole.

B. oleracea botrytis. (*Βότρυς*, a cluster of grapes. *F. chou-fleur*; *G. Blümenkohl*.) The cauliflower and the broccoli.

B. oleracea bullata. (*L. bullatus*, having bubbles. *F. chou bouillonné*.) The Savoy cabbage.

B. oleracea capitata. (*L. capitatus*, having a head. *F. chou pommé, chou cabus*; *G. Weisskraut*.) The cabbage.

B. oleracea caulorapa. (*L. caulis*, a stem; *rapa*, a turnip. *F. chou-rave*.) The kohlrabi.

B. oleracea cymosa. (*L. cymosus*, full of shoots. *F. chou brocoli*.) The broccoli.

B. oleracea gemmifera. (*L. gemma*, a bud; *fero*, to bear. *F. chou bouillonné*.) Brussels sprouts.

B. oleracea gongyloides. (*Γογγυλοειδής*, roundish. *F. chou-rave*.) The turnip cabbage.

B. oleracea napobrassica. The turnip cabbage.

B. pompeiana. (*L. pompeianus*, Pompeian.) The *B. florida*. Borecole, or Scotch kale.

B. rapa. Linn. (*L. rapa*, a turnip. *F. rabiole*; *G. Steckrübe*.) The turnip. Demulcent, detergent, somewhat laxative and diuretic; the seeds are sometimes used as diuretic.

B. rubra. (*L. ruber*, red.) The red cabbage. A variety of *B. oleracea capitata*. An infusion of its leaves, of a very rich blue colour, affords an excellent test both of alkalis and acids, becoming green with the former, and red with the latter.

B. sabauda. (*Mod. L. sabaudia*, Savoy.) Another name for the *B. lacturria*, or Savoy cabbage.

B. sabauda gemmifera. (*L. gemma*, a bud; *fero*, to bear.) Brussels sprouts.

B. subullica. (*L. subullicus*, Sabine.) The borecole.

B. sativa. (*L. sativus*, that which is sown.) The systematic name of the common garden cabbage.

B. sinapioides. (*Σινάπι*, mustard; *ειδός*, likeness.) The *Sinapis nigra*.

B. sinapis trum. Bois (*Σινάπι*, mustard.) The charlock. Seeds used as those of black mustard; they are less pungent.

B. sylvestris. (*L. sylvestris*, belonging to a forest.) Sea colewort or cabbage.

Brassicaeae. (*Brassica*.) A synonym of *Cruciferae*.

Brassicæe. (*L. brassica*.) A Subfamily of the Family, or a Tribe of the Nat. Order, *Cruciferae*, having the cotyledons incumbent and folded.

Brassoidæe. (*Brassica*.) A Tribe of the Nat. Order *Cruciferae*.

Brassidella. The *Ophioglossum*.

Brassidella ars. A Paracelsian term for curing wounds by applying the herb *Brassidella*, or *Brassadella*, to them.

Brass-wire borre'ra. The *Borreria javanica*.

Bra'thu. The *Juniperus sabina*.

Braun's system of plants. *Juli-floræ*, including *Piperinæ*, *Urticinæ*, and *Amentiferæ*; *Monochlamydeæ*, including *Serpentariæ*, *Rhizanthæ*; *Aphanocycle*, including *Hydropheltidæ*, *Polycarpæ*, and *Cruciforæ*; *Tetracyclæ*—(a) *Gamopetalæ*, including *Anisocarpæ*, and *Isocarpæ*, and (b) *Eleutheropetalæ*, including *Encyclæ*, *Centrospermæ*, and *Disocophoræ*; and lastly, *Perigynæ*, including *Calyceifloræ* and *Corollifloræ*.

Braunfels. Germany; in the Rhine Province. Pine-leaf baths. Used in rheumatism and gout, skin diseases, and mucous discharges.

Brawlins. The *Arbutus uva ursi*, and also, the *Vaccinium vitis idæa*.

Brawn. (Old *F. braon*, a slice of flesh.) Flesh, especially the flesh of the pig, and of this, again, especially the soft parts of the head and face.

Brawny. (Same etymon.) Muscular, firm.

B. induration. A term applied to the firm and resistant thickening and hardening which occurs in certain inflammations and degenerations, such as connective-tissue inflammation.

Braxy. A synonym of *Splenic apoplexy* in sheep. The evidence is conflicting as to the results of eating the flesh of a braxy sheep, some observers stating that pigs and dogs die in a few hours after eating; others, that they eat it with impunity. Scotch shepherds, it is said, eat it when pickled for some time. Probably, much depends upon the general infection of the carcase, and the presence of infective bacteria, or of septic poison.

Brayera. (After *Brayer*, a German physician.) A Genus of the Suborder *Rosææ*, of the Nat. Order *Rosales*.

B. anthelmintica. Kunth. (*Αντί, against*; *ἔλμινς*, a worm.) A tree with round, tomentose branches; crowded imparipinnate leaves; oblong, serrate leaflets; flowers in a panicle, dioecious; fruit an obovate, one-seeded nut. Found in Abyssinia. Flowers and tops form kousoo. See *Cusso*.

Brayerin. (*Brayera*.) A bitter, acrid resin, forming 6·25 per cent. of kousoo.

Brazil' cocoa. The seeds of *Paullinia sorbilis*.

B. copal. A resinous exudation from various species of *Hymenææ*, and from *Trachylobium martinum*.

B. iceml. The produce of *Icica icariba*.

B. nuts. The seeds of the *Bertholletia excelsa*.

B. tea. The leaves of *Stachytarpha jamaicensis*.

BRAZILIAN ARROWROOT—BREAD.

B. wood. The *Cesalpinia echinata*, *brasiliensis*, *crista*, and other species.

Brazilian arrowroot. See *Arrowroot*.

Brasilien'se lignum. (L. lignum, wood.) Brazil wood. The wood of species of *Cesalpinia*.

B. ra'dix. (L. radix, a root.) The Brazilian root. A name given to the ipecacuan root.

Brazilin. See *Brasilin*.

Bread. (Sax. *bredd*, from *bredan*, to nourish. Gr. *āpros*; L. *panis*; F. *pain*; I. *pane*; S. *pan*; G. *Brod*.) A dough is made with flour, water, and salt, is rendered porous by carbonic acid, and baked. The porosity is possible by means of the gluten, which is tenacious. The carbonic acid is generated by the admixture of brewer's yeast, German yeast, or baker's yeast, or by the addition of tartaric acid and bicarbonate of soda; or it is introduced by mixing the dough, under pressure, with water in which carbonic acid has been dissolved. Bread is very nutritive and digestible; it contains on an average, according to Dr. Letheby, nitrogenous matter 8.1, carbohydrates 51, fatty matter 1.6, mineral substances 2.3, and water 37 per cent. Good bread is uniformly porous and of agreeable smell; not sodden, heavy, or acid.

B. aëra'ted. Made by Dr. Daughliash's process. Flour and salt are mixed by machinery in an air-tight vessel with water in which carbonic acid has been dissolved. It keeps sweet longer than ordinary bread, but is by some thought not so pleasant to the taste.

B. al'mond. See *Almond bread*.

B. bar'ley. Barley contains little gluten, and so cannot be made into a spongy bread without the addition of wheat flour. It is not very easily digestible, and is laxative.

B. bee. See *Propolis*.

B. black. Bread made from rye flour.

B. bran. Is used sometimes as a laxative. See *Bran cakes*.

B. brown. Bread made with flour not entirely freed from bran; occasionally rye is ground with the wheat for brown bread. It is somewhat laxative, but now and then, if the particles of bran are too coarse, it produces dyspeptic symptoms and intestinal irritation.

B. cassa'va. See *Cassava bread*.

B. cramb. Same as *Mica panis*.

B. cuck'oo. The *Oxalis acetosella*.

B. di'ka. Bread made of the nut of *Mangifera gabonensis*. Eaten in the Gaboon country.

B. ferment'ed. Ordinary bread made with one of the kinds of yeast.

B. fruit tree. The *Artocarpus incisa*.

B. fung'us of. The *Aspergillus glaucus*, *Penicillium roscum*, and *Oidium aurantiacum*.

B. glu'ten. See *Gluten bread*.

B. honey. (F. *pain d'épice*; L. *panis mellificus*.) A bread made with rye flour and honey, to serve as an expellent of drugs.

B. In'dian. The *Sclerotium giganteum*.

B. jelly. Bread boiled in water and strained, so that it sets into a smooth jelly when cool. It may be flavoured according to circumstances.

B. leav'ened. Bread of which the fermentation has been induced by the addition of dough, in which the starch has undergone the change into dextrine and sugar, and this latter into alcohol and carbonic acid. See *Leaven*.

B. meal. An earth, consisting largely of

the shells of minute infusoria, eaten in the north of Europe.

B. men'key's. The *Adansonia digitata*.

B. nuts. The seeds of the *Brosimum ali-castrum*.

B. oat. Thin unfermented cakes made of oatmeal. See *Oatmeal*.

B. poultice. See *Cataplasma panis*.

B. root. The root of the *Psoralea esculenta*.

B. rye. Rye flour is now seldom used alone in England, but mixed with wheat flour to make brown bread. Rye bread is dark in colour, and sour in taste, and is laxative.

B. sow. The species of *Cyclamen*.

B. St. John's. The *Cerastium siliqua*.

B. tree. The *Asadirachta indica*.

B. unferment'ed. Bread made with saline matters capable of disengaging carbonic acid instead of yeast, the so-called baking powders, which consist of sodium carbonate and tartaric acid, coloured with turmeric; sodium carbonate and hydrochloric acid are also used for this purpose. Ammonium carbonate is employed sometimes, as from its volatility, it produces the needed vesiculation.

B. wa'ter. (F. *pain azyne*, *pain à chanter*.) A thin, flexible, baked compound of flour, water, and sugar. Used for wrapping up nauseous medicines for administration.

B. way. The *Plantago major*.

B. white. Bread made with wheaten flour, from which the bran has been carefully removed.

B. whole meal. Bread made of flour to which its natural amount of bran, after being finely ground, has been added.

Bread root. The *Camassia esculenta*, and also the *Psoralea esculenta*.

Break-bone fe'ver. The *Dengue fever*.

Break-stone. The *Pimpinella saxifraga*, the *Alchemilla arvensis* and the several species of *Saxifraga* are so called from their supposed lithontriptic properties.

Bream. (Old F. *brema*. F. *brème*; I. *reina*; G. *Borassen*.) The *Cyprinus breama*.

Breast. (Sax. *bréost*. F. *mamelle*; G. *Brust*.) The mamma of females; the mamma of males. See *Mammary gland*.

Also, popularly used as a term for the thorax, or chest.

B. abs'cess of. See *Abscess, mammary*.

B. ab'sence of. The gland has been found altogether wanting in some females, accompanied by absence or defect of the ovaries.

B. ad'e'nocele of. (Ἀδέν, a gland; κήλη, a tumour.) Same as *B. adenoma of*.

B. ad'e'no'id tum'our of. (Ἀδέν; ἰδός, form.) See *B. adenoma of*.

B. ad'e'no'ma of. (Ἀδέν.) A non-malignant glandular tumour attached to the mammary gland, generally of slow growth, more or less nodulated, and semi-elastic; occasionally, after long quiescence, it grows very rapidly; it usually occurs in women under thirty years of age. See *Adenoma*.

B. amputa'tion of. The removal of the breast by the knife for disease; it is accomplished through two curved incisions, enclosing the nipple, meeting at their extremities and forming an ellipse, the long axis of which usually has the direction of the fibres of the pectoralis major muscle.

B. at'rophy of. (A. neg.: τροφή, nourishment.) Shrinking of the mammary gland,

BREATH.

the result of old age or disease. The glandular tissue is absorbed or replaced by fat, but the ducts remain and often contain a mucous fluid.

B.-bone. The *Sternum*.

B., bony tumour of. See *B., osseous tumour of*.

B., cancer of. The scirrhus form is by far the most frequent, but all the forms of cancer occur in the mammary gland. It is most common in women of forty-five to fifty years of age; local injury is supposed to be a predisposing cause.

B., cartilaginous tumour of. Same as *B., enchondroma of*.

B., colloid of. (Κόλλα, glue; είδος, form.) Colloid of the breast is rare; it is seldom alone, but generally accompanies scirrhus or encephaloid; it sometimes attains a great size.

B., complex cystic tumour of. Same as *B., cystic sarcoma of*.

B., cystic sarcoma of. (Κύστις, a bladder; σάρξ, flesh.) This form varies in appearance according to the proportionate presence of cysts and intermediate solid substance. It occurs often as the result of mammary inflammation in women of thirty to forty years of age, and is said to be not infrequently the seat of cancerous deposit.

B., encephaloid. (Εγκέφαλος, the brain; είδος, likeness.) This form of cancer is not infrequent; it grows rapidly, and may attain a great size.

B., enchondroma of. (Έν, in; χόνδρος, cartilage.) A tumour containing cartilaginous tissue, very rarely seen.

B., fibroplastic tumour of. (L. *fibra*, a filament; πλάσσω, to form.) A term applied to certain tumours which are now usually included under the term spindle-celled sarcoma.

B., glass. A flattened glass vessel, with an opening large enough to receive the nipple, placed on the breast to catch any milk which may run away from a nursing woman.

B., hydatid tumour of. (Υδατίς, a watery tumour.) A cystic tumour caused by the *Cysticercus cellulosus* or the *Echinococcus hominis*.

B., hyperæsthesia of. (Υπίρ, in excess; αίσθησις, sensation.) Exalted sensibility of the mammary gland and of its cutaneous covering.

B., hypertrophy of. (Υπίρ, in excess; τροφή, nutrition.) An increase of size of the mammary gland, caused by growth of normal structure without any new deposit. It may attain a very large size.

B., hysterical. A condition of the mammary gland in hysterical girls, in which it becomes painful, tender on pressure, and somewhat swollen.

B., inflammation of. Inflammation of the breast occurs most frequently in the first month or two of nursing or during weaning; it is also seen in new-born children of both sexes. It may have its seat in the gland itself, or in the connective tissue beneath or above it, and the resulting abscess is then called mammary, submammary, and supramammary abscess, respectively.

B., lac'teal tumour of. (L. *lac*, milk.) A dilatation of an obstructed lactiferous duct containing milk; it may last long, growing slowly, and attain a large size. In process of time the milk becomes inspissated and oily.

B., lipoma of. (Λίπος, fat.) A fatty

tumour of the breast, which occasionally reaches a large size.

B., male. The mammary gland exists in the male, but in a very rudimentary condition. In man it has been known to secrete milk.

B., medullary cancer of. Same as *B., encephaloid*.

B., neuralgia of. Same as *Mastodynia*.

B., neuroma of. (Νεύρον, a nerve.) Small tumours on the cutaneous and other nerve filaments of the breast. See *Neuroma*.

B., osseous tumour of. (L. *os*, a bone.) A tumour containing bony tissue; a condition of very rare occurrence.

B.-pang. A synonym of *Angina pectoris*. The *Sternalgia* of Mason Good.

B., pig's. See *Pig's breast*.

B.-pump. (*Antlia mammaria*.) An instrument for removing milk from the breast when the infant is unable to suck sufficiently. It consists of an expanded glass tip, to surround, without bruising, the nipple; a reservoir to contain the milk withdrawn; and a means for exhausting the apparatus, either a tube to be sucked, or an india-rubber ball to be compressed, or an exhausting syringe. The action should be intermittent to imitate the effort of the child.

B., recurrent fibroid tumour of. A term applied to hard varieties of sarcoma of the breast.

B., sanguineous cyst of. (L. *sanguis*, blood.) A cyst in the mammary gland containing thin, red, altered blood.

B., sarcoma of. (Σάρξ, flesh.) Sarcoma of the breast varies in consistence and in rapidity of growth; it occurs in females of thirty years and upwards, and not infrequently returns after operation. See *Sarcoma*.

B., sero-cystic tumour of. A cystic tumour or cystic sarcoma, the cysts of which contain serous fluid.

B., sero-mucous cyst of. A cystic tumour or cystic sarcoma, the cysts of which contain a glairy fluid.

B., supernumerary. (G. *Brustdrüsenüberzahl*, *Brustdrüsenvermehrung*.) The occurrence of a third mammary gland; a fourth and a fifth have been recorded.

B.-weed. The *Saururus cernuus*.

Breath. (Sax. *bræth*, from *atama*, with a prefix, vapour. L. *halitus*; Gr. *πνῆμα*; F. *halène*; I. *lena*, *alito*; S. *aliento*, *halito*; G. *Athem*.) The air as altered by respiration. This alteration consists in the removal of oxygen, the addition of carbonic acid, ammonia, and watery vapour holding organic matters in solution, and the elevation of temperature. According to Viorodt, the amount of oxygen removed is 4.762 per cent. The average amount of carbonic acid added is 4.35 per cent.; this is liable to great variation from many causes, both external, as temperature, season, moisture; and internal, such as food, sleep, disorder. The nitrogen of the air is probably absorbed, but if so, an equivalent amount is exhaled. The amount of water in vapour given off in the breath is somewhat over 4 per cent., chiefly derived from the blood, but some probably from the combustion of hydrogen in the body. Ammonia is almost always found in the breath, but in very small quantity. Traces of hydrogen have been discovered. Several salts, as sodium chloride, sodium and ammonium urate, have been detected, as also uric acid and urea. The organic matter exhaled has undergone no accurate examination,

either in health or in disease. Neither have the infectious matters, which are doubtless in some contagious diseases given off from the lungs, as yet been recognised. The odorous principles of articles of food, such as alcohol and onions, and of drugs, as ether and phosphorus, are found in the breath. The temperature of the breath is about 35° C. (95° F.)

B., pulse. A term applied to a pulsatile movement of the expired air in cases of phthisis, where there is a large cavity either close to the heart and the aorta, or separated only from them by indurated structures.

B., shortness of. See *Dyspnoea*.

B. sounds. The respiratory sounds heard in auscultation.

Brea'thing. (Same etymon.) The act of respiration.

B., abdom'inal. The form of respiration in which the thorax is more or less quiescent, the abdomen being protruded and depressed by the descent and ascent of the diaphragm. It is natural to the human male, and is produced by pleurisy or other painful affection of the thorax, and by paralysis of intercostal and other respiratory muscles.

B., bronch'ial. See *Bronchial breathing*.

B. pores. The *Stomata*.

B., pu'erile. See *Puerile breathing*.

B., thorac'ic. That form of respiration in which the abdomen is almost quiescent, and the chief movement of expansion is accomplished by the thorax. It is specially a feminine method of breathing, and is met with in painful abdominal and diaphragmatic diseases.

B., vesic'ular. See *Vesicular breathing*.

Breath'lessness. The condition of being short of breath, or of oppressed breathing. Same as *Dyspnoea*.

Breb. Hungary; County Marmoros. A saline water, containing sodium carbonate and sulphate, a little iodine and bromine, with free carbonic acid and hydrogen sulphide.

Brec'cia. (L. *breccia*, a gap. F. *brèche*.) A generic name for all rocks with a fragmentary structure when the agglomerated grains which constitute them are angular fragments with sharp edges.

Brech'ma. Otherwise *Bregma*.

Brech'mus. Otherwise *Bregma*.

Bredes. The young shoots of the *Solanum nigrum*, eaten as spinach.

Breech. (Sax. *bréc*, breeches.) The buttocks; the nates.

B. presenta'tion. The position of the child in labour when the breech occupies the os uteri. It occurs about once in forty-five or fifty births at full period. It is recognised by the tuberosities of the ischia, between which lie the anus and genital organs. The breech may present with the back of the child in front or behind, and in either oblique diameter of the pelvis. The child is not infrequently born dead from delay in the passage of the head and compression of the umbilical cord.

Breese-fly. (Sax. *brimsa*, a gadfly.) The gadfly, *Tabanus bovinus*.

Breg'ma. (*Bpéyua*, the upper part of the head, from *Bpéyω*, to moisten; from its softness in infants. F. *bregma*; I. and S. *bregma*; G. *Scheitel*.) The point of junction of the sagittal and coronal sutures, which in infants is not occupied by bony structure, but by membrane, and is called the anterior fontanelle.

The bregma was described by Aristotle as the anterior part of the head, which in man is developed after birth, and as the last of the bones of the body to become consolidated. In Galen, the word *Bpéyua* is used as a synonym of *κορυφή*, the vertex, whence Vesalius' expression *ossa verticis* for *ossa bregmatica*. By the older physicians the term came to be applied to the anterior fontanelle.

B. bones. (L. *ossa bregmatica*.) The parietal bones.

Bregmatic. (Same etymon.) Of, or pertaining to, the *Bregma*.

Bregmato-an'terior. (*Bpéyua*; L. *anterior*, in front.) A term applied to that stage of presentation of the fetal head in which the bregma is towards the one or other foramen ovale of the mother.

B.-cotyloid. (*Bpéyua*; *κοτύλη*, a small cup; *εἶδος*, likeness.) A term applied to that stage of presentation of the fetal head in which the bregma is towards the cotyloid cavity or acetabulum of the mother.

B.-posterior. (*Bpéyua*; *posterior*, hinder.) A term applied to that stage of the presentation of the fetal head in which the bregma is towards one or other sacro-iliac synchondrosis of the mother.

Bregmatody'mia. (*Bpéyua*; *δύω*, to go into.) A synonym of *Cephalodymia*.

Breguet's thermometer. A delicate metallic thermometer, consisting of three strips of platinum, gold, and silver in this order: rolled into a thin ribbon, and twisted into a spiral, the silver constituting its inner surface, as it is the most expandable; one end is fixed, the other carries a light needle, which marks the movement of the spiral as it expands on the application of heat.

Bre'idin. A crystalline resin, obtained by treating arbol-a-brea resin or gum elemi with alcohol.

Bre'in. A crystalline resin, obtained by treating arbol-a-brea or elemi resin with alcohol.

Brel'isis. A synonym of *Gum caranna*. (Quincy.)

Bren'ning. (Sax. *bernan*, or *byrnan*, to be on fire.) A name for gonorrhoea, synonymous with burning.

Brentwood. A town in Essex, possessing a saline spring, containing magnesium sulphate in small amount.

Brephocacocol'pia. (*Bpéφος*, a foetus; L. *cacocolpia*, putridity of the vulva. F. *brephocacocolpie*.) Term for infantile colpocae or cacocolpia.

Brephoo'tonon. (*Bpéφοκτόνος*, child murdering; from *Bpéφος*, an unborn child; *κτείνω*, to kill.) The *Conyza squamosa*, which was used as an emmenagogue, and probably as an abortifacient.

Brephomeningu'ria. (*Bpéφος*, a foetus; L. *meninguria*. F. *brephomeningurie*.) Infantile meninguria, or passing of small shreds of membrane with the urine.

Brephopityri'asis. (*Bpéφος*, a foetus; L. *pityriasis*. F. *brephopityriasis*.) Infantile pityriasis.

Brephopolysar'cia. (*Bpéφος*, a foetus; L. *polysarcia*. F. *brephopolysarcie*.) Term for infantile polysarcia, or obesity.

Brephotroph'ium. (*Bpéφοτροφείον*. F. *brephotrophion*; G. *Findelhaus*.) A foundling hospital.

Brephulcus. (*Βρέφος*, a foetus; *ἄκω*, to draw. *F. brephulcus*; *G. Geburtssange*.) Midwifery forceps.

Brephydrocephalus. (*Βρέφος*, a foetus; *L. hydrocephalus*. *F. bréphydrocéphale*; *G. Wasserkopf der Kinder*.) Infantile hydrocephalus.

Breschet, Gilbert. A French anatomist, born 1784, died 1846.

B.'s bone-canals. Canals in the diploë of the cranial bones, in which Breschet's veins run.

B.'s veins. The four larger veins on each side of the cranium in the diploë; one frontal, two temporal, and one occipital.

Brazilin. Same as *Bracilin*.

Breslau fever. The contagious epidemic which devastated the Prussian army before Breslau in the middle of the eighteenth century; it was called by Sauvages *Tristophya vrsataviensis*.

B. test. The floating of the stomach and intestines in water immediately they are removed from the body of a child, which was supposed to be a proof that the child had been born alive.

Bretanica. Same as *Britannica*.

Brevi-. (*L. brevis*, short.) An affix employed to denote shortness.

Brevia vasa. (*L. brevis*; *vas*, a vessel.) Branches of the splenic artery and vein supplying the cardiac extremity of the stomach.

Breviarticulate. (*L. brevis*; *articulus*, a joint. *G. kurzgliederig*.) Having short joints or internodes.

Brevicaudate. (*L. brevis*; *cauda*, a tail.) Having a short tail.

Brevicauline. (*L. brevis*; *caulis*, a stem. *G. kurzstengelig*.) Short stemmed.

Breviculus. (Dim. of *L. brevis*. *G. etwas kurz*.) Shortish, rather short.

Brevilinguis. (*L. brevis*, short; *lingua*, tongue.) A Group of the Order *Lacertilia*, Class *Reptilia*. Tongue thick, fleshy, only capable of protrusion when the mouth is open.

Breviped. (*L. brevis*; *pes*, a foot.) Having short feet.

Brevipenna'tæ. (*L. brevis*, short; *penna*, a wing. *F. brevipennes*.) A Family of birds of the Order *Natatores*. Wings always short; tail very short; legs placed far back; hal-lux often absent. Same as *Pygopoda*.

Brevipennes. A synonym of *Struthionida*.

Brevis. (*L. brevis*, short.) A synonym of the *Terres minor muscle*.

B. cubiti. (*L. cubitus*, the forearm.) The anconeus muscle.

B. palmaris. See *Palmaris brevis*.

B. radii. (*L. radius*, the bone of that name.) A synonym of the *Supinator brevis*.

Brevissimus oculi. (*L. brevissimus*, superl. of *brevis*; *oculus*, the eye.) The inferior oblique muscle of the eye, being the shortest of the ocular muscles.

Breweria. A Genus of the Nat. Order *Convolvulaceæ*.

B. scoparia. (*L. scoparius*, a sweeper.) Hab. Canary Islands. Has a bitter balsamic taste, and yields an essential oil, which is employed to adulterate oil of roses. The wood is called rosewood.

Brexia'ceæ. An Order of thalamifloral Eogens. Trees with coriaceous, alternate, simple leaves, a many-leaved calyx, superior five-

called ovary, with a consolidated style, and no albumen.

Brex'iads. The plants of the Nat. Order *Brexia'ceæ*.

Brey'nia. Old name for an undetermined species of *Capparis*.

Brian'gon turpentine. A species of turpentine afforded by the *Pinus cembra*. See *Terebinthina brianica*.

B. man'na. A saccharine substance yielded by the *Pinus larix*.

Briar. (*Sax. brér.*) A prickly shrub.

B. rose. The *Rosa canina*.

B., sweet. The *Rosa rubiginosa*.

B., wild. The *Rosa canina*, dog-rose, or hip tree.

Briarea'ceæ. An Order of the Subclass *Aleyonaria*, or a Suborder of the Order *Aleyonaria*. Axis hollow, or filled with spongy tissue containing siliceous or calcareous spicules.

Brick. (*F. brique*; from old Dut. *brick*, a fragment. *F. brique*; *I. quadrello*; *G. Backstein*, *Mauerstein*, *Ziegelstein*.) Clay moulded into a particular form and burned. Bricks and brick-earth were formerly employed in medicine; the powder of bricks made into an ointment with lard, or mixed with vinegar, was applied to herpes and other cutaneous diseases. A hot brick applied to a bubo is supposed to have a very beneficial action.

B., oil of. (*Oleum lateritium*.) Hot bricks steeped in olive oil, are broken in pieces, and then distilled. Used formerly in cutaneous disorders.

B.-tea. This is essentially Lie tea damped with bullock's blood and pressed into a mould. An infusion of it is beef-tea and tea at once.

Bricklayer's itch. A disease of the skin of the hands of bricklayers and persons following similar occupations, which is sometimes a form of lichen and sometimes eczema.

Bri'onium. An old name for an undetermined species of *Artemisia*.

Bridelia. A Genus of the Nat. Order *Euphorbiaceæ*.

B. collina. Hook and Arn. The outer crust of the capsules is said to be poisonous.

B. spinosa. Willd. (*L. spinosus*, full of thorns.) Hab. Assam. The bark is astringent and the leaves vermifuge.

Brides les Bains. France; Département de la Savoie. Mineral waters, temp. 36° C. (96·8° F.), containing calcium sulphate 2, and sodium sulphate 2·5, in 1000 parts, with free carbonic acid and a little hydrogen sulphide. Used in abdominal congestions, chronic gout, skin diseases, and constitutional syphilis.

Bride'wort. The *Spiræa ulmaria*.

Bridge. (*Sax. bryeg*.) A roadway across a river. A term applied to structures of this character.

B. of nose. The free edge of the nose between its tip and the forehead.

B., wheat'stone's. See *Wheatstone's bridge*.

Bridge of Allan. Scotland; near Stirling. See *Airthrey*.

Bridle. (*Sax. bridel*. *F. bride*; *I. briglia*; *S. brida*; *G. Biterhaken*, *Biterpflock*.) A narrow slip of living structure interposed between two orifices or the opposing walls of an abcess.

A filament of adhesion, which has become organised, between two surfaces of a serous membrane.

A band stretching across a cicatrix.

BRIDLINGTON—BRISEMENT.

B., cicatricial. (L. *cicatrix*, a scar of a wound.) A tough, elevated band stretching across a cicatrix.

B., stricture. A urethral stricture consisting of one or more bands.

Bridlington. A town on the Yorkshire coast, possessing a mild chalybeate spring.

Bridellia. Same as *Bridelia*.

Briegleb. Switzerland; on the Simplon route at the foot of the Neethorn. Sulphur springs, temp. 46° C. (114.8° F.) Used in abdominal congestions, lymphatic enlargements, skin diseases, gout, and rheumatism.

Brier. Same as *Briar*.

Bright, Richard. An English physician, born 1789, died 1858. First associated albumen in the urine and dropsy with a disease of the kidney, which has been named after him.

B.'s disease. (F. *maladie de Bright*, *albuminurie*; I. *malattia di Bright*, *albuminuria*; G. *Bright'sche Krankheit*, *Albuminurie*, *Eiweiss-harn*.) A generic term including several forms of acute and chronic disease of the kidney, usually associated with albumen in the urine, and frequently with dropsy, and with various secondary diseases, resulting from deterioration of the blood.

Nomencl. of Dis. Roy. Coll. Phy. Lond.

The co-existence of degeneration of the kidneys, with the conditions of which albuminuria and dropsy are the chief, was first established by Dr. Richard Bright. Later investigations have demonstrated the existence of several distinct kidney lesions causing albuminuria. Further details will be found under *Nephritis*, *Granular kidney*, *Lardaceous kidney*, and *Albuminuria*.

B.'s disease, acute. (*Albuminuria acuta*, *nephritis desquamans acuta*, *anasarca renalis acuta*; F. *maladie de Bright aiguë*, *albuminurie aiguë*, *néphrite desquamative*, *anasarque aiguë d'origine rénale*; I. *nephritis desquamativa acuta*; G. *acute parenchymatöse nephritis*.) A term applied to those cases in which there is a more or less sudden accession of symptoms with fever. Kidney large, soft, capsule easily peeled; medulla deeply congested; cortex congested in patches, if tubes are much affected opaque and pallid. Epithelium of ducts swollen, cloudy, thrown off from the tubes in casts, both hyaline, granular, and containing blood; in addition to these casts the urine often contains casts of modified epithelium and matter exuded in the bare tubes. The disease varies in severity from a somewhat trivial to a fatal disease, and in duration from a few days to many months. Pulse quick and hard; skin dry; temp. elevated; often nausea, headache; aching across loins. Anasarca is not always present, but generally, and is at first of face and scrotum, then affecting the whole cellular tissue and the serous cavities. Urine scanty, high coloured, sometimes turbid; of high sp. gr.; contains albumen, often blood and casts. Urea diminished. Produced by exposure to cold, by the poison of scarlet fever. Frequently recovery takes place. Death may occur from oedema of important viscera or effusion into serous cavities, from secondary inflammation of lungs or pericardium, from brain complications, and from exhaustion.

B.'s disease, chronic. A term applied to those cases which are of slow growth, with evidence of constitutional disturbance, and in which the kidneys are found degenerated in one of four chief ways, known as the smooth white kidney, the contracted granular kidney, the fatty

or lardaceous kidney, and the cystic kidney. Further details will be found under the heading *Kidney*.

Brighton. A town on the south coast of Sussex. The air is dry and bracing; the land rises behind the town and protects the place from the north winds, but it is exposed to the east. It stands upon the chalk. The best time is from September to January, after that the east winds are very trying. It is hot and glaring in summer. There is an iron spring in the neighbourhood. The shore is shingle, but in other respects the bathing is good.

Brignola. Old name for a variety of the *Prunus domestica*.

Brill. The *Rhombus vulgaris*, a sea fish, much used as food.

Brilliantaisia. A Genus of the Nat. Order *Acanthaceae*.

B. ovarienensis. Hab. Western Africa. A decoction of the leaves is used in abdominal pains.

Brim. (Sax. *brim*, the surf of the sea, and so the border.) A margin, rim, or edge.

B. of pelvis. The upper orifice or inlet of the pelvis formed by the upper border of the symphysis pubis, the ilio-pectineal lines of the ilium, and the promontory of the sacrum. It is oval in form, the longer diameter being transverse and about 5.25", the antero-posterior or conjugate being about 4.5", and the oblique being 5".

Brimstone. (Sax. *bryne*, a burning; *stan*, a stone; as if burning stone.) A synonym of *Sulphur*.

B. wort. The *Peucedanum officinale*.

Brindouia indica. The *Garcinia indica*.

B. tallow. A fatty substance, obtained from the seeds of *Garcinia indica*. It is almost white, fuses at 44° C. (111° F.), and contains olein and stearin.

Brine. (Sax. *bryne*, salt liquor.) A strong solution of sodium chloride with some potassium nitrate.

Salt water. The strong saline residuum after the making of salt.

B. baths. See *B. springs*.

B. springs. Natural waters containing sodium chloride in large quantity.

Brinjal. The egg apple, the fruit of *Solanum melongena*.

Brinton root. The *Leptandra purpurea*.

Brinwillers. The *Spigelia anthelmintica*.

Bri'on. The *Corallina officinalis*.

Briquebec. France; near Cherbourg. Chalybeate waters of little note.

Brisa. (L. *brisa*. G. *Weintraster*.) The refuse of grapes after pressing; grape skins.

Brise-coque. (F. *briser*, to break; *coque*, shell.) An instrument having two limbs and a sheath, devised by Heurteloup, for breaking up the shell of a vesical calculus after it had been drilled by his *mandrin à virgule*.

B.-pierre. (F. *briser*; *pierre*, a stone.) An instrument formerly used in lithotomy to break the stone into smaller pieces, so that it might easily pass through the wound.

Also, the name given by Civiale and Amusat to their original instruments for crushing a vesical calculus, when the force used was obtained by means of a hammer.

Brisement. (F. *briser*, to break.) A breaking or tearing asunder.

BRISINGIDÆ—BROMAL.

B. forc'ed. (F. forced.) The forcible rupture of fibrous or bony ankyloses of joints.

Brisingidæ. A Family of the Order *Asterioidea*, Class *Stellerida*, Subkingdom *Echinodermata*. Arms distinct from the disc, channelled by a straight canal; tentacular tubes in two rows.

Brisingol'dea. An Order of the Class *Stellerida*. The same as *Brisingidæ*.

Bristle. (Sax. *byrast*, with diminutive suffix *el*. L. *seta*; F. *soie*; G. *Borste*.) The strong coarse hair of swine.

In Botany, stiff pointed hairs. See *Seta*.

B. cells. Peculiar cells found in the area of distribution of the acoustic nerve in the sacculi, utricle, and ampullæ. They are triangular in form, and have an oval nucleus. The base of cell is connected with the cuticular membrane, and from this base passes upwards a single cilium or bristle, having parallel and not tapering borders.

B. fern. The *Trichomanes radicans*.

B.-pointed. Applied in Botany to organs which terminate in a stiff hair or bristle.

Bristleworths. The plants of the Nat. Order *Desvauziaceæ*.

Bristly. (Same etymon.) Having many bristles or stiff hairs.

Bristol hot well. See *Clifton*.

Britannica herba. A plant esteemed by the Romans as antiscorbutic. The adjective *Britannica* does not mean British, but is derived, it is supposed, from the Frisian language, and signifies "fixing loose teeth," in reference to its beneficial effects on the gums of scorbutic patients, which was experienced by the Romans in the country of the Frisii. It has been variously ascribed to *Statice armeria*, *S. plantaginæ*, *Cochlearia anglica*, *Potentilla nemoralis*, *Polygonum persicaria*, *Inula britannica*, and *Rumex aquatilis*.

Brith'os. (Βριθω, to labour under a load.) A weight or abnormal pressure upon any part.

British gum. See *Dextrin*.

B. oil. A variety of *Petroleum*.

B. vinegar. The *Acetum* of the Br. Pharm.

Brit'ta. The *Allium schænoprasum*, or chives.

Brittle. (Sax. *breótan*, to break.) Easily broken.

B. blad'der fern. The *Cystopteris fragilis*.

B. cup fern. The *Cystopteris fragilis*.

B. gum. See *Gum*, brittle.

Brittleness. (Same etymon.) The condition of being easily broken.

B. of bones. A condition of atrophy or degeneration of osseous structure occurring in certain cases of insanity, and in other diseases, which allows of easy fracture.

Brittlestars. The animals of the Order *Ophiuroidea*.

Brittleworths. The minute plants of the Nat. Order *Diatomaceæ*.

Br'za. (Βριζα; from βριζω, to make to sleep.) Speltwheat. A kind of corn or bread causing drowsiness.

Also (G. *Zittergras*), a Genus of the Nat. Order *Gramineæ*. Quake, or quaking grass.

Brizoc'eras. (Βριζα, a grain like rye; κίρας, a horn. F. *brizocère*; G. *Mutterhorn*.) The ergot of rye, *Sclale cornutum*.

Broad. (Sax. *brād*. L. *latus*; Gr. *σιπός*; F. *large, grand*; I. *largo*; G. *breit*.) Wide.

B.-leaved laurel. The *Kalmia latifolia*.

B.-leaved moorwort. The *Andromeda mariana*.

B. ligament. (F. *ligament large*; G. *breites Mutterband*.) The wide expansion of peritoneum on each side of the uterus. See *Uterus*, broad ligament of.

Bro'ca, Paul. A French surgeon and anthropologist, born at Sainte Fay, Department of the Gironde, in 1824, died in Paris 1880.

B.'s convulsion. The third left frontal convolution of the brain; because of his observations on the connection between injury or disease of this part and the loss of articulate speech. See *Gyrus frontalis tertius*.

B.'s goniometer. (Γωνία, an angle; μέτρον, a measure.) An apparatus for measuring the facial angle.

B.'s occip'ital crotch'et. A form of hook for determining the point on the face where the prolonged occipital plane impinges.

B.'s region. Same as *B.'s convolution*.

Broccoli. (I. *broccoli*, pl. of *broccolo*, a sprout.) A name for a species of the Genus *Brassica*. See *Brassica oleracea botrytis*.

Broch'itas. (L. *brochitas*, from *brochus*, projecting.) The projection of the teeth in animals.

Broch'os. (Βρόχος, a noose.) A particular form of bandage, like a noose.

Also (L. *brochus*, projecting; G. *hervorstehend*), applied to one in whom the teeth project, or who has a prominent upper lip, or lower lip and chin.

Broch'thos. (Βρόχθος.) The throat. Also, a small kind of drinking vessel.

Broch'us. Same as *Brochos*.

Brodie, Sir Benjamin Collins. An English surgeon, born at Winterslow, in Wiltshire, in 1783, died at Broome Park, Surrey, in 1863.

B.'s disease. A term applied to a pulpy degeneration of the synovial membrane of joints, especially of the knee, described by Brodie.

Bro'dium. (G. *Brühe*.) Broth, or the liquor in which anything is boiled; also, any liquid vehicle of a medicine. The same as *Jusculum*.

B. sa'lis. (L. *sal*, salt.) A decoction of salt.

Broke'leak. The *Rumex hydrolapathum*.

Broma. (Βρώμα, food. G. *Speise*.) Food of any kind that is masticated and not drunk.

Also, a synonym of *Bromine*.

B. the'on. (Θεός, God.) The food of the gods, i.e. mushrooms.

Bromal. CBr₃.CHO. A thin, oily, colourless liquid, produced by acting on alcohol with bromine; it boils at 172° C. (341° F.), and is decomposed by alkalis into formic acid and bromoform. It has a penetrating odour and a pungent taste. Also called *Tribromaldehyde*.

B. hy'drate. CBr₃.CHO + H₂O. Formed on the addition of a small quantity of water to bromal. It melts at 53° C. (127° F.). Produces profuse secretion from mouth, nose, and eyes, diarrhoea, paralysis and convulsions, and death; the serous sacs always contain fluid. Externally it is an irritant. It has been used as a hypnotic, and in epilepsy. Dose, three grains.

BROMALUM HYDRATUM—BROMINE.

Bromalum hydratum. See *Bromal hydrate*.

Bromate. (F. *bromate*; S. *bromato*; G. *bromsäures Salz*.) A salt of bromic acid. The bromates, when heated, lose oxygen, and become bromides.

Bromated. Containing bromine.

B. camphor. See *Camphora monobromata*.

Broma'tion. (Βρωμάτιον, dim. of βρώμα, food.) A light meal.

Bromatoec'crisis. (Βρώμα, food; έκκρισις, secretion.) A synonym of *Lientery*.

Bromatography. (Βρώμα; γράφω, to write.) A description of foods.

Bromatology. (Βρώμα, food; λόγος, a discourse. F. *bromatologie*; I. and S. *bromatologia*; G. *Nahrungsmittellehre*.) The doctrine or consideration of food, its nature, quality, and uses.

Bromatom'etry. (Βρώμα; μέτρον, a measure.) The measure of the quantity of food necessary for each day.

Brome. Same as *Bromine*.

B. grass. The *Bromus purgans*.

B. grass, soft. The *Bromus mollis*.

B. grass, sterile. The *Bromus sterilis*.

Bromel, Olaf. A Swedish botanist, born at Orebro in 1639, died at Göteborg in 1705.

Bromelia. (In honour of Olaf Bromel.) A Genus of plants of the Nat. Order *Bromeliaceae*.

B. ana'nas. The pine-apple, *Ananassa aspera*.

B. pin'guin. The pinguin. The fruit is very acid; a wine is made from it; the seeds are said to be anthelmintic.

The plant is also used as a detergent in the West Indies.

Bromelia'ceae. (*Bromelia*. G. *Ananasegewächse*.) A Nat. Order of epigynous petaloid *Monocotyledones*; or a Family of the Order *Liliiflorae*, Series *Corolliflorae*, Class *Monocotyledones*. *Monocotyledonous* plants often epiphytes. Leaves persistent, rigid, crowded, sheathing at base; perianth arranged in two whorls, the outer leafy, the inner petaloid; stamens 6; anthers introrse; ovary 3-celled; style 1; fruit a berry or a capsule, often the fleshy berries are united in the form of a cone; seeds numerous; embryo at base of mealy albumen.

Bromelia'ceous. Having an arrangement of parts as in the Genus *Bromelia*.

Bromeli'ce. Same as *Bromeliaceae*.

Bromel'worts. The plants of the Nat. Order *Bromeliaceae*.

Bromet'um. A synonym of *Bromide*.

B. ferro'sum. The *Ferri bromidum*.

B. hydrarg'gri. The *Hydrargyri bromidum*.

B. ka'licum. The *Potassii bromidum*.

B. potas'sicum. The *Potassii bromidum*.

Bromhy'drate. Same as *Hydrobromata*.

Bromhy'dric. Same as *Hydrobromic*.

B. e'ther. A synonym of *Ethyl bromide*.

Brom'ic. Of, or belonging to, bromine.

B. ac'id. (F. *acide bromique*; G. *Bromsäure*.) $H.BrO_3$. Liquid, uncrystallizable; decomposed by heat into bromine and oxygen. Obtained from barium bromate by the action of sulphuric acid.

Brom'ica. (*Bromine*.) Medicines containing bromine.

Bromidated. (G. *bromhaltig*.) Containing bromine.

Bromide. A combination of bromine with a base. Bromides are known by the giving off of bromine as a red vapour when heated with potassium chromate and sulphuric acid. In solution chlorine gives an orange solution which, on mixing with ether, becomes colourless, the ether dissolving the bromine, and rising to the surface as a red layer.

B. of ammo'nium. See *Ammonii bromidum*.

B. of cad'mium. See *Cadmium bromide*.

B. of cal'cium. See *Calcii bromidum*.

B. of camphor. See *Camphora monobromata*.

B. of car'bon. See *Carbon bromide*.

B. of cer'ium. See *Cerium bromide*.

B. of e'thyl. See *Ethyl bromide*.

B. of iron. See *Ferri bromidum*.

B. of lith'ium. See *Lithii bromidum*.

B. of mer'cury. See *Hydrargyri bromidum*.

B. of mor'phia. See *Morphiæ hydrobromas*.

B. of potas'sium. See *Potassii bromidum*.

B. of so'dium. See *Sodii bromidum*.

B. of strych'nia. See *Strychniæ hydrobromas*.

B. of zinc. See *Zinc bromide*.

Bromidrosis. (Βρώσις, a stench; ιδρώς, sweat. F. *bromidrose, sueur fétide*; G. *stinkender Schweiss*.) A fetid smell of the cutaneous exhalation.

B., gen'eral. This occurs occasionally when the person is otherwise well, and when there is no excess of secretion.

B., lo'cal. Occurs in the axilla, the feet, and the perineum. Rigid cleanliness and disinfectants are indicated.

B. pe'dum. (L. *pes*, a foot.) The form accompanying excessive sweating of the feet. The odour has been supposed to depend on decomposition of the sweat in the stockings and shoes, and later it has been said to be caused by a bacterium, to which the specific name *foetidum* has been given.

Brominated. (*Bromine*.) Containing or charged with bromine.

B. camphor. The *Camphora monobromata*.

Bromine. (L. *bromum*, from βρώμος, a stench. F. *brome*; I. and S. *bromo*; G. *Brom*.) Symb. Br. At. weight 79.75. Sp. gr. at 0° C. (32° F.) 3.1872. Discovered by Balard in 1826. A dark red liquid, at ordinary temperatures volatile, odour suffocating; freezes at -22° C. (-7.6° F.) to a red crystalline metallic mass; boils at 63° C. (145.4° F.); slightly soluble in water, more so in alcohol, freely in ether. Obtained by passing a stream of chlorine through the mother-liquor of a saline spring, and then adding ether; the magnesium bromide is decomposed, and the ether dissolves the free bromine. Caustic potash is then added; the solution evaporated, ignited, and heated in a retort; bromine is given off as a deep red vapour, which is condensed by cold. Inhalation of its vapour produces great irritation, with profuse secretion from the eyes, nose, and fauces, with cough, hoarseness, and difficulty of breathing. Internally it acts as

BROMINI CHLORIDUM—BRONCHIA.

an irritant, producing congestion and softening of the stomach and duodenum, with vomiting, epigastric pain, difficulty of breathing, anxiety, and collapse. Used as a caustic in cancer and in hospital gangrene and diphtheria. Internally in bronchocele, syphilis, scrofula, and some skin diseases. Dose, two drops, largely diluted.

B. chloride. (F. *chlorure de brome*; G. *Chlorbrom.*) BrCl. Prepared by passing chlorine gas through bromine. It is a reddish-yellow, mobile liquid, very volatile, giving off dark yellow, strong smelling, tear-exciting vapours; a powerful bleaching agent. Used by Landolfi in cancer, both internally and externally. See *Landolf's caustic*.

B., tests for. Its colour and odour; gives a yellowish precipitate with silver nitrate, which light turns violet; turns starch orange.

Bromin'li chloridum. See *Bromine chloride*.

Bromin'ium. U.S. Ph. Bromine.

Brom'ion. (Βρόμιον.) A kind of plaster or cataplasma. These applications were also called *Acopa*, from ἄσπος, not liable to corruption, and believed to restore from a state of fatigue and weariness to ease; it is described by Paulus Ægineta, Adams's Transl. vii, 19, p. 583, vol. iii, and Aëtius, l. xv. (Gorræus.) See *Acopa*.

Bromism. The condition produced by an overdose or too long continuance of bromine or a bromide, consisting in dry throat, watery eyes, acne, boils, hunger, great weakness, somnolence, and loss of sexual power; the latter is by no means always present.

Bromismus. Same as *Bromism*.

Bromium. A synonym of *Bromine*.

Bromley. Kent. There is a chalybeate spring here called St. Blaise's Well.

Bromo-chlorat'um. A disinfectant used in America, containing alum and calcium chloride 73 parts, magnesium bromide 1½ parts, sodium chloride 5 parts, and lime sulphate 1 part.

Bromochloroform. CCl₂Br. Obtained by heating chloroform with bromine to 160° C.—170° C. (320° F.—338° F.) It is a colourless liquid, boiling at 104° C. (219° F.), and decomposing slowly in the light.

Bromo'des. (Βρώμα, food; ὠδης, a suffix signifying fulness.) Having the property of, or being full of, nutriment.

Also (Βρώμος, a stink; ὠδης.) Stinking, full of a foul smell.

Also (Βρωῶμαι, to bray), bellowing, crying with a loud wail.

Bromoform. (F. *bromoforme*, *brométhérider*, *bromoformyl*; S. *bromoforme*; G. *Bromoform.*) CHBr₃. Sp. gr. 2.9. A volatile liquid, oleaginous and inflammable; decomposed by caustic potash into potassium chloride and potassium formate. Prepared by the action of bromine and an alkali on alcohol. It has been used as an anæsthetic, but is irritating.

Bromog'raphy. (Βρώμα, food; γράφω, to describe.) A description of food.

Bromohy'drate. Same as *Hydrobromate*.

Bromohy'dric. Same as *Hydrobromic*.

B. acid. Same as *Hydrobromic acid*.

Bro'mont. France; Département du Puy de Dôme. Cold, weak, bicarbonated waters, with a trace of iron.

Bromous. (Βρώμος, a stink.) Stinking, foul.

Bro'mum. A synonym of *Bromine*.

B. chloridum. Bromine chloride.

Bromurated. Containing bromine.

Bromuret. Same as *Bromide*.

Bromuretted. Containing bromine.

Bromuretum. (Bromine.) A bromide.

B. ferri, Belg. Ph. The *Ferri bromidum*.

B. ka'licum. (Kali.) Potassium bromide.

B. potas'sicum. Potassium bromide.

B. so'dicum. Sodium bromide.

Bromus. (Βρόμος; from βιβρώσκω, to eat.) A Genus of the Nat. Order *Graminaceæ*. Spikelets panicle, awned, with three or more perfect flowers; stamens 2; styles 2.

Also, old name for the oat.

B. arven'sis, Linn. (L. *arvum*, an arable field.) A decoction of the roots is said to be vermicide.

B. cathart'icus. (Καθαρτικός, purgative.) Inhabits Chili. Roots purgative.

B. cilia'tus. (L. *cilium*, an eyelash.) The *B. purgans*.

B. gla'ber. (L. *glaber*, smooth.) The *Triticum repens*.

B. mollis. (L. *mollis*, soft.) Inhabits England. Seeds said to produce giddiness in man, death in poultry.

B. purgans. (L. *purgans*, purging.) Found in North America. Root said to be actively purgative and emetic.

B. secal'ius. (L. *secale*, rye.) Said to be a narcotic poison, but probably incorrectly.

B. ster'ilis. (L. *sterilis*, barren.) Seeds are said to be vermifuge.

B. temulent'us. (L. *temulentus*, intoxicated.) The *Lolium temulentum*.

Bronchaden'es. (Βρόγχα, the bronchial tubes; ἄδην, a gland.) The bronchial glands.

Bronchadenit'is. (Bronchadenes. F. *bronchadenite*; G. *Bronchialdrüsenentzündung*.) Inflammation of the bronchial glands.

Bronchadenoscirr'hus. (Bronchadenes; scirrhus. F. *bronchio-scirrhe* or *-squirrhe*.) Scirrhus of the bronchial glands.

Broncharo'tia. (L. *bronchia*, the bronchial tubes; arcto, to close.) Contraction or narrowness of a bronchus or of a bronchial tube.

Bronchectasis. Otherwise *Bronchiectasis*.

Bronch'i. (L. plural of *bronchus*, the windpipe.) Sometimes used for the two primary divisions of the trachea, each of which is called a bronchus; sometimes used to denote the bronchial tubes.

B., dilata'tion of. (F. *dilatation des bronches*; G. *Erweiterung der Bronchien*.) Same as *Bronchiectasis*.

B., lob'ular. (G. *lobuläre Bronchien*.) Same as *Bronchiole*.

B., plug'ging of. The complete filling up of the smaller bronchial tubes with viscid corpusculated secretion, with consequent degeneration of the bronchial wall.

B., ulcerat'ion of. Ulceration of bronchial mucous membrane may arise from inflammation of mucous glands, from variolous pustules, from syphilis, from tubercular disease, from acute bronchial inflammation occurring in enteric or puerperal fever, it may be the result of pneumonic abscesses, of purulent infection or of gangrene of the lungs, and may be produced by the pressure of an aneurysm, a tumour, or a pleuritic effusion.

Bronchia. (Βρόγχα, the bronchial

tubes. *G. Luftröhrenäste*.) The bronchial tubes.

The branches or divisions of the trachea are never termed bronchi by Celsus and Aurelianus, but always bronchia.

Bronchial. (*L. bronchialis, bronchicus. F. bronchique; I. bronchiale; S. bronchialis; G. bronchial, Luftröhrig.*) Relating to the bronchi or bronchial tubes.

B. arteries. (*G. Luftröhrenschlagadern.*) Usually one on the right side and two on the left, arising separately or conjointly from the thoracic aorta; they pass to the back of their respective bronchus, and accompany it by their branches in its repeated subdivisions. They are the nutritious arteries of the lung, supplying also the bronchial glands and in part the oesophagus.

B. asthma. Asthma with bronchitis, or excessive bronchial discharge.

Also, a synonym of ordinary spasmodic asthma.

B. breathing. (*F. souffle bronchique; G. Bronchialathmen.*) The respiratory sound heard in health over the bronchi on each side of the seventh cervical, and the two or three upper dorsal vertebrae in most people, and often at the sternal end of the clavicle. The sounds of inspiration and expiration are separated by a distinct interval. It differs only in intensity from the sound heard over the trachea, but in the quality of hollowness from vesicular breathing.

Bronchial breathing may be heard in any part of the chest, where it is not naturally present as a consequence of consolidation of the lung over a bronchial tube or a small cavity by pneumonic or other deposit, or by fluid in the pleura when not too great in quantity. Some have supposed that the cause of bronchial breathing is the movement to and fro of air in the bronchial tubes, where it is heard; others that the sound is laryngeal in origin, made intense by consonance in the bronchial tubes; still others, and these the majority, that the noise is made by the air passing through the narrow chink of the glottis, and conducted down the air-tubes. The consolidation of structure adds directly to the conductivity of the lung tissue, and indirectly aids in the recognition of sounds in the bronchial tubes by the destruction of the vesicular murmur.

B. casts. (*G. Abdrücke der Bronchialröhren.*) The exudation product of Bronchitis, plastic.

B. catarrh. A very mild form of bronchitis affecting only the bronchi and the larger bronchial tubes. See *Bronchitis, acute*.

B. cells. The air-cells of the lung.

B. collapse. A synonym of *Pulmonary collapse*; and also of *Atelectasis*.

B. concretion. (*L. concretesco, to grow together. G. Luftröhrenstein.*) Same as *Broncholith*.

B. cough. The reverberant character of the sound of the cough heard over a patch of consolidated lung.

B. expectoration. A term specially given to the expectoration of asthma, asphyxia, and such like grave interferences with breathing when, from a sort of churning process in the bronchial tubes, the secretion is much mixed with air in bubbles.

B. flux. (*L. fluxus, a flow.*) Same as *Bronchorrhœa*.

B. glands. (*G. Bronchialdrüsen, Luftröhrendrüsen.*) Ten or twelve lymphatic glands lying in the interspace of the bronchia and on the

larger bronchial tubes. In early life they are pale red, afterwards they become grey, and subsequently often black.

B. hæmorrhage. Bleeding from the surface of the bronchial mucous membrane, as in catarrh.

The term has also been specially applied to hæmoptysis from congestion of the bronchial capillaries, produced by incompetency of the tricuspid valve.

B. mus'cles. The circularly arranged fasciculi of unstriped muscular fibres which line in a more or less continuous fashion the bronchial tubes; in the bronchi muscular fibre is chiefly distributed in the space between the free ends of the cartilages.

B. nerves. The nerves of the bronchi arise from the recurrent branches of the pneumogastric; sympathetic filaments are also found.

The nerves of the bronchial tubes are derived from the posterior pulmonary plexus.

B. phthisis. (*G. Luftröhrenschwind-sucht.*) Tuberculosis of the bronchial glands, in children chiefly, generally following a severe or several milder attacks of bronchitis. The cough becomes more frequent and paroxysmal; the breathing gets more oppressed; the superficial veins of the thorax are dilated; after several intermissions emaciation progresses rapidly, signs of tuberculous disease of lungs or other viscera become prominent, and the child dies from these, or occasionally recovery takes place slowly; caseous matter may occasionally be seen in the expectoration. Hæmorrhage has been known to occur. The bronchial glands are found in a state of caseous or tuberculous degeneration; some of them are softened and excavated. Ulceration of neighbouring structures may have taken place, and in the lungs or other organs tuberculous disease is advanced.

B. plexus. The *Pulmonary plexus*.

B. polypl. Fibrinous casts of a greater or less extent of bronchial tubes, consisting of a network of fibrin enclosing leucocytes. See *Plastic bronchitis*.

B. respira'tion. See *B. breathing*.

B. sep'tum. See *Bronchus, septum of*.

B. sound. Normal *B. breathing*.

B. spasm. The condition of spasmodic contraction of the muscular coat of the bronchial tubes, which is the essence of the paroxysm of asthma.

B. stenosis. (*Στένσις, to contract.*) See *Bronchiostenosis*.

B. tubercle. Small miliary tubercular deposits in the mucous membrane or the walls of the bronchial tubes, occurring in cases of general tuberculosis, phthisis, and laryngeal phthisis.

B. tubes. (*G. Luftröhrenäste.*) The divisions and subdivisions of the primary bronchi; the division is usually dichotomous, and is continued until a pulmonary lobule is reached, each of which is supplied by a small bronchial tube, which undergoes further division into *lobular passages*, which have opening out from them the *air-cells*. The larger bronchial tubes have the same structure as the *bronchus* of each side, but on entering the lung the cartilages consist of plates and imperfect rings in all parts of the tube, and they cease in bronchial tubes of less than half a line in diameter. The fibrous coat becomes thinner as the tubes become smaller. The muscular coat completely surrounds the

BRONCHIALIS GLANDULA—BRONCHITIS.

tubes, and continues to the smallest subdivisions. The elastic longitudinal fibrous bundles are found in all the sizes. The epithelium of the mucous membrane is columnar and ciliated, with here and there goblet cells. Mucous glands of various sizes are found in all the bronchial tubes. The bronchial tubes are developed in the interior of the primitive lung cavity in the form of caecal tubes.

B. ulceration. Ulceration of the mucous membrane of the bronchial tubes, due either to catarrhal inflammation or to tubercle; syphilitic ulceration is by some believed to occur. See *Bronchi, ulceration of*.

B. veins. (*G. Bronchial-Adarier.*) They arise in the smallest subdivisions of the bronchial tubes, and follow their course to the bronchi; the right vein opens into the azygos vein, the left into the superior intercostal vein.

B. voice. Same as *Bronchoplegma*.

Bronchia lis glandula. (*L. dim. of gland, an acorn.*) A synonym of the *Pigra glandula*.

Bronchiare tia. (*L. Aetion, the bronchial tubes, and, to narrow.*) Contraction of the bronchial tubes. See *Bronchospasms*.

Bronchie. (*L. Bronchia.*) Belonging to the bronchial tubes.

Bronchiec tasia. (*Boeyart's term, dilatation.* *E. Bronchiec-tase.* *G. Erweiterung der Bronchien.*) Dilatation of the bronchial tubes. Sacular, cylindrical, and fusiform dilatations have been described. The commonest cause is chronic bronchitis, which produces relaxation of the walls and increases pressure from within, by reason of the cough, asthma and lobular pneumonia are believed to be causative agents. The diagnosis is often difficult; the symptoms are those of pleurisy, with capillary emphysema, expectoration often bloody, and not unusually fatal.

Bronchitis. Same as *Bronchitis*.

Bronchiocri sis. (*G. Entzündung der Bronchien.*) Inflammation of the bronchial tubes, or, as the term seems to imply, disease of the vessels. It is characterized by cough, expectoration of mucus, and, in severe cases, by haemoptoe.

Bronchiolo. (*L. dim. of bronchus.*) A small, unpaired tubule, sometimes minute, sometimes minute, which is a portion of the bronchus, but possesses a smaller calibre and thinner wall.

Bronchiopneumonia. (*See Pneumonia.*) Inflammation of the bronchial tubes, and of the pulmonary tissue, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchiorrhœa. See *Bronchiorrhœa*.

Bronchiostenosis. (*See Stenosis.*) A narrowing of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchismus. See *Bronchismus*.

Bronchitis. (*See Bronchitis.*) Inflammation of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchitis. (*See Bronchitis.*) Inflammation of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchitis. (*See Bronchitis.*) Inflammation of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchitis. (*See Bronchitis.*) Inflammation of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchitis. (*See Bronchitis.*) Inflammation of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchitis. (*See Bronchitis.*) Inflammation of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchitis. (*See Bronchitis.*) Inflammation of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchitis. (*See Bronchitis.*) Inflammation of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchitis. (*See Bronchitis.*) Inflammation of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchitis. (*See Bronchitis.*) Inflammation of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchitis. (*See Bronchitis.*) Inflammation of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchitis. (*See Bronchitis.*) Inflammation of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchitis. (*See Bronchitis.*) Inflammation of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchitis. (*See Bronchitis.*) Inflammation of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchitis. (*See Bronchitis.*) Inflammation of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchitis. (*See Bronchitis.*) Inflammation of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchitis. (*See Bronchitis.*) Inflammation of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Bronchitis. (*See Bronchitis.*) Inflammation of the bronchial tubes, which is a common form of pneumonia, and is often associated with the pulmonary disease.

Luftrohrentzündung.) Inflammation of the bronchial mucous membrane, with cough, more or less fever, alteration of voice, soreness of chest, and, subsequently, expectoration of cell-containing mucus, and then of a mucus-purulent, or sometimes of a plastic, secretion.

B., acut. (*G. acute bronchitis.*)

The disease ranges from a very trivial malady, which may be called *bronchial catarrh*, to a very severe disorder, largely dependent on the intensity and the extent of the tubes involved. In severe cases the initiatory fever is often intense, the cough accompanied with considerable pain and dyspnea; soon secretion occurs, at first scanty, thin, frothy, and silicious, sometimes streaked, then yellowish, and, lastly, purulent, and often mucus-purulent, and slow the very acute. Death may take place early, from the general malfunction of the mucous membrane, producing asphyxia, or, in the same manner, later, from excessive secretion and inability to get rid of it, or a typhoid condition may supervene, with an irregular pulse, a cold, clammy surface, and delirium. The natural respiratory murmur is obscured by sibilant, sonorous, and rattling rhonchi. The pathogenesis is characterized by swelling, and rupture of the mucous membrane, sometimes ulceration, often followed by a bronchial connective tissue.

B., acute catarrhal. Same as *B., acut.*

B., asthenic. (*See Asthenic.*)

form of chronic bronchitis, which is characterized by dryness, and often by a cough, which is often dry.

B., capillary. (*See Capillary.*)

The form of bronchitis, which is characterized by dryness, and often by a cough, which is often dry. The disease ranges from a very trivial malady, which may be called *bronchial catarrh*, to a very severe disorder, largely dependent on the intensity and the extent of the tubes involved. In severe cases the initiatory fever is often intense, the cough accompanied with considerable pain and dyspnea; soon secretion occurs, at first scanty, thin, frothy, and silicious, sometimes streaked, then yellowish, and, lastly, purulent, and often mucus-purulent, and slow the very acute. Death may take place early, from the general malfunction of the mucous membrane, producing asphyxia, or, in the same manner, later, from excessive secretion and inability to get rid of it, or a typhoid condition may supervene, with an irregular pulse, a cold, clammy surface, and delirium. The natural respiratory murmur is obscured by sibilant, sonorous, and rattling rhonchi. The pathogenesis is characterized by swelling, and rupture of the mucous membrane, sometimes ulceration, often followed by a bronchial connective tissue.

B., chronic. (*See Chronic.*)

B., chronic. (*See Chronic.*)

B., chronic. (*See Chronic.*)

B., chronic. (*See Chronic.*)

B., chronic. (*See Chronic.*)

B., chronic. (*See Chronic.*)

BRONCHIUS—BRONCHOPHONY.

breathing is weak, sibilant and sonorous rhonchi are heard.

B., convulsive. A synonym of *Hooping-cough*.

B., croupous. Same as *B., plastic*.

B., diphtheritic. The extension of diphtheria to the bronchi with the consequent lung troubles.

B., dry. A term given to those cases of chronic bronchitis in which the secretion from the mucous membrane is almost entirely wanting.

B., epidemic. (Ἐπιδήμιος, prevalent amongst a people.) A synonym of *Influenza*.

B., exudative. (L. *exsudo*, to sweat out.) Same as *B., plastic*.

B., fetid. Those cases of chronic bronchitis in which the expectoration is copious, often bloody, and very offensive; supposed to be produced by remaining in a dilated tube. The odour has been known to depend on butyric acid.

B., fibrinous. (Fibrin.) Same as *B., plastic*.

B., gouty. A term applied to cases of bronchitis which appear to be caused by a gouty condition of body, and which thus have a constitutional origin.

B., mechanical. Bronchitis caused by the inhalation of dust, metallic particles, fine sand from a grindstone, cotton dust, and such like.

B., membranous. Same as *B., plastic*.

B., plastic. (Πλαστικός, fit for moulding. F. *pneumonie fibrineuse, bronchite fibrineuse*.) The expectoration of more or less extensive, solid, or hollow casts of the bronchial tubes in cases not of diphtheria or croup. The casts are composed of a fine network of fibrin, enclosing leucocytes and red corpuscles. The preliminary symptoms are those of local pneumonia; hæmoptysis is not unusual, cough generally suffocative. Attacks often return repeatedly, and, after some time, they may cease, or phthisis or pneumonia of a low form may supervene. The disorder is more common on the continent of Europe, and apparently much more fatal than in England.

B., potter's. Called, locally, *Potters' asthma*. A form of chronic bronchitis common among the workers in the potteries, produced by unhygienic conditions, such as the cold, bleak climate, the dampness of the material in which many of them work, the dust which others are constantly breathing, the close, ill-ventilated workrooms of others. There is first oppression at the chest, then dyspnoea, afterwards cough, at first often dry, occasionally hæmoptysis.

B., pseudomembranous. (Ψευδής, false; L. *membrana*, a skin.) The same as *B., plastic*.

B., putrid. Same as *B., fetid*.

B., rheumatic. An attack of bronchitis, which is supposed to depend on a rheumatic disposition, or on an attack of acute rheumatism.

B., senile. (L. *senilis*, belonging to old people. G. *Bronchialentzündung der alten Leute*.) A term applied to subacute or chronic forms of bronchitis occurring in aged persons.

B., suffocative. A severe form of capillary bronchitis occurring in new-born children, and producing much dyspnoea and blueness of surface.

B., summer. A term for *Hay asthma*.

B., vesicular. Same as *Vesicular pneumonia*.

Bronchius. (Βρόγχις.) The sterno-thyroid muscle.

B. musculus. The *Sterno-thyroides* muscle.

Bronchlemmitis. (Βρόγχος, the wind-pipe; λίμμα, a sheath or membrane.) The name given to croup in Good's system.

Bronchospophony. (Βρόγχος; διξ, a goat; φωνή, a voice.) Tremulous bronchophony.

Bronchocacœ. (Βρόγχις, the bronchial tubes; κακός, bad.) Chronic bronchitis.

B. infantilis. (L. *infantilis*, belonging to infants.) Capillary bronchitis.

Bronchocatarrh. (Βρόγχις; κατάρροον, a running down.) Bronchial catarrh.

Bronchocele. (Βρόγχος, the windpipe; κύλη, a tumour. F. *bronchocele*; I. and S. *bronchocele*; G. *Kropf*.) Same as *Goitre*.

B., acute. Same as *Goitre, acute*.

B., aneurysmatic. Same as *Goitre, pulsating*.

B., cystic. Same as *Goitre, cystic*.

B., endemic. (Ἐν, among; δῆμος, a people.) A synonym of *Goitre*.

B., exophthalmic. Same as *Goitre, exophthalmic*.

B., lymphatic. A synonym of ordinary *Goitre*.

B., pulsating. Same as *Goitre, pulsating*.

B., scirrhus. A term given to cancer of the thyroid gland.

B., simple. Same as *Goitre, simple*.

B., vascular. Same as *Goitre, pulsating*.

Bronchocephalitis. (Βρόγχις; κεφαλή, the head.) A synonym of *Hooping-cough*.

Bronchohæmorrhagia. (Βρόγχος, the windpipe; αἱμορραγία, hæmorrhage.) An exudation of blood from the surface of the bronchial membrane.

Broncholemmitis. Same as *Bronchlemmitis*.

Broncholith. (Βρόγχις; λίθος, a stone.) A calcareous deposit in, or degeneration of, a bronchial gland.

Bronchomycosis. (Βρόγχις; μύκης, fungus. G. *Lungempilzkrankheit*.) The production of parasitic fungi in the bronchial tubes. *Bacillus subtilis*, *Oidium albicans*, and *Aspergillus glaucus*, have been found in the bronchial tubes in many birds and mammals. There is no evidence to prove that these growths are disease-producing in man.

Bronchoparalysis. (Βρόγχις; παράλυσις, paralysis.) A synonym of *Asthma*.

Bronchophonism. Same as *Bronchophony*.

Bronchophony. (Βρόγχος, the wind-pipe; φωνή, the voice. L. *bronchophonia*; F. and G. *bronchophonie*; I. *bronchofonia*; S. *bronchofonia*.) The clear resonance of the voice in the bronchi heard by means of the stethoscope. Heard in health over upper part of sternum and in interscapular region, and in greatly lessening degree in the further parts of the chest. Dr. Bristowe points out that bronchophony is the offspring of laryngeal intonation; pectoriloquy of oral articulate sounds. Bronchophony is produced in any part of the chest where it is not natural when the lung tissue over the bronchus is consolidated from any cause, and over cavities; it is due to increased conducting or reflecting capacity of the

BRONCHOPLASTY—BRONTOLITH.

structure of the lung. This is called by Laennec bronchophonic accidentelle.

B., accidental. Bronchophony as an unnatural condition. See under *Bronchophony*.

B., pectoriloquous. (L. *pectus*, the breast; *loquor*, to speak.) A term for pectoriloquy.

B., sniffling. A form which is characterized by a sniffling accompaniment.

B., strong. A synonym of *Pectoriloquy*.

B., whispered. Bronchophony heard when the patient whispers, it is often clearer than vocal bronchophony.

Bronchoplasty. (Βρόγχια; πλάσσω, to form.) The operation for closing a tracheal fistula, which may be done either by paring the edges, and then inserting sutures or transplanting a slip of skin to fill up the gap.

Bronchopleurisy. (Βρόγχια; πλευρίτις, pleurisy.) A disease characterized by the simultaneous occurrence of bronchitis and pleurisy.

Bronchopneumonia. See *Bronchio-pneumonia*.

Bronchorrhœmia. (Βρόγχια; ρίσις, to flow; αἷμα, blood) Hemorrhage from the bronchi or bronchial tubes.

Bronchorrhagia. (Βρόγχια; ῥήγνυμι, to burst forth.) Hemorrhage from the bronchi or bronchial tubes.

Bronchorrhœa. (Βρόγχια, the bronchial tubes, *ρίσις*, to flow. F. *bronchorrhœa*, *pituite*, *flux muqueux*; I. and S. *broncorrea*; G. *Schleimfluss*.) A form of chronic bronchitis where the expectoration is very profuse, albuminous, and free of air, and either thin and watery, or thick and glutinous, the cough is paroxysmal, and often accompanied by great dyspnoea. It is frequent in old persons who have had repeated attacks of bronchitis, especially when there is some cardiac trouble.

B., acute. Subacute bronchitis.

B., fetid. Fetid bronchitis.

Bronchus. (Βρόγχιον, the windpipe.) Suppression of the voice from a catarrh. Former name for a catarrh chiefly affecting the fauces.

Bronchos'tasis. (Βρόγχια; στάσις, a standing.) Bronchitis.

Bronchostenia. (Βρόγχια; στενός, narrow.) Narrowness of the bronchi or the bronchial tubes.

Bronchostenosis. Same as *Bronchostenia*.

Bronchotome. (Βρόγχιον, the windpipe; τομή, a cut, a knife. F. *bronchotome*; I. and S. *broncotomo*; G. *Bronchotom*.) A kind of flat trocar, consisting of a blade, double-edged near to the point, enclosed in a silver cannula. Used for opening the larynx or trachea.

Bronchotomy. (Βρόγχιον, the windpipe; τομή, to cut. F. *bronchotomie*; I. and S. *broncotomia*; G. *Luftrohrschneitt*.) The operation of opening the air-passages for the removal of a foreign body, or for the admission of air. It is called *thyrotomy* when the opening is made by dividing the thyroid cartilage, *laryngotomy* when the opening is made through the cricothyroid membrane; *laryngotracheotomy* when made through the cricoid cartilage and the upper rings of trachea; and *tracheotomy* when the trachea is opened below the isthmus of the thyroid gland.

Bronchotyphus. (Βρόγχια; τυφλός.)

A term applied to those cases of typhus fever in which there is concomitant bronchial affection.

Bronchovesicular. Relating to the bronchial tubes and air vesicles.

B. respiration. The respiratory sounds heard in the chest.

Bronch'us. (Βρόγχιον, the windpipe. F. *bronche*, I. *bronchi*; S. *bronchius*; G. *Luftrohrstamm*.) This name is given to each of the two divisions of the trachea. The bronchi are composed of an elastic framework of cartilaginous bands, surrounding the tube in front and at the sides, but wanting behind, united to each other, and the tube completed behind by an extensible fibrous membrane, which encloses at that part a layer of unstriped muscular fibre and longitudinal bundles of elastic tissue. They are lined by a smooth, pale, rosy, mucous membrane, having a distinct basement membrane and layers of epithelial cells, of which the outermost are columnar and ciliated, and send processes down to the basement membrane, which join with processes of the connective-tissue corpuscles of the submucous tissue; between these processes spindle-shaped cells are found, other irregular cells are found in the deeper layer, and goblet cells are frequently seen. They are formed by end-bulgings of the tube, which is separated from the primitive alimentary canal to form the trachea.

B., left. (G. *linke Luftrohrstamm*.) Narrower and longer and more oblique than the right; has nine to twelve cartilages, and is one and three quarter inches long; passes below the arch of the aorta, to enter the root of the left lung opposite the fifth dorsal vertebra; it crosses the descending aorta and the œsophagus, and has the left pulmonary artery at first above and then in front of it.

B., right. (G. *rechte Luftrohrstamm*.) Wider and shorter and more horizontal in course than the left; has six to eight cartilages, and is one inch long, enters the right lung opposite the fourth dorsal vertebra, has the azygos vein curving round it, and the right pulmonary artery at first below and then in front of it.

B., septum of. The point of junction of the inner walls of the bronchi looking from the inside of the trachea. As the left is the smaller bronchus the septum is more on that side, and the right bronchus is thus more in the line of the trachea, and more likely to receive a foreign body.

Bron'do. Raw beef seasoned with a mixture of spices, *souaze*. Much eaten in Abyssinia.

Brongnart's system of plants. Brongniart divided plants into *Cryptogams*, including *Amphigenæ* (Thalloids) and *Acrogensæ*; *Phanerogams*, including *Monocotyledones*, which are subdivided into *Albuminosæ* and *Exalbuminosæ*, *Dicotyledones* divided into *Angiospermes* and *Gymnospermes*. Under the *Angiospermes* are included *Gamopetalæ*, subdivided into *Perigynæ* and *Hypogynæ*, and *Dialypetalæ*, subdivided also into *Perigynæ* and *Hypogynæ*.

Bron'ia. Italy, in the Apennines. A mineral water containing small quantities of sodium and calcium carbonate.

Bron'tes. (Βροντή, thunder.) Another name for the *Belemnite*, or arrow-stone.

Bron'tolith. (Βροντή, thunder; a stone, from the explosion which accom-or precedes its fall.) An *œrolite* or *meteorite*.

BRONTOLOGY—BROWALLIA.

Brontology. (Βροντή; λόγος, a discourse.) A treatise on thunder.

Bronze. (L. *bronzæ*. L. *æs*; Gr. χαλκός; F. *bronce*; S. *bronce*; G. *Erz*.) An alloy of copper and tin, the latter usually in the proportion of 10 per cent. or thereabouts. Sometimes zinc and a little lead are added.

B. age. (G. *Bronzezeit*.) That period which by some archaeologists is believed to intervene between the stone age and the age of iron.

Bronzed. (Same etymon.) Having the appearance or colour of bronze.

B. skin. A term for *Addison's disease*, from the discolouration of skin which generally accompanies it.

Brood. (Sax. *bród*.) That which is bred or hatched, offspring.

B. cells. A term given to those animal cells which develop other cells in their interior.

B. organ of Barkow. A vascular plexus, which develops during incubation, in the abdominal walls of birds.

Brook. (Sax. *bróc*, a marsh.) A small stream.

B. weed. The *Samolus valerandi*.

Brooklime. The *Veronica beccabunga*.

Broom. (Sax. *bróm*, from *bremen*, to prick. F. *genet*; L. *ginestra*; S. *ginesta*; G. *Ginster*.) The *Cytisus scoparius*.

B. African. The *Aspalathus*.

B. ashes. The ashes from burnt broom-stalks. Formerly used as a diuretic.

B. butcher's. The *Ruscus aculeatus*.

B. clover. The *Baptisia tinctoria*.

B. common. The *Cytisus scoparius*.

B. decoction of. The *Decoction scoparii*.

B. dyers'. The *Genista tinctoria*.

B. indigo. The *Baptisia tinctoria*.

B. juice. The *Succus scoparii*.

B. pine. The *Pinus palustris*.

B. rape. The Genus *Orobanchæ*.

B. rape, Virginian. The *Epiphegus virginiana*.

B. salt of. Obtained by dissolving broom ashes and evaporating the clear solution; it consists chiefly of potassium carbonate. Diuretic and antacid.

B. Spanish. The *Sarothamnus juncus*.

B. tops. The same as *Scoparii cacumina*.

B. yellow. The *Baptisia tinctoria*.

Broom-ropes. The plants of the Nat. Order *Orobanchaceæ*.

Brosimum. (Βρώσιμος, eatable.) A Genus of the Nat. Order *Artocarpaceæ*.

B. alicastrum. (L. *alicastrum*, a kind of spelt.) The tree which yields the bread-nut, which, when roasted, is used instead of bread. The milky juice is poisonous.

B. galactodendron. (Γάλα, milk; δένδρον, a tree. G. *Kuhbaum*.) The *Palo de vaca*, or cow-tree, of South America. Grows on the dry slopes of the Cordilleras. Its juice is milky and nutritious.

B. spurium. (L. *spurius*, false.) Milk-wood. Hab. Jamaica. The milky juice is poisonous, and is made into birdlime.

B. utile. (L. *utilis*, useful.) The *B. galactodendron*.

Brossæa. A Genus of the Nat. Order *Ericaceæ*.

B. coccinea. (L. *coccineus*, scarlet.) Berries succulent, esculent.

Brossardière. France. Chalybeate and aperient waters.

Brotera corymbosa. The *Cardopatum corymbosum*.

Broth. (Sax. *broth*, from *bréowan*, to brew.) A weaker soup, usually with vegetables added.

Mutton broth contains 33 per cent., beef broth 27 per cent., and pork broth 19 per cent. of the weight of raw meat and bone. The loss on knuckle of mutton is 30 per cent. on the meat, and 14 per cent. on the bone.

Brother. (Sax. *brother*. L. *frater*; Gr. ἀδελφός; F. *frère*; I. *frate*; G. *Bruder*.) A son of the same father and mother.

B. uterine. (L. *uterus*, the womb.) A son of the same mother by another father.

Brotterode. Germany; in Thuringia. A small town at the foot of the Inselsberg, 1780 feet above sea level. Recommended as a cure place for phthisis.

Brou. (F. *brou*. I. *mallo*; G. *Nusschale*.) The green envelope of the walnut. An extract is used as a stomachic and vermifuge.

Brough. Same as *Brow* in Scotland.

Brough-ton. Yorkshire. A sulphur spring containing sodium chloride.

Bronquichons. The *Hydnum auriscalpium*.

Brousse. Turkey. Mineral waters from several springs, containing sodium, magnesium, and calcium chloride, sodium and calcium sulphate, free carbonic acid, nitrogen, and a little oxygen.

Broussais, François Joseph Victor. A French physician, born at St. Malo in 1772, died in 1838.

Broussaism. (*Broussais*.) A general term given to the doctrines taught by Broussais. They were marked by an appeal to physiology in the explanation of morbid processes, and consisted mainly in the contention that irritation or excitation was the essential cause of disease, and especially an irritation of the gastro-intestinal mucous membrane.

Broussaïst. A believer in the doctrines of Broussais or *Broussaïsme*.

Broussonetia. A Genus of the Nat. Order *Moracæ* or *Artocarpacæ*.

B. papyrifera. (L. *papyrus*, paper; *fero* to bear.) The paper-mulberry tree. The inner bark is used for making paper in China and the South Sea Islands.

B. tinctoria. (L. *tinctorius*, belonging to a dyer.) Hab. South America, West Indies. The fruit is cooling and astringent, and forms an excellent gargle in ulceration of the mouth and throat. A salt is prepared from the ashes, which is said to afford immediate relief in gout and rheumatism.

Brow. Scotland; near Ruthwell, in Dumfriesshire. A mild chalybeate water.

Brow. (Sax. *brú*.) Used indefinitely, sometimes meaning the forehead, sometimes the eyebrow, sometimes this and the superciliary ridge.

B. a-gue. Strictly supra-orbital neuralgia of malarious origin. Now used as synonymous with *Hemicrania* or *Megrim*.

B. pang. A synonym of *Hemicrania*.

B. presentation. The position of the child in labour when the forehead occupies the front of the axis of motion.

Browallia. A Genus of the Nat. Order *Scrophulariaceæ*.

BROWN—BRUGHEAS.

B. demissa. (*L. demissus*, low lying.) Hab. Caraccas. A decoction is used in ringworm and other skin diseases.

Brown. (Sax. *brün*. F. *brun*; I. *bruno*; G. *braun*.) The name of a colour.

B. atrophy of heart. See *Heart, brown atrophy of*.

B. gum. The inspissated juice of the *Eucalyptus resinifera*.

B. gum-tree. The *Eucalyptus resinifera*.

B. induration of lung. See *Lung, brown induration of*.

B. mixture. The *Mistura glycyrrhizæ composita*, U.S. Ph.

B. mush'room. The common name for the *Cortinarius cinnamomeus*.

B. races. The brown races of Europe are characterised by dark eyes, absolutely black hair, and fair skin, which readily becomes a warm bronze tint by exposure to the sun. They include the Circassian, the Pelasgian or Albanian, the Ligurian, and the Basque races, with the Gipsies. In Africa the brown races are represented by the Berber and Semitic and many others; in India by the Rajpoots and Brahmans; in Persia by the Iranians.

B.-red. A synonym of *Colcothar*.

B. study. Mason Good's *Aphelzia otiosa*.

Brown, John. The founder of the *Brunonian system*. Born at Lintlaw or Preston, Berwickshire, in 1735, died in London in 1788.

Brown, Robert. A botanist, born at Montrose in 1773, died in London in 1858. After him the movement called *Brunonian* is named.

Brownæa. A Genus of the Nat. Order *Leguminosæ*.

B. latifolia. (*L. latus*, broad; *folium*, a leaf.) Hab. West Indies. Used as a styptic.

Brownian movement. A molecular motion, first described by Robert Brown, and named after him, although noticed by previous observers. Granules when in a liquid of some viscosity are immobile, but when suspended in the limpid or watery fluid they are subjected to some influence as yet unknown, it may be currents in the fluid, or mutual attraction, or electrical conditions, which produce irregular movements of approximation and divergence. Organic and inorganic particles are equally affected. It has been suggested that there is an intimate connection between this movement and osmosis; in this instance movable solids move in a liquid, in the other a fixed solid causes currents in the liquid.

Brownism. See *Brunonian system*.

Brownist. Same as *Brunonian*.

Browns town. Ireland; near Kilkenny. A disused chalybeate water.

Brownwort. The *Scrophularia aquatica* and *S. nodosa*.

Bruca. Italy; near Catania. A mineral water, containing calcium and sodium carbonate, alumina, and hydrogen sulphide.

Brucea. (From Bruce, the traveller in Abyssinia, who brought the seeds from that country.) A Genus of the Nat. Order *Simarubacæ*.

B. antidyenterica. (*Arti*, against; *dysenteria*, dysentery.) An African tree, called in Abyssinia *Wogingoo*, having a bitter and astringent bark, esteemed as a remedy in dysentery and diarrhoea. It was at one time supposed that this tree yielded false angustura bark, but it is now known that the real source is *Strychnos nuxvomica*.

B. ferruginæa. (*L. ferrugineus*, of the colour of iron rust.) Same as *B. antidyenterica*.

B. quassaloides. Ham. (*Quassia*; *albos*, likeness.) A Himalayan species. Bark and root used as a bitter.

B. sumatranæ. Hab. Sumatra, China. Used in dysentery.

Bruch, aggregate glands of. See *B., clusters of*.

B., clusters of. Lymph follicles found first in the lower animals, but said to exist in man in the conjunctiva of the lower eyelid, near the inner canthus, and beneath the membrana nictitans. They are closed sacs, surrounded by a capillary plexus, and in their neighbourhood are found lymphoid canals with lymph cells. They are the trachoma glands of Henle.

B., membrane of. A vitreous lamina, stated by Bruch and Faber to cover the posterior surface of the iris, like that on the inner side of the choroid. Alt denies its existence in man.

Bruçin. (Mod. *L. brucia*. F. *brucine*, *comicine*; I. and S. *brucina*; G. *Brucin*.) $C_{22}H_{25}N_3O_4$. Colourless, efflorescent, rhombic prisms or lamellæ, containing four equivalents of water; easily soluble in alcohol, slightly in water, insoluble in ether. Strong sulphuric acid turns its solutions red, then yellow and greenish. Nitric acid forms a deep red, changing to violet on the addition of stannous chloride. The salts are very bitter, and have the same poisonous action as those of strychnin, but are not so active. Bruçin is contained, along with strychnin, in the bark of *Brucea antidyenterica*, and the bark and seeds of *Strychnos nuxvomica*, and the seeds of *Strychnos ignatii*. It is separated in the preparation of strychnine by cold alcohol.

B. sulphate. Used in intermittent fevers.

B. solution. A solution of one gramme of brucin in 1000 c.c. of distilled water. Used in testing for nitric acid in water.

Bruçinum. Same as *Bruçin*.

Brucke's test for sugar. A test for traces of sugar in the urine. The urine is precipitated with normal acetate of lead, filtered, then basic acetate of lead added as long as any precipitate is formed, again filtered, and then precipitated with ammonia. The precipitate is washed with water, dried between bibulous paper, rubbed in a mortar with oxalic acid until a filtered specimen shows no turbidity; the filtrate is saturated with finely divided carbonate of lime, the mixture again filtered, the filtrate acidulated with acetic acid, evaporated to dryness, and then dissolved in a small quantity of water. It contains any sugar existing in the urine which may be detected by the ordinary tests.

Brückenan. Bavaria; in the wooded valley of the Sinn, on the western declivity of the Rhön Mountain, fifteen miles from Kissingen. Altitude 915 feet. A pleasant, quiet place, in a mild climate, with a pure weak chalybeate water, containing a considerable amount of carbonic acid. Peat baths are employed. Used in anæmia; the Sinnbergerquelle is used in chronic bronchitis, scrofula, and calculus disorders.

Bru court. France; near Caen. Waters containing calcium and sodium sulphate, sodium chloride, and carbonic acid.

Brugheas. France; Département de l'Allier. Cold bicarbonated waters, containing a little sodium carbonate.

BRUGUIERA GYMNOREHIZA—BRUIT.

Bruguiera gymnorhiza. The *Rhizophora gymnorhiza*.

Bruise. (Old F. *bruiser*, to break.) A contusion with ecchymosis. The accompanying discoloration is produced by oxidation and other changes in the effused blood; it may not appear for some hours or a day or two after the injury, and may last for several days or two or three weeks.

B. root. The *Stylophorum diphyllum*.

B. wort. The *Saponaria officinalis*, and the *Bellis perennis*.

Bruising. (Same etymon.) A term applied to reduction of vegetable or other drugs to a coarse powder.

Bruissement. (F. *bruissement*, rustling. G. *Schnurren*.) Corvisart's term for the sound called purring tremor, or the *frémissement cataire* of Laennec.

Bruit. (F. *bruit*, a noise, or report. L. *strepitus*; I. *strepito*; S. *ruido*; G. *Geräusch*.) The term used in France to denote the sounds heard in the chest by mediate or immediate auscultation. The word is so commonly used here that it seems well to describe the different varieties.

B. anévrysmal. The loud, rough sound heard over an aneurysm. It is most distinct in a tubular aneurysm, and is sometimes double.

B. artériel. (F. *artériel*, arterial.) Arterial bruit. The conducted heart's sounds heard in the larger arteries.

B. coo-to-hep'atique. (L. *costa*, a rib; *hep'*, the liver.) A sound supposed to depend on the collision of the ribs with the liver.

B. d'airain. (F. *airain*, brass.) Bruit of brass. A variety of metallic tinkling. See *Bell sound*.

B. de chiquenaude. (F. *chiquenaude*, a flip. G. *Nasenstübergeräusch*.) A noise as of a flip on the nose, being the sound in a tortuous or contracted artery during cardiac systole.

B. de choc. (F. *choc*, a shock.) A single or double noise, accompanied by an impulse, heard when, on auscultating the gravid uterus, the head of the fetus or some other part is brought into sharp contact with the uterine wall under the stethoscope.

Also, used in the same sense as *B. de chiquenaude*.

B. de clapotement. (L. *clapoter*, to splash. G. *Gluckengeräusch*.) Splashing bruit. Produced by percussion or succussion in a large vomica, a dilated stomach, or a serous or other cavity, when it contains both fluid and air.

B. de claquement. (F. *claquement*, clapping.) Clapping bruit. The noise produced by the sharp shock of contact.

B. de collision. (L. *collido*, to clash. G. *klimperndes Geräusch*.) A sound of hard bodies striking each other when they are made to move in the cavities in which they are.

B. de craquement. (F. *craquement*, crackling. G. *Krächengeräusch*.) Crackling sound, as in roughnesses of the pleural or pericardial surface, or as in the inspiratory sound in emphysema.

B. de cuir neuf. (F. *cuir*, leather; *neuf*, new. G. *Neuledengeräusch*.) New leather sound. A crackling sound heard in pericarditis or pleurisy.

B. de dia'ble. (F. *diable*, a humming-top. G. *Kriselgeräusch*, *Nonnenengeräusch*.) A term for

a humming sound or murmur produced by the circulation in the veins, being usually confined to the internal jugulars, and more especially to the right one; believed to be caused by diminution of the mass of the blood; so named after a French toy, which produced a somewhat similar sound.

B. de drapeau. (F. *drapeau*, a flag. G. *Fahnenengeräusch*.) A sound like the rustling of a flag waved in the air; heard in nasal polypus when the person breathes strongly. It is heard also in croup when false membranes are detached and are moved in respiration.

B. d'étrille. (F. *étrille*, a currycomb. G. *Striegelgeräusch*.) A harsh cardiac valvular murmur.

B. de flot. (F. *flot*, a wave.) A gurgling murmur coinciding with the movements of the heart, said to depend on the presence of air and fluid in the pericardium.

B. de forge. (F. *forge*, a smithy. G. *Schmiedengeräusch*.) A blowing murmur, synchronous with the arterial diastole, heard in varicose aneurysm.

B. de froissement. (F. *froissement*, rumpling.) A crumpling noise supposed to be caused by the rubbing of thick false membranes on the pleura, or by the compression in expiration of indurated pulmonary parenchyma of differing density or containing small cavities.

B. de frottement. (F. *frottement*, rubbing. G. *Reibungengeräusch*.) Rubbing murmur heard in pericarditis and pleurisy, and sometimes in peritonitis, and in the subcapular region from muscular action. A similar sound is heard in the gravid uterus, and is caused by foetal movements.

B. de frou-frou. (F. *frou-frou*, the rustling of silk. G. *Lockpfeifengeräusch*.) A respiratory rôle suggesting the noise of its name.

B. de galop. (F. *galop*, a gallop.) A cantering action of the heart, in which the first sound is preceded by a feeble præ systolic murmur, heard chiefly at the apex. It is supposed by its describer, Potain, to be connected with granular kidneys.

B. de grelot. (F. *grelot*, a small bell. G. *Schellengeräusch*.) A rôle originating in the to-and-fro movement of a foreign body in the respiratory channels.

B. de lime. (F. *lime*, a file. G. *Feilen-geräusch*.) Filing sound. Valvular murmurs of the heart of a roughish character.

B. de moulin. (F. *moulin*, a mill. G. *Wassermühlengeräusch*.) A splashing murmur heard in connection with the heart's action, said by Morel-Lavallée to be pathognomonic of traumatic hydropneumopericarditis.

B. de parchemin. (F. *parchemin*, parchment.) The sound as if of two pieces of parchment rubbed against each other. A cardiac valvular murmur.

B. de piaul'ement. (F. *piauler*, to whine or mew. G. *Minuengeräusch*.) A cardiac murmur like the mewling of a cat.

B. de pot fêlé. (F. *pot*, a jug; *fêlé*, to crack. G. *Geräusch des gesprungenen Topfes*.) Cracked-pot sound, produced at times by a sharp percussion over cavities during expiration, and also in healthy lungs in yielding chests.

BRUMAL.

B. de ra'clement. (F. *racler*, to scrape.) Scraping sound. An intensified friction sound.

B. de râpe. (F. *râpe*, a rasp. G. *Raspelgeräusch*.) Rasping sound. A harsh cardiac valvular murmur.

B. de rap'pel. (F. *rappel*, a call. G. *gespaltener Herztön*.) An apparent reduplication of the second sound of the heart occurring in mitral constriction, described by Bouillaud. According to later observers, it is a divided diastolic murmur.

B. de roue hydraulique. (F. *roue*, a wheel; *hydraulique*, belonging to hydraulics.) Water-wheel noise. Same as *B. de moulin*.

B. de rou'et. (F. *rouet*, a spinning-wheel.) A modification of the cephalic souffle heard in the neighbourhood of the unclosed anterior fontanelle; it is a continuous soft hum, with or without periodical increases.

B. de scie. (F. *scie*, a saw. G. *Sägegeräusch*.) The sound of the saw, similar to the *B. de râpe*, but more rough, both being most generally indicative of a diseased state of the valves, causing contraction of the orifice of the heart.

B. de sif'flement. (F. *sifflément*, hissing. G. *Pfeifengeräusch*.) A cardiac valvular murmur, as of hissing.

B. de souf'fle. (F. *souffle*, breath. G. *Blasegeräusch*.) A sound as when a large shell is held to the ear. It may be cardiac, vascular, or respiratory.

B. de souf'fle à double cou'rant. (F. *à*, with; *double*, twofold; *courant*, current.) Same as *B. de diable*.

B. de souf'fle continu. (F. *continu*, continuous.) A bruit de souf'fle heard in the veins.

B. de souf'fle ord'naire. (F. *ordinaire*, ordinary.) The intermittent bruit de souf'fle as heard in the arteries. Called by Laennec chant des artères when it possessed a musical note.

B. de souf'flet. (F. *soufflet*, bellows.) The sound of the bellows, heard in cases of enlargement of the heart, or of contraction of its orifices, and passing by insensible gradations into the *B. de râpe* and *B. de scie*, all three originating from the same causes.

B. de souf'flet cephalique. See *Souffle*, cephalic.

B. de sou'pape. (F. *soupape*, a valve. G. *Klappengeräusch*.) Valve sound. A bronchial inspiratory whistle, followed by a dry crackling rattle; originated at the orifice of a cavity.

B. de susur'rus. (L. *susurrus*, a low gentle noise.) A soft murmur heard in erectile tumours, arterio-venous aneurysms, and such like.

B. de taffetas. (F. *taffetas*, a kind of light silk.) A respiratory râle, like the tearing of silk, heard in bronchial asthma at the commencement of pneumonic consolidation.

B. de tiraillement. (F. *tiraillement*. G. *zerrendes Geräusch*.) A respiratory râle, simulating the noise of a sharp pull on anything.

B. de trembl'ement. (F. *trembloter*, to tremble.) Barth's term for *B. de drapeau*.

B. de va et vient. (F. *va*, from *aller*, to go; *vient*, from *venir*, to come.) A systolic and diastolic murmur heard in stenosis, with insufficiency of the aortic valves.

B. dias'tolique. Same as *Murmur*, dias'tolic.

B. du cœur. (F. *cœur*, the heart.) The sounds of the heart.

B. du cœur fœ'tal. (L. *fœtus*, offspring.) The sounds of the heart of the fœtus in utero.

B. hu'morique. (L. *humor*, fluid.) The dull sound on the percussion of a liquid.

B. hy'datique. (F. *hydrique*, belonging to an hydatid.) A mixed noise and vibratory sensation perceived by the hand and obtained occasionally on percussing an hydatid cyst.

B. hydroaë'rique. Same as *B. hydro-pneumatique*.

B. hydro-pneu'matique. (F. *Ydœp*, water; *πνεῦμα*, wind.) The sounds produced by auscultation or percussion of cavities, which contain both air and liquid.

B. inf'érieur. (F. *inférieur*, lower.) The first sound of the heart.

B. mét'allique. Metallic tinkling.

B. mus'culaire. (F. *musculaire*, belonging to muscle.) The first sound of the heart, from its supposed cause. Also see *Murmur*, muscular.

B. mu'sical. Musical cardiac or lung sounds.

B. pericar'dique. Friction sound in pericarditis.

B. peridias'tolique. Same as *Murmur*, peridias'tolic.

B. perisys'tolique. Same as *Murmur*, perisystolic.

B. pla'centaire. The sound heard in the abdomen of a pregnant woman over a certain part of the uterus, varying from a soft whiff to a harder note. At one time it was supposed to be originated in the placenta, hence its name. It is now believed to have its seat in the walls of the uterus, and is called *Uterine souffle*.

B. prædias'tolique. Same as *Murmur*, prædias'tolic.

B. præsys'tolique. Same as *Murmur*, præsystolic.

B. res'piratoire. (F. *respirer*, to breathe.) The breath sounds as heard in health.

B. ro'tatoire. (F. *rotatoire*, rotatory.) The sound which accompanies the contraction of the cardiac ventricles.

Also, a term applied to a sound heard on applying the ear to the naked chest, which is not the respiratory murmur; it resembles the rolling of the wheels of a heavy carriage, and depends on contraction of the muscular fibrillæ.

B. Sko'dique. (G. *Skoda'sche Schall*.) The percussion note which Skoda called tympanitic. Dr. Gee believes the term to be synonymous with clearness of note.

B. sup'érieur. (F. *supérieur*, upper.) The second sound of the heart.

B. sys'tolique. Same as *Murmur*, systolic.

B. tricuspid'ien. (G. *Halsvenengeräusch*.) The murmur heard in the veins of the neck; so called because it is alleged to be caused by the tricuspid valves.

B. tym'panique. (L. *tympanum*, a drum.) Drum sound. A sonorous and clear percussion note.

B. vein'eux. A venous murmur.

B. vesic'ulaire. Vesicular breathing.

Brum'al. (L. *bruma*, mid-winter; for *brevia*, from *brevio*, to shorten. F. *hyemal*; G. *winterlich*.) Pertaining to the midst of winter. Applied to certain plants (*Brumales plantæ*) which flower in the season corresponding to our winter.

Brumasar. Arabic for *Argentum*, or *Luna*. See *Soloma*.

Brumati. A glass vessel. (Ruland.)

Brumelli. The *Frazinus excelior*, or ash.

Brumous. Same etymon and meaning as *Brumal*.

Brunella. Same as *Prunella*.

Brunescens. (Mod. Lat. *brunescens*, to become brown. G. *braunlich*.) Brownish.

Brunfelsia. A Genus of the Nat. Order *Solanacea*.

B. americana. (F. *bois plié bâtard*.) Trumpet flower, rain flower. Hab. West Indies. Fruit of the size of a large nut, soft, smooth, of an orange colour, and of agreeable taste. A syrup of the fruit is used in obstinate diarrhoea.

B. uniflora. (L. *unus*, one; *flor*, a flower.) Hab. Brazil. The root is used as an antisyphilitic and emmenagogue. It produces abortion.

Brunia cœc. Heath-like shrubs, with small, imbricated, rigid, entire, exstipulate leaves. Calyx imbricated; petals and stamens 5, inserted on the calyx; anthers 2-celled, extrose, bursting longitudinally; ovary 1-3-celled, with 1-2 anisotropous ova in each cell; style simple or bifid; fruit 1- or 2-celled; seeds with a minute embryo in fleshy albumen. They are epigynous calycifloral exogens.

Bruniads. The plants of the Nat. Order *Bruniaceæ*.

Brunn's glands. Brunner's glands.

Brunneus. (Sax. *brun*, brown.) Of a dark brown colour.

Brunner, Jean Conrad. A Swiss anatomist, born at Diessenhofen, near Schaffhausen, in 1653, died at Mannheim in 1727.

B.'s glands. Duodenal glands. Small racemose glands of the upper part of small intestine in mammals, and in sharks and rays. In man, found chiefly near the pylorus, sparingly distributed at the lower end of duodenum and beginning of jejunum. They are embedded in the submucous tissue, and have a few muscular fasciculi between the acini; they open on the surface of the mucous membrane by minute pores. The epithelium of acini and duct is cylindrical and flattened. They secrete a viscid fluid containing mucus, which has no action on fats, but whose purpose is not known.

Brunn'thal. A cold water bathing establishment near Munich.

Brunonia cœc. Herbs. Leaves entire, radical; flowers in heads, surrounded by an involucre; calyx inferior, 5-pointed; corolla 5-pointed, withering; stamens hypogynous; anthers slightly united; ovary superior, 1-celled; ovule solitary, erect; style single; stigma with an indusium; fruit enclosed in the hardened calyx. Hypostaminous corollifloral exogens.

Brunoniads. The plants of the Nat. Order *Brunoniaceæ*.

Brunonian. (F. *brunien*.) Belonging to the ideas of Brown, John.

B. system. Applied to a system of the practice of physic, formed by Dr. John Brown, a Scotch physician, and contemporary of Cullen, consisting in the assumption that the body possesses a peculiar property of excitability; that every agent capable of acting on it during life does so as a stimulant; that these stimulants (or the excitement caused by them) when they are duly in exercise, produce the healthy performance of the natural functions; that when excessive they produce exhaustion, or direct debility; when

deficient, the effect is an accumulation of excitability, or indirect debility; from one or other of which states of debility all diseases were supposed to arise.

Brunonianism. Same as *Brunonian system*.

Brunsvigia. A Genus of the Nat. Order *Amargyllidaceæ*.

B. toxica ria. Ker. (L. *toxicum*, poison.) Hab. Cape of Good Hope. The juice of the bulb is an acrid poison, producing violent vomiting. It is added by the natives to their arrow poison.

Brunswick black. A solution of asphalt in drying oil or turpentine, with or without the addition of a solution of india rubber, in mineral naphtha. Used in the mounting of microscopic objects.

B. green. Crude copper chloride; also called *Friesland green*.

Brunus. Erysipelas. (Ruland.)

Bruscan'dula. The *Humulus lupulus*, or hop-plant; also, the Genus *Lupinus*, or the lupin.

Brus'cus. Same as *Ruscus*.

Brush. (F. *brosse*, a brush, from Low Lat. *brustia*.) An implement for cleaning things.

B.-burn. A wound produced by rapid and severe friction of the surface of the body, as when it comes in contact with a strap in rapid motion, or with the ground or hard snow in a slip on a mountain side. The skin is ground away, and the subjacent structures killed.

B. crop. A bush, on a long curved wire, made of a squirrel's tail, with the hairs directed to the handle. Used for removing false membranes from the larynx and trachea, and for applying local remedies.

B. discharge. A term applied to that form of luminous electric discharge in which the light appears to diverge in fine radii from the conductor; its presence depends on the physical conditions of the conductor and of surrounding objects.

B. larynge'al. A brush, pointed or square, made of camels' or squirrels' hair, fixed on a handle bent an inch from the brush at a right angle. Used to apply remedies to the interior of the larynx.

B. metallic. A bundle of fine wires fixed in an insulating handle. Used for faradisation of less sensitive parts in anæsthetic conditions.

B.-shaped. Having the form of a brush; same as *Aspergilliform*.

B. stom'ach. Same as *Excusia ventriculi*.

Bru'ta. (L. *brutus*, stupid.) A term synonymous with *Edentata*.

Also, a term applied to animals not endowed with reason.

Also, a tree known only in the East, and resembling the cypress; also said to be a kind of *Sabina*, or *savin*.

Also, an old term for a certain force or power of celestial influence by which instinct is manifested in brute animals.

Bru'tia pix. Used by Pliny, *H. N.* xv, 7, for a thick, resinous kind of pitch used by the ancients; from the Brutii, a people of Italy, in whose country it abounded.

Bruti'no. Turpentine. (Quincy.)

Brutobon. An ointment used by the Greeks, but not now known, according to J. H. Velschius.

Bru'tole. (Fr.) See *Brytyle*.

BRUTUA—BRYONIA.

Brutua. The *Cissampelos pareira*, or *Pe-reira brava*.

Bruxanelli. (Ind.) A tall tree of Malabar, the bark of which is diuretic, the root anti-arthritis; its juice, mixed with butter, is applied to boils.

Bruyeres. France. A carbonated chalybeate water.

Brya. (Βρύον, a moss.) A Genus of the Nat. Order *Leguminosae*.

B. ebenus. (Έβανος, ebony.) Hab. West Indies. An oil distilled from the wood is used for toothache.

Bryaceae. (Βρύον, a moss.) Mosses. A Suborder of the Order *Stegocarpae*, Nat. Order *Musci*. Sporangium dehiscing transversely by the separation of the operculum, or irregularly.

Also, a synonym of *Stegocarpae*.

Bryasparagi. (Βρύον, the blossom of the hop; ἀσπάργος, asparagus shoots. G. *Hopfenprossen*.) The early shoots of the hop.

Bryce's test. A test of the genuineness of the vaccine virus, consisting in the re-vaccination of a child from the eruption already resulting from the first vaccination, when, if the virus be genuine, the second vaccination is said to overtake the first.

Brycetis. Otherwise *Brychetus*.

Brychethmus. (Βρυχηθμός, from βρύω, to roar.) Rumbling of the intestines.

Brychetus. (Βρυχετός, the ague, from βρύω, to grind the teeth.) A name of a pernicious malarial fever.

Brychius. (Βρύχιος, the depths of the sea.) Term applied by Hippocrates to deep-seated veins.

Bryes. (Βρύον, a moss.) Same as *Bryacea*.

Brygma. Otherwise *Brygmus*.

Brygmus. (Βρυγμός, from βρύω, to grind the teeth. G. *Zähneknirschen*.) Stridor dentium, grinding of the teeth, or the peculiar noise made by gnashing or grating of the teeth, in epilepsy and other convulsive diseases, arising from spasm of the muscles of the lower jaw.

Bryinæ. (Βρύον, a moss.) One of the Subclass of the Class *Musci*, according to some, consisting of the true mosses, the other being *Sphagnaceae*.

Bryogens. (Βρύον, a moss; γεννάω, to produce.) A section of *Cryptogamia*, including mosses and liverworts.

Bryoidæa. See *Bryacea*.

Bryoidin. A crystalline bitter and fusible resin, obtained by treating elemi with alcohol.

Bryology. (Βρύον, moss; λόγος, a discourse. G. *Laubmooskunde*.) The science or botany of mosses.

Bryonæ. Same as *Bryonia*.

Bryonia. (Βρύον, to burst forth, from its rapid growth. F. *bryone*; G. *Zaunrübe*.) Bryony. A Genus of plants of the Nat. Order *Cucurbitaceae*.

B. abyssinica. The root, when fresh, is said to be poisonous, but esculent when cooked.

B. africana. Thunb. Hab. Cape of Good Hope. Used by the Hottentots as an emetic, cathartic, and diuretic, in skin diseases, dropsy and syphilis.

B. alba. Linn. (L. *alba*, white.) Inhabits the South of Europe. Monococcus; root yellowish. A tincture has been recommended in diphtheria.

B. americana. The *Convolvulus mechoacanna*.

B. callosa. Rottl. (L. *callosa*, thick-skinned.) Stem filiform, rough; leaves on long petioles, cordate, 3-5-lobed, toothed, scabrous; berries globose; flowers yellow. Coromandel. Seeds, mixed with oil, are used as a vermifuge.

B. cordifolia. (L. *cor*, the heart; *folium*, a leaf.) Hab. Ceylon. Used as a cooling medicine and an expectorant. (Waring.)

B. dioica. Jacq. (Δίς, twice; εἶκος, a house; meaning stamens and pistils in separate flowers. F. *bryone*, *navet du diable*, *navet galant*, *vigne blanche*, *couleuvrès*; I. *brionia*; G. *Zaunrübe*.) Stem long, branched, weak, with tendrils; leaves alternate, palmate, rough on both sides; flowers in short axillary racemes, greenish white; fruit a globular red berry. The root is large, fusiform, fleshy, esculent, whitish, marked with circular striae, of an acrid taste, and disagreeable odour. It is irritant, and a drastic purgative and an emetic. Used externally to bruises, muscular rheumatism, and glandular swellings; internally in dropsy, bronchitis with serous effusion, whooping-cough, and epilepsy. Sold by herbalists as white bryony and mandrake. Both root and berries have produced death; the former was fatal in four hours, the latter in thirty. Symptoms were giddiness, intoxication, vomiting, diarrhoea, and coma. De-coction of galls is said to be an antidote.

B. epigæa. Rottl. (*Epiγαιος*, upon the earth.) Stem glabrous; leaves fleshy, on longish petioles, cordate, 3-lobed, very hairy; male flowers shortly racemose at the end of a long peduncle; female flowers short, peduncled, solitary; berry ovate, rostrate, glabrous; seeds white. Coromandel. Root bitter; once supposed to be Calumba root. Used externally in castor oil, with cummin seed and onions, for rheumatism. Internally for dysentery and syphilis. A popular internal and external remedy for snake-bites in India.

B. fidoifolia. The *Trianocephalus fidoifolia*.

B. filiformis. (L. *filum*, a thread; *forma*, shape.) Hab. Nepal. Seeds given to feverish conditions in children.

B. glabra. Roxb. (L. *glaber*, smooth.) The *B. epigæa*.

B. heterophylla. (Έτερος, the other, different; φύλλον, a leaf.) Hab. China. Used in phthisis and dysentery. (Waring.)

B. laciniosa. (L. *laciniosus*, full of projecting points.) Hab. India. The juice of the leaves is used in liver disorders, and in cough and flatulence. The whole plant is esteemed a tonic.

B. mechoacan'na alba. (L. *alba*, white.) The *Convolvulus mechoacan'na*.

B. mechoacan'na nigra. (L. *niger*, black.) The *Exogonium purga*.

B. mechoacan'na nigricans. (L. *nigricans*, blackish.) The *Exogonium purga*.

B. nigra. (L. *niger*, black.) The *Tamus communis*. Also, the *B. alba*.

B. palma'ta. (L. *palmæ*, the palm.) Hab. Ceylon. An oil is extracted from it, which is used in wounds and bruises. (Waring.)

B. peruviana. The *Exogonium purga*.

B. pilosa. Roxb. (L. *pilosus*, hairy.) The *B. rostrata*.

B. rostra'ta. Rottl. (L. *rostratus*, beaked.) Stem slender, hairy; leaves on longish petioles, rounded, cordate, toothed, pubescent; male flowers usually two together on a long slender peduncle; female flowers solitary; berries ovate, hairy;

BRYONIN—BUBO.

seeds black. Root small, and of light grey colour. Is used in piles, and as a demulcent in humoral asthma.

B. ruderalis. (L. *rudus*, rubbish.) The *Bryonia dioica*.

B. scabra. (L. *scaber*, rough.) Hab. India, Cape of Good Hope. Gently aperient. Used in coughs. (Waring.)

B. scabrellia. (Mod. L. *scabrellus*, dim. of *scaber*, rough.) Hab. India. Given in flatulence. (Waring.)

B. scrobiculata. (L. *scrobiculus*, a little ditch.) Hab. Abyssinia. Used for tapeworm. Said to be sedative.

Bryonin. $C_{44}H_{80}O_{19}$. A glucoside obtained from *Bryonia alba* and *B. dioica* by percolation with alcohol, and treated with plumbic subacetate. It is a white or slightly coloured granular substance, bitter, soluble in water and alcohol, insoluble in ether. An active purgative.

Bryonitin. A crystallisable substance found in bryony root.

Bryony, black. The *Tamus communis*.

B. black-berried. The *Bryonia alba*.

B. red-berried. The *Bryonia dioica*.

B. water, compound. The *Alcoolatum bryoniae compositum*.

B. white. The *Bryonia alba*, and also, the *B. dioica*.

B. wild. The *Sycios angulatus*.

Bryophilous. (*Brúon*, moss; *φιλίω*, to love. *F. bryophile*.) Growing on or amidst moss.

Bryophyllum. (*Brúon*; *φύλλον*, a leaf.) A Genus of the Nat. Order *Crassulaceae*.

B. calycinum. (*Κάλυξ*, a cup) Hab. Moluccas, India. Used for abdominal pains, and as a poultice in hernia.

Bryophyta. (*Brúon*; *φυτόν*, a plant.) A synonym of *Muscineae*.

Bryoplastic. (*Brúon*, moss; *πλάσσω*, to form. *F. bryoplaste*.) Diseases characterised by productions which approach more or less closely to vegetable forms, as warts, polypi, fungus.

Bryoretin. A product, along with hydrobryoretin and glucose, of the action of sulphuric acid on bryonin.

Bryozoa. (*Brúon*, moss; *ζῷον*, an animal. *F. bryozoaires*.) A term synonymous with *Polyzoa*.

Bryozoa'ria. (*Brúon*; *ζωάριον*, dim. of *ζῷον*, an animal.) A synonym of *Polyzoa*.

Bryth'ion. A malagma, or cataplasm, in former use, described by Paulus Aegineta. (Hooper.)

Brytia. (*Brútia*, the refuse of olives or grapes after pressing.) The lees of grapes.

Brytolatura. (*Brúton*, beer. *F. brytolature*; I. *brytolatura*; G. *Bierauszuge*, *Arzneibier*.) Bérál's term for beers medicated with roots and herbs.

Brytolo. (*Brúton*, beer or ale.) A French term for a preparation made by macerating some medicinal substance in beer; also called *Brutolo*.

Brytoles. (*Brúton*, beer. *F. brytolé*; I. *brytoles*; G. *Arzneibier*.) Same as *Brytolatura*.

Brytol'ica. (*Brúton*. G. *Bierverbindungen*.) Applied by Bérál to combinations of beer for medical use, as in *Brytoles*, *Brytolatura*.

Brytolotiva. (*Brúton*.) Solutions in beer for medical use in lotions and clysters.

Bryton. (*Brúton*, from *βρύω*, to germinate; because the grain germinates in the process

of malting.) Old term for a kind of potion made from barley; said to be what is now called ale or beer.

Bryum. (*Brúon*, a tree moss.) A Genus of the Nat. Order *Bryaceae*.

B. triquetrum. (L. *triquetrum*, three-cornered.) Hab. France. Used as an astringent in hæmorrhage.

Bu. (*Bov.*, a form of *βovs*, an ox.) Used in composition to express size or excess.

Buatrica. A false spelling of *Buiatrica*.

Buba. The same as *Bouba*.

Bubalus. (*Βούβαλος*.) The buffalo, *Bos bubalus*.

Bubastecordium. (L. *Bubastis*, the Egyptian deity, also called Bast, and supposed to occupy the same position as Artemis; *cor*, the heart.) The *Artemisia vulgaris*.

Bubasticum. An ulcer which arises chiefly on the superficial parts in children. *Aëtius*, iv, 21.

Bubble. (Sw. *bubbla*, a bubble.) A skin or bladder of water filled with air or gas.

B. fever. A synonym of *Pemphigus* or *Pompholyx*.

Bubbling. (Same etymon.) Gurgling. Applied to a sound like the bursting of a bubble.

B. rhonchus. See *Rhonchus*, *bubbling*.

Bubö. A pustule.

Bubendorf. Switzerland; not far from Basel, 1200 feet above sea level. Two springs, of a temperature of 13° C. (55-4° F.), containing calcium carbonate 2.3 grains, and magnesium chloride .09 grain, in 16 ounces.

Bubo. (*Βουβών*, the groin. *F. bubon*; I. *bubbone*; S. *bubon*; G. *Drüsengeschwulst*, *Leistenbeule*, *Schambeule*.) An inflammatory enlargement of a lymphatic gland, produced by venereal or other inoculation, or by simple irritation; usually occurring in the groin, but not necessarily so.

B. abdom'inal. That which is placed above the fold of the groin.

B. acute. A bubo arising rapidly, with much redness and pain.

B. amygd'aloid, indolent. (*Αμυγδαλή*, an almond; *ιδίος*, form.) A painless, hard, almond-shaped venereal inguinal bubo.

B. consecutive. A bubo not manifesting itself until after the occurrence of a chancre or gonorrhoea.

B. constitutional. A venereal bubo manifesting itself some time after the occurrence of primary symptoms, when constitutional affections have been developed.

B. creeping. A bubo which, having burst, spreads to a greater or less extent along the neighbouring skin by semicircular advances, healing on one margin whilst it extends on the other. The cicatrix is always thin and blue.

B. crural. (L. *cruralis*, belonging to the leg.) A bubo which is situated well below the fold of the groin.

B. gonorrhoe'al. A bubo resulting from the reflected irritation of a gonorrhoea.

B. indolent. (G. *schmerzlos Bubo*.) A bubo which remains hard, and does not tend to suppuration.

B. indurated. A bubo caused by the absorption of syphilitic poison.

B. infecting. A syphilitic bubo.

B. inguinal. (L. *inguen*, the groin.) An enlargement of one or more lymphatic glands of the groin.

BUBON—BUCCAL.

B., inoculable. Same as *B., syphilitic*.
B., multiple, indolent. A syphilitic enlargement of the whole series of inguinal glands.

B., parotid. A term for *Mumps*.
 The term has also been used to describe inflammation of the parotid gland, following an acute infectious fever, most commonly typhus. It almost invariably ends in suppuration.

B., pestilential. A term for *Plague*.
B., primary. (*F. bubon d'emblée*.) A bubo which is believed to arise from absorption of syphilitic poison without the occurrence of a chancre.

B., primitive. Same as *B., primary*.
B., pubic. A bubo very near the pubes.
B., scrofulous. A scrofulous enlargement of a lymphatic gland.

B., strumous. (*Struma*.) Same as *B., scrofulous*.

B., suppurating. A bubo in which pus has formed.

B., sympathetic. A bubo resulting from irritation without infection.

B., syphilitic. A bubo resulting from absorption of venereal poison.

B., venereal. Same as *B., syphilitic*.
B., virulent. Same as *B., syphilitic*.

Bubon. (*Βουβών*, the groin; because one of the species was used as a remedy for tumours in that region.) A Genus of the Nat. Order *Umbellifera*.

B. copiticum. (*L. copticus*, belonging to Coptos, now Cof, an Egyptian town.) The *Psychotis ajowan*.

B. galbanum. An arborescent South African species, at one time supposed to be the source of galbanum.

B. macedonicum. (*F. persil de Macedoine*, *P. de roches*; *S. ipposelino*; *I. salsa macedonica*; *G. Macedonische Petersilie*.) Macedonian parsley. Hab. Turkey and North Africa. The seeds differ from common parsley in the pericarp being thin, membranous, and without marked rays. The seeds have been used in epilepsy.

Bubon d'emblée. (*F. emblée*, at the first onset.) The same as *Bubo, primary*.

Bubona. The nipple. (*Dunglison*.)

Bubonadenitis. (*Βουβών; adenitis*. *F. bubonadenitis*; *G. Leistenentzündung*.) Inflammation of the inguinal glands.

Bubonalgia. (*Βουβών; άλγος*, pain. *F. bubonalgia*; *G. Leistenschmerz*.) Pain in the groins.

Buboncus. (*Βουβών; δγκος*, a tumour.) Bubo; a swelling in the groin.

Bubonium. (*Βουβώνιον*, from *βουβών*, the groin; because esteemed efficacious in diseases of that region.) A species of starwort, but which is uncertain. Called also *Aster atticus*, *Asterion*, and *Asteriscus*.

Bubonocèle. (*Βουβών*, the groin; *κήλη*, a tumour. *F. bubonocèle*; *G. Leistenbruch*.) A species of hernia in which the part protrudes at the abdominal ring; synonymous with inguinal hernia. By some authors, bubonocèle is synonymous with inguinal hernia of whatever variety, or in whatever part of the course; by others, it is restricted to inguinal hernia when in the inguinal canal.

Bubonoid. (*Bubo*; *είδος*, form. *G. bubonähnlich*, *beulenartig*.) Resembling a bubo.

Bubononcus. (*Βουβών*, the groin; *δγκος*, a swelling.) Bubo.

Bubonopneus. (*Βουβών; L. penis*, a swelling.) A bubo.

Bubonorris. Same as *Bubonorrhæsis*.

Bubonorrhæsis. (*Βουβών*, the groin; *ρήξις*, a rupture or fracture.) A term applied by Paulus Ægineta to a bubonocèle when attended with rupture of the peritoneum, that is, without a hernial sac.

Bubonulus. (*Dim. of bubo*.) Inflammation of the lymphatic glands of the dorsum penis.

Bubon-upas. The *Upes antier*.

Bubronia guazuma. The *Guasumus tomentosa*.

Bubuline. (*L. bubulus*, of the ox.) A substance obtained by Morin from the action of alcohol on cow-dung. Probably a mixture of nitrogenous principles. Precipitated by metallic salts, alum, and tannin.

Bubuncululus. Same as *Bubonulus*.

Bucaros. A name of *Terra portugallia*.

Bucca. (*L. bucca*, the cheek. *F. jous*; *I. guancia*; *S. carrilo*; *G. Backe, Wangs*.) The hollow part of the cheek which stands out in the act of blowing; also, the cheek itself.

Also, the vulva.

B. saccata. (*L. saccus*, a bag.) The cheek pouch for the temporary reception of food in some Rodentia and Quadrumana.

Bucca dei Fiori. Italy; near to the Maremma. Mineral waters, 29° C. (84.2 F.), containing sodium chloride 21.6 grains, sodium carbonate 6.5, sodium sulphate 2.6, in a pint, with some nitrogen and carbonic acid. Used in the neighbourhood in malarious disorders.

Buccacraton. (*L. buccas*, a morsel; *κράς*, to eat; or *καράννυμ*, to mix.) A term used by Lindenus, *Ætær.* ix, 66, for a portion of bread soaked in wine, which anciently served for breakfast.

Buccal. (*L. bucca*, the cheek. *F. buccal*.) Of, or belonging to, the cheek or mouth.

B. artery. (*F. sus-maxillaris*, Ch.; *G. Backenarterie*.) A branch of the internal maxillary, running obliquely forwards on the buccinator muscle with the buccal nerve, supplying the buccal muscles and anastomosing with branches of the facial artery.

B. glands. (*F. glandes buccales*; *G. Backendrüsen*.) Small, racemose, mucous glands lying between the mucous membrane of the cheek and the buccinator muscle. Whether they secrete anything else but mucus is not known.

B. lymphatic glands. The lymphatic glands on the surface of the buccinator muscle, through which the superficial lymphatics of the frontal region pass on their way to the submaxillary lymphatic glands.

B. membrane. The mucous membrane which lines the interior of the mouth.

B. nerve of facial. (*G. Backenlippenzweig*.) Buccal branches are given off from the facial nerve to the buccinator and orbicularis oris muscles; they give branches as they pass to the masseter, the zygomaticus major, the levator anguli oris, and the nasal muscles. They anastomose with the infra-orbital branches of the temporo-facial division of the facial and with the buccal nerve of the inferior maxillary.

B. nerve of inferior maxillary. (*F. buccolabial*, Ch.; *G. Backennerv*.) A branch of the inferior maxillary. It pierces the external pterygoid muscle, and supplies a branch to it,

BUCCALES GLANDULÆ—BUCHU.

and afterwards two or three to the temporal muscle, close to the insertion of which it lies. It divides into two branches, which join the facial nerve, and supply the integument, the buccinator muscle, and the mucous membrane. It is chiefly sensory.

B. nerve, superior. (*L. superior*, upper.) The *B. nerve of facial*.

B. operation. Furneaux Jordan's operation for removal of the tongue, in which the cheek is divided first from the angle of the mouth to the ramus of the jaw.

B. pouch. (*L. sacculus buccalis*; *F. abazone*; *S. abazones*; *G. Hängebacke*, *Backentasche*.) A pouch situated on each side of the mouth, between the cheek and the jaw, in some Cheiroptera, Rodents, and Quadrumana, which serves to contain food. It becomes filled when the masseter is relaxed, and is emptied by the contraction of that muscle.

B. salivary papilla. The prominent opening of the duct of the parotid gland in the cheek.

B. vein. Its branches accompany those of the artery, and it joins the facial vein below the angle of the mouth.

Buccales glandulæ. See *Buccal glands*.

Buccæ. (*L. buccæ*, a mouthful. *G. Bissen*.) Term signifying as much as may be held within the cheeks, a mouthful. The same as *Buccella*. (Ruland and Johnson.)

Buccelaton. (*L. buccella*, a small mouthful; dim. of *buccæ*, a mouthful.) A purgative medicine, consisting of scammony, opium, and aromatics, made up in form of a loaf, or of a thick electuary. *Aëtius*, iii, 100; *Paulus Ægineta*, vii, 5.

Buccella. (*L. buccella*.) A little mouthful.

Applied formerly to a polypus in the nose; because it was supposed to be a portion of flesh parting from the buccæ, or cheek, and finding its way into the nose. (Ruland and Johnson.)

B. purgatoria. (*L. purgatorius*, purgative. *G. Purgurbissen*.) A purgative morvel.

Buccella'tio. (*L. buccella*, a small mouthful.) The application of a pledget of lint to arrest hæmorrhage. *Fallopius*, de *Vuln. part.* v, ii, c. 10.

Buccia. (*It.*) The boiled and pressed pulp of the olive after expression of the oil. It still contains from 22 to 28 per cent. of oil, and is used as a fuel.

Buccina. (*L. buccina*, a shepherd's horn.) The spongy bones of the nasal cavities.

Buccinato-pharyngeal membrane. The pterygo-maxillary ligament.

Buccinator. (*L. buccino*, to sound a trumpet. *F. buccinator alvéolo-labial*, *Ch.*; *I. buccinatorio*; *S. bucinador*; *G. Backenmuskel*.) A thin flat muscle, which occupies the cheek. It arises from the pterygo-maxillary ligament, from the alveolar processes of the upper and lower pairs opposite the molar teeth, and is inserted into the orbicularis oris at the angle of the mouth where the middle fibres decussate. It squeezes food between the teeth, and is used in such actions as blowing a trumpet, from which it derives its name. It is supplied by a branch of the inferior maxillary nerve.

B. nerve. The buccal nerve of the inferior maxillary.

Buccin'idæ. (*L. buccinum*, a shell-fish

like a trumpet.) A Family of the Division *Siphonostomata*, Order *Prosobranchiata*, Section *Branchifera*, of the Class *Gasteropoda*, distinguished by a shell notched anteriorly, or with the canal abruptly reflected, producing a kind of varix on the front of the shell. (Woodward.)

Buccinum. (*L. buccinum*, a shell-fish, so called from its likeness to *buccina*, a trumpet; from *buxum*, a trumpet.) A Genus of the Family *Buccinidæ*. Shell oval, with a large aperture; columella and peristome smooth and not dented.

B. undatum. (*L. undatus*, made in the form of waves. *F. buccin*; *G. Trompetenschnecke*.) The whelk. Used as an article of food; the calcined shell was formerly used as an absorbent; and, filled with salt and then burnt in an earthen pot, as a dentifrice.

Bucco. (*L. bucco*, a babbler; from *buccæ*, the cheek.) One who is wide-mouthed, or who has distended cheeks.

In composition, a prefix signifying relationship to the cheek.

Also, a synonym of *Buchu*.

B.-labial nerve. (*L. labium*, the lip.) The buccal nerve of the internal maxillary.

Also, by some, restricted to the terminal branch of the buccal nerve of the internal maxillary.

B.-labial, superior. The buccal nerve of the facial.

B.-pharyngeal. (Θάρυγξ, the throat.) Relating to the mouth and the pharynx.

B.-pharyngeal aponeurosis. (Ἀπνευρώσις, the end of a muscle.) A synonym of the *Pterygo-maxillary ligament*.

Buccula. (Dim. *buccæ*, the cheek.) The fleshy portion under the chin; used by Bartholin, iii, 11, p. 532.

Also, a small mouth.

Buccule. (*L. buccula*, a cheek. *G. Unterlipp.*) The fatty tissue forming a double chin.

Buccæ. The inner white epiderm of beans. (*Schlickum*.)

Bucellas. A white Portuguese wine, containing, according to Brande, 18.49 parts by volume of alcohol, of sp. gr. 825 at 60° F., in 100 parts of wine.

Bucephalon, red-fruited. The *Trophis americana*.

Bucephalopsis haimænanus. (Βούς, an ox; κεφαλή, the head; ὤψ, the eye.) A larval form of a trematode worm found in the *Cardium rusticum*.

Bucephalous. (Βούς, an ox; κεφαλή, the head. *F. bucephale*.) Like the head of an ox from its size or appearance.

Bucephalus polymorphus. (Βούς; κεφαλή; πολύς, many; μορφή, form.) A larval form of trematode worm found in various species of *Unio* and *Anodonta*.

Buceras. (Βούς, an ox; κέρα, a horn; from the likeness of its seed to a horn. *G. Bockshorn*.) Name used by Hippocrates, de *Morb. Mul.* xciii, i, 24, for the *Trigonella fœnum græcum*, or fenugreek.

B. fœnum græcum. The *Trigonella fœnum græcum*.

Buceros. Same as *Buceras*.

Buchinho. The fruit of *Luffa purgans*.

Buchu. The name given by the natives at the Cape of Good Hope to, and the pharmacopœial name of the leaves of, the *Barosma betulina*, *B. crenulata*, and *B. serratifolia*. *B. pulchella* and

BUCIDA—BUD.

B. betulina are more especially used by the Hot-tentots. They are smooth, greyish green, toothed, marked with pellucid dots at the indentations and apex, having a powerful odour and a warm camphoraceous taste. Buchu leaves contain a volatile oil, smelling like peppermint, which throws down at a low temperature barosma camphor; a body similar to rutin has also been observed. Diuretic stimulant, and stomachic stimulant. Used in chronic inflammation of mucous membrane of urinary passages, and in atonic dyspepsia. At the Cape, buchu is administered in gout and rheumatism; and infused in brandy or vinegar it is used in sprains, bruises, and muscular rheumatism.

B., false. The leaves of the *Empleurum serrulatum* have been imported for buchu. They are distinguished from those of *Barosma serrulata* by being narrower, with the teeth more deflected, and the point acute and wanting a gland.

B. folia. B. Ph. (*L. folium*, a leaf. *F. feuilles de bucco*; *G. Buccoblätter*.) Buchu leaves. See *Buchu*.

B., large. The leaves of *Barosma crenata*, *B. crenulata*, and *B. betulina*.

B. leaves. See *Buchu*.

B., long. The leaves of *Barosma serratifolia* and *Empleurum serratifolium*.

B., short. The leaves of *Barosma betulina*.

Bucida. A Genus of the Nat. Order *Combretaceae*.

B. bucceras. (Bois, an ox; *κερας*, a horn.) Olive bark tree. Hab. West Indies. The bark is astringent.

B. capitata. (*L. capitatus*, having a head.) Yellow sandera. Hab. Jamaica. A decoction is used in syphilis.

Buck. (Sax. *bucca*, a he-goat.) The male of the deer, goat, hare, and other animals.

B.-bean. (By some said to be a corruption of *bog bean*, from its place of growth; by others held to be a derivation of Dutch *bocksbönnen*, or *G. Bocksböhne*, from *Scharbock*, the scurvy, and *böhne*, a bean; a remedy against scurvy.) The *Menyanthes trifoliata*, or water-trefoil.

B.-bean, American. The *Menyanthes verna*.

B.-berry. The *Vaccinium stamineum*.

B.'s horn plantain. The *Plantago coronopus*.

B. mast. (Eng. dialect, *buck*, beech; Sax. *mest*.) The seeds of the beech tree, *Fagus sylvatica*.

B. yam. The *Dioscorea triphylla*.

Buck'et fever. A term for Dengue fever.

Buck'eye. The *Esculus hippocastanum*.

B., red. The *Esculus paria*.

Buck'ho. A synonym of *Buchu*.

Buckland'ess. A Tribe of the Nat. Order *Hamamelaceae*, having several ovules in each cell.

Buck'rams. The *Allium ursinum*.

Buck'thorn. (A translation of *L. spina*, a thorn; *cervina*, belonging to a deer, its old name; or a modification of *G. buzdorn*, a translation of *πυξάκων*, which was perhaps the same plant.) The *Rhamnus catharticus*, or purging buck-thorn.

B., dyer's. The *Rhamnus insectorius*.

B., Palestine. The *Rhamnus paliurus*.

B., purg'ing. The *Rhamnus catharticus*.

B., sea. The *Hippophaë rhamnoides*, the

berries of which are used in sauces, and are said to possess narcotic properties.

Buck'u. A synonym of *Buchu*.

Buck'wheat. (Eng. dialect *buck*, for *beech*; Sax. *bæc*, beech; *G. bucke*, beech. *F. sarrasin*; *L. saggina*, *grano saraceno*; *G. Buckweizen*.) The *Polygonum fagopyrum*, called buckwheat, as if beechwheat, from the resemblance of its seeds to beech mast. The seeds are nutritive, and are used largely in Eastern countries, and in smaller quantities in Europe, to make bread or puddings, but they are deficient in nitrogenous principles and in fat. Buckwheat flour contains, in 100 parts, starch 79.664, nitrogenous principles 2.646, dextrin 2.86, sugar .914, fat .943, and water 12.754.

B., climbing. The *Polygonum convolvulus*.

B., eastern. The *Polygonum disarticulatum*.

Buck'wheats. The plants of the Nat. Order *Polygonaceae*.

Buonemia. (Bois, a particle of increase; *νεμω*, the leg.) A disease of the leg, distinguished by tense, diffuse, inflammatory swelling.

B. sparganet'ica. (*Σπαργανόν*, to wrap in swaddling clothes.) The swelled leg of the puerperal state, or phlegmasia dolens.

B. trop'ica. (*Προκός*, the tropics.) The disease otherwise called Barbadoes leg, and elephantiasis arabum.

Bucranion. (Bois, an ox; *κρανιον*, a head; from a supposed likeness of its flower to an ox's head.) A name for the Genus *Antirrhinum*, or snap-dragon. (Quincy.)

Buc'ton. The hymen, according to Severinus Pirisus, in *Opusc. Phys. Anat.* i. 5, p. 47.

Bud. (Old *F. bote*, to push. *F. denton*, *bourgeon*; *L. botton*; *S. boton*; *G. Knospe*.) A conical body at the termination of the stem or a branch of plants, and at the axils of the leaves, which contains the axis and its appendages in a rudimentary state.

B., accessory. A bud or buds in addition to, and by the side of, the one normal bud.

B., adventitious. (*L. adventitious*, foreign.) A bud which is produced in an abnormal and irregular position, as on the root of a plant, on a leaf, or on the stem.

B., ap'ical. (*L. apex*, the extreme end of a thing.) A bud placed at the extremity of the axis of a plant.

B., em'bryo. An adventitious bud when enclosed in the bark, as in the cedar of Lebanon.

B., fles'h'y. A bud the scales of which are thick and succulent, as in the tiger lily. Also called *Bulbil*.

B., flow'er. An unexpanded blossom.

B., la'tent. (*L. lateo*, to lie hid.) A bud in which there is no apparent external structure when not growing, such as is seen on the horse-chestnut.

B., leaf. A bud which develops leaves, and serves for the growth of the stem.

B., mix'ed. A bud which develops both leaf and flower.

B., na'ked. A bud without scales or other protection.

B., nor'mal. A single bud at the termination of a stem or branch, or in the axil of a leaf.

B. ru'diment. Term applied by Pringsheim to a cell formed, by the growth of *sepia*, from the distended part of the tube just below the 3—6-called apex of the proembryo in *Chara*.

B. scales. The outer dry scales of a bud which are aborted leaves; they serve to protect the inner part of the bud from cold and moisture.

B., scaly. A bud possessing external scales in its period of rest.

B., subpetiolar. (L. *sub*, under; *petiolus*, a little foot.) A bud which is enveloped by the base of the petiole of a leaf, as by a sheath, as in the plane tree.

B., terminal. (L. *terminalis*, belonging to a boundary.) The same as *B., apical*.

B.-variation. The appearance of new characters in particular buds, which develop differently from the other shoots of the same stock. There are two forms. In one case the abnormal shoot of a stock, which itself belongs to a variety, resembles or reverts to the primitive form; in the other case new characters, not previously displayed, arise on particular shoots of a stock.

Buda. See *Ofen*.

Budding. (Same etymon as *Bud*. F. *gemination*; G. *Knospong*.) The mode of propagation of a plant by introducing and keeping fixed a bud under the bark.

A process of the division of living cells. The nucleus first divides: one of the segments approaches the cell wall; a protrusion occurs there, includes the small nucleus, and forms a bud, which finally separates as a complete cell.

Buddleia. A Genus of the Nat. Order *Scrophulariaceae*.

B. americana. Hab. South America, West Indies. Used in emollient baths and fomentations. (Waring.)

B. brasilien'sis. Hab. Brazil. Used for mucilaginous poultices. (Waring.)

B. globosa. Lam. (L. *globosus*, round like a ball.) Hab. Mexico. Used as a stimulant.

B. madagascaren'sis. Hab. Madagascar. Used in asthma, cough, and catarrh. (Waring.)

B. polys'tachys. (Πολύς, many; στάχυς, an ear of corn.) Hab. Abyssinia. Given for tapeworm. (Waring.)

B. verticilla'ta. (L. *verticillus*, the whirl of a spindle.) Hab. Mexico. Used as an application to wounds.

Bud'ram. (Welsh.) Oatmeal steeped in water for twenty-four to thirty-six hours till it begins to ferment, then skimmed and boiled to the consistence of gruel.

Buo. France; Hautes Pyrénées, near St. Sauveur. A weak chalybeate water.

Buoc'physis. (Βούς, an ox; ἐκφύω, to rush forth.) Cow-pox.

Bu'na. (Buono.) A Genus of the Nat. Order *Eubiaceae*.

B. hexan'dra. Pohl. (*Hexandra*, having six stamens; from ἕξ, six; ἀνὴρ, a man.) Hab. Brazil. Bark bitter and febrifuge.

B. obtusifolia. De Cand. (L. *obtusius*, blunt; *folium*, a leaf.) Bark used as a mild febrifuge.

Buff. (Contr. of F. *bufle*, a buffalo.) A pale yellowish colour like the tanned and dressed skin of a buffalo, called buff-leather.

B., inflammatory. The buffy coat of coagulated blood.

Buffalo. (S. *bufalo*. F. *bufle*; I. *bufalo*; G. *Buffel*, *Buffelochs*.) The *Bos bubalus*. Buffalo beef is dark in colour and strong in flavour.

Buffell. A ring made of the horn of a

buffalo, which is worn on the ring finger to cure the cramp. (Parr.)

Buffon, George Louis le Clerc, Comte de. Born at Montbard, in Burgundy, 1707; died, from stone in the bladder, 1788. French naturalist. He wrote the '*Histoire naturelle*.'

Buffy coat. (L. *corium phlogisticum*, *crusta pleuritica*; F. *couenne inflammatoire*, *couenne pleuritique*; I. *colenna*; S. *costra inflammatoria*; G. *Speckhaut*.) The upper layer of the clot in coagulated blood, which, under certain circumstances, contains no red corpuscles, and thus is colourless, or nearly so. It consists of fibrin and white corpuscles. It is always formed when the red corpuscles run together and so fall rapidly to the bottom of the vessel, and, except in the pregnant female, is not found to occur in the healthy human blood. The buffy coat is formed in inflammatory conditions, in chlorosis, and in all conditions of blood which make the liquor sanguinis lighter or the red corpuscles proportionably heavier. In conditions where the fibrin is actually in excess the surface of the buffy coat becomes concavely cupped. In some animals, as the horse, the blood naturally coagulates so strongly that a buffy coat is always formed when blood is let. It is also found in those cases in which the coagulation of blood is retarded by such artificial means as cold.

Bu'fo. (Βούς, an ox; φέω, to slay; they were supposed to be deadly to oxen.) A Genus of the Order *Anoura*, Class *Amphibia*. Body squat; limbs short; gait heavy; back warty; maxilla without teeth.

B. vulga'ris. (L. *vulgaris*, common. F. *crapaud commun*; I. *rospo*; S. *sapo*; G. *Kröte*.) The common toad, formerly believed to be of great efficacy in medicine; the flesh dried and powdered was supposed to be powerfully diuretic and diaphoretic, and was given in dropsy; the living animal was applied to carbuncles and to cancer to draw out the virulent matter, and was alleged to swell visibly with the absorbed virus. The whole animal dried was worn about the neck as an amulet; it was believed to have a gem in its head (*Bufo'nite*), to which extraordinary virtues were attributed.

Bufo'nes exsiccato'es. (L. *bufo*, a toad; *exsiccatus*, dried. G. *getrocknete Kroten*.) Dried toads. See *Bufo vulgaris*.

Bufo'nidæ. (L. *bufo*, a toad.) A Family of the Group *Oxydactyla*, Order *Batrachia*. They are also described as a Section of the Order *Anoura*, of the Class *Amphibia*; as a Family of the *Opiathoglossa platydactyla*, and in other ways. Body squat; skin warty and glandular; toothless; tongue attached by its anterior extremity to the mandible; pupils transverse; hind limbs not much larger than the fore limbs; toes of hind feet only slightly webbed.

Bu'fonite. The toad-stone, believed formerly to be generated in the head of the toad, or to be vomited by the same animal; they were also called *Chelonites*, and other names, for equally good reasons. Toad-stones were in fact the teeth of several species of fossil fish, chiefly the anarrhichs and sparus; they had extraordinary properties attributed to them, were supposed to possess great alexipharmic virtues, and to cure the bite of poisonous animals when applied to the part, according to Aldrovandus, *de Insectis*, iv, 3, m. 469.

Bug. (Welsh *bug*, a hobgoblin. F. *punaise*;

BUGANTIA—BULB.

I. cimex; **S. chinche**; **G. Wanus**.) The *Cimex lectularius*. The bite of a bug produces a raised, circular, flattened papule, having a red point in the centre produced by the puncture.

B., agario. (*F. agario fauces orange*; *G. Fliegenwamm*.) The *Agaricus muscarius*. Used formerly to destroy bugs.

B. bane. The *Cimicifuga racemosa*.

B., harvest. The *Acerus autumnalis*, or *Leptus autumnalis*. Probably this insect is a larval form of a *Tetranychus* or a *Trombidium*.

Bugantia. A chilblain.

Bugle. (*L. bugilla*, the Roman name of this plant.) The *Ajuga reptans*.

B., common. The *Ajuga reptans*.

B., mountain. The *Ajuga pyramidalis*.

B., pyramidal. The *Ajuga pyramidalis*.

B., water. The *Lycopus virginicus*.

B. weed. The *Lycopus virginicus*.

B., yellow. The *Ajuga chamæpitys*.

Bugloss. (*Boû*, an ox; *γλωσσα*, the tongue; from the resemblance of its leaves. *F. bugloss*; *I. buglossa*; *S. buglossa*; *G. Ochsenzunge*.) The *Anchusa officinalis*, *A. italica*, and *Lycopsis arvensis*.

B., cowslip. The *Pulmonaria officinalis*, from its likeness in leaf and flower respectively to the two plants.

B., creeping. The *Lycopsis vesicularia*.

B., dyer. The *Anchusa tinctoria*.

B., garden. The *Anchusa officinalis*.

B., small wild. The *Lycopsis arvensis*.

B., stone. The *Echium italicum*.

B., upright. The *Ajuga pyramidalis*, or *Bugula*.

B., viper. The *Echium vulgare*.

Buglossa. See *Bugloss*.

Buglossum. The bugloss. Also, an old name for the sole, *Solea vulgaris*.

B. angustifolium majus. (*L. angustius*, narrow; *folium*, a leaf; *major*, greater.) The *Anchusa officinalis*.

B. hortense. (*L. hortensis*, belonging to a garden.) The *Anchusa officinalis*.

B. latifolium. (*L. latius*, broad; *folium*, a leaf.) The *Borago officinalis*.

B. sativum. (*L. sativus*, that which is sown.) The *Anchusa officinalis*.

B. sylvestre. (*L. sylvestris*, belonging to a wood.) The *Anchusa officinalis*.

B. tinctorum. (*L. tinctorius*, belonging to a dyer.) The *Anchusa tinctoria*.

B. vulgare majus. (*L. vulgaris*, common; *major*, greater.) The *Anchusa officinalis*.

Bugula. (Probably a dim. of *Buglossa*.) The *Ajuga pyramidalis*.

B. chamæpitys. (*Xquat*, on the ground; *πῖτυς*, a pine tree.) The *Ajuga chamæpitys*.

B. pyramidalis. (*L. pyramidalis*, like a pyramid.) The *Ajuga pyramidalis*.

B. reptans. (*L. repto*, to creep.) The *Ajuga reptans*.

Buiatrica. (*Boû*, an ox; *ιατρικός*, belonging to medicine. *G. Rindreichkunde*.) The medical treatment of cattle diseases.

Buidhe Chonnel. Same as *Blæd*.

Builth. Wales; Brecknockshire. Picturesquely situated on the Wye. There are three springs, a chalybeate, a sulphur, and a strong salt spring, besides others in the neighbourhood. The salt spring contains 66 grains of sodium chloride and 11 grains of calcium chloride, in the pint. Used in dyspepsia and liver diseases.

Buisard. France. A mineral water, containing calcium chloride and carbonate.

Bulam fever. Name given on the African coast to yellow fever.

Bula'ma boil. An inflamed and painful boil common on the west coast of Africa, caused by the larva of an undetermined insect.

Bula'ta. Same as *Balaia*.

Bulb. (*Βολβός*, a bulb. *F. bulbe*; *I. and S. bulbo*; *G. Knolle*, *Zwiebel*, *Belle*.) In Botany, a subterranean bud with fleshy scales, sending off roots from below and a stem above; or it may be looked upon as a very short stem, producing roots below, and leaves in the form of scales above. Confined to Monocotyledons.

Also, a generic term in Biology for several more or less rounded structures.

B., aortic. (*I. bulbo dell aorta*; *G. Aortenwiebel*.) The anterior and upper of the three original divisions of the rudimentary tubular heart of the embryo; from it are developed the primitive aortic arches, which, as well as the bulb, are permanent in some animals.

Also, the enlargement at the commencement of the aorta. See *Aorta radix*.

B., arterial. Same as *B., aortic*.

B., artery of. (*G. Zwiebelarterie*.) A short branch arising from the internal pudic artery between the layers of the subpubic fascia; it passes transversely inward, pierces the bulb of the urethra and ramifies within it; it gives a branch to Cowper's gland. It varies in size, is sometimes double and sometimes absent.

B., auditory. The membranous labyrinth and the cochlea are together so called.

B., central. The bulbous extremity of a nerve-fibril in a corpuscle of Krause.

B., coated. (*Low. L. cois*, a garment.) Same as *B., tunicated*.

B., dental. (*F. bulbe dentaire*; *I. bulbo del dente*.) The papilla which is developed at the bottom of the primitive dental groove, and which, projecting into the descending enamel germ, becomes the tooth pulp.

B. of corpus cavernosum. A slight enlargement near the junction of each corpus cavernosum with its fellow.

B. of corpus spongiosum. The posterior bulbous portion of the corpus spongiosum penis, called *B. of urethra*.

B. of eye. The globe of the eye.

B. of feather. The papilla at the bottom of the feather follicle of the skin, on which the feather rests.

B. of female. The *B. of vestibule*.

B. of fornix. The *Corpus albicans* of each side.

B. of hair. (*F. bulbe du poil*; *I. bulbo del pelo*; *G. Haarknopf*, *Haarzwiebel*.) The soft enlargement of the root end of the hair.

B. of ovary. By Bouget, this term is applied to the plexus of veins and to the arteries of the ovary.

By Sappey, it is applied to the body of the ovary itself.

B. of Oug'et. Same as *B. of ovary*.

B. of spinal marrow. The medulla oblongata.

B. of throat. The tonsils.

B. of tooth. See *B., dental*.

B. of ure'tra. (*G. Harnröhrenzwiebel*.) The posterior rounded end of the *corpus spongiosum* of the penis.

BULBACEOUS—BULBUS.

B. of vagina. The *B. of vestibule*.
B. of vestibule. (G. *Schwellkörper des Perhofes*.) An elongated oval mass, about an inch long, lying on each side of the vestibule of the vagina, and consisting of a venous plexus. Together they are the analogue of the bulb of the male urethra. The bulb of the vestibule is covered internally with mucous membrane, and externally by part of the constrictor vaginae muscle.

B., olfact'ory. (L. *olfacio*, to smell. I. *bulbo olfactorio*; G. *Riechkolben*, *Riechnervenkolben*.) The anterior oval termination of the olfactory tract, consisting chiefly of grey substance, and giving origin to the branches of the olfactory nerve, which pass through the foramina in the cribriform plate of the ethmoid.

B., rachid'ian. (Γάχις, the spine.) The medulla oblongata.

B., scaly. A bulb with narrow, thickish, imbricated scales, as the lily.

B., specific gravity. See *Specific gravity bulb*.

B., tunicated. (L. *tunicatus*, provided with a coating.) A bulb with broad, enfolding fleshy scales, as the onion.

Bulba'ceous. (L. *bulbus*. F. *bulbacé*; G. *zwiebelartig*, *zwiebeltragend*.) Applied to a bulb-bearing plant.

Bulbar. (Same etymon.) Relating to a bulb.

Also, and especially in the term bulbar paralysis, relating to the bulbous rachidicus or medulla oblongata.

B. disc'a'ces. A term under which some authors include epilepsy and bulbar paralysis.

B. paral'ysis. See *Paralysis, bulbar*.

Bulbi. (Plural of L. *bulbus*; a bulb.) A term applied to rounded eminences or parts of organs.

B. forn'cis. (Fornix.) The *Corpora albicantia*.

B. prio'rum cru'rum forn'cis. (L. *prior*, first; *cruis*, a leg.) The *Corpora albicantia*.

B. vestib'uli. (L. *vestibulum*, an entrance.) See *Bulb of vestibule*.

Bul'biceps. (L. *bulbus*; *caput*, the head. G. *zwiebelkopfig*.) Bulbous-headed.

Also, a stem with a bulbous base.

Bulbiferous. (L. *bulbus*, a bulb; *fero*, to bear. F. *bulbifère*; G. *zwiebeltragend*.) Having or bearing bulbs.

Bulbiform. (L. *bulbus*; *forma*, shape. G. *zwiebelformig*.) Having the shape of a bulb.

Bulbil. (L. dim. *bulbus*, a bulb. F. *bulbille*; G. *Zwiebelknospe*.) A small, solid, or scaly bud, growing in the axils of the leaves of a plant, which, being detached from it, becomes developed and produces a new individual.

The term is also applied in Chara to a mass of isolated underground nodes with greatly abbreviated whorls.

Bulbilliferous. (L. *bulbillus*; *fero*, to bear. F. *bulbillifère*; G. *bulbillentragend*.) Bearing bulbils.

Bulbillus. Same as *Bulbil*.

Bulbine. A Genus of the Nat. Order *Liliaceae*.

B. planifo'lia. R. and S. (L. *planus*, flat; *folium*, a leaf.) Hab. Europe. Said to be a purgative.

Bulbip'arous. (L. *bulbus*; *pario*, to bring forth.) Same as *Gemmiparous*.

Bulblet. (Dim. of *bulb*.) Same as *Bulbil*.

Bulbocastan'eum. Same as *Bulbocastanum*.

Bulbocast'anum. (Βολβός, a bulb; κάστανος, a chestnut.) The *Bunium bulbocastanum*, so called because its root is bulbous, and has the flavour of a chestnut.

Bulbocaverno'sus. (L. *bulbus*, a bulb; *cavernosus*, cavernous; in reference to the bulb of the urethra and the cavernous bodies of the penis.) The accelerator urinae muscle.

Bulbocavernous glands. (Same etymon.) Cowper's glands.

Bulboco'dium. (Βολβός, a bulb; κώδιον, a skin.) The *Narcissus pseudonarcissus*.

Bulbodium. (L. *bulbus*.) A synonym of *Corm*.

Bulbogemma. (L. *bulbus*; *gemma*, a bud.) The same as *Bulbil*.

Bulbonach. The *Lunaria rediviva*.

Bulbophyllum. (L. *bulbus*, a bulb; *folium*, a leaf.) A Genus of the Nat. Order *Orchidaceae*.

B. nu'tans. (L. *nuto*, to nod.) Hab. Madagascar. Used as an emollient.

Bulborrh'exis. (Βολβός, a bulb; ῥήξις, a breaking.) Rupture of the globe of the eye.

Bul'bosin. A bitter, uncrystallisable principle, soluble in water and in absolute alcohol, insoluble in ether; obtained from the *Agaricus bulbosus*, and to which, according to Boudier, its poisonous properties are due; it is said to differ from amanitin.

Bulbo'sus. Same as *Bulbosus*.

Bulbotu'ber. (L. *bulbus*; *tuber*, a bump. G. *Knollzwiebel*, *Zwiebelknolle*.) A tuberculated bulbous underground dilated stem, with very few scales; also called *Corm*.

Bulbourethra'lis. (Βολβός, a bulb; οὐρήθρα, the urethra.) The accelerator urinae muscle.

Bul'bous. (L. *bulbosus*. G. *zwiebelartig*, *ausgeschwollen*, *knollig*.) Of a rounded form. Bearing, or having the structure of, a bulb.

B. ag'arie. See *Agaricus bulbosus*.

B. ba'sed. Swollen at the base.

B. crow'foot. The *Ranunculus bulbosus*.

B. fing'ers. Enlargement of the ends of the fingers, with incurvation of the nails, seen in phthisical people and in cases of cyanosis.

B. por'tion of ure'thra. See *Urethra, bulbous portion of*.

Bul'bill. Plural of *Bulbilus*.

Bul'bulus. (L. dim. of *bulbus*. G. *Zwiebelchen*.) A small bulb, such as develops in the angles of the scales of a growing or propagating bulb.

Also, the same as *Bulbil*.

B. thra'cus. (L. *bulbus*, a bulb; *thracus*, belonging to Thrace.) The bulbous edible root of *Cyperus esculentus*.

Bul'bus. (Βολβός, a bulb.) A bulb; a bulb-shaped structure.

B. all'i. U.S. Ph. (L. *allium*, garlic. F. *ail*; G. *Knoblauch*.) The bulb of *Allium sativum*.

B. aor'ticus. Same as *Bulb, aortic*, and *Aorta radix*.

B. arterio'sus. (*Arteria*.) The *Bulb, aortic*.

B. care'tis commu'nis. (L. *communis*,

BULSIS—BULLET.

common.) An enlargement of the upper part of the carotid artery, which occurs in about 33 per cent. of adults. It is not perceptible during the first year or two of life. A similar enlargement is sometimes found at the commencement of the external or internal carotid artery.

B. cepa. (L. *cepa*, an onion.) The onion; the bulb of the *Allium cepa*.

B. cinereus. (L. *cinereus*, ashen-grey colour.) A synonym of *Bulb*, olfactory.

B. colchici. Colchicum root. See *Colchici cormus*.

B. oculentus. (L. *oculentus*, eatable.) Probably the *Allium ascalonicum*.

B. fornicis. (L. *fornix*, an arch.) A synonym of each of the *Corpora albuginea*.

B. glandulosus. (L. *glandulosus*, full of glands.) The *Proventriculus*.

B. medullae spinalis. (L. *medulla*, marrow; *spinalis*, belonging to the spine.) The medulla oblongata.

B. oculi. (L. *oculus*, the eye. F. *bulbe de l'œil*; G. *Augapfel*.) The eyeball.

B. olfactorius. See *Bulb*, olfactory.

B. ovarii. (L. *ovarium*, the ovary.) See *Bulb of ovary*.

B. pilii. (L. *pilus*, hair.) See *Bulb of hair*.

B. rachidicus. (F. *épine*, the spine.) A synonym of the *Medulla oblongata*.

B. scellus. The bulb of *Scilla maritima*.

B. urethrae. (O. *ὀυρήθρα*, from *ὀύρις*, to pass urine.) See *Bulb of urethra*.

B. vaginae. (L. *vagina*, a sheath, the vagina.) The *Bulb of the vestibule*.

B. vena jugularis. (L. *vena*, a vein; *jugulum*, the throat. G. *Drosseladerenvein*.) The enlargement of the jugular vein at its commencement; it occupies a depression in the temporal bone.

B. vestibuli. (L. *vestibulum*, from *vestis*, to cover.) See *Bulb of vestibule*.

B. victorialis longum. (L. *victorialis*, belonging to the mountain St. Victoire; *longum*, long. G. *langer allermannaharnisch*.) The bulb of the *Allium victoriale*.

B. vomitoria. (L. *vomitorius*, emetic.) The *Hyacinthus muscari*.

Bulcasis. (Βούλησις, a willing. G. *Stroden*, *Willk.*) The will.

Bulga. (L. *bulga*, a bag.) The vulva; also the womb.

Bulging. (Old Sw. *bulga*, to swell out.) Protrusion, a circumscribed swelling out. Applied to such occurrences as the prominence seen in the early stage of a hernia, or the projection of a part of the chest walls in thoracic aneurysm.

Bulimia. (Bow, a particle of augment; *λιμω*, hunger. F. *boulimie*, *faim canine*, *addé-phagie*; I. *bulimo*; G. *Heiss-hunger*, *Gefrassigkeit*.) A morbid hunger, chiefly occurring in idiots and maniacs, in which the patients eat so inordinately that regurgitation or vomiting occurs, and then they eat again; the so-called canine hunger. The older writers paid great attention to this condition. Cullen distinguished three species.

B. cynorexia. (Κύων, a dog; *ἀρεξία*, appetite.) Same as *B. emetica*.

B. emetica. (Εμετικός, provoking sickness.) In which there is desire of food in great quantity, which is immediately vomited up again.

B. bellacissima. (L. *bellus*, a glutton.) In which the craving for food is the only disorder.

B. syncopea. (Σύκορσις, a swoon.) In which the sense of hunger is preceded and caused by fainting.

Bulimiasis. Same as *Bulimia*.

Bulimic. (Same etymon.) Relating to *Bulimia*.

Bulimicus. Same as *Bulimia*.

Bulimy. Same etymon and meaning as *Bulimia*.

Bulithos. (Βούθ, an ox; *λίθω*, a stone.) A bezoar, or intestinal concretion, found in the kidneys, gall-bladder, or urinary bladder of the ox. (Castellus.)

Bull. (From Sax. *bellan*, to bellow. F. *taureau*; I. *toro*; S. *toro*; G. *Stier*.) The male of the *Bos taurus*.

B.'s eye condenser. See *Condenser*, *bull's-eye*.

B.'s foot. The *Tussilago farfara*, from the shape of its leaf.

B.'s head. The *Muricea ocellata*.

B.'s liver. The *Fistulina hepatica*.

B. sagg. Pool sedge. The *Typha latifolia*.

B.'s tongue. The *Fistulina hepatica*.

B. weed. (O. E. *bell*, a globular body.) The *Centaurea nigra*.

B. wort. Pool wort. The *Scrophularia*.

Also, *Ammi majus*.

Bulla. (L. *bulle*, a bubble of water. F. *bulle*; I. *bolle*; G. *Blase*, *Wasserblase*.) A bleb. A more or less circular elevation of the epidermis, caused by effusion of a serous or sero-purulent fluid; produced by disease or venousness. A bulla differs from a vesicle only in its size, and may be from half an inch in diameter to the size of a Tangerine orange.

Also, a term applied to the tympanic element of the temporal bone, when, as in the dog, it forms a large bubble-like appearance.

Bullace. (Gael. *bulacair*.) The *Prunus communis*, var. *instituta*.

Bullae. (L. plural of *bulle*, a water-bubble. F. *bulles*, G. *Blasen*.) An Order in the classification of skin diseases by Willan, including pemphigus and pompholyx.

Also, large vesicles or blebs, or appearances resembling them.

B. rotundus cervicis uteri. (L. *bulle*, a bubble, *rotundus*, round; *cervix*, the neck; *uterus*, the womb.) The glands of Naboth.

Bullete. (L. *bullatus*, inflated, having a bubble. G. *blasig*.) Blistered; having blebs or blisters; inflated.

Applied to leaves where the surface rises above the veins, convex on one side, concave on the other, as the Savoy cabbage.

Bull'dog for ceps. Forceps with a spring catch, a fenestrated wide blade, tapering rapidly, and the extremity of one blade pointed, of the other notched, for the reception of the point. They are used for taking hold of the end of bleeding vessels.

Bullescence. (L. *bulle*, a bubble.) A term applied to the condition occurring in leaves when the intervenous structure arises above the veins, as in the Savoy cabbage.

Bullescent. Same as *Bullete*.

Bullet. (F. *boulet*, a bullet; from L. *bulle*, a stud.) A ball-shaped missile for a gun.

B. detector. An instrument to enable

BULLFIST—BUNGARUS.

the presence of a leaden bullet to be detected at the bottom of a deep wound, or when embedded in bone. Much ingenuity was directed to this object in connection with the well-known case of Garibaldi, where Nélaton discovered the bullet by a probe made of porcelain, which was coloured by the metal. Lacombe Liérs employs a small osula forceps, by which a piece of metal can be pinched off, whilst Liebreich employs two wires—the poles of a battery—connected with a galvanometer, the needle of which moves when contact with a metal is effected.

B. extractor. (G. *Angelachrauche*.) A kind of gimlet which, guarded by a canula, is inserted into the wound and screwed into the bullet.

B. forceps. Forceps with long handles and short-toothed blades, that is, having the hinges near the extremity. Used for extracting bullets.

Bull'et. (Perhaps a corruption of *Boista*.) A name of several species of *Lycopodium*.

Bullicame. See *Vierbo*.

Bulliferous. (L. *bulis*; *fera*, to bear. F. *bullifère*; G. *blancstragend*.) Bearing blisters or venicles.

Bullock. (Sax. *bulluca*, a little bull. F. *boeuf*; L. *bue*; G. *Ochs*.) The castrated male of the domesticated *Bos taurus*.

B.'s blood. Has been used as a remedy in anæmia, phthisis, and general debility. It may be drunk warm, or may be concentrated and taken in the form of pill.

B.'s heart. The *Anona reticulata*.

B.'s lung-wort. The *Verbascum theopras*, so called because it was used in chest diseases of oxen.

Bullose. (L. *bulle*, a water bubble.) Same as *Bullets*.

Bullos. (Same etymon.) Having blebs or blisters.

B. diseases. In Tilbury Fox's classification, herpes and pemphigus.

Bulls and cows. The *Arum maculatum*.

Bull'segg. (*Segg* for *edge*.) The *Typha latifolia*.

Bullula. (Dim. of *bulle*, a bubble. G. *Bläschen*.) A small bleb or blister.

Bullule. (Dim. of *Bulle*.) A small bleb or blister.

Bull'wort. (More probably poolwort, from the habit.) The *Scrophularia aquatica*, and also, the *Anem. majus*.

Bully tree. The *Achras zapota*.

Also, the *Bumelia nigra*.

Bulrush. (Polerush or poolrush. F. *jonc d'eau*; L. *giunco*; G. *glatte Binse*.) The *Typha latifolia*.

And also, the *Scirpus lacustris*.

Bulrushworts. The plants of the Nat. Order *Typhaceæ*.

Bulung. The Javanese name of the *Fucus vesiculosus*.

Bumam'mus. (Bov. a particle of increase; *μάμμη*, the mother's breast. G. *Grossberrig*.) Having large berries like a nipple.

Bumas'thon. (Bov. a particle of increase; *μαστός*, for *μαστός*, the breast.) Excessive size of the female breast.

B. pendulum. (L. *pendulus*, hanging.) A large female breast hanging down.

Bumas'tus. (Same etymon.) Same as *Bumasthon*.

Alse (G. *groosberrig*), bearing large berries like a large nipple.

Bumble-bee. (Old Dutch *bommelon*, to buzz.) A name given to the species of the Family *Bombide*; also called *Humble-bee*.

Bumblkite. The *Rubus fruticosus*.

Bumelia. (*Baumalia*, a kind of ash.) The *Fraxinus excoelior*.

Bumelia. (Same etymon.) A Genus of the Nat. Order *Sapotaceæ*. Tropical trees or shrubs, with a bitter astringent bark; some of the species supply *Balsam*.

B. lyctol'ea. Gaertn. (*Amouéris*, wolf-like.) Hab. Carolina. Fruit used in diarrhoea.

B. montana. (L. *montana*, belonging to a mountain.) Red bully tree. Hab. Jamaica. Bark used as a substitute for cinchona.

B. nigra. (L. *niger*, black.) Bully tree. Hab. West India. Used instead of cinchona, and as an application to foul ulcers; supplies bastard balsam.

B. salicifolia. (L. *salix*, a willow; *folium*, a leaf.) Willow-leaved sapota. Hab. West India. Used as a substitute for cinchona. Also called *Achras salicifolia*.

Bumping. (Welsh *pwmpio*, to thumb.) The sudden jump or jar occurring when certain liquids are boiled in glass vessels. It may be prevented by putting into the vessel small angular fragments of glass, by giving the lower part of its interior a metallic coating, or by passing a slow current of air or carbonic acid through a fine-pointed glass tube to the bottom of the fluid.

Buma. The *Coffea arabica*.

Bumochia. A Genus of the Nat. Order *Malpighiaceæ*.

B. armenifera. (L. *armeniaca*, Armenian.) Hab. Peru. Seeds poisonous.

Buncombe. United States. A county of North Carolina, in which there are mineral springs. (Dunblison.)

Bundle. (Sax. *byndel*, dim. of *bund*, a thing bound up.) A thing or things tied or gathered up into one package.

B. sheath. (G. *Grasbüschelchride*, *Strangheride*.) A term applied by Sachs to partially or entirely closed envelopes or sheaths, composed of fundamental tissue, which accompany the fibro-vascular bundles of plants.

Bundu. Otherwise *Bonduc*.

Bunduhr. The *Corylus anellana*.

Bunewand. The *Heracleum spondylium*.

Bung'arum pa'mah. The native Indian name of the *Bungarus fasciatus*.

Bungarus. A Genus of venomous snakes of the Family *Elapidae*. Suborder *Proteroglyphæ*, Order *Ophidia*. Hab. India, Ceylon, and China. The characters of the Genus are—Body rather elongated; tail comparatively short; head more or less dilated, depressed, with broad rounded muzzle, scarcely distinct from neck, which is not dilatable; eye small, with round pupil; rostral shield broader than high, reaching to upper surface of snout; anterior frontals half the size of posterior, vertical 5-sided; occipitals tapering behind; nostrils rather wide between two nasals; scroal none; one pre-, two post-oculars; seven upper labials, the third and fourth entering the orbit; scales smooth, moderately imbricated, disposed in oblique rows, forming fifteen longitudinal series round the body, those of the vertebral series are very broad, hexagonal; ventrals between 200 and 250; anal and sub-

BUN-HALDI—BUPEINA.

caudal entire; scales without apical groove; maxillary bone with a fang in front, a second small simple tooth at some distance behind the fang. The Bungari are diurnal terrestrial snakes, living in holes in the ground; fang shorter, and therefore bite less dangerous, than that of the Cobra, since it can be more easily excised.

B. annulatus. (*L. annulatus*, furnished with a ring.) A synonym of *B. fasciatus*.

B. arcuatus. (*L. arcuatus*, part. of *arcus*, to bend like a bow.) A variety of *B. caeruleus*. The upper parts of the animal present narrow white streaks, arranged in pairs.

B. candidus. (*L. candidus*, glistening.) A synonym of the *B. caeruleus*.

B. caeruleus. (*L. caeruleus*, dark blue.) The krait. The first temporal shield is considerably longer than high; ventrals 201 to 221, subcaudals 38 to 56; lower parts uniform white; upper parts bluish or brownish black, uniform, or with more or less numerous very narrow white cross streaks, not quite so broad as a scale, and generally radiating from a white vertebral spot; no collar; ventral surface sometimes livid or yellow. This snake is common all over India. It may attain a length of four or five feet. Next to the Cobra it is the snake most destructive to human life in India.

B. fasciatus. (*L. fascia*, a band.) A species found in Burmah, Kangoon, and India. Body trigonal, with sharp dorsal ridge and declining sides; body with alternate broad, black, and yellowish rings extending across the belly; there are about twenty-five to thirty-three black rings; head black anteriorly, and on the sides separated from the triangular surface by a yellow V-like mark; lower parts and throat uniform yellow. Length sometimes over six feet. Bite very dangerous.

B. lividus. (*L. lividus*, of a leaden colour.) A variety of *B. caeruleus*. The upper parts of the animal are uniform blackish brown.

Bun-haldi. The Hindustani name of the root of the *Curcuma aromatica*.

Bunias. (*Bouviás*. G. *Zackenschote*.) A Genus of the Nat. Order *Cruciferae*.

Also, the *Brassica napus*, or wild navew.

B. cakilé. The *Cakile maritima*.

B. eruca-go. Linn. (*L. eruca*, a kind of colewort.) Hab. Europe. Acrid and diuretic; also used as a sternutatory.

Buniole. (*Bouviás*, a kind of turnip; *éidos*, like.) Turnip-like; applied to a form of scirrhus cancer from its shape.

Bunion. (*Bouviás*, a little hill. *L. tubera verrucosa*; *F. oignon*; *L. bunione*; G. *Schwiele*.) An enlarged bursa on the foot; generally on the metatarso-phalangeal articulation of the great or little toe, occasionally over the scaphoid. Produced by crowding of the toes in a too tight boot, or by injury. In time the joint ends of the bones become thickened, the bursa becomes inflamed, and may suppurate, and a troublesome ulcer be left. The boots or shoes should be broad soled, with a short waist. The bunion should have pressure taken off it by a pad, and the absorption of its contents may be attempted by iodine or mercuric iodide.

Bunites vinum. (*L. vinum*, wine.) Name for wine made of bunion 2 drs., and must 4 pints.

Bunium. (*Bouviás*, a little hill; from its place of growth, or from its tuberous root.) A

Genus of plants of the Nat. Order *Umbelliferae*. Fruit oblong, crowned with styles; carpels with 5 slender ribs, and 2 or 3 elongated vittas between them; petals obovate, with an inflexed point. This word was anciently applied as a name of the turnip; also a name for the *Petrococtonum sativum*, wild paraley, and the *Seseli montanum*.

Also, the same as *Bunion*.

B. bulbocastanum. (*Βολβός*, a bulb; *κάστανον*, a chestnut. *F. noix de terre*.) The root is named earth-nut, hawk-nut, kipper-nut, and pig-nut; it is as large as a nutmeg, hard, tuberous, whitish, nutritious, and has a sweetish taste; it has been supposed useful against stranguary and bloody urine.

Also, called *Carum bulbocastanum*.

B. carvi. The *Carum carvi*.

B. copiticum. The *Ptychotis coptica*.

B. ferulaecum. (*Ferula*.) The tubers are eaten in Greece under the name of *Topana*.

B. flexuosum. With. (*L. flexuosus*, full of turns.) The *Conopodium denudatum*.

B. minus. (*L. minor*, less.) The *B.* or *Carum bulbocastanum*.

Bun'ian. Otherwise *Bunion*.

Bun'sen. A German physicist, who died in 1871.

B.'s absorptiometer. (*L. absorptio*, a sucking down; *metrum*, a measure.) An apparatus contrived for the determination of the amount of a gas capable of being absorbed by water.

B.'s battery. Zinc-carbon battery. It consists of a vessel of earthenware containing dilute sulphuric acid, into which is placed a cylinder of zinc, open at both ends; within this is placed a porous earthenware vessel, containing nitric acid and a solid cylinder of carbon. The carbon forms the positive, and the zinc the negative, pole.

B.'s burner. A tube of metal placed over a small gas burner, having opposite to the jet at its lower end holes for the admission of air, which, mixing with the gas, secures its perfect combustion, and a smokeless, very hot flame, when lighted at the top of the tube.

B.'s photometer. (*Φῶς*, light; *μέτρον*, a measure.) A circular spot is made on a bibulous paper screen, by means of a solution of spermaceti in naphtha; the spot appears translucent, and when illuminated from the front it appears darker, from behind lighter, than the surrounding paper. A light of a definite intensity, say a wax candle of known size, is placed behind the screen. The light to be tested is placed at such a distance in front of the screen that the spot is of the same brightness as the rest of the paper, and thus the relative illuminatory power of lights is obtained.

Bunt. The *Tilletia caries*.

Bun'weed. The *Senecio jacobaea*.

Bun'yon. Otherwise *Bunion*.

Buophthalmia. A synonym of *Buphthalmos*.

Buoyancy. (*Eng.* *buoy*, from *Dut.* *boei*, from *Low.* *L. boia*, a clog.) The quality of floating; lightness.

B. of liquids. The vertical upward pressure of the lower layers of a liquid on those above, the result of the pressure of liquids being exerted in all directions.

Bupeina. (*Bov*, a particle of augment; *πεινα*, hunger.) *Bulimia*, or voracious hunger.

BURGUNDY—BURROW'S OPERA

leaven and afterwards dried in the sun. It will keep good for years, and is eaten with bulln or oil.

Burgundy. (F. *Bourgogne*.) A district of Central France.

B. pitch. (F. *pois blanche, pois jaune*; G. *Weisspeck*.) *Pis burgundica*. A resinous exudation from incisions through the bark of the *Abies szoelea*, melted in hot water and strained through a cloth. Hard and brittle, yet gradually taking the form of the vessel in which it is kept, opaque, varying in colour, generally dull reddish brown; of a peculiar somewhat spyræumatic perfumed odour, and aromatic taste without bitterness; gives off no water when heated; nearly soluble in rectified spirit. A compound of resin and palm oil is often substituted. Used as a plaster basis.

B. wine. The wine grown in the Burgundy districts, both red and white. It is stronger and fuller bodied than claret, and, for that reason, is believed to be of service in anæmic conditions of body. It contains an average of seven to fourteen per cent. of alcohol.

Burina. Pix or pitch. (Ruland.)

Buris. Name used by Avicenna, iii. *scn*. 2, *tr*. 1, c. 3, for what was called a scirrhus hernia, which probably meant a scirrhus enlargement or induration of the testicle.

Burmannia'ceæ. Herbaceous plants without true leaves, or with radical tufted ones. Flowers hermaphrodite, regular; perianth tubular, regular, superior; stamens distinct, inserted into tube of calyx, either 3 with introrse anthers, or 6 with extrorse anthers; ovary inferior, 1-celled, with 3 parietal placentæ, or 3-celled with axile placentæ; style 1; stigmas 3; capsule 1—3 celled; seeds numerous, very small; embryo solid.

A Nat. Order of epigynous petaloid *Monocotyledones*, or a Family of the Order *Gymnandra*, Class *Monocotyledones*.

Burmanniads. The plants of the Nat. Order *Burmanniaceæ*.

Burmeister, Hermann. A distinguished entomologist of the early part of the present century.

B.'s classification of animals. Irregular, Infusoria; Regular, Radiata; Symmetrical, Mollusca, Arthropoda, Osteozoa.

Burmic. (Hind) The *Taxus baccata*. Used in India as a scent and an aphrodisiac.

Burn. (Sax. *bærnan*, to scorch with heat. F. *brûlure*; Gr. *kavov*; L. *ustio*; I. *abbrucciamento*; S. *quemadura*; G. *Brandwunde*.) A lesion of some part of the body produced by the action of heat. Dupuytren divided burns into six classes.

1. The result of a momentary application, or of no great temperature, in which there is only redness and pain.

2. When there is vesication and loss of cuticular substance, followed or not by suppuration.

3. When the cuticle is destroyed, but a portion only of the corium.

4. When there is complete destruction of the whole depth of skin. The cicatrix after healing often produces deformity by contraction.

5. When the superficial muscles are destroyed.

6. When the whole thickness of the limb is destroyed.

There is more constitutional disturbance when the trunk is injured than when the limbs are burnt. At first, in a severe burn there is great

depression, with which may ensue after two or three inflammation of the duodenum, there is often prove fatal by monia or brand.

BURSA.

A bursa which is present in 20 per cent. of subjects between the extensor carpi radialis longus and the second metacarpal bone.

B. extensoris carpi ulnaris. A bursa found in 30 per cent. of cases between the flexor carpi ulnaris and the os pisiforme.

B. extensoris digitorum pedis brevis. A bursa beneath the short extensor of the toes; it is found in 6 per cent. of subjects.

B. extensoris hallucis brevis. A bursa found in connection with the short extensor of the great toe in 12 per cent. of subjects.

B. Fabricii. (*Fabricius*.) A cecal process opening into the posterior extremity of the cloaca in birds. During the first period of fetal life the duct of the corpora Wolffiana opens into it. Its mucous membrane contains a large number of Peyer's glands.

B. fibularis. The same as *B. bicipitis cruris*.

B. flexoris carpi ulnaris. A bursa found between the tendon of the flexor carpi ulnaris muscle and the pisiform bone in 30 per cent. of subjects.

B. fossae infraclaviculae. A bursa found frequently in front of the coracoid process and the coraco-clavicular fascia.

B. gastrocnemii lateralis. A bursa lying beneath the outer head of the gastrocnemius muscle, and found in from 14 to 17 per cent. of subjects.

B. gastrocnemii medialis. A bursa lying beneath the inner head of the gastrocnemius muscle. It is entirely independent of the bursa semimembranosa in 50 per cent. of subjects.

B. gemelli superioris. A bursa existing between the tendon of the gemellus superior and the pyriformis. It is present in 25 per cent. of cases.

B. genualis anterior. The same as *B. anserina*.

B. genualis lateralis externa. A bursa found in 16 per cent. of subjects between the external intermuscular septum of the fascia lata, ligamentum iliotibiale, and the external condyle of the femur.

B. genualis lateralis externa inferior. The same as *B. bicipitis cruris*.

B. genualis lateralis interna inferior. The same as *B. anserina*.

B. genualis lateralis interna medialis. A bursa found in 52 per cent. of subjects beneath the ligamentum collaterale mediale of the knee.

B. genualis lateralis interna superior. A bursa found in 13 per cent. of subjects at the lower extremity of the adductor magnus muscle.

B. genualis posterior. The same as the *B. semimembranosa*.

B. glutei majoris. A bursa existing between the gluteus maximus and the femur. That of one side fails in 42 per cent. of subjects, and both in 17 per cent.

B. glutei medii. A bursa existing between the gluteus medius and the trochanter major of the femur. It is absent in 20 per cent. of subjects.

B. glutei minoris. A bursa existing beneath the pyriformis, or between the tendon of this muscle and that of the gemellus superior in 25 per cent. of subjects.

B. gluteofasciatis. The same as *B. gluteofemorales*.

B. gluteofemorales. A bursa between the gluteus maximus and the femur. It is absent on one side in 42 per cent., and on both sides in 17 per cent.

B. gluteotrochanterica. A large bursa situated between the gluteus maximus and the surface of the great trochanter.

B. humeralis flexoris digitorum sublimis. A bursa found occasionally beneath the upper part of the flexor sublimis digitorum.

B. humerotricipitalis. A bursa found on the posterior surface of the humerus in 8 per cent. of subjects.

B. hyoidae. The same as *B. subhyoidae*.

B. iliaca. The same as *B. subtendinea*.

B. iliocostocervicalis. A bursa found over the tubercle of the first rib in 80 per cent. of cases.

B. iliocostocervicalis. A bursa situated between the iliocostalis dorsi muscle and the transverse process of the seventh cervical vertebra.

B. iliopectinea. A bursa situated between the psoas and iliac muscles in front, and the iliopectineal eminence and the hip-joint, with which last it often communicates, behind.

B. iliopsoas. A bursa existing between the iliopsoas muscle and the trochanter minor. It is present in 17 per cent. of subjects.

B. infragenualis. The same as *B. infrapatellaris*.

B. infrapatellaris. A bursa situated between the tendo patellae and the tuberosity of the tibia.

B. infrapatellaris profundae. A bursa found in front of the ligamentum patellae in 40 per cent. of subjects.

B. infrapatellaris superficialis inferior. A bursa found in front of the tuberosity of the tibia in 20 per cent. of subjects; it is either subcutaneous or is covered by the fascia.

B. infrapatellaris superficialis superior. A bursa found beneath the skin in front of the ligamentum patellae in 40 per cent. of subjects.

B. infraspinaea. A bursa situated beneath the tendon of insertion of the infraspinatus muscle into the middle facet of the great tuberosity of the humerus.

B. infraspinaea. A bursa situated beneath the infraspinatus muscle. It is frequently absent.

B. intermetacarpophalangeae. See *Bursae intermetacarpophalangeae*.

B. intermetatarsophalangeae. See *Bursae intermetatarsophalangeae*.

B. intertubercularis. (*L. inter*, between; *tuberculum*, dim. of *tuber*, a knot.) A synonym of *B. bicipitis*.

B. intramuscularis pectoralis majoris. A bursa found in 8 per cent. of cases within the substance of the pectoralis major muscle.

B. intraserrata. A bursa found between the insertions of the upper division of the serratus anticus major muscle in 9 per cent. of subjects.

B. intratendinea olecrani. A bursa found in 58 per cent. of subjects within the tendinous tissue superjacent to the anconeus.

B. ischiadica. A bursa situated between

BURSA.

the tendon of the obturator internus muscle and the groove of the ischium, in which it glides.

B. ischiadica glutei maximi. A bursa found between the gluteus maximus and the tuber ischii in 42 per cent. of subjects.

B. latissimi dorsi. A bursa situated between the latissimus dorsi and the lower border of the teres major muscle when these muscles are in contact.

B. masseterica. A bursa occasionally found between the anterior and posterior portions of the masseter muscle.

B. metacarpophalangea. See *Bursa metacarpophalangea*.

B. mucilaginea. (L. *mucilago*.) Same as *B. mucosa*.

B. mucosa. (F. *bourse muqueuse*; I. *borsa*; S. *bolsa*; G. *Schleimbeutel*.) A synovial sac of discoidal form interposed between muscles, tendons, or skin, and bony prominences, for the purpose of lessening friction. Bursae mucosae are often lined with true synovial membrane, but not always; and sometimes they have direct communication with the joint which they protect.

About 27—30 of the bursae mucosae are constant, and about 170 occur occasionally, so that the total number in the two halves of the body is about 400. The occasional bursae are generally developed as the result of unusual friction of muscles against each other or adjoining parts. Some, as those which form on the shoulder when heavy weights are frequently borne, are pathological. There is a gradual passage from loose connective tissue, the meshes of which are filled with fluid, to the perfect bursa lined with endothelium.

B. obturatoria interna. A bursa existing in 38 per cent. of subjects, and found nearer to the trochanter major than the usual bursa ischiadica.

B. obturatoria externa. A bursa found in connection with the obturator muscle. It exists in 11 per cent. of cases.

B. obturatoria interni circumflexa. The same as *B. ischiadica*.

B. obturatoria interni ovalis. The same as *B. obturatoria interna*.

B. olecrani. A bursa situated between the skin and the olecranon; it is rounded or elliptical, and 4 cm. long (1½ inch).

B. omentalis. (L. *omentum*.) The cavity of the lesser omentum, exhibited by blowing through the foramen of Winslow.

B. omentis majoris. A synonym of the great omentum.

B. omentis minoris. A synonym of the lesser omentum.

B. ovarica. (G. *Eierstocktasche*.) A bursa situated between the superior part of the broad ligament of the uterus and the tubal surface of the ovary. It extends towards the middle line in a horizontal groove between the inner part of the tube and the ligamentum ovarii.

B. pastoris. (L. *pastor*, a shepherd.) Shepherd's purse. The *Capsella bursa pastoris*, from the form of its seed-vessels.

B. pastoris minor. (L. *minor*, lesser.) The *Tesdalia iberis*.

B. patellae. (F. *patella*, a plate, the knee-pan.) The synovial bursa between the patella and the skin.

B. patellae amplificatae. (L. *patella*, the knee-pan; *amplifico*, to enlarge.) Housemaid's knee.

B. patellaris. The same as *B. prepatellaris subcutanea*.

B. patellaris lateralis. One or occasionally two bursae found in 8 per cent. of subjects on the outer side of the patella.

B. patellaris lateralis externa. The same as *B. patellaris lateralis*.

B. patellaris praeligamento. The same as the *B. infrapatellaris superficialis superior*.

B. patellaris praespino. The same as *B. infrapatellaris superficialis inferior*.

B. patellaris praetubero. The same as *B. infrapatellaris superficialis inferior*.

B. patellaris profunda. The same as *B. prepatellaris subtendinea*.

B. patellaris subcutanea. The same as *B. prepatellaris subcutanea*.

B. pectinea. A bursa found at the insertion of the pectineus muscle in 57 per cent. of subjects.

B. pectoralis minoris. A bursa frequently found at the insertion of the pectoralis minor into the humerus.

B. peroneorum communis. A bursa situated between the tendon of the peroneus brevis and the external malleolus. It communicates with the bursa of the peroneus longus above.

B. pharyngea. (G. *Schlundtasche*.) A median pouch or enlargement of the pharynx, about three fifths of an inch long (16 mm.) and a quarter of an inch (6 mm.) wide, occasionally found between the upper part of the pharynx and the spinal column. It opens usually by a narrow aperture at the lower border of the tonsil. It projects upwards towards the body of the occipital bone, and ends blindly in front of the pharyngeal tubercle. It is a remnant of that projection of the pharyngeal mucous membrane from which the anterior lobule of the hypophysis cerebri is developed.

B. phrenicohepatica anterior. When the free border or the posterior surface of the plica ligamentosa triangularis sinistri is (pathologically) adherent to the peritoneal investment of the diaphragm a sac is formed, which is closed everywhere except to the right. It is found in from 10 to 48 per cent. of cases.

B. phrenicohepatica posterior. When the free border or the anterior surface of the plica ligamentosa triangularis sinistri is (pathologically) adherent to the peritoneal investment of the diaphragm a sac is formed, which is closed everywhere except to the right. It is found in 3 per cent. of cases.

B. poplitea. A bursa found behind the knee-joint between the fibrous capsule and the oblique origin of the popliteus muscle. It communicates with the part of the joint above the external semilunar cartilage by means of a fissure, which is limited anteriorly by the border of this cartilage, and behind by the tendinous origin of the popliteus.

B. postcalcaranea profunda. The same as *B. calcanea*.

B. postcalcaranea subcutanea. A bursa situated between the skin and the tendo Achillis opposite the os calcis.

B. postcalcaranea superficialis. The same as *B. postcalcaranea subcutanea*.

B. postgenua lateralis. The same as *B. gastrocnemii lateralis*.

B. praementalis. A bursa situated be-

BURSA.

tween the skin and the anterior and lower part of the inferior maxilla.

B. præpatella'ris latera'lis interna subligamento'sa. The same as *B. præpatella'ris media'lis profunda*.

B. præpatella'ris me'dia. The same as *B. præpatella'ris subfascia'lis*.

B. præpatella'ris media'lis profunda. A bursa found in 10 per cent. of subjects beneath the fascia covering the inner part of the patella.

B. præpatella'ris media'lis superficialis. A bursa found on the inner side of the patella superficial to the fascia in 8 per cent. of cases.

B. præpatella'ris profunda. The same as *B. præpatella'ris subfascia'lis*.

B. præpatella'ris secun'da. The same as *B. præpatella'ris subfascia'lis*.

B. præpatella'ris subaponeurotica. The same as *B. præpatella'ris subfascia'lis*.

B. præpatella'ris subcutanea. A bursa found beneath the skin in front of the patella.

B. præpatella'ris subfascia'lis. A bursa found between the fascia lata and the tendon of the quadriceps extensor femoris in 29—45 per cent. of subjects.

B. præpatella'ris subtendin'ea. The same as *B. præpatella'ris subfascia'lis*.

B. præpatella'ris subtendin'osa. A bursa found in 10 per cent. of cases between the patella and a thin layer of the tendon of the quadriceps extensor muscle.

B. præpatella'ris superficialis. The same as *B. præpatella'ris subcutanea*.

B. præpatella'ris ter'tia. The same as *B. præpatella'ris subfascia'lis*.

B. pyriformis. A bursa found either beneath the tendon of the pyriformis muscle or between its tendon and that of the gemellus superior muscle, in 25 per cent. of subjects.

B. quadra'ti fem'oris. A bursa found between the quadratus femoris and the trochanter minor.

B. retrocondyloidea externa me'dia. A bursa found between a sesamoid bone of the external head of the gastrocnemius and the tendon of the biceps. It is of rare occurrence.

B. retrocondyloidea externa subcutanea. A bursa occasionally, but rarely, found between the skin and the outer head of the gastrocnemius muscle.

B. retroepicondyl'ioidea latera'lis profunda. The same as *B. gastrocnemii lateralis*.

B. retroepicondyl'ioidea latera'lis propria. The same as *B. gastrocnemii lateralis*.

B. retroepitrochlea'ris media'lis humeri. A bursa rarely found to the inner side and behind the inner condyle of the humerus.

B. sacralis. A bursa situated between the skin and lumbodorsal fascia covering the sacrospinous articulation.

B. sartorii propria. A bursa between the sartorius muscle and the lower end of the adductor magnus. It is found in 13 per cent. of subjects.

B. semimembranosa. A bursa situated between the semimembranosus muscle and the internal condyle of the femur. It often com-

municates with the cavity of the knee-joint, the opening being most patent in flexion. It also covers the tendinous origin of the inner head of the gastrocnemius to the extent of one inch and a half.

B. semimembranosa propria. A bursa between the tibia and the tendon of the semimembranosus muscle. It may either be independent or a process of the bursa semimembranosa.

B. semimembranosa. A bursa occasionally found between the semimembranosus muscle and the internal condyle of the femur. It generally communicates with the synovial sac of the knee-joint.

B. semimembranosa superior. A bursa found between the semimembranosus and the tuber ischii. It exists in 17 per cent. of subjects.

B. semimembranosa-gastrocnemii. The same as *B. semimembranosa*.

B. sinus tar'al. A bursa, found in 42—49—56 per cent. of subjects, situated in the sinus tarsi and extending beyond to the lateral surface of the neck of the astragalus, beneath the tendon of the extensor digitorum longus and the tendinous band of the ligamentum cruciatum tarsi (Wurzel), which connects the fibrous sheath of the latter with the ligamentum interosseum in the sinus tarsi. This bursa is bounded posteriorly by the first joint of the foot, and in front extends as far as the astragalo-scapoid articulation, with which it communicates in 5 per cent. of subjects.

B. sternohyoidea. A bursa occasionally found between the sternohyoid muscle and the thyrohyoid membrane.

B. subachilla'ea. The same as *B. calcanea*.

B. subacromia'lis. A bursa which appears to be a process of the *B. subdeltoides* above the tendon of the supraspinatus muscle.

B. subcalca'nea. The same as *B. subcutanea calcanei*.

B. subcap'ite latera'li mus'culi rec'ti fem'oris. A bursa found in 28—44 per cent. of subjects beneath the external head of the rectus femoris.

B. subclavia. A bursa occasionally found between the clavicle, the tendon of the subclavius muscle, and the ligamentum costoclaviculare.

B. subcra'ura. The same as *B. suprapatellaris*.

B. subcutanea acromia'lis. A bursa found between the acromion process of the scapula and the skin in 15 per cent. of subjects.

B. subcutanea calcanei. A bursa situated between the posterior part of the fascia plantaris and the tuberosity of the os calcis.

B. subcutanea capit'uli ulnae. A bursa found in 27 per cent. of subjects between the skin and the head of the ulna.

B. subcutanea con'dyli radia'lis humeri. A bursa found in from 2—7 per cent. of subjects over the outer condyle of the humerus.

B. subcutanea con'dyli ulna'ris humeri. A bursa found in 17 per cent. of subjects between the skin and the inner condyle of the humerus.

B. subcutanea fibula'ris. A bursa found occasionally between the skin and the head of the fibula.

BURSA.

B. subcutanea genu. (*L. subcutanea*; *sub*, beneath; *cutis*, the skin; *genu*, the knee.) A bursa placed between the tendo patellae and the skin.

B. subcutanea iatisimi dorsi. A bursa found between the skin and the latissimus dorsi muscle.

B. subcutanea malleoli lateralis. A bursa found between the skin and the outer malleolus in 64 per cent. of cases.

B. subcutanea malleoli medialis. A bursa found between the skin and the inner malleolus in 38 per cent. of subjects.

B. subcutanea olecrani. A bursa found beneath the skin over the olecranon in 60 per cent. of subjects. It is present on the right side alone in 5 per cent., on the left side alone in 3 per cent.

B. subcutanea ossis navicularis. A bursa found both on the dorsal and on the plantar surface of the scaphoid bone.

B. subcutanea plantaris capituli metatarsi. A bursa between the skin and the plantar surface of the head of the first metatarsal bone. It is found in 80 per cent. of subjects.

B. subcutanea plantaris capituli ossis metatarsi quinti. A bursa between the skin and the plantar surface of the head of the fifth metatarsal bone. It occurs in 50 per cent. of subjects.

B. subcutanea processus styloidei radii. A bursa found occasionally only between the skin and the styloid process of the radius.

B. subcutanea supra protuberantiam occipitalem externam. A bursa situated between the skin and the external occipital protuberance.

B. subcutanea trochanteris majoris. A bursa found between the skin and the trochanter major in 31 per cent. of subjects.

B. subcutanea tuberculi ischii. A bursa occasionally, though rarely, found between the skin and the tuber ischii.

B. subcutanea ulnaris ossis metacarpi quinti. A bursa situated between the skin and the ulnar surface of the fifth metacarpal bone.

B. subdeltoides. A bursa found beneath the deltoid muscle.

B. subgemellaris. A bursa found beneath the gemelli in 6 per cent. of subjects.

B. subhyoides. A bursa situated between the skin and the pomum Adami.

B. subiliaca. The same as *B. subtendinea*.

B. subligamentosa. The same as *B. infrapatellaris*.

B. sublingualis. A bursa believed by some anatomists to exist on the outer surface of the genioglossus muscle, and to afford an explanation of ranula.

B. subpatellaris. (*L. sub*, beneath; *patella*, the knee-pan.) A bursa placed between the tendo patellae and the tibia. The same as *B. infrapatellaris*.

B. subscapularis. (*L. sub*, under; *scapula*, the shoulder-blade.) A bursa beneath the tendon of the subscapularis muscle, communicating with the synovial membrane of the shoulder-joint by an opening on the inner side of the capsular ligament.

This bursa is found in 11 per cent. of subjects.

B. subserata. A bursa occasionally

found between the serratus magnus and the upper angle of the scapula.

B. subtendinea. A small bursa situated between the tendon of the iliac muscle and the trochanter minor muscle.

B. subtendinosa musculi brachialis interni. A bursa, rarely found, beneath the tendon of the coracobrachialis muscle.

B. subtendinosa musculi pectoralis majoris. A bursa found in 33 per cent. of subjects beneath the tendon of the pectoralis major.

B. subtendinosa musculi peronei tertii. A bursa, rarely found, beneath and near the insertion of the peroneus tertius.

B. subtendinosa musculi subscapularis. A bursa found in 11 per cent. of subjects beneath the tendon of the subscapularis muscle.

B. subtendinosa musculi supraspinati. A bursa, rarely found, beneath the tendon of the supraspinatus muscle.

B. subtendinosa musculi teretis minoris. A bursa, rarely found, beneath the tendon of the teres minor.

B. subtendinosa musculi tricipitis brachii. The same as *B. subtendinosa olecrani*.

B. subtendinosa olecrani. A bursa situated beneath the fascia covering the olecranon in from 3 to 37 per cent.

B. supraacetabularis. A bursa found above the acetabulum in 31 per cent. of subjects.

B. supraanconae intratendinosa. The same as *B. intratendinosa olecrani*.

B. supracondyloidea interna. A bursa frequently communicating with the knee-joint, situated beneath the inner head of the gastrocnemius muscle.

B. supracondyloidea medialis. A bursa covered by the inner head of the gastrocnemius, and often a mere process of the synovial membrane of the knee-joint. It exists as an independent cavity in 39 per cent. of subjects.

B. supracoracoidea lateralis posterior. The same as *B. coracoclavicularis lateralis posterior*.

B. supracoracoidea lateralis anterior. The same as *B. pectoralis minoris*.

B. supracoracoidea medialis anterior. The same as *B. fossae infraclavicularis*.

B. supraglenialis. The same as *B. suprapatellaris*.

B. suprapatella. A bursa situated beneath the muscles above the knee-joint in about 11 per cent. of subjects; it does not communicate with the cavity of the knee-joint.

B. suprapatellaris intramuscularis. A bursa found in 13 per cent. of subjects between the cruralis and rectus femoris muscle, two or three centimetres above the patella.

B. supraxiphoides. A bursa or lacuna in the connective tissue, situated at the lower extremity of the ensiform process of the sternum, behind the linea alba.

B. synovia. (*L. synovia*.) Same as *B. mucosa*.

B. synovialis iliocostocervicalis. The same as *B. iliocostocervicalis*.

B. tensoris fasciae latae. The same as *B. genualis lateralis externa*.

B. tensoris vel palati. A bursa situated between the tendon of the tensor palati

BURSÆ.

and the hamular process of the internal pterygoid plate.

B. ter'etis major'is. A bursa found between the tendon of the teres major and the lesser tuberosity of the humerus in 57 per cent. of subjects.

B. tes'tium. (*L. testis*, a testicle.) The bag of the testicles; a term for the scrotum.

B. thyrochyo'idæa. The same as *B. subhyoides*.

B. thyrochyo'idæa latera'lis. A bursa frequently found between the greater cornu of the hyoid bone and the thyrohyoid muscle.

B. thyrotrachea'lis. A bursa found between the isthmus of the thyroid gland and the trachea.

B. tibia'lis ant'ci. A bursa found on the inner side of the first tarsal bone in 42 per cent. of cases.

B. trochanter'ica. The *B. gluteofemoralis*.

B. trochanter'ica mus'culi glute'i me'dii ante'rior. A bursa situated between the tendon of the gluteus medius and the outer part of the trochanter major of the femur. It is often double.

B. trochanter'ica mus'culi glute'i me'dii poste'rior. A bursa found in 67 per cent. of subjects between the tendon of the gluteus medius and that of the pyriform muscle.

B. trochanter'ica mus'culi glute'i mini'mi. A bursa situated between the tendon of insertion of the gluteus minimus and the trochanter major.

B. trochanter'ica profun'da. The same as *B. trochanterica*.

B. tuberosoischia'dæa. A bursa situated between the tendon of the obturator muscle and the groove of the ischium in which it glides.

B. ulnora'dia'lis. A bursa existing between the ulna and the radius, sometimes termed *B. cubitalis interossea*. It is found in from 20 to 50 per cent.

B. vir'i'lis. (*L. virilis*, belonging to a man.) The scrotum.

Bursæ. (*L. bursa*, a sac.) A term usually used alone to signify *B. mucosæ*.

Also, see *Bursa*.

B. dorsa'les articula'res metacarpophalange'æ profun'dæ. Bursæ, not always present, situated beneath the extensor tendons on the metacarpal phalanges of the fingers. When present they communicate with the joint of the phalanx in 25 per cent. in the case of the thumb, and in 50 per cent. of the remaining fingers.

B. dorsa'les pe'dis subcuta'nææ. Bursæ found rarely between the skin and the extensor tendons over the first joints of the toes.

B., drop'sy of. (*G. Wassersack der Schlimbeutel*.) Effusion into a bursa mucosa.

B., for'ign bod'ies in. Small flattened bodies found in the fluid of an enlarged bursa, consisting probably of consolidated lymph; a friction sound is often noticed, produced by their movement.

B. gluteofemora'les. Two or three small bursæ situated between the tendon of the gluteus maximus below the great trochanter, the bones, and the adjoining muscles.

B., inflamma'tion of. Inflammation may occur from injury or other cause in any bursa; it

is most common in the most exposed, as that over the patella. It may result in effusion of serum or in the production of pus, or in the thickening of the walls of the sac by fibrinous deposit and infiltration.

B. intermetacarpophalange'æ. Bursæ found in the second interosseous interspace in 25 per cent. of subjects, in the third in 58 per cent., and in the fourth in 17 per cent. of cases.

B. intermetatarsophalange'æ. Bursæ found between the heads of the metatarsal bones. That between the first and second exist in 95 per cent. of subjects, that between the second and third in 98 per cent., that between the third and fourth in 95 per cent., and that between the fourth and fifth in 20 per cent. of cases.

B. lumbrica'les ma'ximæ. The same as *B. intermetacarpophalangeæ*.

B. lumbrica'les pe'dis. A synonym of *B. intermetatarsophalangeæ*.

B. metacarpophalange'æ. Bursæ placed either on the volar or dorsal surface of the metacarpal phalangeal articulation. They may be subcutaneous and superficial, or subcutaneous and deep. The subcutaneous dorsal of the first finger occurs in 40 per cent., of the second in 53 per cent., of the third in 86 per cent., of the fourth in 86 per cent., and in the fifth in 27 per cent. of subjects. A subcutaneous or deep metacarpophalangeal bursa is only occasionally present. When present it communicates with the joint in the case of the thumb in 25 per cent., and in the other fingers in 50 per cent. of subjects. The subcutaneous volar bursa occurs in the case of the thumb in 6 per cent., of the forefinger in 20 per cent., in the middle finger in 27 per cent., and occasionally only in the ring and little fingers.

B. mucosæ. See *Bursa mucosa*.

B. musculo'rum interosseo'rum ma'ximæ. Bursæ found beneath the interossei muscles of the hand. That which is most frequently present is beneath the second dorsal interosseous muscle.

B. musculo'rum interosseo'rum pe'dis. Bursæ found beneath the interosseous muscles of the foot. That beneath the second dorsal is found in 3 per cent. of cases; that beneath the third dorsal in 7 per cent.; that in connection with the first plantar in 47 per cent., with the second plantar in 57 per cent., and with the third plantar in 13 per cent. of cases.

B. musculo'rum lumbrica'lium pe'dis accesso'riæ. Bursæ found in connection with the lumbricales muscles. That in connection with the first exists in 17 per cent., with the second in 25 per cent., and that with the third in 17 per cent. of cases.

B. musculo'rum lumbrica'lium sub-tendino'sæ. Bursæ found between each of the extensor tendons and the first joints of the toes.

B. planta'res. Bursæ found in connection with the interossei muscles; that connected with the first plantar occurs in 47 per cent. of subjects, with the second in 57 per cent., and with the third in 13 per cent. of subjects.

B. subcuta'nææ dorsa'les articula'tionum metacarpophalange'æ. Bursæ found between the skin and the metacarpophalangeal articulations. That of the thumb occurs in 40 per cent. of subjects; that of the forefinger

BURSAL—BUSCATINA.

in 53 per cent.; that of the middle finger in 66 per cent.; that of the ring finger in 66 per cent.; and that of the little finger in 27 per cent. of subjects.

B. subcutaneæ dorsales phalangium secundo'rum digito'rum manus. Bursæ found between the skin and the second joint of the fingers. Such a bursa exists in the thumb in 80 per cent. of subjects, in the ring finger in 87 per cent. of subjects, and is constant in the index, middle, and ring fingers.

B. subcutaneæ dorsales phalangium tertio'rum digito'rum manus. Bursæ found between the last articulations of the fingers and the skin. These exist in 7 per cent. of subjects in the case of the second and fourth fingers.

B. subcutaneæ plantares articulationum metatarsophalangium. Bursæ occasionally found between the skin and the metatarsophalangeal articulations.

B. subcutaneæ processus spinosi vertebrarum cervicalium. Bursæ found beneath the skin over the spinous processes of the lower cervical vertebrae, especially of the seventh or *Vertebra prominens*.

B. subcutaneæ volares articulationum metacarpophalangium. Bursæ found between the skin and the volar surface of the metacarpophalangeal articulations. That of the thumb is present in 6 per cent. of subjects; that of the forefinger in 20 per cent.; that of the middle finger 27 per cent.; and those of the ring and little fingers occasionally only.

B. subcutaneæ volares phalangium primo'rum digito'rum. Bursæ situated between the skin and the volar surface of the first phalanges of the fingers. They are found in 9 per cent. of subjects.

B. subtendinose pedis. Bursæ found occasionally beneath the tendons covering the first joints of the toes.

B. subtendinose dorsales articulationum metacarpophalangium. The same as *B. dorsales articulares metacarpophalangeæ profundæ*.

B. synoviales accessorie. (*L. synovia; accessorius*, accessory.) Term applied to the synovial bursæ found in and between various muscles of the head, trunk, and extremities.

B. synoviales subcutaneæ. Bursæ situated in various parts of the body between the skin and bony or cartilaginous projections, as the olecranon, angle of the jaw, thyroid cartilage.

B. tumor. (*L. tumor*, a swelling.) A thickening of the walls of a bursa mucosa. Same as *Bursal tumour*.

Bursal. (Same etymon.) Of, or belonging to, a bursa.

B. abscess. Suppuration, the result of inflammation of a bursa.

B. synovial membrane. See *Synovial membrane, bursal*.

B. tumour. A hard swelling, usually over the patella, consisting of thickening of the bursal sac over the patella, or of a deposit of fibrous material in its cavity, or of a gradual consolidation of the contents of the bursa, or from deposit of urate of soda in gout.

Bursalis. (Same etymon.) Belonging to a bursa; shaped like a bag or purse.

B. muscle. A muscle found in the orbit of birds and lizards, the tendon of which is at-

tached to the membrana nictitans; it draws the lid over the eye.

Also, the same as *B. musculus*.

B. musculus. (*L. musculus*, a muscle.) The *Obturator internus* muscle.

Bursalogy. (*Bûrsa*, a bag; *lógos*, a discourse.) The doctrine or consideration of the bursæ mucosæ.

Bursarius. Same as *Bursalis*.

Burser, Jo'achim. A botanist born at Cametz in 1593, and was professor of physic and medicine in the Academy of Soroe in Denmark.

Burse'ra. (*Burser*.) A Genus of the Nat. Order *Amyridaceæ*, or *Terebinthaceæ*.

B. acuminata. Willd. (*L. acumino*, to make pointed.) A tree growing in the Antilles, which furnishes *Caragna resin*.

B. balsamifera. Pers. (*L. balsamum*, balsam; *fero*, to bear.) A tree growing in the Antilles which furnishes the balsamiferous resin of Gommart.

B. gummi'fera. Jacq. (*L. gummi*, gum; *fero*, to bear.) A tropical South American tree which furnishes *Gommart* or *Cachibou resin*.

B. paniculata. Lam. (*L. panicula*, a tuft.) The *Canarium commune*, or *Colophonia mauritiana*; latterly it has been called *Boswellia mauritiana*.

Bursera'cea. A Subtribe of the Nat. Order *Terebinthaceæ*. Ovary containing 2 ovules; ovules with a superior micropyle and a ventral raphé.

Also, a synonym of *Amyridaceæ*.

Burseridæ. A Tribe of the Nat. Order *Amyridaceæ*, in which the ovary is more than one-celled.

Burserine. A white pulverulent resinous substance obtained from *Cachibou resin*, the balsam of the *Bursera gummi'fera*.

Bursicula. Same as *Burnicula*.

Bursiculate. (*Bûrsa*, a bag.) Like a purse. Furnished with a *Bursicula*.

Bursicule. (*Dim. bursa*, a pouch. *G. Beutelchen*.) A small pouch; a small sac excavated in the rostellum to receive the retinacula of the pollinia of orchids.

Bursifoliate. (*L. bursa; folium*, a leaf.) Having pouch-shaped leaves.

Bursiform. (*L. bursa*, a purse; *forma*, shape. *G. taschenförmig*.) Purse-shaped. A flattened sphere.

Bursitis. (*Bursa. G. Schleimbeutel-entzündung*.) Inflammation of a bursa mucosa.

Burstwort. (From its supposed efficacy in ruptures.) The *Herniaria glabra*.

Bursula. (*Dim. of L. bursa*, a bag.) The scrotum.

Burtscheid. (*Borcette*.) Germany; a suburb of Aix-la-Chapelle. Height 500 feet. A rather close town, with fair accommodation; not so pleasant as Aix-la-Chapelle, but much cheaper. There are sulphurous and weak alkaline saline springs of 59° C. (138·2° F.) to 71° C. (159·8° F.) They contain less sulphur than those of Aix-la-Chapelle. The sulphur springs are used in skin diseases, in dyspepsia, liver disorders, and gravel. The saline in scrofula, gout, and rheumatism.

Burunhem. A name of *Monesia*.

Buscatina. (*Boûs*, an ox; *σκατός*, for *σκατόν*, gen. of *σκαρ*, dung.) The odoriferous principle of cow-dung which imparts to cow-houses their peculiar odour.

BUSCORINA—BUTTER.

Buscorina. (Boû; σκόρ, dung.) Same as *Buscatina*.

Busellinum. (Bov, intensive; ελλινος, parley.) The *Daucus carota*, or carrot.

Bush. (Dan. *bush*, a shrub. F. *buisson*; I. *cespuglio*; G. *Busch*, *Strauch*.) A small shrubby tree, a thicket. In Botany, a shrub which is low and branched at the base is called a bush.

B.-bas'il. The *Ocimum caryophyllatum*, or *O. minimum*.

B. honeysuckle. The *Diervilla tri-Ada*.

B. Jew. The *Pedilanthus lithymaloides*.

B. tea. The leaves of *Cyclopa genistoides* and *C. latifolia*.

Busignargues. France; Département de l'Hérault. A mild chalybeate water.

Bush. Russian Poland; in the neighbourhood of Cracow. Mineral waters, temp. 13° C. (55.4° F.), containing magnesium iodide 1.3, magnesium chloride 8.7, magnesium sulphate 29, sodium chloride 154, in 22,400 parts, with some hydrogen sulphide and nitrogen.

Bu'sot. Spain; near Alicante. A pleasant place, but hot in summer, with earthy waters of a temperature of 41° C. (105.8° F.) Used in chronic rheumatism and dyspepsia.

Bu'sang. France; Vosges. A cold carbonated chalybeate water, containing a little arsenic. Used in gastralgia, dyspepsia, chlorosis, and anemia.

Bu'ssieres. France; Département de l'Aisne. Cold weak bicarbonated waters.

Bu'ss'il spiritus bezoardicus. The bezoardic spirit of Bussius; made by distilling spirit of hartshorn, or of ivory, sal ammoniac, crude potash, amber, oil of cedar, and alcohol.

Bu'stard. (Through Old F. *bistard*, from L. *avis*, a bird; *tarda*, fem. of *tardus*, slow. F. *outarde*; I. *ottarda*; G. *Trappe*.) The *Otis tarda*. The flesh is much esteemed.

Bu'talanine. C₂H₁₁NO₂. A substance homologous with glycol and with leucine, found in the spleen and pancreas of oxen. It sublimes without decomposition, and forms large colourless prisms, which are very slightly soluble in alcohol and water.

Bu'tane. (G. *Butylwasserstoff*.) C₄H₁₀. A paraffin, gaseous under 1° C. (33.8° F.), occurring in petroleum and in the distillation of some coals. It is anæsthetic.

Butcher, Richard G. A Dublin surgeon of the present century now living.

B.'s saw. A narrow-bladed saw on a frame, so arranged that it can be set at any angle. Used in resections of joints.

Butcher. (Old F. *bocher*, one who kills he-goats; from Old F. *boc*, a he-goat.) One who kills animals for food.

B.'s broom. The *Ruscus aculeatus*, or knee-holly, because butchers made besoms of it.

B.'s prickwood. The *Rhamnus frangula*, from its use for skewers.

Bute. Scotland. An island at the mouth of the Frith of Clyde. Mild, equable, and moist climate. Range of temperature not extreme. Snow seldom falls heavily in winter, and does not stay long; heat in summer less than on the mainland. Few fogs. Protected from east winds to a great extent.

Bute, John Stu'art, Earl of. Born 1713, died 1792. A celebrated botanist.

Bu'tea. (*Bute*.) A Genus of the Suborder *Papilionaceæ*, of the Nat. Order *Leguminosæ*.

B. frondosa. Roxb. (L. *frondosa*, leafy.) Bastard teak. Leaves pinnately trifoliate; leaflets large, roundish ovate; racemes simple, many-flowered; calyx segments short, slightly acute; corolla pubescent; legume flat, with a solitary apical seed. Seeds used as a vermifuge, and locally in ringworm. Flowers used as a fomentation in dysuria. Yields a gum called *Butea kino*.

B. gum. Same as *B. kino*.

B. kino. *Pulos kino*. Gummi rubrum astringens formerly; now this name is applied to an Eucalyptus gum. It is brittle, ruby red, inodorous, astringent, soluble in water, partly in alcohol. Used externally as an astringent. Given in chronic diarrhoea and pyrosis.

B. parviflora. Roxb. (L. *parvus*, small; *flor*, a flower.) Supplies an astringent gum like that of the *B. frondosa*.

B. seeds. The seeds of the *B. frondosa*. Used as an anthelmintic.

B. superba. Roxb. (L. *superbus*, proud.) Twining shrub, with pinnate trifoliate leaves; leaflets roundish; racemes simple; legumes flat, with one apical seed; calyx segments short, acuminate. Also yields *Butea kino*.

Bu'tea gummi. (L. *gummi*, gum.) The *B. kino*.

Bu'teo. A Genus of the Family *Falconidae*, Order *Accipitres*, or *Raptores*. The buzzards.

B. vulgaris. Linn. (L. *vulgaris*, common. F. *buis vulgaire*; I. *bossago*; G. *Bussard*.) The common buzzard. The testicles, boiled with honey, were used against male impotence.

Bu'tic acid. The same as *Arachidic acid*.

Bu'tiga. A swelling of the whole face; also called *Gutta rosæ* or *rubra*. (Ereland.)

Bu'tin. One of the solid constituents of butter, according to Heintz, probably *Arachis*.

Butoma'ceæ. (*Butomus*. G. *Blumenbinser*.) A Nat. Order of hypogynous petaloid *Monocotyledons*. Aquatic plants, with parallel-veined leaves, triseriate petaloid flowers, and superior ovary with numerous ovules attached to a parietal network.

Butomads. The plants of the Nat. Order *Butomaceæ*.

Bu'tomon. (Βούτομον.) The *Iris pseudacorus*.

Butomus. (Βούτομος, from βούτ, an ox; τίνω, to cut. So called because it was said to cut the mouths of oxen eating it.) A Genus of the Nat. Order *Butomaceæ*.

B. umbellatus. Linn. (*Umbel*. F. *Jonc fleuri*; G. *Wasserviole*.) The flowering rush. Hab. Europe, Asia. Plant acrid; leaves asperant; root and seeds used in snake-bites. From the farina of the root a bread is made. A decoction of the leaves is said to be diuretic, and useful in dropsy and in splenic disease.

Butter. (Sax. *butera*; from L. *butyrum*; from βούτυρον, from βούτ, cow; τυρον, cheese. F. *beurre*; I. *butiro*; S. *mantees*; G. *Butter*.) The oily portion of milk obtained by the churning of cream or new milk; this mechanical action breaks the walls of the fat-globules, and causes the contents to adhere to each other. It consists of the glycerides of stearic, palmitic, and oleic acids, with smaller quantities of those of butyric, capric, caproic, and caprylic acids. Fresh butter contains 4 to 16 per

BUTTERBUR—BUTYL.

cent. of water, .5 to 2.5 per cent. of salt, 3 to 5 per cent. of casein, and from 86 to 92 per cent. of fat. When fresh, butter is usually very easily digested. It speedily becomes rancid in hot weather, from decomposition set up by the casein which it contains. Butter is adulterated with water, starch, salt, and animal fats.

The term butter is given to several solid vegetable oils and to certain metallic chlorides.

B. and eggs. The *Linaria vulgaris*, from the colour of its flowers.

B., bambarra. A name of *Shea butter*.

B., bambouc. A name of *Shea butter*.

B. bar. The *Petasites vulgaris*.

B., cacao. A concrete oil obtained from the decorticated seeds of the *Theobroma cacao* by pressure and heat. It is pale yellow, of a bland and agreeable taste; melts at 33° C. (91.4° F.) It is composed of stearin and palmitin, with a small quantity of olein, and perhaps arachic acid. It is used for making suppositories. See *Oleum theobromae*.

B., chl. A name of *Shea butter*.

B., chigomier. A name of *Chiquito butter*.

B., chiquito. A product of the *Combretum butyrosu*, a native of South-Eastern Africa. It is rather hard, white, and of an aromatic odour. Used in food.

B., cocoa-nut. Cocoa-nut oil. See *Oleum cocois*.

B., croton. Obtained by heat from the seeds of the *Stillingia sebifera*. A tallowy substance used for candles.

B., di'ka. Same as *Dika bread*.

B., fulwa. A concrete oil expressed from the seeds of the *Bassia butyracea*, a native of India. It is used externally in rheumatism.

B., galam. A name of *Shea butter*.

B., ghee. See *Ghee*.

B., il'ipe. See *Ilipé oil*.

B., ko'kum. The *Mangosteen*, oil of.

B., mahduca. A name of *Shea butter*.

B., mah'wa. A name of *Shea butter*.

B., man'go. A concrete oil obtained from the seeds of the *Mangifera indica*.

B., mountain. A natural alum, but rarely found; it is yellowish and unctuous.

B., nut. The *Juglans cinerea*.

B., nutmeg. A name of *Mace*, oil of.

B., nut tree. The *Bassia butyracea*.

B., of antimony. Trichloride of antimony.

B., of tin. A crystalline mass formed by the addition of one third of its weight of water to tetrachloride of tin or stannic chloride.

B., of zinc. The chloride of zinc.

B., palm. A concrete oil, of orange-yellow colour, extracted from the fruits of the *Elaeis guineensis* and the *E. melanococca*. Used in the manufacture of soap and candles.

B., shea. A concrete oil, extracted by boiling, from the seeds of the *Bassia Parkii*. Used largely as food by different African races.

B., tooth. The incisor teeth.

B., tree, Indian. The *Bassia butyracea*.

B., vegetable. The concrete oils obtained from various trees, such as the species of *Bassia*, *Combretum*, *Elaeis*, and others.

B., wax. A solid oil obtained by the distillation of wax, and employed as a solvent.

Butterbur. The *Petasites vulgaris*.

Butterby. Durham, on the river Wear.

A sulphur water containing sodium chloride; now almost disused.

Buttercup. A name for the Species of *Ranunculus*.

Butterflower. The Genus *Ranunculus*, or crowfoot.

Butterfly. (Sax. *butter-flöge*; perhaps from Old Dutch *boter-schijte*, yellow excrement. *F. papillon*; *I. farfalla*; *G. Schmetterling*.) The imago of the species of *Diurnal lepidoptera*.

B. orchid. The *Habenaria bifolia*.

B. root. The root of *Asclepias decumbens*.

B. satyrion. The *Habenaria bifolia*.

B. weed. The *Asclepias tuberosa*.

Buttermilk. (*F. babeurre*, *lait de beurre*; *I. siero*; *G. Buttermilch*.) The residue of milk after butter is obtained by churning. It consists of nitrogenous matter 4.1, fat .7, lactose 6.4, salts .8, water 88.0 per cent. Used in gastrodynia and neuralgic disorders, rickets, and diabetes.

Butternut. The *Juglans cinerea*, or white walnut.

Butters. (*Boútrporov*.) Fixed oils having a softish solid consistence at an ordinary temperature; also called *Fats*.

Butterweed. The *Erigeron canadense*.

Butterwort. The *Pinguicula vulgaris*, or Yorkshire sanelle, from the property its leaves possess of coagulating milk, or from its greasy feel.

Butterworts. The plants of the Nat. Order *Lentibulariaceae*.

Buttner, David S. A. Born 1724 at Chemnitz, died in 1768. He was professor of botany in the University of Göttingen.

Buttneria. Same as *Byttneria*.

Buttneria cesp. See *Byttneriacea*.

Buttock. (Eng. *butt*, an end; with dimin. suffix *ock*; from Old *F. bot.* an end. *L. clunus*; Gr. *κύνη*; *F. fesse*; *I. natica*; *S. nalga*; *G. Hintertheil*, *Hinterbacke*, *Steiss*.) The protuberant termination of the trunk behind. The breech or haunch.

Button. (Old *F. boton*, a bud, a button, from *O. F. boter*, to push out. *F. bouton*; *I. bottone*; *G. Knopf*.) A small round knob; an article for fastening parts of dress together.

B., bachelor's. The *Ranunculus aconitifolius*, and also the *Lychnis vespertina*.

B. bush. The *Cephalanthus occidentalis*.

B. can'tery. See *Caulery*, *button*.

B. of Aleppo. Same as *Aleppo evil*.

B. of Sis'kra. Same as *Aleppo evil*.

B. of Croto. Same as *Aleppo evil*.

B. of Na'ples. A term for a bubo.

B. scur'vy. An epidemic of cachectic disease, observed in the South of Ireland, accompanied by button-like excrescences on the skin.

B., snake'root. The *Eryngium yuccifolium*; and also the *Liatris spicata*.

B., snake'weed. The *Eryngium aquaticum*.

B. su'ture. See *Suture*, *button*.

Buttonhole fracture. An incomplete fracture of bone, in which a missile has perforated or driven a piece out of the bone.

Buttonwood shrub. The *Cephalanthus occidentalis*.

Butua. The *Cissampelos pareira*, or *Paraireira brava*.

Butyl. (*Boútrporov*, butter; *ἔλν*, matter.)

C₄H₉. A hypothetical radicle supposed to exist

BUTYLAMINE—BUXTON.

in the tetra- or tetracarbon series of alcohols and ethers.

B. alcohol. $C_4H_{10}O$. Exists in four isomeric conditions. It is obtained by fractional distillation from the molasses of beet-root sugar. It is a colourless liquid, boiling at $110^{\circ} C.$ ($230^{\circ} F.$), sp. gr. 802, smelling somewhat like amy alcohol and burning with a smoky flame.

B. carbinol. The normal primary pentyl alcohol.

B. hydride. C_4H_{10} . A rectified hydrocarbon obtained from American petroleum. It is a colourless liquid, boiling at $0^{\circ} C.$ ($32^{\circ} F.$), sp. gr. 600. It has anæsthetic properties when inhaled, but is unsafe.

Butylamine. C_4H_9N . Primary butylamine exists under three forms: normal butylamine $CH_3(CH_2)_3NH_2$; isobutylamine $CH(CH_3)_2CH_2NH_2$; and tertiobutylamine $(CH_3)_3CNH_2$.

Butylchloral. A colourless oily liquid, of a peculiar odour, rather like chloral.

B. hydrate. Same as *Chloral butylamine*.

Butyphus. (Bovæ, an ox; *typhus*, G. *Ectoparasit.*) A term for the cattle plague.

Butyræceous. (L. *butyræus*, butter. F. *butyreux*, butter; G. *butterig*.) Of the nature, appearance, or consistency, of butter.

Butyrate. (L. *butyræus*.) A combination of butyric acid with a base.

B. of ethylic ether. Same as *Butyric ether*.

B. of glycerin. The substance called butyrine found in butter.

B., sodium. A salt of butyric acid, found in the sweat of many animals, and occasionally in that of man.

Butyric. (L. *butyrum*, butter.) Of, or belonging to, butter.

B. acid. (G. *Buttersäure*.) $C_4H_7O.OH$. A viscid liquid with a rancid smell, solidifying at $12^{\circ} C.$ ($-10.4^{\circ} F.$) and boiling at $163^{\circ} C.$ ($325.4^{\circ} F.$). It is found in the pulp of the fruit of a few trees, such as the *Cordallia alliodora*, *Sapindus saponaria*, and *Tamarindus indica*, in the seeds of *Hebecladon giganteum* and *Partinaca sativa*, and is otherwise widely distributed throughout the vegetable kingdom. In animals it is found free or combined with bases in perspiration, the juice of flesh, urine, and in many decomposing matters, such as the contents of the large intestine. Combined with glycerin, it occurs in cows' and goats' milk, and in many fatty substances. It is obtained from the fermentation of sugar in contact with putrid cheese when kept alkaline by chalk. The sugar solution becomes thick, lactic acid is then produced, and subsequently butyric acid.

B. ether. $C_4H_7O.C_2H_5O$. Prepared by agitating a mixture of 100 parts of butyric acid, 100 of alcohol, and 50 of sulphuric acid. The ether is removed from the surface, washed with water, and treated with calcium chloride. It boils at $110^{\circ} C.$ ($230^{\circ} F.$), is freely soluble in alcohol, slightly in water, and smells like the pineapple; it is used to communicate this flavour.

B. fermentation. The process which occurs when butyric acid is formed from the fermentation of sugar. See *B. acid*.

Butyrin. (L. *butyrum*, butter.) Butyrate of glycerin. It is an oily fluid at ordinary temperatures, solid at $0^{\circ} C.$ ($32^{\circ} F.$). It smells of heated butter. It is soluble in alcohol.

Butyroid. (*Butyropus*, butter; *tydos*, form.) Resembling butter.

B. tumour. A galactocoele in which the fluid portions have been absorbed.

Butyrometer. (*Butyropus*, butter; *metro*, a measure.) A graduated tube, in which milk is shaken up with ether until the fatty matter is dissolved by it; on the addition of alcohol, in a quantity equal to the ether, the butter is separated, and, floating on the surface, its relative proportion can be read off.

Another form depends for its action on the solution of the casein in strong acetic acid, and thus the separation of the butter.

Butyrose. (L. *butyrum*. F. *butyreux*; G. *butterig*.) Having the characters of, or appertaining to, butter.

Butyrum. (*Butyropus*, butter; from *bois*, a cow; *traces*, cheese.) Butter.

B. amygdalarum dulcietum. (L. *amygdala*, an almond; *dulcis*, sweet.) A synonym of *Confectio amygdala*.

B. antimonii. (F. *beurre d'antimoine*; G. *Spiesglashutter*.) Chloride of antimony, or antimonious chloride.

B. antimonii liquidum. (L. *liquidus*, fluid.) Antimonious chloride.

B. cacao. See *Butter, cacao*.

B. cacaophosphoretum. A mixture of one part of phosphorus in eighty of cacao butter.

B. cere. (F. *beurre de cire*; G. *Wachs-butter*.) Same as *Oleum cere*.

B. insulsum. (L. *insulsum*, unsalted.) Unsalted butter. Used occasionally as a local application.

B. nucis. (L. *nux*, a nut.) Butter of nutmeg. The *Oleum myristice expressum*.

B. saturni. (L. *Saturnus*, Saturn, a name for lead.) Butter of lead. The *Unguentum plumbi acetici*.

B. stanni. (L. *stannum*, tin. F. *beurre d'étain*; G. *Zinnbutter*.) Chloride of tin.

B. stibii. (L. *stibium*, a sulphuret of antimony.) Butter of antimony; chloride of antimony.

B. sulphuris. (G. *Schwefelbutter*.) Sulphur monochloride.

B. vaccini. (L. *vaccinus*, from cows.) The butter of cow's milk.

B. zinci. Butter, or chloride, of zinc.

Buxa cœsa. (L. *cœsa*, the box tree.) An order of which the box tree is the type, but which is usually included in the Nat. Order *Euphorbiaceæ*.

Buxace. A tribe of the Nat. Order *Euphorbiaceæ*, having the ovules in pairs, and the stamens inserted beneath the rudimentary ovary.

Buxaceus. (L. *buxa*, the box tree. G. *buchsbaumartig*.) Yellowish with the odour of boxwood.

Buxin. An alkaloid obtained from the box tree, *Buxus sempervirens*. It has a bitter taste, and excites sneezing. Soluble in alcohol and boiling water. Also said to be identical with *Belletin*.

B. sulphate. A yellow substance, soluble in water. Used as a tonic and stimulant, and as a substitute for quinine in fever.

Buxinæ. The same as *Buxaceæ*.

Buxinum. Same as *Buxa*.

B. sulfuricum. Same as *Buxa sulphate*.

Buxous. (L. *buxa*, the box tree; *ous*, pertaining to.) Having the characters of, or appertaining to, the box tree.

Buxton. English. Derivation. Climate

BUXUS—BYTTNERIADS.

bracing, but somewhat wet and cold. Altitude 1000 feet; on the limestone. Indifferent thermal waters, of 28° C. (82.4° F.), containing little solid matter, but a large quantity of nitrogen, 63 cub. in. to the pint. The waters are drunk for dyspepsia and vesical disorders, but they are mainly used for baths in chronic gout and rheumatism.

Buxus. (Πύξος; from πυκάζω, to grow thick, or hard.) The box tree. A Genus of the Nat. Order *Euphorbiaceae*. Flowers monœcious, axillary; male flowers one bract at base; stamens 4; female flowers 3 bracts at base; styles 3; capsule 3-celled, each 2-seeded.

B. sempervirens, Linn. (*L. semper*, always; *virens*, partic. of *viridis*, to be green. *F. buis*; *I. bosso*; *S. box*; *G. Buchsbaum*.) The box tree. Leaves opposite, oval, entire, leathery, smooth, persistent; anthers ovate, sagittate. The leaves have a strong, nauseous, bitter taste, are aperient, and have been used in decoction in dropsy, asthma, and worms; the wood has been supposed to be diaphoretic, diuretic, and alexipharmic. The bark has been used in rheumatism and syphilis. The leaves are said to have been used as an adulterant of *uva ursi*.

Buzias. Hungary; between Temesvar and Lugos. Several chalybeate mineral springs are here, varying considerably in the amount of iron they contain.

Buzard. (*F. busard*, or *buss*; from Low *L. busio*, *L. buteo*.) The *Buteo vulgaris*.

Buzzing. (Eng. part. of *buzz*, formed by imitation of the actual sound which it expresses. *F. bourdonnement*; *I. bucinamento*; *S. zumbido*; *G. Summen*.) A humming, as of bees; applied to a similar sound heard as if in the ears under certain circumstances, as the taking an over-dose of quinine.

Byarus. A plexus of blood-vessels in the brain, the *rete mirabile* of sheep.

Bykow. Russia; circle of Isum. A water containing sodium sulphate, and free carbonic acid.

Byn. (Bünn, malt for brewing.) An old term for macerated barley in a state of germination, as described by Aëtius, xxx, 29. See *Malt*.

Byrethrum. Name for a kind of cap for the head, containing cephalic drugs, according to Forestus, v, *Obs.* 132.

Byron acid springs. A town in Genesee County, New York. The water is a nearly pure dilute sulphuric acid. It is powerfully astringent and tonic. (Dunglison.)

Byssa. (Bύσσα, a hide.) A piece of leather to spread plasters on. (Quincy.)

Also, same as *Bursa*.

Byrsodepsicon. (Byρoδeψiς, to tan hides.) Cotton wool saturated with a tanning material. Applied by the ancients to the abdomen.

Byrsodepsicum principium. (Byρoδeψiς, for tanning; *L. principium*, a principle. *G. Gerbstoff*.) Tannic acid.

Byrsonima. A Genus of the Nat. Order *Malpighiaceae*.

B. chrysophylla. (Χρυσός, gold; φύλλον, a leaf.) Hab. Brazil. Bark astringent. (Waring.)

B. continuifolia. (*L. continuus*, hanging together; *folium*, a leaf.) Hab. Mexico. The bark is used in skin diseases.

B. crassifolia. De Cand. (*L. crassus*, thick; *folium*, a leaf.) Hab. French Guiana.

Used as a febrifuge and against the bite of the rattlesnake; also, in abscess of the lungs. (Waring.)

B. spicata. (*L. spicatus*, part. of *spica*, to furnish with a point.) Berries acid and astringent. Used in dysentery.

B. verbascifolia. (*L. verbascum*, the plant of that name; *folium*, a leaf.) Hab. French Guiana. Used as a local astringent to clean ulcers and heal wounds. (Waring.)

Bysau'chen. (Bύω, to stuff full; αὐχέν, the neck.) A stiff neck. A short-necked person.

Bysma. (Bύσμα, a plug.) A cork, a stopper.

Byssa'cese. (*L. byssus*, cotton.) An Order of fungoid plants, according to Fries.

Byssa'ceous. (*L. byssus*, cotton. *F. byssacei*; *G. schimmelartig*, *flaumfederig*.) Resembling a byssus; consisting of fine entangled threads.

Byssiferous. (*L. byssus*; *fero*, to bear. *F. byssiferæ*.) Having a byssus.

Bys'sine. (Bύσσος, cotton.) Made of, or resembling, silk.

Byssocaul'sis. (Bύσσος, cotton; αἰσσις, a burning. *F. byssocaulis*.) Term for burning produced by the use of the byssus as a moxa.

Bys'soid. (Bύσσος; σίδω, form. *G. schimmelartig*, *flaumig*.) Resembling a byssus.

Byssopht'his. (*L. byssus*, cotton; *phthisis*. *F. byssophtisie*; *G. Baumwollenschwindsucht*.) Phthisis or consumption of the cotton-spinner.

Byssus. (Bύσσος, a kind of very fine linen. *F. byssus*.) Fine flax; cotton wool, charpie, silk.

A Genus of Fungi, now included in *Penicillium* and *Mucor*.

Also, the thread-like stipe of some fungi.

Also, a tuft of silky threads, of a chitinous character, secreted by a special gland in the foot of certain lamellibranchiate mollusca for the purpose of attachment to a rock or other surface.

Also, the *Pudendum muliebre*.

B. gland. (*G. Byssusdrüse*.) An organ in the foot of certain lamellibranchiate mollusca which secretes the *Byssus*; it is a tongue-like process, grooved at its base.

Bystini antid'otus. (Ἀντιδότης, a remedy.) A corroborant and diuretic medicine anciently in use.

Bythus. (Βαθός, depth.) An old term for the hypogastric region.

Byttera febrifuga. Same as *Bittera febrifuga*.

Byttneria. (Byttner.) A Genus of the Nat. Order *Byttneriaceae*.

B. cordata. Lamb. (Mod. *L. cordatus*, heart-shaped.) Hab. Peru. The leaves are applied to the bites of spiders.

Byttneria'cese. Trees or shrubs. Leaves simple, alternate; calyx 4-5-lobed, valvate; stamens hypogynous; filaments more or less united; anthers 2-celled, introrse; ovary composed of 4-10 carpels, united, and a central column; style simple; stigmas equal in number to carpels; ovules 2 in each cell; fruit capsular; cotyledons plaited or spiral. It is a Nat. Order of thalamifloral angiospermous *Dicotyledons*.

Byttneriads. The plants of the Nat. Order *Byttneriaceae*.

C.

C. Abbreviation of compositus, compound. Also, of Centigrade, or Celsius, a scale of thermometry.

Also, signified nitre.

Also, used in prescriptions for calx, lime.

Also, the chemical symbol of carbon.

C.C. Cornu cervi, hartshorn.

Also, an abbreviation of concisus, cut; and contusus, bruised.

C.C.U. Cornu cervi ustum, burnt hartshorn.

C.M. Abbreviation of Cras mane, to-morrow morning.

Ca. The chemical symbol of calcium.

Ca. A Brazilian word signifying herb, and specially used to designate the *Ilex paraguayensis*.

Caaguay-mi. A Paraguayan name of a species of *Styrax*, having aromatic balsamic properties. (Waring.)

Caapia. Brazilian name for the *Dorstenia brasiliensis*.

Caataja. A Brazilian plant, which is bitter and reputed a good purgative; supposed to be a species of *Gratiola*.

Caabera. A Paraguayan name of a plant of the *Asparagineae*, producing a resin like dragon's blood. (Waring.)

Caabera-mi. A Paraguayan name for a labiate plant, of strong balsamic odour and aromatic taste, which is used in snake-bites and as an antiseptic. (Waring.)

Caabo. The Brazilian name of the *Mimosa sensitiva* and *M. pudica*.

Caacambay. (S. *lechitrenza*.) A Paraguayan name for one of the *Euphorbiaceae*, with a caustic, milky juice, applied to foul ulcers; the leaves are used as a poultice to indolent tumours.

Caacica. The *Euphorbia capitata*.

Caacurura. A Paraguayan name of a verbenaceous plant, the decoction of which is used in baldness, erysipelas, sore throat, and intermittents. (Waring.)

Caaghuju-yo. Brazil. A species of *Gratiola*. Bitter; used as a purgative. (Dunghison.)

Caahay. Paraguay. A species of *Portulacca*, the leaves and roots of which are used in decoction in dysentery, malignant fevers, and inflammation of the kidneys and bladder. (Waring.)

Caaimbe. Paraguay. A species of *Cheiranthus*, the aromatic petals of which are used in hooping-cough. (Waring.)

Caaimbe-mi. (S. *nardo celtico*.) Paraguay. A species of valerian. Root and flowers aromatic, stimulant, tonic, and diuretic. (Waring.)

Caanambuy-guazu. (S. *enula*.) Paraguay. A species of *Inula*. Root large, fleshy, of pungent taste. Boiled in wine it is used as a poultice in lumbago. Used as stimulant and tonic in malignant fevers. (Waring.)

Caangay. Paraguay. A kind of wild chicory, used instead of taraxacum. (Waring.)

Caapia. Brazilian name for the *Hypericum brasiliense*.

Caapeba. A name of the *Ocotepehnia parviflora*, the *C. glomerata*, the *Pachymorpha pilata*, and *P. umbellata*.

Caapetay-hubay. (S. *nasturtium silvestre*.) Paraguay. A species of *nasturtium*; also, the *Parietaria officinalis*. Used as a diuretic. (Waring.)

Caapita-guazu. (S. *consueto*.) Paraguay. A species of *Symphytum*, the root of which is astringent. (Waring.)

Caaponga. Brazilian name for the *Inula crithmoides*.

Caaponi-miquira. Paraguay. A species of *Glechoma*. Aromatic, bitter, and slightly astringent. Used in chest affections. (Waring.)

Caaguiri. Paraguay. A species of *Fumarica*. Used as an emmenagogue. (Waring.)

Caaroba. Same as *Caroba*.

Caarura. (S. *Atolacca*.) Paraguay. A species of *Phytolacca*. Used as a purgative. (Waring.)

Caatay. (S. *yerba sanguinaria*.) Paraguay. A species of *Polygonum*. Used as an astringent. (Waring.)

Caati-hubos. (S. *escabiosa negra*.) Paraguay. A species of *Scabiosa*. Supposed to be a specific in lepra and scabies. (Waring.)

Caayupe. (S. *tanacetum*.) Paraguay. A species of *Tanacetum*, having a strong balsamic odour, and used as a stimulant and vermifuge. (Waring.)

Cab. (Arab.) An alchemical term for aurum or gold.

Cabacalli bark. A product of British Guiana. Said to be a good dressing for ulcers. Source unknown. (Waring.)

Cabacinha. A name of the fruit of *Luffa purgans*.

Caba'da. Same as *Cadaba*.

Cabal. A Portuguese beverage, made by infusing bruised raisins in white wine.

Cabala. See *Kabbala*.

Cabalatar. Same as *Cabalator*.

Cabalator. Old term for nitre

Cabalhan. A Mexican plant, species unknown. Used for poisoning arrows, and as an antidote against white hellebore.

Cabalist. See *Kabbalist*.

Caballation. The *Cynoglossum officinale*.

Caballine. (L. *caballus*, a horse.) Of, or belonging to, a horse.

C.al'ces. See *Alce caballina*.

Cabanis. A Swiss physician, born 1757, died 1808.

C., pallet of. A shovel-shaped instrument, composed of two plates of silver pierced by holes, jointed and movable on each other, used to seize the extremity of the probe introduced into the nasal canal in the operation for lachrymal fistula done according to the method of Méjean.

Cabaret. (F. *cabaret*, a wine shop.) The *Asarum europaeum*, because it is said to be used by drinkers to produce vomiting.

Cabbage. (Old F. *cabus*, great-headed; from L. *caput*, a head. F. *chou*; L. *carolo*; S. *col*; G. *Kohl*.) The generic name of the *Brassica oleracea* and many of its cultivated varieties.

The cabbage, when boiled, is largely used as an article of food, and is a valuable antiscorbutic. The leaves put into a vessel, with alternate layers of salt, pressed, allowed to remain until they are

CABBAGIUM—CACAPHRODITE.

sour, form the *Sauer-kraut* of the Germans. The fresh leaves have been used as an application to foul ulcers.

Also, a name of the fruit bud of the *Cocos nucifera*.

C., cow. The *Nymphaea odorata*.

C., Irish. The *Dracontium fatidum*.

C. palm. The *Areca oleracea*, and the *Euterpe montana*, and the *Andira inermis*.

C., red. A garden variety of *Brassica oleracea*, used chiefly as a pickle.

C. rose. The *Rosa centifolia*.

C., Savoy. A variety with bullate leaves.

C., sea. The *Crambe maritima*.

C., skunk. The *Dracontium fatidum*.

C., swamp. The *Dracontium fatidum*.

C. tree. The *Andira*, or *Geoffraa inermis*. Also, the *Cacalia kleinia*, or carnation tree, a native of the Canary Islands.

C.-tree bark. The bark of *Andira inermis*. Used as an anthelmintic. It is cathartic, emetic, and narcotic.

C., turnip. A variety with a large fleshy enlargement of the stem, somewhat like a turnip, and used as food in the same way. Also called *Kohl-rabi*. The *Brassica oleracea caulorapa*.

C., water. The *Nymphaea odorata*.

C., white. The ordinary garden variety of *Brassica oleracea*.

Cabbagium. (G. *Wurmrinde*.) The bark of the *Andira inermis*, and *A. retusa*.

Cabeb. (Arab.) Old term for scales of iron. (Ruland and Johnson.)

Cabebi. Same as *Cabeb*.

Cabel. (Arab.) *Fæces*.

Cabob pepper. Cubebs, fruit of *Cubeba officinalis*.

Cacombacœ. A Nat. Order of thalamifloral Exogens; or Subfamily of the Family *Nymphaeaceae*, Order *Polycarpiceæ*, having cyclic flowers, numerous monomerous ovaries, each with two or three ovules having sutural placentæ. A synonym of *Hydrophyllidæ*.

Cabotz. The *Brayera anthelmintica*.

Cabralia. A Genus of the Nat. Order *Meliaceæ*.

C. canjera'na. Hab. Brazil. The bark is employed in intermittent fevers and dropsy.

Cabulator. (Arab.) Old term for sal nitrum.

Cabureiba. The native name of the tree supplying balsam of Peru.

Cabureiciba. Balsam of Peru.

Cacabum. (Κάαβος, a three-legged pot. G. *Kassl*.) A pot in which anything is boiled.

Cacabus. Same as *Cacabum*.

Cacœmia. (Κακός, bad; αἷμα, blood.) A diseased or unhealthy condition of the blood.

Cacœrometer. (Κακός, bad; ἀήρ, air; μέτρον, a measure. F. *cacœromètre*; G. *Luftverderbnissmesser*.) An instrument for measuring noxious gases.

Cacœsthesia. (Κακός; αἰσθησις, sensation. F. *cacœsthesie*; G. *Kakästhesie*.) Term for bad or morbid sensation.

Cacaferri. Ferrous carbonate.

Cacagogue. See *Cacagogue*.

Cacalexiteria. (Κακός; ἀλῆξω, to ward off.) Applied to remedies which drive away noxious humours, or which counteract poisons.

Cacalia. (Κακαλία, a plant mentioned by Dioscorides and Pliny as being serviceable in coughs; and variously supposed to be a *Bupleu-*

rum, a *Mercurialis*, and a *Cacalia*. G. *Pestours*.) A Genus of the Nat. Order *Compositæ*.

C. alliariifolia. (*Alliaria*, the hedge-mustard; L. *folium*, a leaf.) The *C. alpina*.

C. alpina. Jacq. (L. *alpinus*, alpine.) The strange colt's foot; supposed to possess desiccative virtues, and to be the *κακαλία* of Dioscorides.

C. anteuophorbium. (Ἀντί, against.) An African plant, supposed to be an antidote to the euphorbium.

C. glabra. (L. *glaber*, smooth.) The *C. alpina*.

C. hastata. (L. *hastatus*, armed with a spear.) A plant which grows in Siberia, is violently purgative, and said to be antisyphilitic.

C. kleinii. Linn. Hab. India. A decoction of the leaves is used as an alterative in syphilis, rheumatism, and lepra.

C. odorata. (L. *odorus*, sweet smelling.) A species used in Arabia for fumigating the chambers of the sick in smallpox.

C. pendula. (L. *pendulus*, hanging.) A species, the expressed juice of which is used in Arabia against diseases of the ear.

C. sarraocénica. The *Senecio cacaliaster*.

C. sonchifolia. Wall. (L. *sonchus*, the sow thistle; *folium*, a leaf.) Used in India as a condiment. Its juice, mixed with arrack, is given to favour the eruption of smallpox, and alone it is employed externally as resolvent and suppurative, and as an application to inflamed eyes.

Cacacum. Improperly used for *Cantharum*.

Cacan'che. Same as *Cacocynanche*.

Cacanthrax. (Κακός, bad; ἀντραξ, a carbuncle.) Malignant pustule.

Cacanus. A plant, mentioned by Paulus Ægineta and Galen, probably identical with *Cacalia*.

Caca'o. Same as *Cocoa*.

C. antillanum. *Cocoa* of the Antilles, the fruit of *Theobroma cacao*.

C., black. The *Colocasia esculenta*.

C. butter. Same as *Oleum Theobromæ*.

C. butter, medicated. *Cacao butter* 28 oz., yellow wax 4, balsam of Peru and benzoic acid, of each 1 dr. Melt and mix. Used for chapped hands.

C. caraccen'se. (F. *cacao-caraque*.) *Cocoa* from Caraccas. Seeds largish, rounded, sometimes a little mouldy in flavour.

C., island. Same as *C. antillanum*.

C. lagarto. The *Theobroma pentagona*.

C. minus. Gärt. A synonym of *Theobroma cacao*.

C.-red. A substance found in the seeds of *cocoa* after the sweating process; it is soluble in water and alcohol.

C. semen. Belg. Ph. (L. *semen*, seed.) The fruit of *Theobroma cacao*.

C. tabulata. (L. *tabula*, a board.) Chocolate in cakes.

C. theobroma. The *Theobroma cacao*.

C. tree. The *Theobroma cacao*.

C., wild. The *Carolinea princeps*.

Cacaoste'arin. (Στρίαρ, suct.) Same as *cocoa butter*.

Cacaphonia. (Κακός, bad; φωνή, the voice.) Hoarseness, roughness, or other unnatural condition of the voice.

Cacaphrodit'e. (Κακός; ἀφροδίτη, Venus.) A name for syphilis.

CACAPHTHÆ—CACHEXIA.

Cacaphthæ. (Κακός; ἀφθα, thrush.) A malignant form of aphthæ or thrush.

Cacation. (L. *caco*, to go to stool.) The act of defecation.

Cacatoria febris. (L. *cacatorius*, from *caco*.) A species of intermittent fever in which there is diarrhoea, sometimes accompanied by tormina.

Cacatory fever. See *Cacatoria febris*.

Cacava'ta. A term for cocoa.

Caca'vi. A term for cocoa.

Also, the *Jatropha manihot*.

Cacæagogue. (Κάκη, excrement; ἄγω, to lead along.) That which promotes intestinal action.

Applied to ointments which, when rubbed on the anus, produced defecation.

Cacæio cotto. Italy; in the district of Voller. A mineral water containing sodium chloride and calcium sulphate, with free carbonic acid and nitrogen.

Cacæion dñ. A pill, of which the basis is catechu, recommended by Baglivi in dysentery.

Cacædonium tartarum. The peccant matter in the human body secreted but not immediately expelled.

Cacenteria. (Κακός, bad; ἔντροπον, an intestine. F. *cacenteria*; G. *Darmfäule*.) A putrid state of the bowels, as in dysentery.

Cacophobesia. (Κακός; φόβος, fear. F. *cacophobie*; G. *Kakophobie*.) Disease occurring at puberty.

Cachalot. (*Biscayan*, from *cachau*, which in the Cantabrian dialect signifies a tooth. S. *cachalote*; G. *Grosskopf*; Dan. *kaskelot*; Swed. *kaskelot*; Greenland *kigutilik*.) The spermaceti whale, *Physeter macrocephalus*. This animal is a monophyodont, and has about twenty-seven conical teeth in the lower jaw.

The flesh, dried and smoked, is eaten by the Esquimaux; the intestines are also eaten; the blubber supplies oil, and the tendons and aponeuroses furnish gelatine; spermaceti is obtained from the head, and ambergris is formed in the intestines.

Cachang-parang. A Sumatran bean given in pleurisy; probably the *Mimosa scandens*.

Cachectic. (Καχέκτης, in a bad habit of body. F. *cachectique*.) Of, or belonging to, the state called cachexia.

C. discæses. Diseases supposed to be dependent upon a morbid condition of blood.

Cachelco'ma. (Κακός, bad; ἔλκος, a sore.) A foul or a malignant ulcer.

Cachelcoporphyrtyphus. (*Cachelcoma*; *porphyrytyphus*.) Term for porphyrytyphus accompanied by sloughing ulcers.

Cachen-laguen. The *Chironia chilensis*.

Cachex'ia. (Κακός, bad; ἔξis, a habit. F. *cachexie*; L. *cachexia*; S. *cachexia*; G. *Kachexie*.) A depraved condition of the body, in which nutrition is everywhere defective; used generically with an adjectival qualification, as syphilitic, cancerous, scorbutic, to denote the special cause. Formerly it was synonymous with chlorosis.

C. africa'na. (L. *Africanus*, African.) The desire of dirt-eating among the negroes. Also, called *Pica* and *C. aquosa*.

C., alkali'ne. The bad health caused by taking large quantities of alkalies for a long period, and evidenced by pallor, breathlessness,

emaciation, and anemia, accompanied sometimes by increase of latent diseases, such as phthisis.

C. aquosa. (L. *aquosa*, watery. F. *cachexie aqueuse*.) A term given to an anæmic condition leading to serous effusions, and often accompanied by perversion of appetite, seen in hot climates, and specially among negroes. It has received many names, such as white tongue, stomach disease of negroes, dirt-eating, negro cachexy, intertropical anemia, and many others. Doubtless many different disorders have been included under this name, such as the results of malaria or of intestinal worms.

The term is also given to the condition in cattle and sheep produced by *Fasciola hepatica*.

C. calculosa. (L. *calculosa*, full of stones.) The conditions tending to the formation of urinary calculus.

C. cancerat'ica. (L. *canceraticus*, like a cancer.) The conditions accompanying the formation of cancer, such as loss of strength and flesh, and yellowish or brownish colouration of the skin; at one time the impairment of nutrition, known by the term cancerous cachexia, was supposed to be present before the occurrence of the local disease.

C., can'cerous. Same as *C. cancerat'ica*.

C. cardi'aca. (Καρδιακός, belonging to the heart.) The special conditions of disorder attaching to persons the subjects of heart disease, such as venous obstructions, deficient arterialisation of the blood, dyspeptic conditions, and dropsical effusions.

C. chlorot'ica. A synonym of *Chlorosis*.

C., drop'sical. A condition described as exhibiting pallor and dryness of skin, puffiness of eyelids, anasarca of lower limbs, and difficulty of breathing on any exertion.

C. dysthet'ica. (Δυσθετός, in bad condition.) A bad habit of body, from some disorder of the blood.

C. exophthal'mica. Same as *Exophthalmic bronchoecle*.

C., gaol. The dyscrasia often produced by close confinement in prison.

C. icter'ica. (Ικταρός, jaundice.) Jaundice.

C. lymphat'ica farcinino'sa. (*Lymphatic*; L. *farcinum*, farcy.) Farcy.

C., marsh. The condition of body produced by exposure to marsh miasmata.

C. mercurial'is. (L. *mercurialis*, belonging to mercury.) A term formerly applied to cases of tertiary syphilis where mercury had been administered in large quantities and great destruction of tissue, in soft palate, bone, and other parts, had ensued.

C. palustr'is. (L. *paluster*, marshy.) Same as *C., marsh*.

C. rena'lis. (L. *renalis*, belonging to the kidney.) Albuminuria and its accompanying symptoms.

C. rhachit'ica. (Ραχίτις, a spinal complaint.) The early signs of impaired nutrition preceding the full development of rickets. They are essentially emaciation, profuse perspiration of head and upper part of body during sleep, intolerance of bed coverings, and tenderness or great painfulness on being touched.

C. saturn'ina. (L. *Saturnus*, Saturn, a name for lead.) Chronic lead-poisoning.

C. scorbu'tica. (*Scorbutus*.) The condition of body leading to purpura.

CACHEXIE—CACODIA.

C. scrofulosa. (*L. scrofula*, a swelling of the glands of the neck.) Scrofula.

It is usually described as being denoted by a thin, pale skin, often marked with cicatrices or eruptions, especially about the nose, a thick upper lip, a narrow chest, large abdomen, flabby muscles, and large joints.

C. splenica. (Σπληνικός, belonging to the spleen.) The condition of body induced by miasmata. Leucocythæmia.

C., strumous. (*L. struma*, a scrofulous tumour.) Same as *C. scrofulosa*.

C. syphiloidea. (*Syphilis*; εἶδος, likeness.) A term given to the condition also called *C. mercurialis*.

C. uterina. (*L. uterinus*, belonging to the womb.) Leucorrhæa.

C. venerea. (*L. Venus*, the goddess of love.) Syphilitic disease.

C. venosa. (*L. venosus*, venous.) A condition of body in which the venous circulation is supposed to be torpid.

C. virginum. (*L. virgo*, a virgin.) Chlorosis.

Cachexies. Cachectic diseases; the name of a Class of Cullen's Nosology, being diseases in which there is a depraved state of the whole, or greater part, of the body; without any febrile or nervous disease, as the primary one.

Cachexy. Same as *Cachexia*.

Cachibou resin. A white or brownish, aromatic, bitter resin, often in triangular masses, the product of the *Bursera gummifera*.

Cachiman. The fruit of the *Anona muricata*.

Cachim'ia. See *Cachymia*.

Cachinlag'ua. The *Chironia chilensis*.

Cachinnation. (*L. cachinno*, to laugh loudly.) Immoderate laughter; a symptom in mania, and hysteria.

Cachiri. A fermented liquor obtained from the root of a species of manihot.

Cachlex. (Κάληξ.) A little stone or calculus, found in waters or on the sea-shore, which, when heated on the fire, and cooled in whey, gives an astringent quality to the liquid, which makes it useful in dysentery. (Galen.)

Cachore. A synonym of *Catechu*.

Cachos. An Oriental fruit, apparently of a Solanum, which is reputed to be lithontriptic. (Dunglison.)

Cachou. A term for *Catechu*.

Cachrys. (Κάχρυς.) A Genus of the Nat. Order *Umbellifera*, having acid and sialagogue properties.

Also, a term for parched barley.

C. libanotis. Linn. (*A. balsamitis*, rosemary.) Hab. Africa and South Europe. Aromatic and astringent; seeds acrid.

C. maritima. (*L. maritimus*, maritime.) The *Crithmum maritimum*.

C. odontalgica. Pall. (Ὄδους, a tooth; ἄλγος, pain.) The root has been used against toothache.

Cachu. A synonym of *Catechu*.

Cachun'de. A medicine in great repute among the Chinese and Indians, described by Ros. *Lentilius, Muscell. Med. Pract. part iii, p. 113*, and composed of aromatics, perfumes, medicinal earths, and precious stones, the whole made into a stiff paste and formed into figures that are dried for use. Of these the chief persons in China usually keep a small piece in their mouths as a cordial, and as a means of rendering

the breath fragrant. This substance is valued as a medicine in nervous complaints, and as aphrodisiac and a prolonger of life, the two grand objects of most Eastern medicines.

Cachutic acid. (*Cachou*.) Same as *Catechulannic acid*.

Cachym'ia. Old term for an imperfect metallic body, or immature ore of metal, not saline, nor metalline, but almost metallic.

Cacia ferrea. (*L. ferreus*, made of iron.) The same as *Cochlea ferreum*.

Caco'a. Another spelling of *Cocoa*.

Cacocæsthesia. See *Cacæsthesia*.

Cacocæxeterian. (Κακός, evil; ἀλεξητήριος, driving back.) Having power to drive back, or protect against, mischief; applied to medicines and preparations.

Cacocæxeterium. (Κακός, evil; ἀλεξητήριον, a remedy.) A term in former use, according to Helmontius, *de Peste*, § *Preservatio*, synonymous with *Alexiterium*.

Cacochol'ia. (Κακός, bad; χολή, bile.) Old term for a vitiated condition of the bile.

Cac'ochri. See *Cacochroi*.

Cac'ochroi. (Κακός; χρῶς, colour.) Diseases in which the colour of the skin is changed.

Cacochylia. (Κακός, bad; χυλός, chyle.) Term for indigestion or depraved chyliification.

Cacochylous. (Κακός, bad; χυλός, chyle.) Producing bad chyle. Applied to food of difficult digestion, as cacochylous aliments, aliments that produce bad chyle.

Cacochym'ia. (Κακός, bad; χυμός, juice or humour.) Old term for an unhealthy state of the humours.

C. plum'bea. (*L. plumbæus*, belonging to lead.) Lead poisoning.

C. scorbutica. Purpura.

C. scrofulosa. Scrofula.

C. venerea. Syphilis.

Cacochymica febris. (*Cacochymia*; febris, a fever.) A remittent or intermittent fever, supposed to arise from a depraved state of the humours.

Cacochymicous. (Κακός, bad; χυμός, juice or humour.) Causing or producing a vitiation or depraved condition of the humours.

Cacochymous. Same as *Cacochymicous*.

Cacocnemus. (Κακός; ανήμη, the leg.) One who has diseased legs.

Cacocol'pia. (Κακός; κόλπος, the vagina. *F. cacocolpie*.) Term for a putrid condition of the vulva.

Cacocore'ma. (Κακός, bad; κόρημα, a purge.) Old term for a medicine which purges off depraved humours.

Cacocynan'che. (Κακός; κυνάγχη, sore throat.) Term for angina maligna.

Cacodæmon. (Κακός, bad; δαίμων, a god.) An old term for an evil spirit, supposed to influence and afflict with disorders the bodies of men. Formerly used as a name for nightmare.

Cacodæmonoma'nia. (Κακός; δαίμων; μανία, madness.) A term applied to that form of delusional insanity in which a person believes himself to be, or to be inhabited by, the devil or some evil spirit.

Cacod'es. (Κακός; ὀσῶ, to smell. *G. ūbelriechend*.) Having a bad smell. Offensive matter discharged by the bowels, the stomach, or by foul ulcers.

Cacodia. (Κακωδία, a bad smell.) Having a bad smell.

CACODONTIA—CACOTHYMLA.

Cacodontia's. (Κακός; ὀδούς, a tooth.) A bad condition of the teeth.

Cacodyl. (Κακῶδες, ill-smelling; ὕλη, matter.) $As(CH_3)_3$. Arsendimethyl. Constitutes, with its oxidation products, alkarsin, or Cadet's fuming liquid. A colourless, transparent, oily liquid, boiling at $170^\circ C.$ ($338^\circ F.$), and crystallising at $6^\circ C.$ ($42.8^\circ F.$); it takes fire easily in the air, and is a very energetic poison. It is obtained by decomposing cacodyl chloride by zinc, dissolving out the zinc chloride with water, and removing the water from the cacodyl by calcium chloride.

C. chloride. $As(CH_3)_3Cl$. Obtained by distilling alkarsin with hydrochloric acid. A colourless, non-fuming liquid, exhaling a very poisonous vapour.

C. cyanide. $As(CH_3)_3Cn$. Obtained by distilling alkarsin with hydrocyanic acid. A colourless, ethereal liquid above $33^\circ C.$ ($91.4^\circ F.$); below that temperature it is a lustrous solid in 4-sided prisms. Boils at $140^\circ C.$ ($284^\circ F.$), slightly soluble in water. Intensely poisonous in vapour.

Cacodylic acid. (Same etymon.) $(CH_3)_2AsO_2H$. The result of the oxidation of cacodyl in the presence of water. Brilliant, colourless, square prisms; permanent in dry, deliquescent in moist air. Not poisonous.

Cacoëthes. (Κακός, bad; ἥθος, manner or disposition.) A bad habit of body, or a disorder of a bad character.

Cacoëthic. (Same etymon.) Ill-conditioned. Used to ulcers or disorders which do not answer to remedies.

Cacoëthous. Same as *Cacoëthic*.

Cacogalactia. (Κακός; γάλα, milk.) A condition in which the milk is bad.

Cacogalactica. (Same etymon.) One who has bad milk.

Cacogal'ia. Same as *Cacogalactia*.

Cacogenesis. (Κακός, bad; γένεσις, origin. *F. cacogénésis*.) Term for false, morbid formation, either a monstrosity, or a pathological product.

Cacoglossia. (Κακός, bad; γλῶσσα, the tongue. *F. cacoglossie*; *G. Zungenfäule*.) Putrid state of the tongue.

Cacomeliasmus. (Κακός; μέλος, a limb. *F. cacomeliasme*; *G. eine üble Beschaffenheit der Glieder*.) A bad condition of the limbs.

Cacometra. Same as *Metrocace*.

Cacometria. Same as *Metrocace*.

Cacometrum. Same as *Cacairometer*.

Cacomorphia. (Κακός, bad; μορφή, form. *G. missbildung*.) Malformation or deformity.

Cacomorpho'ma. (Κακός; μόρφωμα, form.) Term for a morbid alteration.

Cacomorphosis. (Κακός; μόρφωσις, a shaping.) The progress of cacomorphia.

Caconychia. (Κακός; ὄνυξ, the nail.) A morbid state of a nail.

Cacoparonych'ia. (Κακός; paronych'ia.) Malignant paronychia.

Cacopathia. (Κακός, bad; πάθος, affliction.) Old term, used by Hippocrates, for a severe affection or malady of the mind; as in melancholy.

Cacopharyng'ia. (Κακός; φάρυγξ, the pharynx.) A putrid condition of the pharynx.

Cacophony. (Κακός, bad; φωνή, the voice.) Old term for a harsh, grating, or discordant state of the voice.

Cacophthal'mia. (Κακός; ὀφθαλμία.) Malignant inflammation of the eye.

Cacopla'sia. (Κακός; πλάσσω, to form.) The formation of diseased structures, as cancer, in consequence of a depraved condition of the system generally.

Cacoplas'tic. (Κακός, bad; πλάσσω, to form.) Morbid deposits that are of an imperfect organisation or structure.

Cacopneumo'nia. (Κακός; pneumo'nia.) Same as *Pneumonoasaprosis*.

Cacoprag'ia. (Κακός, bad; πράσσω, to do.) Old term for a diseased or depraved condition of the viscera by which nutrition is carried on.

Cacoprax'is. The same as *Cacopragia*.

Cacoproct'ia. (Κακός; πρωκτός, the anus.) Same as *Proctoecae*.

Cacore'ma. Same as *Cacorecrema*.

Cacorrhachi'tis. (Κακός; r'achitis.) Term for a disease of the vertebral column.

Cacorrhin'ia. (Κακός; ρίον, the nose.) A putrid condition of the nose.

Cacorrh'ymic. (Κακός, bad; ρυθμός, order.) Old term, applied to an irregular or disorderly pulse as to its rhythm.

Caco'sis. (Κακῶς, to corrupt; also, to afflict.) An old term (*Gr. κάκωσις*), used by Hippocrates, for a bad habit of body.

Cacosit'ia. (Κακός, bad; σίτιον, food.) An aversion from food.

Cacos'mia. (Κακός; ὁσμή, a smell.) Having a bad smell.

Cacosom'ium. (Κακός; σῶμα, the body.) A lazaretto for leprous and other incurable diseases.

Cacosom'nia. (Κακός; *L. somnus*, sleep.) Sleeplessness.

Cacosperma'sia. (Κακός; σπέρμα, seed.) A depraved condition of the semen.

Cacosperm'ia. Same as *Cacospermasia*.

Cacosphyx'ia. (Κακός, bad; σφύξις, the pulse.) A bad or irregular state of the pulse.

Cacosplanchn'ia. (Κακός; σπλάγχνον, the bowel.) A depraved condition of the digestive organs.

Cacostom'achus. (Κακός, bad; στόμαχος, the stomach.) That which hurts the stomach. Formerly applied to improper food.

Also, a disordered condition of stomach.

Cacostomatosphre'sia. (Κακός; στόμα, a mouth; σφρησις, a smell.) A bad odour from the mouth.

Cacostom'ia. (Κακός, bad; στόμα, a mouth.) Same as *Stomacae*.

Cacostomus. (Κακός, bad; στόμα, the mouth.) An old term for one who has a bad or diseased mouth, or fetid breath.

Cacothana'sia. (Κακός; θάνατος, death.) Term for a severe death, or that attended by the more violent symptoms of pain, convulsions, &c.; the opposite of euthanasia.

The term has also been used to denote death rendered more painful by the *nimia diligentiæ medici*; when active drugs are given to patients with a hopeless malady.

Cacothelin. $C_{20}H_{22}N_4O_8 + H.O.$ An alkaloid produced by the action of nitric acid on brucin.

Cacothesis. (Κακός; θέσις, a placing.) A bad or faulty position of any part, or of the whole body.

Cacothy'mia. (Κακός, bad; θυμός, the mind.) A disordered or depraved state of mind.

CACOTRIBULUS—CADIA.

Cacotribulus. (Κακός; τρίβολος, a three-pronged implement, a caltrop.) The *Centaurea calcitrapa*. (Hooper.)

Cacotrichia. (Κακός; θρίξ, hair.) Disease of the hair.

Cacotrophia. (Κακός, bad; τροφή, nourishment.) Imperfect or disordered nourishment of a part.

C. folliculorum. (L. *folliculus*, a small bag.) A cachectic disease of the hair follicles, dependent on mal-nutrition; occurring generally over the whole body, especially on the outer sides of the limbs, on the back, the sides of the face, and the forehead. It consists of solid, red, firm, raised papules, the size of a pin's head, over the site of the hair follicles; the hairs are generally absent, and the few that are present are dry, twisted, and shrivelled. The disease usually occurs in strumous or phthisical females, although it is not restricted to them; it often produces considerable irritation.

Cacotrophy. (Κακός, bad; τρέφω, to nourish.) Disordered or imperfect nutrition.

Ca'cou. A term for a cretin.

Also, a synonym of *Catechu*.

Cacou'cia. A Genus of the Nat. Order *Combretaceae*.

C. coccinea. (L. *coccineus*.) Hab. South America. A perennial climbing shrub, having emetic and cathartic properties.

Ca'cozyme. (Κακός; ζύμη, leaven.) A term applied to a particle of matter, organised or not, which is supposed to be the active agent in the production of infectious disease, either by its propagation or by acting as a ferment.

Cactaceæ. (*Cactus*. G. *Kaktusgewächse*.) A Nat. Order of epigynous, calycifloral Exogens; or a Family of the Order *Opuntina*. Succulent plants, usually spiny and leafless; stems globular, columnar, flattened, or angular; flowers sessile; sepals and petals usually many, alike, epigynous; stamens numerous, with long filaments and versatile anthers; ovary inferior, fleshy, one-celled, with parietal placentæ; style one; stigmas several; fruit succulent; seeds numerous, exalbuminous.

Cactal alliance. Same as *Cactales*.

Cactales. In Lindley's system epigynous Exogens, with dichlomydeous polypetalous flowers, parietal placentæ, and an embryo with little or no albumen. It includes the Nat. Orders *Homaliaceæ*, *Loasaceæ*, and *Cactaceæ*.

Cactes. Same as *Cactaceæ*.

Cactiform. (L. *cactus*; *forma*, likeness.) Resembling certain Cacti, as the *Spongia cactiformis*.

Cactoides. (Κάκτος; είδος, likeness.) Same as *Cactaceæ*.

Cactos. The plant known to the ancients under this name was a thorny plant, the downy seeds of which, called pappus, were regarded as poisonous. It was probably the artichoke, *Cynara scolymus*, or the cardoon, *C. cardunculus*.

Cactus. (Κάκτος, a thorny plant. F. *cactier*; I. *cacto*; G. *Packeldistel*.) A Genus of the Nat. Order *Cactaceæ*. Succulent plants. Some of the species have been used as antiscorbutics.

C. coccinellifer. (L. *coccinella*, the cochineal insect; *fero*, to bear.) The *Opuntia coccinillifera*.

C. ficus indica. (L. *ficus*, a fig; *indicus*, Indian.) The *Opuntia ficus indica*.

C. grandifera. (L. *grandis*, great; *flos*,

a flower.) A tincture has been used with success in functional palpitation. Four ounces of the fresh stems and flowers are macerated for a month in a pint of alcohol. Dose, 1—5 drops, three times a day.

C. melocactus. The *Melocactus communis*.

C. opuntia. The *Opuntia vulgaris*.

Cacubalum. The berry-bearing chickweed. (Quincy.)

Cacubay. A disease of Jamaica, probably leprosy.

Cacumen. (L. *cacumen*, the extreme end. G. *Spitze*, *Gipfel*.) A ridge; the top, summit, or highest point of anything.

Also, the highest point of the superior vermiform process of the cerebellum.

Cacumina. (Plural of *Cacumen*, the extreme end.) The tops of a plant.

C. sabinae. See *Sabinae cacumina*.

C. scoparii. See *Scoparii cacumina*.

Cacuminata. (L. *cacumen*. G. *sugespitzt*.) Having a point or fine end.

Cacurg'ia. (Κακουργία, ill-doing.) Perverity of function.

Cada'ba. A Genus of plants of the Nat. Order *Capparidaceæ*.

C. farinosa. (L. *farinosus*, mealy.) The young shoots are said to be an antidote against venomous bites. (Dunglison.)

C. indica. Linn. (L. *indicus*, Indian.) The root is said to be aperient and anthelmintic.

Cada'ver. (L. *cado*, to fall. F. *cadavre*; G. *Leichnam*.) A body deprived of life; a corpse, carcase, or dead body.

Cadaveric. (L. *cadaver*, a dead body.) Of, or belonging to, a dead body.

C. hyperæmia. Hypostatic hyperæmia, or the red stains of the depending parts of a dead body.

C. rigidity. Rigor mortis.

Cadaverinus. Same as *Cadaveric*.

Cadaverisation. (L. *cadaver*, a dead body.) The condition of paleness, coldness and insensibility of a finger or other small part of the body, popularly known as *dying* of the part.

Cadaverous. Same as *Cadaverous*.

Cadaverous. (L. *cadaverosus*. Gr. νεκρώδης; F. *cadavereux*; I. *cadaveroso*; S. *cadaverico*; G. *leichenartig*, *tödtelnahlich*.) Belonging to, or resembling, the dead body.

Cad'dis. Soft lint. (Quincy.)

Cade. The French name of the *Juniperus oxycedrus*, the oil of which is called *Huile de Cade*. See *Oleum juniperi empyreumaticum*.

Cade'ac. France; Département des Hautes Pyrénées. A cold spring, containing sodium and hydrogen sulphide and sodium chloride, with minute quantities of iodine and bromine.

Cadeji'indi. The *Folia malabathri* of old pharmacologists; the leaves of *Cinnamomum tamala* and *C. eucalyptoides*.

Cadelari. The *Achyranthes aspera* and *A. prostrata*.

Cadel-avanacu. The *Croton tiglium*.

Ca'det - Gas'sicourt, Louis Claude. A French chemist, born in Paris in 1731, and died there in 1799.

C's fuming liquid. A synonym of *Alkarsin*.

Cadia. A Genus of plants of the Nat. Order *Leguminosæ*, growing in Egypt.

CADIVA INSANIA—CÆCÆ HÆMORRHOIDES.

C. purpurea, Forsk. (*L. purpureus*, purple.) The leaves applied to the abdomen are used in colic.

C. varia, Forsk. (*L. varius*, variegated.) Used as *C. purpurea*.

Cadiva insania. (*L. cadivus*, falling; *insania*, senselessness.) Epilepsy.

Cad'mia. (*Kad'mia*, or *kad'mia*, calamine. *F. cuamie*; *S. cadmia*; *G. Ofenbruch*.) A soot which collects on the sides of melting-pots, according to Dioscorides.

Also, a name applied to several metallic substances, calamine, cobalt, tutty.

Also, a yellow pigment containing cadmium sulphide.

C. arsenic'alis. A white pulverulent oxide, which forms on the surface of the arsenious acid of commerce.

C. artificia'lis. (*L. artificialis*, artificial.) Tutty.

C. factit'ia. (*L. factitius*, made by art.) Tutia, or tutty.

C. fornac'um. (*L. fornax*, a furnace.) Tutia, or tutty.

C. foss'ilis. (*L. fossilis*, that which is dug up.) Calamina, or calamine.

C. lapido'sa. (*L. lapidosus*, stony.) Calamina, or calamine.

C. metal'lica. (*L. metallicus*, metallic.) Cobalt.

C. nat'iva. (*L. nativus*, natural.) Cobalt.

Also, the *Lapis calaminaris*, or calamine.

C. natura'lis. (*L. naturalis*, natural.) Calamine.

C. of Gæubius. Flowers of zinc.

Cadmiferous. (*Cadmium*; *fero*, to bear.) Containing cadmium.

Cadmii iodidum, B. Ph. (*F. iodure de cadmium*; *G. Jodcadmium*.) CdI₂. At. weight 366. Iodine and cadmium filings are mixed in a moist condition in the proportion of 127 to 56. It consists of flat, white, pearly micaceous crystals, melting at 310° C. (590° F.) It is soluble in water and alcohol. Astringent; seldom used internally; locally as an ointment, instead of iodide of lead, in enlarged glands, nodes, and chronic joint affections.

C. sulphas, U.S. Ph. (*F. sulfate de cadmium*; *G. schwefelsaures Cadmium*.) CdSO₄. 4H₂O. Formed by dissolving cadmium oxide or carbonate in dilute sulphuric acid. Transparent colourless crystals, astringent, rough in taste, efflorescent. Astringent and emetic. Used locally in conjunctivitis, corneal opacities, and gonorrhœa, in solution of $\frac{1}{4}$ grain to 4 grains to an ounce of water. Ointment, 2 grains to 80 grains of lard.

Cadmium. (*Kad'mia*, calamine, in which it was first observed.) Symb. Cd. Atom. weight 111.6, vapour density 55.8. Found in zinc ores. Like tin, but harder; very malleable; sp. gr. 8.667; melts at 315° C. (599° F.) It is dyadic, and forms but one series of compounds. It is used in the manufacture of some tooth-stoppings.

C. bromide. CdBr₂. A salt used in photography. It has been taken by mistake for ammonium bromide, and produced vomiting, burning in throat and stomach, diarrhœa, and great exhaustion.

C. ioda'tum. See *Cadmii iodidum*.

C. iodide. See *Cadmii iodidum*.

C. nitrate. Cd(NO₃)₂ + 4H₂O. Fibrous

crystals, deliquescent in the air, and soluble in alcohol.

C. poisoning. Soluble salts are poisonous, producing giddiness, vomiting, purging, slowness of pulse and respiration, coma, and convulsions.

C. salts. Fixed caustic alkalis give a white precipitate, insoluble in excess; ammonia gives a white precipitate, soluble in excess; alkaline carbonates give a white precipitate of cadmium carbonate, insoluble in excess; hydrogen sulphide and ammonium sulphide throw down yellow cadmium sulphide.

C. sulphate. See *Cadmii sulphas*.

C. sulphur'icum, G. Ph. (*G. Schwefelsaures Cadmiumoxyd*.) See *Cadmii sulphas*.

Cadoc. A synonym of *Bonduc*.

Cad'tchu. A synonym of *Catechu*.

Caducæ membra'na Hunteri. (*L. caducus*, falling; *membrana*, a membrane.) The membrana decidua, and called after William Hunter.

Also, called simply *caduca*.

C. passio. (*L. passio*, a suffering.) A synonym of *Epilepsy*, the falling sickness.

Caducase. Vertigo. (Quincy.)

Caducibranchi'ata. (*L. caducus*, falling; *βράχια*, the gills.) A Suborder of the Order *Urodela*, Class *Amphibia*, having deciduous gills, opisthocœlous vertebræ, and double vertebral transverse processes.

Caducibranch'iate. (*L. caducus*; *βράχια*, the branchiæ.) Applied to those *Amphibia*, in which the branchiæ disappear when the animal arrives at adult age.

Caduciflor'ous. (*L. caducus*; *flos*, a flower.) Plants in which the corolla falls at an early period.

Cadu'city. (*L. caducitas*. *F. caducitè*; *I. caducità*; *S. caducidad*; *G. Hinfälligkeit*.) Weak old age; the period of human life which extends from 70 to 80 years of age, and which precedes decrepitude.

Cadu'cous. (*L. cado*, to fall. *F. caduc*; *G. abfällig*, *hinfällig*.) Falling off; dead.

In Botany, applied to a calyx which falls off when the blossom expands, as in the poppy.

Cadu'cus. (*L. caducus*, falling.) Falling off.

C. morbus. (*L. morbus*, a disease.) The falling disease; epilepsy.

Cadur'cus. (*L. cadureum*, a coverlet of Cadurcian (Cahors in France) linen, then a bed so ornamented, and a marriage bed.) A term for the vulva.

Cad'us. (*Kád'os*.) An ancient wine vessel, containing about eleven gallons and a quarter, equal to the *Metreta attica*.

Cæ'ca. (*L. cæcus*, blind.) A term applied generally to blind tubes, or tubes with one end closed.

C. foram'ina. (*L. foramen*, an opening.) See *Foramen cæcum anterius* and *F. cæcum posterius*.

C., intesti'nal. Two long blind tubes connected with the upper part of the large intestine in birds, the use of which is unknown.

C., pylor'ic. (*Πυλῶρ'ος*, the pylorus.) A series of blind tubes, varying in number from one to fifty, found immediately behind the pyloric valve in the stomach of most fishes. They have been supposed to represent the pancreas.

Cæcæ hæmorrhoid'es. (*L. cæcus*, blind; *hæmorrhoid*.) Blind piles.

CÆCAL—CÆSALPINIA.

Cæcal. (L. *cæcus*.) Blind; closed at one end. Of, or belonging to, the cæcum.

C. appendix. See *Appendix cæci vermiformis*.

C. artery. A branch of the ilio-colic artery, which supplies the cæcum.

C. hernia. (G. *Blinddarmbruch*.) A protrusion of the cæcum through the right abdominal ring. There is usually no sac, sometimes there is a partial sac at the upper part, the tumour is large, irregular, and generally, when seen, irreducible.

Cæcatrix. The same as *Cicatrix*.

Cæcitas. (L. *cæcus*, blind.) Blindness.

C. crepuscularis. (L. *crepusculum*, twilight.) A synonym of *Hemeralopia*.

C. diurna. (L. *diurnus*, belonging to the day.) A synonym of *Nyctalopia*.

C. minor. (L. *minor*, less.) A synonym of *Amaurosis*.

C. nocturna. (L. *nocturnus*, belonging to the night.) A synonym of *Hemeralopia*.

C. verbalis. (L. *verbalis*, belonging to words.) Word blindness. A condition in which, from unilateral destruction of the nervous centre of sight, a person, although able to speak and write words, is unable to understand anything that is written. This condition often occurs in conjunction with *Surditas verbalis*.

Cæcitis. (Cæcum, the intestine of that name.) A synonym of *Typhlitis*.

Cæcitis. (Cæcum.) A synonym of *Typhlitis*.

Cæcitudo. (L. *cæcitus*.) Blindness.

Cæcum. (L. *intestinum cæcum*, from *cæcus*, blind. F. *cæcum*; I. *cieco*; S. *ciego*; G. *Blinddarm*.) The beginning of the large intestine, so called because it is prolonged behind the opening of the ileum into a cul-de-sac. It is the widest part of the large intestine, being 24 inches wide. It lies in the right iliac fossa, covered by peritoneum, except behind, where it lies on the iliacus muscle. On its left side the ileum opens, protected by the ileo-cæcal valve, and below is the appendix vermiformis. It is supplied by a branch of the ilio-colic artery, and its nervous supply is derived from the plexuses of sympathetic nerves around the mesenteric arteries.

The cæcum is present in most mammals and birds, in many reptiles, but not in fishes.

Also, applied to any blind tube. See *Cæca*.

C. phlegmonos. (Φλεγμονή, an inflamed tumour.) Perityphlitis.

Cæcus. (L. *cæcus*, blind.) Blind. Applied to canals, &c., that are closed at one end, as the intestine cæcum, or blind gut.

Cæla-dolo. The *Torrenia asiatica*.

Cæli donum. (L. *cælum*, heaven; *donum*, the gift.) The *Chelidonium majus*, from its excellent qualities.

C. rosa. (L. *rosa*, a rose.) The rose of heaven, *Lychnis cæli rosa*.

Cementation. (L. *cementum*, stone from the quarry.) See *Cementation*.

Also, any tenacious substance which, when placed between two bodies, causes them to adhere.

C. cuprum. (L. *cuprum*, copper.) Copper precipitated from its solution by iron.

Cementum. (L. *cementum*, stone as hewn out of the quarry.) The cement of the teeth.

Cænesthesis. (Καὶνός, new; αἴσθησις, perception.) A term given to that feeling in

the body generally which induces, on the one hand, sensations of lightness and elasticity, and on the other, of lassitude and weariness, without the intervention of muscular labour or disease. It has been spoken of as a sixth sense.

Cænopus. The *Erigeron canadense*.

Cænozoic. Same as *Cainozoic*.

Cæpa. The onion, *Allium cepa*.

Cærulein. (L. *cæruleus*, dark blue.)

Same as *Azulens*.

Cærulescent. (L. *cæruleus*, dark blue.)

Sky blue.

Cæruleum. (L. *cæruleus*, dark blue. G. *Himmelblau*.) A sky, or deep blue, or Prussian colour.

C. berlinense. (G. *Berlinerblau*.)

Berlin or Prussian blue. A synonym of *Ferric ferrocyanide*.

C. borussicum. (Mod. L. *Borussia*, Prussia.) Prussian blue. A synonym of *Ferric ferrocyanide*.

Cæruleus. (L. *cæruleus*.) Blue, sky blue.

C. morbus. (L. *morbis*, disease.) The blue disease. Cyanosis.

Cæruleic acid. (Same etymon.) An acid of coffee, by some regarded as an oxidation product of caffeinic acid.

Cæruleina. Same as *Cærulein*.

Cæruleosis. (L. *cæruleus*, dark blue.) A blueness.

C. neonatorum. (Nec, new; L. *natus*, born.) The blue disease of new-born children; Cyanosis.

Cæsalpinæ. A Suborder or a Family of the Nat. Order *Leguminosæ*. Petals monosymmetrical, not papilionaceous, imbricated in aestivation, the upper petal exterior; flowers in panicles or racemes.

Cæsalpinia. (In honour of *Cæsalpinus*.) A Genus of plants of the Nat. Order *Leguminosæ*, Suborder *Cæsalpinæ*, several species of which supply the Brazil wood used for dyeing. The legumes of most are astringent.

C. bonduc. Roxb. A species often confounded with *Guilandina bonducella*, and from which it is distinguished by its glabrous leaflets, very unequal at the base, by the absence of stipules, and by its yellow seeds.

C. bonducella. The *Guilandina bonducella*.

C. brasilienis. Furnishes braziletto, an inferior Brazil wood.

C. coriaria. Willd. (L. *coriarius*, belonging to leather.) Hab. India. Divi-divi. The legumes contain a large quantity of tannin. In powder they are used as an antiperiodic and as an astringent. A decoction is used as an injection in bleeding piles.

C. cristata. (L. *crista*, a crest.) The source of braziletto, an inferior Brazil wood.

C. echinata. (L. *echinatus*, prickly.) The source of the true Brazil wood. Somewhat astringent, but only used as a colouring agent. According to some, it is from the wood of this tree that they collect *Goa powder*.

C. moringa. The root is used as a diuretic.

C. nuga. The root is used as a diuretic.

C. oleosperma. (L. *oleum*, oil; *sperma*, seed.) The seeds yield an oil.

C. papai. Pi-pi. Legumes are astringent.

C. sappan. Linn. (F. *brésillet des Indes*.) Hab. India. The wood is used in decoction or

CÆSARIA SECTIO—CÆSTRIN.

extract as an astringent. The latter in doses of 10–15 grains twice daily.

Cæsar's section. See *Cæsarian section*.

Cæsar's. Children brought into the world by the Cæsarean operation.

Cæsarian section. (L. *sectio cæsaria*, from *cæsa*, to cut, or named after Julius Cæsar, who is said to have been removed from his mother by abdominal section. *F. accouchement, or opération cæsarienne*, I. *parto or taglio cesareo*; G. *operation cesarea*, G. *Kaiserschnitt*.) The operation for the removal of the child from the uterus by means of an incision through the abdominal walls into that organ. It is adopted when the pelvic cavity is so small that there is no reasonable belief that the child can be extracted, or when the mother has died suddenly, and it is hoped that the child may still be living. The causes of pelvic contraction calling for the operation are mollities osseum, rickets, distortion from fracture of the pelvis, exostoma, spondylolisthesis, tumours, cancer of cervix uteri. The amount of contraction of conjugate diameter of the pelvis justifying the operation is generally stated by English obstetricians to be 1.5"; in Germany a diameter of 2.5" has been held to be too small for an attempt to extract the child. The best time for operation is believed to be a few days before the expected time for the beginning of labour. The os should be dilated some hours before the operation to secure a free passage for discharges, the bladder and rectum should be emptied. An incision is made through the abdominal parietes, from just below the umbilicus, to about 2.5" above the pubes, bleeding vessels are to be tied, and the abdominal walls kept closely applied to the uterus by the hands of an assistant to keep back the intestines, the uterus is to be cut through in the middle line, and in its middle third, so as to avoid the fundus and the cervical region, where a superabundance of circular fibres would cause the wound to gape. If the placenta be underneath, it must be separated as far as its edge, the membranes ruptured, and the child extracted by the feet, the placenta is then removed, a large bougie or the finger is passed through the os uteri into the vagina to secure a passage for the blood and fluids, and the uterus induced to contract by pressure and by ice. It is generally advised to bring the uterine walls together by an uninterrupted suture, with one end of the silk hanging out of the vagina, or with carbolised catgut, the abdominal walls are to be closed by suture and dressings applied. The maternal mortality is great: 85 per cent. See also *Ferre's operation*.

Cæsar's rate. (L. *cæsarius*, the hair. G. *behaar*.) Having hair.

Cæsar's skin. (L. *cæsarius*, skin to Sans. *kras*, hair. G. *Haupthaar*.) The hair of the head.

Cæsareotomy. (Cæsarian; *tomé*, section.) A synonym of *Cæsarian section*.

Cæstrin. (L. *cæstrum*, bluish-grey, G. *blausch, hechtblau*.) A dull light bluish-grey, or greenish grey, or lavender colour. Old term for glaucoma.

Cæstrum. (L. *cæstrum*, bluish-grey) Ca. At. weight 132.5. A monad alkaline metal, discovered by Bunsen and Kirchhoff, by the aid of the spectroscope, in the residue of mineral waters. It occurs very sparingly, its salts burn with a blue flame. It is the most electropositive of metals.

The metal has not yet been obtained in the pure state.

Cæstron. A term applied to those born by means of the Cæsarian operation.

Cæspitellose. Diminutive of *Cæspitose*.

Cæspitose. (L. *cæspes*, turf, a lump. G. *rauschfarnig, rauschständig*.) Growing in tufts, tufted.

Cæspitulus. (L. dim. of *cæspes*.) A small tuft.

Cæsullos. (Lat.) Having grey eyes.

Cæsthu. A synonym of *Cæsthu*.

Cæf. Old name for *Camphora*, or camphor.

Cæf a. Same as *Cæf*.

Cæf al. A term for *agrimony*.

Cæf ar. Same as *Cæf*.

Cæf ein. The same as *Cæf*.

Cæf fa. A term for camphor.

Cæf e. (U. S. Ph.) The same as *Cæf*.

Cæf ean to acid. An acid of coffee. By some, regarded as an oxidation product of caffeic acid.

Cæf eic acid. An acid of coffee. By some, regarded as an oxidation product of caffeic acid.

Cæf eia. The same as *Cæf*.

Cæf eio. (F. *café, coffee*.) Of, or belonging to, coffee.

Cæf eio. $C_8H_7O_2$. Formed by boiling caffeic acid with potash. Brilliant yellowish prisms or plates, soluble in hot water and alcohol. The aqueous solution reduces a hot solution of silver nitrate; it is coloured green by ferric chloride, changing to red on the addition of sodium carbonate.

Cæf eidin. (F. *caféidin*.) $C_8H_7N_2O$. A strong uncrystallisable base, obtained by treating caffeine with barium hydrate. It is soluble in water and alcohol.

Cæf eidin. Same as *Cæf eidin*.

Cæf eia. (F. *café, coffee*; *caféine*; I. *caffina*, S. *caffina*; G. *Kaffin*) $C_8H_7N_2O_2$.

Methyl-thiobromine. An alkaloid identical with that found in the leaves and seeds of *Coffea arabica*, the leaves of the species of *Thea*, the leaves of *Ilex paraguensis*, the fruit and leaves of *Pandanus tomentosus*, in *Cola acuminata*, *Ilex cassia*, and other plants. It consists of silky needles containing one equivalent of water, soluble in 74 parts of cold water and 165 parts of alcohol, melting at 225° C. (437° F.) and subliming, without change, at a higher temperature. A poisonous dose in animals produces cerebral excitement, irregular movements, quick breathing, muscular weakness, then tetanic and clonic convulsions, slowness and irregularity of heart's action, and death from paralysis of respiration. In moderate dose, it produces in man increased mental activity and wakefulness, quickness of pulse, restlessness, and muscular tremor. It has been used in nervous headaches, priapism, and in opium poisoning, and as a diuretic. Dose, two grains.

Cæf eio. A salt which has been used as an antiperiodic.

Cæf eio. Prepared by dissolving caffeine in citric acid and evaporating. Has been used in migraine. Dose, one grain.

Cæf eio. A salt which has been said to have diuretic properties.

Cæf eio. Used in hysterical vomiting, migraine, whooping-cough, and as a nervous tonic.

CAFFEINA—CAJUPUTI OLEUM.

Caffeina. Same as *Coffein*.
Caffeone. A brown, aromatic, volatile, oil, produced in the roasting of coffee berries; slightly soluble in water, easily in ether.
Caffeotannic acid. Same as *Caffeotannic acid*.

Caffeotannic acid. (F. *acide caféotannique*.) $C_{12}H_{10}O_{11}$, doubtful. Found in coffee berries, in Paraguay tea, and in cahinea. A colourless, gummy, easily soluble mass, giving with ferric salts a green colour. Perhaps the same as *Chlorogenic acid*.

Caffre bread. The edible seeds of various species of *Encephalartos*.

C. corn. The seeds of *Panicum spicatum*.

Caffres. See *Kaffres*.

Caffra. The Arabian name of the young shoots of *Catha edulis*, or of a preparation made from them.

Cafurs. A term for camphor.

Cafuzo. A mixed breed between a white man and an Indian of Brazil, in which the hair is very curly and coarse enough to form a large bristly mass sucking up like a mop.

Cagas'trum. Used by Paracelsus to express the germ of, or the morbid matter which generates diseases that are not congenital nor hereditary, but arise from corruption, viz. pleurisy, pestilence, and fever.

Cagosanga. The ipocacuanha plant, *Cephaelis ipocacuanha*.

Cagot. A term given in some parts of France to a *Cretin*. See also *Cagots*.

Cagots. (Probably *can* or *ca got*, a provincial corruption of *Canis gothicus*, a Gothic dog, from their supposed descent from the Visigoths.) A people found in the Basque provinces, Béarn and Gascony. They have high cheek bones, prominent noses with large nostrils, straight lips; the lobule of the external ear is wanting. In the middle ages they were excluded from all political and social rights, and were compelled to wear a special dress.

Cagu's. A term for vegetable ivory.

Caguacu-apara. The American beaver deer. (Quincy.)

Cahinea. A name, adopted from the Brazilian Indians, of the root of several species of *Chiococca*. It consists of twisted, longitudinally wrinkled pieces, varying in size from that of a quill to that of the little finger, the cortical part is bitter, acrid, and astringent in taste, the inner ligneous part tasteless. It contains cahineic acid, a green, bad-smelling, fatty matter, a yellow colouring matter, a coloured viscid matter, and caffeotannic acid in the bark. It is tonic, diuretic, purgative, and emetic, sometimes producing nausea and griping. It has been used in snake-bite and in rheumatism; in dropsy it had a great reputation, which time has not sustained.

Cahineic radix. (L. *radix*, a root.) The root called *Cahinea*.

Cahinectin. $C_{22}H_{34}O_4$. A compound which, along with a non-crystallizable sugar, is formed by the action of hydrochloric acid on cahineic acid.

Cahineic acid. (F. *acide cahineique*; G. *Cahineäure*.) $C_{26}H_{44}O_{12}$. A colourless, prismatic substance, of a very bitter taste and without odour, slightly soluble in water, easily soluble in alcohol. Used as a diuretic in dropsy.

Cahineic'genin. $C_{11}H_{18}O_2$. A compound formed, along with butyric acid, by the action of potassium hydrate on cahinectin.

Cahin'cin. Same as *Cahineic acid*.
Cai'chu. A name of *Catechu*. (Quincy.)
Caleput. A synonym of *Cajuput*.
Cail'ce'dra. The *Swietenia senegalensis*.
Cail'ce'drin. The bitter febrifuge principle contained in the bark of the *Swietenia senegalensis*.

Caina'na root. A synonym of *Cahinea*.
Caina'num. A synonym of *Cahineic acid*.

Cain'ga. A synonym of *Cahinea*.

Cain'cino. *Cahineic acid*.

Caini to. The star apple; the edible fruit of the *Chrysophyllum cainito*.

Cainozo'ic. (Kai'zo's, new; ζωϊκός, of animals.) Applied, in Geology, to the post-Tertiary and Tertiary strata of the earth as containing recent forms of life.

Caipa schora. A cucurbitaceous plant of Malabar, the unripe fruit of which is emetic, and the juice of the ripe fruit is drunk by the natives with a little nutmeg, to remove hic-cough.

Caira. The *Mimosa japonica*.

Cai'ro. Egypt. A winter residence for chest affections, having a dry and generally a mild winter climate, but with some vicissitudes and often much dust. In summer it is intolerably hot. It is unfavorable for those liable to pulmonary congestion or hæmoptysis.

Cait'chu. A synonym of *Catechu*.

Cajan. A decoction of the *Phaseolus versicolor*.

Caja'nus. A Genus of the Suborder *Psittacinae*, Nat. Order *Leguminosae*.

C. bicolor. De Cand. (L. *bicolor*, two-coloured. F. *pois d'Angole*.) A species the seeds of which are used as food in the Antilles.

C. sa'vus. De Cand. (L. *sericeus*, yellow. F. *pois d'Angole*.) A species the seeds of which are used as food in the Antilles.

C. in'dicus. Spreng. (L. *indicus*, Indian.) Pigeon pea or dhol. The seeds are used as food; in excess they have produced diarrhoea, but in moderation they are said to be somewhat constipating.

Caj'eput. Same as *Cajuput*.
Caj'eputene. $C_{10}H_{18}$. A hydrocarbon obtained by repeatedly distilling cajuput oil with anhydrous phosphoric acid.

Caj'eputol. Same as *Cajuput oil*.

Caju nassi. The *Strychnos colubrina* or the *S. ligustrina*.

Cajuput. (Malay, *caju-puto*, white tree.) The pharmacopœial name of the *Melaleuca minor*.

C. oil. See *Cajuputi oleum*.

Cajuputene. $C_{10}H_{18}$. The hydrocarbon of which oil of cajuput is the hydrate. It is pleasant to the smell, slightly soluble in alcohol, and boils between 160° C. (320° F.) and 165° C. (329° F.)

Cajuputi oleum. (L. *oleum*, oil. F. *essence de cajuput*, S. *cajuput*; G. *Cajuputöl*.) Distilled from the leaves of the *Melaleuca minor* $C_{10}H_{18}$, H_2O . Very mobile, transparent; sp. gr. .919; boils at 175° C. (347° F.); of a fine green colour, a camphoric odour, and an aromatic taste. Externally, it is a rubefacient; internally, stimulant, antispasmodic, and diaphoretic. Used in spasmodic affections of the intestinal canal and in rheumatism, also in chronic catarrh of mucous membranes generally.

CAJU-ULAR--CALAMINT.

Caju-ular. The *Strychnos cularina* or the *S. agustina*.

Cak. An Arabic name in Senegal for a little-known disease, possibly of the nature of pellagra or ergotism.

Cake-meal. Linseed meal obtained by grinding the cake after the expression of the oil; the *Lini ferina*, B. Ph.

Cakile. A Genus of the Nat. Order *Cruciferae*.

C. maritima, Linn. (*L. maritima*, belonging to the sea. *G. Maritima*.) Purple sea rocket. An antiscorbutic.

Cakili'cep. A Family of the Section *Plumorrhaceae*, Nat. Order *Cruciferae*, having the fruit short, deeply two-jointed, the upper joint dagger-shaped.

Cal. Alchemical name of erpiment, arsenious sulphide, also, of vinegar.

Calaba balsam. Same as *C. rosin*.

C. rosin. (*P. baume de Marie*.) Obtained from *Coleophyllum calaba*. Green, of a strong but not disagreeable odour. Used in the Antilles as a vulnerary, and as a substitute for copal balsam.

Calabar. A district, of no definite boundary, on the west coast of Africa, in the Right of Benin.

C. bean. The seed of the *Physostigma venenosum*. See *Physostigma* *fabae*.

Calabarin. An alkaloid found in the Calabar bean. The liquid from which coerin has been separated is precipitated by subacetate of lead and ammonia, the filtrate is evaporated, the residue treated with alcohol, precipitated with phosphotungstic acid, and this decomposed with baryta. It is distinguished from coerin by its solubility in water. It produces tetanus in frogs. Also used for impure coerin.

Calabash. (Port. *calabace*, a gourd.) The dried shell of a gourd. Used as a receptacle.

C. gourd. The *Lagenaria vulgaris*.

C. nutmeg. The *Monodora myristica*.

C. sweet. The *Passiflora laurifolia*.

C. tree. The *Crescentia cajeta*.

C. tree, narrow leaved. The *Crescentia cujete*.

Calabrian manna. See *Manna*.

Caladi'ce. A Tribe of the Nat. Order *Araceae*. Stamens and pistils numerous, contiguous, or separated by the rudimentary bodies; anther cells with a thick connective.

Caladium. A Genus of the Nat. Order *Araceae*, possessing underground corms, which, when cooked, are esculent.

C. bicolor. (*L. bicolor*, two-coloured.) The corms, when cooked, are eaten as food.

C. esculentum. (*L. esculentum*, eatable.) The *Calocasia esculenta*.

C. picea. (*Hemidione*, many-coloured.) Esculent. Same as *C. bicolor*.

C. sagittifolium, Willd. (*L. sagitta*, an arrow; *folium*, a leaf.) Hab. West Indies. Roots are eaten, when boiled, and also the leaves.

C. seguinum, Vent. A native of India. The juice has been given in gout and rheumatism, and to women as an anaphrodisiac. A tincture is used in pruritus vulvae.

C. viola ceum. (*L. violacea*, violet-coloured.) Esculent. Same as *C. bicolor*.

Calad. Name formerly in use for a species of Indian tin, which is reduced by exposure to the fire into a kind of cerussa, such as is made of lead and European tin.

Calacum. Same as *Calat*.

Calacumum. Same as *Calat*.

Calaf. The *Salix aegyptiaca*.

Calageri. A name of the seeds of the *Veronica anthelmintica*. See *Calagiri*.

Calagi'rah. A name of the seeds of the *Nigella arvensis*. They have been confounded with the seeds of *Calagiri*.

Calagua'la. The *Polypodium calaguale*.

C. mala'ma. The *Arctostaphylos hawaiiensis*.

Calagua'la ra'ziz. (*L. radix*, a root.) The root of *Polypodium calaguale*.

Calahuala. The same as *Calaguale*.

Calamagrost'ia. (*Kalagros*, a road; *agrostis*, a kind of grass.) A Genus of the Nat. Order *Gramineae*.

C. lanceolata, Roth. (*L. lanceolata*, lance-shaped. *G. Rostratus*.) Reed grass. Root diuretic and emmenagogue.

Calamandrina. The *Tanacetum calamandrya*.

Calama'rian. (*L. calamus*, a reed.) Of, or belonging to, a reed.

Calamary. The *Loligo vulgaris*.

Calambac. Indian name for *Aleisophen agallochum*.

Calambouc. Same as *Calambac*.

Calamedon. (*Kalamedis*, like a broken reed.) Old term for different kinds of fracture, longitudinal, but lunate at the extremity, oblique, and comminuted. (*Gerraea*.)

Calament. The *Melissae calamintina*.

Calamiferous. (*L. calamus*; *ferre*, to bear. *F. calamifera*; *G. federatragrad*.) Formed of cylindrical tubes, like reeds or feathers, united in tufts, as the *Spongia calamifera*.

Calamiform. (*L. calamus*; *forma*, Whence. *F. calamiformis*; *G. federatragrad*.) Formed like a reed or feather.

Calamina. See *Calamine*.

C. preparata. (*L. preparatus*, prepared.) See *Calamine*, prepared.

Calamina'ria. Belonging to calamine.

C. la'pis. (*L. lapis*, a stone.) A term for calamine.

Calamine. (As if *calapida*, from *caladus lapideus*, an ore of zinc; or from *Calamus*, a reed, inasmuch as it forms reed-like filaments in the furnace when melted. *L. calamina*, *F. calamine*; *S. calamina*; *G. Calmen*.) A native impure zinc carbonate found in crystalline and transition rocks and in the carboniferous and oolitic formations. Mineralogists call zinc silicate also by this name. Calamine is a compact, dull, earthy substance, varying in colour from greyish to reddish or brownish. Sp. gr. 3.4 to 4.4.

C., prepared. The native mineral is heated to redness, powdered, and elutriated. It is salmon-coloured, and contains iron oxide. It is often adulterated largely with barium sulphate and chalk. Used as a mild astringent and emollient in excoriations and superficial ulcerations, in eczema, and intertrigo.

Calamint. (*Kalamint*, from *caladus*, beautiful, *menta*, mint.) The *Calamintha officinalis*.

C., common. The *Calamintha officinalis*.

C., wild. The *Calamintha nepeta*.

C., lesser. The *Calamintha nepeta*.

C., mountain. The *Calamintha grandiflora*.

C., spotted. The *Calamintha nepeta*.

C., water. The *Mentha arvensis*.

CALAMINTA HUMILIOR—CALATHIS.

Calaminta humilior. (L. humilis, lowly.) A synonym of *Glechoma hederacea*.

Calamintha. (Καλός, beautiful; μέντα, mint. *F. calament*, S. *calaminta*.) A Genus of the Tribe *Satureieae*, Nat. Order *Labiata*. Herbs or shrubs.

C. acinos. (Άκινος.) Basil thyme, wild basil. Stimulant, diaphoretic, and expectorant.

C. anglica. (L. *anglica*, English.) The *Calamintha nepeta*.

C. aquatica. (L. *aquatica*, living in water.) The *Monarda arvensis*.

C. clinopodium. Benth. (Κλινωδίσκος, from κλίσιν, a bed. ποίς, a foot; so called because its tufts are like the knobs on a bed-foot.) Hab. Europe, Asia, America. It is somewhat aromatic, and has been used as a cephalic and tonic.

C. erecta virginiana. (L. *erectus*, upright; *virginiana*, Virginian.) The *Cordia maritima*.

C. grandiflora. Mönch. (L. *grandis*, great; *flor*, a flower.) Mountain calamint. Hab. Italy. Used as a carminative.

C. hederacea. (L. *hederacea*, of ivy) The *Glechoma hederacea*.

C. humilior. (L. *humilis*, lowly.) The *Glechoma hederacea*.

C. magniflora. (L. *magnus*, great; *flor*, a flower.) The *C. grandiflora*.

C. magno flore. (L. *magnus*, great; *flor*, a flower.) The *C. grandiflora*.

C. montana. (L. *montanus*, belonging to a mountain.) The *C. officinalis*.

C. nepeta. Link. (L. *Nepeta*, a city of Etruria.) Used as an aromatic and carminative in popular medicine.

C. officinalis. Mönch. (L. *officina*, a workshop. *F. calament des montagnes*; G. *Kalaminthensalbe*, *Bergmünze*.) Calamint. Perennial. Leaves ovate, dentate, pubescent; cymes secund, more or less unilateral. Hab. Europe, North Africa, West Asia. The plant has an agreeable odour, and is sometimes used as a stomachic and sedative.

C. officinarum. (L. *officina*, a workshop.) The *C. officinalis*.

C. palmata. (L. *palmatus*, marahy.) The *Monarda aquatica*.

C. parviflora. (L. *parvus*, small; *flor*, a flower.) The *C. nepeta*.

C. pulchra odorata. (L. *pulchrum*, pennyroyal; *odor*, a scent.) The *C. nepeta*.

C. trichotoma. (Τρίχη, in three parts; *trichos*, to cut.) The *C. nepeta*.

C. vulgaris. (L. *vulgaris*, common.) The *C. officinalis*.

Calamistrum. (L. *calamistrum*, a spring-iron.) A double row of short, closely-set, curved bristles on the upper surface of the metatarsus of each of the fourth pair of legs of the females of certain spiders. Its use is to card the silk obtained from the fourth pair of spinnera.

Calamita. The *Syrax calamita*.

C. bianca. (I. *bianco*, white.) The white leadstone. A name for a very adhesive kind of white lead, which was formerly supposed alexipharmic and aphrodisiac.

Calamule. (Dim. *calamus*. *F. calamule*; G. *Kalamul*.) A small reed or feather.

Calamus. U.S. Ph. (Κάλαμος, a reed.) The rhizome of the *Acorus calamus*. Used as a stimulant tonic in Satulence and digestive torpor.

Also, the quill of a bird's feather.

Also, formerly applied to the stalk of any plant.

C. alexandrinus. (L. *alexandrinus*, Alexandrian.) The stalk of a plant growing in India and Egypt, supposed to be the *Andropogon nardus*. An antihysterical and emmenagogue.

C. aromaticus. (L. *aromaticus*, fragrant.) The *Acorus calamus*; but the plant so designated by Dioscorides is believed to be a species of *Andropogon*.

C. aromaticus verus. (L. *verus*, true.) The *C. alexandrinus*.

C. draco. (L. *draco*, a dragon.) The fruit of this species is the chief source of the resin called dragon's blood.

C. indicus. (L. *indicus*, Indian.) The *Saccharum officinarum*.

C. odoratus. (L. *odoratus*, sweet smelling.) The *Acorus calamus*, *Andropogon martini*, and *A. citratus*.

C. oil. See *Oleum calami*.

C. re' tang. A plant erroneously supposed to yield dragon's blood.

C. saccharinus. (L. *saccharum*, sugar.) The sugar-cane, *Saccharum officinarum*.

C. scriptorius. (L. *scriptorius*, belonging to a writer. *F. plume d'ecrivre*; G. *Schreibfeder*.) The hinder termination of the median furrow of the floor of the fourth ventricle where bounded by the posterior pyramida.

C. vulgaris. (L. *vulgaris*, common.) The *Phragmites communis*, or common reed; and also, *Acorus calamus*.

Calan'dra. A Genus of the Family *Curculionidae*, Group *Cryptopentamera*, Order *Coloptera*.

C. granaria. (L. *granaria*, a granary.) The corn weevil. A beetle which does much damage to stored corn.

Calappite. (Malay, *calappa*, the coconut tree.) A stony concretion sometimes found in the inside of the coconut; also, called a vegetable bezoar. The Malays wear them as amulets of great virtue.

Calasaya. The same as *Calisaya*.

Calathiana viola. (Καλαθία, a little basket.) The *Gentiana pneumonanthe*.

Calathide. (Καλαθία, a little basket. *F. calathide*, G. *Bluthenkorb*.) Used by Mirbel and Cassini for a kind of inflorescence composed of sessile flowers thickly placed upon a common involucre. Adopted by Link, but applied by him only, to compound flowers which, before florescence or during the night, are enveloped totally by the common calyx.

Calathidiflora. (L. *calathus*, a little basket, *flor*, a flower.) An involucre when it surrounds a clinanthium charged with sessile flowers, or nearly so, somewhat resembling a small basket.

Calathidium. (Καλαθία, a little basket. G. *Bluthenkorbchen*.) A term for the flower-head of *Compositae*, or for the involucre alone.

Calathiform. (L. *calathus*, a wicker basket; *forma*, shape. G. *Korbformig*, *napfförmig*.) Cup-shaped.

Calathine. (Καλαθός, a vase-shaped basket.) Cup-like.

Calathiphore. (Καλαθία, a little basket; *φέρω*, to bear. *F. calathiphore*; G. *Bluthenkorbträger*.) The part which, in the *Compositae*, bears the calathidia of the capitulum.

Cal'athis. Same as *Calathidium*.

CALAZIA—CALCARIA.

Calaz'ia. (Χάλαζα, a hail-stone.) A precious stone with white spots, like hail, in it. (Quincy.)

Cal'ala. A synonym of *Kabbala*.

Calbia'num. A plaster, the composition of which is not known, mentioned by Myrepsus. (Hooper.)

Calca'dinum. Term for zinc sulphate; also, for red ink. (Randf.)

Cal'cadis. Zinc sulphate; also, according to some, the *Sai alkali*. The same as *Calcedinum*.

Calca'neal. (L. *calcaneum*, the heel.) Of, or belonging to, the *Calcaneum*.

Calca'nean. (L. *calcaneum*.) Belonging to the heel.

C. arteries, internal. Several large branches of the posterior tibial artery before it divides, which supply the inner plantar muscles and the fat and integument of the heel; they anastomose with the peroneal and internal mal-leolar arteries.

Calca'neo-astrag'al articula'tion. The astragalo-calcaneal articulation.

C.-astrag'al lig'aments. The astragalo-calcaneal ligaments.

C.-cuboid articula'tion. The synovial joint and ligaments which unite the anterior face of the calcaneum to the posterior of the cuboid bone.

C.-cuboid lig'aments. These consist of a dorsal or superior ligament connecting the anterior and upper surface of the calcaneum with the cuboid, an inferior ligament divided into a superficial part, the long plantar ligament, and a deeper part, the short plantar ligament, and the internal or interosseous ligament closely connected with the external calcaneo-scapoid ligament.

C. fib'ular lig'ament. (*Fibula*, the bone of that name.) The middle portion of the external lateral ligament of the ankle-joint.

C.-scap'oid lig'aments. Two ligaments which connect the calcaneum and scap'oid: the inferior or plantar, which passes from the front of the calcaneum to the inferior surface of the scap'oid; and the external or dorsal, or interosseous, which is attached to the ridge of the calcaneum, which separates the articular surfaces for the astragalus and the cuboid, and is inserted into the outer side of the scap'oid.

C.-ta'lar. (L. *calcaneum*, the bone of that name; *talus*, the ankle-bone, the astragalus.) Belonging to the os calcis and the astragalus.

C.-ta'lar lig'aments. The *Astragalo-calcaneal ligaments*.

Calca'neum. (L. *calcaneum*, from *calx*, the heel. Gr. *κκίρνα*; F. *calcaneum*; I. and S. *calca-neo*; G. *Fersenbein*, *Fersenknocken*.) The bone of the heel. Articulates above with the astragalus, in front with the cuboid bone. It consists of a large posterior part, *tuber calcis*, with a constricted part, *neck*, in front, and two *tubercles* inferiorly. The internal surface is concave, having in front a flattened process, the *sustentaculum labi*. The upper surface has two articular facets for the astragalus; anterior surface concave vertically, convex transversely, articulates with the cuboid; inferior surface presents a rough anterior *tubercle*. It is very long in some monkeys and frogs.

Calcanth'os. Same as *Chalcanthos*.

Calcanth'um. Same as *Chalcanthum*.

Calcan'tum. A kind of red ink. (Quincy.)

Calcar. (L. *calcar*, a spur; from *calx*, the heel, on which the spur is fixed. F. *éperon*; G. *Sporn*.) The *Calcaneum*.

A spur-like process of the calcaneum of bats, which gives attachment to the wing membrane.

Also, applied to the rudiments of the hind limbs in certain snakes.

The horny projection found on the tarsal of some Gallinaceæ; also, called the spur.

Also, a spur-like process in some Rotifera.

A posterior projection of the base of the corolla or calyx of some flowers. The nectariferous spur.

The ergot of rye, from its shape.

C. avis. (L. *avis*, a bird.) The *Hippocampus minor*.

Cal'carate. (Same etymon. F. *épérané*; G. *gespornt*.) Spurred, or having spur; applied to corolla.

Calca'neo-ferru'gineous. (L. *calx*, lime; *ferrum*, iron.) Containing lime and ferric oxide.

C.-magne'sian. Containing lime and magnesia.

C.-sab'ulous. (L. *sabula*, coarse sand.) Containing lime and the *débris* of quartz.

C.-sile'ceous. (L. *siles*, flint.) Containing lime and flint.

Calca'reous. (L. *calx*, lime. F. *calcaire*; I. and S. *calcareo*; G. *kalkartig*.) Of, or belonging to, or of the nature of, lime.

C. degenera'tion. See *Degeneration, calcareous*.

C. earth. Lime.

C. infar'ction. (L. *infarcio*, to stuff with.) A term applied to that condition of the kidney in which deposits of phosphate, or, more rarely, carbonate of lime, are found in the connective tissue of the kidney.

C. metas'tasis. (*Metástasis*, a being put into a different place.) A condition of acute calcareous deposit in organs, such as the lungs or intestinal mucous membrane; according to some, connected with kidney change, whereby the excretion of calcareous salts is obstructed.

C. spar. Crystalline calcium carbonate.

Calca'reus carbo'nas. Calcareous carbonate; a synonym of *Chalk*.

Calca'ria. (L. *calx*.) Lime.

C. bisulfuro'sa. Calcium bisulphide.

C. carbol'ica. Same as *Calcis carbolica*.

C. carbon'ica. Chalk, carbonate of lime.

C. carbon'ica anima'lis. (L. *animalis*, living.) Carbonate of lime prepared from animal structures, such as shells, madrepores, crabs' eyes, cuttle-fish bones, or egg-shells.

C. carbon'ica cru'da. Russ. Ph. (L. *crudus*, raw.) Prepared chalk, *Creta præparata*.

C. carbon'ica nat'iva. (L. *nativus*, natural. G. *weisse Kreide*.) Chalk.

C. carbon'ica præcipita'ta. G. Ph. (G. *präcipitirter kohlen-sauren Kalk*.) The *Calcis carbonas præcipitata*.

C. carbon'ica solu'ta. (L. *solutus*, dissolved.) The *Aqua calcaris carbonica*.

C. caust'ica. (Kavortuós, capable of burning.) Quicklime.

C. chin'ica. Quinate of lime contained in cinchona bark.

C. chino'vica. Quinovate of lime. Used in diarrhoea.

CALCARE AQUÆ—CALCEUM EQUINUM.

C. chlora'ta, G. Ph. (G. *Chlorkalk*.) Chlorinated lime.

C. chlorin'ica. Chlorinated lime.

C. extinc'ta. (L. *extinctus*, part. of *extinguo*, to quench.) A synonym of *Calcis hydras*.

C. glycerina'ta. Quicklime 3, glycerin 150 parts, digest with a gentle heat, and, on cooling, add chloric ether 3 parts. Used as an application to burns.

C. hydr'ica. (Υδρωπ.) Slaked or hydrated lime, *Calcis hydras*.

C. hydrochlo'rica. (G. *chlorcalcium*.) Calcium chloride.

C. hydroiod'ica. The *Calci* iodidum.

C. hydrosulfura'ta. Same as *Calcium sulphite*.

C. hypochloro'sa. Chlorinated lime.

C. hypophosphor'ica. A synonym of *Calcis hypophosphis*.

C. hypophosphoro'sa. The *Calcis hypophosphis*.

C. lact'ica. Same as *Calcium lactate*.

C. muriat'ica. (L. *muria*, brine.) The *Calci* chloridum.

C. oxyuriat'ica. A synonym of *Chlorinated lime*.

C. phenyl'ica. (Phenyl.) A synonym of *Calcis carbolas*.

C. phosphor'ica, G. Ph. (G. *phosphorsauere Kalkerde*.) A synonym of *Calcis phosphas*.

C. phosphor'ica ac'ida. The acid phosphate of lime. See *Calcium tetrahydrogen phosphate*.

C. phosphor'ica ex os'sibus. (L. *ex*, out of; *os*, a bone.) Bone phosphate. See *Calcis phosphas*.

C. phosphor'ica mellit'ica. (L. *mel*, honey.) Phosphate of lime mixed with fermenting milk, and, after standing for eight days, evaporated to the consistence of honey. Given in rickets.

C. pu'ra. (L. *purus*, pure.) Lime. See *Calcium monoxide*.

C. pu'ra liq'uida. (L. *liquidus*, fluid.) Lime water.

C. sacchara'ta. (L. *saccharum*, sugar. F. *saccharate de chaux*; G. *Zuckeralkali*.) A concentrated solution of sugar is shaken with calcium hydrate, filtered, and precipitated with alcohol. It contains 86 parts of sugar and 14 of lime. Used instead of lime water; and given in poisoning by carbolic and oxalic acids.

C. solu'ta. (L. *solutus*, part. of *solvo*, to dissolve.) Lime water, *Liquor calcis*.

C. stibiat'o-sulfura'ta. Three drachms of sulphuret of antimony, half an ounce of sulphur, and two ounces of lime, powdered, mixed, and exposed to heat for an hour in a well-luted crucible. A yellowish powder, now disused.

C. subphosphoro'sa. Same as *Calcis hypophosphis*.

C. sulfo-carbol'ica. See *Calcium sulpho-carbolate*.

C. sulfura'ta. Same as *Calcium sulphide*.

C. sulfura'to-stibia'ta. Same as *C. stibiat'o-sulfurata*.

C. sulfu'rica. Calcium sulphate.

C. sulfuro'sa. Same as *Calcium sulphide*.

C. sulphu'rica us'ta, G. Ph. (L. *ustus*, part. of *uro*, to burn. G. *gebrannter Gyps*.) Burnt sulphate of lime, *Plaster of Paris*.

C. us'ta, G. Ph. (L. *ustus*, burnt. G. *gebrannter Kalk*.) Quicklime, *Calx*.

Calca'ris aquæ. (L. *aqua*, water.) Lime water.

C. chlo'rum. Chlorinated lime.

C. hypophosph'is. A synonym of *Calcium hypophosphite*.

Calcarifer'ous. (L. *calx*, lime; *fero*, to bear.) Containing, or mingled with, lime.

Also (L. *calcar*, a spur), bearing spurs.

Calcariform. (L. *calx*, lime; *forma*, likeness.) Having a calcareous, rhomboidal appearance.

Also (L. *calcar*, a spur), formed like a spur.

Cal'carine. (L. *calcar*, a spur.) Spur-like.

C. sul'cus. See *Sulcus, calcarine*.

Cal'caris flos. (L. *calcar*, a spur; *flos*, a flower.) *Delphinium*, or larkspur.

Calca'rius lap'is. (L. *lapis*, a stone.) The limestone.

Cal'cas. The *Arum colocasia*.

Cal'catar. Same as *Calradinum*.

Cal'caton. A troche containing arsenic.

Calcatrep'ola. Name, used by Paracelsus, for the *Delphinium*, or larkspur.

Calcatrep'ola. A synonym of *Centaurea calcitrapa*.

Calcatrip'æ flo'es. (L. *flos*, a flower.) The blue, bitterish, mucilaginous flowers of the *Delphinium consolida*. Used as an expectorant and a vulnerary.

Calcatrip'pa. Same as *Calcatrepola*.

Calce'don. See *Chalcedon*.

Calcedon'icus. See *Chalcedonic*.

Calce'iform. (L. *calceus*, a shoe; *forma*, likeness. G. *schuhformig*.) Somewhat like a shoe.

Cal'cena. Concretions of the tartrate of lime, which form in the human body. Paracelsus, *de Tartaro*, ii, 1.

Cal'cenon. Same as *Calcena*.

Calcenon'ia. A synonym of *Calcena*.

Calcenon'ius. Term, applied by Paracelsus, *de Tartaro*, ii, 3, to the blood when supposed to abound in tartrate of lime; whence such was called calcined blood.

Cal'cenos. Same as *Calcenonius*.

Calceola'ria. (L. *calceolus*, a little slipper. F. *calceolaire*; G. *Pantoffelblume*.) A Genus of the Nat. Order *Scrophulariaceæ*. The slipper-wort.

C. corymbo'sa. (L. *corymbus*, a cluster of flowers.) Used in Peru as a purgative and diuretic.

C. pinna'ta, Linn. (L. *pinnatus*, feathered, pinnate.) Used in Peru as laxative and emetic.

C. rugo'sa, Ruiz and Pavon. (L. *rugosus*, wrinkled.) Used in Chili as a vulnerary.

C. scabiosse'folia, Sims. (L. *scabiosus*, rough; *folium*, a leaf.) Used in Peru as an emetic.

C. trif'ida, Ruiz and Pavon. (L. *trifidus*, three-cleft.) Used as febrifuge.

Cal'ceolate. (Same etymon. G. *schuhformig*.) Slipper-shaped.

Calceos'toma. A Genus of the Suborder *Polystoma*, Order *Trematoda*.

C. el'egans. Parasitic on the branchiæ of *Sciæna aquila* and *S. umbra*.

Cal'ces. (L. *calx*, lime.) A synonym of oxides, especially of the earthy metals, from their frequent similarity to lime.

Calce'tus. Same as *Calcenos*.

Cal'ceum equi'num. (L. *calceus*, a

CALCHITHIUS—CALCINED.

shoe; *equinus*, belonging to a horse.) The *Tus-silago farfara*, from the shape of its leaf.

Calchithius. Verdigris. (Quincy.)

Calcia. A synonym of *Calcaenum*.

Calcic. (*L. calx*, lime.) That which be-
longs to, or resembles, calcium.

Also, the adjectival form of calcium, and used instead of it, as *calcic hydrate* for calcium hydrate, *calcic sulphate* for calcium sulphate.

Calcico-. (*L. calx*.) A prefix in several compound terms, applied by Berzelius to double salts resulting from the combination of a calcic salt with another, indicated by the terminal por-
tion of the epithet, as *Calcico-ammonicus*.

Calcides. A family of simple bodies, having Calcium for their type.

Calcidicum. A medicine into which arsenic was introduced as an ingredient. (R. and J.)

Calciferosus. (*L. calx*, lime; *fero*, to carry. G. *Kalkführend*, *Kalkhaltig*.) Con-
taining, or bearing, lime or earthy salts.

C. bod'ies. The lacunae of bone.

C. canal's. The canaliculi of bone.

Calcification. (*L. calx*, lime; *fit*, to become.) The deposit of earthy and other salts in a structure or tissue. See *Degeneration*, *cal-careous*.

Also, the normal deposit of earthy matter in a growing structure, as in a tooth or bone.

Calciform. (*L. calx*, a small stone; *forma*, shape.) Pebble-shaped.

Also (*L. calx*, the heel) having a projection like a heel.

Calcifraga. (*L. calx*, lime, or stone; *frango*, to break; because believed to break or crumble down the stone in the bladder.) *Scolo-pendrum*, or spleenwort, according to Scribonius Largus, n. 160. The *Calcifraga* of Pliny is sup-
posed to be the *Globularia alypum* of modern botanists, and by some it has been used syno-
nymously with *Saxifraga*.

Calci-fying. (*L. calx*, lime; *fit*, to be-
come.) Producing, or becoming infiltrated with,
lime, or calcareous matter.

C. seg'ment. A thick, glandular sacculus,
or dilatation of the lower part of the oviduct in
birds, which secretes the substance forming the
shell; it is sometimes called the uterus.

Calci-genous. (*L. calx*, lime; *γεννάω*,
to generate. G. *Kalkzeugend*.) Applied to the
common metals which, with oxygen, form a calx,
or earthy-looking substance.

Calci-gerous. (*L. calx*; *gero*, to carry.)
Bearing, or holding, lime or earthy salts.

C. cells. The outermost cells of the dentine
of the tooth.

Calci-gra'dus. (*L. calx*, the heel; *gradus*,
a step.) One who walks on his heel.

Calci-bromi'dum. See *Calcium bro-mide*.

C. carbo'nas precipita'ta. See *Calcis carbonas precipitata*.

C. chlori'dum. B. Ph. (*F. chlorure de calcium*; G. *salzsaurer Kalk*.) CaCl_2 . Hydro-chloric acid is neutralised by calcium carbonate, with the addition of a solution of chlorinated lime and slaked lime; the solution is filtered, evaporated to solidity, and the salt dried at 204.4°C . (400°F .) It is very deliquescent, soluble in twice its weight of water, and in alcohol. It is colourless, slightly translucent, hard, friable, and of a bitter, acrid taste. The hydrate crystallises from a saturated solution in 6-sided prisms.

With ice it forms a powerful freezing mixture, reducing temperature to -48°C . (-64.4°F .) When strongly heated it becomes anhydrous, and is used to dry gases. It occurs in the water of many springs, and in sea water. Used in scrofula and rickets, in uterine and ovarian tumours. Dose, 10 to 30 grains. In large doses it is a gastro-intestinal irritant.

C. chlorure'tum. A synonym of *C. chloridum*.

C. hy'dras. See *Calcis hydras*.

C. hypochloris. A name formerly given to chlorinated lime, *Calc chlorata*.

C. hypophos'phis. U.S. Ph. Same as *Calcis hypophosphis*, B. Ph.

C. hyposal'phis. See *Calcium hyposal-phite*.

C. i'odas. See *Calcium iodate*.

C. iodi'dum. See *Calcium iodide*.

C. oxychlorure'tum. A synonym of *C. chloridum*.

C. ox'i'dum. See *Calcium, monoxide*.

C. phos'phas precipita'ta. U.S. Ph. Same as *Calcis phosphas*, B. Ph.

C. protochlorure'tum. A synonym of *C. chloridum*.

C. sul'phas. See *Calcium sulphate*.

C. sul'phas us'ta. (*L. ustus*, burnt.) Plaster of Paris.

C. sulph'i'dum. See *Calcium sulphide*.

C. sul'phis. See *Calcium sulphite*.

C. sulphure'tum. Same as *Calcium sul-phide*.

Calcina'tio. See *Calcination*.

C. philosoph'ica. (*Φιλοσοφικός*, philo-sophic.) Alchemical term applied to the process of rendering bony or horny matter brittle and pulverisable, by suspending it for some hours over boiling water.

C. si'ne igne. (*L. sine*, without; *ignis*, fire.) Same as *C. philosophica*.

C. spagy'rica. (*Spagyric*.) Same as *C. philosophica*.

Calcina'tion. (*L. calx*, lime. *F. calcina-tion*; *I. calcinazione*; *S. calcination*; G. *Kal-cinierung*.) The application of such an amount of heat to saline, metallic, or other substances, as to deprive them of moisture and organic or vola-tilizable matter, but not sufficient to fuse them. It was formerly used to indicate the formation of an oxide of a metal by exposure to the air.

Calcina'tum ma'jus. (*L. major*, greater.) A term used by the alchemists for whatever was dulcified by their art, and not so by nature, as lead, mercury.

C. ma'jus pote'ril. (*L. major*; *Poterius*.) Precipitated mercury. Mercury dissolved in aquafortis, and precipitated by salt water; ap-plied by Poterius to obstinate ulcers.

C. mi'nus. (*L. minor*, less.) Alchemical term applied to anything naturally sweet, as sugar, honey, manna.

Cal'cine. (*F. calciner*, from Low L. *cal-cino*, to reduce to lime or a calx. G. *verkalken*.) To subject a body to great heat in order to drive off its water and more volatile parts.

Cal'cined. (Same etymon. *F. calciné*; G. *calciniert*.) That which has been subjected to calcination.

C. blood. Same as *Calceonius*.

C. magne'sia. A synonym of *Magnesia usta*.

C. mer'cury. Same as *Hydrargyrum oxydum rubrum*.

CALCINONIA—CALCIUM.

Calcino'nia. Same as *Calcenonia*.

Calcino'nus. Same as *Calcenonius*.

Calcipa'rous. (L. *calx*, lime; *pario*, to produce.) Producing, or bearing, lime, or earthy salts.

Calciphy'ta. (L. *calx*; *φυτόν*, a plant.) Applied by Blainville to a Class of his *Pseudozoa*, containing organised phytoid bodies composed of an internal fibrous and an external cretaceous substance, as the *Coralline*.

Cal'cis cre'mor. (L. *calx*, lime; *cremor*, cream.) The cream of lime. An old term for the pellicle formed on the surface of lime water by exposure to the air, which consists of calcium carbonate.

C. bichlorure'tum. The *Calcii chloridum*.

C. carbo'las. Carbolate of lime. Calcium hydrate 4 parts, carbolic acid 10 parts; mix. Used in chronic diarrhoea. Dose, two grains.

C. carbo'nas. Same as *Calcium carbonate*.

C. carbo'nas du'rus. (L. *durus*, hard.) Marble.

C. carbo'nas friab'ilis. (L. *friabilis*, easily broken.) Chalk.

C. carbo'nas præcipita'ta. B. Ph. (G. *frischgefällter kohlenaurer Kalk*.) Hot solutions of calcium chloride and sodium carbonate are mixed, and the precipitate washed and dried until no precipitate is given with silver nitrate. A white powder, free from grit. Antacid. Dose, 10 to 40 grains or more.

C. he'par. ('*ἥπαρ*, the liver.) Calcium sulphuret, from its colour.

C. hy'dras. (F. *chaux hydratée*, *chaux déteinte*; G. *gelöschter Kalk*.) $\text{Ca}(\text{OH})_2$. Slaked lime. A soft, white, bulky powder, soluble in cold water, freely soluble in syrup. Formed when water is added to quicklime. Much heat is evolved, and watery vapour, carrying particles of lime, is given off; it contains 24.32 per cent. of water. Used as a pharmaceutical agent in the preparation of certain alkaloids and other drugs; and, in solution, as lime water.

C. hypochlor'is. A synonym of *Calz chlorata*.

Also, *Calcium hypochlorite*.

C. hypophosphis. B. Ph. (G. *unterphosphorigsaurer Kalk*.) $\text{Ca}(\text{PO}_3\text{H}_2)_2$. Formed during the boiling of phosphorus with calcium hydrate and water. It is pearly white, and crystallises in flattened prisms. Bitter and nauseous to the taste. Has been used in phthisis with doubtful advantage, in loss of nerve power, in scrofula, and bone diseases. Dose, 5—10 grains three times a day.

C. linimentum. Carron oil. Equal parts of lime water and olive oil mixed together form calcium oleate and margarate. Used locally to burns and scalds.

C. li'quor. *Aqua calcis*, lime water. Two ounces of slaked lime added to a gallon of water, the clear liquor poured off after twelve hours. Antacid and astringent in dyspepsia with diarrhoea and vomiting, and in pyrosis; locally in leucorrhoea and gleet. Dose, 2—8 ounces.

C. li'quor sacchara'tus. One ounce of slaked lime and two ounces of sugar are added to one pint of water. The clear solution is decanted after twelve hours. One part lime in 50. Used as liquor *calcia*. Dose, 1—3 drachms in water or milk.

C. mu'rias. Same as *Calcii chloridum*.

C. oxymu'rias. The *Calcii chloridum*.

C. phos'phas. B. Ph. $\text{Ca}_3(\text{PO}_4)_2$. (F. *phosphate de chaux hydratée*; G. *phosphorsaure Kalkerde*.) Calcium phosphate is prepared by dissolving bone ash in dilute hydrochloric acid, precipitating by solution of ammonia, and washing and drying the precipitate under 100° C. (212° F.) It is a light, white, amorphous powder, insoluble in water, soluble in nitric, hydrochloric, and acetic acids. Deficiency of calcium phosphate in the food produces in animals weakness and bad health, and sometimes bone disease. It has been given in rickets, caries of bone, phthisis, scrofula, ununited fracture, tertiary syphilis, and menorrhagia. Dose, 10—20 grains thrice daily.

C. phos'phas præcipita'ta. See *Calcii phosphas precipitata*.

C. sul'phas. See *Calcium sulphate*.

C. sulphis. See *Calcium sulphite*.

C. sulphure'tum. The *Calcium sulphide*.

C. vi'vi flo'res. (L. *vivus*, living; *flos*, a flower.) See *C. cremor*.

Cal'cis os. (L. *calx*, the heel; *os*, a bone.) The bone of the heel. The *Calcaneum*.

Calcispong'isæ. (L. *calx*, lime; *spongia*, a sponge.) An Order of the Class *Spongia*, having a calcareous skeleton.

Calcitari. Old term for alkaline salt. (Quincy.)

Cal'cite. (L. *calx*, lime.) A term applied to minerals composed of the crystalline varieties of carbonate of lime.

Calcite'a. Ferrous sulphate. (Quincy.)

Calcite'o'sa. Lithargyrum, or litharge. (Quincy.)

Cal'cithos. Verdigris. (Quincy.)

Calci'tis. An old term. Vitriol burnt to redness.

Calcitrap'a. (I. *calcatreppo*, from L. *calco*, to tread down; Mod. L. *trappa*, a snare, or L. *tribulus*, a thistle. The name was probably first applied to the iron-pointed sphere thrown down before cavalry to injure the horses' feet, and thence transferred to the spiny heads of the plant.) The *Centaurea calcitrapa*; also, *Delphinium consolida*.

C. hippophas'tum. ('*ἵπποφαιστον*, an unknown plant.) The *Centaurea calcitrapa*.

C. lanugino'sa. (L. *lanuginosus*, downy.) The *Ononis benedictus*.

C. officina'lis. (L. *officina*, a workshop.) The *Centaurea calcitrapa*, St. Barnaby's thistle.

C. sic'ula. (L. *siculus*, Sicilian.) The *Centaurea solstitialis*.

C. solstitia'lis. The *Centaurea solstitialis*.

C. stella'ta. (L. *stellatus*, starry.) The *Centaurea calcitrapa*.

Calcitrap'ic ac'id. A name given by Colignon to a very bitter substance obtained from the *Centaurea calcitrapa*. It is an impure product.

Calcitrapol'des. Old name for the montpellier star thistle, which has lanceolate and entire leaves. A species of *centaurea*.

Calci'um. (L. *calx*, lime.) Ca. At. weight 39.9; sp. gr. 1.5778. Very abundant in compounds, never free. Light yellow metal, hard, very ductile; quickly oxidises, decomposes water, burns with a bright flash. Prepared by fusing calcium, strontium, and ammonium chlorides in a porcelain crucible, in which there is an iron cylinder connected with the positive pole of a

CALCIUM.

battery, and a carbon point with the negative; calcium collects round the carbon point.

C. acetate. See *Acetate of lime*.

C. antimonio-sulphuratum. The *Calcaria stibiato-sulphurata*.

C. benzoate. See *Lime, benzoate of*.

C. bisulphide. Same as *C. disulphide*.

C. bisulphite. A solution of hydrated calcium sulphite in aqueous sulphurous acid; it is made by passing sulphur dioxide into milk of lime. It is used as an agent in stopping fermentation and putrefaction.

C. bromatum. Same as *C. bromide*.

C. bromide. (*F. bromure de calcium*; *G. Bromcalcium*.) CaBr_2 . Formed by the direct union of calcium and bromine, or by dissolving lime in hydrobromic acid. Deliquescent and soluble in alcohol.

Used, as the other bromides, in epilepsy, hysteria, and insomnia, than which it is said to act more quickly.

C. bromidum. See *C. bromide*.

C. carbonate. (*F. carbonate de chaux*; *I. carbonato di calce*; *G. kohlensaurer Kalk*.) CaCO_3 . Exists, in a more or less pure state, in the form of chalk, marble, and limestone, of which the more ancient are without organic remains, while the more recent are composed of the calcareous envelopes of Foraminifera. These rocks often contain cavities, in which huge crystals of the salt occur. It is found in plants, in the bones and shells of animals, and in a crystalline form in the sacculus vestibuli of the ear. It is almost insoluble in pure water, readily soluble in water which contains carbonic acid; on this depends the hardness of waters. It is dimorphous in its forms, *calc spar* and *aragonite*.

C. carbonate, precipitated. See *Calci carbonas precipitata*.

C. carbonicum. Same as *C. carbonate*.

C. carbonicum nativum. (*L. nativus*, natural.) Chalk.

C. carbonicum purum. (*L. purus*, pure.) The *Calci carbonas precipitata*.

C. chlorate. $\text{Ca}(\text{ClO}_3)_2$. Formed when chlorine is transmitted through milk of lime or potassium chlorate is precipitated with calcium silicofluoride. It is very deliquescent.

C. chloratum. Same as *Calcii chloridum*.

C. chloratum crystallisatum. Crystallised calcium chloride from a watery solution.

C. chloratum fixatum. A term applied to calcium chloride after being exposed to heat.

C. chloratum siccum. (*L. siccus*, dry.) Same as *Calcii chloridum*.

C. chloride. See *Calcii chloridum*.

C. chloridum. Same as *Calcii chloridum*. Also, a synonym of chlorinated lime, *Calc chlorata*.

C. chloruret. Chlorinated lime.

C. chloruretum. Chlorinated lime.

C. dioxide. CaO_2 . Is obtained by treating lime with hydrogen dioxide. It consists of microscopic quadratic tables or prisms, soluble with difficulty in water, insoluble in alcohol, and efflorescent in the air.

C. disulphide. CaS_2 . Obtained when milk of lime is boiled with an excess of sulphur, filtered, and allowed to cool, when it throws down yellow crystals, soluble in water.

C. fluora tum. See *C. fluoride*.

C. fluoride. CaF_2 . (*G. Fluorcalcium*.) Fluor spar. Occurs abundantly in nature in metalliferous veins. It is a constituent of bones

and of the enamel of the teeth, and of the ashes of plants. Insoluble in water. Used in retarded dentition and rickets.

C. hydrate. See *Calci hydraz*.

C. hydride. See *Calci hydride*.

C. hydrosulfuratum. Same as *C. sulphite*.

C. hydrosulphide. (*G. Schwefelsaure-stoffcalcium, Schwefelcalcium*.) $\text{Ca}(\text{SH})_2$. Same as *C. sulphhydrate*.

C. hydroxide. $\text{Ca}(\text{OH})_2$. Same as *C. hydrate*.

C. hypochlorite. $\text{Ca}(\text{OCl})_2$. A compound which occurs in the form of unstable feathery crystals, and which, according to one hypothesis, is a constituent, along with calcium chloride, of chloride of, or chlorinated, lime. See *Chlorinated lime*.

C. hypochlorosum. Same as *C. hypochlorite*.

C. hypophosphite. See *Calci hypophosphis*.

C. hyposulphite. Ca_2HSO_4 . Calcium hydrate in water is boiled with sulphur and filtered; sulphurous oxide gas is passed through the solution, the clear liquid is decanted and evaporated to crystallisation. It occurs in 6-sided efflorescent crystals. Has the power of preventing fermentation and destroying the lower vegetable organisms. Used in sarcina ventriculi, and in epiphytic diseases.

C. iodate. (*F. iodate de chaux*; *G. jod-saurer Kalk*.) $\text{Ca}(\text{IO}_3)_2 \cdot 6\text{H}_2\text{O}$. Obtained by adding an excess of a filtered aqueous solution of chlorinated lime to an alcoholic solution of iodine kept cool. It occurs in flat, colourless, shining needles, slightly soluble in water, almost insoluble in alcohol.

C. ioda tum. A former name of *Calcium iodide*.

C. iodide. CaI_2 . A solution of iron iodide is treated with milk of lime; the liquid is filtered and evaporated to crystallisation. It is in white pearly plates, often yellow from excess of iodine, deliquescent, and very soluble in water. Used instead of potassium iodide. Given in scrofulous phthisis and erysipelas, and to arrest suppurative discharges. It is said to stop putrefaction. Dose, 1–3 grains after each meal.

C. iodobromide. Has been used with apparent success in exophthalmic goitre.

C. lactate. (*F. lactate de chaux*; *G. milchsaurer Kalk*.) $\text{Ca}(\text{C}_2\text{H}_3\text{O}_2)_2 \cdot 2\text{C}_2\text{H}_5\text{O}_2$. A white granular mass, soluble in water and alcohol. Used as an easily assimilable form where lime is indicated.

C. lactophosphate. A solution of calcium phosphate in water by means of lactic acid. Dose, 2–5 grains.

C. monosulfuratum. A synonym of *C. sulphite*.

C. monosulphide. Same as *C. sulphide*.

C. monoxide. (*L. calx viva*; *F. chaux, chaux vive*; *I. calce*; *S. cal viva*; *G. Atzkalk, gebrannter Kalk*.) CaO . Quicklime, caustic lime; an alkaline earth. Obtained by exposing chalk or limestone, calcium carbonate, to a red heat, by which the carbonic acid is expelled. Lime obtained in this manner is impure from mineral admixture. Pure lime may be formed by igniting to whiteness, in a platinum crucible, artificial calcium carbonate. It is white, hardish, infusible, and phosphorescent at a high temperature. When moistened with water it develops

CALCOCOS—CALCULIFRAGE.

heat, crumbles into hydrate, and is said to be slaked. Exposed to the air it absorbs moisture and carbonic acid. Lime is a caustic, and, as such, it was used to sloughy ulcers. It forms part of the official caustic, *Potassa cum calce*.

C. mur'iate. Same as *Calcii chloridum*.

C. ni'trate. $\text{Ca}(\text{NO}_3)_2$. Made by saturating chalk with nitric acid. In its anhydrous state it is a white porous mass, which, after being heated and exposed to sunshine, becomes luminous in the dark. It is very deliquescent, and is soluble in alcohol. It forms the white efflorescences on walls into which urine has soaked. In its anhydrous state it is used for drying organic substances instead of calcium chloride.

C. orthophos'phate, monohy'dro-gen. $\text{H}_2\text{CaPO}_4 + 2\text{H}_2\text{O}$. Obtained as a white crystalline precipitate when calcium chloride and sodium phosphate in solution are mixed. It occurs in urinary concretions, and forms the stellar phosphate crystals deposited from urine.

C. orthophos'phate, nor'mal. The tribasic *C. phosphate*.

C. oxalate. $\text{C}_2\text{CaO}_4 + 4\text{H}_2\text{O}$. A white powder formed by the addition of oxalic acid, or an oxalate, to a soluble calcium salt; it is insoluble in water and in acetic acid, soluble in nitric acid. It occurs in the urine and in plant cells in minute octahedral or dumbbell-shaped crystals.

C. oxide. Same as *C. monoxide*.

C. oxychlor'uret. The *Calcium chloride*.

C. oxyda'tum. Caustic, or quick-lime, *C. monoxide*.

C. oxyda'tum hydra'tum. Slaked lime, *Calcis hydras*.

C. oxymu'riate. The *Calcium chloride*.

C. oxysulfura'tum. Ph. Aust. (*F. foie de sulfure impure*; *G. fünffach Schwefelcalcium*.) Calcium hydrate 3 parts, flowers of sulphur 1, water 5. The mixture is heated and evaporated, when there results a brown sulphurous-smelling mass. Used in a bath for scaly skin diseases.

C. phos'phate. (*F. phosphate de chaux des os*; *I. fosfato di calce*; *G. Kalkphosphat*.) Several distinct salts of calcium and phosphoric acid are known. The salt used in medicine is the tribasic phosphate or bone phosphate, $\text{Ca}_3(\text{PO}_4)_2$; a second tribasic calcium phosphate, $\text{H}_2\text{Ca}_2\text{PO}_6$, is gelatinous. Both these salts occur in bones. Calcium phosphate is found in the bones, teeth, nails, and hair, and either free, in solution, or combined with albuminous principles, in the blood and other animal fluids, and it occurs in the urine. It dissolves in acids, in water charged with carbonic acid, ammoniacal and other salts.

C. phos'phate, precip'itated. Same as *Calcis phosphas*.

C. phos'phate, tetrahy'drogen. $\text{H}_4\text{Ca}(\text{PO}_4)_2$. Acid phosphate of lime; obtained by dissolving bone phosphate in phosphoric acid and crystallising. Given in disease of bone and caries of teeth.

C. phos'phide. Ca_2P_2 . Little is known of this salt.

C. phosphor'icum. Same as *Calcis phosphas*.

C. phosphor'icum ex os'sibus. (*L. ex, out of; os, a bone*.) Bone phosphate. See *Calcis phosphas*.

C. phos'phuret. A brown substance produced when phosphorus in vapour is passed over

lime heated to redness. It is a mixture of calcium phosphide and calcium pyrophosphate.

C. poisoning. Death has occurred from drinking water in which a large quantity of lime had been mixed. It is caustic and irritant. Antidote, solutions of alkaline sulphates.

C. protochlor'uret. Same as *Calcii chloridum*.

C. protoxichlor'uret. Same as *Calcii chloridum*.

C. protoxide. Quick-lime, *C. monoxide*.

C. quinquesulfura'tum. Same as *C. oxysulfuratum*.

C. salts, tests for. Alkaline carbonates give white insoluble precipitates of chalk.

Soluble oxalates give a white precipitate of calcium oxalate, insoluble in acetic acid.

Calcium chloride dissolved in alcohol causes it to turn reddish.

C. sarcocol'ate. (*Σάρξ, flesh*.) $2[\text{Ca}(\text{C}_2\text{H}_3\text{O}_2)_2] + 9\text{H}_2\text{O}$. A salt of sarcocollactic acid, the variety of lactic acid occurring in dead muscle.

C. sulfura'to-stibia'tum. The *Calcaria sulfurato-stibiata*.

C. sul'phate. CaSO_4 . Occurs in the anhydrous state, and also, in considerable abundance, crystallised with two molecules of water, as *Gypsum*; when in large monoclinic crystals it is called *Selenite*.

C. sul'phide. (*F. sulfure de chaux*; *G. Schwefelcalcium*.) CaS . Obtained by heating calcium sulphate with powdered coal. When pure it is a white, insoluble mass, smelling of hydrogen sulphide; it is often coloured from impurities.

C. sul'phite. CaSO_3 . Obtained by adding a solution of a normal sulphite to one of a calcium salt, or by passing sulphurous acid gas through milk of lime. It is a white powder, soluble in 800 parts of water. It dissolves in sulphurous acid, from which it crystallises in six-sided needles. It arrests fermentation and putrefaction, and has been applied to foul ulcers and favus crusts, and has been used as a depilatory. Internally it is not much used, from its insolubility.

C. sulphocar'bolate. $\text{Ca}_2\text{C}_6\text{H}_7\text{SO}_4 \cdot 6\text{H}_2\text{O}$. Occurs in shining scales. Used as sodium sulphocarbolate.

C. sulphura'tum. Same as *C. sulphide*.

C. sul'phuret. Same as *C. sulphide*.

C. sulphy'drate. CaH_2S_2 . Prepared by passing hydrogen sulphide through a mixture of two parts of slaked lime and three of water. The muddy fluid is used as a depilatory.

Cal'cocos. A synonym of *Bell-metal*.

Calcoidea ossicu'la. (*L. calx, the heel*; *σῆλα, likeness*; *ossiculum, a small bone*.) Term applied by Fallopius to the cuneiform bones of the tarsus, according to Bartholin, *Anat. iv*, 21, p. 756.

Calcokeu'menos. (*L. as ustum*. *G. Kupferschlag*.) Burnt copper, or the oxide of copper. (Ruland.)

Calcosubphalange'us mini'mi dig'iti. (*L. calx, the heel; sub, under; phalanx*.) A synonym of *Abductor minimi digiti pedis*.

Cal'cotar. Green vitriol, ferrous sulphate.

Calc-spar. (*L. calx, lime*.) Crystalline calcium carbonate.

Cal'culi cancro'rum. (*L. calculus, a stone; cancer, a crab*.) Crabs' eyes.

Cal'culifrage. (*L. calculus, a stone*;

CALCULIFRAGOUS—CALCULUS.

frango, to break.) A name for an instrument introduced into the bladder for breaking down calculi.

Calculifragous. (Same etymon.) Applied to medicines having power to break or reduce calculus in the bladder.

Calculus. (L. *calculus*, F. *calculus*; I. *calcolo*; S. *calculus*; G. *steinig*.) Having, or belonging to, a calculus.

C. diseases. (F. *affections calculieuses*; I. *calcolosa affezioni*; G. *Steinkrankheit*, *Steinleiden*, *Steinbeschwerden*.) Diseases referable to presence of a calculus.

C. nephritis. See *Nephritis, calculous*.

C. oxide. A synonym of *Cystic oxide*.

C. phthisis. Disease of the lung, accompanied by broncholiths or pneumoliths.

C. pyelitis. See *Pyelitis, calculous*.

Calculus. (L. *calculus*, a small stone. Gr. *λίθος*, *λίθιδιον*; F. *calcul*; I. *calcolo*; S. *calculo*; G. *Stein*.) A stone. A generic term for concretions forming accidentally in the animal body.

Also, a term applied to any branch of mathematics which may involve or lead to calculation, except pure geometry.

C., alternating. (L. *alternus*, to interchange with.) A urinary calculus consisting of laminae of different chemical composition.

C., alvine. (L. *alvus*, the belly, excrement.) Same as *C., intestinal*.

C., ammoniaco-magnesian phosphate. Same as *C., triple phosphate*.

C., arthritic. (Ἀρθριτις, gout.) Same as *Chalk-stones*.

C., articular. (L. *articulus*, a joint.) A synonym of *Chalk-stones*.

C., aurial. (L. *auris*, the ear. F. *calcul de l'oreille*; G. *Ohrstein*.) Hardened masses of cerumen in the external auditory canal.

C., bezoardic. A synonym of *Bezoar*.

C., biliary. Same as *Gall-stone*.

C., blood. Coal-black bodies, varying in size from a coriander seed to a horse-bean, have been found by Dr. Scott Alison in the pelvis of an atrophied kidney. They were hard and friable; they dissolved in ammonia; and, when treated with a saline solution, amorphous forms, as of blood-corpuscles, were seen.

C., bone earth. A synonym of phosphate of lime calculus.

C., breast. See *C., lacteal*.

C., bronchial. (Βρόγχις, the bronchial tubes.) A smooth, more or less globular concretion formed in a dilated bronchial tube.

C., cæcal. (Cæcum.) A concretion in the intestine cæcum or in the appendix cæci vermiformis; it may consist of calcium carbonate and phosphate, with more or less fecal matter, and may contain foreign substances, such as seeds of fruit, bone, or entozoa. Dry semi-transparent masses of mucus are sometimes found in the appendix.

C., carbonate of lime. Urinary vesical calculi of this composition are rare in man, but common in the herbivora. Usually they are described as of the size of a pea, white, lamellar, and sometimes hard; they effervesce on the addition of acids. A concretion of this material has been found in the kidney, and not infrequently in the prostate gland.

C., cholesterine. A variety of *Gall-stone*.

C., compound. A urinary calculus composed of several constituents.

C., cystic biliary. (Κύστις, a bladder.) A gall-stone in the gall-bladder.

C., cystic oxide. (Κύστις.) Same as *C., cystine*.

C., cystine. (Κύστις. I. *calculo di cystine*.) A rare urinary calculus, greenish, waxy, smooth, unlaminate, of glistening fracture, and semitransparent appearance. It is soluble in ammonia, and crystallizes from the solution in hexagonal plates. See also *Cystine*.

C., dental. (L. *dens*, a tooth.) Same as *Tartar*.

C., encysted. A urinary calculus which has become included in a sacculus developed in the walls of the bladder; or, perhaps, enclosed in a new deposit of false membrane. A calculus may be known to be encysted if the sound strikes it at times but not at others, if the stone always appear to be fixed in one situation, and if the beak of the instrument cannot be made to pass round it so as to isolate it, but a kind of tumour projecting through the walls of the bladder is felt around or on one side of the point where the calculus is struck (Erichsen).

C., fatty. Same as *C., uratealith*.

C., felleous. (L. *felleus*, of bile.) Same as *Gall-stone*.

C., fibrinous. Very rare urinary calculus, consisting of a yellow, waxy, organic substance, closely allied to fibrin; soluble in potash and hot acetic acid, insoluble in water, alcohol, and ether.

C., fistulous. A urinary calculus found in a fistula communicating with the urethra or bladder; occasionally of large size; usually composed of triple phosphate and organic matter.

C., fixed. A urinary calculus which has become adherent to the wall of the bladder.

C., fusible. A urinary calculus of triple phosphate and phosphate of lime, sometimes making up the entire mass, sometimes alternating with other deposits, and sometimes forming a crust to a uric acid nucleus. It fuses under the blowpipe flame with a readiness proportionate to the amount of triple phosphate in its composition. Dissolved in dilute hydrochloric acid, and ammonia added in slight excess, the mixed phosphates are deposited in crystals and recognised by the microscope.

C., fusible phosphate. Same as *C., fusible*.

C., gastric. (Γάστρην, the stomach. F. *calcul gastrique*; I. *calcolo gastrico*; G. *Magenstein*.) A concretion of hair or such like.

C., hepatic. (Ήπαρ, the liver.) A gall-stone formed in a bile duct in the substance of the liver.

C., hepatocystic. (Ήπαρ; κύστις, a bladder.) A gall-stone in the hepatic duct.

C., impacted. (L. *impactus*, part. of *impingo*, to drive into. F. *calcul chatonné*; I. *calcolo incastonato*; G. *eingekeilt Stein*.) A urinary calculus which has become arrested in the ureter or the urethra in the course of its natural expulsion.

C., incarcerated. (L. *in, in; carceris*, to imprison.) An encysted or a fixed urinary vesical calculus.

C., intestinal. (L. *intestina*, the bowels. F. *calcul intestinal*.) Concretions formed from the undigested parts of the intestinal contents, such as husks of the oat, and other vegetable debris, hair, string, or other foreign matters, mixed with lime salts, and sometimes magnesian

CALCULUS.

salts. These concretions are uncommon in man, but frequent in the lower animals, forming bezoars. They produce sometimes serious obstruction.

C., joint. Same as *Chalk-stones*.

C., lachrymal. (*L. lachryma*, a tear. *F. calcul lachrymal.*) Same as *Dacryolith*.

C., lacteal. (*L. lac*, milk. *F. calcul mammaria*; *I. calcolo latteo*; *G. Milchstain*.) A concretion in the mammary gland, consisting of inspissated milk.

C., lithic acid. Same as *C., uric acid*.

C., lung. Same as *C., pulmonary*.

C., mammary. (*L. mamma*, the breast.) Same as *C., lacteal*.

C., Meibomian. Yellowish-white concretions, consisting of inspissated secretion of the Meibomian follicles, and often some calcareous matter, projecting on the under or conjunctival surface of the eyelids, and sometimes producing considerable irritation.

C., mulberry. (*F. calcul murax*; *I. calcolo moriali*; *G. Maulbeerstein*.) A term applied, from its resemblance to the fruit of this name, to the *C., oxalate of lime*.

C., nasal. (*L. nasus*, the nose. *G. Nasenstein*.) A concretion found in the nasal fossa. It may originate in the fossa or form around a dacryolith or a foreign body; it consists generally of phosphate and carbonate of lime.

C., nucleus of. (*L. nucleus*, a kernel.) The central part of a calculus. It is usually of different structure to the rest of the stone, and is commonly lithic acid; it may happen, especially in phosphatic calculi, that there is no nucleus, or its place may be taken by a foreign body accidentally introduced into the bladder.

C. of ear. See *C., aural*.

C. of veins. Same as *Phlebolith*.

C., oxalate of lime. (*F. oxalate de chaux*; *I. ossalato di calce*; *G. oxalsaurer Kalk*.) Dark brown, rounded, moderate-sized, rough, tuberculated, and very dense. The colour sometimes approaches to black, and the tubercles are occasionally so sharp as to be like small thorns. On section the appearance is of wavy, imperfect lamellæ. Sometimes, especially when renal, this calculus is smooth, and like a hemp-seed; sometimes it is crystalline throughout, and of a pale brown colour; and sometimes it is milk-white and smooth. It is soluble, without effervescence, unless carbonate of lime is present, in dilute acid, from which a white precipitate, insoluble in acetic acid, is thrown down by ammonia. It blackens and gives off an unpleasant smell when heated, and afterwards becomes white, being converted into carbonate of lime. A urinary calculus.

C., pancreatic. (*Πάν*, all; *κρέας*, flesh.) A concretion in a pancreatic duct, varying in size from a pin's head to a filbert, and sometimes occurring in great numbers. It is chiefly composed of calcium chloride.

C., phosphate of lime. A very rare urinary calculus; it is moderately hard and smooth. When of renal origin it is usually pale brown, with laminae loosely adherent, and contains much animal matter; it is composed of neutral phosphate. When of vesical origin it is usually soft, irregular in shape, and often consisting of small crystalline masses, held together by tenacious mucus. It is composed of "bone earth," a mixture of the two calcium phosphates. When

heated it turns black, and gradually becomes white; it is infusible, except at a very high temperature indeed; soluble, without effervescence, in dilute nitric acid, from which it is thrown down as a gelatinous precipitate; soluble in acetic acid by ammonia.

C., phosphatic. A calculus composed of phosphate of lime, of triple phosphate, or of the two substances combined in various proportions.

C., pineal. The sandy matter in the pineal gland, called *Acervulus cerebri*.

C., podag'ric. (*Ποδάγρυς*, gout in the feet.) A synonym of *Chalk-stones*.

C., preputial. (*Præpuce*. *F. calcul préputial*; *I. calcolo prepuziale*; *G. Vorhautstein*.) A calculus which forms under the prepuce in cases of phymosis, from retention of some urine there. Indeed, a case has been recorded of the removal of 426 calculi from that position at one time.

C., prostatic. (*F. calcul prostatique*; *I. calcolo prostatico*; *G. Prostatastein*.) A calculus formed in the ducts of the prostate gland, composed of phosphate or carbonate of lime, and animal matter; seldom single, ashy grey in colour, smooth, polygonal from rubbing or pressure, and usually not very large, varying from a poppy-seed to a plum-stone. It gives rise to perineal pain and weight, obstruction to the passage of the urine, and mucus in the urine. It may sometimes be felt from the rectum and by the sound before it enters the bladder.

C., prostatic-vesical. See *C., vesico-prostatic*.

C., pulmonary. (*L. pulmo*, the lung. *F. calcul pulmonaire*; *G. Lungenstein*.) A calcareous mass found in the lungs, and consisting of tubercle which has undergone a retrograde metamorphosis, or, according to some, of a pulmonary lobule, the cheesy infiltration of which has undergone calcification. The salt is chiefly calcium phosphate and carbonate.

C., renal. (*L. ren*, the kidney. *F. calcul renal*; *G. Nierenstein*.) See *Renal calculus*.

C., salivary. (*L. saliva*, spittle. *F. calcul salivaire*; *I. calculi salivari*; *G. Speichelstein*.) Occurs most commonly in Wharton's duct, but is also found in the ducts of the submaxillary and parotid glands. It is composed chiefly of carbonate of lime, with some carbonate of magnesia and phosphate of lime, and mucus. A salivary calculus obstructs the duct in which it lies, causing distension and pain.

C., sanguineous. (*L. sanguis*, blood.) Same as *C., blood*.

C., scrotal. (*L. scrotum*. *F. calcul scrotal*; *G. Hodensackstein*.) Very rarely a calculus seems to form in the bladder to find its way through the urethra into the scrotum, and thence to be removed by ulceration or excision. One weighing 26 oz. has been recorded.

C., seminal. (*L. semen*, seed.) Same as *C., spermatic*.

C., silicic acid. There is no record of a calculus being composed altogether or chiefly of silicic acid, but now and then it has been found to contain a small quantity.

C., spermatic. (*Σπέρμα*, semen. *F. calcul spermaticus*; *I. calcolo spermatico*; *G. Samenstein*.) A concretion, of unknown nature, described as occurring in the vesiculae seminales.

C., stercora'ceous. (*L. stercus*, excrement.) Same as *C., intestinal*.

CALCULI.

C., ammoniacalis. (*U. murex*, the stone;) Same as *C. ureæ*.

C., calcifying. (*U. murex*, the stone;) Same as *C. ureæ*.

C., crystalline. (*U. murex*, the stone;) Same as *C. ureæ*.

C., uric. (*U. murex*, the stone;) Same as *C. ureæ*.

C., uric acid. (*U. murex*, the stone;) Same as *C. ureæ*.

C., uric acid. (*U. murex*, the stone;) Same as *C. ureæ*.

C., uric acid. (*U. murex*, the stone;) Same as *C. ureæ*.

C., uric acid. (*U. murex*, the stone;) Same as *C. ureæ*.

C., uric acid. (*U. murex*, the stone;) Same as *C. ureæ*.

C., uric acid. (*U. murex*, the stone;) Same as *C. ureæ*.

C., uric acid. (*U. murex*, the stone;) Same as *C. ureæ*.

C., uric acid. (*U. murex*, the stone;) Same as *C. ureæ*.

C., uric acid. (*U. murex*, the stone;) Same as *C. ureæ*.

tassium nitrate; so that the dissolving action of the alkali at the negative pole and of the acid at the positive pole would be brought to bear. Calculi while in the bladder have undergone fracture, occasionally from direct violence; sometimes, it has been suggested, by decomposition of the animal matter contained, and the evolution of gas.

C. vesico-prostatic. A prostatic calculus projecting into the bladder.

C., xanthic oxide. (*Ξανθός*, yellow.) A very rare urinary calculus, laminated, without any crystalline texture, moderately hard, waxy when rubbed, variable in colour. Soluble in potash, from which it is precipitated by hydrochloric acid; when dissolved in nitric acid, and evaporated, it leaves a yellow residue, not reddened by ammonia.

Caldana, La. Italy; in the Compartment of Siena. Mineral waters, springing from the travertin, of a temperature of 28° C. (82.4° F.), and containing magnesium and calcium sulphate, calcium carbonate, and free carbonic acid.

Caldanella. Italy; in Tuscany. Mineral waters, containing sodium carbonate and chloride, with free carbonic acid.

Caldanicoia. Corsica; between Ajaccio and Bastia. Mineral waters, of a temp. of 40° C. (104° F.); the mineral constituents are small.

Caldar. (Arab.) Stannum, or tin.

Caldarium. (As if *calidarium*, from *calco*, to be hot.) A caldron to boil anything in. The hot bath.

Cal'das de Cuntis. Spain; near Santiago. Mineral waters, containing sodium sulphide.

Cal'das de Estrac. Spain; not far from Barcelona. Mineral waters, of a temp. of 41° C. (105.8° F.), containing sodium chloride and some hydrogen sulphide.

Cal'das de Mombuy. Spain; in Catalonia. Mineral waters, of a temp. of 69° C. (156.2° F.), containing, in two cubic feet, sodium sulphate 58 grains, calcium sulphate 24.5, sodium chloride 811, calcium chloride 42.5, and silica 65, with much carbonic acid.

Cal'das de Ovie'do. Spain; in Asturias. Alkaline mineral waters, containing a little iron.

Cal'das de Rainha. Portugal; between Lisbon and Leyria. Saline waters, containing sodium sulphate and chloride, and calcium and magnesium sulphate.

Cal'das de Reyes. Spain; in Galicia. A mild sulphur water.

Calderise balneæ. Warm baths, near Ferrara, in Italy, much resorted to in cases of dysuria. *Forestus*, xxvi, *Obs. i. in Schol.*

C. ital'icæ. Same as *Calderia balneæ*.

Caldie'ro. Italy; between Vicenza and Verona. Mineral waters, of a temp. of 28° C. (82.4° F.), containing calcium and magnesium carbonate, calcium sulphate, and magnesium chloride. Known to the Romans as *Aquæ Junonis*.

Caldi'ne. Italy; in Tuscany. Mineral waters, containing calcium sulphate, sodium chloride, magnesium, iron, and calcium, with free carbonic acid and traces of hydrogen sulphide.

Cal'dus. (For *L. calidus*, warm.) A term formerly used for hot water.

Cale. The same as *Kale*.

Caledonia springs. United States;

in Pennsylvania. Pure water, of a temperature of 11° C. (51.8° F.)

Springs of the same name in Canada, forty miles from Montreal. There are various sources: one, the gas spring discharging carburetted hydrogen, a saline spring, a sulphur spring, and an intermitting spring, containing carburetted hydrogen, as well as iodine and bromine. (*Dunglison*.)

Calefa'cient. (*L. calefacio*, to make warm.) Having power to excite warmth, or a sense of heat.

Calefa'cients. (Same etymon. *G. Erwärmungsmittel*.) Applied to various substances which have the power to produce warmth or a sense of heat, as pepper, mustard, and turpentine.

Calefaction. (Same etymon. *G. Erwärmung*.) The act or process of applying heat.

Calen'dula. (*L. calendæ*, the kalends, or first of each month; so called because it flowered every month.) A Genus of the Nat. Order *Compositæ*.

Also, the ray-florets of *Calendula officinalis*.

C. alp'ina. (*L. alpinus*, Alpine.) The wild marigold, *Arnica montana*.

C. arven'sis. Linn. (*L. arvensis*, from *arvum*, an arable field. *F. souci des champs*.) Stimulant and antispasmodic.

C. cal'tha. The *Calendula arvensis*.

C. officina'lis. Linn. (*L. officina*, a workshop. *F. souci des jardins*; *G. Ringelblume*.) Pot marigold. Has been used as an antispasmodic, sudorific, deobstruent, aperient, and emmenagogue in fever, jaundice, amenorrhœa, and cancer. A tincture of the flowers is said to be useful in wounds, and has been employed as an hæmostatic, and an application to cancers.

C. palustr'is. The *Caltha palustris*.

Calen'dulæ martiales. A synonym of *Ferri ammonio-chloridum*.

Calen'dulin. A gummy substance discovered by Geiger in the flowers of the *Calendula officinalis*, of the character of bassorin, although soluble in alcohol; it is yellow and tasteless.

Calentu'ra. (*L. calco*, to be hot.) A Spanish term for fever. A disease common to sailors in the tropics, consisting in depraved imagination, weak, equal, soft pulse, without fever and with reduced heat; in their delirium the patients, it is said, fancy the sea to be green fields, and are ready to leap into it if not withheld.

Also, a synonym of *Sunstroke*.

C. amarill'a. (*S. amarilla*, daffodil-coloured.) Yellow fever.

C. contin'ua. (*L. continuus*, continued.) Simple continued fever.

Calentu'ras. Cinchona, according to some; others state it to be the name of a tree in the Philippine Islands, the bark of which is very bitter and employed as febrifuge.

Cales'tum. A tree which grows in Malabar, the bark of which, it is said, made into an ointment with butter, cures tetanus from wounds, and heals ulcers; the juice of the bark cures aphthæ, and, taken inwardly, dysentery.

Cal'f. (*Sax. cealf*; *L. vitellus*; *F. veau*; *I. vitello*; *G. Kalb*.) The young of the common ox, *Bos taurus*.

C.'s-foot. The *Arum maculatum*, from the shape of its leaf.

C.'s-snout. The *Antirrhinum majus*, and other species, from the shape of the seed-vessel.

CALI—CALLA.

C. of the leg. (The word calf here is probably derived from Icel. *kálf*, or Gael. *kalpa*, the calf of the leg, and not from Sax. *cealf*, a calf. *L. eura*; Gr. *γαστροκαρπιον*; *F. mollet*; *I. polpaccio*; *G. Wade*.) The thick hinder part of the leg, formed by the bellies of the gastrocnemius and soleus muscles.

C.-kill. The *Kalmia latifolia*.

C.-knee. Genu valgum, knock-knee.

Call. See *Kali*.

Calibash. See *Calabash*.

Calibration. (*Calibre*.) The ascertaining of the irregularities in the bore of a thermometer, so as to allow for them in taking accurate observations.

Calibre. (*F. calibre*, from *I. calibro*, or *S. calibro*; these either from Ar. *kalib*, a mould, or *L. quæ librâ*, of what weight, in regard to a ball which fits the bore of a tube.) The size, diameter, or bore of a tube; the capacity of the mind.

Calicantha'ceæ. Same as *Calycanthaceæ*.

Calice. (*L. calix*, a cup.) A shallow cup-shaped depression in the upper part of the theca of a coralligenous Zoophyte, which contains the stomach-sac of the polyp.

Calices. (*L. plural of calyx*, a cup.) Cups or cup-shaped things.

C. of kidney. See under *Calyx*.

Caliceæ. Same as *Calyciceæ*.

Calicifloræ. Same as *Calycifloræ*.

Calicifloria. (*L. calyx*, a cup; *flos*, a flower.) An Order of Dumortier's classification of plants having the corolla perigynous.

Calicle. The same as *Calice*.

Calico bush. The *Kalmia latifolia*.

Calicungulia. (*L. calix*, a cup; *unguis*, a claw.) An Order of plants, according to Dumortier, having the claws of a polypetalous corolla perigynous.

Calidarium. (*L. calidus*, hot.) The heating-room of a Roman bath; it was placed over the hypocaust.

Calidum animale. (*L. calidus*, hot; *animalis*, animal.) Animal heat.

C. innatum. (*L. innatus*, inborn.) An old term for animal or vital heat.

Calieta. Name, by Paracelsus, for the young fungi growing on juniper bushes. (Ruland and Johnson.)

Caliette. Same as *Calieta*.

California, mineral waters of. Several mineral springs exist in California, near 40° north lat. and 40° 5' long. west of Washington, directly upon the California trail, leading from the sink of Humboldt River to Pyramid Lake. Their temperature varies from cold to almost boiling; they ebb and flow at irregular intervals; they have not been analysed, but some have a taste of a strong solution of magnesium sulphate. They have had the singular effect of inducing blennorrhœal symptoms both in man and animals. (Dunghison.)

C. Bay lau'rel. The *Oreodaphne californica*.

C. nutmeg. The fruit of *Torreya californica*.

C. oak balls. The galls of *Quercus lobata*.

Caligatio. (*L. caligatio*, mistiness.) Dazzling of the eyes.

Caligidæ. A Family of the Order *Siphonostomata*, Subclass *Epicœa*. Flat, buckler-shaped crustaceans, parasitic on fishes.

Caliginous. (*L. caliginosus*, from *caligo*, a thick fog, darkness.) Applied to eyes which have lost their original brightness.

Caligo. (*L. caligo*, a thick atmosphere.) Dimness of sight, approaching imperceptibly and without apparent cause; blindness.

C. a pacheablepharosi. Same as *Pacheablepharosis*. (Savages.)

C. corneæ. (*Cornœ*.) Opacity of the cornea.

C. humorum. (*L. humor*, a liquid.) Dimness of sight from want of transparency of the aqueous or vitreous humour.

C. lentis. (*Lens*.) Dimness of sight produced by the opaque condition of the lens or its capsule.

C. palpebrarum. (*L. palpebræ*, the eyelids.) Dimness of sight depending on some morbid condition of the eyelids.

C. pupillæ. (*L. pupilla*, the pupil.) Dimness of sight depending on contraction or closure of the pupil.

C. synizeia. (*Συνίζησις*, a collapse.) Closure of the pupil.

C. tenebrarum. (*L. tenebræ*, darkness.) Homeralopia.

Caligula. (*L. caligula*, a military half-boot.) Name, by Illiger, for the skin which covers the tarsus of some birds.

Calihæca canelina. A synonym of *Laurus cassia*.

Calipers. (From *F. calibre*.) A pair of compasses with curved legs and a scale near the joint, affixed to one leg and moving on the other, by means of which the diameter of bodies may be measured.

C., Band'elocque's. Same as *Baudelocque's pelvimeter*.

Calisaya bark. (*F. quinquina jaune royal*; *G. Kômigschinarina*.) The commercial name of the yellow cinchona bark, obtained from the *Cinchona calisaya*.

C. bark, bat. (*S. calisaya plancha*.) The bark of the large branches and the trunk, destitute of epidermis; the outer surface is irregular with longitudinal furrows, of shades of a brownish-fawn colour, darker than the inner surface.

C. bark, New Granada. A bark brought from Carthage by the Isthmus of Panama. It contains a large proportion of alkaloids.

C. bark, quilled. (*S. calisaya arrolada*.) The bark of the smaller branches and twigs, having a brownish lichen-covered epidermis, which is inert; the bark is of a brownish-orange colour, and of short fibrous texture.

C. bark, spurious. The barks of *Cinchona calisaya*, var. *Josephiana*, *C. boliviana*, *C. ovata*, var. *rufinervis*, *C. scrobiculata*, *C. pubescens*, var. *Pelletieriana*, *C. micrantha*, var. *rotundifolia*, *C. amygdalifolia*, and of the *Gomphosia chlorantha*.

Calisay'in. (*F. calisayne*.) A supposed vegetable alkali, discovered by Pelletier and Caventou, in the bark of the *Cinchona calisaya*.

Calisthenics. (*Καλός*, beautiful; *δύναμις*, strength.) A system of regulated movements of the limbs and body, intended to develop the muscles and assist in obtaining a graceful carriage. Wisely used so as not to fatigue or to exercise one set of muscles at the expense of others, calisthenic exercises are a valuable means of improving the physique of young people.

Calix. A varied spelling of *Calyx*.

Calla. (*L. calla*, the name of an under-

CALLACEÆ—CALLITRIS.

mined plant.) A Genus of the Nat. Order *Acoraceæ*.

C. aromatica. The *Homalomena aromatica*.

C. palustris, Linn. (*L. paluster*, marshy.) Water arum, water dragons. Rhizome creeping; leaves cordate. Used as a diaphoretic. A kind of bread is made in Lapland of the acrid rhizomes, when dried, washed, and ground.

C. virginica. The *Peltandra virginica*.

Calla'ceæ. A synonym of *Acoraceæ*.

Callahuala. The *Polypodium calaguala*.

Callææ. A Tribe of the Nat. Order *Acoraceæ*, having the flowers naked and the ovules erect.

Callectamenon. Burnt copper; copper oxide. (Quincy.)

Callo'na. A kind of nitre, or saltpetre. Paracelsus. (B. and J.)

Callian'dra. (Κάλλος, beauty; ἀνδρ, a man; signifying beautiful stamens.) A Genus of the Suborder *Mimosæ*, Nat. Order *Leguminosæ*. Many species have an astringent juice.

Callia'no. Italy; in Piedmont. Mineral waters, containing calcium carbonate and sulphate, magnesium chloride and potassium nitrate, with free carbonic acid, nitrogen and hydrogen sulphide.

Callibleph'arum. (Κάλλος, beauty; βλέφαρον, the eyelid.) A medicine, used by Galen, de C.M. sec. Loc. iv, 6, for beautifying the eyelids.

Callican'thus. Same as *Calycanthus*.

Callicar'pa. (Κάλλος; καρπός, fruit.) A Genus of plants of the Nat. Order *Verbenacæ*.

C. acuminata, Kunth. (*L. acuminatus*, pointed.) The flowers are purgative and sudorific.

C. america'na. Hab. North America. The leaves are used in dropsy and in cutaneous diseases.

C. lana'ta, Linn. (*L. lanatus*, covered with wool.) The bark is bitter and rather aromatic; it is used in Ceylon as a substitute for betel leaves.

Callicarp'ous. (Same etymon. G. schönfrüchtig.) Having beautiful fruit.

Callichroma. (Κάλλος, beauty; χρώμα, colour.) A Genus of the Subfamily *Cerambycinæ*, Family *Cerambycidae*, Group *Cryptopentamera*, of coleopterous insects.

C. moscha'ta. (Μόσχος, musk.) A species used to adulterate cantharides; it may be known by its long antennæ, its rounded and large thorax, and its elytra, which are larger at the base than at the extremity. It is non-vesicant.

Callicoc'ca ipecacuan'ha. Brotero. (Κάλλος; κόκκος, a kernel.) The *Cephaelis ipecacuanha*.

Callic'reas. (Κάλλος; κρέας, flesh.) The pancreas of certain of the lower animals, from its delicacy as food; the sweetbread.

Callif'erous. (*L. callus*, hardness of skin; *fero*, to bear. G. schwielentragend.) Having a callosity.

Calligonum. (Κάλλος, beauty; γόνυ, joint.) A Genus of plants of the Nat. Order *Polygonaceæ*.

Calligonum is also an old name of the *Polygonum aviculare*.

C. palla'sia. Hab. Siberia. A leafless shrub, the roots of which furnish a substance like tragacanth, which is used as food by the

Kalmucks; the acid branches and fruits are chewed to allay thirst.

Callimor'phia. (Καλλιμορφος, beautifully shaped. G. Schöngestaltigkeit.) Beauty of figure and form.

Calliomar'chus. Said to be the Gallic name for the *Tussilago farfara*, or colt's-foot.

Callipæ'dia. (Κάλλος, beautiful; παῖς, a child.) The art of begetting beautiful children. The title of a Latin poem published in 1655 by Ol. Quillet.

Callipers. Same as *Calipers*.

Calliphonia. (Κάλλος, beauty; φωνή, the voice.) A fine voice.

Calliphyl'um. (Κάλλος; φύλλον, a leaf.) *Asplenium trichomanes*, or common maidenhair.

Callisen, Heinrich. A Danish surgeon, born at Prätz, in Holstein, in 1720, died at Copenhagen in 1824.

C.'s operation. The operation for artificial anus, in which the colon is opened from behind in the left lumbar region, where it is not covered by peritoneum, was first proposed by Callisen, and put into practice on the living subject by Amussat.

Callisthen'ics. Same as *Calisthenics*.

Callitricha'ceæ. A Nat. Order of menochlamydeous, angiospermous Dicotyledons, or a Family of the Order *Tricocceæ*, Subclass *Eleutheropetalæ*. Small aquatic herbs. Female flowers with a 4-cornered, 4-celled ovary, with 1 suspended ovule in each cell; fruit indehiscent, 4-celled; seeds 4, peltate, with fleshy albumen; embryo inverted, with very long superior radicle. Very mucilaginous.

Callitriche. (Κάλλος; θρίξ, the hair.) A name of the Genus *Adiantum*.

A Genus of plants of the Nat. Order *Callitrichaceæ*.

C. aquatica. (*L. aquaticus*, living in water.) The *C. verna*.

C. heterophylla, Pursh. (ἑτερος, other; φύλλον, a leaf.) Hab. Southern United States of America. An aquatic species with broadly spatulate, petiolate, floating leaves. Used as *C. verna*.

C. interme'dia. (*L. intermedius*, intermediate.) The *C. verna*.

C. verna, Linn. (*L. vernus*, belonging to spring. G. Wasserstern.) Water starwort. Hab. North America. A small herbaceous fresh-water plant, with a long stem and nearly sessile floating leaves. Used as a diuretic in dropsy and urinary affections.

Callitrichin'ceæ. Same as *Callitrichaceæ*.

Callitrichon. Same as *Callitriche*.

Callit'ris. A Genus of the Suborder *Cupressæ*, Nat. Order *Conifereæ*. Flowers monœcious; cones woody, with 4 to 6, three- to six-seeded, scales.

C. articula'ta. (*L. articulatus*, jointed.) The *C. quadrivalvis*.

C. cupressif'olus. (Κυπάρισσος, cypress; ἰδος, likeness.) Yields a similar resin to the *C. eckloni*.

C. ecklo'ni. Hab. South Africa. Exudes resin, resembling sandarach, which is used as a fumigation in rheumatism, gout, and oedema.

C. quadrival'vis, Ventenat. (*L. quatuor*, four; *valva*, a folding door.) A large tree with straggling branches. Dry resin forms gum sandarach.

CALLOPHIS—CALMATIVE.

Callophis. (Κάλλος, beauty; ὄφις, a snake.) Family *Elapidae*, Order *Ophidia*, Class *Reptilia*. A genus of venomous snakes, of which several species are found in India. The body is subcylindrical, very long, and slender; belly rounded; head short, obtuse, with broad snout, not distinct from neck, which is not dilatable; tail short; maxillary with a grooved fang in front, without other teeth behind. All the species are sluggish, and apparently defective both in sight and hearing. From their smallness and the shortness of their fangs, it is not probable that their bite would be fatal in man. They are not aggressive, but fowls bitten by them die in from one to three hours. They are ground snakes, prefer hilly to level country, and feed on other snakes.

C. annularis. (L. *annularis*, from *annulus*, a ring.) A species with yellowish belly and a black cross band in the middle between the rings. Hab. India. It attains a length of twelve inches.

C. cerasinus. (L. *cerasinus*, cherry-coloured.) Back purplish brown, with shining nacreous lustre, and about forty broad, transverse, black bands; sides and belly bright cherry hue. Length of one specimen, 21½ in. Hab. Malabar forests.

C. concinnus. (L. *concinnus*, elegant.) A synonym of *C. nigrescens*.

C. intestinalis. (L. *intestinum*, a bowel.) A rare species, found in Central India (Malwah) and Burmah. Pale reddish-brown above, with a bright yellow dorsal line with black serrated margins. It attains a length of two feet. The poison glands extend from the head to about one third of the total length of the body, lying free in the cavity of the anterior part, and causing the heart to be much posterior to its usual position in other species of snakes.

C. maclellandii. Head and neck black above, with a yellow cross band behind the eyes. Body and tail reddish brown, generally with a black vertebral line from the nape to the tip of the tail. Belly yellowish, with black cross bands or quadrangular black spots. It is found in Nepal and Assam.

C. malabaricus. A synonym of *C. nigrescens*.

C. nigrescens. (L. *nigresco*, to become black.) Upper parts darkish red, the lower uniform red, a black spot below the eye, a black horseshoe-like collar. Hab. Neilgherries. It attains a length of 4 feet.

C. trimaculatus. (L. *tris*, three; *maculatus*, spotted.) Light bay above; an indistinct line formed by minute brown dots along each series of scales. Belly red, a yellow spot on each temporal shield; a subtriangular yellow spot on the middle of the neck. Bengal, Kangoon.

C. univirgata. (L. *unus*, one; *virgatus*, striped.) A synonym of *C. maclellandii*.

Callosalgyrus. See *Gyrus, callosal*.
Callose. (L. *callosus*, thick-skinned.) Having callosities or hard lumps.

Calloselasina. (Κάλλος, beauty; ὄφις, brightness.) A Genus of poisonous snakes belonging to the Family *Crotalidae*.

C. rhodostoma. (Ρόδον, a rose; στόμα, the mouth.) Hab. Java and Siam. Kuhl saw two men, bitten by the same snake, die in five minutes. It attains a length of three feet.

Callositas. (L. *callositas*, hardness of skin.) Callosity; induration.

C. palpebrarum. (L. *palpebra*, the eyelids.) Induration of the eyelids.

C. ventosa. (L. *vesica*, the bladder.) Hypertrophy of the coats of the urinary bladder.

Callosity. (L. *callositas*, hardness of skin. F. *callosité*, *durillon*; L. *callositas*; S. *callosidad*; G. *Schwiele*.) A preternatural degree of hardness in the skin or in naturally soft parts.

Also, applied to the natural thickenings which exist on the inner side of the legs of the horse, on the breast of the camel, or on the buttocks of some monkeys.

Callosomarginal sulcus. See *Sulcus, callosomarginal*.

Callous. (L. *callosus*, thick-skinned. F. *callous*; G. *harthäutig*, *schwielig*.) Indurated; hard.

C. mediastino-pericarditis. See *Mediastino-pericarditis, callous*.

C. ulcer. An indolent ulcer with thickened edges.

Calluna. (Κάλλυν, to beautify, to sweep clean.) A Genus of the Nat. Order *Ericaceae*.

C. erica. (Ἐριση, heath.) The *C. vulgaris*.

C. vulgaris. (L. *vulgaris*, common. F. *bruyère*; G. *Heidekraut*, *Beemheide*.) The common heather. Astringent. Has been used as a diaphoretic and diuretic.

Callus. (L. *callus*, hardness. Gr. *καλός*; F. *cal*; L. and S. *callo*; G. *Schwiele*, *Knochenarbe*.) The bony material thrown out around and between the two ends of a fractured bone during the process of healing. At first the broken ends of bone are surrounded by extravasated blood; in ten or twelve days this is chiefly absorbed, and its place is taken around and in the bone by a reddish gelatinous mass of lymph poured out by the vessels of the periosteum, the endosteum, the bone, and the surrounding structures; this gradually gets firmer, and in three weeks or so is able to keep the broken ends together; bone is then deposited in granular, spongy form, it consolidates, and is covered with a membrane; this is the *provisional callus*. Gradually the bone ends become more vascular, new plastic matter is formed between them, which is converted into bone, *definitive callus*, and co-incidentally the provisional callus is absorbed.

Also, an unnatural hardness of a part.

Also, in Botany, a spongy, succulent substance formed by the cambium at the extremity of a cutting of a plant when placed in the earth or in grafts and wounds of a branch, by which repair is accomplished, and from which, or from the neighbouring cambium in cuttings, roots grow.

The base of the inferior palca of grasses.

C., definitive. The callus ultimately thrown out between the broken ends of the bones, which in time becomes as the old bone, and is the real repairing structure.

C., ensheathing. The *C., provisional*.

C., external. The *C., provisional*.

C., provisional. The callus thrown out at first round the broken ends of the bones, which in time is absorbed as the union of the fracture progresses.

C., temporary. The *C., provisional*.

Calm. (F. *calme*.) The interval between the paroxysms of a disease.

Calmative. (F. *calmant*; S. *calmante*; G. *beruhigend*.) A medicine which quiets inordinate action of an organ; chiefly applied to

CALMET—CALORIFICATION.

remedies which relieve nervous agitation and restlessness.

Cal'met. Antimony, or antimony. (Quincy.)

Cal'mus. The stalk of any plant. (Quincy.)

Calocat'anus. The wild poppy. (Quincy.)

Calom'ba. A synonym of *Calumba*.

Cal'omel. (From *καλός*, beautiful; *μέλας*, black; given by Turquet de Mayerne in honour of a young negro who assisted him. Another derivation is from *καλός*, and *mel*, honey, a play on its name, *Mercurius dulcis*; another is from black sulphuret of mercury, to which the name was first applied.) The *Hydrargyri subchloridum*.

C. bath. See *Mercurial fumigation*.

C. cum cre'ta. (L. *cum*, with; *creta*, chalk.) Calomel 7 parts, concha marinis preparata 3 parts.

C. pill, com'pound. The *Pilula hydrargyri subchloridi composita*.

C., precipitated. A term applied to calomel made in the humid way, formerly official in the Dublin Pharmacopœia.

C. prot'i'odide. One part of calomel is heated in a matras till it begins to sublime, and one part of iodine is then added by degrees. It is a mixture of biniodide and bichloride of mercury. Used in syphilitic, scrofulous, and cancerous affections.

C. sub'i'odide. Two parts of calomel are heated in a matras to commencing sublimation, and then one part of iodine is gradually added. It is a mixture of bichloride and biniodide of mercury with some calomel. Used in syphilitic, scrofulous, and cancerous affections.

C. va'p'our bath. See *Mercurial fumigation*.

C., veg'etable. A term applied to podophyllin.

C. vi'a hu'mida. (L. *via*, a way; *humidus*, moist.) Same as *Hydrargyrum chloratum mite precipitationis paratum*.

Calomel'anos Turque'ti. Calomel of Theod. Turquet de Mayerne. A purging pill, in former repute, made of calomel, sulphur, and the resin of jalap.

Calom'elas. Same as *Calomel*.

C. vapo're para'tum. (L. *vapor*, vapour; *paratus*, prepared.) The *Hydrargyrum chloratum mite vapore paratum*, G. Ph.

C. vapo're'sus. (L. *vaporosus*, from *vaporo*, to emit vapour.) A synonym of *Hydrargyrum dulcis vaporosum*, Belg. Ph.

Calonia. (Καλονία.) An old epithet of myrrh, according to Hippocrates, de *Nat. Mulier.* vi, 11.

Calony'ction. (Καλός, fair; νύξ, night.) A Genus of the Nat. Order *Convolvulaceæ*.

C. specio'sum. Choisy. (L. *speciosus*, handsome.) Hab. India. The bark of the roots is used as a purgative.

Calophyllous. (Καλός, fair; φύλλον, a leaf.) Having elegant foliage.

Calophyllum. (Καλός, beautiful; φύλλον, a leaf.) A Genus of tropical trees of the Nat. Order *Guttiferae*.

C. bin'tagor. The *C. inophyllum*.

C. brasilien'sis. Yields a resin like *tacamahaca*.

C. ca'aba. Jacq. Yields a resinous juice known as East Indian *tacamahaca* and *Baume de Marie*. It is green, thickens on exposure, of

a strong but not disagreeable odour. Used as *copaiba* and as a vulnerary.

C. inophyllum. Lamb. Alexandrian laurel. A resin exudes from the bark; East Indian *tacamahaca*. It is in yellowish-brown pieces, semitransparent, soft and sticky, having a smell of lavender and a bitter taste. Used for indolent ulcers. A fixed oil is yielded by the seeds, *wandee*, which is used in India in rheumatism.

C. Mari'ae. Pl. A tree of New Grenada, which yields a resin similar to *C. calaba*.

C. spu'rium. (L. *spurius*, false.) The *C. calaba*.

C. spectab'ile. (L. *spectabilis*, remarkable.) Same as *C. inophyllum*.

C. tacamahaca. Same as *C. inophyllum*.

Calophy'ta. (Καλός, fair; φυτόν, a plant.) Applied by Bartling to a Class containing the *Pomaceæ*, *Rosaceæ*, *Dryadeæ*, *Spiraceæ*, *Amygdaleæ*, *Chrysobalanaceæ*, *Popilionaceæ*, *Swartziaceæ*, *Cesalpiniaceæ*, and *Mimosaceæ*.

Calopod'ium. (Καλοπόδιον, a shoe-maker's last. F. *calopode*; G. *Kolbenhulle*.) Name for the spathe of the *Aroidæ*, from its form.

Cal'ops. (Καλός, fair; ὤψ, the eye.) Having a very great or very brilliant eye.

Calop'terous. (Καλός, fair; πτερον, a wing.) Having beautiful wings.

Calopus. (Καλός, fair; πούς, a foot.) Having a beautiful foot, or stipe.

Cal'or. (L. *calor*.) Heat. In olden phrase, the lowest of the three degrees of heat, the others being fervor and ardor.

C. anima'lis. (L. *animalis*, animal.) Animal heat.

C. fer'vens. (L. *ferreo*, to be hot.) The heat of boiling water, 100° C. (212° F.)

C. le'nis. (L. *lenis*, moderate.) A gentle heat, between 32° C. (89° F.) and 38° C. (100° F.)

C. mor'dax. (L. *mordax*, biting.) Same as *C. mordicans*.

C. mor'dicans. (L. *mordico*, white.) A biting heat. The almost burning heat of the skin in fevers, which causes an unpleasant sensation on the fingers after touching the patient, as in typhus.

C. nat'i'vus. (L. *nativus*, inborn.) Animal heat.

Calores'cence. The transmutation of non-luminous into luminous heat; or, in other words, of the non-luminous heat rays beyond the red rays of the luminous spectrum into rays of greater refrangibility.

Caloric. (L. *calor*, heat. F. *calorique*; I. and S. *calorico*; G. *Wärmestoff*.) Originally used to denote a hypothetical fluid which was supposed to be the cause of the sensation of heat. Now used as synonymous with heat.

Caloric'ity. (L. *calor*, heat.) That faculty which living bodies possess of developing caloric or heat.

Calorie. The French equivalent of the term *Unit of heat*, or *Thermal unit*, being in this instance the quantity of heat necessary to raise the temperature of one kilogramme of water through one degree centigrade.

Calorifa'cient. (L. *calor*; *facio*, to make.) Heat making or producing.

Calorific. (L. *calor*; *facio*, to make. F. *calorifique*; G. *erwärrend*.) Heat giving or causing.

C. capao'ity. Specific heat.

Calorifica'tion. (L. *calor*; *facio*, to

CALUMBIC ACID—CALYCATUS.

calumba and with calumba wood. It is a non-astringent, mild tonic, and stomachic. Used in dyspepsia, and in enfeebled states of the digestive organs, during the later stages of acute, or in chronic, diseases; also, in vomiting of pregnancy. Doses of the extract, 5–10 grains; of the infusion, 1–2 oz. twice a day; of the tincture, 1–2 drachms.

Calumbic acid. $C_{22}H_{34}O_7$. A yellow bitter substance found in calumba root; probably along with berberin, a derivative of calumbin.

Calumbin. $C_{21}H_{22}O_7$. (G. *Columbin.*) A substance found in calumba root; it consists of colourless needles, inodorous and very bitter, soluble in alkalies and acetic acid, slightly soluble in alcohol and ether. Tonic and stomachic. Dose, 1–3 grains.

Calus. A varied spelling of *Callus*.

Calva. (L. *calvus*, bald.) A term for the *Calvaria*.

Calvanella de Mo'si. Corsica. A little-used mineral water containing a small quantity of sodium sulphate.

Calvaria. (As if *calvus*, bald. G. *Hirn-schale*.) That portion of the skull which is above the orbits, temples, ears, and occipital protuberance.

C. curta. (L. *curtus*, mutilated.) Deficiency of the cranium.

Calvarium. Same as *Calvaria*.

Calva ta ferramenta. (L. *calvatus*, bald, smooth; *ferramentum*, an implement of iron.) An old term (Gr. *φαλακρά σιδήρια*), used for such instruments as probes, which have a smooth button or little knob at their extremity.

Calvello. Italy; in Tuscany. Mineral waters, of a temperature of 33° C. (91.4° F.), containing sodium and calcium chloride, calcium, magnesium, and iron carbonate. Used against malaria.

Calvit'ies. (L. *calvus*, bald. F. *calvitie*; G. *Kahlkeit*.) Baldness.

C. palpebra'rum. (L. *palpebra*, the eyelashes.) Loss of the eyelashes.

C. prematura. (L. *prematurus*, untimely.) Premature baldness; baldness occurring in young persons.

C. senilis. (L. *senilis*, belonging to old people.) The baldness of old age.

Calvus. (L. *calvus*, bald. G. *kahlkopfig*.) Bald; a bald person.

In Botany, applied to naked surfaces, as an achæmium without pappus.

Calw. Wurtemberg. An alkaline sulphur water, containing iron.

Calx. (Lat.) The heel.

Also (Arab. *Kalah*, to burn), formerly applied to any oxide of a metal, effected by the action of the air, from its being earthy-looking like lime.

Also, the residue of the combustion of any substance.

The pharmacopœial name for lime recently prepared by calcination.

C. antimonii. The oxide of antimony obtained by calcining the sulphuret.

C. antimonii anglo'rum. The *Antimonium diaphoreticum*.

C. antimonii cum sulphu're Hoffmanni. The *Calcaria stibiato-sulfurata*.

C. antimonii lota. (L. *lotus*, part. of *lavo*, to wash.) The *Antimonium calcinatum*.

C. bismuthi. Bismuth subnitrate.

C. chlora'ta. B. Ph. Chlorinated lime. A dull white powder, obtained by exposing slaked lime to the action of chlorine gas until absorption ceases. It is believed to be a mixture of calcium chloride and calcium hypochlorite; by some, it is thought to be a double salt of chlorine and hypochlorous acid. It gives off chlorine freely, and is used as a disinfectant and for bleaching purposes.

C. chlorina'ta. Chlorinated lime.

C. cum ka'li pu'ro. (L. *cum*, with; *kali*, potash; *purus*, pure.) The potassa cum calce.

C. e testis. (L. *e*, from *testa*, a shell.) Lime prepared from shells.

C. extinc'ta. (L. *extinctus*, put out.) The calcium hydrate, slaked lime.

C. hydrarg'yr'i alba. (L. *hydrargyrum*, mercury; *albus*, white.) Mercury ammonio-chloride.

C. oxymuriat'ica. The *Calcii chloridum*.

C. re'cens. (L. *recens*, fresh.) The *Calcium monoxide*, quicklime.

C. sacchara'tum. (Σάκχαρον, sugar.) The *Liquor calcis saccharatus*.

C. sal'ta. (L. *salitus*, part. of *salio*, to salt.) The *Calcii chloridum*.

C. us'ta. (L. *ustus*, burnt.) The *Calcium monoxide*, quicklime.

C. vi'va. (L. *vivus*, living.) The *Calcium monoxide*, quicklime.

Calyb'io. (Καλύβιον, dim. of καλύβη, a hut, from καλύπτω, to cover. F. *calydon*.) A fruit formed of one or several glands, contained wholly or partly in a cupula.

Calycan'dria. (Κάλυξ, the calyx; ἀνρίρ, a man. F. *calycandrie*.) Applied by L. C. Richard to a class of his modified sexual system, having more than ten stamens inserted into a calyx, the ovary being free and parietal.

Calycantha'ceæ. A Nat. Order of epigynous calycifloral Exogens; or a Family of the Order *Polycarpiceæ*. Shrubs with square stems; sepals and petals alike, numerous, imbricated, confined in a fleshy tube; cotyledons convolute.

Calycanth'æ. (Κάλυξ, a flower-cup; ἄνθος, a flower.) A Class, in Perleb's system, of vascular Exogens having a double perianth and a monopetalous perigynous corolla.

Calycanth'ææ. Same as *Calycanthaceæ*.

Calycanth'emæ. (Same etymon.) An Order of plants proposed by Linnæus including *Eriothera* and *Lythrum*.

Calycanth'emonus. (Κάλυξ, a flower-cup; ἄνθος, a flower.) Applied to plants which have the corolla and stamens inserted into the calyx.

Calycanth'emy. (Same etymon.) The conversion, partial or complete, of sepals into the appearance of petals.

Calycanth'inæ. Same as *Calycanthaceæ*.

Calycanth's. The plants of the Nat. Order *Calycanthaceæ*.

Calycanth'us. (Κάλυξ, the calyx; ἄνθος, a flower. G. *Kelchblume*.) A Genus of the Nat. Order *Calycanthaceæ*.

C. flor'idus. Linn. (L. *floridus*, full of flowers.) Carolina allspice. Hab. United States. A plant bearing purplish flowers of strong agreeable odour. The root is possessed of emetic properties.

Calycat'us. Same as *Calycine*.

CALYCERACE—CALYSTESIA.

Calycera'ces. (Κάλυξ, a flower-cup.) A Nat. Order of epigynous corollifloral Exogens. Corolla monopetalous, valvate; anthers syngamous; ovule solitary, pendulous; ovary inferior, one-celled; seeds solitary, with fleshy albumen.

Calycer'ces. Same as *Calyceraceae*.
Calycos major'es. (L. *major*, greater.) The infundibula of the kidney.

C. minor'es. (L. *minor*, lesser. G. *Nierenkelche*, *Nierenbecher*.) The seven or eight small tubes which surround the papillae of the kidney.

Calyc'ia. (Κάλυξ.) A stipitate and sessiphorm apothecium.

Calyci'ces. A Family of *Lichenes gymnocarpi*, or of crustaceous lichens, having stalked apothecia.

Calyciflor'es. (L. *calyx*; *flos*, a flower.) A Subclass or the Division *Angiospermia*, Class *Dicotyledones*, or a Division of the Subclass *Eleutheropetala*, Class *Dicotyledones*. Flowers cyclic, usually with calyx and corolla, the latter generally with distinct petals, and inserted on the corolla; stamens equal to, or twice as numerous as, the petals, or in several whorls; gynoecium syncarpous or apocarpous. It is divided into *Perigyna* and *Epigyna*.

Calyciflor'al. (L. *calyx*; *flos*, a flower. F. *calyciflore*; G. *Kelchblumig*.) Plants having the petals and stamens inserted into the throat of the calyx.

Calyciflor'ous. Same as *Calyciflor'al*.
Calyciform. (L. *calyx*; *forma*, likeness. F. *calyciforme*; G. *kelchformig*.) Formed like a calyx.

Calycinalis. Same as *Calycine*.
Calycinaris. Same as *Calycine*.

Calycine. (Κάλυξ, a flower-cup. F. *calice*, *calicinal*; G. *kelchartig*, *becherformig*.) Of, or belonging to, a calyx; cup-shaped.

Calycin'al. (F. *calycinien*.) Applied by Mirbel to the indivisive when they come from the calyx.

Calyc'ole. Same as *Calyculus*.
Also, a cup-like expansion of the polypary in *Sertulariidae* containing the polypite. Also called *Hydrotheca*.

Calycoid. (Κάλυξ; εἶδος, likeness. F. *calycoides*; G. *kelchähnlich*.) Resembling a calyx.

Calycopet'ales. (Κάλυξ, a flower-cup; *πτερον*, a leaf, a petal.) A class, in Perleb's system, of vascular Exogens having a double perianth, a pleiopetalous corolla, and perigynous petals.

Calycophor'idæ. (Κάλυξ; *φορέω*, to bear.) An Order of the Subclass *Siphonozoa*, Class *Hydrozoa*. Hydrozoa free and oceanic, consisting of several polypites united by a filiform and unbranched coenosarc, with the proximal end modified into a somatocyst, and propelled by one or more nectocalyses.

Calycostemon'es. (Κάλυξ; *στήμων*, a stamen. G. *Kelchmännchen*.) A class of plants having the stamens inserted on the calyx.

Calycozo'a. (Κάλυξ; *ζῷον*, a living animal.) An Order of the Subclass *Discophora*, Class *Hydrozoa*. Polypite single, in the middle of a cup-shaped umbrella, which is fixed at its proximal end; generative elements discharged into the body-cavity.

Calyc'ular. (Κάλυξ.) Having relation to a calyx.

C. bud. A term applied to reproductive buds in *Actinosea*, which arise inside the cup or calyx.

Calyculate. (F. *caliculé*; G. *gabelst, becherformig*.) Having a calyculus.

Calyculus. (Dim. *calyx*. F. *calicule*; G. *Kelchkelch*.) A little calyx. Applied to the membranous margin surrounding the apex of a seed.

An accessory calyx placed behind the true calyx, consisting of contiguous bracts, so as to form a partial involucre.

A range of bractlets placed at the base of an involucre.

Calyphy'omy. (Κάλυξ, a flower-cup; *φύωμαι*, to grow.) Accidental adhesion of the calyx to the corolla.

Calyp'ter. (Κάλυπτρ, a covering.) A blind-pile; so called because it seems as a fleshy excrescence covering a hemorrhoidal vein.

Calyp'teria. (Κάλυπτρ, a covering. F. *calyp'teres*; G. *Schwanzdeckhen*.) The covertures of the tail of birds.

Calyp'toblast'es. (Κάλυπτρ, covered; *βλαστός*, a sprout.) A Suborder of the Order *Hydroidea*, Class *Hydromedusae*. The ramifications of the colony clothed with a chitinous horny tube, which becomes cup-shaped round each polyp, the hydrotheca. The sexual buds arise in regular manner, and are sometimes sessile, sometimes become free medusae.

Calyp'tra. (Κάλυπτρ, a cover. F. *calyp'tre*, *coiffe*; G. *Haube*, *Mütze*.) A membranous covering or hood placed over the sporangium of mosses. It is the actively growing ventral part of the Archegonium.

The proper exterior covering or coat of the seed, which falls off spontaneously.

Calyp'tranth'es. (Κάλυπτρ, a veil; *άνθος*, a flower. G. *Kappentblum*.) A Genus of the Nat. Order *Myrtaceae*.

C. aromatic'a. St. Hil. (L. *aromaticus*, fragrant.) A species of which the dried flower buds have the same properties as cloves.

C. caryophyll'a'ta. (Καρυόφυλλον, the clove tree.) A synonym of *C. aromatic'a*.

Calyp'trate. (Κάλυπτρ, a veil. F. *coiffe*, *calyp'tré*; G. *mützenformig*.) Having a veil, hood, or covering; hooded; as when a caducous calyx is separated from its base, and is carried on the unexpanded flower like an extinguisher.

Calyp'triform. (L. *calyp'tra*, a veil; *forma*, shape.) Having the appearance of a calyp'tra or hood.

Calyp'trimorph'ous. (Κάλυπτρ; *μορφή*, form.) Applied in Botany to ascidia which have a distinct lid.

Calysac'cion. (Κάλυξ, a calyx; *σακκίον*, a small bag.) A Genus of the Nat. Order *Guttifera*.

C. longifo'lum. Wight. The fragrant flowers are mildly stimulating, and are used as a perfume.

Calyste'gia. (Κάλυξ, calyx; *στῆγς*, a roof.) A Genus of the Nat. Order *Convolvulaceae*.

C. se'pium. R. Brown. (L. *sepe*, a hedge. F. *liseron des haies*; G. *Winde*.) Large bindweed. Stem twining; leaves sagittate, truncate at base. Root purgative.

C. soldanel'ia. R. Brown. (Ety. unknown. F. *chou marin*; I. *cavolo di mari*; G. *Meerwinde*.) Sea bindweed. The leaves and juice are actively purgative.

CALYX—CAMBIUM.

Cal'yx. (Κάλυξ, the cup of a flower. F. *calice*; I. *calice*; S. *calis*; G. *Blumenkelch*.) The outermost envelope of the flower of plants when the perianth is double. When the perianth is single the use of the term is not uniform. Some botanists give the name calyx to every perianth which is single, others give it only to those single perianths which are green. The parts of which the calyx is composed are the *sepals*; these are usually green, sometimes otherwise coloured; in the latter case the calyx is called petaloid.

Also (F. *calice*; G. *Nierenkelch*), the truncated termination of the branches of the ureter in the kidney, each of which embraces two or more papillae. The calyx is composed of an external fibrous coat, uniting at the base of the papilla with the fibrous structure of the kidney; a middle muscular coat, containing both longitudinal and circular fibres, except at the upper termination of the calyx, where the latter only are present; and an inner mucous coat, the epithelium of which is continuous with that of the papilla.

The calyx of the ovum is the wall of the Graafian follicle, from which it has just escaped.

Also, the body of a Crinoid or a Coral, which is placed on the top of the stem, and is more or less cup-shaped; its dorsal surface is composed of calcareous plates, articulated at their margins; from its upper margin spring the arms; its ventral surface is leathery.

Also, the body of a Vorticella.

C. vomitorius. (L. *comitorius*, that which provokes vomiting.) A vessel made by pouring antimony into a mould; wine being allowed to stand in it some time produces and dissolves a salt of antimony, and was administered as an emetic.

Cam'acoe. A name of the fruit of *Acrodictidium camara*.

Camandag. A tree of the Philippine Islands yielding a milky juice, called by the natives tague, which they use to poison their arrows.

Camandung. Same as *Camandag*.

Cam'ara. (Καμάρα, a vaulted roof.) A chamber or arched vault.

The *Fornix cerebri*, Galen, *de Us. Part.* viii, 11.

The arched hollow part of the auricle at the entrance to the auditory foramen, Lindenus, *Phys. Med.* ii, 11, art. 1, § 4.

Also (F. *camara*), in Botany, a membranous fruit composed of two united valves and enclosing one or many seeds attached to the internal angle.

Also, sometimes used for the cells of a fruit.

C. nutmeg. The fruit of *Acrodictidium camara*.

C. tree. The *Acrodictidium camara*.

Cam'arez. France; Department of Aveyron. Two springs of mineral water are found here, both of 13° C. (55° F.) One, Andabre, contains calcium, magnesium, sodium, and iron carbonate, and sodium sulphate and chloride; the other, Prugnes, is much less mineralised, and contains no iron.

Cam'arion. (Καμάριον, a chamber in the brain.) The *Fornix cerebri*.

Camarium. Same as *Camarion*.

Camaro'ma. (Καμάρωμα, a vaulted chamber. G. *Gewölbbuch*.) Used by Galen, in *Def. Med.* for a fracture of the skull, where the bones appear arched or vaulted.

Camaro'sis. Same as *Camaroma*.

Camas'sia. A Genus of the Nat. Order *Liliaceae*.

C. esculen'ta. (L. *esculentus*, eatable.) A species the bulbs of which are eaten as food by the North American Indians, under the name of Quamash, bread root.

Cambaiba. The Brazilian name of the *Curatella sambaiba* and other species, which are employed as astringents.

Cambaibinha. The Brazilian name of the *Davilla braziliensis* and *D. elliptica*. Used as a vulnerary.

Cambia'lis. (Cambium. F. *cambial*.) Relating to vegetable structure called *Cambium*.

C. an'nulus. (L. *annulus*, a ring. G. *Cambiumring*.) The layer of cells known as *Cambium* or *Cambium-layer*.

Camb'le leaf. The *Nymphæa alba* and the *N. lutea*.

Camb'iform. (L. *cambium*; *forma*, likeness.) Having the appearance of *Cambium*.

C. tis'sue. (G. *Dauercambium*.) Long, thin-walled, succulent cells, like young bast cells, occurring in the bast tissue.

Camb'il. Red earth. (Ruland.)

Camb'ing. A tree of the Moluccas Islands, the bark of which exudes a juice much esteemed against dysentery.

Camb'ium. (L. *cambio*, to change. F. *cambium*; I. *cambio*; G. *Bildungsgevebe*.) A layer of cells lying between the wood and the bark of Exogens, and from which each new annual zone of wood springs. The cells consist of a thin layer of cellulose containing a primordial utricle, a nucleus, and protoplasm. The cells are inactive during winter, but very succulent in spring. This name was formerly given to the fluid contents only of the cells.

Also, a supposed principle elaborated from the blood of animals, for the repair and increase of the various organs.

C. bun'dle. (G. *Cambiumstrang*.) A term applied to a cord of cambium in an isolated position.

C. cells. See *Cambium*.

C. cyl'inder. A term applied to a central rod of cambium.

C. fluid. The mucilaginous matter found between the bark and wood of plants in spring. It was supposed formerly to be a fluid poured out between the bark and the wood, which became organised into new wood; it is now known to be the layer of cambium, always present, made more succulent by the presence of much sap in the growing period of spring.

C. layer. The term frequently applied now to the whole cambium substance, from the inner portion of which new wood is developed, and from the outer new bark.

Also, the inner layer of the periosteum of a growing bone immediately beneath the fibrous layer; it consists of small nucleated cells, having numerous fine processes, which join the reticulum of the external layer.

Also, a layer of roundish cells with processes lying between the periosteum and the cementum of the fang of the tooth.

C. permanent. (G. *Dauercambium*.) Same as *Cambiform tissue*.

C. ring. A term applied to the cambium layer, as seen in transverse section.

C. sheath. (G. *Cambiummantel*.) A term applied to the annular layer of cambium which

CAMBO—CAMEROSTOMA.

only surrounds the stem of a monocotyledonous plant in its earliest stage.

Cambo. France; Departement Basses-Pyrénées, near Bayonne; situated among pleasant scenery. There is a mild sulphur spring, 22° C. (71·6° F.), and a weak iron water.

Cambo'dia. See *Gamboge*.

Cam'boge. Same as *Gamboge*; see *Cam-bogia*.

Cambo'gia. B. Ph. (*Cambodia*, or *Kamboja*, a river by which the tree affording it grows. *F. gutta*, *gomme-gutta*; *L. gomma-gutta*; *S. gula-gamba*; *G. Gutti*, *Gummigutti*.) The Pharmacopoeial name of gamboge; it is a gum-resin imported from Siam, and obtained from the *Garcinia morella*, var. *pedicellata*, a tree which is now regarded as a species and called *G. Hanburii*. Gamboge is obtained by cutting the bark and allowing the yellow juice to flow into hollow bamboo canes; as seen in commerce it is in pipes of 6" or 8" long and 1" to 2" in diameter, orange yellow in colour, with a smooth conchoidal fracture and an acid taste. It contains cambo'gic acid and a gum. It is a hydragogue cathartic. Dose, 1—5 grains.

C. gut'ta. Old name for the tree which affords gamboge, *Garcinia morella*, var. *pedicellata*, or *G. Hanburii*.

Cambo'gic acid. A resinous substance found in gamboge, soluble in alcohol and ether, and, with a deep red colour, in alkalis.

Cambo'gium. Gamboge; see *Cam-bogia*.

Cam'bon. France; Departement du Cantal. A cold spring, containing bicarbonate of soda. Used in stomach affections.

Cambu'ca. Used by Paracelsus for a bubo in the groin or an ulcer there, or near the genital organs. (Euland.)

Cam'bui. The American myrtle of Piso and Marcgrave. Said to be astringent.

Cam'el. (*L. camelus*, from Gr. κάμηλος, from Heb. *gdmel*. *F. chameau*; *L. cammello*; *G. Kameel*.) The *Camelus bactrianus*. The flesh is eaten, the hump being considered a great delicacy; the milk is very nutritious, but deficient in butter; anciently it was credited with many medicinal virtues.

C.'s hay. The *Andropogon citratus*.

C.'s thorn. The *Alhagi maurorum*.

Camelan. A small tree of Amboyna, the seeds of which smell like those of anise and are similarly used; it is therefore called *Anisum moloecanum*.

Camel'idæ. A Family of the Group *Ruminantia*, of the Section *Artiodactyla*, of the Order *Ungulata*. Hornless; feet long, two-toed, having imperfect nail-like hoofs, and an integumentary cushion to walk upon; navicular and cuboid bones not united; cervical vertebral arches pierced by the vertebral artery, not the transverse processes; premaxillæ have a single, strong, conical, laterally compressed incisor in each; two large, curved, pointed canines in each jaw; nostrils closeable at will; œsophagus opens directly into the paunch, which has a smooth epithelial coat; from its walls go off two sets of diverticula, the water-cells, which store up water for future use; the reticulum is sharply defined from the rumen; the psalterium is only a tubular passage; the abomasum is large; the pyloric end of the duodenum is dilated; cæcum short and simple; red blood-corpuscles elliptical; placenta diffuse. Types: Camel and Llama.

Camel'ina. (*Kamel*, on the earth; *λίον*, *flax*.) A Genus of the Nat. Order *Crucifera*.

C. sativa. Linn. (*L. sativus*, that which is sown. *G. Leindotter*.) Gold of pleasure. Used as a vermifuge; the seeds, called cœsum seeds, were used in paralysis; they yield an oil.

Camell'i. A priest who introduced the camellia tree into England from Japan in 1730.

Camellia. (*Camelli*.) A Genus of the Nat. Order *Ternstramiaceæ*.

C. drupifera. Lour. (*L. drupa*, an over-ripe olive, a drupe; *fero*, to bear.) The seeds supply a useful oil.

C. japonica. Linn. Japan camellia. The leaves are used to mix with tea leaves.

C. oleifera. (*L. oleum*, oil; *fero*, to bear.) A species, the seeds of which yield a good oil, used as food.

C. sasan'qua. The flowers are used to give aroma to some kinds of tea.

C. the'a. Link. (Chinese *tscha*.) Hab. Asia. The plant the cultivated varieties of which yield tea. See *Tea*.

C. theifera. Griffith. (*L. thea*; *fero*, to bear.) The *C. thea*.

Camellia'cese. A synonym of *Ternstramiaceæ*.

Camelus. (Heb. *gdmel*.) A Genus of the Family *Camelidæ* or *Tylopodæ*.

C. bactrianus. Linn. (*L. bactrianus*, belonging to Bactria, now Balk.) The camel with two humps.

C. dromedarius. Linn. (*L. dromedarius*, from *δρομος*, swift.) The dromedary or camel with one hump.

Cam'era. (*Kaméra*, an upper gallery; also, a vaulted or arched roof.) A chamber, or vaulted structure.

C. cor'dis. (*L. cor*, the heart.) The pericardium.

C. cran'ii. (*Kranion*, the upper part of the head.) The vault of the skull.

C. lucida. (*L. lucidus*, bright.) A four-sided glass prism, having one angle a right angle, the opposite angle one of 135° and the other angles of 67·5°. A ray of light falling on the face, which is formed by the right angle, is totally reflected from the first face of the obtuse angle, again from the second face of the same angle, and emerges towards the extremity of the other face of the right angle in a direction perpendicular to its first incidence. The eye can thus perceive an image of an object on a piece of paper lying at right angles to it, and the outlines may be traced with a pencil. The instrument is used in microscopic drawing.

C. oculi. (*L. oculus*, the eye.) The chambers of the eye.

C. oculi ter'tia. (*L. tertius*, the third.) The canal of Petit in the crystalline lens.

Camera'ria. A Genus of the Nat. Order *Apocynaceæ*.

C. latifolia. Jacq. (*L. latus*, broad; *folium*, a leaf.) Bastard manchineel tree. Hab. West Indies. The milky juice is used by the natives as an arrow poison.

Cam'rated. (*L. camera*, a chamber.) Having chambers.

Camera'tion. (*Kaméarwos*, an arching.) Synonymous with *Camarosis*.

Cameros'toma. (*Kamára*, a vault; *στόμα*, a mouth. *F. Camerostome*.) The anterior part of the cephalothorax of spiders, forming a

CAMERULA—CAMPER, PIERRE.

kind of cover or vault above the organs of munda-
tion.

Camerula. Dim. of *Camera*.

Cæmes. (Arab.) Argentum or silver. (R. and J.)

Cæmet. Same as *Cames*.

Camforosma. See *Camphorosma*.

Camin'ga. The *Canella alba*.

Cam'nus. (Κάμνος.) A furnace, or its chimney, or a place where fire is made; also a bell. (Ruland.)

Camis'ia fœtus. (Arab. *Kamisah*, an under garment.) The chorion, as resembling the shirt or under garment of the fœtus.

Cam'isole. (F. from *I. camiciula*, a small shirt. *I. camicia di sicurezza*; G. *Zwangsjacke*, *Zwangswams*.) A strait waistcoat, formerly used for the confinement of the violently insane.

Cammaras. (Κάμματος.) The crab, *Cancer pagurus*; or the lobster, *Hommarus gammarus*. The name has also been applied to the river crayfish, *Asiacus fluvialis*.

Cammaron. A plant supposed to be the *Arnica scorpioides*. (Hooper.)

Cammarum. The *Aconitum cammarum*.

Cam'mock. The *Ononis spinosa*; and also the *Peucedanum officinale*.

Camoins-les-Bains. France; Département des Bouches-du-Rhône. An thermal mineral water, containing a small amount of calcium sulphate and a little carbonic acid and hydrogen sulphide. Used in non-inflammatory skin affections and in chronic catarrh of the respiratory mucous membrane.

Camomile. See *Chamomile*.

Camomilla. The chamomile, *Anthemis nobilis*.

Camot'es. The *Convolvulus batatus*.

Camp. (L. *campus*, a field. F. *camp*; I. *campo*; G. *Lager*.) The ground occupied by an army at rest; also the army itself.

C. fever. A form of fever prevalent in army encampments has been described under this term, which in most instances was typhus fever.

C. mea'sles. An epidemic of measles occurring among soldiers. The disease has been prevalent among the soldiers of the United States when encamped, and it has been suggested by Dr. Salisbury that it was caused by the development of *Puccinia graminis* in mouldy straw.

Campagne. France; Département of Aude. Situated in a pleasant valley. Tepid sulphated saline waters, 26° C. (78.8° F.) to 27° C. (80.6° F.) Used in vesical catarrh, gravel, and malarial engorgements.

Cam'pana. (Mod. L. *campana*, a bell, from *Campania*, in Italy, where they were first used in churches.) A bell. A dish or cover shaped like a bell, and employed in making sulphuric acid.

Cam'panal alliance. Same as the alliance *Campanales*.

Campanales. An alliance of epigynous Exogens in Lindley's classification, having dichlamydeous, monopetalous flowers, and the embryo with little or no albumen.

Also, the same as *Campanulina*.

Campan'ellate. (Mod. L. *campana*, a bell. F. *campanellé*.) Applied to the corolla when tubular at the base, globular in the middle, and again tubular above, as in the *Compositæ*.

Cam'panelle. (I. *campanella*, a small bell.) The *Convolvulus sepium*.

Campaniflorous. (Mod. L. *campana*, a bell; *flos*, a flower. F. *campaniflore*; G. *glockenblättrig*.) Having bell-shaped flowers.

Campaniform. (Mod. L. *campana*, a bell; *forma*, resemblance. F. *campaniforme*; G. *glockenformig*.) Formed like a bell; bell-shaped.

Campan'ula. (Mod. L. dim. *campana*, a bell.) The bell-flower. A Genus of plants of Nat. Order *Campanulaceæ*.

C. bellidifolia. (L. *bellis*, a daisy; *folium*, a leaf.) The *C. patula*.

C. decurrens. (L. *decurro*, to run down.) The *C. patula*.

C. glauca. (L. *glaucus*, bluish-grey.) Used as a tonic.

C. glomera'ta. Linn. (L. *glomer*, to form into a ball.) Hab. Siberia. Used in rabies.

C. lacinia'ta. Linn. (L. *lacinia*, the jagged end of a leaf.) Syrian campanula. Hab. Greece, Syria. Roots used as an antimenorrhagic, seeds as an emmenagogue.

C. me'dium. Linn. (L. *medius*, in the middle.) Canterbury bells. Hab. South Europe. Root used as a pot-herb.

C. pat'ula. Linn. (L. *patulus*, spread out.) Field campanula. Hab. Europe. Leaves bitter.

C. plicat'ula. (L. *plica*, a fold.) The *C. trachelium*.

C. rapun'culus. Linn. (L. dim. of *rapum*, a turnip.) The rampion. The young roots are esculent. The juice is used in toothache, and the seeds in ophthalmia.

C. trache'um. Linn. (Τράχηλος, the throat. F. *gantée*, *gant de Notre Dame*.) The great throat-wort. A decoction of the root is used in sore throat, relaxed uvula, as an astringent. It is also reputed antiphlogistic and vulnerary.

C. urticifolia. (L. *urtica*, a nettle; *folium*, a leaf.) The *C. trachelium*.

Campanula'ceæ. (*Campanula*. G. *Glockenblumengewächse*.) A Nat. Order of epigynous corollifloral Exogens, or a Family of the Order *Campanulina*. Herbaceous plants, or under shrubs, with a milky juice; stamens often connate at the base; stigma naked; ovary inferior, generally 3-celled.

Campanula'ceous. Having an arrangement of parts as in the Genus *Campanula*.

Campanula'ria. A synonym of *Calyp'toblastea*.

Campan'ulate. (Mod. L. *campanula*, a little bell. F. *campanulé*; G. *glockenformig*.) Bell-shaped. Applied particularly to the corolla and nectaries of plants.

Campanuliflorous. (Mod. L. *campanula*; *flos*, a flower.) Having bell-shaped flowers.

Campanulin'æ. (*Campanula*. G. *Glockenblumige*.) An epigynous, anisocarpous Order of the Subclass *Gamopetalæ*. Flowers actinomorphic or zygomorphic, pentamerous; sepals leafy, narrow; ovary inferior. It contains the Families *Campanulaceæ*, *Lobeliaceæ*, and *Cucurbitaceæ*.

Campanulin'ææ. (Mod. L. *campana*, a bell.) Applied by Bartling to a Class comprehending the *Goodeniaceæ*, *Stylidiaceæ*, *Lobeliaceæ*, and *Campanulaceæ*.

Cam'per, Pierre. A Dutch physiologist,

CAMPFER—CAMPHOR.

born at Leyden in 1722, died at The Hague in 1789.

C.'s facial angle. See *Angle, facial*.

C.'s ligament. The deep perineal fascia.

Cam'pfer. Switzerland; in the Upper Engadine. A summer air-cure place, 6000 feet above sea level; in a picturesque and pleasant neighbourhood.

Cam'phene. $C_{10}H_{16}$. A terpene contained in camphor oil from *Lawsonia camphora*. It is formed by the decomposition of hydrochlorate of terebene by cold water or by dilute alcohol. It is a crystalline, colourless mass, fusible at $47^{\circ}C.$ ($116.6^{\circ}F.$); it varies in its action on polarised light according to its source.

Cam'phine. A substance procured by distillation from common turpentine from a solution of caustic potash. Used for burning in lamps.

Cam'phire. Camphor.

Camphocres'asote. A synonym of *Carvacrol*.

Camphogen. The same as *Camphine*.

Cam'phol. A synonym of *Camphor, oil of*.

Campholeulea. Term by Bérál for combinations of three parts of any ethereal oil with one part camphor.

Campholic acid. (*F. acide campholique*; *G. Campholsäure*.) $C_{10}H_{14}O_2$. Obtained by passing camphor vapour over heated potash and lime. It crystallises from alcohol in prisms or colourless scales, fusible at $95^{\circ}C.$ ($203^{\circ}F.$), sublimable, and slightly soluble in water.

Cam'phor. (*Camphora*.) The generic name of a series of oxygenated, volatile, odoriferous, aromatic, crystalline compounds. They are found in conjunction with, and are probably the results of the oxidation of, the terpenes in plants. The two principal types of this group are ordinary camphor, $C_{10}H_{16}O$, and borneol, $C_{10}H_{18}O$.

A camphor is found in the essential oils of many labiate plants, as rosemary, marjoram, and sage, in those of the feverfew and wormwood, and in oil of cloves isomeric with common camphor, except that this turns the plane of polarisation to the right, while the feverfew camphor turns it to the left, and the labiate camphors are inactive.

Borneol or Borneo camphor has isomerides in the liquid camphors contained in the oils of hops, cajeput, coriander, and others.

See also *Camphora*.

C., an'ise. A synonym of *Anethol*.

C., artifi'cial. $C_{10}H_{16}.HCl$. Is formed by the action of hydrochloric acid gas on turpentine. It is not a camphor, but a monohydrochloride of oil of turpentine. It has been used as an adulterant of official camphor. It may be detected by the deposition of a flocculent precipitate by the addition of ammonia to an alcoholic solution.

C., asarabac'ca. Same as *Asarin*.

C., baros'ma. See *Barosma camphor*.

C., Ba'rus. A name of *Borneol*.

C., bergamot. A synonym of *Bergap'tene*.

C. bibro'mide. Same as *C. dibromide*.

C., Blu'mea. Same as *C., Nghai*.

C., Bor'neo. Same as *Borneol*.

C., bro'mated. Same as *C. monobromide*.

C. bro'mide. See *C. monobromide*.

C., bro'mised. See *Camphor monobromide*.

C., car'bolated. Carbolic acid, 15 grains, is mixed with an equal quantity of alcohol and 37.5 grains of powdered camphor added. Used with olive oil or infusion of saponaria as an antiseptic dressing.

C., Chi'na. Official camphor in its crude form.

C.-chlo'ral. A mixture of equal parts of powdered camphor and chloral hydrate, which, when allowed to stand, becomes liquid. It has been used with three parts of glycerin as an external antineuralgic.

C. cigars of Bas'pail. (*F. cigarettes de camphre de Baspail*.) A goose-quill filled with small pieces of camphor, and stopped with cotton wool. The quill is put into the mouth and the camphor vapour inhaled; and the result, according to the originator, is the prevention of most diseases.

C., com'mon. The camphor of *Camphora officinarum*. See *Camphora*.

C., cu'bebs. $C_{10}H_{14}.2H_2O$. A hydrate of cubebin deposited from the essential oil of cubeb in large octohedra.

C. dibro'mide. $C_{10}H_{16}OBr_2$. Formed by dissolving camphor in bromine. A colourless crystalline substance, melting at $114^{\circ}C.$ ($237.2^{\circ}F.$), distilling at $285^{\circ}C.$ ($545^{\circ}F.$)

C., dryobalanops. A synonym of *Borneol*.

C., Dutch. Japan camphor is so called because it was introduced into commerce by the Dutch.

C., el'ecampane. Same as *Helenin*.

C. emul'sion. Camphor rubbed up with milk or almond emulsion in the proportion of one part to 420.

C., essence of. An alcoholic solution of camphor, 1 to 20. Dose, 5 mins. in water frequently. Used in diarrhoea.

C., faot'i'ous. Same as *Camphor, artifi'cial*.

C., fe'ver'few. A crystalline substance, resembling common camphor in every respect, except that its action on polarised light is different; obtained by the distillation of the essential oil of *Pyrethrum parthenium*. See also *Camphor*.

C., Form'o'sa. Same as *C., China*.

C. gland. (*G. Camphoradus*.) A cell, or a group of cells, in a plant having camphorous contents.

C., hydrochlo'rate of. An old preparation made by passing hydrochloric acid gas over camphor in small fragments.

C. ice. White wax 4 oz., benzoated lard 12 oz., are melted together, and when nearly cool powdered camphor 2 oz., and oil of lavender 2 drs., are added. Used for chapped hands and lips.

C., inac'tive. The camphor of the Labiate, which exerts no influence on the polarised light-ray.

C., in'ula. (*F. camphre d'aunée*.) *Helenin*.

C., i'odized. Powdered camphor is put into a box with a hundredth part of its weight of iodine in a muslin bag, and shaken up; in a few hours they will have united. It is used as a snuff for the purpose of administering iodine vapour in phthisis and chronic bronchitis.

C., Iris. A solid crystalline matter obtained in the distillation of the rhizomes of *Iris florentina* with water. It is probably the same as *Myristic acid*.

C., Japan. A variety of camphor grown

CAMPHORA.

in Japan, and containing less impurity than China camphor.

C. ju'lep. The *Aqua camphoræ*.

C. le'dum. The essential oil of *Ledum palustre*.

C. left. The camphor of feverfew which turns the plane of polarisation to the left.

C. lem'on. A name of the dihydrochloride of turpentine oil.

C. li'quid. Same as *Camphor, oil of*.

C. matric'a'ria. Same as *C. feverfew*.

C. mi'ner'al, of coal tar. Carbolic acid.

C. mint. Same as *Menthol*.

C. mix'ture. Same as *Aqua camphoræ*.

C. monobrom'ated. Same as *C. monobromide*.

C. monobrom'ide. $C_{10}H_{13}BrO$. Formed by heating camphor dibromide in a sealed tube to $100^{\circ}C$. ($212^{\circ}F$.) It is in white, hard, colourless, long, acicular crystals, of a camphorous odour and a bitterish taste. It is insoluble in water, slightly in alcohol, easily soluble in chloroform and benzine; it melts at $76^{\circ}C$. ($168.8^{\circ}F$.), and distils at $274^{\circ}C$. ($525.2^{\circ}F$.) It is an antispasmodic and sedative. Used in delirium tremens, hysteria, convulsions from teething, chorea, and paralysis agitans. Dose, 2 to 5 grains, to be repeated in an hour if needful.

C. ner'oli. A neutral, inodorous, tasteless, semi-crystalline substance found in oil of neroli.

C. N'ghal. A species of camphor obtained in Burmah and China by the distillation of *Blumea balsamifera*. It has the same composition as borneol, $C_{10}H_{13}O$, but is levo-rotatory; treated with nitric acid it yields ordinary camphor, but it is still levo-rotatory.

C. ni'trate of. An old preparation made by dissolving camphor in cold nitric acid.

C. offic'i'nal. See *Camphora*.

C. of pyre'thrum parthe'nium. Same as *C. feverfew*.

C. oil of. A pale yellow liquid, of strong camphorous odour, obtained by incision from the *Dryobalanops camphora* when young. It contains 94 per cent. of *Borneone* and essential oil, and 6 per cent. of a resin.

Also, the *Oleum camphoræ*, U.S. Ph.

C. oint'ment. Three parts of camphor is heated in a water bath with twelve parts of prepared lard, and stirred while cooling.

C. patch'ouli. $C_{15}H_{25}O$. A crystalline mass contained in oil of patchouli; homologous with Borneol.

C. poi'soning by. It produces giddiness, nausea, vomiting, thirst, epigastric pain, cramp, dyspnoea, convulsions, and sometimes death. Recovery is preceded by sleep and perspiration. Ten grains have produced death in a child of a year and a half old. The membranes of the brain are congested, there is much reddening and occasional ulceration of gastro-intestinal mucous membrane, and also of the genito-urinary tract. Emetics should be given, and then castor oil, with draughts of milk.

C. right. The camphor of the Lauracæ, which causes the plane of polarisation to deviate to the right.

C. suma'tra. A synonym of *Borneol*.

C. tea. A solution made by pouring boiling water upon a lump of camphor.

C. thyme. A synonym of *Thymol*.

C. tobac'co. A synonym of *Nicotianin*.

C. tree. The *Camphora officinarum*.

C. tab. Same as *C. Japan*.

C. turpentine. A synonym of *Terpin*.

C. va'pour bath. The addition of some camphor, on a plate which can be heated, to the process described under *Bath, vapour*. It produces perspiration.

C. wa'ter. Same as *Aqua camphoræ*.

Camphora, B.P. (Ar. *kāfir*; Malay, *kāpūr*, chalk; camphor was called *Barus kāpūr*, from the place where it was obtained. Gr. *καφουρά*; L. *camphora*; F. *camphre*; I. *canfora*; S. *alcantor*; G. *Kampher*.) Camphor, $C_{10}H_{16}O$, is a concrete volatile substance, obtained in China and Japan from the *Camphora officinarum* by boiling and purified by sublimation. Crude camphor is in small, grey or pinkish, sparkling, aggregated grains; it is refined by mixing it with a fiftieth part of quicklime and exposing to heat in an iron vessel, by which it is melted, and then, going off as vapour, is condensed in a receiver. Purified camphor is white, translucent, of crystalline fracture, powerful odour, and pungent taste. Sp. gr. from 9857 to 996. It is volatile at ordinary temperatures, and inflammable; melts at $175^{\circ}C$. ($347^{\circ}F$.), and distils at $204^{\circ}C$. ($399.2^{\circ}F$.) It dissolves sparingly in water, more freely if sugar, magnesia, myrrh, or carbonic acid be present; it is easily soluble in alcohol, ether, chloroform, acetic, and dilute mineral acids, and volatile and fixed oils. It crystallises by slow sublimation, or from spirituous solutions, in large, shining, refractile hexagonal plates. It is poisonous to most insects. Camphor is an irritant locally. It is described by some as a sedative, by others as a stimulant. In moderate doses it produces a sense of warmth and exhilaration, with a fuller pulse. It allays nervous irritation and restlessness. It is said to be an anaphrodisiac, yet in poisonous doses it is reported to cause voluptuous dreams. It will frequently arrest a catarrh; it is useful in diarrhoea, especially in infants, in nervous headaches, in dysmenorrhoea, and in chordee. It has been used with doubtful advantage in adynamic fevers. It is of some value as an antidote to strychnia. Externally it is used in bruises dissolved in oil or spirit. Dose, 1 to 10 grains of the solid camphor; of aqua c., 1 to 2 oz.; of sp. c., 10 to 30 mins., in milk. See *Camphor*.

Also a Genus of the Nat. Order Lauracæ.

C. broma'ta. (G. *Bromkampher*.) Same as *Camphor monobromide*.

C. carboli'sa'ta. (G. *Kamphorisirtes phenol*.) Carbolic acid, two parts, dissolved in alcohol, and camphor one part, are mixed together; the result is a reddish-yellow oil, insoluble in water and glycerin. Given in zymotic diseases, and used locally as an antiseptic in wounds, and an anodyne in toothache and earache.

C. cum cre'ta. (L. *cum*, with; *creta*, chalk.) Powdered camphor 1 part, prepared chalk 8 parts. Used as a dentifrice.

C. monobroma'ta. See *Camphor monobromide*.

C. officina'rum. (L. *officina*, a shop.) The camphor tree. Hab. China, Japan, and Cochin China. The roots, wood, and branches yield camphor on boiling.

Also, a name of official camphor. See *Camphora*.

C. tri'ta. (L. *tritum*, part, of *tero*, to grind.) Camphor to which a little alcohol has been added,

CAMPHORACEOUS--CANADA.

and then rubbed in a mortar till it is reduced to a fine powder.

Camphoraceous. (L. *camphoraceus*; G. *kampferartig*.) Belonging to, containing, or resembling, camphor.

Camphorata hirsuta. (L. *Hirsuta*, hairy.) A name for the *Camphoraceae monspeliensis*.

C. monspeliensis. The *Camphoraceae monspeliensis*.

Camphorate. A salt of camphoric acid.

C. of guaiac. See *Guaiacum camphoratum*.

Camphorated. (F. *camphré*; G. *gekampfert*, *kampferhaltig*.) Associated or combined with camphor.

C. acetic acid. See *Arctium cicutum camphoratum*.

C. chloral. Same as *Camphor-chloral*.

C. chloroform. One part of camphor dissolved in two parts of chloroform. Used externally in toothache and rheumatism.

C. liniment. The *Linimentum camphoratum*.

C. oil. The *Linimentum camphoratum*.

C. phos. Same as *Camphor*, carbolic.

C. tincture of opium. The *Tinctura camphorae opii*.

C. tincture of soap. The *Linimentum saponis*.

C. vinegar. Camphor 1 part, alcohol 50, vinegar 150; dissolve and mix.

C. wine. See *Vinum camphoratum*.

Camphoric. (F. *camphorique*.) Of, or belonging to, camphor.

C. acid. $C_{10}H_{16}O_4$. (F. *acide camphorique*; G. *Kampfersäure*.) Obtained by prolonged boiling of camphor with nitric acid. Polarization is dextro-rotatory; crystallizes from water in colourless plates; fusible at 157° C. (323° F.); soluble in alcohol. It forms crystallizable salts.

Camphoric acid obtained from Borneo camphor is levo-rotatory.

Camphoride. Generic name by Fechner for substances of vegetable origin that approach camphor in their properties, as aloe-resin, betulin, cerin, succinic camphor, and that of bitter almonds.

Camphorosma. (L. *camphora*; *borné*, a smell.) A Genus of plants of the Nat. Order *Chenopodiaceae*.

C. monspeliense. Linn. (F. *camphris de Montpellier*; S. *alcanforada*; G. *Kampferkraut*.) Stinking ground-pans. Said to smell of camphor; it is acrid, bitter, and aromatic. Formerly used in decoction for dropsical and asthmatic complaints, and esteemed in anodyne fomentations.

C. monspeliensis. The *C. monspeliense*.

C. perennis. (L. *perennis*, lasting the whole year through.) The *C. monspeliense*.

Camphiculous. (L. *campus*, a field; *caus*, to inhabit. F. *campicole*; G. *feldbewohnend*.) Living or growing in fields.

Camphiglia. Italy; not far from Pisa. A thermal water, temp. 38° (100.4° F.), containing sodium chloride 6 grains, calcium carbonate 4, and calcium sulphate 1.5, in sixteen ounces.

Camphimeter. (L. *campus*, a field; *metron*, a measure.) An instrument for measuring the field of vision.

Campeon. (I. *campione*, a champion.) A name of some plants, it is said, from being included in the chaplets with which champions at the public games were crowned.

C. bladder. The *Silene inflata*.

C. corn. The *Githago setigera*.

C. meadow. The *Lysichiton flaccidus*.

C. rose. The *Lysichiton cernuus*.

C. white. The *Lysichiton cernuus*.

Campatechrotes. (Κάπτω, to fold; *χρῶς*, the surface of the body.) An Order of the *Reptilia*, having the skin more or less soft and the body flexible, as the *Scorpi* and *Batrachii*.

Campala. (Gr. *κάμψω*, a bending. G. *Biegung*, *Krümmung*, *Verbiegung*.) Bending of a bone without fracture.

C. depressa. (L. *depressio*, from *deprimere*, to press down.) Depressed fracture.

Campitropal. Same as *Campitropous*.

Campitropous. (Καμπύλος, flexible; *τρέπω*, to turn.) A term, in Botany, applied to an ovule which is folded on itself equally from the middle.

Campula oblonga. A synonym of *Distoma campula*.

Campulitropous. Same as *Campitropous*.

Campylocheirus. (Καμπύλος, bent; *χείρ*, the hand. F. *campylodactyle*; G. *mit gekrümmten Händen*.) Having the hands, arms, or anterior extremities bent.

Campylocecus. (Καμπύλος, bent; *καίς*, the intestine. F. *campylobile*; G. *mit gekrümmten Eingeweiden*.) Having flexures of the intestines.

Campylophyte. (Καμπύλος, bent; *φυτόν*, a plant. F. *campylophyte*.) Applied to plants the superior part of the corolla of which is obliquely inflexed, and more frequently turned spirally before blooming.

Campylorhiza chis. (Καμπύλος, bent; *ῥίζη*, the spine.) A malformed fetus having a crooked back.

Campylorhizinus. (Καμπύλος, *ῥίς*, the nose.) A malformed fetus having a crooked nose.

Campyloperma. (Καμπύλος, bent; *σπίρα*, seed. G. *Gefurchtsamig*.) Applied to a Section of the Nat. Order *Umbelliferae*, in which the seed has a longitudinal ventral furrow by means of the incurvation of the margins of the endosperm.

Campyloperma. (Same etymon. G. *krümmend*.) Having crooked seeds.

Campylotia. (Καμπύλωσις, crookedness.) Distortion of the eye.

Campylotropal. Same as *Campylotropous*.

Campylotropous. (Καμπύλος, *τρέπω*, to turn. G. *krümmend*.) Bent on itself.

C. ovale. An ovule which is so bent on its axis that the micropyle approaches the hilum; but the two portions are unequal in length.

Campylum. (Καμπύλος, bent, from *κάμπτω*, to bend.) Distortion of the eye.

Canabina. Same as *Cannabina*.

Canabis. Same as *Cannabis*.

Canada. A British colony of North America, now included, along with Nova Scotia, New Brunswick, Prince Edward's Island, Manitoba, and British Columbia, under the name Dominion of Canada.

C. agrie. The *Polygala canadensis*. Used in acute rheumatism.

C. balsam. See *Balsam, Canada*.

C. burser. The *Sanguinaria canadensis*.

C. erigeron. The *Erigeron canadensis*.

C. sea-bane. The *Erigeron canadensis*.

C. maidenhair. The *Adiantum canadense*, or *Adiantum pedatum*.

CANAGONG—CANAL.

C., min'eral waters of. See *Caledonia springs, Charlotteville spring, St. Catherine's, Tuscarora acid spring.*

C. pitch. See *Pitch, Canada.*

C. rice. The *Zizania aquatica.*

C. snake-root. The *Asarum canadense.*

C. tea. The leaves of *Gaultheria procumbens.*

C. turpentine. Same as *Balsam, Canada.*

C. yellow root. The *Hydrastis canadensis.*

Canagong. The Australian name of the fruit of *Mesembryanthemum aquilaterale.*

Canal. (L. *canalis*, from *canna*, a reed. Gr. *ὄμιον*; F. *canal*; I. *canale*; S. *canal*; G. *Kanal*, *Gang*, *Böhre*.) A channel or duct which gives passage to some structure or other substance.

C., abdom'inal. (L. *abdomen*, the belly.) Same as *C., inguinal.*

C., aliment'ary. (F. *canal alimentaire*; G. *Verdauungskanal*, *Speisekanal*.) The continuous muscular, mucus-lined tube extending from the mouth to the anus, into which the food is introduced, in which it undergoes the changes necessary to fit it for absorption as nutriment for the body, and from which the refuse matter is expelled as feces. In man, this canal is about thirty feet in length. It is an involution of a part of the external surface. See *Alimentary system.*

C., alveolodental. (L. *alveolus*, a small hollow; *dens*, a tooth.) The canal in the upper and the lower jaw which, with its branches, transmits the dental vessels and nerves.

C., arach'noid. (*Arachnoid*, the cerebral membrane of that name.) Same as *Bichat*, *canal of.*

C., arte'rial. The *Ductus arteriosus.*

C., au'ditory. (L. *auditorius*, relating to hearing. F. *conduit auriculaire*; G. *Ohrgang*.) It extends from the concha of the external ear to the membrana tympani, being 1-5" long. Its course is inwards. Its longest diameter externally is vertical; internally transverse. The outer part is cartilaginous, fibrous above; the inner bony. It is lined by thin skin, possessing sebaceous glands and hairs at the external orifice and many small oval glands, the ceruminous glands. It is supplied by the posterior auricular, internal maxillary, and temporal arteries, and by the temporo-auricular branch of the inferior maxillary nerve.

C., Bartholin's. See *Bartholinus, duct of.*

C., Bichat's. See *Bichat, canal of.*

C., Breschet's. See *Breschet's bone-canal.*

C., bull'ular, of Petit. (L. *bullula*, a watery vesicle.) Same as *Petit, canal of*; so called because of its sacculated appearance when inflated.

C., carot'id. A canal in the temporal bone, commencing below in front and on the inner side of the jugular fossa, ascending at first, and then running horizontally forwards and inwards, until it opens at the apex of the petrous portion of the bone. It transmits the internal carotid artery and the carotid plexus.

C. cells. The series of axial cells, excepting the lowest, which is called oosphere, in the archegonium of mosses; the septa between the cells often disappear.

C., cen'tral, of modiolus. (L. *modiolus*, the nave of a wheel.) The largest of several

canals in the modiolus of the cochlea, extending from its base to its summit; it transmits the central artery of the modiolus and filaments of the cochlear nerve.

C., cen'tral, of spinal cord. (F. *canal central de la moelle*; G. *Centralkanal des Rückenmarks*.) A canal extending from the calamus scriptorius to the bottom of the spinal cord; it traverses the substance of the grey commissure, and is lined with a layer of cylindrical ciliated epithelium. It is the remnant of the anterior division of the primary central canal of the nervous system of the embryo, and is more distinct in fishes, reptiles, and birds, than in mammals.

C., ciliary. Same as *Fontana, canal of.*

C., Cloquet's. Same as *C., hyaloid.*

C., coch'lear. Same as *Canalis cochlearis.* Also, see *Canalis cochlea.*

C., Corti's. A canal lying between the membrana tectoria and the lamina basilaris of the cochlea of the inner ear.

C., Cotunn'nius's. The *Aqueductus ves-tibuli.*

C., cru'al. (L. *crus*, the leg.) The *C., femoral.*

C., cyst'ic. The *Cystic duct.*

C., den'tal. (L. *dens*, a tooth. G. *Unterkieferkanal*.) The canal leading from the inferior dental foramen, which is situated about the middle of the inner surface of the inferior maxillary bone, and which transmits the inferior dental vessels and nerves.

C., den'tal, ante'rior. The hinder branch of the infraorbital groove of the superior maxillary bone. It runs in the substance of the anterior wall of the antrum, and transmits the anterior dental vessels and nerves to the incisor teeth.

C., den'tal, infe'rior. The *C., dental.*

C., den'tal, poste'rior. Situated about the middle of the posterior part of the external surface of the superior maxillary bone. It transmits the posterior dental vessels and nerves. There are usually two or three of these canals.

C., diges'tive. The *alimentary canal.*

C., ejac'ulatory. The *Ejaculatory duct.*

C., ethmoid'al, ante'rior. A canal formed from a groove on the anterior part of the orbital surface of the frontal bone by articulation with the ethmoid, and which transmits the anterior ethmoidal vessels and the nasal branch of the ophthalmic nerve.

C., ethmoid'al, poste'rior. A canal formed from a groove on the posterior part of the orbital surface of the frontal bone by articulation with the ethmoid, and which transmits the posterior ethmoidal vessels.

C., Eusta'chian. A canal in the petrous portion of the temporal bone leading from the lower part of the anterior wall of the tympanum downwards, forwards, and inwards to the angle between the squamous and petrous portions of the bone, where it ends by a ragged rim.

C., fac'ial. (L. *facies*, the face.) The *Aqueductus Fallopii* for the transmission of the facial nerve.

C., Fallo'plan. The *Fallopian tube.*

Also, the *Aqueductus Fallopii.*

C., fem'oral. (G. *Schenkelcanal*.) The innermost compartment of the sheath of the femoral vessels, containing a lymphatic gland and its vessels, with some connective tissue and fat. It is nearly half an inch long, larger above than below, and is the aperture through which

CANAL.

a femoral hernia escapes from the body. In front of it is the fascia transversalis, Poupart's ligament and the falciform process of the fascia lata; behind it the pectineus muscle, covered by the pubic portion of the fascia lata; on the inner side the femoral sheath formed by the junction of the transversalis and iliac fasciae and the cribriform fascia; and on the outer side the femoral vein separated by the septum. Its inner opening is the femoral ring, its outer the saphenous opening.

Also, a synonym of *Hunter's canal*.

C., Ferrein's. See *Ferrein, canal of*.

C., Fontana's. See *Fontana, canal of*.

C. for Arnold's nerve. A small canal on the outer wall of the jugular fossa for the transmission of Arnold's nerve. Also called *Canaliculus mastoideus*.

C. for chorda tympani nerve. See *Canalis chorda tympani*.

C., Gärtner's. See *Gärtner, duct of*.

C., Gu'di's. Same as *C., Vidian*.

C., hæmal. (*ἡμα, blood*.) The canal formed by the apposition of several typical vertebrae in which a hæmal arch is developed.

C., hepatic. (*ἥπαρ, the liver*.) The hepatic duct.

C., Hovius's. Same as *Fontana, canal of*.

C., Hugulier's. See *Hugulier, canal of*.

C., Hunter's. See *Hunter, John, canal of*.

C., hyaloid. (*ῥαλός, glass; εἶδος, form*.) A canal in the vitreous body which, lined by a reflection of the hyaloid membrane, transmitted in the fœtus a branch of the central artery of the retina to the posterior surface of the lens.

C., incisive. (*L. incido, to cut; from its nearness to the incisive teeth*.) The *Canal, palatine, anterior*.

C., infraorbital. (*L. infra, beneath; orbit. G. Augenhöhlenkanal*.) The larger branch of the canal leading from the infraorbital groove on the orbital surface of the superior maxillary bone. It opens on the external surface by the infraorbital foramen, and transmits the infraorbital vessels and nerve.

C., inguinal. (*L. inguen, the groin. G. Leistenkanal*.) An oblique canal, 2" long, parallel with and a little above the inner half of Poupart's ligament, commencing by an opening, the internal abdominal ring, in the abdomen opposite the middle of Poupart's ligament, running downwards and inwards, and ending over the crest of the pubis in the external abdominal ring. It is bounded in front by the aponeurosis of the external oblique muscle for its whole length, and by that of the internal oblique for its outer third; behind by the fascia transversalis, the conjoined tendon of the internal oblique and transversalis, and the triangular ligament; above by the arched fibres of the internal oblique and transversalis; and below by Poupart's ligament and its junction with the fascia transversalis. It transmits the spermatic cord in the male, and the round ligament in the female. It is the seat of inguinal hernia.

C., intestinal. (*L. intestina, the intestines. G. Darmkanal*.) The whole length of intestine from the stomach to the anus.

C., Jacobson's. See *Jacobson, canal of*.

C., lachrymal. (*L. lachryma, a tear*.) The *Canal, nasal*.

Also, see *Canals, lachrymal*.

C., Löwenberg's. A canal bounded by the membrana vestibularis, the membrana testicularis, and the stria vascularis of the cochlea of the inner ear.

C., median. (*L. medius, in the middle*.) The *Aquæductus Sylvii*.

C., medullary. (*L. medulla, marrow. G. Markkanal*.) The hollow interior of the shaft of a long bone.

Also, in Botany, the cavity which occupies the centre of the stem of dicotyledons, and contains the pith or medulla; cylindrical in plants with alternate leaves; oval or angular in those with opposite leaves.

C., Müller's. See *Müller, duct of*.

C., nasal. (*L. nasus, a nose. G. Nasenkanal*.) The canal formed by closing in of the lachrymal groove of the superior maxillary bone by the lachrymal and inferior turbinated bones; it is directed downwards and a little backwards and outwards, is of the diameter of a goose-quill, slightly narrowest at the middle, and lodges the nasal duct.

C., naso-lachrymal. (*L. nasus; lachryma, a tear. G. Thränennasenkanal*.) The nasal duct.

C., naso-palatine. (*L. nasus; palatus, the palate. G. Nasengaumenkanal*.) The anterior palatine canal.

C., neural. (*Νεύρον, a nerve*.) The series of vertebral rings when in *situ* and connected by ligaments.

C., Nuck's. See *Nuck, canal of*.

C., obturator. (*L. obturo, to stop up*.) A small funnel-shaped canal in the upper part of the obturator membrane which transmits the obturator vessels and nerve.

C. of cochlea. The *Canalis cochlearis*.

C. of epididymis. (*Ἐπιδιδυμῖς. G. Nebenhodenkanal*.) The canal by the convolutions of which the epididymis is formed; when uncoiled it is 20' or more in length; it extends from the globus major to the globus minor, and is packed in coils separated from each other by fibrous septa and forming lobes; its diameter at its commencement is about 1-70th of an inch, it decreases to 1-90th at the globus minor, and then increases as it approaches the vas deferens.

C. of style. (*G. Griffenkanal*.) A canal running from the stigma down the centre of the style of a flower to the cavity of the ovary. It is generally filled with *Conducting tissue*.

C. of tensor tympani. (*L. tendo, to stretch; tympanum, a drum*.) The upper of the two compartments of the Eustachian orifice at the anterior extremity of the tympanum. It runs forwards, inwards, and slightly downwards to the angle between the squamous and petrous portions of the temporal bone. It opens by a conical projection into the tympanum, and transmits the tensor tympani muscle.

C., omphalo-mesenteric. (*Ὠμφαλός, the umbilicus; μεσέντερον, the mesentery*.) The tubular connection of the umbilical vesicle or yolk-sac with the intestine.

C., optic. (*Ὀπτικός, of or for sight. G. Sehnervenloch*.) The optic foramen of the sphenoid bone.

C., palatine, anterior. (*G. Nasengaumenkanal*.) The communication between the nose and the palate, commencing below at the incisive foramen of the superior maxillary bones; as it passes upwards it is divided into four smaller canals, the two foramina of Stenson

CANAL GROSSO.

and of Scarpa; the latter are in the middle line before and behind.

C., palatine, descending. The same as *C., palatine, posterior*.

C., palatine, posterior. A canal formed by a groove placed behind the opening of the antrum of Highmore, on the internal surface of the superior maxillary bone, when closed in by the articulation with the palate bone.

C., Petit's. See *Petit, canal of*.

C., pterygoid. (Πτερυξ, a wing.) The *C., Vidian*.

C., pterygo-palatine. (Πτερυξ; *L. palatum*, the palate. *G. Flieggaumenkanal*.) A canal formed by a groove on the internal pterygoid plate of the sphenoid bone when closed in by the sphenoidal process of the palate bone.

C., pulmo-aortic. (*L. pulmo*, the lung; *aorta*, the artery of that name.) The ductus arteriosus.

C., rachidian. (Ράχις, the spine.) The neural canal.

C., Rocklinghausen's. See *Rocklinghausen, canal of*.

C., Reissner's. The *Canalis cochlearis*.

C., Rivinus's. See *Rivinus, duct of*.

C., Roenthal's. The *C., spiral, of modiolus*.

C., sacral. (*L. sacrum*, the bone of that name. *G. Kreuzbeinkanal*.) The continuation of the neural canal in the sacrum; it is nearly triangular, follows the curve of the bone, and decreases in size as it descends, and is flattened from front to back; its posterior wall is deficient below. It contains four pairs of intervertebral foramina, opening laterally on the outer surface by the anterior and posterior sacral foramina, which give exit to branches of the sacral nerves which are contained in the canal.

C., Schlemm's. See *Schlemm, canal of*.

C., semicircular, anterior. The superior semicircular canal. See *Canals, semicircular*.

C., semicircular, anterior vertical. (*L. cortex*, the highest point.) The superior semicircular canal. See *Canals, semicircular*.

C., semicircular, external. (*G. laterale Bogengang*.) See *Canals, semicircular*.

C., semicircular, horizontal. The external semicircular canal. See *Canals, semicircular*.

C., semicircular, inferior. (*G. untere Bogengang*.) The posterior semicircular canal. See *Canals, semicircular*.

C., semicircular, lateral. (*G. laterale Bogengang*.) The external semicircular canal. See *Canals, semicircular*.

C., semicircular, posterior. (*G. obere Bogengang*.) See *Canals, semicircular*.

C., semicircular, posterior vertical. The posterior semicircular canal. See *Canals, semicircular*.

C., semicircular, superior. (*G. obere Bogengang*.) See *Canals, semicircular*.

C., spermatic. (Σπέρμα, seed.) Same as *Canal, inguinal*; because it transmits the spermatic cord.

C., spinal. (*L. spina*, the backbone. *G. Rückenmarkskanal*.) The neural or vertebral canal.

C., spiral, of cochlea. (*G. Schneckenkanal*.) The osseous tube which, winding spirally round the modiolus, forms, along with it and the lamina spiralis, the cochlea. It is

about an inch and a half long, and a tenth of an inch wide at its origin; it takes two and a half turns round the modiolus, gradually diminishing in diameter, and ends at the apex of the cochlea in a cul-de-sac, the cupola; it is partially divided in its length into two by a thin bony plate arising from the modiolus, the *lamina spiralis*. At its lower end it diverges slightly from the modiolus, where it communicates with the tympanum by the fenestra rotunda, and with the vestibule by the apertura scale vestibuli, and into it enters the aqueductus cochleæ.

C., spiral, of modiolus. (*L. modiolus*, the nave of a wheel.) A small canal running spirally round the modiolus in the base of the osseous lamina spiralis. It contains the ganglion spirale of the cochlear nerve.

C., spiral, of temporal bone. (Σπείρα, a spiral; εἶδος, likeness.) The aqueduct of Fallopius.

C., Stenon's. Same as *Stenon, duct of*.

C., Stillig's. A synonym of the *C., hyaloid*.

C., supraorbital. The supraorbital foramen of the frontal bone.

C., thoracic. The thoracic duct.

C., tympanic. (Τύμπανον, a drum.) Same as *Jacobson, canal of*.

C., urethrosexual. (*L. urethra*; *sevus*, sex.) A diverticulum on each side of the anterior extremity of the vaginal cul-de-sac of marsupials.

C., urinary. (*L. urina*, the urine.) The urethra.

C., urogenital. (*L. urina*; *genitalis*, belonging to generation.) The anterior common canal of the two vaginæ of marsupials.

C., uterocervical. (*L. uterus*, the womb; *cervix*, a neck.) The part of the uterine cavity which represents at the time of labour the neck of the uterus.

C., vector. (*L. vector*, a carrier.) The Fallopian tube.

C., venous. (*L. vena*, a vein.) The ductus venosus.

C., vertebral. (*L. vertebra*, the bones of that name. *G. Wirbelkanal*.) The canal formed by the apposition of the foramina of the vertebrae; it extends from the occiput into the sacrum; it is wide and triangular in the lumbar and cervical regions, narrow and rounded in the dorsal region.

C., Vidian. A canal traversing horizontally the base of the internal pterygoid plate of the sphenoid bone; it transmits the Vidian nerve and vessels.

C., vulvar. (*L. vulva*, a wrapper.) The vestibule of the vagina.

C., vulvo uterine. (*L. vulva*; *uterus*, the womb.) The vagina.

C., Wharton's. Same as *Wharton, duct of*.

C., Wirsung's. See *Wirsung, canal of*.

C., zygomatico-facial. (Ζύγωμα; *L. facies*, the face.) The branch of the malar canal opening on the anterior surface of the malar bone.

C., zygomatico-temporal. (Ζύγωμα; *L. tempora*, the temples.) The branch of the malar canal opening on the temporal surface of the malar bone.

Canal grosso. Italy; in the Magra Valley, near Calice. A mild sulphur water, having a temperature of 13° C. (55.4° F.)

CANALES—CANALICULUS.

Canales. (L. plural of *canalis*.) Channels. Also, anciently applied to boxes or troughs in which a fractured limb, after being bound in splints, was placed.

C. aerif'eres. (L. *aër*, air; *fero*, to carry. G. *Luftföhren*.) The air canals of plants.

Also, the tracheae of insects and the air passages of other animals.

Also, the bronchial tubes.

C. alveola'res. (L. *alveolus*, a small hollow.) Term applied to the anterior and posterior dental canals.

C. circula'res. The semicircular canal of the inner ear.

C. cochl'ares. (L. *cochlea*, a snail shell.) The scales of the cochlea of the inner ear.

C. diplo'ici. (*Διπλόν*, a fold, the diploë of the cranial bones.) The canals for the veins in the diploë; also called *Breschet's canals*.

C. lachryma'les. (L. *lachryma*, a tear.) The lachrymal ducts.

C. laqueif'ormes. (L. *laqueus*, a noose; *forma*, shape. F. *canaux en anse de Henle*; G. *Schleifenförmigekanälchen*.) Term applied to Henle's loops or the looped portion of the tubuli uriniferi.

C. membra'nei re'num. (L. *ren*, the kidney.) Membranous canals of the kidneys. The calyces of the kidney; see *Calyx*.

C. nutrit'i. (L. *nutritivus*, that which nourishes. G. *Ernährungskanäle*.) The same as *Canals*, *nutritives*.

C. semicircula'res. See *Canals*, *semicircular*.

C. semicircula'res membra'neæ. See *Canals*, *semicircular*.

C. semicircula'res os'seæ. See *Canals*, *semicircular*.

C. semicircula'res petro'sæ. (L. *petrosus*, stony.) The osseous semicircular canals.

C. tubae'formes. (L. *tuba*, a trumpet; *forma*, shape.) The semicircular canals of the inner ear.

Canalic'ular. (L. *canaliculus*, a little canal.) Having small tubes.

C. ab'scess. A mammary abscess communicating with the lactiferous ducts.

C. tis'sue. A tissue containing canals, as bone.

Canalic'ulate. (L. *canaliculus*, a little canal. F. *canaliculé*; G. *rinnenförmig, ausgehöhl.*) Channelled.

Canalic'ulated. (Same etymon.) Channelled.

Canalic'uli. (L. *canaliculus*, a small channel; dim. of *canalis*, a channel. G. *kleine Gänge, Rinnen*.) Small channels.

Also, a name given to the lachrymal canals.

Also, a synonym of *Canals*, *juice*.

C. accesso'rii. (L. *accedo*, to be added.) The same as *Foramina condyloidea accessoria*.

C. bilif'eri. (L. *bilis*, bile; *fero*, to carry.) The bile ducts.

C. calci'eri. (L. *calx*, lime; *fero*, to carry.) Channels at one time believed to exist in ossifying cartilage.

C. carotico'tympan'ici. (L. *carotid*; *tympanum*.) Two or three small short canals which lead from the hinder wall of the carotid canal into the tympanum. One of these canals gives passage to the superior and the other to the inferior carotico'tympanic branch of the carotid

Can'tium. (L. *dens*, a tooth. F. *cana-*

licules dentaires; G. *Zahnbeinhöhchen*.) The minute canals traversing the dentine of the tooth.

C. Haversia'na. The Haversian canals of bone.

C. lachryma'les. (L. *lachryma*, a tear. F. *conduits lacrymaux*; G. *Thränenkanälchen*.) The lachrymal canals. They commence in the inner angle of the eye, at the papilla lachrymalis on the inner margin of each eyelid, by a small aperture, the punctum lachrymale, and open into the lachrymal sac. The upper canaliculus is smaller and longer; it first ascends vertically, and then suddenly bends inwards and downwards; the lower canaliculus first descends, and then is directed horizontally inwards. They are both dilated at the bend, and open into the lachrymal sac either separately or by a joint opening.

C. lima'cum. (L. *limas*, a snail.) The lachrymal ducts, from their likeness to the horns of a snail.

C. of bone. (F. *canalicules osseus*; G. *Knochenkanälchen*.) Fine, tortuous, branching tubes running between the lacunae of bone, or between an Haversian canal and a lacuna. See *Bone*.

C. petro'si. (L. *petrosus*, rocky; applied to a part of the temporal bone.) Two very narrow canals, or sometimes only channels, on the upper surface of the petrous bone on the outer side of the superficial petrosal sulcus, transmitting the greater and lesser superficial petrosal nerves.

C. semicircula'res. The *Canals*, *semicircular*.

C. semina'les. (L. *semen*, seed.) The *Tubuli seminiferi*.

C. semina'les rect'i. (L. *semen*, seed; *rectus*, straight.) The *Vasa recta* of the testicle.

C. semini'eri. The *Tubuli seminiferi*.

C. vasculo'si. (L. *vasculum*, a small vessel.) The canals for the transmission of blood-vessels in bone, including the nutritious and the Haversian canals.

Canaliculation of bone. (L. *canaliculus*.) The process of development of the canaliculi; also called *Vascularisation of bone*.

Canaliculus. (L. *canaliculus*.) A small channel.

C. communicatio'nis. (L. *commun-*
catio, a making common.) A small canal frequently to be found at the hinder end of the superior angle of the petrous bone, by means of which the middle fossa of skull communicates with the sulcus transversus of the parietal bone.

C. innomina'tus. (L. *in*, neg.; *nomen*, a name.) A small canal situated near the foramen spinosum, or near the foramen ovale of the sphenoid bone, which transmits the small superficial petrosal nerve.

C. mastoideus. (*Μαστός*, a breast; *ειδος*, likeness.) A small canal, commencing in the lateral wall of the jugular fossa, which runs along the antero-lateral part of the mastoid process, and opens into the petromastoid fissure; it transmits the auricular branch of the vagus n. and Arnold's nerve.

C. pharyngo'sus. (*Φάρυγξ*, the pharynx.) A groove on the under surface of the body of the sphenoid bone, which is more or less completely converted into a canal by the sphenoidal process of the palate bone. It transmits the pterygopalatine nerve.

CANALIS.

C. pharyngeus accessorius. (Φάρυγξ, the pharynx; *L. accedo*, to be added.) A canal accessory to the Vidian on the under surface of the processus ad vomerem of the sphenoid bone, or between the latter and the body of the sphenoid.

C. pterygopalatinus. (Πτερυγίς, a wing; *L. palatum*, the palate.) The *C. pharyngeus*.

C. sphenoidalis lateralis. (*Sphenoid* bone; *L. lateralis*, pertaining to the side.) A small canal taking origin in a small furrow of the sphenoid bone lying between the sulcus tubæ Eustachii and the foramen ovale, and ending near the sulcus caroticus between the lingula and the foramen rotundum.

C. sphenoidalis medialis. (*L. medialis*, belonging to the middle.) A small, short canal, arising in a furrow of the sphenoid bone, lying between the sulcus tubæ Eustachii and the foramen ovale, and opening into the Vidian canal.

C. sphenopalatinus. (Σφήν, a wedge; *palatum*, the palate.) The *Canal, pterygopalatine*.

C. sphenopharyngeus. (Σφήν, a wedge; *pharynx*, the gullet.) The *C. pharyngeus*.

C. tympanicus. (Τύμπανον, a drum.) A canal commencing in the fossula petrosa or in the fossa jugularis of the temporal bone, and passing outwards and somewhat backwards to the tympanum, where it opens by a small aperture below the promontory; it transmits Jacobson's nerve.

C. vomerobasilaris lateralis superior. (*L. vomer*, the bone of that name; *basis*, a base; *lateralis*, belonging to the side; *superior*, upper.) The *C. vomerosphenoidalis lateralis superior*.

C. vomerosphenoidalis lateralis inferior. The *Canalis vomerosphenoidalis lateralis inferior*.

C. vomerosphenoidalis lateralis superior. (*L. lateralis*, lateral; *superior*, that is above.) A canal frequently found between the vaginal process of the sphenoid bone and the lateral border of the ala of the vomer; it transmits blood-vessels and a pharyngeal branch of the sphenopalatine ganglion.

C. vomerosphenoidalis medialis. (*L. medialis*, middle.) A canal frequently found between the posterior extremity of the incisura vomeris and the inferior surface of the body of the sphenoid; it transmits blood-vessels to the body of the sphenoid, and to the sphenoidal sinuses.

Canalis. (*L. canalis*, from *canna*, a pipe.) A channel.

C. alveolaris anterior. (*L. alveolus*, a small hollow; *anterior*, in front.) The foremost channel descending from the infraorbital canal.

C. alveolaris inferior. (*L. inferior*, lower. *G. Unterkieferkanal*.) The dental canal.

C. alveolaris medius. (*L. medius*, middle.) The middle channel or channels descending from the infraorbital canal.

C. alveolaris posterior. (*L. posterior*, hinder.) The posterior channel or channels descending from the infraorbital canal.

C. arteriosus. The *Ductus arteriosus*.

C. auricularis. (*L. canalis*, a canal; *auricula*, the auricle of the heart.) The elongated

constriction between auricular and ventricular parts of the heart of the embryo.

C. biflexus. (*L. bis*, twice; *flectus*, part. of *flecto*, to bend. *F. canal biflexus*.) A sac, bent upon itself, situated between the hoofs and secreting a thick sebaceous substance. It is found in the sheep and sometimes in the goat.

C. Botalli. The *Ductus arteriosus*.

C. canaliculatus. (*L. canaliculatus*, channelled.) The gorget formerly used in lithotomy.

C. caroticus. (Καρωτίδης, the carotid arteries.) The carotid canal.

C. centralis. (*L. centralis*, in the middle.) The *Canal, central, of spinal cord*.

C. centralis cochlear. (*L. centralis*, in the middle; *cochlea*, a part of the inner ear.) Same as *Canal, central, of modiolus*.

C. centralis medullaris. (*L. centralis*; *medulla*, marrow.) The *Canal, central, of spinal cord*.

C. centralis medifoli. See *Canal, central, of modiolus*.

C. cervicis. (*L. cervix*, the neck.) The canal of the cervix uteri.

C. cervicis uteri. (*L. cervix*, uterus, the womb.) The canal of the neck of the womb; it is tubular, slightly flattened from front to back, widest in the middle, and communicates above with the uterus, below with the vagina. On its anterior and posterior walls is a longitudinal ridge, from which lateral upward springing rugæ arise, the *Arbor vite uterina*.

C. choleocephus. (Χολή, bile; *δοχή*, a receptacle.) The common bile-duct; *Ductus communis choleocephus*.

C. chordæ tympani. (Χορδή, a cord; *τύμπανον*, a drum.) A canal on the outer side of the Eustachian tube in the angle between the petrous and squamous portions of the temporal bone; it transmits the chorda tympani nerve.

C. cochlear. (*L. cochlea*, a snail-shell.) This term and its equivalents, cochlear canal and canal of cochlea, have been very loosely applied. It has been applied to the spiral windings of the osseous tube forming the cochlea, to the canal bounded by the membrane of Reissner and the membrana basilaris, and also, by the subdivision of this space, to the upper part of the same canal between the membrane of Reissner and the membrana tectoria.

C. cochlear osseus. (*L. cochlea*; *osseus*, bony.) The bony part of the canal of the cochlea.

C. cochlear spiralis. See *Canal, spiral, of cochlea*.

C. cochlearis. (*L. cochlea*, a snail-shell. *G. Schneckenkanal*.) The triangular canal at the outer part of the scala vestibuli of the cochlea, its inner boundary being the membrane of Reissner, its outer the osseous wall of the cochlea, and its lower the membrana basilaris with the organs of Corti. Also called *ductus cochlearis*, *canalis cochlear*, *canalis membranaceus*, *scala media*, and *Reissner's canal*.

C. condyloideus. (Κόνδυλος, a knob; *εἶδος*, likeness.) The canal for the transmission of a vein, the external opening of which, the posterior condyloid foramen, is situated in the depression behind each condyle of the occipital bone.

C. condyloideus posterior inferior. (*L. posterior*, hinder; *inferior*, lower.) The *Sulcus condyloideus*.

C. cranio-pharyngeus. (Κρανίον, the

CANALISATION—CANALS.

skull; *φάρυγξ*, the pharynx.) A canal perforating the floor of the sella turcica of the sphenoid bone in the fetus, and often in the infant, which transmits a small artery and vein, with a process of dura mater which originally had relation to the development of the pituitary gland.

C. cruralis. (*L. crus*, the leg.) Same as *Canal, femoral*.

C. deferens. Same as *Vas deferens*.

C. eminens quadrigenus. (*L. eminentia*, a prominence; *quadrigenus*, four-fold.) The *Aqueductus Sylvii*.

C. excretorius linguae. (*L. excreo*, to separate; *lingua*, the tongue.) A short canal, present in 24 per cent. of subjects, which opens externally at the foramen caecum of the dorsum of the tongue.

C. Fallopii. The *Aqueductus Fallopii*.

C. fibrosus vasorum tibialium anteriorum. (*L. fibra*, a fibre; *vas*, a vessel; *tibia*, the bone of that name; *anterior*, in front.) A fibrous canal at the upper extremity of the interosseous ligament of the leg, which transmits the anterior tibial artery, veins, and nerve.

C. ganglionaris. (*Γάγγλιον*, a nerve-knot.) The *Tractus spiralis foraminulentus*.

C. gutturalis auris. (*L. guttur*, the throat; *auris*, the ear.) The Eustachian tube.

C. gutturalis tympani. (*L. guttur*, the throat; *tympanum*, a drum.) The Eustachian tube.

C. gynecophoricus. (*Γυνή*, the female; *φορέω*, to bear.) A fissure in the ventral surface of the male of the *Bilharzia hæmatobia*, which becomes a canal by the overlapping of the lateral walls; it receives the female when in the act of impregnation.

C. hypoglossi. (*Υπό*, under; *γλῶσσα*, the tongue.) The anterior condyloid foramen of the occipital bone, which transmits the hypoglossal nerve.

C. intestinum. (*L. intestina*, the intestines.) The intestinal canal.

C. lateralis. (*L. lateralis*, belonging to the side.) The *Canaliculus vomerosphenoidalis lateralis superior*.

C. mandibularis. (*L. mandibula*, the lower jaw.) The dental canal.

C. maxillaris. (*L. maxilla*, the jaw.) The dental canal.

C. medius. (*L. medius*, in the middle.) The *Aqueductus Sylvii*.

C. medullæ spinæ. (*L. medulla*, marrow; *spina*, the spine.) The neural or vertebral canal.

C. membranae. (*L. membranaceus*, composed of membrane.) The *C. cochlearis*.

C. musculo-peroneus. (*L. musculus*, a muscle; *περόνη*, the fibula.) A canal formed in the fibres of the flexor longus pollicis for the transmission of the peroneal artery.

C. musculotubarius. (*L. musculus*; *tuba*, a trumpet.) The joint canals for the tensor tympani and the Eustachian tube.

C. nervus fistulosus renum. (*L. nervus*, a sinew; *fistula*, a pipe; *ren*, the kidney.) The ureter.

C. orbitæ nasalis. (*L. orbita*, an orbit; *nasalis*, belonging to the nose.) The nasal canal.

C. palatinus descendens. (*L. palatum*, the palate; *descendo*, to pass down.) Same as *Canal, palatine, posterior*.

C. palatinus tympani. (*L. palatus*, the palate; *tympanum*, a drum.) The Eustachian tube.

C. periphericus medii. (*L. peripheria*, the circumference; *medius*, the nave of a wheel.) The *Canal, spiral, of mediolus*.

C. reuniens. (*L. re*, an inseparable particle meaning again; *unio*, to unite.) A short, narrow canal, connecting the sacculus of the vestibule of the membranous labyrinth with the canalis cochlearis; it is lined with epithelium.

C. rotundus. The *Foramen rotundum* of the sphenoid bone.

C. scala rum communis. (*L. scala*, a staircase; *communis*, common.) The infundibulum of the cochlea.

C. semicircularis horizontalis. (*L. semi*, half; *circulus*, a circle; *horizon*.) The external semicircular canal.

C. semicircularis verticalis posterior. (*L. vertes*, the summit.) The posterior semicircular canal.

C. semicircularis verticalis superior. The superior semicircular canal.

C. spiralis membranae. (*G. hässige Schneckenkanal*.) The same as *Reissner's canal*.

C. spiralis medii. See *Canal, spiral, of mediolus*.

C. stigmatis. (*Stigma*, *G. Narbenkanal, Griffenkanal*.) The more or less distinct canal which exists in the centre of the style of a flower; it is generally occupied by loose cellular tissue.

C. tarai. (*Τάραι*, a broad flat surface.) The depression between the two articulating surfaces of the astragalus and calcaneus.

C. tarai accessorius. (*Τάραι*, the tarsus; *accedo*, to be added to.) The canal which exists when the anterior calcaneo-astragaloid articulation is divided into two.

C. transversæ. (*L. transversarius*, lying across.) The canal formed by the superposition of the perforated transverse processes of the six upper cervical vertebrae connected by the intertransverse ligaments; it transmits the vertebral artery.

C. venosus. The *Ductus venosus*.

C. vomeris. (*L. vomer*, the bone of that name.) The *Canaliculus vomerosphenoidalis medianus*.

C. vomerobasilaris lateralis inferior. (*L. vomer*; *basis*, a base; *lateralis*, belonging to the side; *inferior*, lower.) The *C. vomerosphenoidalis lateralis inferior*.

C. vomerosphenoidalis lateralis inferior. (*L. vomer*; *sphenoid*, the bone of that name.) The pterygopalatine, where a portion of the ala of the vomer enters into its formation.

Canalisation. (Same etymon.) The conversion of a vessel, especially a vein, into a rigid tube.

Also, the boring through a structure, as of the prostate gland for retention of urine from prostatic enlargement.

Canals. (*L. canalis*, a channel.) Channels, ducts.

C., accessory palatine. (*L. accedo*, to be added; *palatus*, the palate.) One or more small orifices in the posterior part of the horizontal plate of the palate bone.

C., afferent. (*L. afferro*, to convey to.) Same as *C., incurrent*.

C., apical. (*L. apex*, a summit.) Two

CANALS.

canals proceeding from the funnel of some Ctenophora to the apical pore.

C., biliary. Same as *Capillaries, biliary*.

C., bone. The Haversian canals.

C., bone, of Breschet. Same as *C., Breschet's*.

C., Breschet's. See *Breschet's bone-canal*.

C., ctenophoral. (*Kreis*, a comb; *φορ-ίω*, to bear.) A series of canals with caecal extremities running longitudinally along the body of Ctenophora in the direction of the locomotive bands or ridges.

C., Cuvier's. Same as *Cuvier, ducts of*.

C., semicircular. The semicircular canals of the internal ear.

C., efferent. (*L. effero*, to carry out.) Same as *C., excurrent*.

C., ejaculatory. Same as *Ducts, ejaculatory*.

C., excurrent. (*L. ex*, out of; *curro*, to run.) A series of canals in sponges, which commence in the interior by junction with the incurrent canals, and running to the surface open by the oscula; they convey the water to the outside.

C., galactophorous. See *Ducts, galactophorous*.

C., Haversian. See *Havers, canals of*.

C., incurrent. (*L. in*, into; *curro*, to run.)

A series of canals in sponges, arising from the pores and joining the excurrent canals; by them water is conveyed into the substance of the sponge.

C., intralobular biliary. (*L. intra*, within; *lobulus*, a lobe; *bilis*, bile.) A fine network running between and amongst the hepatic cells, being the commencement of the biliary ducts. They are believed to possess proper walls. Also called *biliary capillaries*.

C., juice. (*F. canaux de suc*; *G. Saftkanälchen*.) A term given to the inoculating branched connective-tissue cells, on the supposition that a circulation of plasma occurs in them. It is not thus generally held.

C., lachrymal. The canals leading from the eye to the lachrymal sac; also called *Canaliculi lachrymales*.

C., malar. (*L. mala*, the cheek.) One or more small canals passing from the orbital to the facial and other surfaces of the malar bone and transmitting vessels and nerves.

C., nutritive, of bone. The Haversian canals.

Also, the canals for the transmission of blood-vessels to bone.

C. of Havers. See *Havers, canals of*.

C., paragastric. (*Παρά*, alongside of; *γαστήρ*, the stomach.) Two canals arising from the base of the stomach of Ctenophora, one on each side, and running along towards the oral extremity, where they have a blind ending.

C., perivascular. (*Περί*, around; *L. vasculum*, a little vessel.) Sheaths derived from the connective tissue of the pia mater, which surround the blood-vessels of the membrane more or less loosely, and accompany them in their capillary ramifications in the encephalon and spinal cord. They may be injected from the subarachnoid space, and contain a clear lymph-like fluid.

C., perous. This term was originally given to the radiated striae of the vitelline membrane of the ova of fishes by Remak, who be-

lieved them to be very fine canals. This system of radiated pores is found in many Invertebrata, as the Echinodermata, and among Vertebrata in fishes and in mammals. Some have doubted the existence of these canals, and have attributed the appearance to deeper coloured lines.

C., portal. Tubular passages in the liver, commencing at the transverse fissure, and branching in all directions in the substance of the gland; the larger canals are lined by a prolongation of the capsule of Glisson; they contain a branch of the portal vein, of the hepatic artery, and of the biliary duct.

C., radial. (*L. radius*, the spoke of a wheel.) Two primary canals arising from the lateral part of the stomach of some Ctenophora, one on each side, each branching into two secondary radial canals, and these again into tertiary, which last open at right angles into the ctenophoral canals.

C., resiniferous. (*L. resina*, resin; *fero*, to bear.) Channels or ducts in plants containing resin. They may be either vascular structures formed by the absorption of adjacent end-walls of contiguous cells, or they may be intercellular spaces.

C., semicircular. (*L. semi*, an inseparable particle signifying half; *circularis*, circular. *G. Bogengänge*.) Three bony canals, .05" in diameter, each forming two thirds of a circle, situated above and behind the vestibule of the inner ear, and opening into it by five orifices; one end of each is double the width of the remainder of the tube, and is called the ampulla. They are lined by a thin periosteum and contain a fluid, the perilymph, and the membranous canals.

The superior semicircular canal is vertical and transverse in direction; the crown of its arch forms a smooth projection on the anterior surface of the petrous bone. The ampulla is the most outward end, and opens into the upper part of the vestibule, the other end joins the non-dilated end of the posterior canal; they open conjointly into the back part of the vestibule.

The posterior semicircular canal, the longest of the three tubes, is vertical and longitudinal in direction; its arch is directed to the posterior surface of the petrous bone; its ampulla is at the lower and back part of the vestibule, its other end joins the superior canal in the common orifice above mentioned.

The external semicircular canal is horizontal and external in direction; its ampulla is just above the fenestra ovalis; its other end opens at the upper and back part of the vestibule.

The membranous semicircular canals are contained within the osseous canals; they are of the same shape, about one third the diameter, and open in the same manner into a central cavity, called the utricle. The ampullae are dense in structure, and nearly fill the osseous ampullae. The convexity of the canals is attached to the osseous walls; in the ampulla it forms a projection, the septum transversum, and receives vessels and nerves. The canals have three coats: an outer fibrous layer of the same character as the periosteum, and containing irregular pigment cells, from it slender fibrous bands pass to the periosteum of the osseous canal, and convey minute blood-vessels; a middle layer, the tunica propria, clear and somewhat transparent, with numerous papilliform projections into the canal; an inner layer, consisting of tessellated epithe-

CANANGA—CANCER.

lium, excepting over the septum transversum of the ampullæ, where it is columnar and conical-based; between and below these cells are small spindle-shaped cells, from which, or from the columnar epithelium, spring delicate non-vibratile hairs; the fibrils of the branches of the auditory nerve approach the base of, and have an intimate connection with, these two sets of cells, but the exact relationship is as yet uncertain. Three branches of the vestibular division of the auditory nerve enter the respective ampullæ of the three membranous canals, and, splitting up, are distributed to the ampullæ alone. The blood supply is from the vestibular branch of the internal auditory artery. The membranous canals contain a fluid, the endolymph.

C., semicircular, membranous. See *C., semicircular*.

C., semicircular, osseous. (L. *os*, a bone.) See *C., semicircular*.

C., temporomalar. One or more canals the orifices of which are seen on the orbital surface of the malar bone; one opens on the posterior surface, and one or more on the facial surface of the bone. They transmit the temporomalar branches of the orbital branch of the superior maxillary nerve.

C., zygomatic. (Ζύγωμα, the cheek-bone.) Same as *C., malar*.

Cananga. The *Uvaria odorata*.

Canapacia. The *Artemisia vulgaris*.

Canara. A district on the west coast of India, south of Bombay.

C. vegetable butter. A solid oil obtained by boiling the fruit of *Vateria indica*, and used in rheumatism.

Canarina. A Genus of the Nat. Order Campanulaceæ.

C. campanula. (L. *campanula*, a little bell.) A species the roots and young shoots of which are used as food.

Canarium. A Genus of the Nat. Order Amyridaceæ.

C. balsamiferum. (L. *balsamum*, balsam; *fero*, to bear.) Yields a resin resembling elemi.

C. commune. Linn. (L. *communis*, common.) Hab. Moluccas. The species said to furnish the official elemi. The seeds, called Java almonds, are made into bread.

C. mehenbothen. The *C. commune*.

C. strictum. Roxb. (L. *strictus*, drawn together.) A species which is the chief source of black dammar, which is used as a substitute for Burgundy pitch.

C. vulgare. (L. *vulgaris*, common.) The *C. commune*.

C. zephyrinum. (L. *zephyrus*, a gentle west wind.) A species supplying a resin.

Canary archil. Same as *C. weed*.

C. grass. The *Phalaris canariensis*.

C. rosewood. The *Genista canariensis*.

C. seed. (F. *semence de canarie*; G. *Kanariensamen*.) The fruit of *Phalaris canariensis*. The flour of the seeds has been used as food for man, as well as birds, and as an emollient poultice.

C. weed. A commercial name of the lichen, *Rocella tinctoria*, obtained in the Canary Islands.

C. wine. See *Wine*.

Canary Islands. A group of seven islands, with several islets, situate in the North Atlantic, about sixty miles from the west coast

of Africa, between the parallels 27° 4' and 29° 3' N. lat. and the meridians of 13° 3' and 18° 2' W. long. They are of volcanic origin. The climate is mild, dry, and salubrious, and in the plains very equable, the daily range seldom exceeding 3-33° C. (6° F.) From April to October a north or north-east wind is prevalent during the day, which produces during summer a stratum of sea cloud, which does not descend lower than 3000 feet above sea level. In the winter a south-east wind, the Levante, blows across the Asiatic deserts, and is very injurious to animal and vegetable life. Hurricanes are rare. Tenerife is the only one used as a residence for invalids.

Canaveilles. France; Departement des Pyrénées-Orientales. A thermal water, temp. 64° C. (129° 2' F.), containing sodium and hydrogen sulphide.

Can'aman. (Κάγκανον.) A term which seems to have been applied to various gums and mixtures of gums.

Also, a term for *Animé*.

Can'camum. See *Can'aman*.

Can'camy. See *Animé*.

Can'cellate. (L. *cancelli*, lattices. F. *cancellé*; G. *gitterförmig*, *vergittert*.) Having a latticed or reticulated appearance.

Can'cellated. (L. *cancelli*, lattice-work; *cancellatus*. G. *gegittert*.) Having a structure as of network.

C. osseous tumour. Same as *Exostosis, cancellous*.

Can'celli. (L. dim. of *cancer*, a lattice; akin to *κυκλῖς*, a latticed gate.) The lattice-work of the spongy portion of bones, consisting of thin plates and bars interlacing with each other, and forming arches and buttresses in the direction of greatest pressure.

Cancellous. (Same etymon.) Having a structure as of network.

C. exostosis. See *Exostosis, cancellous*.

C. tissue. (G. *schwammige Knochensubstanz*.) The spongy tissue in the interior of bone, made up of fine interlacing fibres and plates of bone. It forms the bulk of the articulating ends of long bones and of the substance of the short bones; it is called diploë in flat bones. It does not differ in essential structure from the compact tissue, but passes into it gradually by consolidation.

Cancellus. (Dim. *cancer*, a crab.) The *Cancer Bernhardus*, or hermit crab.

Can'cer. (Καρκίος, a crab. L. *cancer*; F. *cancer*; I. *canero*; S. *cancer*; G. *Krebs*.) So called because the veins ramifying round the part involved are like a crab's claw; or because, as anciently believed, an animal was attacking the diseased parts.) A malignant disease defined, in the nomenclature of the Roy. Coll. Phys., London, as a deposit or growth that tends to spread indefinitely into the surrounding structures and in the course of the lymphatics of the part affected, and to reproduce itself in remote parts of the body, to which may be added, and to return after removal. Cancerous tumours are composed of a fibrous framework, or stroma, carrying blood-vessels, and so disposed as to form spaces, loculi or alveoli, communicating with each other, and containing, besides granular matter, nuclei and fat globules, many variously-shaped, nucleated, often vacuolated cells, lying close together, and having no intercellular material. Such tumours generally yield on pressure, after incision, a whitish, milky juice. The mode of origin is

CANCER.

includes scirrhous and, according to some, encephaloid cancers.

C., connective-tissue, hard. A synonym of *C., scirrhous*.

C., connective-tissue, soft. A synonym of *C., encephaloid*.

C., cylinder-cell. A form of epithelial cancer in which the cells are of a more or less cylindrical form. Same as some forms of *C., adenoid*.

C., cystic. (Κύστις, a bladder.) A synonym of colloid cancer.

This term is also applied to any of the forms of cancer when accompanied by the growth of cysts, which may be either simple or compound. The cystic condition may be produced by the growth of a cancer in a cyst-wall, by the increase of natural cavities, or by the softening and collapse or removal of the cancer cells.

C., dendritic. (Δένδρον, a tree.) A form of cancer in which the stroma is developed in a branched fashion.

C., eburneous. (Ι. *ebur*, ivory.) A form of lardaceous degeneration of the mammary gland, erroneously called cancer.

C., encephaloid. (Ἐγκέφαλος, the brain; εἶδος, form. *F. encephaloide*; *I. encephaloide*; *S. encephaloide*; *G. Markkrebs*.) Medullary cancer. Encephaloid cancer is of rapid growth, and soft structure. The stroma is very delicate, the cells very abundant, and the milky juice very plentiful. Encephaloid may exist as a distinct tumour or a diffuse infiltration; it is white and opaque on section, and is much subject to softening and fatty degeneration; patches of pigment are not very uncommon. It is markedly malignant, rapidly producing a well-marked cachexia and lymphatic disease. Several varieties have been described, among which are villous, hæmatoid, pultaceous, lipomatous, and melanotic cancers; it differs from scirrhous only in the rapidity of its growth.

C., encephalo-matous. Same as *C., encephaloid*.

C. en cuirasse. (*F. en*, in; *cuirasse*, a breastplate.) A term given to cancer of the breast when the neighbouring skin has become largely implicated, and when the disease has undergone atrophic change.

C., endothelial. (Ἐνδον, within; τίθημι, to place.) A term given to cancers of the same nature as epithelial cancers, arising, it is asserted, from increase of the endothelium of lymphatic vessels.

C., epithelial. (Ἐπιτίθημι, to place upon. *F. epithelioma*; *I. cancro epithiale*; *G. Epitheliom*.) This form of cancer originates almost entirely on epithelial surfaces or in secreting glands; it is most common on the lips, edges of eyelids, and tongue, in the anus, vagina, and uterus. It varies in size, is friable and granular, and yields a thick, whitish, pulpy juice. The stroma is fibrous, vascular, and contains remnants of the healthy tissue of the part in which the growth occurs. The cells are nucleated, polygonal, and are formed upon the stroma, the older cells occupying, in confused or stratified manner, the centre of the alveoli. It consists essentially in hyperplasia of the epithelial structures. It is the least malignant of all the forms of cancer, but it does contaminate the lymphatic glands. It is more common in older than in young persons, and in men than in women. It is liable to be produced by local irritation, as a pipe or a broken

tooth when in the lips, soot when in the scrotum.

C., epithelial, gelatinous. The disease otherwise called *Cylindroma*.

C., epithelial, of scro-tum. Chimney-sweepers' cancer.

C., erectile. (Ι. *erigo*, to erect.) Hæmatoid cancer.

C., fasciculated. (Ι. *fasciculus*, a small bundle.) The same as *Spindle-celled sarcoma*.

C., fibrous. (Ι. *fibra*, a fibre.) Scirrhous cancer, from its appearance.

C., fungous. (Ι. *fungus*, a mushroom.) The hæmatoid variety of encephaloid cancer.

C., gelatiniform. (*Gelatin*; Ι. *forma*, shape.) Colloid cancer, from its appearance.

C., gelatinous. (*Gelatin*.) Colloid cancer, from its consistence.

C., glandular. (Ι. *gland*, an acorn.) Adenoid cancer.

C., glandular-cell. Same as *C., adenoid*.

C., gum. Colloid cancer, from its appearance.

C., gum-mous. Colloid cancer, from its appearance.

C., hæmatoid. (Αἷμα, blood; εἶδος, form. *L. fungus hæmatodes*; *F. fungus hematodes*; *I. fungo ematode*; *G. Blutschwamm*.) A variety of encephaloid cancer in which the vascular element is largely developed. Serious bleedings often occur, and hasten death.

C., hard. Scirrhous cancer, from its firm consistence.

C., hyaloid. (Ἵαλος, glass; εἶδος, likeness.) A cancer having a translucent, glass-like appearance when cut.

C., integumental. (Ι. *integumentum*, a covering.) Epithelial cancer, because it chiefly attacks the integument.

C., juice. (*F. suc cancræus*; *G. Krebs-saft*, *Krebsmilch*.) The milky fluid, containing cancer cells, which may be squeezed out of all cancerous growths.

C., lardiform. (Ι. *lardum*, the fat of bacon; *forma*, likeness.) A scirrhous cancer having an appearance of lard.

C., lardoid. (Λαρνός, fatted; εἶδος, likeness.) A scirrhous cancer having a greasy appearance.

C., lenticular. See *Carcinoma lenticulare*.

C., lipomatous. (Λίπος, fat.) A variety of encephaloid cancer in which the cells contain oil in their earliest stage, increasing with their growth to such an extent as to give the tumour an appearance as of fat.

C., lupous. Same as lupus.

C., mastoid. (Μαστός, the breast; εἶδος, likeness.) A variety of scirrhous cancer which, on section, looks like boiled udder.

C., medullary. (Ι. *medulla*, marrow.) Encephaloid cancer.

C., melanoid. (Μέλας, black; εἶδος, likeness.) Melanotic cancer.

C., melanotic. (Μέλας, black. *F. cancer melanique*; *I. cancro melanotico*; *G. Pigmentkrebs*.) A variety of encephaloid cancer in which the cells contain black pigment, or melanin. The growths which follow as secondary to a melanotic cancer do not always contain pigment.

C., milk-like. A soft, pale, encephaloid cancer; like the milk of a fish.

C., mu-cous. Colloid cancer, from its appearance and consistence.

C., multicoelular. (Ι. *multus*, many;

CANCER.

cellula, a little room or cell.) A term which includes adenoid and encephaloid cancers.

C., myxo'matous. (Μύξα, mucus.) A cancer in which there has occurred a mucous degeneration of the stroma.

C., napiform. (L. *napus*, a turnip; *forma*, shape.) A scirrhus cancer having the form of a turnip.

C., nephroid. (Νεφρός, a kidney; εἶδος, likeness.) A cancer having the appearance of a kidney in structure.

C., occult. (L. *occultus*, part. of *occulere*, to cover.) A cancer before it has ulcerated.

C., open. A term applied to an ulcerating cancer.

C., osteoid. (ὀστίον, a bone; εἶδος, likeness.) Tumour originating in, and chiefly composed of, bone; very malignant. It is probably an ossifying sarcoma.

C., papillary. (L. *papilla*, a nipple.) A variety of epithelial cancer in which the papillae of the corium are much developed.

C., pavement-cell. A term used to describe the typical epithelial cancer, in which the cells are more or less of the character of tessellated or pavement epithelium.

C., pavement-cell, cicatricial. (L. *cicatrix*, a scar.) The form of epithelial cancer in which there is a retrograde and absorptive metamorphosis of the cells and a cicatricial contraction of the stroma. It is usually a slowly-growing disease, and occurs on the skin of the face of old people.

C., pavement-cell, papillary. An epithelial cancer having a warty or villous surface.

C., phymatoid. (Φύμα, a tumour; εἶδος, likeness.) The same as *Cancer reticularis*.

C., pigmentary. (L. *pigmentum*, a paint.) A form of round-cell sarcoma.

Also, a synonym of *C. melanotic*.

C., primary. (L. *primus*, first.) The first growth; the original tumour, to which any others that may arise are secondary.

C., pultaceous. (Πόλτος, porridge.) A variety of encephaloid cancer in which the septa of the alveoli are thick and large, and from which the contents escape as a thick pulp.

C., rapiform. (L. *rapum*, a turnip; *forma*, shape.) A scirrhus cancer having the form of a turnip.

C., retractile. (L. *retrahere*, to draw back.) A cancer of the breast in which retraction of the nipple occurs.

C., retrograde. (L. *retrogradus*, to go back.) A term applied to cancers when they have become firmer and smaller, and so remain.

C., rodent. (L. *rodere*, to gnaw.) Lupus. Also, the same as *Rodent ulcer*.

C., root. Several species of *Orobanchae* and the *Phytolacca decandra* are thus named.

Also, the *Orobanchae virginiana*.

C., sarco'matous. (Σάρξ, flesh.) A combination of cancer with sarcoma, in which the epithelium of a gland undergoes cancerous degeneration, whilst the interstitial connective tissue undergoes a sarcomatous degeneration. Frequent in the testicle and kidney.

C., scirrhus. (Σκίρως, a hard tumour. F. *squirrhe*; I. *scirro*; G. *Faserkrebs*, *Harthrebs*.) Hard cancer. It is uneven, distinct, and hard. On section, during which it cracks, it is greyish white, glossy, fibrous, and contains some milky juice. The stroma is abun-

dant and thick; the alveoli few and small, the cells of the common cancer character. Scirrhus is slow in progress and in the production of secondary lymphatic or other tumours; it is liable to fatty and calcareous degeneration, and to partial atrophy. It is most common in the breast of the female, the pylorus, and the rectum.

C., secondary. Cancerous tumours developed in the body after, and in consequence of the infective action of, the primary tumour. They may appear in the connective tissue near the original growth; in the lymphatic glands, and vessels proceeding from its neighbourhood; and in internal organs, especially the liver and the lungs.

C., serum. (L. *serum*, the watery part of a thing.) The fluid otherwise called *C. juice*.

C., simple. The form of scirrhus cancer which, from excess of cell-growth, approximates to the characters of encephaloid cancer.

C., soft. Encephaloid cancer, from its soft consistence.

C., solanoid. (L. *solanum*, the potato; εἶδος, likeness.) A cancerous tumour having the shape of a potato.

C., stroma of. (Στρώμα, anything spread. F. *trame canceruse*; G. *Bindegewebsstroma*.) The interlacement of fibres in a cancerous tumour, forming intercommunicating spaces or alveoli, which contain the cancer cells and juice. This skeleton contains the blood-vessels, and is chiefly made up of connective-tissue fibres, with a few round or spindle-shaped cells when it is growing quickly.

C., telangiectatic. (Τήλε, far off; ἀγγίον, a vessel; ἑκτασις, extension.) A variety of hæmatoid encephaloid, in which, from the first, the development of blood-vessels predominates.

C., tuberous. (L. *tuber*, a swelling.) A synonym of *Encephaloid cancer*, from its shape.

Also, see *Carcinoma tuberosum*.

C., tubular. (L. *tubulus*, a small pipe.) Adenoid cancer, from its structure.

C., villous. (L. *villus*, a tuft of hair. G. *Zottenkrebs*.) A name given to encephaloid cancer when projecting into a cavity in a villous form. According to Rindfleisch it is a papilloma, and not a cancer.

Also, applied to epithelioma of a mucous membrane having a papillated surface.

C., weed. The *Gordyera pubescens* and also the *Salvia lyrata*.

Cancer apertus. (L. *aperire*, to uncover.) The ulcerated stage of a cancer.

C., aquaticus. (L. *aquaticus*, watery.) A synonym of gangrenous stomatitis or cancerum oris; perhaps from the free secretion of saliva which often accompanies the disease.

C., caminari'rum. (L. *caminus*, a chimney.) Chimney-sweepers' cancer.

C., mollis. (L. *mollis*, soft.) Soft cancer; a synonym of encephaloid cancer.

C., munditorum. (L. *mundus*, to make clean.) Chimney-sweepers' cancer.

C., occultus. (L. *occultus*, hidden.) A cancerous tumour before ulceration.

C., oris. (L. *os*, the mouth.) A synonym of *Gangrenous stomatitis*.

C., ossis. (L. *os*, a bone.) A term formerly applied to caries of bone in children.

C., purgatoris infanticuli. (L. *pur-*

CANCER—CANDELA.

gator, a cleanser; *infumiculus*, a chimney.) Chimney-sweepers' cancer.

C. reticulare. (L. *reticulum*, a little net.) A term applied to certain forms of encephaloid cancer in which there is a yellow reticulation over the surface, caused by more or less linear fatty degeneration.

C. scro'til. Same as *C. chimney-sweepers'*.

C. spur'ius. (L. *spurius*, false.) A synonym of the disease *Zarishan*.

Cancer. (Καρκίνος, a crab.) A Genus of the Tribe *Brachyura*, Order *Decapoda*, Subclass *Malacostraca*, Class *Crustacea*. Crabs.

C. astacus. (Αστράχης, a kind of lobster.) The *Astacus fluviatilis*.

C. Bernhard'us. The *Pagurus Bernhardus*.

C. cran'gon. The *Orangon vulgaris*.

C. fluviatilis. The *Astacus fluviatilis*.

C. gam'marus. (Κάμμαρος, a lobster.) The *Homarus vulgaris*.

C. mar'inus. (L. *marinus*, belonging to the sea.) The *C. pagurus*.

C. man'us. See *Carcinus manas*.

C. pagurus. (Πάγουρος, a crab. F. *crabbe*; I. *granchio*; S. *cangrejo*; G. *Krabbe*.) The crab. The flesh is somewhat difficult of digestion, and with most persons needs the addition of pepper and vinegar. Occasionally it produces urticaria, even when fresh. From this crustacean is obtained the substance termed *Chela cancerorum*, or crab's claws.

C. ruri'ela. (L. *ruricola*, a countryman.) The great land-crab of the Bahama Islands, which is used as food by the negroes in many of the sugar islands.

C. squil'la. (L. *scilla*, a kind of lobster.) The *Palomon serratus*.

Cancer Galeni. A term given to Galen's bandage, in consequence of the ends in some fashion being supposed to resemble a crab's legs. See *Bandage*, *Galen's*.

Canceratic. (L. *cancer*. G. *krebsartig*.) Of the nature of, or related to, cancer.

Cancerid'eous. Same as *Cancroid*.

Cancerism. The cancerous diathesis.

Canceroma. Celsus's term for carcinoma.

Cancerous. (G. *krebsartig*.) Having relation to, or being of the nature of, cancer.

C. cachex'ia. See *Cachexia*, *cancerous*.

C. insan'ity. A term applied to the mental derangements which sometimes accompany the early stages of intracranial cancer.

Canchala'gua. The *Chironia chilensis*.

Canchas'mus. (Καρχασμός, loud laughter.) Immoderate laughter, as in hysteria.

Cancinper'icon. An old term for the steam from hot horse-dung, which was supposed to have medical virtues.

Cancro'na. Used by Paracelsus and Langius instead of *Gangraena*.

Can'criform. (L. *cancer*; *forma*, likeness. F. *cancriforme*; G. *krebsformig*.) Formed like a crab.

Also, having the appearance of cancer.

Can'crine. (L. *cancer*.) Of the nature of cancer.

Cancro'des. (L. *cancer*; *εἶδος*, likeness.) The disease canceroid, or epithelial cancer.

Cancroid. (L. *cancer*, the disease cancer; *εἶδος*, likeness.) Resembling the disease cancer.

A synonym of *Cancer epithelial*.

Also, a synonym of *Keloid*.

C. cylinder-epithe'nal. Same as *Cancer, cylinder-cell*.

C. dry. Epithelial cancer of a chronic form, in which the cells become dry soon after their formation, and contain air.

C. epithe'lioma. Same as *Cancer, epithelial*.

C. mu'cosus. A term for a tumour which has received various names from different observers, who have probably, under this title and its synonyms, described more than one diseased structure, such as an adenoid cancer or a sarcoma undergoing in part mucous degeneration. See *Cylindroma*.

Cancro'is. A synonym of *Keloid*.

Cancro'ma. A synonym of the disease *Cancer*.

Cancro'rum ohe'las. (L. *cancer*, a crab; *ὄχλα*, the claws.) Crabs' claws.

C. cal'culi. (L. *calculus*, a pebble.) Crabs' eyes.

C. concremen'ta. (L. *concrementum*, that which grows together.) Crabs' eyes.

C. lapil'li. (L. *lapillus*, a small stone.) Crabs' eyes.

C. oc'uli. (L. *oculus*, an eye.) Crabs' eyes.

Can'crum. (L. *cancer*, the disease cancer.) The canker. An eating, spreading sore.

C. or'is. (L. *os*, the mouth.) Same as *Stomatitis gangrenosa*.

Cand'e. France; Département de la Vienne. A cold chalybeate water, containing iron bicarbonate and magnesium chloride. Used in anemia, chlorosis, and some forms of dyspepsia. It is said to be laxative and diuretic.

Candela. (L. *candeo*, to glow.) A bougie.

C. belladon'nae. Belladonna leaves and nitrate of potash mixed with althaea root and water to form a pastile. To be burnt for the relief of asthma.

C. cinnaba'ris. Cinnabar 2 parts, nitrate of potash, althaea root, of each 4 parts, water sufficient. Made into a candle and smoked with tobacco in syphilis.

C. fuma'lis. (L. *fumus*, smoke. G. *Räucherkerzen*.) Old term for candles made of odoriferous and resinous substances, to purify the air and excite the spirits. (Quincy.)

A pastile, according to Welcherus, *Antidot. Spec.* ii, 48, Schröderus, ii, 86.

C. hyoseyami. Hyoseyamus leaves, nitrate of potash, of each 4 parts, althaea root 1 part, water sufficient. To be burned as a pastile for the relief of asthma.

C. ioda'ta. Iodine 5 parts, nitrate of potash 35 parts, althaea root, and spirit of wine, to form a candle; each to contain 0.5 gm. of iodine. Used as an inhalation while burning.

C. medica'ta. (L. *medicatus*, healing.) A medicated bougie.

C. mercuria'lis. A candle made of wax and grey oxide of mercury, which, being lighted, is placed under a glass funnel with a curved neck, and so applied to the sore, or other part, to be treated.

Also, the same as *C. cinnabaris*.

C. opi. Powder of opium 5 parts, althaea root and nitrate of potash, of each 80 parts, water to make a candle; each to contain .25 gm. Used as an inhalation.

C. probato'ria. (L. *probo*, to try.) A bougie.

CANDELARIA—CANINANÆ RADIX.

C. regia. (L. *regius*, royal.) The black mullein, *Verbascum nigrum*.

Candalaria. (L. *candela*, a candle.) The *Verbascum nigrum*, from the resemblance of its stalk.

Can'di. (Candy.) The form of crystallised sugar called sugar candy.

Candication. (L. *candico*, to make white.) The act or process of becoming or making white.

Candidulous. (L. dim. of *candidus*, white. G. *Weisslich*.) Whitish.

Candidum ovi. (L. *candidus*, white; *ovum*, an egg.) The white of egg.

Candidus. (L. *candidus*. G. *glänzend weiss*.) Pure white.

Candisation. (Candy.) The dissolving of sugar in water and crystallising; candying.

Candle. (L. *candela*. F. *chandelle*; I. *candela*; G. *Licht*.) A rod-like mass of tallow, or other combustible material, with a wick in the centre. Used for illuminating purposes.

Also, applied to structures of the same shape.

C., medicated. A candle containing some drug for diffusion during burning. For the kinds see under *Candela*.

C., mercurial. See *Candela mercurialis*.

C. snuf. The charred wick of a candle. It has been recommended for the cure of ague.

C. tree. The *Parmentiera cerifera*.

Can'dieberry. The *Myrica cerifera*.

Can'dlenut tree. The *Aleurites triloba*.

Candolle', A. P. de. A Swiss botanist born at Geneva in 1778, and died there in 1841.

Candum. Candied sugar, or sugar candy. (Quincy.)

Candy. (Ar. *kand*, or *kandat*, sugar in crystals.) Sugar candy.

Candy car'rot. (*Candia*, Crete.) The *Daucus creticus*.

Candytuft, bitter. (*Candia*.) The *Iberis amara*.

Cane. (*Kávva*, a reed.) A stem of a reed or of a strong grass.

C., brim'stone. Sulphur in rolls.

C., dumb. The *Diospyros eschscholzi*.

C., Indian. The *Canna indica*.

C., storax tree. The *Styrax officinale*.

C., sugar. The *Saccharum officinarum*.

C. sugar. The sugar obtained from the sugar cane, *Saccharum officinarum*.

C., sugar, Chinese. The *Saccharum sinense*.

C., sweet. The *Acorus calamus*.

Canella. (L. dim. of *canna*, a reed; the pieces being rolled up like a reed.) A Genus of the Nat. Order *Canellaceæ*. Some authors refer it to Nat. Order *Meliaceæ*.

The Pharmacopœial name, U.S.A., of the bark of the *C. alba*.

C. al'ba, Murray. (L. *albus*, white.) White or laurel-leaved canella. The bark is officinal.

C. axilla'ris, Mart. (L. *axilla*, the armpit.) A species supplying an aromatic bark used in Brazil, and called *paratudo aromatico*.

C. bark. See *Canella alba cortex*.

C. caryophylla'ta. The bark of the *Eugenia caryophyllata*, or clove-berry tree.

C. cheiro. The *Oreodaphne opifera*.

C. cuba'na. The *Canella alba*.

C. javen'sis. The *Cinnamomum cassia*.

C. malabar'ica. The *Cinnamomum cassia*.

C. winter'na. The *C. alba*.

Canella'cese. A Nat. Order of thalamifloral Exogens having alternate leaves, unsymmetrical flowers, with contorted aestivation and horny albumen.

Canell'ice al'be cortex, B. Ph. (L. *albus*, white; *cortex*, bark. F. *cannelle blanche*; I. *canella bianca*; S. *canela blanca*; G. *Weisser Zimmt*, *Canell*.) The bark of the *Canella alba*. In quills, yellowish white within, more orange externally, of an odour like cloves, and a warm, pungent taste. Contains 9 per cent. of a reddish, fragrant, acrid, volatile oil, mannite, a bitter extract, resin, gum, starch, albumen, and saline matters, chiefly calcium carbonate. No tannic acid. An aromatic stimulant, and warm mild tonic. Used in the West Indies as a condiment and an antiscorbutic. Contained in *vinum rhei* and *pulv. aloes cum canella*, U.S. Ph.

C. malabar'ice cortex. (L. *cortex*, bark.) The bark of the *Cinnamomum cassia*, or wild cinnamon tree.

Canell'ic acid. A synonym of *Cinnamic acid*.

Canellifera malabar'ica. The *Cinnamomum cassia*.

Canell'in. A crystallisable material, similar to mannite, which is contained in the canella bark.

Canee'tica. (*Canea*, the modern capital of Crete.) The name by which *Aleppo evil* is known in Crete, in consequence of its having been first observed in Canea.

Canes'cent. (L. *canesco*, to become white. G. *weissgrau*, *gräulich*.) Hoary, greyish.

Canescentifus'cous. (L. *canesco*; *fuscus*, swarthy. G. *graubraun*.) Grey brown.

Canica'ceous. (L. *canis*, a dog.) Of, or belonging to, the dog.

Also (L. *canica*, a kind of bran), surfuraceous.

Canica'ceus panis. (L. *canica*; *panis*, bread.) Old term for bread made of canice, or coarse meal, because such meal was only fit for dogs' food.

Can'icæ. (L. *canis*, a dog; because only fit for their food.) An old name for coarse meal, in which the flour is much mixed with bran. (Quincy.)

Canic'ida. (L. *canis*, a dog; *cædo*, to kill.) An old name for *Aconitum*, because dogs were poisoned with it.

Canic'ula. (L. dim. *canis*, a dog. F. *canicule*; G. *Hundstern*.) A name for Sirius, or the dog-star, which was supposed to have a great influence on disease.

Canicula'ris. (*Canicula*.) Of, or belonging to, the dog-star. Applied to the *Dies caniculares*, or dog-days, the hottest days of the year, from July 24th to August 23rd, being the time that the sun rises with Sirius, which were supposed to produce rabies, and increase disease.

Canidæ. (L. *canis*, a dog; *idos*, likeness.) A Family of the Section *Digitigrada*, Order *Carnivora*. The dog family. Pointed muzzles, smooth tongues; non-retractile claws; fore feet with five toes, hind feet with four; six molar teeth in each side of upper jaw, occasionally seven, seven in lower; carnassial tooth with a large process.

Can'ina appeten'tia. (L. *caninus*, belonging to a dog; *appetentia*, desire.) A synonym of *Bulimia*.

Canina'næ rad'ix. A synonym of *Canina radix*.

CANINE—CANNA

Canine'. (L. *caninus*; *canis*, a dog. F. *canin*; G. *hündisch*.) Of, or belonging to, or of the nature of, a dog.

C. appetite. From the likeness to the mode of eating of a dog. Same as *Bulimia*.

C. em'inance. Same as *C. prominens*.

C. fos'sa. (L. *fossa*, a pit. F. *fosse canine*; G. *Oberkiefergrube*.) A depression on the external surface of the superior maxillary bone behind the canine prominence, and giving origin to the levator anguli oris and compressor nasi muscles.

C. hun'ger. So called from the imitation by the patient of the voracity of a dog. Same as *Bulimia*.

C. laugh. Because in the effecting this contortion of the face the canine muscles are much used. Same as *Risus sardonius*.

C. mad'ness. Same as *Hydrophobia*.

C. mus'cle. Because it is chiefly used in producing the facial change accompanying the snarling of a dog. The *Levator anguli oris*.

C. prom'inence. A vertical ridge on the anterior surface of the superior maxillary bone, caused by the fang of the canine tooth.

C. tooth. (F. *dent canin*; G. *Eckzahn*.) Cuspitate tooth, eye tooth. The first tooth behind the premaxillo-maxillary suture on each side of the upper jaw, and the corresponding teeth in the lower jaw of mammals. They exist in both the deciduous and the permanent dentition. In man they are larger and stronger than the incisors, with a central point or cusp. The fang is long, single, conical, and laterally compressed. In the carnivora and other animals the canine teeth are very large and strong.

Caninum ma'lum. (L. *caninus*; *ma-lum*, an apple.) Dog's apple. The fruit of the *Atropa mandragora*.

Caninus. (L. *caninus*.) Belonging to a dog.

C. mi'nor. (L. *minor*, less.) A name applied by Winslow to a few muscular fibres sometimes given off from the levator anguli oris or canine muscle to the musclicul incisivi.

C. mus'culus. The canine muscle. The *Levator anguli oris*.

C. ri'sus. The *Risus sardonius*.

C. sen'tis. (L. *sentis*, a thorn.) The *Rosa canina*.

C. spas'mus. (Σπασμός, a spasm.) Same as *C. risus*.

Caniram. (Arab.) The *Nux vomica*.

Caniram'num. A synonym of *Bru-cine*.

Caniru'bus. (L. *canis*, a dog; *rubus*, a bramble.) The *Rosa canina*.

Ca'nis. (L. *canis*. Gr. *κύων*; F. *chien*, *chienne*; G. *Hund*, *Hündinn*.) A dog or bitch. A Genus of the Family *Canidae*, Group *Cynoidea*, Order *Carnivora*.

Also, anciently used as a name for the frænum of the prepuce.

C. cere'brum. (L. *cerebrum*, brain.) Dog's brain. The *Antirrhinum*, from its seed-vessels resembling a dog's skull.

C. familia'ris. Linn. (L. *familiaris*, belonging to the family.) The domestic dog. The fat was, till the seventeenth century, included in the London Pharmacopœia. It was used in paralysis. The dung is *Album græcum*.

C. interfe'ctor. (L. *interfe'ctor*, a slayer.) The dog-killer; the *Veratrum sabadilla*.

C. lu'pus. Linn. (L. *lupus*, a wolf) The

wolf. The fat was used in joint and uterine diseases and the liver in hepatic affections.

C. mari'nus. (L. *marinus*, belonging to the sea.) The white shark, *Carcharias vul-garis*.

C. pon'ticus. (L. *ponticus*, Pontic, relating to the Black Sea.) A synonym of the beaver, *Castor fiber*.

C. vul'pes. The *Vulpes vulgaris*.

Canit'ies. (L. *canities*, hoariness, from *canus*, grey-haired. Gr. *πῶλια*; F. *canitie*; I. *canizie*, *canutezza*; S. *canicie*; G. *Grauworden*.) Greyness of the hair.

C. acqui'sita. (L. part. of *acquirere*, to acquire.) Greyness of the hair coming on in after life.

C. pre'matur'a. (L. *prematurus*, too early.) The loss of colour of the hair at an early period of life while in full vigour. The whole hair may become white or grey, or it may be ringed with colourless spots. Premature greyness is not always permanent. A deficient supply of pigment by the papilla is the cause of greyness. A sudden change in a few hours is not admitted by the best authorities.

C. seni'lis. (L. *senilis*, aged.) The greyness of the hair which occurs in persons of advanced life.

Can'ker. (Cancer.) A common name for disease in trees and plants, or rust in metals.

Also, gangrenous stomatitis.

C. of mouth. Gangrenous stomatitis.

C. rash. A term for sloughing sore throat.

C. rose. The *Papaver rhæas*, from its colour, and from its injuring corn land.

C., wa'ter. A term for gangrenous stomatitis.

Can'na. (Κάμμα, a reed. G. *Rohr*, *Schilf*.) A cane or reed. A Genus of the Nat. Order *Marantaceæ*.

The official name, U.S. Ph., of the *Tous les mois*.

Also, anciently applied to the tibia and fibula, from their likeness to a reed or pipe.

Also, the trachea.

Also, a synonym of *Cassia fistula*.

C. achi'ra. Gillics. One of the species supplying *Tous les mois*.

C. a'gr'ia. (L. *agrius*, wild.) Hab. South America. The juice has been employed in diabetes mellitus.

C. arrowroot. A synonym of *Tous les mois*.

C. auranti'aca. (Mod. L. *aurantiacus*, orange-coloured.) Tubers diuretic and diaphoretic.

C. bra'chil. (L. *brachium*, the arm.) A synonym of the *Ulna*.

C. coccin'ea. (L. *coccineus*, scarlet.) One of the species supplying *Tous les mois*.

C. dis'color. (L. *discolor*, having different colours.) A species supplying *Tous les mois*.

C. domes'tica cru'ris. (L. *domesticus*, familiar; *crus*, the leg.) A synonym of the *Tibia*.

C. edulis. Ker. (L. *edulis*, eatable.) Hab. Peru. One of the species supplying *Tous les mois*.

C. fis'tula. (L. *fistula*, a pipe.) The *Cassia fistula*.

C. glau'ca. (Γλαυκός, silvery.) One of the species supplying *Tous les mois*. The fresh tubers are said to be diuretic and diaphoretic.

CANNABENE—CANNSTATT.

C. guttaria. (L. *guttur*, the throat.) A synonym of the *Windpipe*.

C. indica. (Tam. *Kull-ealei-mannie*; Beng. *Surbo-jaya*; Mal. *Katoo-bala*; Tel. *Krishna-tamarah*.) Indian shot. Root acrid and stimulant. Used as a remedy for poisoned arrow wounds, and given by the natives to cattle when they have eaten poisons.

C. major. (L. *major*, greater.) A synonym of the *Tibia*.

C. minor. (L. *minor*, less.) A synonym of the *Fibula*.

C. solutiva. (L. *solto*, to relax.) The *Cassia fistula*.

C. speciosa. Roxb. (L. *speciosus*, handsome.) The rhizome is believed to be a kind of turmeric, called African turmeric.

C. starch. Same as *Tous les mois*.

Cannabene. $C_{18}H_{22}$. According to Personne, a volatile, colourless, strong-smelling liquid obtained from Indian hemp: it boils at $240^{\circ}C$. ($464^{\circ}F$.) According to Bohlig, it contains oxygen. This is believed to be the active principle.

C. hydride. $C_{18}H_{22}$. A compound which, according to Personne, along with cannabene, composes the volatile oil of Indian hemp.

Cannabin. (Κάναβις, hemp.) The resin of the extract of Indian hemp.

Cannabina. (Κάναβις, hemp.) A term for remedies containing Indian hemp, *Cannabis indica*.

C. aquatica. (L. *aquaticus*, living in water.) A synonym of *Eupatorium cannabinum*.

Cannabinaeae. (*Cannabis*.) An Order of monochlamydeous angiospermous Exogens, or a Family of the Order *Urticinae*. Rough stemmed herbs, with a watery juice. Ovary free, one-celled; ovule solitary, pendulous; embryo hooked, exalbuminous; radicle superior.

Cannabineae. Same as *Cannabinaeae*.

Cannabis. (Κάναβις.) A Genus of the Nat. Order *Cannabinaeae*.

C. americana. U.S. Ph. (F. *chanvre américain*; G. *Amerikanischer Hanf*.) The flowering tops of *Cannabis sativa*, cultivated in North America.

C. indica. B. Ph. (F. *chanvre indien*; G. *Indischer Hanf*.) Indian hemp. The dried flowering tops of the female plants of *C. sativa* grown in India. The official part is called in India Gunjah; the larger leaves and fruits, without the stalks, Bhang, Subjee, and Sidhee; and the concrete resinous exudation from the plant, Churru. In Arabia a preparation is called Hashish; in Western Africa, Diamba and Dakka; and under other names it is largely used as an intoxicant or narcotic in other parts of the tropics. *Cannabis indica* has a bitter taste and a peculiar odour; it contains a bitter substance, chlorophyll, a green resinous extractive, cannabine, a volatile oil, cannabene, gum, albumen, lignin, and salts. Indian hemp, when given in full doses, produces great exhilaration, intoxication, and stupor. It acts as an aphrodisiac, and increases the appetite. It produces sleep, relieves pain, relaxes spasm, and allays restlessness, without producing constipation or headache, but it is somewhat uncertain in its action on some persons. It is useful in neuralgia, migraine, dysmenorrhoea, and nervous restlessness and sleeplessness. It has been recommended in tetanus and hydrophobia.

C. sativa. Linn. (L. *sativus*, that which

is sown. F. *chanvre cultivé*; I. *canapa*; S. *canamo*; G. *Hanf*.) Hemp. A native of Persia. Supplies hemp-fibre and hempseed. See *Fructus cannabis* and *Oilum cannabis*.

C. sativa, var. indica. This variety, which supplies the drug known as Indian hemp, appears to differ from the common hemp only in that it contains a larger quantity of the resin, in consequence of being grown in a hot climate. Hemp grown in the hotter parts of the United States furnishes the drug of a fairly active character.

C. semen. Belg. Ph. (L. *semen*, seed.) The seeds of hemp, *C. sativa*. See *Fructus cannabis*.

Can'nabum. (L. *cannabum*.) Hemp.

C. arracanicum. Arracan hemp, or *Jute*.

C. corchoricum. (*Corchorus*.) A synonym of *Jute*.

Canna'cese. (*Canna*.) A synonym of *Marantaceae*.

Cannac'orus radi'ce cro'cea. (L. *canna*, a reed; *acorus*, the sweet flag; *radix*, a root; *croceus*, saffron-coloured.) The *Curcuma longa*.

Can'næ. Jussieu's term for the combined Orders *Zingiberaceae* and *Marantaceae*.

Can'næ. (*Canna*.) A synonym of *Marantaceae*.

Can'nel. (L. *canna*, a reed.) The *Cinnamomum zeylanicum*.

C. bone. The clavicle.

C. wa'ter. Cinnamon water.

Can'nel coal. A hard, dull, black variety of coal, breaking with a conchoidal fracture, and obtaining the name from its burning with flame like a candle. Formerly used as a vermicide and a destroyer of ectozoa.

Can'nelate. (L. *canna*, a reed. F. *cannelé*; G. *röhrenförmig*.) Reed-shaped, tubular.

Also (from *canneler*, to groove), furrowed, channelled, grooved.

Can'nelated. Same as *Cannellate*.

C. bodies. (F. *corps cannelés*.) The corpora striata of the brain.

Cannes. France; Département des Alpes-Maritimes. Well-situated at the extremity of the Bay of Napoule, twenty-one miles from Nice. It is protected on the north and west by the Maritime Alps and the Estrelles, but less completely on the east. The hotels and lodging-houses are comfortable. The climate is very equable; and the rainfall not extreme. The mistral is less severe than at many other winter resorts. The mean temperature of spring is $10^{\circ}C$. ($50^{\circ}F$.), of summer $22^{\circ}C$. ($71.6^{\circ}F$.), of autumn $13^{\circ}C$. ($55.4^{\circ}F$.), and of winter $10^{\circ}C$. ($50^{\circ}F$.) Number of rainy days in the year 52, rainfall 25 inches. Its climate is less irritating and more equable than that of Nice; less damp than Pau. The early stages of phthisis, scrofulous diseases, relaxed conditions of bronchial mucous membrane, and general nervous debility constitute the class of cases which may be expected to obtain benefit at Cannes.

Can'net, Le. France; near to Cannes. A well-protected winter place for phthisical and rheumatic invalids.

Can'non-ball tree. The *Conrouspita guianensis*.

Can'non-bone. See *Canon-bone*.

Cannstatt. Würtemberg, on the Neckar,

CANNULA—CANTHARIDES.

three miles from Stuttgart, 700 feet above sea level. Many saline chalybeate springs are found here, of a temperature about 19° C. (66.2° F.) They contain sodium chloride, calcium and iron carbonate, sodium, magnesium and calcium sulphate, with much carbonic acid. They are used in chronic mucous catarrh, especially of the intestinal and genito-urinary mucous membrane, and in some cases of anemia and chlorosis.

Can'nula. (L. dim. *canna*, a reed. *Σύριγξ*; F. *canule*; I. *cannello*; G. *Röhre*, *Böhrlein*.) A tubular instrument introduced by means of a stilette, to which it forms a sheath, into a cavity or tumour, in order that, on removing the stilette, any fluid present may be allowed to pass through it. The sheath of a trocar.

C. of Belloc. Same as *Belloc's sound*.

C. of Reybard. See *Reybard's cannula*.

Can'nule pulmo'nium. (L. *cannula*, a small reed; *pulmo*, the lung.) The bronchial tubes.

Can'nulate. (*Cannula*. G. *rohrartig*, *schilfförmig*.) Tubular.

Can'on-bone. (Κανόν, a straight rod.) The third and only metacarpal bone of the horse, having on each side the rudimentary second and fourth metacarpals, the splint bones.

Canopite. Term used by Celsus, vi. 6, § 26, for a collyrium made of cadmia, oxide of copper, aromatics, &c.

Canopum. (Κάνωνος, the elder flower.) Term, by Paulus Aegineta, Adams's Transl. vol. iii. b. vii. z. 3, p. 156, for the flower or bark of the *Sambucus nigra*, or elder tree.

Can'or stethoscopicus. (L. *canor*, melody; *stethoscopic*.) A term for metallic tinkling.

Can'orous. (L. *canor*. G. *klangreich*, *wohlklingend*.) Having a singing or ringing sound.

Also, having a voice more or less harmonious.

Can'o-tomento'sus. (L. *canus*, grey; *tomentosus*, from *tomentum*, a stuffing for cushions. G. *grauflzig*.) Having a grey downy or velvety surface.

Can'o-viridis. (L. *canus*; *viridis*, green. G. *graugrün*.) Of a greyish-green colour.

Can'quin. A French surgeon of the first half of the nineteenth century.

C's antimo'nial paste. Antimony chloride 3 parts, zinc chloride 6, flour 16, mixed into a paste with a little water. Used to destroy cancerous tumours.

C's paste. Equal parts of zinc chloride and flour. The zinc chloride is dissolved in water, and the flour added to form a paste. Used in the treatment of cancerous ulcers, either superficial or dried, and introduced into the tumour as small rods, crayons caustiques.

Cansco'ra. A Genus of the Nat. Order *Gentianaceæ*.

C. decussa'ta. R. and Sc. (L. *decusso*, to divide crosswise.) Hab. India. A laxative, alterative, tonic, and nervine. Used in insanity and epilepsy.

Cantabrica. (*Cantabri*, a people of Spain, in whose country it was first discovered.) A plant which some have thought to be a *Dianthus*, others a *Campanula*, but most generally it is supposed to have been the *Convolvulus cantabrica* of Linnaeus.

Cantabrum. (Latin.) Bran, or very coarse bread.

Can'tacon. Name for the *Crocus sativus*. (Ruland.)

Cantarell'a a'qua. See *Aloes toffana*.

Cantarell'us. The *Melos procerabamus*.

Can'tel. The vertex of the skull.

Can'terbury. Kent. A sulphurous and chalybeate spring was formerly in use here.

C. bells. The *Campanula medium* and the *C. trachelium*.

Can'tering. (Eng. *canter*, an easy gallop; from Canterbury pilgrims and their ambling pace.) Going as a horse in an easy gallop.

C. ac'tion. Same as *Bruit de galop*.

Can'ter'ium. (Καντίριον.) Term used by Hippocrates, *de Artic. t.* 20, for a rail or spar between two upright posts or pillars, employed as a lever in dislocations.

Cantharel'lus. (A diminutive of *κύβητος*, a cup. F. *chanterelle*.) A Genus of the Family *Agaricini*, Suborder *Hymenomyces*, Order *Basidiomycetes*.

C. auranti'acus. Fr. (Mod. L. *aurantiacus*, orange-coloured. F. *chanterelle fausse*; G. *falscher Bierschwamm*.) False chanterelle. Stem stuffed, often amber-coloured at base; pileus fleshy, tomentose; gills crowded, moderately slender, darker than pileus; colour orange yellow. In fir woods and heaths. Not good to eat, but doubtfully poisonous.

C. cibari'us. Fr. (L. *cibarius*, fit for food. F. *girols ordinaire*, *jaunelet*, *chevette*; G. *Bierschwamm*, *Pfifferling*, *Gelbmännel*.) Edible chanterelle. Stem solid, ringless, thickening as it rises; pileus fleshy, smooth; gills thick, distant; colour yellow; odour pleasant, as of apricots or iris root. Found in woods. Esculent, and very good in flavour.

Can'thari figuli'ni. (L. *cantharus*, a pot; *figulinus*, belonging to a potter.) Old term for earthen cucurbits.

Canthari'asis. (Κάνθαρος, a kind of beetle.) A term applied to the condition in which the larvæ of *Coleoptera* develop in the animal body.

Cantharic acid. A substance having the same composition as cantharidin, and formed by heating the latter body with hydriodic acid. It is monobasic, soluble in water, slightly soluble in ether, and when dissolved in glycerin is non-vesicant.

Canthar'idal. (Κανθαρίς, the blistering beetle.) Made with, or containing, cantharides.

C. collo'dion. See *Colloidion cum cantharide*.

Cantharidate of pot'ash. (G. *Cantharidenlaures Kali*.) A salt of cantharidin and potash, slightly soluble in water. Used in a glycerin solution spread on linen as a vesicant.

Canthar'idated. (Κανθαρίς.) Containing cantharides.

Cantharides. (Κανθαρίς. F. *cantharide*; I. *cantarelle*; S. *cantarida*; G. *Kantheride*, *Spanische Fliegen*.) The Pharmacopœial name of the dried beetle, *Cantharis vesicatoria*. They are of the form and colour of the living insect, with a disagreeable odour and acrid burning taste; the powder is greyish brown, containing shining green fragments of the elytra and limbs; it soon decomposes when moist. Cantharides contain a green oil, soluble in water, insoluble in alcohol, and non-vesicant; a black matter, soluble in water, insoluble in alcohol, and inert; a yellow, viscid matter, soluble in water and alcohol, and

CANTHARIDIC ACID—CANTHOPLASTY.

non-vesicant; cantharidin; a fatty matter, insoluble in alcohol; calcium and magnesium phosphates; acetic acid, in the fresh insect, uric acids; and a volatile principle, on which the foetid odour of the beetle depends. Adulterated with other insects and with euphorbium. In moderate doses diuretic and stimulant to genito-urinary organs; in large doses a poisonous irritant. Used in gleet and leucorrhœa, in seminal weakness, in incontinence of urine, in amenorrhœa, in asthenic dropsy, and in scaly diseases of the skin. Externally as a rubefacient and vesicant. Dose, tinct. canthar. 5–20 minims.

C. camphor. A synonym of *Cantharidin*.

C. poisoning. Mouth and throat hot and irritable; epigastric pain gradually becoming abdominal; vomiting of mucus, often bloody; tenesmus; stranguy, bloody urine, painful priapism, hard breathing, quick pulse, coma, sometimes tetanus, convulsions. Recovery, when it occurs, is always slow. Affected organs are all intensely inflamed or gangrenous. Fatal doses have been 24 grains of the powder, 1 oz. of the tincture. Vomiting should be promoted and diluents used, opium suppositories and the warm bath. Particles of green elytra should be looked for, and a chloroform solution of contents of stomach tried as a vesicant.

Cantharid'ic acid. $C_{10}H_{14}O_5$. A development of cantharidin by the absorption of one equivalent of water. It forms salts, and in this condition is by some supposed to be the form in which cantharidin exists in the beetle.

Cantharidin. (F. *cantharidine*; I. *cantharidina*; S. *cantaridino*; G. *Kantharidin*.) $C_{10}H_{14}O_5$. The vesicating principle of cantharides. It is in white, micaceous plates, or four-sided prisms; insoluble in water, soluble in hot alcohol and ether. It is volatile, fuses at 210° C. (410° F.), and sublimes in acicular crystals at a lower temperature.

Cantharidin'ic acid. (G. *Cantharidinsäure*.) Same as *Cantharidin*.

Cantharidin'um. Same as *Cantharidin*.

C. oleosum. Same as *Oleum cantharidinum*.

Canthar'idism. (Κανθάρ'ισ.) The symptoms of *Cantharides poisoning*.

Cantharis. (Κανθάρ'ις, a blistering beetle.) A Genus of the Family *Trachelida*, Section *Heteromera*, Order *Coleoptera*. Head with strong central furrow; head and thorax with fine scattered punctures; elytra punctured closely in wrinkles. All the following species possess blistering powers.

C. senecæ. (L. *ancus*, of bronze.) A native of Pennsylvania.

C. al'ida. (L. *albidus*, whitish.) A large species found near the Rocky Mountains, America.

C. azellæ'na. A native of the Southern States of America.

C. atoma'ria. (L. *atomus*, undivided.) A native of Brazil.

C. atra'ta. Latr. (L. *atratus*, clothed in black.) The black cantharis. Black; 4"–5" long; feeds on aster and solidago. Found in the northern and middle parts of the United States and in Barbary.

C. cinere'a. Latr. (L. *cinereus*, ash-coloured.) The ash-coloured cantharis. Length 6"; elytra and body black, covered and hidden

by an ash-coloured pubescence; antennæ black. Feeds on the potato plant. Inhabits the northern and middle parts of the United States.

C. g'igas. (L. *gigas*, a giant.) Found in India.

C. margina'ta. Latr. (L. *marginatus*, bordered.) Elytra black, with ash-coloured suture and margin; head, thorax, and abdomen black, nearly covered with an ash-coloured pubescence. Feeds on clematis. Inhabits the United States and the Cape of Good Hope.

C. melo'na. (Mél'as, black.) Found in California.

C. mutal'lis. Head deep green, with a red frontal spot; thorax golden green; elytra golden purple, rugose; thighs purplish, tarsi black. Found in the plains of the Missouri.

C. poli'ta. (L. *politus*, refined.) Found in southern part of the United States.

C. ru'ficeps. (L. *rufus*, red; *caput*, the head.) Found in Sumatra and Java.

C. syri'aca. (L. *syriacus*, Syrian.) Found in Arabia.

C. vesicato'ria. Latr. (L. *vesica*, a blister.) The official cantharis. Length 6"–10"; head large, subcordate, with a longitudinal furrow, which is short and quadrilateral; thorax and body covered with greyish hairs; elytra long, flexible, golden green; antennæ black, long, filiform; legs violet. Inhabits France, Spain, Italy, Germany, South Russia and Western Asia. Feeds on many trees, as ash, poplar, privet, lilac. When caught they are plunged into diluted vinegar, then exposed to the vapour of heated vinegar, and afterwards dried.

C. viola'cea. (L. *violaceus*, violet-colour.) Found in India.

C. vitta'ta. Latr. (L. *vittatus*, having a fillet or chaplet.) The potato fly. Length 4"; head light red, with dark spots; antennæ black; thorax black, with three yellow lines; elytra with a yellow margin and central line; abdomen and legs black, covered with a cinereous pubescence. Feeds on the potato plant. Inhabits the middle and southern parts of the United States. At one time it was official in the United States.

C. vulne'ra. (L. *vulnus*, a wound.) Found in California.

Canthec'tomy. (Κανθός, the angle of the eye; ἐκτομή, a cutting-out. G. *Augenwinkelaußschnitt*.) Excision or incision of either canthus of the eye.

Canther'ius. See *Canterium*.

Canthi'tis. (Κανθός, the angle of the eye. F. *canthite*.) Inflammation of one or both canthi.

Canth'ium. A Genus of the Nat. Order *Cinchonaceæ*.

C. corona'tum. (L. *corona*, a crown.) The *Randia dumetorum*.

C. parviflo'rum. Lamb. (L. *parvus*, small; *flos*, a flower.) Hab. India. Used in dysentery and as an anthelmintic.

Canthoplas'tic. (Κανθός, the angle of the eye; πλάσσω, to form.) Of, or belonging to, the operation of canthoplasty.

Canthoplasty. (Κανθός, the angle of the eye; πλάσσω, to form.) An operation for increasing the palpebral aperture when too small, as in chronic entropium. The outer canthus may be cut by a bistoury or by scissors, and the skin and conjunctival portion of the incision united by suture. In some instances a portion of

CANTHORRAPHY—CAPE.

conjunctiva, either of man or of an animal, has been inserted into the wound.

Canthorraphy. (*Κανθός*; *παρά*, a seam.) The operation for reducing the size of the opening of the eyelids by putting a suture in the angle of the lids.

Canthum. Same as *Candum*.

Canthus. (*Κανθός*, the angle of the eye. *F. canthus*; *I. angulo dell' ochio*; *G. Augenwinkel*.) The angles formed by the junction of the eyelids.

C., external. The outer canthus.

C., greater. The inner canthus.

C., inner. The angle formed by the junction of the eyelids by the side of the nose. It contains the plica semilunaris and the caruncula lachrymalis.

C., internal. The inner canthus.

C., lesser. The outer canthus.

C., nasal. (*L. nasus*, the nose.) The inner canthus.

C., outer. The angle formed by the junction of the eyelids furthest from the nose. It is more acute than the inner.

C., temporal. (*L. tempora*, the temples.) The outer canthus.

Cantianus pulvis. Lady Kent's powder. Name for a cordial, in former high repute, composed of crabs' claws, prepared pearls, red coral, oriental bezoar.

Cantion. Old name for *Saccharum*, or sugar.

Can'ton's phosphorus. Composed of three parts of calcined oyster shells with one of flowers of sulphur, subjected to a strong heat for an hour in a covered crucible; the product is luminous in the dark.

Cantores. (*L. canto*, to sing.) A synonym of *Paseres*.

Can'ula. A misspelling of *Cannula*.

Canus. (*Kais*, to burn; because of the colour of ashes. *G. Aschgrau*.) A hoary grey colour.

Caoutchin. $C_{10}H_{16}$. One of the constituents of caoutchouc, boiling at $171^{\circ} C.$ ($339^{\circ} F.$)

Caoutchouc. (*F. caoutchouc*, from the Caribbean, *gomme elastique*; *I. gomma elastica*; *S. goma elastica*; *G. Kaoutschouk*, *Federharz*.) The concrete milky juice of different species of *Siphonia*, especially *S. elastica*, imported chiefly from Brazil, and of *Ficus elastica*, from India. Many plants of the Nat. Orders *Apocynaceae*, *Artocarpaceae*, and *Euphorbiaceae*, yield a similar product. It is a mixture of several hydrocarbons, isomeric or polymeric, with turpentine oil. It is insoluble in water and alcohol, soluble in ether, chloroform, petroleum, benzine, turpentine, and most oils. Its chief characteristic is elasticity, which it loses after melting at a little above $100^{\circ} C.$ ($212^{\circ} F.$) It is miscible with sulphur, when it retains its elasticity at much lower temperatures, and for a longer period, than pure caoutchouc. When mixed with half its weight of sulphur, heated, and subjected to pressure, it forms the hard material called vulcanite. Caoutchouc, in one form or other, is used in the formation of flexible tubes, for catheters, pessaries, stethoscopes, plates for artificial teeth, and other surgical appliances. It forms, when applied in solution, an impervious backing to leather for fontanements or plasters, and on a felted fabric it forms spongio-piline. The fresh juice, to which some ammonia has been added to prevent solidi-

fication, has been used as a local application in erysipelas and burns, and a solution of caoutchouc in chloroform is applied to the same purpose. It has also been given in phthisis, in doses of two grains, gradually increased.

C., artificial. Tungstic acid, or sodium tungstate, added to a solution of glue, and then hydrochloric acid, produces this substance, which is elastic when warm.

C., mineral. An undetermined substance covering large tracts of ground in Australia.

C., vulcanised. (*L. Vulcanus*, the fire god.) Caoutchouc subjected to the action of melted sulphur or a bisulphide. It becomes black and horny, and retains its elasticity when exposed to cold and heat. The process is called vulcanisation, and if it is continued for some time at a high temperature the caoutchouc becomes hard, and is called *Vulcanite*.

Caoutchouc'cin. A thin, volatile, oily liquid, of naphtha-like odour, obtained by destructive distillation of caoutchouc. It is composed of two polymeric hydrocarbons, *Caoutchicin* and *Isoprene*.

Cap. (*Low L. cappa*, a hooded cloak, from *caput*, the head; or *capio*, to receive.) A cover.

In Dentistry, used to denote a small somewhat concave piece of gold, ivory, or other substance used to cover over an opening into the pulp cavity of a carious tooth prior to filling the tooth; its purpose is to prevent pressure on the pulp.

Also, in Botany, the pileus of agarics.

Capacity. (*L. capacitas*, capability of holding much, from *capax*, roomy. *F. capacité*; *I. capacità*; *G. Räumigkeit*, *Rauminhalt*.) The power of containing.

C., breathing. Same as *C., vital*.

C., electrical. See *Electrical capacity*.

C. for caloric. (*L. calor*, heat.) Same as *Heat, specific*.

C., lung. Used in the same sense as *C., vital*.

C., mental. (*L. mens*, a mind.) The faculty or ability of the mind.

C. of saturation. (*L. saturio*, to fill.) The whole number of the combining units of an atom.

C., physical. (*Φυσική*, natural.) The amount of room in a place.

Also, the power of the body, or of an organ, to endure or perform work.

C., pulmon'ic. (*L. pulmo*, a lung.) Used in the same sense as *C., vital*.

C., respiratory. (*L. respiro*, to breathe back.) Same as *C., vital*.

C., specific inductive. See *Inductive capacity, specific*.

C., testamentary. (*L. testamentum*, a will.) The mental competency of a person to make a will.

C., thoracic. (*Θώραξ*, the chest.) Same as *C., vital*.

C., vital. (*L. vita*, life.) The measure, obtained by the spirometer, of the amount of air which can be expelled from the lungs by the deepest possible expiration after the deepest possible inspiration. It averages 3000—4000 c.c. (200—250 cubic inches).

Capa'iba. Same as *Copaiba*.

Capa'isakka. The pine-apple, *Ananassa sativa*.

Cape. The Cape of Good Hope.

C. al'ces. See *Aloes, Cape*.

CAPE COAST CASTLE—CAPILLIGULUS.

C. bad'ger. The *Hyrax capensis*. It furnishes *Hyraceum*.

C. Colony. A British colony occupying the southernmost part of Africa. There are several military stations, all of which are healthy. Rheumatism and heart disease are common. There is no malaria.

C. gum. The produce of *Acacia karroo* and *A. horrida*.

C. saffron. The substance known under this name consists usually of the florets of *Carthamus tinctorius*, and sometimes of the corolla of *Lyperia crocea*.

C. sa'lip. The *Homeria collina*.

C. wine. Wine made in the Cape Colony. The varieties are highly branded, and are now little used in England.

Cape Coast Castle. West coast of Africa; in Upper Guinea. It is a military station for black troops. It is the healthiest of the West coast stations; dysentery is common among the whites; phthisis, pneumonia, and bronchitis among the black troops; and dracunculosis among all.

Capellina. Same as *Bandage*, *capelline*.

Capella. Same as *Cupel*.

Cap'per. (F. *cápre*, from L. *capparis*, from Gr. *κάπρις*, from Pers. *kabar*. I. *cappero*; G. *Kaper*.) The bud or unexpanded flower of the *Capparis spinosa*. Used as a pickle, and esteemed as antiscorbutic.

C. bean. The *Zygophyllum fabago*.

C. bush. The *Euphorbia lathyrus*.

C. plant. The *Capparis spinosa*.

Also, the *Euphorbia lathyrus*.

C. spurge. The *Euphorbia lathyrus*.

C. tree. The *Capparis spinosa*.

Caphop'orite. A synonym of *Rhein*, which itself is chrysophanic acid.

Caph'ora. Same as *Camphora*.

Caph'ura. Camphor.

Capilla'ceous. (L. *capillaceus*, from *capillus*, a hair. F. *capillacé*; G. *haarfein*, *haarig*.) Hair-like in dimension; also, hair-like in appearance.

Capillaire. (F. from *capillus*, a hair.) A name given to several ferns of different species, the fronds of which are used in medicine; such are *Adiantum pedatum* and *A. capillus-veneris*, *Asplenium adiantum nigrum* and *A. trichomanes*, *Ceterach officinarum*, and others. The name was originally given to *Adiantum capillus-veneris*, and, according to some, was derived from the slenderness and hair-like appearance of its frond stalks; according to others, because it was used to prevent baldness.

Capillament. (L. *capillamentum*, from *capillus*, a hair. G. *haarduune Fiber*.) A very fine fibre.

Also, a hairy covering.

Capillaries. (L. *capillaris*, hair-like; from *capillus*, a hair. F. *caisseaux capillaires*; G. *Kapillaren*, *Haargefäße*.) The fine network of vessels connecting the arterial and venous systems; discovered by Malpighi in 1661. They are of nearly uniform size, from 1-3500th to 1-2000th of an inch in diameter; the smallest are found in the brain and intestinal mucous membrane, the largest in the skin; the meshes of the network vary in size, being smallest in the lungs, skin, glands, and grey matter of the brain, largest in ligaments and tendons. The wall of the capillaries is a layer of cells continuous with the epithelial lining of the arteries and veins. The

cells are united to each other at their edges, flat, long, and nucleated; when a capillary gives off branches, offshoots of the cells at the point of junction run into the diverging vessels. The existence of openings in the walls, stomata, is still unsettled, as well as the question of their contractility.

C., biliary. (L. *bilis*, bile. F. *canaliculi biliaires*; G. *Gallenkanalchen*.) The intercellular passages in the liver which form the commencement of the biliary ducts.

Capillarimeter. (L. *capillus*; *μέτρον*, a measure.) An instrument for determining the alcoholic strength of wines, based on the fact that alcohol prevents the rise of water in capillary tubes in proportion to its amount.

Capillarity. (L. *capillus*, a hair. F. *capillarité*; I. *capillarità*; S. *capillarität*; G. *Capillarität*, *Haarröhrchenkraft*.) The series of phenomena which are observed when capillary tubes are placed in a liquid, and which are dependent on the attraction between the walls of the tube and the molecules of the liquid, and on the mutual attraction of these latter towards each other. The phenomena observed when a solid is placed in or upon a liquid are of the same nature.

Capillary. (L. *capillaris*, like a hair. F. *capillaire*; I. *capillare*; S. *capilar*; G. *haarfein*.) Hair-like; having the fineness of a hair.

C. attrac'tion. Same as *Capillarity*. Also, the force which produces the phenomena of capillarity.

C. blood-ves'sel. Same as *Capillaries*.

C. bronchitis. See *Bronchitis*, *capillary*.

C. circula'tion. The circulation of blood in the *Capillaries*.

C. emb'olism. See *Embolism*, *capillary*.

C. fiss'ure. A fracture of a bone as fine as a hair.

C. frac'ture. See *Fracture*, *capillary*.

C. hæm'orrhage. Bleeding from a surface and not from a distinct vessel. Supposed to come from the capillaries.

C. lymphatics. The vessels forming the plexiform origin of lymphatics.

C. næ'vus. See *Nævus*, *capillary*.

C. phenom'ena. Same as *Capillarity*.

C. pulse. (G. *Capillarpuls*.) A beating, synchronous with the systole of the heart, which may either exist naturally, or may be made to appear on slight pressure, as of the finger-nails.

C. sys'tem. The system of blood-channels lying between the ultimate arteries and veins; the *Capillaries*.

Also, by some, applied to the hairy structures of the body.

C. thrombo'sis. See *Thrombosis*, *capillary*.

C. tubes. Tubes of a hair-like fineness, which exhibit the phenomena of *Capillarity*.

C. ves'sels. The *Capillaries*.

Capillate. (L. *capillus*, a hair. G. *behaart*, *faserig*.) Covered with hair; also, having the fineness of a hair.

Capilla'tio. (L. *capillus*, a hair.) Old term for a capillary fracture of the cranium. A fracture as fine as hair.

Capilli veneris her'ba. Belg. Ph. (L. *herba*, a herb.) The plant *Adiantum capillus-veneris*.

Capillig'ulus. (L. dim. *capillus*, a hair.)

CAPILLIFOLIUS—CAPITULUM.

Arterial and venous radicles described as carrying on a circulation, forming a diverticulum of the general circulation, and pervading, more minutely than the capillaries, the ultimate elements of every organ. An erroneous idea.

Capillifolius. (L. *capillus*; *folium*, a leaf.) Having hair-like leaves, as the *Polygala capillifolia*.

Capilliform. (L. *capillus*; *forma*, likeness. F. *capilliforme*; G. *haarformig*.) Having the form or appearance of hair, or of a hairy covering.

Capillitium. (L. *capillitium*, the hair. G. *Haupthaar*.) The hair of the head.

Also (G. *Haargewebe*), any hairy covering or tissue.

Also (G. *Haargeflecht*), a filamentous network formed along with conidia in some of the sporangia of Myxomycetes.

Also, a synonym of entropion.

C. intricatum. (L. *intrico*, to entangle. G. *Wichselkopf*.) A synonym of *Plica polonica*.

Capillorum defluvium. (L. *capillus*, a hair; *defluvium*, a falling off.) Baldness.

Capillose. (L. *capillus*. G. *haarig*, be-haired.) Covered with hair or down.

Capillus. (L. as if *capitis pilus*, from *caput*, the head; *pilus*, hair.) The hair, particularly on the top of the head. Different names are given to the hair as it exists on particular parts: as on the head generally, *Capillitium*; on the top of the head, *Capillus*; on the back of the head, *Crinia*; on the temples, *Circinnus*; on the eyelids, *Cilium*; on the eyebrows, *Supercilium*; in the nostrils, *Vibrissae*; on the chin, *Barba*; on the middle of the chin, *Pappus*; under the chin, *Hypeme*; on the upper lip, *Mystax*; on the body, *Pilus*; under the armpits, *Grandebrala*.

C. ven'oris. See *Adiantum capillus-ven'oris*.

C. ven'oris canadensis. The *Adiantum pedatum*.

Capitlenium. (L. *caput*, the head; *plenum*, full.) A barbarous term, used by Schneiderus, de *Catarrho*, i, 3, for a species of catarrh; also, for a peculiar heaviness or disorder of the head.

Capistratio. (L. *capistrum*, a bridle.) An old term for phymosis, because the prepuce seemed fixed as if by a bridle.

Capistrum. (L. *capistrum*, a halter, from *capio*, to hold.) A bridle. Old term for trismus or lock-jaw.

Name used by Galen, de *Fasciis*, for a bandage used in fractures or injuries of the lower jaw.

Also (G. *Halfterbinde*; F. *capistre*, *capeline*), a term for bandages for the head, such as the capeline and the chevestre.

Also, the frænum of the prepuce.

C. au'ri. (L. *aurum*, gold.) Borax; because it is used in soldering gold. (Ruland.)

Capita papaveris. (L. *caput*, a head.) A synonym of *Fructus papaveris*, G. Ph.

Capital. (L. *caput*, the head.) Of, or belonging to, the head.

Applied, by way of eminence, to the more important operations.

Applied as a name for the head or upper part of an alembic.

Capitalia medicamentata. (L. *capital*, a thing pertaining to the head; *medicamentum*, a drug.) Medicines for affections of the head.

Capitate. (L. *caput*, the head. F. *capité*;

G. *beknopft*, *köpfig*, *kopftragend*.) Having a head or heads; growing in heads.

Capitellum. A lividium or the lees of soap, *Parvus*, *Chir.* xxv, 32, *Fallopius*, de *Caust.* tom. i, c. v, p. 637; also, soapy water, according to Johnson.

Capitellate. (L. *capitulum*, dim. of *caput*, a head. G. *kleinköpfig*.) Having a rounded termination like a small head.

Also, similar to *Capitulate*.

Capitellum. (L. dim. *caput*.) A small head. The rounded eminence on the external surface of the lower end of the humerus for articulation with the radius.

Also, the apothecia of mosses.

Also, an alembic.

Capitulum. (L. *caput*; *lava*, to wash. F. *capitulus*; G. *Kopfbad*.) A lotion or a bath to be applied to the head.

Capitulenium. See *Capiplenium*.

Capiturgula. See *Capiturgium*.

Capitiraha. (L. *caput*, the head; *traho*, to draw.) An instrument, of the character of the midwifery forceps, for extracting an impacted foetal head from the pelvis.

Capitium. (L. *capitium*, a cover for the head. G. *Kopfbinde*.) A bandage for the head.

C. magnum. (L. *magnus*, great.) An appliance in former use; the great head-bandage. (Quincy.)

C. magnum quadrangulare. (L. *magnus*, great; *quadrangulus*, four-sided.) A handkerchief, about one yard square, is so folded that the long border of the upper half lies about 10 cm. behind the long border of the lower half. An oblong is thus produced, which is so placed on the head of the patient that the centre of the handkerchief covers the sagittal suture, whilst the free border of the lower fold hangs down to the tip of the nose, and the border of the upper fold to the eyebrows; the upper, or outer, of the two borders is tied beneath the chin, the lower, or inner, is tied behind the head.

C. quadrangulare. (L. *quadrangulus*, four-cornered.) A capitium in which a square or oblong piece of material is used. See *C. magnum quadrangulare*.

C. triangulare. (L. *triangulus*, three-cornered.) A head bandage made of a three-cornered piece of material, as Esmarch's bandage.

Capitones. (L. *capito*, one who has a large head, from *caput*, the head.) Foetuses which have so large a head as to render their birth difficult.

Capitose. (L. *capito*. G. *grossköpfig*, *dickköpfig*.) Having a large head.

Also (G. *störriisch*), obstinate, headstrong.

Capitular. Same as *Capitulate*.

C. process. The lower or ventral transverse process of the dorsal vertebrae in certain Vertebrata, the articulation of the head of a rib. Also called *Parapophysis*.

Capitulate. (L. *capitulum*, a small head. F. *capitulé*; G. *kleinköpfig*.) Having a capitulum, or a little head.

Capituliform. (L. *capitulum*; *forma*, likeness. F. *capituliforme*; G. *köpfchenformig*.) Having the appearance of a small head.

Capitulum. (L. *capitulum*, dim. *caput*, the head. F. *capitulé*; S. *capitolo*; G. *Köpfchen*.) A little head or knob.

A protuberance of bone received into a hollow portion of another bone.

CAPIVI OIL—CAPRA.

Also, the body of a lepatoid Cirripede, from its being on a peduncle.

Also, the terminal lip of the haustellum of some insects.

Also (*F. capitule*; *G. Köpfchen*), a form of racemose inflorescence with shortened, globular, orbicular or cup-shaped axis, and sessile flowers.

Also, the rounded extremity of the antheridium of some plants.

The stalked, globular-headed apothecia of certain lichens.

An alembic, or moor's head.

C. arytenoidæum. (*Ἀρύταινα*, a ewer; *idos*, likeness.) The cartilage of Santorini, because it is attached to the upper part of the arytenoid cartilage.

C. costæ. (*L. costa*, a rib.) The head of a rib.

C. laryngis. (*Ἀδρυγξ*, the larynx.) The cartilages of Santorini, because they are situated at the top of the larynx.

C. martis. (*L. Mars*, the god of war.) The *Eryngium campestre*.

C. Santorini. The same as *Santorini*, cartilage of.

Capivi oil. Copaiba balsam.

Capnelæum. (*Καπνός*, smoke; *ἔλαιον*, oil.) Old term (*Gr. πύστανθος*) for a liquid species of resin, mentioned by Galen, *de C. M. sec. Loc.* ii, 13, and Poesius, in *Ec. p.* 305, because it gives off smoke when heated.

Capnisma. (*Κάπνισμα*, an offering of smoke.) Fumigation.

Capnita. A kind of gem, according to Pliny.

Capnitis. Old term for an uncertain herb.

Also, a fine species of *Cadmia*.

Capnium. Same as *Capnos*.

Capnoides cava. (*Καπνός*, smoke; *idos*, likeness; *L. cavus*, hollow.) The *Fumaria bulbosa*.

Capnomor. (*Καπνός*, smoke; *μοῖρα*, a part.) A colourless transparent oil, one of the constituents of smoke, of a peculiar odour, obtained from beech tar. It dissolves caoutchouc. It is probably a mixture.

Capnorchis. (*Καπνός*; *ὄρχις*, a testicle.) The *Fumaria bulbosa*, from its bulbous roots.

Capnos. (*Καπνος*, smoke.) The *Fumaria officinalis*, or fumitory, because the juice, if applied to the eyes, gives a smarting sensation as if produced by smoke.

Capnus. Same as *Capnos*.

Capon. (*L. capo*, from *κάπων*, a capon.) A castrated cock of the domestic fowl.

C's tail. The *Valeriana officinalis*.

Capon springs. United States of America; West Virginia; Hampshire County; on the western slope of the ridge of the Alleghanies, about 2000 feet above sea-level. Three sources of mineral water, containing sodium carbonate 6 grains, calcium carbonate 8.3, magnesium carbonate 1.4, ferrous carbonate .041, and small quantities of potassium and calcium sulphate, in an imperial gallon; carbon dioxide, oxygen, and nitrogen, are found in the water free and dissolved. The water is used in uric acid calculi, in vesical catarrh, in acid or gouty dyspepsia, in hepatic congestion and enlargement, and in menstrual deficiencies.

Cappacaro'ca. The name of species of Myrmine used as an adulterant of Paraguay tea, *Ilex paraguayensis*.

Cappar'ee. A Tribe or Section of the Nat. Order *Capparidaceæ*, having the fruit an indehiscent berry.

Capparidæ'ceæ. (*Capparis*.) A Nat. Order of thalamifloral Exogens; or a Family of the Order *Crucifloræ* having tetramerous flowers, one-celled ovary, a closed-up fruit, and exalbuminous seeds.

Capparid'ee. Same as *Capparidaceæ*.

Capparids. The plants of the Nat. Order *Capparidaceæ*.

Capparis. (*Κάππαρις*, the caper plant.) A Genus of the Nat. Order *Capparidaceæ*.

C. ægypti'aca. Said to be the hyssop of the Bible. Used in Egypt as *C. spinosa*.

C. amygdali'na. (*Ἀμυγδαλινος*, of almonds.) The bark of the root blisters the skin. Used in South America as a diuretic.

C. aphylla. (*A. neg.*; *φύλλον*, a leaf.) Grows in India. Used as food, but is supposed to be heating and aperient. Medicinally it is used in boils, joint diseases, skin diseases, and as an antidote against poisons.

C. badu'ca. An Indian species. The juice is made into a liniment, which is used as an anodyne; the flowers are purgative.

C. caran'das. The *Carissa carandas*.

C. cynophalloph'ora. Linn. (*Κύνων*, a dog; *φάλλος*, the penis; *φορέω*, to bear.) The bark of the root is a vesicant. Used in South America as a diuretic.

C. ferrugin'ea. (*L. ferrugineus*, rust-coloured.) The bark of the root is a vesicant.

C. fontane'sil. Used in Barbary as *C. spinosa*.

C. in'dica. The *Cadaba indica*.

C. mithridat'ica. (*Mithridate*.) An Indian species, said to be efficacious against poisons and snake-bites.

C. pulcher'rima. Jacq. (*L. pulcher*, beautiful.) Fruit believed to be poisonous.

C. rupest'ris. (*L. rupe*, a cliff.) Used in Greece as *C. spinosa*.

C. sati'va. (*L. sativus*, sown.) The *C. spinosa*.

C. siliqu'osa. (*L. siligua*, a pod.) Hab. Antilles. Root aperient, anthelmintic, and antihysterie.

C. sola'da. Has a narcotic odour; fruit acrid and stimulating. Used by women to procure fecundity.

C. spino'sa. Linn. (*L. spinosus*, thorny. *F. caprier*; *I. cappero*; *S. alcaparro*; *G. Kappernstrauch*.) The caper plant. A low trailing plant growing on the shores of the Mediterranean. Leaves roundish, blunt, or emarginate; stipules spiny, curved. The unexpanded buds form the pickle capers. The dried bark of the root is wrinkled, and greyish without, whitish within; inodorous, bitterish in taste. It is said to be diuretic, and was used in amenorrhœa, chronic rheumatism, and liver disorders.

Capping. In Dentistry, the process of applying a *Cap*.

Cappone. Italy; in the Island of Ischia, in the Bay of Naples. Warm, saline, slightly aperient waters, of temp. 37° C. (98.6° F.), and smelling like chicken broth. Contain sodium chloride and carbonate, calcium and sodium sulphate, and carbonic acid gas. Used in dyspepsia, chronic derangements of alimentary canal, and in uterine affections.

Cap'ra. (*L. capra*, a she-goat; fem. of *caper*; akin to *κάπρος*.) A Genus of the Family

CAPRARIA—CAPRYL

Ovide, Group *Ruminantia*, Order *Ungulata*, Class *Mammalia*. Both sexes have horns; no lacrymal sinuses; the throat is furnished with a beard, generally in both sexes.

C. aegagrus. (*Alycapros*, a wild goat.) The paseng, or wild goat, supposed to be the ancestor of the common goat. In the fourth stomach is found the *Bezoar orientale*.

C. alpina. (*L. alpinus*, alpine.) The chamois, *Rupicapra tragus*.

C. hircus. (*L. hircus*, a he-goat. *F. chèvre*; *L. capra*; *S. cabro*; *G. Ziege*.) The common goat. The horns were formerly used in epilepsy; the dried blood as an aperient; the tallow as a relaxant; and the dung as a detensive. Goats' milk is much used for the making of cheese, and in some countries as food.

C. sylvestris. (*L. sylvestris*, belonging to a wood.) The wild goat, which was formerly used in medicine.

Capra'ria. (*L. capra*, a she-goat.) A Genus of plants of Nat. Order *Scrophulariaceae*.

C. bisora. (*L. bis*, twice; *flor*, a flower.) The Mexican tea plant, used in America as a substitute for tea.

Caprate. A salt of capric acid.

Capren'ne. See *Borro di Caprenne*.

Capreolaria va'sa. (*L. capreolus*, a tendril; *vas*, a vessel.) The spermatie vessels, so called from their twisted appearance.

Capreolate. (*L. capreolus*. *G. gabel-rankig*.) Twisted like the tendril of a vine.

Also, bearing a tendril.

Capreolus. (*L. capreolus*.) The helix of the ear.

A tendril or cirrus.

C. auris. (*L. auris*, the ear.) A term for the helix of the ear, from its twisted form, according to Bartholin, iii, 9.

Capri. Italy; an island in the Bay of Naples. On the south side is a winter residence for invalids.

Capria. The *Capparis spinosa*.

Capric acid. (*L. caper*, a goat. *F. acide caprique*; *G. Caprinsäure*.) $C_{10}H_{20}O_2$. Retic acid. An acid found as a glyceride in butter and in cocoa-nut oil; occurs in fusel oil; and is formed in the oxidation of oleic acid and oil of rue. It is colourless, crystalline, of a goaty smell. Melts at 27° – 30° C. (80° – 86° F.); boils at 268° – 270° C. (514° – 518° F.). Soluble in cold alcohol and ether, insoluble in water. It is found in the faeces of meat-eaters.

Capricer'va. (*L. caper*, a goat; *cerv*, a stag.) A name for the Antilope, or antelope.

Capricornus. (*L. caper*; *cornu*, horn.) Plumbeum or lead. (Ruland.)

Capridæ. Same as *Ovide*.

Capricco di Valaspra. An Italian mineral water; also called *Acqua Bolle*.

Capricus. (*L. caper*, a goat; *ficus*, a fig.) The wild fig-tree, *Ficus carica*, because goats feed upon its fruit.

Caprifolia. The plants of the Nat. Order *Caprifoliaceae*.

Caprifolia. (*L. caper*, a goat; *folium*, a leaf.) The *Lonicera periclymenum*, or common honeysuckle.

Caprifoliaceæ. (*G. Geisblattgewächse*.) An Order of epigynous corollifloral Exogens; or a Family of the Order *Aggregatæ*. Shrubs or herbaceous plants, with opposite exstipulate leaves; stamens epipetalous; anthers straight, bursting longitudinally; ovules pendulous; fruit

consolidated; embryo small, in fleshy albumen; radicle next the hilum.

The *Caprifoliaceæ* of Kunth is synonymous with *Cornaceæ*.

Caprifolium. (Etymology doubtful; *L. capra*, a goat; or *capreolus*, a tendril; or a corruption of *caparis*, the caper plant; *folium*, a leaf; because goats like it, because of the tendril-like tendency of the young shoots, or because of the likeness of its leaves to those of the caper plant.) The honeysuckle, *Lonicera caprifolium*.

C. distinctum. (*L. distinctus*, separated.) The *Lonicera periclymenum*.

C. hortensis. (*L. hortensis*, belonging to a garden.) The *Lonicera caprifolium*.

C. periclymenum. The *Lonicera periclymenum*.

C. rotundifolium. (*L. rotundus*, round; *folium*, a leaf.) The *Lonicera caprifolium*.

C. sempervirens. The *Lonicera sempervirens*.

C. sylvaticum. (*L. sylvaticus*, growing wild.) The *Lonicera periclymenum*.

Caprilo'quium. (*L. caper*, a goat; *loquor*, to speak.) Eponymy.

Caprin. A supposed body which, by saponification, is transformed into capric acid and glycerin.

Caprin'ic acid. $C_{10}H_{20}O_2$. The same as *Capric acid*.

Caprizans pul'sus. (*L. capris*, to leap like a goat; *pulsus*, the pulse.) A name first applied by Herophilus (*Gr. δοκασίς*, see *Galen, de Diff. Puls.* i, 28, vol. viii, p. 558, ed. Kuhn), to that kind of pulse called bounding.

It has also been described as a pulse, one beat of which is so delayed in its movement that the succeeding beat closely approaches it, and the pulse is felt as if it were double.

Caproate. A salt of caproic acid.

Caproic acid. (*Hexoic acid*.) $C_6H_{12}O_2 = C_6H_{11}.CO_2H$. There are eight theoretical forms of this acid, but five only are known.

C. acid, normal. (*Pentylformic acid*.) $CH_3(CH_2)_4.CO_2H$. It is produced, along with acetic, butyric, and other acids, during the oxidation of many albuminous substances, as bran, cheese; occurs in a free state in sweat and in the faeces of meat-eaters, and as a glyceride in butter of cows' milk. It is an oily liquid, with a disagreeable sweaty odour. It boils at 205° C. (401° F.).

Caproin. A supposed neutral fatty body, which, by saponification, is transformed into caproic acid and glycerin.

According to some, the same as *Caprin*.

Capronæ. (*L. capronæ*, a horse's forelock; as if a *capite pronæ*.) The hair which hangs down over the forehead.

Capron'ic acid. (*G. normalbutylglycinsäure, isobutylglycinsäure*.) $C_6H_{12}O_2$. An acid found by Chevreul in cows' and goats' butter. It exists under two forms, a normal and an isomeric form; the former is transparent and colourless, not miscible with water. It boils at 204° C. (400° F.); sp. gr. 0.9449 at 0° C. (32° F.). The isomeric form is characterised by its lower boiling point, 198° C. (388° F.).

Capryl. The hypothetical radicle of the eighth term of the series of normal primary alcohols; otherwise *Octyl*.

C. hydride. (*G. Caprylcasserstoff*.) C_8H_{18} . A paraffin boiling at 124° C. (255° F.). It is an anæsthetic when inhaled, but produces

CAPRYLIC ACID—CAPSULA.

much excitement and vomiting; recovery is not easy.

Caprylic acid. (F. *acid octylique*.) $C_8H_{16}O_2 = C_7H_{15} \cdot CO_2H$. It occurs as a glyceride in the butter of cows' milk, and in cocoa-nut oil, also in fusel oil, and in the faeces of meat-eaters. It has a faint unpleasant odour. It solidifies at $12^\circ C$. ($53.6^\circ F.$), melts at $16^\circ C$. ($60.8^\circ F.$), and boils at $227^\circ C$. ($440.6^\circ F.$)

Caprylin. A supposed neutral body furnishing, by saponification, caprylic acid and glycerin.

Cap'sa. (Κάψα, a case. G. *Behältmiss*, *Kiste*.) A capsule. An enclosing substance.

C. cordis. (L. *cor*, the heart.) The pericardium.

Capsaicin. $C_8H_{15}O_2$. The active principle of capscin. It is a fusible, volatile, crystallisable body, soluble in alcohol and ether, and very irritating.

Capsarium. (Κάψα, a case.) A box for substances used in dressing wounds.

Capsella. (L. dim. *capsula*, a little coffer or chest.) A Genus of the Nat. Order *Cruciferae*.

Also, the viper's bugloss, *Echium vulgare*.

Also, *C. bursa-pastoris*, or shepherd's purse.

C. bursa-pastoris. De Cand. (F. *bourse d'pasteur*, *molette*; G. *Hirtentäschlein*.) Shepherd's purse. A mild astringent. Used in diarrhoea, dysentery, and menorrhagia; it has also been employed to promote menstruation.

Capsici fructus. B. Ph. (F. *piment rouge*, *poivre d'Inde*; I. *peperone*; S. *pimiento de Indias*; G. *Spanischer Pfeffer*, *Cayennepfeffer*.) Capsicum fruit. The dried ripe fruit of *Capsicum fastigiatum*, imported from Zanzibar, and distinguished in commerce as Guinea and pod pepper. An orange-red membranous pod, 1' to 6' long, .25' broad, straight, conical, pointed, smooth, shining, somewhat wrinkled, and very pungent to the taste. It is an active stimulant. Applied to the skin it produces redness and vesication. Internally it gives a sense of great warmth in the stomach, and in large doses it may produce vomiting, diarrhoea, and gastro-intestinal inflammation. It is chiefly used as a condiment. It is added to purgative or tonic pills to relieve flatulence or griping, and to astringents in diarrhoea; it may be given in atonic dyspepsia, and is of use in the craving for drink of drunkards. Locally it is of service as a gargle in the very early or the chronic stages of sore throat; and as an application in muscular rheumatism, neuralgia, and chilblains. Dose, $\frac{1}{4}$ —2 grains; of the tincture, 10—20 minims.

C., poisoning by. Capsicum has been found in the stomach of a child, and was believed to be the cause of death; as also in other cases.

Capsicia. Same as *Capsicin*.

Capsicin. A reddish oil, obtained by treating an alcoholic extract of capsicum fruit with ether. It is a compound substance, and contains an alkaloid having an odour of conium, which has not yet been completely separated. Capsicin is very pungent to the taste, and gives off an intensely irritating vapour when heated; it forms crystalline salts with acids.

Cap'sicol. A red, oily liquid. It is a mixture containing capscin.

Capsicum. (L. *capsa*, a case.) A Genus of the Nat. Order *Solanaceae*.

Also, the official name, U.S. Ph., of the *Capsici fructus*, B. Ph.

C. annum. Linn. (L. *annuus*, annual. F. *piment des jardins*.) The Chili plant. An annual. Hab. the warmer parts of Asia and America, and cultivated generally for its pods, which are one source of ordinary Cayenne pepper.

C. baccatum. Willd. (L. *baccatus*, bearing berries.) Bird pepper. Furnishes the Cayenne pepper of the West Indies and South America.

C. brasiliense. The *C. frutescens*.

C. cerasiforme. Willd. (L. *cerasus*, a cherry; *forma*, shape.) A species sometimes used.

C. chlorocladum. De Cand. (Χλωρόε, green; κλάδος, a shoot.) A species with small oblong fruit; occasionally used.

C. fastigiatum. Blume. (L. *fastigium*, a projecting point.) Hab. Tropical America, Africa, and India. The official source of capscin.

C. fruit. See *Capsici fructus*.

C. frutescens. Linn. (L. *frutex*, a shrub.) Goat pepper. One of the sources of West Indian Cayenne pepper.

C. grossum. Willd. (L. *grossus*, thick.) Bell pepper. One of the sources of Cayenne pepper, and is used as a pickle. Probably a variety of *C. annum*.

C. hispanicum. (L. *hispanicus*, Spanish.) The *C. annum*.

C. indicum. The *C. annum*.

C. longum. De Cand. (L. *longus*, long.) Probably a variety of *C. annum*. It is the source of Spanish pepper, called in Austria *Paprika*.

C. nepalense. Nepal pepper. A variety which produces a pleasant tasting pepper when made from the not quite ripe pods.

C. toxicarium. (Τοξικόν, a poison in which arrows were dipped.) Said to be used by the natives of Peru to poison their arrows.

Capsitis. (L. *capsa*, a case.) Inflammation of the capsule of the crystalline lens.

Capsocataracta. (*Capsula*; *cataracta*. G. *Kapselstaar*.) Capsular cataract.

Capsula. (L. dim. of *capsa*.) A capsule.

C. articulata. (L. *articulum*, a joint.) The capsular ligament of a joint.

C. circumscissa. (L. *circumscindo*, to tear off around.) A capsule, in Botany, opening with a lid; a pyxidium.

C. communis Glissoni. (L. *communis*, common.) See *Glisson*, capsule of.

C. cordis. (L. *cor*, the heart.) The pericardium.

C. dentata. (L. *dens*, a tooth.) The capsule of a tooth; *Nasmyth's membrane*.

C. humoris aequalis. (L. *humor*, fluid; *aqueus*, watery.) The membrane enclosing the aqueous humour, which at one time was believed to exist.

C. interna. (L. *internus*, within.) A layer of fibres separating the optic thalamus from the corpus striatum.

C. lentis. (L. *lens*, a lentil.) The capsule of the crystalline lens.

C. lumbalis. (L. *lumbus*, the loin.) The receptaculum chyli.

C. nervorum. (L. *nervus*, a nerve.) The neurilemma.

C. renis adiposa. (L. *ren*, the kidney; *adiposus*, fat. G. *Fettkapsel*.) The loose con-

CAPSULE—CAPSULE.

nective tissue, containing many fat cells, in which the kidney is embedded.

C. sequestratilis. (L. *sequestro*, to separate.) The portion of bone surrounding a sequestrum.

C. venæ portæ. (*Vena portæ*.) Same as *Glisson*, capsule of, inasmuch as it surrounds the vena portæ.

Cap'sulæ. (L. plural of *capsula*.) Capsules, cases.

C. atrabillaris. (L. *ater*, black; *bilis*, bile.) The adrenals.

C. hæmatis. Blood dried in vacuo, mixed with a tenth part of sodium phosphate, and enclosed in a capsule. Used as a nutrient and roborant in anæmia and chlorosis.

C. hibisci esculenti. The fruit of *Hibiscus* or *Abelmoschus esculentus*.

C. hydrargyri. Five grains of unguentum hydrargyri, in a gelatin capsule, for introduction into the vagina.

C. matice. Powdered matico, mixed with balsam of copaiba, and enclosed in a capsule. Used in gonorrhœa.

C. matice vaginalis. Etheral oil of matico is mixed with lycopodium, or carbonate of magnesia, in conjunction with tannin, alum, or sulphate of zinc, for an astringent vaginal suppository.

C. papaveris. See *Papaveris capsula*.

C. renalis. (L. *ren*, the kidney.) The adrenals.

C. seminales. (L. *semen*, seed.) The vesiculæ seminales.

Also, applied to the sacculated portion of the vasa deferentia before their junction with the ducts of the vesiculæ seminales.

C. synovialis. (*Synovia*.) The bursæ mucosæ.

C. unguinis. (L. *unguen*, an ointment.) The bursæ mucosæ.

Capsulæcic acid. (L. *capsula*; *æsculus*, the chestnut.) An acid found in the capsules of the fruit of the horse-chestnut, *Æsculus hippocastanum*.

Cap'sular. (L. *capsula*. F. *capsulaire*; I. *capsulure*; S. *capsular*; G. *kapsel*/formig.) Belonging or related to, or like, a capsule.

C. artery. The suprarenal artery.

C. cataract. Cataract depending on an opaque deposit on the inner surface of the capsule of the lens. See *Cataract, capsular*.

C. ligament. The ligamentous expansion round a joint.

C. vein. The suprarenal vein.

Capsulæres seminales. (L. *capsula*; *seminalis*, belonging to semen.) The sacculated portion of the vas deferens before it joins the duct of the vesiculæ seminales.

Capsulate. (L. *capsula*.) Provided or enclosed in a capsule.

Capsulation. (L. *capsula*.) The enclosure of a drug in a capsule to render it more convenient or more pleasant in administration.

Capsule. (L. *capsula*. F. *capsule*; I. and S. *capsula*; G. *Kapsel*.) A name given to various structures which act as enclosing agents.

In Anatomy, besides the various structures of this name with an adjectival qualification, the term capsule is given to that part of the corpus callosum of the brain which extends into the anterior lobe and forms the under part of the medullary capsule of the corpus striatum.

In Surgery, it has been used to denote the

cyst of an encysted tumour; also, the wall of an abscess.

In Botany, a capsule is a superior, one or more celled, many seeded, dry, dehiscent fruit, formed of two or more carpels.

Also, it is applied to the rounded spore-cases of ferns or sporangia.

In Chemistry, a capsule is a shallow vessel for evaporating substances, or other purposes.

In Pharmacy, an envelope of gelatin, gluten, or membrane, enclosing a drug for the purpose of disguising its taste or securing its entrance into the stomach unchanged.

C., aqueous. A synonym of *Descemet's membrane*, from its relation to the aqueous humour of the eye.

C., articular. (L. *articulum*, a joint.) The ligamentous expansion around a joint.

C., cartilaginous. The concentric layer around certain cartilage cells, especially in the costal and intervertebral cartilages.

C., crystalline. The capsule of the crystalline lens.

C., devorative. (L. *devoro*, to swallow down.) A layer or film of gelatin. Used for the enclosure of a medicine to be swallowed.

C., fibrous. The capsular ligament of joints.

C., folding. Same as *C., devorative*.

C., gelatin. A case for the enclosure of medicine. These capsules are made by dipping a bulb or oblong mould into a solution of gelatin, allowing the coating partially to dry, removing it, filling with the drug and closing the hole with semisolid gelatin; or they are made in half spheres, and joined after filling.

C., hæmorrhoidal. (*Æmorrhoides*, piles.) A cup-like instrument, with a perforated bottom, which was placed around a pile and received the caustic which was used to destroy the structure.

C., hyaloid. The same as *Hyaloid membrane*.

C., medullary, of Reil. The outer coating of white or medullary fibres of the grey matter of the corpus striatum.

C., membrane. A capsule made as a gelatin capsule, but with gut skin.

C., ocular. The *Tunica vaginalis oculi*.

C. of aqueous humour. The supposed membrane lining the anterior and posterior chambers of the eye and secreting the aqueous humour.

C. of Bonnet. See *Bonnet, capsule of*.

C. of Bowman. See *Bowman, capsule of*.

C. of eye, ciliary. The *Tunica vaginalis oculi*.

C. of Glisson. See *Glisson, capsule of*.

C. of glomerulus. (L. *glomerulus*, dim. of *glomus*, a ball of thread; and, from its likeness, applied to the vascular tuft of the Malpighian corpuscle.) Same as *Bowman, capsule of*.

C. of heart. The pericardium.

C. of kidney. See *Kidney, capsule of*.

C. of lens. (G. *Kristallinskapsel*.) The transparent elastic membrane enclosing the lens. It is structureless and brittle, and curls up outwards when broken. It allows of easy osmosis, and slowly dissolves in boiling water.

C. of lens, vascular. A membranous capsule, containing the ramifications of the hyaloid artery, which invests the lens soon after its first appearance in the fetus, and in man remains until about the seventh month. Its anterior

CAPSULES, POPPY—CAPUT.

part, adherent to the margin of the iris, is the membrana pupillaris, and itself is also called capsulo-pupillary membrane.

C. of Malpighian body. Same as *Bowman, capsule of*.

C. of Müller. See *Müller, capsule of*.

C. of nerves. The neurilemma.

C. of teeth. Same as *Nasmyth's membrane*.

C. of Tenon. See *Tenon, capsule of*.

C., organic. Same as *C., membrane*.

C., periotic. (Περί, around; οὖς, the ear.) The tissue surrounding the auditory sacs in the embryo.

C., renal. (L. *ren*, the kidney.) The adrenal.

C., seminal. (L. *semen*, seed.) The vesicula seminalis, and also the dilated entrance of the vas deferens into it.

C., suprarenal. (L. *supra*, above; *ren*, the kidney.) The adrenal.

C., synovial. Same as *Synovial membrane, articular*.

Capsules, poppy. See *Capsula papaveris*.

Capsuliferous. (L. *capsula*; *fero*, to bear. F. *capsulifère*; G. *kapseltragend*.) Bearing or containing capsules.

Capsulitis. (L. *capsula*, a capsule. F. *capsulite*; G. *Linsenkapselfentzündung*.) Inflammation of the capsule of the lens. It is supposed to occur in cases where the capsule and the iris are adherent to each other; also in cases of traumatic and of secondary cataract after operation, when vessels appear on the membrane; and it has also been applied to simple capsular and secondary cataract, on the assumption that they represented Virchow's non-vascular parenchymatous inflammation.

Capsulo-pupillary membrane. (L. *capsula*; *pupilla*, the pupil of the eye.) The vascular investment of the foetal lens. See *Capsule of lens, vascular*.

Capuli. The *Prunus capulin*.

Capuloid. (L. *capula*, a cup; εἶδος, likeness. F. *capuloïde*; G. *becherähnlich*.) Resembling a cup.

Capulum. (Κάπτω, to bend.) A contortion of the eyelids or other parts.

Capulus. (L. *capulus*, a handle.) A term for the penis.

Capur. (Arab. *Cáfir*. Κάφουρα.) Camphor. (Quincy.)

Capuron. A French physician born 1767, died 1850.

C.'s pills. Catechu 12 parts, alum 6, opium 2, mixed with syrup of red rose.

Caput. (L. *caput*, the head; akin to Sanscrit *kapāla*; Gr. κεφαλή; F. *tête*; I. *testa*; S. *cabesa*; G. *Kopf*.) The head, including the skull and face.

Also, the rounded top or articulating end of a bone.

Also, a term for the glans penis.

Also, applied in Biology to the top or rounded end of structures.

C. alli. (L. *allium*, garlic.) The kind of garlic called *Molyza*.

C. angularis. (L. *angularis*, angular. G. *Augen-mediale*, or *Winkelzacke*.) Term applied by Henle to the musculus levator alae nasi et labii superioris, which he unites with other muscles to form a single stratum named the musculus quadratus labii superioris.

C. asperae arteriae. (L. *asper*, rough; *arteria*, the windpipe.) The head of the rough artery or windpipe. A term for the larynx.

C. caecum coli. (L. *caecus*, blind; *colon*, the intestine of that name.) The blind head of the colon. The caecum.

C. coli. The head of the colon. A synonym of the *Caecum*.

C. concutiens. (L. *concutio*, to shake.) A name given to the first of the intertransversales muscles, from its action on the head.

C. cornu posterioris. (L. *cornu*, a horn; *posterior*, hinder.) The hinder, somewhat enlarged, part of the posterior cornu, or horn of the crescent-shaped mass of grey substance in each lateral half of the spinal cord.

C. epididymidis. (G. *Kopf des Nebenhodens*.) The upper enlarged extremity or head of the epididymis.

C. galeatum. (L. *galeatus*, helmeted.) The head of the new-born child when covered with the caul.

C. gallinae oecum. The same as *C. gallinaginis*.

C. gallinaginis. (L. *gallinago*, a woodcock.) A longitudinal elevation of the mucous membrane of the prostatic urethra, extending outwards for eight or nine lines from the urula vesicae; it gradually rises from its origin until it attains a height of a line and a half, when it sinks again.

C. genitalis. (L. *genitalis*, causing generation.) A term for the glans penis.

C. inclavatum. (L. *in*, in; *clavus*, a plug.) Applied to cases of labour in which the foetal head is impacted.

C. incisum. (L. *in*, in; *cuneo*, to drive in a wedge.) Applied to impaction of the foetal head in labour.

C. infraorbitale. (L. *infra*, beneath; *orbis*, a circle. G. *mittlere*, or *Infraorbitalsacke*.) A name applied by Henle to the levator labii superioris proprius, which forms the middle head of his musculus quadratus labii superioris.

C. liberum. (L. *liber*, free.) A term applied to the head of insects when it is free from protection or cover of the thorax.

C. lubricum. (L. *lubricus*, slippery.) A synonym of the *Penis*.

C. major. (L. *major*, larger.) The head, or upper end, of the epididymis.

C. medusae. (*Medusa*, the daughter of Phorcus, whose golden hair, having captivated Neptune, was turned into snakes by Minerva.) A term given to the appearance produced by dilatation of the small cutaneous veins around the navel, the result of congestion of the portal vein in those cases in which the umbilical vein remains pervious in the abdomen, and is joined by the parumbilical vein.

C. minor. (L. *minor*, less.) The tail, or lower end, of the epididymis.

C. monachi. (L. *monachus*, a monk.) A name of the dandelion, *Taraxacum dens leonis*.

C. mortuum. (L. *mortuus*, dead. G. *Todtenkopf*, *Rückstand*.) The dead head. A term applied to inert or useless residue after distillation or sublimation. Seldom used now, except to the deposit left in the retort after the distillation of the fuming sulphuric acid of Nordhausen.

C. obstipum. (L. *obstipus*, bent on one side.) A term for wry-neck.

C. obtectum. (L. *obtectus*, part. of ob-

CAPUTPURGIUM—CARAPA.

tego, to cover up.) A term applied to the head of an insect when it is covered by the thorax.

C. papaveris. (*G. Mohnkopf.*) The head, or capsule, of the poppy, *Papaver somniferum*.

C. penis. The head, or glans, of the penis.

C. purgum. (*L. purgo*, to cleanse.) An old name for remedies which produced a discharge from the head, as errhines, sialogogues, and sternutatories.

C. receptum. (*L. receptus*, part. of *recipio*, to receive.) A term applied to the head of an insect when it is received into a notch on the anterior border of the thorax.

C. scapulae. The head of the shoulder-blade. A term for the acromion.

C. succedaneum. (*L. succedaneus*, substituted. *G. Kopfgeschwulst der Neugeborenen.*) A term applied to the oedematous swelling of the scalp of the child observed in many cases of labour where there is sufficient amount of resistance of the maternal parts; it is situated on that part of the head which presents. Also, called *Cephalamatoma*.

C. testis. (*L. testis*, the testicle.) The epididymis.

C. zygomaticum. (*Zuyón*, a yolk. *G. laterale* or *Jochbeinsacke.*) Term applied by Henle to the zygomatic minor, which forms the external head of his musculus quadratus labii superioris.

Caputpurgium. Same as *Caput purgum*.

Capvern. France; Département Haute-Pyrénées. Pleasantly situated in a narrow valley about twelve miles from Bagnères de Bigorre. Waters, of temp. 21° C. (69.8° F.) to 23° C. (73.4° F.), contain calcium and magnesium salts, with a little iron and carbonic acid, oxygen and nitrogen. The source Hount-Caoude is said to be stimulant; it is used in indolent conditions of the abdominal viscera, in urinary calculus, and in climacteric affections, and is contraindicated in hæmorrhages. The source Bouridé is said to be calnative, and of use in hysteria.

Caqueta. A river of the north-western side of South America running into the Amazon.

C. bark. One of the names of the bark of *Cinchona lancifolia*.

Car'a. (*Kápa.*) The head.

Car'a schulli. Name of a plant of Malabar. Used externally as suppurative, internally against suppression of urine; supposed to be the *Barleria buxifolia*.

Car'aba. Same as *Carabé*.

Also, a name for the oil of cashew nuts, the fruit of *Anacardium occidentale*.

Carabay'a. A province of Brazil.

C. bark. A thin bark, probably the produce of *Cinchona ovata* and its varieties.

Carabé. (*Pers. karubah.*) Amber. Also applied to other substances, as asphalt. *Paracelsus, de Tart. Morb. c. 9.*

C. funerum. (*L. funus*, burial.) Bitumen; because used in embalming the dead.

Carabus. (*Kápaβos*, a stag beetle. *F. carabe*; *S. carabo*; *G. Laufkäfer.*) A Genus of the Order *Coleoptera*, Class *Insecta*.

Also, a name of the cray fish, *Astacus fluviatilis*.

C. chrysocephalus. (*Χρυσός*, gold; *κεφαλή*, the head.) Formerly used locally in toothache.

C. ferrugineus. (*L. ferrugineus*, rust-

coloured.) Common around Paris, where it is used, when bruised, and rubbed on the gum in toothache.

Caracaracal. A name for a form of tineæ. (*Littre* and *Robin.*)

Carac'as. The capital of the United States of Venezuela.

C. kino. A form of the gum probably obtained from the *Coccoloba welfera*.

C. sarsaparilla. The produce probably of *Smilax medica*.

Caracha. A name applied in Peru to a pustular eruption on the arms and chest, which leaves white cicatrices in negroes and mulattoes, and black scars in white people. (*Littre* and *Robin.*)

Caracos'mos. Sour mare's milk, much esteemed by the Tartars. *Lindenus, S. M. Es. xvi, § 127.*

Caragaheen. Same as *Carrageen*.

Carag'ena. A Genus of the Nat. Order *Leguminosæ*.

C. arborescens. Lamb. (*L. arboresco*, to grow like a tree.) Hab. Siberia. Seeds are eaten as food.

Carag'na. See *Caranna*.

Carai'ba. A synonym of *Caroba*.

Caram'ina. A province in the eastern part of Asia Minor.

C. gum. A variety like Bassora gum. Used to adulterate gum tragacanth.

Caramatu. A tree growing in Pomeroun. It furnishes a febrifuge bark, which may be used in typhoid and remittent fevers, when cinchona would be useless or pernicious. (*Dunglison.*)

Carambola. The *Averrhoa carambola*.

Caramel. (*S. caramelo*, from *L. canna*, a cane; *mel*, honey.) A black porous mass produced when sugar is exposed to a temperature of 204.4° C. (400° F.), by which it loses two equivalents of water. It is used as a colouring matter.

Caramelan. (Same etymon.) $C_{12}H_{10}O_2$ or $C_4H_6O_2$. One of the principal constituents of caramel. It is colourless.

Caranna. (*Span.*) Name of a resin which exudes from a large tree in New Spain, mentioned by Schröderus, *l. iv, cl. 2, n. 380*; it is of a brownish colour streaked with white, and was formerly employed in vulnerary balsams, strengthening, discutient, and suppurating plasters. It is believed to be the produce of *Amyris caranna*, or, according to some, of *Bursera gummisera*.

Carannæ gum'mi. (*L. gummi*, gum.) See *Caranna*.

Carapa. A Genus of the Nat. Order *Meliaceæ*. Tropical trees with bitter bark and oily seeds.

C. guianensis. Aubl. Hab. Brazil and Guiana. The bark is bitter and astringent. It is used in malarious fevers and as a vermifuge. The oil of the seeds is bitter and anthelmintic, and is used against the bites of insects.

C. guineensis. The *C. touloucouna*.

C. moluccensis. The *Xylocarpus granatum*.

C. obovata. Linn. (*L. ob*, towards; *ovatus*, egg-shaped.) Yields a bitter and astringent bark.

C. proce'ra. (*L. procerus*, tall.) Hab. India. A bitter and tonic.

C. touloucouna. Hab. Western Africa. The seeds furnish a bitter, pale yellow oil, called Kunda, or Tallicoanah, which is purgative and anthelmintic. The bark is bitter.

CARAPACE—CARBO.

Carapace. (S. *carapacho*. G. *Rücken-schild*.) The dorsal part of the hard epidermic exoskeleton of the Chelonia; it is composed of the expanded extremities of the spinous processes of the dorsal vertebrae in the centre; of the broad and flat costal plates, supported by the ribs, which form the chief extent; and of the series of marginal plates around the edges.

The upper shell of certain *Crustacea*, in which it is a development of the epimera of the cephalic segments of the cephalothorax.

The enclosing case of certain *Infusoria*.

Carapat. Castor oil.

Carapin. An alkaloid found in the bark of the *Carapa guianensis*. It forms crystallisable salts with nitric and hydrochloric acids.

Carate. A cutaneous disease occurring in Santa Fé, and supposed to be syphilitic. It consists of blotches, sometimes coffee-coloured, sometimes crimson, and sometimes a livid blue.

Carawala. The native Indian name of the *Hypnale napa*.

Caraway. (S. *alkarahueya*, from Ar. *karviya*, caraway; perhaps from *kāpov*, cummin.) The *Carum carui*.

C. fruit. See *Carui fructus*.

C. seed. The seeds of the *Carum carui*. See *Carui fructus*.

Carballino. Spain; Province of Santiago. A mineral water from several springs, of a temperature varying from 26° C. to 38° C. (78.8° F. to 100.4° F.). They contain calcium and magnesium chloride, calcium carbonate, calcium and magnesium sulphate, with free carbonic acid and hydrogen sulphide.

Carballo. Spain; Province of Corunna. A sulphur water, of 30° C. (86° F.) Used in rheumatism.

Carbamic acid. $\text{CO.NH}_2\text{OH}$. An acid not known in the free state. It is said to be contained in the serum of blood.

Carbamide. $\text{CO(NH}_2)_2$. A synonym of *Urea*.

Carbasus. An old name, used by Scribonius Largus, n. 227, for very fine linen; also, lint used in surgery.

Carbazotate. A salt of carbazotic or picric acid.

Carbazotic acid. A synonym of picric acid.

Carbide. A compound of carbon and some other element, as hydrogen or iron.

C., magnetic. A substance used for water-filters, said to be made by heating hematite with sawdust.

C. of sulphur. Same as *Carbon disulphide*.

Carbinol. A term for methyl alcohol. The alcohols formed from it by substitution of methyl, ethyl, or other radicle, for one of its atoms of hydrogen, are called methyl carbinol, ethyl carbinol, and so forth.

Carbo. (L. *carbo*, a coal; also, a live coal.) Charcoal, carbon.

A term for carbuncle, from the hot sensation and fiery appearance attending it.

C. animalis. B. Ph. (F. *charbon animal*; I. *carbone animale*; S. *carbon animal*; G. *Thierischekohle*, *Thierkohle*.) The pharmacopoeial name of impure animal charcoal, or bone black. The residue of bones which have been exposed to a red heat without the access of air. Consists of 88 per cent. of calcium carbonate and phosphate, 2 per cent. of ferric carbide and silicide

and 10 per cent. of carbon. It is bitter to the taste.

The G. Ph. (G. *Thierkohle*, *Fleischkohle*) directs *carbo animalis* to be made from calf's flesh, deprived of fat, to be burnt with a third part of bone in a covered vessel.

C. animalis purificatus. B. Ph. Purified animal charcoal. Animal charcoal 16 ounces, hydrochloric acid 10 fluid ounces, and a pint of water, are digested for some time, so that the salts may be dissolved, and the carbon collected on a calico filter, washed and dried. It is a black powder, inodorous and tasteless, and is used as a decolouriser. It is used as an antidote to poisonous alkaloids, and to hydrocyanic acid, when it should be given very soon. Half an ounce absorbs and neutralises about a grain of the alkaloid.

C. carnis. (L. *caro*, flesh.) The *C. animalis*. G. Ph.

C. e ligno. See *C. ligni*.

C. fossilis. (L. *fossilis*, dug up.) Coal.

C. humanum. (L. *humanus*, belonging to man.) Human feces.

C. juglandis. (L. *juglans*, a walnut.) Charcoal made from walnut wood. Used in stultulent dyspepsia.

C. ligni. B. Ph. (L. *lignum*, wood. F. *charbon de bois*; I. *carbone di legno*; S. *carbon de lena*; G. *Holz Kohle*.) Wood charcoal. Wood charred by exposure to a red heat without the access of air. Black, brittle, light, porous, tasteless, inodorous, insoluble in water, a good conductor of electricity, but a bad one of heat. When burned in the air at a high temperature it leaves not more than 2 per cent. of ash. It is able to absorb gases. A cubic inch will condense within itself 90 cubic inches of ammonia, 55 of sulphuretted hydrogen, 35 of carbonic acid, 9 of oxygen, 7.5 of nitrogen, and 1.7 of hydrogen. Charcoal is disinfectant when applied in substance, between muslin, to foul ulcers and sloughing wounds. It is useful in diarrhoea and indigestion, with foul breath and eructations; for this it is best given in capsule. Dose, 20 to 60 grains.

C. ligni depuratus. Belg. Ph. (L. *lignum*; *depuro*, to purify.) Poplar wood deprived of its bark, exposed to a strong heat in a closed vessel; after cooling, soaked in frequently renewed water for three days, dried and powdered.

C. mineralis. (F. *mineral*, ore.) Graphite, and also anthracite.

C. nucis cocois. (L. *nux*, a nut; *cocoos*, the cocoa-nut.) Charcoal made from cocoa-nut shells. Used in stultulent dyspepsia.

C. osium. (L. *os*, a bone. G. *Knochenkohle*.) Animal charcoal.

C. osium depuratus. Belg. Ph. (L. *os*; *depuro*, to purify.) The *C. animalis purificatus*.

C. palpebrarum. (L. *palpebra*, the eyelids.) A carbuncular disease of the eyelids.

C. panis. (L. *panis*, bread. G. *Brotkohle*.) Charcoal made by burning bread. Used as a tooth powder.

C. petree. (L. *petra*, a stone.) Coal.

C. populi. (L. *populus*, a poplar tree. G. *Pappelkohle*.) Charcoal made from poplar wood. Used in atonic stomach and intestinal diseases.

C. praepraatus. (L. *praepra*, to prepare.) The *C. ligni*.

C. pulveratus. G. Ph. (L. *pulcero*, to reduce to powder.) Wood charcoal. See *C. ligni*.

CARBOHÆMIA—CARBOLICI ACIDI AQUA.

C. sanguinis. (*L. sanguis*, blood. *G. Blutkohle*.) Blood charred as bone in *C. animalis*, and used in the same way.

C. spongios. (*L. spongia*, sponge.) Burnt sponge.

C. suberis. (*L. suber*, the cork tree. *G. Corkkohle*.) Charcoal made from cork bark. Used in dysentery.

C. trichlorata. Carbon trichloride.

C. vegetabilis. (*G. Holzkohle*.) Carbon ligni, wood or vegetable charcoal.

C. vegetabilis preparata. (*L. præparata*, to prepare.) The *C. ligni depuratus*.

Carbohæmia. (*Carbon*; *alua*, blood.) A condition in which the blood is imperfectly oxidised.

Carbohydrates. (*Carbon*; *ύδωρ*, water.) A term applied to certain organic compounds containing six or twelve atoms of carbon, united with a variable number of atoms of hydrogen and oxygen, but always in the proportion to form water. They are divided into *Glucoses*, *Saccharoses* or *Sucroses*, and *Amyloses*.

Carbolate. A salt of carbolic acid.

C. of lime. See *Calcei carbolis*.

C. of quinine. (*G. carbolsäures Chinin*.) One part of quinine and two parts of carbolic acid are dissolved in alcohol and evaporated. Used in puerperal fever, typhus, pyæmia, and septicæmia.

C. of soda. See *Sodium carbolate*.

Carbolated. Containing carbolic acid.

C. camphor. See *Camphor, carbolated*.

Carbolic acid. C_6H_5O . (*L. carbo*, coal; *olcum*, oil. *F. acid phenique*; *G. Phenol, Carbol, Carbolsäure*.) Phenic acid. It is produced by the action of nitrous acid on anilin, by the dry distillation of salicylic acid, and by the dry distillation of coal. Coal-tar oil is distilled, and the portion which passes over between the temperatures of $150^{\circ} C.$ ($302^{\circ} F.$) and $200^{\circ} C.$ ($392^{\circ} F.$) is collected and mixed with a hot strong solution of caustic potash, when a pasty crystalline mass is obtained; this, on the addition of water, separates into a light oil and a dense alkaline solution; which latter, when decomposed by hydrochloric acid, yields carbolic acid in the form of an oily liquid; it is then purified by calcium chloride, and crystallised by exposure to a low temperature. The crystals are long, colourless, prismatic needles, of sp. gr. 1.066, melting at about $40^{\circ} C.$ ($104^{\circ} F.$), and boiling about $181.5^{\circ} C.$ ($358.7^{\circ} F.$) It is very deliquescent, soon liquefying on exposure. It is soluble in 20 to 33 parts of water, easily in glycerin, oils, alcohol, ether, and acetic acid. It is neutral to test paper, and precipitates albumin. It has a hot, corrosive taste, and a peculiar odour. Carbolic acid is poisonous to the highest as well as the lowest forms of life, by which action it prevents fermentation and putrefaction. When taken internally it is absorbed into the blood and eliminated by the kidneys. It produces stupor, and convulsions, and failure of heart action. Locally it is used as an antiseptic and disinfectant in foul wounds and in burns, in the treatment of recent wounds according to *Lister's method*; as a local anæsthetic preparatory to stopping a decayed tooth, or the use of caustic in lupus, and other skin diseases. It is used in eczema, psoriasis, parasitic skin diseases, and boils, and as an injection into the vagina when the discharges are foul, and into a suppurating cavity, and, in substance, to ulceration of the os uteri. It is used as a gargle or paint in sloughy sore throat and diphtheria, and as a spray where the expectoration is fetid; as a disinfectant in infectious diseases it is largely employed. Internally it is given in vomiting produced by nervous irritation. It has been used with apparent success as an injection into the subcutaneous tissue, a parenchymatous injection as it is called, in glandular swellings and inflammations, in erysipelas, poisoned wounds, inflamed breasts, in phlegmons, into the sac of hydrocele, and into the joint cavity in chronic synovitis. Dose, 1 to 3 grains in solution. As a lotion and injection, 1 part to 50 or 60.

C. acid, poisoning by. Intense burning and whiteness of mouth, sometimes vomiting of frothy mucus, intoxication, contracted pupils, quick irregular pulse, oppressed and jerky breathing, cold clammy skin, smoky urine, coma, sometimes convulsions, and death in half an hour to four hours, the shortest period recorded being ten minutes, the longest sixty hours. The mouth, gullet, and stomach are found shrivelled and white, the intestines, and sometimes the stomach, congested, and the lungs gorged. Dangerous symptoms have been produced by less than ten drops.

C. acid, tests for. The odour is distinct, a splinter of firwood, moistened with the acid and then with hydrochloric acid, turns blue when dry; ferric chloride colours it violet; bromine water gives a white precipitate.

C. bandage. A flannel or calico bandage which has been soaked in carbolic oil, and often stiffened with wax.

C. gauze. (*G. Carbolgaze*.) Thin muslin impregnated with carbolic acid.

C. jute. Jute impregnated with carbolic acid, and used as a surgical dressing.

C. oil. (*G. Carbolsäureöl, Carbolöl*.) A solution of carbolic acid in boiled linseed oil in a proportion varying from 5 to 10 per cent. Used in the dressing of wounds as an antiseptic.

C. putty. (*G. Carbol kitt*.) One part of carbolic acid is mixed with four parts of boiled linseed oil, and chalk added till it is of the consistence of putty.

C. soap. (*G. Carbolseife*.) Carbolic acid added to soap in the proportion of 1 to 10. A disinfecting agent in washing.

C. spray. A solution of 1 part of carbolic to 25 of water, used with a spray apparatus in ulcerated sore throat.

Also, a weaker solution, 1 to 100, used as a steam spray to produce a cloud of carbolised vapour around the part, when an operation is performed by the antiseptic method.

C. wax. (*G. Carbolwachs*.) Carbolic acid 1 part, melted with yellow wax 10 parts. Used to impregnate ligatures or bandages.

Carbolici acidi aqua. U.S. Glycerite of carbolic acid ten drachms, distilled water sufficient to make a pint; one drachm contains a grain of the acid.

C. acidi glycerinum. B. Ph. Carbolic acid 1 part, glycerine 4; rubbed together till dissolved. Dose, 5 to 10 minims in water.

C. acidi glyceritum. U.S. Similar to the Glycerinum of the B. Ph.

C. acidi suppositorum cum sapone. Carbolic acid 12 grains, and soap, in powder, 180, starch to form a mass sufficient for twelve suppositories.

C. acidi unguentum. U.S. Carbolic

CARBOLISATED—CARBON.

acid 60 grains, ointment 420; mix. Requires dilution in using.

Carbolised. (Same etymon.) Prepared, or charged with, carbolic acid.

Carbolised. (Same etymon.) Containing, or prepared with, carbolic acid.

C. camphor. An oleaginous liquid obtained by mixing 2 parts of a solution of 9 parts of carbolic acid in one of alcohol, with 12 parts of powdered camphor. Used as an antiseptic dressing, in the proportion of 1 part to 20 of water or more.

C. catgut. See *Catgut*, *carbolised*.

C. res'in-cloth. Thin calico muslin steeped in a solution of carbolic acid 2 parts, castor oil 2, resin 16, spirits 40. Used as an antiseptic dressing.

Carbon. (*L. carbo*, a coal. *F. carbone*; *I. carbonio*; *S. carbono*; *G. Kohlenstoff*.) Symb. C. At. weight 11.97. A tetratomic element existing in three forms: the diamond, crystallizing in cubes or regular octahedra; graphite, occurring in hexagonal plates belonging to the rhombohedral system; and charcoal, an amorphous form. It constitutes a large part of all animal and vegetable matter, from which it may be obtained by burning in close vessels.

C. ac'ids. A term for organic acids.

C. bichlo'ride. An incorrect name for carbon tetrachloride.

C. bisulph'ide. Same as *C. disulphide*.

C. bisulph'uret. Same as *C. disulphide*.

C. bromide. A compound said to be present in some specimens of commercial bromine.

C. dichlo'ride. C_2Cl_2 . Formed by passing the vapour of the tetrachloride of carbon through a red-hot tube. A mobile liquid, sp. gr. 1.629, boils at 117°C . (242.6°F .) Its vapour is anæsthetic.

C. dioxi'de. (*F. acide carbonique*; *I. and S. acido carbonico*; *G. Kohlenäure*.) CO_2 . Carbonic acid. Formed when charcoal burns in the air, and when a carbonate is decomposed by a stronger acid, as marble by hydrochloric acid. It is a colourless gas, with pungent smell and taste, sp. gr. 1.5241, soluble in water, but expelled by boiling. It will not support combustion, and destroys animal life. It has been liquefied and solidified by pressure and cold. It exists in atmospheric air in the proportion of .2 to .5 per 1000, and in water in variable proportions. It is a product of respiration, and is decomposed and the carbon fixed by the green leaves of plants.

Carbonic acid gas has been used in the photophobia of strumous ophthalmia, and has been inhaled in a dilute form in chronic cough and asthma. In solution, as soda water, it relieves vomiting and gastrodynia. It is used as a local sedative in a yeast poultice.

Poisoning by carbonic acid gas occurs when it is present in the proportion of 50 per 1000 of air and upwards. A smaller quantity produces headache, sickness, and loss of appetite. When pure it is instantly fatal. Poisoning by this gas has occurred in close rooms from burning a charcoal stove, in fermenting vats, in lime kilns, in old wells, and in coal mines (choke damp). There is, when death does not occur at once without a struggle, pain in the head, drowsiness, giddiness, weakness, blueness of the lips and skin, palpitation, quick breathing, sometimes convulsions and vomiting, coma, and death. The brain is congested with effusion of serum into

the ventricles, the blood is dark and uncoagulated.

Tests for carbonic acid are the reddening of litmus paper, and the production of a white precipitate in solution of lime or baryta.

C. disulph'ide. CS_2 . Formed by passing the vapour of sulphur over charcoal at a high temperature. It is a volatile, transparent, colourless liquid, of great refractive and dispersive power, of disagreeable odour and pungent taste. It is of sp. gr. 1.292; it boils at 46°C . (114.8°F .) It is a diffusible stimulant, exciting the secretions of the skin and kidneys. It has been used internally in rheumatic and arthritic affections, in paralysis, and in skin diseases. Externally it has been used for the cold produced by its evaporation; its vapour has been applied to enlarged lymphatic glands, and to the skin for the relief of neuralgia. It is also used as a local application to chronic ulcers. Dose, one minim.

Its vapour arrests putrefaction of organic substances and destroys the lower forms of life. When inhaled it produces headache, giddiness, and other nervous disturbances, and, in the end, anæsthesia.

C. gas. A hard, iron-grey substance deposited in the upper part of the retort used in the manufacture of coal gas. It may also be obtained by passing olefiant gas through a red-hot porcelain tube. It is used for the carbon cylinders or plates of Bunsen's battery and the poles for the electric light.

C. huma'num. (*L. humanus*, belonging to man.) An old term for the human faces or excrement.

C. hydr'iodide. Iodoform.

C. min'eral. Name for charcoal with various proportions of earth and iron, without bitumen; it is of a grey blackish colour, has a silky lustre, and the fibrous texture of wood; found in small quantities stratified with brown coal, slate coal, and pitch coal.

C. monochlo'ride. C_2Cl_2 . Obtained by passing the vapour of chloroform through a red-hot tube. It is in white needles.

C. monosulph'ide. CS . Obtained by exposing carbon bisulphide, in sealed tubes, to direct sunshine. It is a maroon-coloured powder, of sp. gr. 1.66, tasteless and inodorous.

C. monox'ide. (*Carboneum oxydatum*. *F. oxyde de carbone*; *G. Kohlenoxyd*.) CO . Carbonic oxide. Prepared by heating potassium ferrocyanide with sulphuric acid. It is colourless, tasteless, does not support combustion, burns with a pale blue flame. Its sp. gr. is .9678, and it is only slightly soluble in water. It is very poisonous; has been recommended as an anæsthetic, but is very dangerous.

In poisoning by carbonic oxide there are no other symptoms than insensibility and coma. The blood is very red, the brain slightly congested, and the auricles distended. It is supposed that the hæmoglobin is converted into a new and stable compound by carbonic oxide.

Tests for carbonic oxide in the blood are the extension of the hæmoglobin absorption band towards the red; and the deposit of a red precipitate when caustic soda is added to the blood, instead of the brownish-green precipitate of healthy blood.

C. monox'ide hæmoglob'in. See *Hæmoglobin*, *carbon monoxide*.

C. oxychlo'ride. Same as *Carbonyl chloride*.

CARBONACEOUS—CARBONAS.

C. oxy sulph'ide. Same as *Carbonyl sulphide*.

C. protosulph'uret. (Πρώτος, the first.) Same as *C. monosulphide*.

C. sesquichloride. (L. *sesqui*, one half more.) Same as *C. trichloride*.

C. sesquioxide. Iodoform.

C. sulph'ide. Same as *C. disulphide*.

C. sulph'uret. Same as *C. disulphide*.

C. terchloride. (L. *ter*, thrice.) Chloroform.

C. tetrachloride. (Τετράς, four. F. *tetrachlorure de carbone*. G. *Carbonetetrachlorür*.) CCl_4 . Formed by passing the vapour of carbon bisulphide, together with chlorine, through a red-hot porcelain tube, and the resultant distilled with potash. A colourless, transparent liquid, with an agreeable odour, of sp. gr. 1.56, and a vapour density of 5.33. It boils at 77° C. (170.6° F.) Its vapour is anæsthetic, like that of chloroform, but it is unsafe, in consequence of its depressing influence on the heart. Locally it is useful in neuralgia.

C. trichloride. (Τρεῖς, three.) C_2Cl_6 . Is produced by the action of chlorine, in sunshine, on ethyl chloride. It is white and crystalline, and of a camphorous odour; insoluble in water, easily soluble in alcohol and ether; it melts at 160° C. (320° F.), and boils at 182° C. (359.6° F.) It has been given in Asiatic cholera, and used as a disinfectant in foul ulcers. Dose, four grains.

Carbonaceous. (G. *kohlenstoffhaltig, kohlig*.) Of, or belonging to, or of the nature of, carbon.

C. acid. Carbonic acid, Carbon dioxide.

C. lungs. The same as *Anthraxis pulmonum*.

Carbonæmia. (Carbon; *αἷμα*, blood. F. *carbonémie*.) A term for the accumulation of carbonic acid in the blood.

Carbonas. A carbonate, a salt of carbonic acid.

C. ammo'nise, Belg. Ph. The *Ammonia carbonas*.

C. ammo'nise pyro-oleosus liqui'dus, Belg. Ph. Ammonium carbonicum pyro-oleosum two parts, dissolved in eight parts of distilled water.

C. ammo'nise solu'tus, Belg. Ph. (L. *solutus*, dissolved.) One part of carbonate of ammonia dissolved in nine parts of distilled water.

C. ammon'icus. The *Ammonia carbonas*.

C. ammon'icus pyro oleosus, Belg. Ph. Same as *Ammonium carbonicum pyro-oleosum*.

C. ammon'icus solu'tus. (L. *solutus*, dissolved.) The *Liquor carbonatis ammonici*.

C. bary'tæ. Barium carbonate.

C. bary'ticus. Barium carbonate.

C. bismu'thi. See *Bismuthi carbonas*.

C. cal'cicus. Same as *Calcis præparata*.

C. cal'cicus præcipita'tus. The *Calcis carbonas præcipitata*.

C. cal'cis depura'tus, Belg. Ph. (L. *calx lime; de*, from; *puro*, to purify.) Same as *Calcia præparata*.

C. cal'cis præpara'tus. Same as *Calcis carbonas præparata*.

C. ferri, Belg. Ph. Same as *Ferri carbonas*.

C. ferro sus sacchara'tus. The *Ferri carbonas saccharatus*.

C. ka'licum. The *Potassa carbonas*.

C. ka'licus depura'tus. (L. *de*, from; *puro*, to purify.) Carbonate of potassium, obtained by dissolving and recrystallising the commercial salt.

C. ka'licus pu'rus, Belg. Ph. (L. *purus*, pure.) Same as *Carbonas potassa purus*.

C. lith'icus. The *Lithia carbonas*.

C. lixi'vis cru'dus. (L. *lixivium*, lye; *crudus*, undigested.) Commercial potassium carbonate.

C. lixi'vis pu'rus. (L. *purus*, pure.) Purified carbonate of potash.

C. magne'siæ, Belg. Ph. Same as *Magnesia carbonas*.

C. magne'siæ cum hydra'te magne'siæ. Carbonate of magnesia.

C. magne'sicus. The *Magnesia carbonas*.

C. magne'sicus cum a'qua. (L. *cum*, with; *aqua*, water.) Same as *Magnesia carbonas*.

C. mangane'sii, Belg. Ph. Same as *Manganese carbonate*.

C. mangano'sus. Same as *Manganese carbonate*.

C. na'tricus. (*Natron*.) A synonym of *Soda bicarbonas*.

C. na'tricus exsicc'a'tus. (L. *exsicco*, to dry up.) The *Soda carbonas exsiccata*.

C. na'tricus pu'rus. (L. *purus*, pure.) The *C. soda depuratus*.

C. plum'bicus. (L. *plumbum*, lead.) A synonym of *Plumbi carbonas*.

C. plum'bi vena'lis, Belg. Ph. (L. *venalis*, for sale.) Commercial carbonate of lead.

C. potas'sæ comple'tus. (L. *completus*, filled full.) Potassium bicarbonate.

C. potas'sæ cru'dus. (L. *crudus*, undigested.) Commercial carbonate of potash.

C. potas'sæ depura'tus, Belg. Ph. (L. *de*, from; *puro*, to purify.) Commercial potassium carbonate dissolved in water and recrystallised.

C. potas'sæ pu'rus, Belg. Ph. (L. *purus*, pure.) Carbonate of potash obtained by deflagrating six parts of cream of tartar with three parts of nitre, dissolving and crystallising.

C. potas'sæ vena'lis, Belg. Ph. (L. *venalis*, for sale.) Commercial potassium carbonate.

C. potas'sicus. The *Potassa carbonas*.

C. so'dæ. See *Soda carbonas*.

C. so'dæ acid'u'lis. (L. *acidulus*, sourish.) Bicarbonate of soda.

C. so'dæ anhy'drus, Belg. Ph. ('*An*, neg.; *deap*, water.) Same as *Soda carbonas exsiccata*.

C. so'dæ comple'tus. (L. *completus*, filled full.) Sodium bicarbonate.

C. so'dæ depura'tus, Belg. Ph. (L. *de*, from; *puro*, to purify.) Commercial carbonate of soda dissolved in water and recrystallised.

C. so'dæ exsicc'a'tus. See *Soda carbonas exsiccata*.

C. so'dæ solu'tus, Belg. Ph. (L. *solutus*, dissolved.) Purified carbonate of soda dissolved in four parts of distilled water.

C. so'dæ vena'lis, Belg. Ph. (L. *venalis*, for selling.) Commercial carbonate of soda.

C. so'dicus. The *Soda carbonas*.

C. zin'cicus. The *Zinci carbonas*.

C. zin'cicus nat'ivus. (L. *nativus*, natural.) Native carbonate of zinc or calamine.

CARBONATE—CARBUNCLE.

Carbonate. (F. *carbonate*; I. *carbonato*; G. *kohlensaure*.) A salt of carbonic acid.

Carbonated. (F. *carboné*. G. *carbonisirt*.) Containing carbonic acid.

C. waters. Mineral waters containing a greater or less amount of carbonic acid in solution. They are sparkling in appearance, sharp and brisk to the taste, and redden litmus paper. They are also called acid or sour waters.

Carbo'nei bisulphidum. The Carbon disulphide.

C. tetrachloridum. The Carbon tetrachloride.

Carbo'neous. (F. *carboné*.) Containing carbon.

Carbo'neum. (L. *carbon*. G. *Kohlenstoff*.) The element carbon.

C. bichlorat'um. Same as Carbon dichloride.

C. chlorat'um. A synonym of Chloroform.

C. oxidat'um. Carbonic oxide.

C. protochlorat'um. (Πρωτος, the first.) Same as Carbon dichloride.

C. sesquichlorat'um. (L. *sesqui*, once and a half.) The Carbon trichloride.

C. sulfurat'um. The Carbon disulphide.

C. sulphurat'um. A synonym of Carbon disulphide.

C. superchlorat'um sulfurosum. Same as C. trichlormethylsulfurosum.

C. trichlorat'um. (Τρις, three.) A synonym of Carbon trichloride.

C. trichlormethylsulfurosum. Same as Methylum trichloratum sulfuroso-chloridum.

Carbon'ic. (L. *carbo*, a coal; F. *carbonique*; I. *carbonico*; G. *kohlensaure*.) Containing, or having relation to, carbon.

C. acid. Same as Carbon dioxide.

C. acid bath. See Bath, carbonic acid.

C. acid gas. Same as Carbon dioxide.

C. acid water. The *Aqua acidæ carbonici*.

C. anhydride. (Αν, neg.; ὑδρ, water.) Carbonic acid or carbon dioxide.

C. oxide. Same as Carbon monoxide.

C. oxychloride. Same as Carbonyl chloride.

Carbonide. A term formerly applied to some of the salts of oxalic acid, such as those of zinc and lead, after they had been exposed to a certain temperature; oxalic acid being looked upon as an hydracid composed of hydrogen and a radicle containing oxygen and carbon, heat was supposed to drive off all but the metal and the radicle, and the compound was called a carbonide.

Carboniferous. (L. *carbo*, a coal; *fero*, to bear. G. *kohlehaltig*.) Bearing, having, or containing, coal or carbon.

Carbonii disulphidum. See Carbon disulphide.

C. tetrachloridum. See Carbon tetrachloride.

Carbo'nis bichloridum. (L. *bis*, twice.) Same as Carbon tetrachloride.

C. sesquichloridum. (L. *sesqui*, one half more.) Same as Carbon trichloride.

C. sesquiodidum. A synonym of Iodoform.

C. sulphuretum. Same as Carbon disulphide.

C. trichloridum. (Τρις, three.) See Carbon trichloride.

Carbonisation. (L. *carbon*, charcoal or

carbon. F. *carbonisation*; I. *carbonizzazione*; G. *Verkohlung*.) The process of converting organic substances into charcoal, by the application of heat and the admission of a little air.

Carbonisation is adopted in some toxicological researches, for the purpose of destroying organic substances which might mask the chemical reactions.

The term is also applied to the destruction of tissue occurring in very severe burns.

Carbonised. (L. *carbo*.) Being converted into charcoal.

Also, applied to simply blackened surfaces.

Carbonite. A salt of Carbonous acid.

Carbonium. Same as Carboneum.

Carbonometry. (Carbon; μέτρον, a measure.) The measurement of the quantity of carbonic acid exhaled in the breath.

Carbonous. (F. *carbonoux*.) Having relation to carbon.

C. acid. (F. *acide carbonoux*.) A name proposed for oxalic acid, inasmuch as it was supposed to be an oxyacid of carbon intermediate between carbonic oxide and carbonic acid.

Carbonoxide. A name proposed for the combination of carbon and oxygen.

Carbonycinchon'ic acid. A crystallisable acid, the product of the action of potassium permanganate on cinchonin.

Carbonyl. CO. A dyad radical which, in the free state, is carbon monoxide.

C. chloride. COCl₂. Obtained when a mixture of equal volumes of dry chlorine and carbonic acid gas are exposed to sunlight. It is a colourless gas, having a pungent, unpleasant, suffocating smell. It liquefies below 8° C. (46.4° F.)

C. sulphide. COS. Produced when carbon monoxide, mixed with vapour of sulphur, is passed through a red-hot tube. It is a gas of sp. gr. 2.104, having a resinous odour and an acid reaction. It burns with a faint blue flame; it is soluble in water. It exists in some sulphur springs, and in volcanoes.

Carbonyldiurea. C₂H₄N₂O₃. A white powder formed by heating urea to 100° C. (212° F.) with carbonyl chloride.

Carbores'cens. A name of the *Copperis pulcherrima*.

Carbosulphuret. A combination of carbon sulphide with an alkali.

Carbovin'ic acid. H.Eth.CO₂KCO₂. An acid that has not been obtained in a separate condition. Carbovinat of potash is supposed to be produced when carbonic acid is transmitted through a solution of potassium hydrate in absolute alcohol, and is decomposed into ether and carbonate of potash.

Carboxyl. CO.OH. A hypothetical monad radicle supposed to be contained in all the organic acids.

Carbuncle. (L. *carbunculus*, dim. of *carbo*, a live coal. F. *escarboucle*; I. *carbuncchio*; G. *Carfunkel*.) A precious stone; a variety of the garnet, of a deep red colour, with a tinge of scarlet. Formerly used as a preservative against poisonous and infectious diseases.

Also (ἀνθραξ; L. *anthrax*; F. *anthras*; I. *antrace*, *carbone*; S. *carbunculo*; G. *Kohlenbeule*, *Brandschwür*, *Karbunkel*.) A circumscribed inflammation of the subcutaneous connective tissue always terminating in a slough and suppuration. It begins by a small vesicle on a dusky-red indurated base, with considerable pain; pus forms and

CARBUNCLED—CARCHARIAS.

the base enlarges, and becomes doughy and elevated; then small openings appear, giving passage to greyish sloughs and pus; the openings enlarge, the sloughs separate, and healing by granulation occurs; or the carbuncle increases, the suppuration becomes very copious, the strength wastes, and the patient dies. The general condition is that of weakness, with disturbed digestive organs. Bad food, wasting diseases, especially diabetes, and the acute febrile conditions, induce a condition in which carbuncle is likely to occur. It is a disease of mature life. There is often no distinct local cause, though septic infection may now and then be traced. Carbuncle differs from boil chiefly in degree, and in its greater tendency to advance from its circumference. The larger the disease, the nearer the head, and the more unhealthy the patient, the greater is the danger to life.

C., berry. A synonym of the variety of carbuncle called *Terminthus*.

C., eschar. (Εσχάρα, the scab on a wound caused by a burn.) A synonym of the variety of carbuncle called *Pruna*.

C., facial. By some authors described as malignant pustule, but by most recognised as a distinct disease. Commences as a small pustule on the lip, usually the upper, which rapidly produces a hard oedematous swelling of the adjacent parts, of a dusky hue, and very painful. The constitutional symptoms are severe, and of the character known as typhoid. It is very fatal. Pyæmia is a common termination. It has been supposed to be connected with the growth of bacteria or micrococci.

C., fungous. A synonym of *Terminthus*.

C., malignant. Same as *C. facial*.

Carbuncled. (L. *carbunculus*, a precious stone.) Having the appearance of a carbuncle. Pimply and red.

C. face. A synonym of Good's *Ionthus corymbifer*, or of *Acne rosacea*.

Carbuncular. (L. *carbunculus*. F. *carbunculaire*.) Of the nature, or appearance, of carbuncle.

C. exanthem. A synonym of *Anthraxia*, of Dr. Mason Good.

Carbunculate. (L. *carbunculus*, a carbuncle, the precious stone.) Like to carbuncle, tuberculate.

Carbuncula'tio. (L. *carbunculo*, to suffer with a carbuncle.) A carbuncle.

C. oculi. (L. *oculus*, the eye.) A term for carbuncle of the eyelids.

Carbunculation. (Same etymon.) The occurrence of canker, or blight, in the bud of a plant.

Carbunculoid. (L. *carbunculus*; εἶδος, form.) Resembling carbuncle.

Carbunculous. (L. *carbunculus*. F. *carbunculeux*.) Relating to a carbuncle, or to anthrax.

Carbunculus. (L. dim. of *carbo*, a glowing coal.) See *Carbuncle*.

C. anginosus. (L. *angina*, the quinsy.) Same as *Cynanche maligna*.

C. benignus. (L. *benignus*, mild.) A synonym of *Boil*.

C. contagiosus. (L. *contagio* contagion.) Same as *Malignant pustule*.

C. gallicus. (L. *Gallicus*, French.) Same as *Malignant pustule*.

C. gravis. (L. *gravis*, severe.) A term applied to ordinary carbuncle, accompanied by

serious constitutional symptoms, and often pyæmia.

C. hungaricus. (L. *Hungaricus*, Hungarian.) Same as *Malignant pustule*.

C. labiorum et genarum. (L. *labium*, a lip; *gena*, a cheek.) Same as *Gangrenous stomatitis*.

C. polonicus. (L. *Polonia*, Poland) Same as *Malignant pustule*.

C. pulmonum. (L. *pulmo*, a lung.) Same as *Gangrene of the lung*.

C. rubineus. (L. *rubineus*, ruby-red.) The gem *Carbuncle*.

C. septentrionalis. (L. *septentrionalis*, the north.) A synonym of *Malignant pustule*.

C. simplex. (L. *simplex*, simple.) Ordinary carbuncle.

C. ulcusculosus. (L. *ulcusculus*, a small sore.) A synonym of *Cynanche maligna*.

Carbure'ic acid. A synonym of *Allophanic acid*.

Carburet. (F. *carbure*; I. *carburo*.) A term for the combination of carbon with any other substance; now usually called *Carbide*.

Carburetted. Of the nature of a carburet.

C. hydrogen. Same as *Methane*.

Carbure'tum. Same as *Carburet*.

C. ferri nativum. (L. *nativus*, natural) Native carbon of iron or graphite.

C. hydrogen'il. Light carburetted hydrogen or methane.

C. sulfuris. Carbon disulphide.

Carby'lic sulphate. C₂H₄. 2SO₂. A substance supposed by Robiquet to be a first formed and temporary product in the making of ether.

Carcan'ieres. France; Departement de l'Ariège. A pleasant village, 2290 feet above sea-level. Thirteen springs, of a temperature varying from 25° C. to 59° C. (77° F. to 138° F.), and containing sodium sulphide. The water is used in skin diseases, in rheumatic and in catarrhal affections.

Car'caros. (Καρκαίρος, to vibrate or quake.) Trembling; shaking. A term applied to a pernicious intermittent fever speedily fatal.

Car'carus. Same as *Carcaros*.

Car'cax. (Κάρα, a head.) Name for a kind of poppy, the head of which is so large that it will contain a pint and a half, according to Hartmannus, *de Opio*, ii, 3.

Carcer. (L. *carcer*, a prison.) An old term, used by Paracelsus, *de Morb. Ament.* tr. ii, c. 3, for a medicine proper for restraining inordinate movements of mind or body, as in chorea.

Carcerule. (L. dim. of *carcer*. F. *carcérule*.) A superior dry, indurated, one or many seeded fruit, with the carpels adherent around an axis, as in the mallow. Each cell of a carcerule is essentially like an achæmium.

Carcer'ular. (L. *carcer*. F. *carcéculaire*.) Bearing, or being like, a carcerule.

Carcharadonta. (Κάρκαρος, sharp-pointed; ὀδὼν, a tooth.) Old term for those tribes of animals having sharp-pointed teeth.

Carcharias. A Genus of the Suborder *Selachoides*, Order *Chondropterygii*, Class *Pisces*.

C. vulgaris. (L. *vulgaris*, common. F. *requin*; I. *pescé cane*; S. *tiburón*; G. *Haifisch*.) The white shark. The liver supplies an oil used instead of cod-liver oil; the teeth are popularly used to help the cutting of the teeth in children by rubbing the gums; the flesh is eaten.

CARCHESIUM—CARCINOPOLYPUS.

Carchesium. (Καρχήσιον, the highest point of a ship's mast, or the holes at its top, through which the ropes pass.) Term, used by Galea, *de Artic.* iii, 25, for a kind of noose formerly used in reducing dislocations, which resembles the rope passing round the topmast of a ship, keeping it steady on both sides.

Carchesium. The same as *Carchesium*.

Carcinocoele. (Καρκίνος, cancer; *Coele*, ulceration.) A cancerous ulcer.

Carcinethron. (Καρκινῆθρον.) Name of a plant, supposed to be the *Polygonum aviculare*.

Carcinie. (Καρκίνος, cancer.) Alibert's term for cancer of the skin.

Carcinodes. (Καρκινώδης, cancerous.) Having cancer; full of cancer.

Also, ulcerated, gangrenous.

Carcinoid. (Καρκίνος, a crab, cancer; *idos*, likeness. *F. carcinoides*; *G. krebsähnlich*.) Resembling the crab; also, resembling cancer.

Carcinoides. (Καρκίνος, cancer; *idos*, form.) Resembling cancer.

Carcinoma. (Καρκίνωμα, a cancer, from *καρκίνος*, a crab. *F. carcinoma*; *G. Krebs*.) Although now generally used to signify the disease cancer, this word has been applied by authors in other ways.

Indolent non-malignant tumours have been so named.

Those forms only of cancer in which the structure resembles brain matter have been thus called.

This designation has by some been restricted to the early stages only of cancer.

C. adenoides. See *Cancer, adenoid*.

C. alveolar. (L. *alveolus*, a hollow vessel.) Colloid cancer.

C. arborum. (L. *arbor*, a tree. *G. Baumkrebs*.) The diseased condition of a tree, called canker.

C. asbestinum. (Ἀσβόλη, soot.) Chimney-sweepers' cancer.

C. atrophicum. (Ἀτροφία.) Cancer which has undergone atrophic degeneration in whole or in part.

C. caminus purgantium. (L. *caminus*, a furnace; *purgare*, to cleanse.) Chimney-sweepers' cancer.

C. cicatricialis. (L. *cicatrix*, a scar.) A scirrhus cancer in which the softer structures have degenerated in parts and been absorbed, and the stroma has hardened and contracted.

C. colloid. Same as *Cancer, colloid*.

C. desmold. (Δέσμα, a bond; *idos*, likeness.) Under this term, R. Schulz includes all those malignant atypical connective-tissue new growths which are included under the names of lymphosarcoma, lymphadenoma, and pseudoleucemic tumours.

C. durum. (L. *durus*, hard.) Scirrhus cancer.

C. encephaloides. (Ἐγκέφαλος, the brain; *idos*, likeness.) Encephaloid cancer.

C. epitheloides. (Ἐπιτίθημι, to place upon.) Epithelial cancer.

C. epithelioides. (Same etymon.) Epithelial cancer.

C. fasciculatum. Same as *Sarcoma, fasciculata*.

C. fibrosum. (L. *fibrosus*, fibrous. *G. Faserkrebs*.) Scirrhus cancer, from its appearance.

C. gelatinosum. Same as *Cancer, gelatinous*.

C. glandular. (L. *glandula*, glands; *G. Drüsenzellenkrebs*.) Primary carcinoma of the glandular organs; the female mammary gland, liver, thyroid glands, salivary glands, including the pancreas, prostate gland, kidneys, testicles, and ovaries, are stated in their order of frequency.

C. haematodes. (Αἱματώδης, blood-like.) Haematoid epithelial cancer.

C. lenticular. (L. *lentacula*, a little lentil. *G. lenticulärer Bindegewebskrebs*.) A term applied to a brownish-red nodular appearance of the skin sometimes observed over a mammary or other scirrhus cancer as it involves the skin.

C. linguae. (L. *lingua*, the tongue.) Cancer of the tongue.

C. medullar. (L. *medulla*, marrow.) Encephaloid cancer, from its resemblance to medullary nervous tissue.

C. medullaris. (L. *medulla*.) Encephaloid cancer.

C. melanodes. (Μέλας, black. *G. Pigmentkrebs*.) Melanotic cancer.

C. melanotum. (Μελανότης, blackness.) Melanotic cancer.

C. mollis. (L. *mollis*, soft.) Encephaloid cancer, from its softness.

C. myxomatodes. See *Cancer, myxomatous*.

C. nigrum. (L. *niger*, black.) Melanotic cancer.

C. osteoides. (L. *os*, bone; *idos*, likeness.) Osteoid cancer.

C. reticular. (L. *reticulum*, a web.) Scirrhus cancer, from its reticulated appearance.

C. reticulatum. (Same etymon.) A term applied by Müller to those forms of scirrhus cancer in which the cancer cells become converted into yellowish granule corpuscles, and the larger trabeculae of the stroma become more distinct and prominent on section.

C. sarcomatodes. Same as *Cancer, sarcomatous*.

C. scrotil. (L. *scrotum*, the scrotum.) Chimney-sweepers' cancer.

C. simplex. (L. *simplex*, simple.) Scirrhus cancer.

C. spongiosum. (L. *spongia*, a sponge.) Encephaloid cancer, and its haematoid form.

C. teleangiectodes. See *Cancer, teleangiectatic*.

C. tuberosum. (L. *tuber*, a swelling. *G. knotiger Bindegewebskrebs*.) A cancer of the skin, primary or secondary, occurring in flat or rounded, red or livid, nodules of varying size, and frequently in large numbers; they often ulcerate, sometimes are thus entirely destroyed, and cicatrization takes place.

C. ventriculi. (L. *ventriculus*, the stomach.) Cancer of the stomach.

C. villosum. (L. *villosus*, shaggy.) Villous cancer.

Carcinomatos. (F. *carcinomatos*; *G. krebsartig*.) Having the nature of, or resembling, carcinoma.

C. struma. (Struma.) A term for malignant disease of the thyroid gland or of lymphatic glands.

Carcinomeleosis. (Καρκίνωμα, cancer; *ἄλκωσις*, ulceration.) An ulcerated cancer.

Carcinopolypus. (Καρκίνος, cancer; *πολύς*, many; *πούς*, a foot.) A cancerous or malignant polypus.

CARCINOSES—CARDAMOMUM

Carcino'ses. (Καρκίνος. *G. Karkinosen.*) A name by Eisenmann for a family of diseases, including the different forms of cancer and cancer-like diseases, tubercular, scirrhus, and encephaloid.

Carcino'sis. (Καρκίνος.) The production and development of cancer.

Also, a synonym of the disease *Cancer*.

C. millia'ris acu'ta. (*L. miliu*m, millet seed; *acutus*, violent.) A rapid primary or secondary development of minute cancerous masses in or on the surface of the internal organs.

Carcinous. (Καρκίνος, cancer.) Belonging to cancer.

Carcinus. (Καρκίνος, cancer.) A synonym of *Cancer*.

C. spongio'sus. (*L. spongia*, a sponge.) Encephaloid cancer.

C. vulga'ris. (*L. vulgaris*, common.) A term under which Dr. Mason Good includes all forms of cancer, with the exception of encephaloid cancer.

Carcinus. (Καρκίνος, a crab.) A Genus of the Family *Portunida*, Tribe *Brachyura*, Order *Decapoda*.

C. mœ'nas, Leach. (*L. Mœnas*, a Bacchante. *F. crabe enragé*.) The shore crab. Used as food.

Carcythium. Name by Necker for the mycelium of fungi.

Cardaman'tica. (Κάρδαμον, the nasturtium or cress.) The *Lepidium iberis*; also, the *Cardamine pratensis*.

Cardameleum. A medicine mentioned by Galen, *C. M. per Gen.* vii, 7.

Cardamin'dum. (Κάρδαμον, cardamine; *ludós*, Indian.) The Indian cress, *Tropaeolum indicum*.

Cardami'në. (Καρδάμινη.) A Genus of the Nat. Order *Crucifera*.

C. ama'ra, Linn. (*L. amarus*, bitter. *F. cresson amer.*) Bittercress. Used as an antiscorbutic.

C. asarifolia, Linn. (*L. asarum*, wild spikenard; *folium*, a leaf.) Used in Europe as an antiscorbutic.

C. fonta'na. (*L. fontanus*, belonging to a spring.) The *Nasturtium officinale*.

C. hirsu'ta, Linn. (*L. hirsutus*, hairy.) Small bittercress. Used as an antiscorbutic. The seeds are said to be diuretic.

C. impa'tiens, Linn. (*L. impatiens*, that will not suffer anything.) Hab. Europe. Used as an antiscorbutic.

C. nasturtioi'des, Berter. (*L. nasturtium*, a kind of cress; *εἶδος*, likeness.) Used in Chili as an antiscorbutic.

C. nasturtium. The *Nasturtium officinale*.

C. pratensis, Linn. (*L. pratensis*, growing in meadows. *F. cresson des prés*; *I. cardamindo*; *S. nastuerzo de prados*; *G. Wiesen-kresse, Kukukskraut*.) Cuckoo flower. Leaves pungent, rather bitter. Used as an antiscorbutic, and in calculus; the flowers were supposed to be diuretic, diaphoretic, and antispasmodic, and were used in chorea and asthma; the flowering tops had a reputation in epilepsy.

Cardami'num minu's. A name for the *Tropaeolum minus*.

Cardamom. See *Cardamomum*.

C., Alepp'o. The fruit of *Elettaria cardamomum*.

C., bas'tard. The fruit of *Elettaria major*.

C., Ben'gal. The fruit of *Amomum aromaticum*.

C., Bir'mah, bas'tard of. The fruit of *Amomum xanthioides*.

C., Ceylon'. The fruit of *Elettaria major*.

C., Chi'na, hair'y. The fruit of *Amomum villosum*.

C., Chi'na, o'void. The fruit of *Amomum medium*.

C., Chi'na, round. The fruit of *Amomum globosum*.

C., Clu'sius's. The fruit of *Amomum Clusii*.

C., Clu'sius's, pol'ished. The fruit of *Amomum Danielli* and *A. Clusii*.

C., clu'ster. The fruit of *Amomum cardamomum*.

C., com'mon. The official cardamom.

C., Gärt'ner's. The product of *Amomum Danielli*.

C., Gärt'ner's black. The *Zingiber nigrum*.

C. gala'nga. The fruit of *Alpinia galanga*.

C., great'er. The fruit of *Elettaria major*.

C., great-wing'ed. The *Amomum maximum*.

C., Java. The fruit of *Amomum maximum*.

C., korari'ma. The *Amomum korarima*.

C., large. The fruit of the *Elettaria major*. Also, the *C., Java*.

C., les'ser. A variety of the official cardamom.

C., long. The fruit of *Elettaria cardamomum*.

C., Madagas'car. The fruit of *Amomum angustifolium*.

C., Madras'. The fruit of *Elettaria cardamomum*.

C., Mal'abar. The fruit of *Elettaria cardamomum*.

C., Nepaul'. The fruit of *Amomum subulatum*, or perhaps of *A. maximum*.

C., offi'nal. The fruit of *Elettaria cardamomum*.

C., round. The fruit of *Amomum cardamomum*.

C., Si'am, bas'tard. The fruit of *Amomum xanthioides*.

C., Sibe'rian. A name of the seed of the star-anise, *Illicium anisatum*.

C., small. The official cardamom.

C., spi'ny. The fruit of *Amomum xanthioides*.

C., true. The fruit of *Elettaria cardamomum*.

C., wild. The fruit of *Elettaria major*, and *Amomum xanthioides*; and also a name given in the Cape Colony to the fruit of *Fagarastrum capense*.

C., wing'ed. The fruit of *Amomum maximum*.

Cardamomi sem'ina. (*L. semen*, seed.) Cardamom seeds. See *Cardamomum*.

Cardamomum. (Καρδάμωμον. *F. cardamome*; *I. and S. cardamomo*; *G. kleine Kardamomen, Kardamomenfrucht*.) Cardamoms. The dried capsules of the *Elettaria cardamomum*. The other varieties are not official. The capsules, when ripe, are picked and dried at a fire; they are 3" to 10" long, 2" to 4" thick, three-sided, with rounded angles, and yellowish-white in colour.

CARDAMON—CARDIAC.

They contain several seeds, which are small, angular, roughish, reddish-brown without, white within, of a warm, pungent, aromatic taste and an aromatic odour. They contain 10·4 per cent. of fixed oil, 4·6 per cent. of volatile oil, 4·7 per cent. of colouring and mucilaginous matters, 3 per cent. of starch, and 77·3 per cent. of woody fibre. The volatile oil contains a crystalline camphor. Cardamom is a warm, pleasant aromatic. Used as an adjunct to purgatives and stomachics.

C. Bandaēn'se, Martius. The *Amomum macraspermum*.

C. ma'jus. (L. *major*, greater.) The fruit of *Elettaria major*.

C. malabar'se. The fruit of *Elettaria cardamomum*.

C. malabar'icum. The fruit of *Elettaria cardamomum*.

C. mi'nus. (L. *minor*, less.) The fruit of *Elettaria cardamomum*.

C. piper'a'tum. (L. *piperatus*, peppered.) Grains of Paradise.

C. rotun'dum. (L. *rotundus*, round.) The fruit of *Elettaria cardamomum*.

Cardamon. (Κάρδαμον.) The Greek name for the *Tropaeolum majus*, or nasturtium.

Cardamum. Same as *Cardamomum*.

Carden's amputa'tion. A mode of amputating the leg at the knee through the condyles of the femur, suggested in 1863 by Carden. The flaps resemble those made in Teale's mode of operating.

Cardia. (Καρδία, the heart, the stomach. *F. cardia*; I. *cardia*; S. *cardias*; G. *der obere Magenmund*.) The upper or œsophageal orifice of the stomach. It is situated at the level of the eleventh dorsal vertebra and the inner end of the sixth costal cartilage of the left side.

The heart, according to some uses.

Cardiac. (Καρδια. *F. cardiaque*; I. and S. *cardiaco*.) Belonging to the heart, or situate near the heart or the cardiac orifice of the stomach.

Applied to medicines supposed to invigorate the heart.

C. affec'tions. (L. *afficio*, to affect. G. *Herzleiden*.) Diseases or disorders of the heart.

C. anx'iety. (L. *anxietas*, solicitude. G. *Herzbekelemmung*.) The feeling of distress accompanying irregular or imperfect action of the heart.

C. apnœ'a. See *Apnœa, cardiac*.

C. ap'oplexy. Extravasation of blood, in larger or smaller patches, into the muscular structure of the heart, generally accompanied by atheromatous disease of the neighbouring branches of the coronary artery and fatty degeneration of the surrounding tissue.

C. ar'teries. (*F. artères cardiaques*.) See *Coronary arteries of heart*.

C. asth'ma. (G. *Herzasthma*.) See *Asthma, cardiac*.

C. cœc'um. (L. *cæcus*, blind.) A caecal appendage to the stomach. The Dugong possesses two, and the blood-sucking bat, *Desmodus*, has one highly developed, the pyloric end of the stomach being very small, and the cardiac end developed into a long pouch, the cardiac cæcum; the food requiring little provision for digestion, but much for storing.

C. concre'tions. (L. *concretus*, from *con-cresco*, to grow together. G. *Herzgerinnsel*.) Masses composed of more or less firm blood-clot

or of coagulated fibrin, some formed after death, some in the act of dying, and others by slow increase sometime before death; they often extend into the vascular trunks.

C. concre'tions, ombol'ic. (Εμβολή, from ἐμβάλλω, to throw in.) A sanguineous or fibrinous clot enclosing matters, such as pus-corpuscles, which have come from a distant part.

C. concre'tions, a'brinous. Clots consisting for the most part of fibrin, firm, solid, or gelatinous, of a yellow colour, and moulded on the wall of the containing cavity, and entangled in the irregularities of, and projections from, the surface; they often extend into the blood-vessels. They are formed during life, in most instances probably in the act of dying, but in some cases they are formed much more slowly and are accompanied by great dyspnoea, anxiety, and palpitation, accompanied often with a livid complexion and tendency to syncope. It is supposed that some diseases, such as scarlatina and febrile puerperal conditions, tend to fibrinous clotting.

C. concre'tions, glob'ular. Smooth-surfaced, buff-coloured, sometimes red-streaked clots, most commonly found in the left ventricle, sometimes solid throughout, sometimes containing, in one or more cavities, a thick puriform, often brownish-red fluid; the solid parts consist of a fibriform network, with granular matter, compound granular cells, oil globules, and sometimes crystalline needles; the fluid matter consists of molecules, broken-up corpuscles, oil globules, and colourless crystals, and, when dark coloured, in addition, altered blood-corpuscles and rhomboidal crystals of hæmatoidin.

C. concre'tions, lam'inated. (L. *lamina*, a layer.) Coagula formed of layers like those in an aneurysm, occasionally met with in the left auricle and in aneurysms in the ventricular walls.

C. concre'tions, mould'ed. Clots, whether of blood or of fibrin, found in the heart after death, and moulded to the shape of the cavity or the part of the cavity in which they lie.

C. deform'ity. (L. *deformo*, to disfigure. G. *Herzmisbildung*.) Malformation of the heart.

C. dias'tole. See *Diastole, cardiac*.

C. disca'se. Disease of the heart.

C. distress'. Same as *C. anxiety*.

C. drop'sy. Droopy depending on heart disease.

C. dul'ness. (G. *Herzdämpfung*.) The note obtained by percussion of the chest over the heart. It varies in quality in different individuals, and in extent according to the greater or less inflation of the lungs, the presence or absence of disease, and the strength or lightness of the percussion. The lower edge of cardiac dulness is not generally to be distinguished from the left upper edge of hepatic dulness.

C. dul'ness, deep. The note obtained by strong percussion. According to Walsh, it extends normally in a vertical direction from the third to the edge of the sixth costal cartilage, and transversely from the left nipple to a little beyond the right edge of the sternum, opposite the fourth costal cartilage; the longest measurement is the diagonal one from the upper part of the third right costal cartilage to the point of the apex beat.

C. dul'ness, superfic'ial. The note obtained by light percussion. According to Walsh,

CARDIAC.

It is a rudely triangular space, bounded on the right by a vertical line extending at mid-sternum from the level of the fourth rib to that of the sixth; on the left by an oblique line passing outwards and downwards, at a more or less acute angle from the latter, opposite the fourth cartilage, and curving inwards again, somewhat within the site of the nipple, to the sixth rib, beside the heart's apex; and inferiorly by a line gently sloping to the left, from the central point of the lower edge of the sternum along the sixth cartilage. Forced inspiration diminishes its extent; expiration increases it above and on the left.

C. dyspnœa. (*Aus*, an inseparable prefix meaning hard; *pnœa*, from *πνέω*, to breathe.) Difficulty of breathing, from disease or disorder of the heart.

C. engorgement. (*F. engorger*, to be choked up; from *en*, into; *gorge*, the throat.) Over-much blood in the heart from cardiac muscular weakness, valvular deficiency or obstruction, or distal impediment, evidenced by a dusky complexion, oppression at the præcordia, and dyspnœa.

C. excitement. (*L. excito*, to rouse up. *G. Herzaufregung*.) Rapid or tumultuous action of the heart.

C. fever. Same as *Carditis fever*.

C. ganglia. Numerous small ganglia found on the branches of a plexus of nerves, ramifying under the endocardium and penetrating the muscular tissue. Also, see *Ramak, ganglion of*; *Leidig, ganglion of*; *Bidder, ganglion of*; and *Wrisberg, ganglion of*.

C. ganglion. (*F. ganglion cardiacum*.) Same as *Wrisberg, ganglion of*.

C. glands. (*G. Cardialiastrum*.) The glands found in the walls of the cardiac extremity of the stomach.

C. herb. The *Leonurus cardiaca*, or motherwort.

C. impulse. (*L. impulsus*, part. of *impello*, to urge on. *F. choc du cœur*; *G. Herzschock, Herztoss*.) The shock or blow felt and often seen over the apex of the heart at the same time as the systole of the ventricles. In man, it is ordinarily most distinctly felt in the fifth costal interspace, about an inch below and a little to the inner side of the left nipple.

C. inhibition. (*L. inhibeo*, to restrain. *G. Herzhemmung*.) The more or less complete arrest of the heart's action through influence conveyed by filaments of the vagus nerve.

C. irritation. (*L. irrito*, to excite. *G. Herzerregung*.) Same as *C. excitement*.

C. lymphatic glands. (*G. Herzlymphdrusen*.) Three or four lymphatic glands lying behind and one in front of the arch of the aorta.

C. lymphatics. The lymphatic vessels accompanying the coronary vessels. Those of the right side collect into a trunk, which courses the arch of the aorta to reach the trachea, and opens into the right lymphatic duct. Those of the left side pass along the pulmonary artery, and, running by the side of the trachea, join the thoracic duct.

C. murmurs. See *Murmurs cardiaci*.

C. muscles. See *Heart, muscles of*.

C. nerve, deep. The middle cardiac nerve.

C. nerve, greater. The middle cardiac nerve.

C. nerve, inferior. The lower cardiac nerve.

C. nerve, lower. A sympathetic nerve arising from the third cervical or first thoracic ganglion. The right nerve runs behind the subclavian artery, where it communicates with the middle cardiac and the recurrent laryngeal nerves, and joins the deep cardiac plexus. The left nerve generally joins the middle cardiac before reaching the plexus.

C. nerve, mid'dle. A sympathetic nerve arising from the middle cervical ganglion. The right nerve passes behind the carotid sheath, where it communicates with the upper cardiac and recurrent laryngeal nerves, runs along the trachea, where it joins again branches of the recurrent laryngeal, and ends in the right side of the deep cardiac plexus. The left nerve enters the chest between the carotid and subclavian arteries, and joins the left side of the deep cardiac plexus.

C. nerve, smaller. The lower cardiac nerve.

C. nerve, superficial. The upper cardiac nerve.

C. nerve, super'ior. The upper cardiac nerve.

C. nerve, up'per. A sympathetic nerve arising from the upper cervical ganglion, and sometimes from the cord connecting the first two ganglia on the right side. Both nerves lie in the neck on the longus colli, behind the carotid sheath, and run in front of the lower thyroid artery, where they send branches to the thyroid body and the recurrent laryngeal nerve. In the thorax the right nerve, after crossing in front or behind the subclavian artery, runs along the innominate to the deep cardiac plexus, while the left follows the left carotid to the aortic arch, and joins sometimes the superficial, sometimes the deep, cardiac plexus.

C. nerves. The nerves of the heart are derived from the cardiac plexus, and are partly of cerebro-spinal, partly of sympathetic origin; they run across the direction of the superficial muscular fibres, and in their course present small ganglia.

C. nerves, cervical. Branches of the pneumogastric. The upper branches are given off in its course through the neck, and join the sympathetic cardiac nerves. The lower branch arises as the pneumogastric enters the thorax; that of the right side runs along the innominate artery and joins the deep cardiac plexus; that of the left side joins the superficial cardiac plexus.

C. nerves, thoracic. (*Θώραξ*, the chest.) Branches of the pneumogastric nerve in the neck and of its recurrent laryngeal branch. They end in the deep cardiac plexus.

C. neuralgia. (*Νεύρον*, a nerve; *Αλγος*, pain.) A synonym of *Angina pectoris*.

Also, applied to the severe præcordial pain sometimes accompanying disease of the mitral valve of the heart.

C. oppression. (*L. oppressio*, from *opprimo*, to press down. *G. Herzbeklemmung*.) Same as *C. stricture*.

C. orifice. (*L. orificium*, an opening. *F. orifice*; *G. Aeria*.) The opening by which the œsophagus communicates with the stomach. Called also *Cardia*.

C. orifices. (*L. myricism*.) A term which usually includes the two auriculo-ventricular orifices and those of the aorta and the pulmonary artery.

CARDIARIUS—CARDIODEMIA

contract.) Diminution in size of the heart. The condition called concentric hypertrophy.

Cardia'rius. (*Καρδία*. *G. Herzwurm*.) A worm said to have been found in the heart or pericardium.

Cardiasth'ma. (*Καρδία*; *ἀσθμα*.) Difficulty of breathing, or asthma depending on heart disease.

Cardiatel'ia. (*Καρδία*; *ἀτελής*, imperfect.) Incomplete development of the heart.

Cardiatom'ia. Same derivation and meaning as *Cardiatomy*.

Cardiatomy. (*Καρδία*; *τομή*, a cutting.) Dissection of the heart.

Cardiatroph'ia. (*Καρδία*; *ἀτροφία*, atrophy.) Atrophy of the heart.

Cardiaux'e. (*Καρδία*; *αὔξη*, growth.) Hypertrophy of the heart.

Cardieche'mata. (*Καρδία*; *ἤχημα*, a sound.) The sounds of the heart.

Cardiec'tasis. (*Καρδία*; *ἐκτασις*, extension. *G. Herzerweiterung*.) Dilatation of the heart.

C. parti'al'is. (*L. pars*, a part.) Aneurysm of the heart.

Cardielco'sis. (*Καρδία*; *ἔλκωσις*, ulceration.) Ulceration of the heart.

Cardiethmolipo'sis. (*Καρδία*; *ἠθύμός*, a sieve; *λίπος*, fat.) Fatty deposit about the heart.

Cardieurys'ma. (*Καρδία*; *εὐρύς*, wide.) A morbid dilatation of the heart.

Cardilæ'a. A synonym of *Cardialgia*.

Cardim'elech. (*Καρδία*, the heart; *Heb. melech*, a king.) A supposed active principle in the heart, superintending what are now called the vital functions. *Dolæus, Encyclop. l. ii.*

Cardimo'na. An old term for heartburn.

Cardinal. (*L. cardinalis*, pertaining to a door-hinge.) Principal, chief.

C. flower. The *Lobelia cardinalis*, because its scarlet flower was the colour of a cardinal's robes.

C. flower, blue. The *Lobelia syphilitica*.

C. flower, common. The *Lobelia cardinalis*.

C. hu'mours. An old term for four principal humours of the animal body, viz. blood, phlegm, yellow bile, and black bile, which were said to be formed by the four elements variously combined, and from which all the solids and fluids of the body were derived. Such was the doctrine taught by Hippocrates, after the Pythagorean school, and adopted by Galen and his followers. The same doctrine was prevalent among the ancient Hindoos, and it is probable, as pointed out by Dr. Allen Webb, that Pythagoras and the Greeks derived it from this source.

C. plant. The *Lobelia cardinalis*.

C. points. (*G. Cardinalpunkte*.) The points of section of the horizontal plane and the meridian, hence the north point and south point, and, with the equator of the heavens, thus the east and west points. These are the chief points of the compass.

In Listing's diagrammatic eye there are six points termed cardinal, namely: (1) the focus, situated upon the retina, in which rays falling parallel upon the cornea are united; (2) the anterior focus, at which rays, coming from the retina, and whose course is parallel in the vitreous humour, are brought to a focus; (3 and 4) the two "principal" points, which lie on the optic axis

in the anterior chamber, close behind the cornea; (5 and 6) the two "nodal" points, in which the lines of direction cut each other, and which are near the posterior surface of the lens.

C. pro'cess. (*L. processus*, a projection.) The median process on the hinge line of the dorsal valve of *Brachiopoda*.

C. teeth. A term applied to those projections of one valve of the shell of lamellibranchiate Molluscs, which, fitting into corresponding depressions of the other valve, lie directly under the beak.

C. veins. (*F. veines cardinales*; *G. Hauptblutader*.) The venous trunks, one on each side of and beneath the hinder section of the primitive skeletal axis, which transmit the blood in the early embryo from the Wolffian bodies, the vertebral column and the parietes of the trunk to the sinus venosus by means of the ducts of Cuvier. Similar veins from the anterior part of the body, the primitive jugular veins, join the duct of Cuvier. These are sometimes called anterior cardinal veins and the others posterior cardinal veins. In the course of development the cardinal veins become discontinuous with the primitive jugular veins, and form the azygos veins. In fishes they are permanent.

The term has also been given to the veins of the elbow-joint or *Cardinamentum*.

C. vein, ante'rior. The primitive jugular vein.

C. vein, poste'rior. The *C. vein*.

Cardinalis de Lu'go cortex. (*L. cardinalis*; *cortex*, bark.) Cardinal de Lugo's bark. A name for cinchona bark, from his having administered it in 1658 to a great many patients, it being then newly introduced as a medicine.

C. flos. (*L. flos*, a flower.) The *Lobelia cardinalis*.

Cardinamen'tum. (*L. cardo*, a hinge.) An old term (*Gr. γιγγλυμοειδής*), used by Hippocrates for ginglymus, or the hinge-like articulation. *Galen, de Fract. i, 10.*

Cardinif'erous. (*L. cardo*; *fero*, to bear.) Applied to bivalve shells the valves of which are articulated in form of a hinge.

Cardioarter'ial. (*Καρδία*, the heart; *ἀρτηρία*, an artery.) Belonging to the heart and artery.

C. interval, con'jugate. (*L. interval-lum*, a space between; *con'jugo*, to join together.) The interval which occurs between the commencing systolic rise in an artery and the closure of the aortic valve at the heart.

C. interval, first. The interval which occurs between the commencing systole of the heart and its indication with a registering instrument in an artery, as the radial.

C. interval, sec'ond. The interval which occurs between the closure of the aortic valve at the heart and its indication in an artery.

Cardiobot'anum. (*Καρδία*, the heart; *βοτάνη*, grass.) The *Centaurea benedicta*.

Cardiocele. (*Καρδία*, the heart; *κύλη*, a tumour. *F. cardiocele*; *G. Herzbruch*.) Protrusion of the heart through a wound of, or aperture in, the diaphragm.

Cardiocrys'talli. (*Καρδία*; *κρύσταλλος*, crystal.) Whitish microscopical crystals found in the substance of the heart.

Cardiode'mia. (*Καρδία*; *δημός*, fat. *F. cardiode'mie*.) Fatty degeneration of the heart.

CARDIODYNE—CARDIOSPERMUM.

Cardiodynā. (*Kardia*; *dýnē*, pain.) Pain at the heart.

C. spasmodica intermittens. (*L. spasmodica*, a spasm; *intermittens*, to leave off for a while.) Intermittent spasmodic pain of the heart. A synonym of *Angina pectoris*.

Cardiodyn'ia. (*Kardia*, *dýnē*, pain.) Pain in the heart.

Cardiodysæsthe'sia. (*Kardia*; *dysæsthe'sia*, insensibility.) Disturbed nervous power of the heart.

Cardiodysæuria. (*Kardia*; *dys*, prefix signifying bad; *urine*, a nerve.) The same as *Cardiodysæsthe'sia*.

Cardiogastrocœl'r'hina. (*Kardia*, the cardiac end of the stomach; *gastrocœl'r'hina*, the stomach; *cœl'r'hina*, a hard tumour.) Stricture of the cardiac opening of the stomach.

Cardiogram. (*Kardia*; *gramma*, a writing.) An old term for *cardialgia*. Also, applied to incipient aneurysm of the heart or of the aorta.

Also, applied to general dilatation of the heart. Applied, by some modern authors, to *angina pectoris*.

C. cor'dis sinist'ri. (*L. cor*, the heart; *sinister*, left.) *Angina pectoris*.

Cardiograph. (*Kardia*, the heart; *graphein*, to write.) An instrument which registers, in the form of alternately ascending and descending curves, the systole and diastole of the auricles and ventricles of the heart. It consists of an india-rubber air-bag, the exploring bag, which is introduced into the cavity of the heart, and which communicates with a second, the indicating bag, by a tube; when the heart contracts on the first bag the second is dilated, and *vice versa*. A lever is so adapted by one end to the indicating bag that its movements are amplified by the other, which is furnished with a marker, which, touching a band of paper kept in constant and even motion by clockwork, registers the various motions of the heart.

Also, applied to a modification of the sphygmograph, which, being attached to the chest wall, marks and records the character of the heart's impulses.

Cardiograph'ic. (Same etymon.) Relating to *Cardiography*.

Cardiography. (Same etymon.) The application and use of the cardiograph.

Cardioid. (*Kardia*; *eidēs*, likeness.) Heart-shaped.

Cardioinhibitory. (*Kardia*; *L. inhibeo*, to restrain.) Restraining or arresting the heart's action.

C. con'tro. The part of the medulla oblongata at and around the place of origin of the pneumogastric nerve, which is believed to be the centre for the reception of peripheric influences and the propagation of the consequent inhibitory impulses through the pneumogastric nerve, which results in the arrest of the heart's action.

Cardiology. (*Kardia*; *lógos*, a discourse.) The knowledge of, or a treatise on, the heart.

Cardiomalacia. (*Kardia*; *malacia*, softness. *G. Herzmalacia*.) Softening of the heart's substance.

Cardiom'eter. (*Kardia*; *metron*, a measure.) Same as *Hæmodyn timer*.

Cardiometry. (Same etymon.) The measurement of the size of the heart by percussion and auscultation.

Cardiomyolip'e'sia. (*Kardia*; *lip'e'sia*, a muscle, *lipos*, fat.) Fatty degeneration of the muscular structure of the heart.

Cardion'chus. (*Kardia*; *ónchos*, a tumour.) Aneurysm of the heart.

Cardioneural'gia. (*Kardia*; *neurōn*, a nerve; *dýlos*, pain.) Neuralgia of the heart. A synonym of *Angina pectoris*.

Cardion'cosis. (*Kardia*; *óncos*, disease.) Heart disease.

Cardiopalmus. (*Kardia*; *palmos*, palpitation. *F. cardiopalmus*; *G. Herzklopfen*.) Palpitation of the heart.

Cardioparaplasia. (*Kardia*; *para-plasie*, transformation.) Deformity of the heart.

Cardiopath'ia. (*Kardia*; *pathe'sia*, disease.) Disease of the heart.

Cardiopericardit'is. (*Kardia*; *peri-cardium*, the pericardium.) Inflammation of the heart and pericardium.

Cardiopetalous. (*Kardia*; *petalon*, a petal.) Having the limb of the petals centrally at the base.

Cardiophthalmos. (*Kardia*; *ophthalmos*, the eye.) A synonym of *Rhaphthalmos*.

Cardiophthar'ia. (*Kardia*; *phthar'ia*, from *phtheo*, to corrupt.) Corruption or decay of the heart's substance.

Cardiophyllous. (*Kardia*; *phyllos*, a leaf.) Having leaves in the centre.

Cardioplectic. (*Kardia*; *plectico*, from *plecteo*, to strike.) Relating to *Cardioplegia*.

Cardiople'gia. (*Kardia*; *plegē*, a stroke.) Paralysis of the heart.

Also, applied to a wound of the heart, and to sudden failure of its strength.

Cardiopletho'ra. (*Kardia*; *plethorā*, fulness.) Plethora of the heart's substance.

Cardiopolym'mia. (*Kardia*; *polym'mia*, much, *aima*, blood.) Same as *Cardioplethora*.

Cardiopterosus. (*Kardia*; *pteron*, a wing.) Having fins sloping towards the heart or its openings.

Cardiopul'monary. (*Kardia*; *L. pulmo*, the lung.) Belonging to the heart and lungs.

C. mur'mura. (*G. Herzklopfgeräusch*.) Murmure heard in the lungs at the time of the systole or the diastole of the heart, and depending on conditions of altered lung structure, such as the blowing murmur heard in connection with large thin-walled vomica near the heart, the systolic murmur heard in the pulmonary artery when there is pneumonic consolidation and contraction of the upper part of the left lung, and the murmur heard in the subclavian artery in connection with apical pulmonary induration.

Cardiopulmon'ic. (*Kardia*; *L. pulmo*.) Belonging to the heart and lungs.

Cardiorrheu'ma. (*Kardia*; *rhēma*, a fluxion.) Rheumatism of the heart.

Cardiorrhex'ia. (*Kardia*; *rhēxis*, a rupture. *G. Herzerreissung*.) Rupture of the heart.

Cardiosclero'sis. (*Kardia*; *sclerōsis*, hard. *G. Herzerhärtung*.) Induration of the tissues of the heart.

Cardiosperm'um. (*Kardia*; *sperma*, seed.) A Genus of the Nat. Order *Sapindaceæ*.

C. cœrt'anum. Linn. Hab. Brazil. Similar in use to *C. hancornium*.

CARDIOSPHYGMOGRAPH—CARDUUS.

C. halleae's abum, Linn. (*Ἀλυσκαβόν*, the plant alkekengi. *F. pois de merveille, pois de carur.*) Hab. India. Leaves, when boiled, are eaten as food. A decoction of the root is mucilaginous, aperient, diuretic, and diaphoretic. It is used as a lithontriptic, and in gonorrhoea; the seeds are used in rheumatism.

Cardiosphygmograph. (*Καρδία*; *σφυγμός*, the pulse; *γράφω*, to write.) An instrument, suggested by Garrod, consisting of a Marey's sphygmograph attached to a piece of board, to which a cardiograph is also connected in such a way that the levers of both instruments record their movements on the same paper, one giving the motion of the reflex of the heart, the other the pulsation of the artery at the wrist.

Cardiostenoma. (*Καρδία*; *στενός*, to straighten. *G. Herzerengerung.*) Contraction of the heart.

Cardiostenosis. (Same etymon.) The progress or formation of cardiostenoma.

Cardiothyroid exophthalmos. (*Καρδία*; *thyroid* body.) A synonym of *Exophthalmic goitre*. Suggested by the palpitation and the enlargement of the thyroid body which accompany the disease.

Cardiotomy. (*Καρδία*; *τομή*, a cutting.) Dissection of the heart.

Cardiotrauma. (*Καρδία*; *τραύμα*, a wound. *G. Herzwunde.*) A wound of the heart.

Cardiotremus. (*Καρδία*; *τρόμος*, a tremor. *G. Herzzittern.*) Tremor, or a slight degree of palpitation or fluttering of the heart.

Cardiotrophia. (*Καρδία*; *τροφή*, nourishment.) Nutrition of the heart.

Cardiotrotus. (*Καρδία*; *τροπήσκω*, to wound.) One who has a wound of the heart.

Cardipericarditis. Same as *Cardiopericarditis*.

Carditis. (*Καρδία*. *F. carditique.*) Relating to the heart.

Also, of the nature of carditis.

C. fever. (*G. Herzfieber.*) A variety of pernicious intermittent fever, accompanied by palpitation and tendency to fainting.

Carditis. (*Καρδία*. *F. cardite*; *G. Herzfeischentzündung.*) Same as *Myocarditis*.

C. externa. (*L. externus*, outward.) Pericarditis.

C. interna. (*L. internus*, inward.) Endocarditis.

C. membranosae. (*L. membrana*, a membrane.) Pericarditis.

C. muscularis. (*L. musculus*, a muscle.) Myocarditis.

C. musculo'sae. Same as *C. muscularis*.

C. polypo'sae. (*L. polypus*, a polypus.)

Fibrinous clots in the heart.

C. sero'sae. (*L. serum*, the watery part of a thing.) Pericarditis.

Cardium. (*L. cardo*, a hinge; from the hinge-like connection of the two shells; or from *καρδία*, the heart, from its shape. *F. bucarde*; *I. bucardia*; *G. Herzmuschel.*) The cockle. A Genus of the Family *Cardiadae*, Order *Siphoniata*, Class *Lamellibranchiata*.

C. edule. (*L. edulis*, eatable. *F. bucarde sourdon*; *I. bucardia*; *G. casbare Herzmuschel.*) The common cockle. Found plentifully buried in the sands on all the arid shores of Europe.

Cardioperæmia. (*Καρδία*, the heart; *ἔκπρ*, in excess; *αἷμα*, blood.) Term for *Cardio-plethora*.

Cardiypertrophia. (*Καρία*; *ἔκπρ*;

τροφή, nourishment.) Hypertrophy of the heart.

Card-like teeth. (*F. dents en cardes*, or *dents en râps.*) The teeth of fishes are so called when fine conical teeth are mixed with coarser ones.

Cardo. (*L. cardo*, a hinge.) Applied to the kind of articulation called ginglymus.

Also, a term for the basal articulation of the maxilla of some of the *Coleoptera*.

Cardo, Santo. The *Argemone mexicana*.

Cardol. $C_{20}H_{32}O_2$. A reddish-yellow, tasteless oil, contained in the cashew nut, the fruit of *Anacardium occidentale* and *A. orientale*. It is insoluble in water, soluble in alcohol. Its external and internal action is similar to cantharides, but the blistering process is more painful, and healing is less readily induced.

Cardoleum. The *Anacardium occidentale*.

Also, the same as *Cardol*.

C. prurians. (*L. prurio*, to itch.) The cardol obtained from *Anacardium orientale*. It is a rubefacient like mustard.

C. vesicans. (*L. vesica*, a blister.) The cardol from *Anacardium occidentale*. It is an active blistering agent.

Cardonium. A wine medicated with herbs. *Paracelsus, de Uloer. c. 55.* (Ruiland and Johnson, in *Lex.*)

Cardoon. (*F. cardon*, from *L. cardunculus*, dim. of *carduus*, a thistle. *I. cardone*; *S. cardo silvestre*; *G. Spanische Artichoke.*) The *Cynara cardunculus*. The stalks of the inner leaves, when blanched, are eaten as a vegetable.

C., Spanish. The *Scolymus hispanicus*. The roots and young shoots are eaten as food.

Cardopathium. (*Καρδία*, the heart; *πάθος*, disease.) A Genus of plants of the Nat. Order *Compositae*.

C. apulum. A variety of *C. corymbosum*, found in Apulia.

C. corymbosum, De Cand. (*L. corymbus*, a cluster. *F. chameleon noir.*) A plant having narcotico-acrid properties. It has been used externally in scaly and parasitic skin diseases.

C. Fontanæ. A variety of *C. corymbosum*, found in Tunis.

C. orientale. (*L. orientalis*, eastern.) A variety of *C. corymbosum*, found in Greece and Macedonia.

Cardopatium. Same as *Cardopathium*.

Cardopatium. A plant supposed to be the *Carlina acaulis*, or carline thistle.

Also, a synonym of *Cardopathium*.

Cardopericarditis. Same as *Cardiopericarditis*.

Cardua'ceæ. (*L. carduus*, a thistle.) Same as *Cynara'cephalæ*.

Cardua'ceous. (*L. carduus.*) Having the characters of the thistle.

Carduin'eous. Same as *Cardua'ceous*.

Cardunculus. (*L. dim. of carduus*, a thistle.) The *Cinara scolymus*, or artichoke. (Quincy.)

Carduus. (*L. carduus*, a thistle.) A Genus of plants of the Nat. Order *Compositæ*.

C. acanthus. The *Acanthus mollis*, or bear's breech.

C. altilis. (*L. altilis*, nutritive.) The *Cinara scolymus*, or artichoke.

C. arvensis. (*L. arven*, a field.) The *Serratula arvensis*, or common creeping way-thistle.

CAREBARENIS—CARICINEÆ.

O. benedictus. (L. *benedictus*, blessed.) The *Centaurea benedicta*, or blessed thistle.

O. brasiliensis. The *Ananassa sativa*, or pine-apple.

O. casabonensis. The *Chamapence casabonensis*. **O. chrysanthemum.** (Χρυσάνθεμον, a flower.) The *Cinara scolymus*, or artichoke.

O. domesticus. (L. *domesticus*, belonging to the family.) Same as *C. chrysanthemum*.

O. eriophorum. (Εριον, wool; κεφαλή, the head.) The *Cirsium eriophorum*.

O. eriophorum. The *Cirsium eriophorum*.

O. fullosum. The *Dipsacus fullonum*, or fuller's teasel.

O. haemorrhoidalis. (Αιμορροΐδες, piles.) The *Serratula arvensis*, or common creeping way-thistle.

O. lacteus. (L. *lacteus*, milky.) The *C. marianus*.

O. Mariae. (L. *Maria*, the mother of Jesus. *F. chardon Marie*; *G. Mariendistel*.) Same as *C. marianus*.

O. marianus. (Same etymon. *F. chardon Marie*, *Notre Dame*; *I. cardo di Maria*; *G. Mariendistel*, *Frauentistel*.) The common milk-thistle, or Our lady's thistle. Has been used as a sudorific and tonic. The seeds are oleaginous, and have been used in hemorrhages from the intestines and the uterus; also in amenorrhœa with hepatic disturbance. Two ounces of seeds are boiled in a pint of water, and a tablespoonful given every two hours.

O. monspessulensis. The *Cirsium monspessulanum*.

O. pinus. (L. *pinus*, belonging to the pine.) The *Atractylis gummifera*, gummy-rooted pine-thistle.

O. polyacanthus. (Πολύς, many; ἀκανθός, a thorn.) The *Chamapence casabonensis*.

O. sativus. (L. *sativus*, that which is sown.) The *Cinara scolymus*, or artichoke.

O. solstitialis. (L. *solstitialis*, belonging to midsummer.) The *Centaurea solstitialis*, or St. Barnaby's thistle.

O. stellatus. (L. *stellatus*, starred.) The *Centaurea calcitrapa*, common star-thistle.

O. syriacus. The *Notobasis syriacus*.

O. tomentosus. (L. *tomentum*, a stuffing for cushions.) The *Onopordon acanthium*, or cotton thistle.

O. venenis. (L. *Venus*, the goddess of love.) The *Dipsacus sylvestris*, or wild teasel.

O. virginiana. (Virginia, the state of that name.) Rocky mountains thistle. A starch is obtained from the root.

Carebarensis. Same as *Carebaria*.

Carebaria. (Καρνάρια, from *κάρν*, the head; *βάρος*, weight.) Old term, used by Hippocrates, *Aph.* v. 22, and Galen, in *Comm.* for heaviness of the head.

Carēna. An old term for the twenty-fourth part of a drop. (Buland and Johnson.)

Carēum. (Κάρων, caraway; or from *Caria*, its native country.) The carum or caraway.

O. vinum. (L. *vinum*, wine.) Term for wine boiled down to two thirds of its original quantity.

Carex. (L. *carex*, reed grass. *G. Riadgras*.) A Genus of the Nat. Order *Cyperaceæ*. The sedge.

O. arena ris. Linn. (L. *arenarius*, belonging to sand. *F. laiche de sables*, *chiendent rouge*; *L. carice*; *S. aspergano*; *G. Quecken-wortel*, *Sandegge*.) German sarsaparilla, sea-

sedge. Grows plentifully on the sea coast; its root is red without, white within, of a mild but somewhat disagreeable taste; is said to be serviceable in affections of the trachea, in rheumatism and gout, and is used as a substitute for sarsaparilla.

O. disticha. Huds. (Διστίχος, two-rowed.) Soft brown sea-sedge; German sarsaparilla. Used as *C. arenaria*.

O. hirta. (L. *hirtus*, hairy.) Same as *C. disticha*.

O. intermedia. (L. *intermedius*, that which is between.) Same as *C. disticha*.

O. patula. (L. *patulus*, spreading.) The *C. sylvatica*.

O. sylvatica. Huds. (L. *sylvaticus*, belonging to a wood.) Pendulous wood sedge. Used as *C. arenaria*.

O. villosa. (L. *villosus*, shaggy.) Same as *C. disticha*.

Carēya. A Genus of the Nat. Order *Barringtoniaceæ*.

O. arborea. Roxb. (L. *arborius*, tree-like.) Hab. India. The flowers or bark are used as a poultice. The bark is astringent.

Cariacon. A fermented liquor made in Cayenne, being a mixture of cassava, potatoes, and cane syrup.

Carriated. Same as *Carious*.

Caribbean. A name applied to the sea on the northern coasts of Granada and Venezuela.

O. bark. A false cinchona bark, the product of *Esostemma caribæum*.

Caribs. (G. *Karaiden*.) A people originally inhabiting the islands of the Caribbean Sea and the adjoining coast, but now nearly confined to the Republic of Honduras; they are of Red Indian race, and were cannibals.

O., black. Half-bred Caribs, having Negro blood in them.

O., red. A term applied to pure bred Caribs.

Carica. (Caria, a region of Asia Minor, where they were cultivated.) A dried fig.

A Genus of the Nat. Order *Papayaceæ*.

O. digitata. (L. *digitatus*, fingered.) Hab. the banks of the Amazon. Supplies a poison having the same reputation as the upas poison.

O. papaya. Linn. The papaw tree, a native of East and West India, and the Guinea Coast. The fruit is boiled and eaten with meat, as turnips are in this country; every part of the tree, except its ripe fruit, yields a milky juice. The juice of the fruit is used in the Mauritius as a remedy for tapeworm; it, as well as the seeds, are said to be emmenagogue and abortifacient. The juice (*F. lait de mamocire*) is also used to make tough meat tender; it has been proposed as a substitute for pepain.

Carices. G. Ph. (L. *carica*. *F. figues*; *G. Feigen*.) Dried figs.

O. fructus. (L. *carica*; *fructus*, fruit.) Dried figs.

Carices. (L. *carica*.) A synonym of *Papayaceæ*.

Also (L. *carex*), a Tribe of the Nat. Order *Cyperaceæ*, having declivous flowers, the males being unlike the females.

Caricin. An oily substance of peculiar unpleasant smell and taste, contained in the seeds of *Carica papaya*.

Caricinæ. A Tribe of the Nat. Order *Cyperaceæ*; same as *Carices*.

CARICIOUS—CARINA.

Caricous. (*L. carios.*) Resembling a fig.

Carium. (*Καριόν*, a kind of salve.) Used by Hippocrates, *de Ulcer.* l. xi, 7, seq., for an escharotic and detergent application made of black hellebore, sandarach, scales of copper, burnt lead, sulphur, orpiment, and cantharides, made up in form of a liniment, with oil.

Caries. (*L. caries.* *F. carie*; *I. carie*; *G. Fäule*, *Morschheit*.) Rottenness, decay.

The disease described under *C. of bone*.

In vegetables, the disease produced by *Uredo*. See *C. vegetable*.

C., articular. (*L. articulus*, a joint.) Caries affecting the joint ends of bones.

C., central. Caries originating on the medullary surface of bone.

C., dental. (*L. dens*, a tooth. *F. carie dentaire*; *G. Zahnfäule*.) A condition of progressive softening and destruction of the hard structures of the tooth, beginning usually in the dentine or the enamel, and depending probably on the chemical action of acid and other products of the fluids of the mouth, and frequently accompanied by the growth of low vegetable forms, such as *Oidium albicans*, species of *Leptothrix*, *Protozoous dentalis*, and some *Bacteria*. The enamel tissue loses coherence and is broken up, and the dentine tubes become softened and present varicosities; the secretion is acid, and the tooth in the vicinity is discoloured.

C., dental, penetrating. (*L. penetrare*, to pierce into.) Dental caries starting from a fissure and spreading deeply and widely, without much external manifestation.

C., dental, spreading. Same as *C., dental, penetrating*.

C., dry. Same as *C., siccus*.

C. from phosphorus. See *Phosphorus poisoning*.

C. fungous. (*L. fungosus*, spongy.) The condition of bone in those cases of joint-disease which are called fungous arthritis, and in which the caries of bone is accompanied by exuberant granulations arising from the medullary membrane.

C. gallica. (*L. gallicus*, French.) A synonym of hard chancre.

C. granulo'sa. (*L. granulum*, a small grain.) Same as *C. fungosa*.

C. interna. (*L. internus*, inner.) A term given to dental caries originating in the substance of the dentine, a view which is not generally held.

C. interna suppurativa circumscripta. (*L. internus*, inward; *suppurare*, to form matter; *circumscribo*, to describe a line around.) A term for the condition of bone abscess.

C., necrotic. (*Νεκρόν*, a dead body.) Caries accompanied by the death and discharge of greater or smaller fragments of bone; it is most frequent in the cancellous structure.

C. non-gallica. (*L. non*, not; *gallicus*, French.) A synonym of soft chancre.

C. of bone. (*Ταρβάν*; *F. carie*; *I. carie*; *S. caries*; *G. Beinfrass*, *Knackenfrass*.) A condition of inflammatory disintegration of bone analogous to ulceration of the soft parts. When superficial the periosteum is loosened, generally thickened, and in advanced conditions villous, from the growth of granulation tissue, the projections on its under surface fitting into depressions of the bone produced by disintegration; the bone itself is softened, its cancelli enlarged, and its surface ragged and irregular. The cavities are occupied by a brownish fluid containing oil globules and blood-cells, greater or less granules of dead bone, and structureless debris; the deeper part is often condensed. When caries occurs in the interior of bone the same process is observed; granulation tissue is developed from the medullary structures, and a cavity containing caseous matter, sanious pus, and bone debris may result. The short bones are the most liable to be attacked; and the disease is most common in scrofulous and syphilitic persons. Caries occurs at first with pain in the bone, accompanied by a red swelling, which before long suppurates; this bursts or is opened; it then gets smaller and degenerates into a sinus with everted edges, discharging a sanious offensive pus, and having at its bottom the bone ulcer, which may be felt by a probe as an unequal surface, which is rough and yields to pressure.

According to some, caries is less an inflammatory condition than a destructive fatty degeneration of the corpuscles contained in the lacunae of bone.

C., peripharic. (*Περιφάρεια*, the line round a circular body.) Caries arising from the articular or periosteal surface of bone.

C. profunda. (*L. profundus*, deep.) Rokitan's term for a condition in syphilitic bone disease in which there is destruction of tissue, beginning in the medullary cavity.

C. pudendo-rum. (*L. pudenda*, the privy parts.) An old term for a chancre.

C. sic'ca. (*L. siccus*, dry.) Caries with free granulation and considerable destruction of bone, but with no formation of pus.

C. simplex. (*L. simplex*, simple.) The ordinary caries attacking bone, in which the disease is comparatively shallow and its floor shows no fungating granulations, only molecular debris and pus cells.

C., syphilitic. Caries of bone occurring in the course of constitutional syphilis following the development of gummata.

C., vegetable. A term applied to the destructive changes which take place in wood, as the result of old age or the presence of larvae of coleopterous, lepidopterous, or other insects. It is also used to denote the conditions of disease, especially in cereal plants, produced by the lower fungi, as in smut and brand.

C., worm-eaten. A form of syphilitic caries in which there is an appearance, as of small pits, on the surface of the diseased bone.

Carim curini. *The Justicia colorium*.

Carina. (*L. carina*, the keel of a ship. *F. carène*; *G. Kiel*.) The lower petals of the papilionaceous corolla.

Also, any structure like the keel of a ship, such as occurs on the lower surface of the glumes of some grasses.

Also, the median longitudinal projection from the sternum of birds.

Also, the dorsal single plate of the shell of Cirripedes.

Also, formerly applied to what is described as the primal seminal rudiment communicated by the male to the ovum, which, if it undergoes incubation, becomes, after various changes, the animal itself.

Also, the vertebral column, especially of the foetus.

CARINAL—CARLSBRUNN.

Also, a deformity in which the sternum projects in its middle.

Carinal. (L. *carina*.) Relating to, or possessing, a *Carina*.

C. aestivation. See *Aestivation*, *carinal*.

Carinalis. (L. *carina*, a keel.) Same as *Carinate*.

Carinatae. (L. *carina*.) An Order of *Aves* containing all birds which have a carina or keel to the sternum.

Carinate. (L. *carina*. F. *cariné*; G. *keilformig*.) Keeled, keel-shaped.

Cariniferous. (L. *carina*; *fero*, to bear. F. *carinifère*; G. *keiltragend*.) Bearing a keel.

Carinulate. (L. *carinula*, dim. *carina*. F. *carinulé*.) Having a very light keel.

Caripoidium. (F. *caripéide*.) See *Caryopodium*.

Caripais. Properly *Caryopsis*.

Cariosity. (L. *caries*, rottenness.) Same as *Caries*.

Cariose. A Portuguese name for the *Palma edy*.

Carious. (L. *cariosus*, rotten. F. *carieux*; G. *verrot*, *faul*, *knockenfrassig*.) Affected with caries.

Caris. A Genus of the Order *Acaridea*, Class *Arachnida*.

C. elliptica. (Ελλειψις, the comic section called ellipse.) A parasite found on the common bat, *Vesperugo pipistrellus*.

Carisae. A Genus of the Nat. Order *Apocynaceae*.

C. carandas. Linn. Hab. India. Berries edible.

C. diffusa. (L. *diffusus*, extended.) Hab. India. Berries edible. Wood of old trees used as an aromatic.

C. edulis. Vahl. (L. *edulis*, eatable.) Berries esculent.

C. xylopteros. Dup. Th. (Ζύλον, wood; *πτερόν*, bitter. F. *bois amer de Bourbon*.) Hab. Réunion. Wood bitter. Used as a stomachic.

Carisaeae. A Tribe of the Nat. Order *Apocynaceae* having a single two-celled ovary and naked seeds.

Carium terrae. (L. *caries*, decay; *terra*, the earth.) Lime.

Carive. Pimento berries, the fruit of *Eugenia pimenta*.

Carvilland'i. Sarsaparilla, *Smilax officinalis*.

Carli'na. (*Carolus magnus*, Charlemagne, whose army, by using it, was preserved from the plague.) The carline thistle. A Genus of plants of Nat. Order *Compositae*.

Also the *C. acaulis*.

C. acanthifolia. All. (L. *acanthus*, the plant of that name; *folium*, a leaf. F. *carline chardonnee*, *artichaut sauvage*.) Hab. South Europe. A species the receptacle of which is used in the mountainous regions in the South of France as a substitute for the artichoke, called there artichaut sauvage.

C. acaulis. Linn. (L. *a*, neg.; *caulis*, a stem. F. *carline sans tige*; I. *carlina*; G. *Eberwurz*.) The carline thistle. Hab. mountainous districts, the Alps and Pyrenees. The root, official in the G. Ph. as *Radix carlinae*, is of a strong smell, and an aromatic bitter taste. The bark contains a bitter, strong scented oil. Used as a tonic, emmenagogue, and sudorific. Employed in magic incantations.

C. acaulis. Lamb. The *C. acanthifolia*, All.

C. caulescens. The *C. acaulis*.

C. chamissoi. Vill. The *C. acaulis*, Linn.

C. elatior. (L. *elatior*, higher.) The *C. subacaulis*.

C. gummifera. The *ἔξια* or *ἔξιν* of the ancients. Has been used as an anthelmintic. When fresh the root, which is large and fleshy, is said to be poisonous. The fleshy receptacles are preserved in sugar and eaten. The *Atractylis gummifera*.

C. subacaulis. De Cand. The *C. acaulis*, Linn.; or a variety with a stem about 30 centimètres, nearly 1 foot high.

C. utzka. Haec. The *C. acanthifolia*, All.

C. vulgaris. Linn. (L. *vulgaris*, common.) The carline thistle. Hab. Europe and Siberia. Used as a diaphoretic and diuretic.

Carline. See *Carlina*.

Also, a name of the *Ranunculus glacialis*.

C. thistle. The *Carlina acaulis*, and also the *C. vulgaris*.

C. thistle, prickly. The *Carlina vulgaris*.

Carlisle springs. United States; near the town of Carlisle, in Pennsylvania. A mild sulphur water. (Dunglison.)

Carlo Sancto. (S. *Carlo*, Charles; *santo*, saint.) St. Charles' root. Hab. Mechoacan. An undetermined plant, the bark of which is aromatic, bitter, and acrid. It is said to be sudorific, and to strengthen the stomach and gums.

Carlsbad. Austria; in the north-west of Bohemia. Altitude 1124 feet; beautifully situated in a narrow valley, surrounded by wooded hills. The climate is subject to considerable fluctuations, and is often damp and cold. The mineral waters, which spring from the granitic formation, are numerous, and vary in temperature from 44° C. (111·2° F.) to 75° C. (167° F.) The chief spring, the Sprudel, contains potassium sulphate 1·6, sodium sulphate 23·7, sodium chloride 10·3, sodium carbonate 13·6, calcium carbonate 2·9, magnesium carbonate 1·2, iron carbonate ·028, silica 7 parts, in 10,000, and free carbonic acid 7·6 cubic inches in a pint. The other sources have the same composition, with very little variation. The so-called Sprudelstein is an incrustation of salts on the fountains from evaporation of the water. The treatment at Carlsbad comprises both the drinking of the waters and their use as baths, and is indicated in chronic catarrhal affections of the stomach and intestines, in constipation and piles, in liver congestions from diet mistakes, in fatty liver, and in malarial engorgements; in jaundice and in gall-stones; in splenic enlargements, in renal calculus of lithic acid or oxalate of lime, and in chronic cystitis; in obesity, gout, and diabetes; in hypochondriasis.

Carlsbad waters are contraindicated in organic diseases of brain, heart, or lungs, and in cancer.

C. water, artichoke. Sodium sulphate, crystallised, 669 grains, sodium carbonate, in crystals, 862, sodium chloride 104, calcium chloride in crystals 103, magnesium sulphate 164 grains, water 2 gallons; dissolve and charge with carbonic acid.

Carlsbrunn. Austrian Silesia; in a valley of the Sudeten Mountains, 2350 feet above sea level. Mineral waters, containing magnesium,

CARLSHAVEN—CARNICULA

calcium, and iron carbonate, and a little manganese, with free carbonic acid. Used, with or without cow's milk, in uterine debility, anaemia, and chlorosis.

Carlsbadten. Germany; Province Hesse Nassau. Mineral springs, containing sodium chloride 203 grains in 10,000. Used as salt springs generally.

Carmentine. Malabar nuts, the fruit of *Adhatoda vasica*.

Carmelite water. (After the monks of the Carmelite Order, who make it, and who took their name from Mount Carmel.) The Eau des Carmes. See *Aqua carmelitana*.

Charmon. (*L. carmen*, a verse.) An amulet or charm, so called because it often consisted of a verse.

Carminans. (*L. carmino*, to turn into verse.) Same as *Carminatives*.

Carminant. Same etymon and meaning as *Carminatives*.

Carminantia. (*L. carmen*, a charm.) Carminative medicines.

Carminative. See *Carminatives*.

Carminative. (*L. carmen*, a song, a formula. *F. carminativ*; *L. carminativ*; *G. windstreibend, blähungstreibend*.) Having power to relieve pain of the bowels from flatulence, and acting speedily as by a charm or carmen.

Carminatives. (Same etymon. *G. blähungstreibende Mittel*.) The class of carminative medicines.

C., four greater. An old term for the seeds of anise, caraway, cummin, and fennel.

C., four lesser. An old term for the seeds of bishop's weed, stone parsley, smallage, and wild carrot.

Carmine. (*F. carmine*; *L. carmino*; *G. Carmin, Karminstoff*.) A red pigment obtained by treating a solution of cochineal with alum. It is used for staining structures for microscopic purposes.

C. blue. See *Indigo carmine*.

C. injecting fluid. Carmine 5 grs., glycerin, with 8 or 10 drops of hydrochloric acid, $\frac{1}{2}$ oz., glycerin 1 oz., alcohol 1 dr., solution of ammonia a few drops, water 6 dra. Mix the carmine with a few drops of water, then add 5 drops of liquor ammonia; to this add $\frac{1}{2}$ oz. of the glycerin, and shake; then add by degrees the acid glycerin; it should now have an acid reaction; lastly, mix the alcohol and the water. Used for injecting into the vessels. (Beale.)

C. staining fluid. A solution of carmine used for staining structures to facilitate microscopic examination, inasmuch as growing structures and nuclei of cells absorb the colour the most easily. Dr. Beale's formula is—Carmine 10 grains, dissolved by the aid of gentle heat in half a drachm of strong solution of ammonia, when it has cooled glycerin 2 oz., water 2 oz., and alcohol $\frac{1}{2}$ oz. are to be added. Others omit the glycerin. Both strong and weak solutions are used; the former for rapid, the latter for slow, staining.

Carminic acid. $C_{17}H_{15}O_6$. Contained in cochineal and in the flowers of *Morinda didyma*. A watery decoction is precipitated by lead acetate, the resulting lead carminate is decomposed by hydrogen sulphide, and the solution of carminic acid evaporated, treated with alcohol, lead carbonate, and ether in succession, and then evaporated. It is soluble in water and alcohol, and slightly in ether. It is a glycoside of red carmine.

Carmet. An alchemical name for the matter composing the philosopher's stone.

Carnabedia. An old name of caraway seed.

Carnabedium. An old name for carmin seed.

Carnahuca. The same as *Carnabedia*.

Carnal. (*L. carnalis*, from *carn*, flesh.)

Fleshly, sensual.

C. knowledge. Sexual connection.

Carna'ria. (*L. carnarius*, one who loves flesh, from *carn*, flesh. *F. carnassiers*.) Flesh-eating animals; divided into *Chiroptera*, *Insectivora*, and *Carnivora*.

Carnas'al. (*F. carnassier*, carnivorous.) Relating to flesh eating.

C. teeth. Teeth adapted to the mastication of flesh, such as the pointed fourth premolar teeth of most carnivora, which meets with its fellow of the upper jaw in a scissors-like action.

Carnatio. (*L. caro*, flesh.) A synonym of *Synsarcosis*.

Carnation. (According to some, through *F. carnation*, from its flesh colour, from *L. carnatio*, fleshiness, from *carn*, flesh; according to Prior, its original spelling was *coronation*, as representing the *Vestonica coronaria* of the early herbalists, and so called from its flowers being used in chaplets, *corona*. *Gr. καρνώφλλον*; *F. arillet*; *L. garofano*; *S. clavel*; *G. fleischfarbene Nelke*.) The *Dianthus caryophyllus*.

C. grass. A name given to several of the species of *Carex*, from their likeness to the leaves of the carnation.

C., Spanish. The *Poinciana pulcherrima*.

Carnaub's. Palm wax, collected in Brazil from the *Corypha cerifera* and other palms. It occurs as a powder on the leaves, which, when melted, becomes a hard, dry, yellowish, brittle mass, having a smooth fracture; it melts at 89° C. (192° F.).

C. root. The root of *Corypha cerifera*. Used in like manner to sarsaparilla.

C. wax. Same as *Carnaub's*.

Carnes colum'nes. See *Columna carnea*.

Carnelian. (*L. caro*, flesh. *F. cornaline*; *L. corniola*; *G. Carneol*.) A flesh-coloured variety of calcedony in its original application, but now employed to distinguish the transparent varieties of other colours. It is of uniform colour, but is sometimes clouded. It contains silica, alumina, ferric peroxide, magnesia, soda, potash, and carbon. It was highly valued for its medical properties. Also called *Cornelian*.

Carnel'olus. The carnelian.

Carneous. (*L. carneus*, of flesh. *F. charnu*; *G. fleischig, fleischartig*.) Consisting of, or resembling, flesh.

Also (*G. fleischfarbig*), of a flesh colour.

C. columns. See *Columna carnea*.

C. fibres. (*L. fibra*, a fibre.) The fibres of a muscle.

C. leaves. Leaves which contain between the upper and lower epidermic surface a more or less solid pulp.

Carneum marsupium. (*L. carneus*, fleshy; *marsupium*, a pouch.) The gemelli muscles.

Carnic'ula. (*L. dim. of caro*, flesh.) Term by Fallopius, *Expos. de Ovid.*, for a small fleshy substance. A caruncle.

Also, a term for the gums.

CARNIFEX SPAGYRICUS—CAROBA.

Carnifex spagyricus. (L. *carnifex*, an executioner; *spagyric*.) An alchemical name for fire when employed in the quest after the philosopher's stone.

Carnificatio. See *Carnification*.

C. pulmonum. (L. *pulmo*, a lung.) Hepatisation of the lung.

Also, see *Carnification of lung*.

Carnification. (L. *caro*, flesh; *facio*, to make. F. *carnification*; I. *carnificazioni*; S. *carnificacion*; G. *Verfleischung*, *Fleischwerdung*.) An alteration of tissue, whereby it assumes an unnatural appearance, as of flesh.

The term has also been used to designate amyloid or lardaceous degeneration.

C. of bone. Same as *Osteosarcosis*.

C. of lung. (F. *carnification pulmonaire*.) A term applied by Laennec to simple condensation of the lung, without inflammation, in which it becomes tough, leathery, inelastic, and having the appearance of muscle; it is the condition which is found in the fetal lung, in atelectasia, and in pressure from pleural effusions and such like.

Also, a synonym of *Hepatisation of lung*.

C. of lung, congestive. An induration of lung caused by congestion, dependent on heart disease.

Carnified. (Same etymon. F. *carnifié*.) Changed into muscle, or into the likeness of muscle or flesh.

Carniformis. (L. *caro*; *forma*, shape. F. *charnu*; G. *fleischähnlich*.) Flesh-like.

C. abscessus. (L. *abscessus*, an abscess.) An abscess, ordinarily occurring near the joints, which has a thick sac and a hard-edged opening.

Carnin. (L. *caro*, flesh.) $C_7H_5N_3O_2 + H_2O$. Found as yet only in Liebig's extract of meat. It is obtained in small, white, barely crystalline masses, slightly soluble in cold water, freely in hot water, insoluble in alcohol and ether; it has a slightly bitter after-taste.

Carnisation. Same as *Carnification of lung*.

Carnivora. (L. *caro*; *coro*, to devour. F. *carnassiers*; G. *Fleischfresser*, *Raubthiere*.) An Order of the Class *Mammalia*. Orbits and temporal fossae communicate; a distinct coronoid process; lower jaw possesses vertical motion only; clavicles absent or small; hallux and pollex not opposable; terminal phalanges of digits provided with sharp, curved claws; teeth in distinct sockets, with their surfaces simply covered with enamel; incisors generally six in each jaw; canines long, curved, and pointed; stomach simple; cæcum small, sometimes absent; teats abdominal; placenta deciduate and zonular; cerebellum never completely covered by cerebrum; usually three convolutions around the fissure of Sylvius.

Carnivorous. (Same etymon. F. *carnivore*; I. *carnivoro*; G. *Fleischfressend*.) Eating flesh. Applied to certain animals which live on flesh.

Also, to certain plants which have the power of dissolving and absorbing animal structures on the surface of their leaves, as the *Drosera*.

Also, applied to caustics as destructive of flesh.

Carnosa cutis. (L. *carnosus*, fleshy; *cutis*, the skin.) An old term for the *Panniculus carnosus*.

C. musculosa membrana. (L. *mus-*

culosus, muscular; *membrana*, a membrane.) Riolan's name for the corrugator supercili muscle.

Carnose. (L. *carnosus*, fleshy.) Having a fleshy consistence or resemblance.

Carnosity. (L. *carnosus*. F. *carnosité*; I. *carnosita*; S. *carnosidad*; G. *Fleischauswuchs*.) A fleshy growth.

C. of urethra. (Οὐρηθρα.) Granulations of the urethral mucous membrane, said to occur in gonorrhoea.

Also, a synonym of *Urethral caruncle*.

C., venereal. A synonym of *Condyloma*.

Carnosus. (L. *carnosus*, from *caro*, flesh. G. *fleischig*.) Fleshy.

C. panniculus. See *Panniculus carnosus*.

Car'o. (L. *caro*, by transposition connected with *κρίας*, and *Sana kraya*.) Flesh. Muscular structure.

Also, the soft portion of fruits.

C. accessorius. (Mod. L. *accessorius*, from L. *accedo*, to be added.) The flexor accessorius muscle of the foot.

C. adnata ad testem. (L. *adnatus*, part. of *agnascor*, to grow in addition; *ad*, to; *testis*, the testicle.) An old name for a sarcocele originating in the epididymis.

C. adnata ad vas. (L. *adnatus*; *ad*; *vas*, a vessel.) An old term for a sarcocele which apparently springs from the spermatic vessels.

C. anserina. Same as *Cutis anserina*.

C. bubula. (L. *bubulus*, of oxen. G. *Bindfleisch*.) Beef.

C. contusa. (L. *contusus*, part. of *contundo*, to bruise.) A deep-seated bruise.

C. crudus. (L. *crudus*, raw. G. *rohes Fleisch*.) Raw meat.

C. excrecens. (L. *excreasco*, to grow out.) An excrescence, whether a skin growth, as a wart, or a large granulation, springing from a sore.

C. fungosa. (L. *fungosus*, fungous.) The exuberant granulations known as proud flesh.

C. gallina'cea. (L. *gallinaceus*, belonging to poultry.) A synonym of *Cutis anserina*.

Also (G. *Hühnerfleisch*), the flesh of poultry.

C. glandulosa. (L. *glandulosus*, glandulous.) A term for the epiglottic glands.

C. luxurians. (L. *luxurio*, to abound in. G. *wildes Fleisch*.) Exuberant granulation of wounds.

C. orbicularis. (L. *orbicularis*, circular.) The placenta.

C. ovilis. (L. *ovilis*, belonging to sheep. F. *mouton*; G. *Schöpfenfleisch*, *Hammelfleisch*.) Mutton.

C. parenchymatica. (Παρίσχυμα, anything poured in beside.) The texture of organs, such as the glands.

C. quadrata. (L. *quadratus*, square.) The palmaris brevis muscle.

C. quadrata Syll'vi. (L. *quadratus*; Syllivius.) The flexor accessorius muscle of the foot.

C. viscerum. (L. *viscus*, the inner part of an animal.) A synonym of *Parenchyma*.

C. vitulina. (L. *vitulinus*, belonging to a calf. F. *veau*; G. *Kalb'fleisch*.) Veal.

Car'ob tree. The *Ceratonia siliqua*.

Caroba. A Brazilian name for the bark of the *Bignonia copaia*, and probably other species; also the bark of *Jacaranda procera*.

C. alnaba'ti. The *Ceratonia siliqua*.

C. bran'ca. The *Sparattosperma lithen-*

triptica.

CARODES—CAROTID.

C. cern'tia. The *Ceratonis siligua*.
C. leaves. The leaves of *Gelsemium* *levis*.

Caro'des. (Καρόδες, drowsy.) A synonym of *Carotis*.

Ca'rol. An old name for chancre on the penis.

Carolina. United States. The name of two of the Southern States, North and South Carolina.

Also, the same as *Carina*.

C. all'optea. The *Calycanthus floridanus*.

C. cedar. The *Juniperus virginiana*.

C. hipp'e. The *Euphorbia speciosa*.

C. lyc'neo. The *Euphorbia speciosa*.

C. jas'mine. The *Gelsemium sempervirens*.

C., North, min'eral wa'ters. Several sulphurous and acidulous saline springs are found in the Counties of Warren, Montgomery, Rockingham, Lincoln, Buncomb, and Rowan. (Dunlison.)

C. pink. The *Spigelia marilandica*.

C. pop'lar. The *Populus balsamifera*. Also called *P. tocmahaca*.

C. shrub tre'foil. The *Ptelea trifoliata*.

C., South, min'eral wa'ters. Paeolet springs, on the west bank of the Paeolet river, contain sulphur and iron; other waters with similar properties are scattered about the State. (Dunlison.)

Carolin'ea. A Genus of the Nat. Order *Bombaceae*, or of the Tribe *Bombaceae*, Nat. Order *Storuliaceae*.

C. prin'ceps. Linn. (*L. princeps*, first.) A species the seeds of which are oculent.

Carony bark. A synonym of true *As-guturs bark*.

Caropl. The *Elletaria cardanumum*.

Caros. Same as *Carus*.

Caros'ia. (Κάρωσις, drowsiness.) Profound or deep sleep.

Also, the act of inducing sleep; also, vertigo.

Carota. (*L. carota*, from Gr. *καρτόν*. *F. carotte*; *G. Möhre*.) The carrot, *Daucus carota*, var. *sativa*.

Also, the official name, U.S. Ph., of *Carrot seed*.

Carotic. (Καρτικός, from *καπώ*, to stupefy. *F. carotique*; *I. carotico*; *G. schlafbringend*.) Having power to stupefy or produce stupefaction.

Also, a synonym of *Carotid*.

C. artery. The carotid artery.

C. ganglion. The carotid ganglion.

C. nerve. The carotid nerve.

C. plexus. The carotid plexus.

C. sleep. (*F. sommeil carotique*.) Profound drowsiness.

Carotica. (Same etymon.) Narcotics.

Caroticus. Same as *Carotic* and *Carotid*.

Carotid. (Καρτίδης, the carotid arteries, from *καπώ*, to throw into heavy sleep.) A term given to the great arteries of the neck by the ancients, because they were believed to be the seat or cause of stupor.

C. artery, common. (*L. arteria carotis communis*; *F. artère carotide*; *I. arteria carotide*; *S. arteria carotida*; *G. gemeinschaftliche Kopfschlagader* or *Kopfschlagader*.) The right common carotid is the inner branch of the division of the innominate artery. It arises behind the upper part of the sterno-clavicular articulation, and extends to the upper border of the

thyroid cartilage, where it divides into the internal and external carotids; it is enclosed in the same sheath with the jugular vein and the pneumogastric nerve, each occupying a separate compartment. It gives off no regular branch, but occasionally it gives origin to the superior thyroid artery, and in very rare cases to a laryngeal, or an inferior thyroid, or the vertebral artery. The artery is deeply placed at its origin, but becomes more superficial as it extends upwards; it also separates from its fellow of the opposite side during its course. Below it is covered by skin, fascia, the platysma myoides, sterno-mastoid, sterno-hyoid, and sterno-thyroid muscles; near the lower margin of the cricoid cartilage it is crossed by the omo-hyoid muscle; above this it is covered by the skin, fascia, the platysma, and the inner border of the sterno-mastoid muscles, and is contained in a triangular space, bounded behind by the sterno-mastoid, above by the posterior belly of the digastric, and below by the anterior belly of the omo-hyoid muscle. The artery lies on the cervical vertebra, separated from them first by the longus colli muscle, then by the rectus anticus major; internally it is in relation with the trachea and the thyroid body, higher up, with the larynx and the pharynx; on its outer side is the internal jugular vein, nearer to it in the upper part, and between and behind the two is the vagus nerve. The upper part of the vessel is crossed by the sterno-mastoid artery and the superior thyroid veins; the middle part by the middle thyroid vein, and the lower part by the anterior jugular vein; the inferior thyroid artery lies between it and the trachea. The vagus nerve lies in the sheath between and behind the artery and vein; the descendens nemi and its communications lie on the sheath, crossing it from the outer to the inner side, or occasionally run within the sheath; the sympathetic nerve lies between it and the cervical muscles, and the recurrent laryngeal lies between it and the trachea, and crosses behind it at its lower part.

The left common carotid arises from the arch of the aorta near the origin of the innominate artery, and also reaches to the upper border of the thyroid cartilage. It ascends obliquely outwards from its origin behind the upper part of the sternum and the sterno-hyoid and sterno-thyroid muscles, separated from them by the remains of the thymus, and crossed by the innominate vein; it lies in front of the trachea, the oesophagus, and the thoracic duct; on its inner side is the innominate artery, and on its outer side the left subclavian artery, the vagus, and the cardiac branches of the sympathetic nerve. In the neck it has the same relations as the right carotid, except that the jugular vein is closer to it throughout its course, and at the lowest part lies in front of it.

The common carotid results from the persistence of the third aortic arch of the embryo of man; it is the first aortic arch in the adult frog. Its place of division varies, and sometimes it does not divide at all. In man, the right carotid may arise directly from the aorta, as in birds, or by a common trunk with the left carotid. The left carotid may arise from the innominate, as in the hedgehog. In the ox, the carotids and innominates of both sides arise by a common trunk. In the lion, the two carotids and the right subclavian have a joint origin.

C. artery, external. (*F. carotide externa*; *G. äussere Kopfschlagader*.) One of the

CAROTID.

divisions of the common carotid, commencing at the upper border of the thyroid cartilage, and extending to near the neck of the condyle of the inferior maxillary bone, where it divides into the temporal and internal maxillary arteries. Its branches are the superior thyroid, the lingual, and the facial, running forwards; the occipital and the posterior auricular, directed backwards; and the ascending pharyngeal, the temporal, and the internal maxillary, proceeding upwards; they supply the face, part of the neck, and the cranial walls.

The external carotid lies nearer to the middle line, and soon becomes more superficial than the internal carotid artery; at first it is contained in a triangular space, bounded by the sternomastoid muscle behind, the omohyoid below and the stylohyoid and posterior belly of the digastric above, and which is covered in by skin, platysma muscle, and the cervical fascia, the hypoglossal nerve and the lingual and facial veins; it then passes beneath the digastric and stylohyoid to penetrate the substance of the parotid gland, where it lies beneath the facial nerve and the junction of the temporal and internal maxillary veins. On its inner side are the hyoid bone and the pharynx below, and the ramus of the lower jaw above, the latter separated by a piece of the parotid gland. Behind it are the superior laryngeal nerve below; and above, separating it from the internal carotid, are the styloid process, the styloglossus, and the stylopharyngeus muscles, and the glossopharyngeal nerve. It is crossed by small venous branches, but is not accompanied by a vein, except by the internal maxillary vein, when it happens to join the deep jugular.

The external carotid has been known to arise directly from the aorta, and its length varies according to the place of division of the common carotid, which is occasionally much higher or much lower than the usual point. The branches may vary in number by coalescence, and in position by being nearer or further from each other.

C. artery, internal. (*F. carotide interna*; *G. innere Kopfschlagader*.) One of the two branches of the common carotid at its division opposite the upper border of the thyroid cartilage, from whence it ascends to the carotid foramen of the temporal bone, traverses the carotid canal, crosses the foramen lacerum medium, passes upwards and then forwards by the side of the sella turcica in the wall of the cavernous sinus, turns abruptly upwards on the inner side of the anterior clinoid process, where it perforates the dura mater, and divides opposite the inner end of the Sylvian fissure into the anterior and middle cerebral arteries. It supplies the anterior part of the brain, the eye with its appendages, and a portion of the forehead, by means of its branches, which are the tympanic from the part in the carotid canal, the arteries receptaculi, the anterior meningeal and the ophthalmic arteries from the cavernous portion, and from the remaining portion the anterior cerebral, the middle cerebral, the posterior communicating, and the anterior choroid arteries, in addition to its terminal division into anterior and middle cerebral arteries. In the neck it lies on the rectus anticus major muscle, the superior cervical ganglion, and the superior laryngeal nerve; on its inner side is the pharynx, the tonsil, and the ascending pharyngeal artery; on its outer side the internal jugular vein and the

vagus nerve, and it is covered below by the sternomastoid and the platysma muscles, the deep fascia, and the skin; it then passes under the parotid gland, being crossed first by the occipital artery, the hypoglossal nerve, and the digastric and stylohyoid muscles, and afterwards by the styloglossus and stylopharyngeus muscles, the glossopharyngeal nerve, and sometimes the pharyngeal branch of the vagus, which separate it from the external carotid. In the carotid canal it lies in a sheath of dura mater, close to the front wall of the tympanum and surrounded by the carotid plexus and its branches. In the cranium it is placed in the inner and lower part of the wall of the cavernous sinus, and covered by its lining membrane, having the third, fourth, and ophthalmic nerves on its outer side. When it reaches the inner side of the anterior clinoid process it perforates the dura mater, becomes covered by the arachnoid, and has the optic nerve on its inner and the third nerve on its outer side.

Sometimes the internal carotid arises directly from the arch of the aorta; occasionally it is absent. It is partly derived from the third branchial arch. In the ox, it breaks up into a network of small branches, the rete mirabile; in the cat, it penetrates the foramen lacerum posterius; in the dog, the foramen lacerum medium; and in the opossum, it perforates the sphenoid bone; in snakes, it perforates the basiophenoid; in birds, the aperture is in the pituitary fossa.

C. artery, primitive. The *C. artery*, common.

C. canal. (*F. canal carotidien*; *G. Carotiskanal*.) The tunnel through the petrous portion of the temporal bone, which transmits the carotid artery and its sympathetic plexus. It is absent in some mammals, when the internal carotid passes through other foramina into the cavity of the cranium, as in monkeys, through the petiotic bone; in tigers, it is a mere furrow in the foramen lacerum posterius.

C. foramen. (*L. foramen*, an opening. *F. orifice inférieur du canal carotidien*.) The inferior extremity of the *C. canal*.

C. foramen, external. (*F. trou carotidien externe*.) The outer and lower opening of the *C. canal*.

C. foramen, internal. (*F. trou carotidien interne*.) The inner and upper opening of the *C. canal*.

C. ganglion. A small sympathetic ganglion occasionally found on the under surface of the internal carotid artery while in the carotid foramen, and formed from filaments of the carotid plexus.

C. gland. (*G. Carotisdrüse*.) A cavernous non-glandular structure of the carotid artery of many Vertebrata, consisting of a network of trabeculae, given off from the muscular wall and enclosing spaces. It contains many small heaps of ganglion cells, and doubly-contoured fibres, proceeding from the carotid plexus. It is very vascular. It appears to be the remains of the branches of the third embryonic branchial arch.

C. murmur. See *Murmurs, carotid*.

C. nerve of glossopharyngeal. A branch of the glossopharyngeal nerve which accompanies the internal carotid artery, and unites with the pharyngeal branch of the vagus and with the sympathetic nerve.

C. nerve of Vidian. A branch of the Vidian nerve, of reddish colour, soon after it

CAROTIDÆUS—CARPENTARIA.

leaves the Vidian canal; it joins the carotid plexus of the sympathetic.

C. plexus. (L. *plexus*, a twining. F. *plexus carotidian.*) A plexus of sympathetic nerves upon the internal carotid artery while in the carotid canal, and derived from the external division of the ascending branch of the superior cervical ganglion. It communicates with the Gasserian ganglion of the fifth nerve, with the sixth nerve, and with the sphenopalatine ganglion by means of the carotid branch of the Vidian nerve; it sends filaments to the artery and to the dura mater.

C. sounds. The sounds heard by means of the stethoscope over the carotid artery at the same time as its expansion and its contraction; the first sound is in part the transmitted aortic sound, in part probably is caused by the stretching of the arterial walls; the second sound is the transmitted second aortic sound. See *Arterial sounds*.

C. triangles. See *Neck, triangles of*.
Carotidæus. A Latin synonym of *Carotic*.

Carotidaneurysma. (Καρωτίδες, the carotids; ανεύρυσμα, an aneurysm.) Aneurysm of the carotid artery.

Carotidocyphus. (Καρωτίδες; κύφος, a lump.) Term for tubercle of the carotid artery.

Carotin. $C_{18}H_{16}O$. A colouring matter contained in the form of microscopic crystals in the cells of the *Daucus carota*. They are red-brown, cubic, insoluble in water, slightly soluble in ether and alcohol.

Caroua. A synonym of *Caraway*.

Carp. (F. *carpe*; I. *carpione*; G. *Karpfen*.) The *Cyprinus carpio*. Used as food.

The soft roe or milt was considered very nutritive and aphrodisiac. The hard roe was made into red caviare. The fat was also esteemed as an aphrodisiac. The bile was used against feebleness of sight.

C. stone. (F. *pierre de carpe*; G. *Karpfenstein*.) A term applied to one of the harder palate bones of the carp, and also to the petrous bone and otoliths, which were supposed to have many medicinal properties.

Carpadellum. (Καρπός, fruit; ἄδελος, secret. F. *carpadele*.) An indehiscent plurilocular fruit, enveloped in a calyx, with distinct, monospermous, opposing compartments, as in the Umbelliferae.

Carpal. (Καρπός, the wrist. F. *carpien*.) Belonging or relating to the carpus or wrist.

C. artery, anterior radial. (F. *transverse antérieure radiale du carpe*; G. *vordere Handwurzelarterie*.) A branch of the radial artery arising near the lower border of the pronator quadratus, and running inwards to unite into an arch with the anterior ulnar carpal artery, from which branches supply the carpal joints.

C. artery, anterior transverse radial. The *C. artery, anterior radial*.

C. artery, anterior transverse ulnar. The *C. artery, anterior ulnar*.

C. artery, anterior ulnar. (F. *transverse antérieure cubitale du carpe*.) A small branch of the ulnar at the lower border of the pronator quadratus joining with the above.

C. artery, dorsal. (L. *dorsum*, the back.) The *C. artery, posterior radial*.

C. artery, dorsal ulnar. The *C. artery, posterior ulnar*.

C. artery, posterior radial. (F. *dorsale du carpe*; G. *Rückenarterie der Handwurzel*.) A branch of the radial artery as it lies against the carpal articulations, which, passing beneath the extensors of the thumb, reaches the back of the wrist, and joins with the corresponding branch of the ulnar to form an arch beneath the extensor tendons of the fingers, from which arise the third and fourth dorsal interosseous arteries and a branch which joins the termination of the anterior interosseous artery.

C. artery, posterior ulnar. (F. *dorsale cubitale du carpe*; G. *Handrückenarterie*.) A branch of the ulnar artery a little above the pisiform bone, which, passing backwards beneath the tendon of the flexor carpi ulnaris, joins the above.

C. articulations. (F. *articulations carpiennes*.) The articulations of the carpal bones with each other are arthrodial, and are so arranged as to allow of little movement between any two bones laterally, but of a considerable amount of antero-posterior movement between the two rows of the bones.

C. bones. (F. *os carpiens*.) See *Carpus*.

C. ligaments. The bones of the carpus are united to each other by dorsal, palmar, lateral, and interosseous ligaments; the pisiform is connected by a capsular ligament to the cuneiform, and by strong fibres to the unciform and the fifth metatarsal bone.

See also, *Carpus, annular ligaments of, anterior and posterior*.

C. synovial membrane. The synovial sac of the carpus is interposed between the two rows of bones, and sends off-shoots between the bones of each row; occasionally it communicates with the radio-carpal synovial membrane. The articulation of the pisiform and unciform bones is lined with a separate synovial sac.

Carpalia. (Καρπός.) The bones of the wrist.

Carpapiga. The *Piper carpapiga*.

Carpasa. (Sans. *karpasa*, cotton.) A term for lint.

Carpasium. Same as *Carpasus*.

Carpasus. (Κάρπασος.) A plant not now known. Its juice, called *Opocarpason*, resembled myrrh in appearance, and was a powerful narcotic poison. (Quincy.)

Carpathian. A name of the eastern range of the great central mountain system of Europe.

C. balsam. See *Balsam, Carpathian*.

C. oil. Same as *Balsam, Carpathian*.

Carpathium. (Carpathian.) The *Pinus cembra*.

Carpel. (Καρπός, a fruit. F. *carpelle*; G. *Fruchtblatter*.) A modified leaf, one or more of which forms the *pistil* of flowers. It consists of a hollow inferior part, the *ovary* ; and of a superior part, the *stigma* ; the latter is sometimes mounted on a *style* . The carpels of single flowers may develop into more or less perfect leaves. They appear at first as slightly concave bodies of a green colour, gradually grow more concave, the edges then unite to form a sac, and ovules are developed.

Carpella. (Dim. from *καρπός*, a fruit. G. *Fruchtschen*.) A small fruit.

Carpellary. (Same etymon.) Belonging to a carpel.

Carpellum. Same as *Carpel*.

Carpentaria. (L. *carpentarius*, a car-

CARPENTER—CARPOMETACARPUS MINIMI DIGITI

penter.) A vulnerary herb, supposed to be the *Achillea millefolium*, or the *Sanicula europæa*, or the *Nasturtium barbarea*, so called because used by carpenters for wounds made by their tools.

Carpenter. (*L. carpentarius*, a carriage maker; from *carpentum*, a chariot on two wheels.) A maker of wooden articles.

Also, a name of *Oniscus asellus*.

O's herb. The *Prunella vulgaris*, because, as its corolla in profile resembles a bill-hook, it was of old supposed to be a proper application to wounds.

O's leaf. The *Galax aphylla*, because it was applied to cuts and bruises.

Carpestium. (*Καρπύσιον*.) A diuretic plant, like valerian, growing on mountains, mentioned by Galen. It has been supposed to be the *Euscus hypophyllum*.

Carphodes. (*Κάρφος*, any small dry body, as twigs, stalks, shrubs; *εἶδος*, likeness.) Flocculent.

Carphoides. (*Κάρφος*; *εἶδος*, likeness.) Like straw; flocculent.

Carphology. (*Κάρφος*, chaff; *λόγος*, to collect. *F. carphologie*; *I. and S. carfologia*; *G. Flockenlesen*.) The movements of delirious patients in searching for or grasping at imaginary objects, or picking the bed-clothes.

Carphos. (*Κάρφος*.) Chaff. Also a name for the *Trigonella fenum græcum*, or fenugreek.

A term for a small pustule. Dioscorides, v, 86.

Carpia. (*L. carpo*, to pluck; because plucked from linen cloth.) A name for lint. (Quincy.)

Carpisus. (*Καρπός*, the wrist.) The palmaris brevis muscle.

Carpial. (*Καρπός*.) Of, or belonging to, the carpus.

C. ligaments. The carpal ligaments proper.

Also, the annular ligaments of the wrist.

Carpid. Same as *Carpel*.

Carpidium. (Dim. from *καρπός*, fruit. *F. carpidie*.) Same as *Carpel*.

Carpinæ. A synonym of *Corylaceæ*.

Carpinifolius. (*L. carpinus*, the hornbeam; *folium*, a leaf. *G. hainbuchenblätterig*.) Having a leaf like the hornbeam.

Carpinus. (*L. carpinus*, the hornbeam.) A Genus of the Nat. Order *Corylaceæ*.

C. betulus. (*L. betula*, the birch. *F. charme*; *G. Weissbuche, Hainbuche, Hornbaum*.) The hornbeam. Bark used, but inefficaciously, as a febrifuge.

Carpio. The carp, *Cyprinus carpio*.

Carpismus. The carpus.

Carpium. (*Καρπός*.) Of, or belonging to, the carpus.

Carpobalsamum. (*Καρπός*, fruit; *βάλσαμον*, a balsam. *G. Balsamkörner*.) The dried fruit of the *Balaamodendron gileadense*. It is of the size of a small pea, lengthened at each end, of a reddish-brown colour, and is stimulant and aromatic.

Also, an ethereal oil, of yellow colour and clove-like odour, contained in the pods and seeds of *Myrtus pimenta*. It is heavier than water.

Carpocacé. (*Καρπός*, the wrist; *ακός*, evil.) Disease of the carpus.

Carpocarpal. (*Καρπός*.) That which concerns the relations of parts of the carpus to each other.

Carpocerite. (*Καρπός*; *κίρας*, a horn.) A segment of the antenna of *Crustacea*.

Carpocervical tie. (*Καρπός*, the wrist; *L. cervix*, the neck. *F. cravate carposcervicale*.) A bandage for flexing the forearm on the upper arm. The middle of a piece of calico is fixed to the wrist, and its two ends tied to a bandage fixed in the fashion of a collar round the neck.

Carpochoriza. (*Καρπός*; *χωρίζω*, to separate.) Term applied by some botanists to multiple fruits, or fruits formed of separate carpels.

Carpocolumbium. (*Καρπός*; *κλωνιον*, dim. of *κλων*, a young shoot.) A term applied to free organs in which the tetracarps of certain Floridææ are contained, for example, those of the *Carpophlepharidææ*.

Carpodetææ. A synonym of *Escaloniaceæ*.

Carpoglyphus. (*Καρπός*; *γλυφεύς*, a carver.) A Genus of the Family *Zyroglyphidææ*, Order *Acarida*.

C. passulorum. Ch. Robin. (Mod. *L. passula*, dim. of *passa*, a raisin.) A term applied to free organs in which the tetracarps of certain Floridææ are contained, for example, those of the *Carpophlepharidææ*.

Carpogone. (*Καρπός*; *γόνος*, offspring.) A term applied by Stahl to the vertical filaments in the thallus of *Collema*æ. These filaments are enlarged and contorted at their base, which constitutes the origin of the apothecium, and are prolonged to the surface of the thallus, forming a projecting point, when fecundation is effected by the contact of spermatia. Stahl names the contorted part ascogone, and the articulated filament which extends to the surface trichogyne.

Carpolith. (*Καρπός*, fruit; *λίθος*, a stone. *F. carpolithe*; *G. Fruchtstein*.) The hard granular material around the pippins of certain fruits, as the pear, and occasionally in connection with the epidermis; they are composed of thick, hard-walled cells, occasionally containing mineral matter.

Also, a term for a fruit stone.

Also, a term for fossil fruits.

Carpologia. A wrong spelling of *Carphologia* or *Carphology*.

C. spasmodica. (*Σπασμός*, cramp.) A synonym of *Subsultus tendinum*.

Carphology. (*Καρπός*, fruit; *λόγος*, a discourse. *F. carphologie*.) The study of fruits. A branch created by Gärtner, to whom is owing the first correct description of fruits and seeds. A word not to be confounded with carphology.

Also, a misspelling of *Carphology*.

Carpomel. (*Καρπός*, fruit; *L. mel*, honey.) The sugar of fruits.

Carpometacarpal. Relating to the *Carpus* and the *Metacarpus*.

C. articulations. (*F. articulationes carpometacarpiales*; *G. Handwurzelmittelhandgelenke*.) The articulations between the metacarpal bones and those of the carpus. Those of the four inner bones are connected by carpal, dorsal, and interosseous ligaments, and that of the thumb by a capsular ligament; the synovial membrane of the carpometacarpal joint of the thumb is separate; that of the rest is continuous with the synovial membrane belonging to the carpal bones.

Carpometacarpus minimi digiti. (*Carpus*; *metacarpus*.) The opponens minimi digiti muscle.

C. pollicis. The opponens pollicis muscle.

CARPOMORPHOUS—CARRAGEEN MOSS.

Carpomorphous. (Καρπός, fruit; μορφή, form. *F. carpomorphe*; *G. fruchtformig*.) Applied to those apothecia of lichens which resemble fruits.

Carpomyzous. (Καρπός, fruit; μυζάω, to suck. *F. carpomyze*; *G. fruchtsaugend*.) Applied to a Group of the *Muscidae*, supposed to live on the juices of plants on which the most part habitually fix themselves.

Carpo-olecranal tie. (Καρπός; ὤλην, the ulna; κρανίον, the head. *F. oravate carpo-olecranienne*.) A bandage for maintaining extreme flexion of the hand. One end of a wide bandage is wound round the wrist, then the whole hand, to the points of the fingers, is encircled, and the other end is fixed, after flexing the hand, firmly round the upper arm above the elbow.

Carpope'dal. (L. *carpus*, the wrist; pes, the foot.) Relating to the hand and the foot.

C. contraction. The contraction noticed under *C. spasm*.

C. spasm. A term applied to the local convulsions which affect the hands and feet of children, and which may occur during an attack of laryngismus stridulus, or of general convulsions. The hands are flexed and the thumb drawn across the palm; the feet are forcibly flexed, and sometimes drawn outwards; and the great toe is violently separated from the rest. Sometimes carpedal spasm occurs in cases of chronic diarrhoea, and then there is often œdema of the dorsum of the foot and the back of the hands.

In consequence of the frequency of the occurrence of carpedal convulsions in that disease, the term has been used as a synonym of *Laryngismus stridulus*.

Carpophaga. (Καρπός, fruit; φαγίω, to eat.) A Tribe of the Order *Monotremata*, having the anterior incisors large and long in both jaws, and a long cœcum.

Carpophagous. (Καρπός, fruit; φαγίω, to eat. *F. carpophage*; *G. fruchtfressend*.) Eating fruits.

Carpophalangeus minimi dig'iti. (*Carpus*; phalangeus.) The abductor minimi digiti muscle.

Carpophyllous. (Καρπός, fruit; φιλέω, to love.) Growing on fruits, as the *Peziza carpophila*.

Carpophore. (Καρπός, fruit; φέρω, to bear. *F. carpophore*; *G. Fruchtträger*.) A prolongation of the thalamus beyond the ovary, as in the *Geraniaceæ* and *Umbelliferae*.

Carpophyl. Same as *Carpophyllum*.

Carpophyllum. (Καρπός, fruit; φύλλον, a leaf. *F. carpophylle*; *G. Fruchtblatt*.) The modified leaf which by its folding produces a carpel.

Carpophytæ. (Καρπός, fruit; φυτόν, a plant.) A section which, according to Oken, with Anthophytæ, formed the class of plants now known as Exogens.

Carpop'odite. (Καρπός; ποῦς, a foot.) The fifth basal joint of the hinder antennæ of certain Arthropoda.

Carpopo'gon giganteum. The *Mucuna giganteum*.

C. pruriens. The *Mucuna pruriens*.

Carposubphalangeus minimi dig'iti. (*Carpus*; sub, under; phalanx. *F. carposubphalangien du petit doigt*.) The opponens minimi digiti muscle.

Carpotheca. (Καρπός; θήκη, a case. *G. Fruchtbehälter*.) The receptacle for the fruit in the Alga.

Carpotica. (Καρπός.) A term applied to an Order of Mason Good's *Class Genetica*, being diseases affecting impregnation.

Carpotokous. (Καρπός; τόκος, a bringing forth. *G. Fruchtgebarend*.) Bearing fruit.

Carpozyma. (Καρπός, fruit; ζύμη, ferment.) Term applied to a peculiar kind of alcohol ferment.

Carpus. (Καρπός, the wrist. *F. carpe*; I. and S. *carpo*; *G. Handwurzel*.) The part of the upper or fore limb lying between the forearm and the hand. In man it consists of two rows of four bones each, so arranged as to be convex on the dorsal surface, concave on the palmar. The proximal row contains the *scaphoid*, *semilunar*, *cuneiform*, and *pisiform* bones, reckoning from the radial to the ulnar side; and the distal row, reckoning in like manner, the *trapezium*, *trapezoid*, the *os magnum* and *unciform*. In Chelonia there are ten bones, in birds but two. In the chameleon the bones of the distal row coalesce with the metacarpals. When least modified there is reason to believe, says Huxley, that the carpus and the tarsus are composed of skeletal elements, which are alike in number and arrangement. One of these, primitively situated in the centre of the carpus, is termed the centrale; on its distal side are five carpalia articulating with the several metacarpal bones; on its proximal side are three bones, a radiale and ulnare, and between them an intermedium.

Also (καρπός, fruit), a term for fruit.

C., annular ligament, anterior. (L. *annulus*, a ring. *F. ligament annulaire antérieure du carpe*.) A thick band of ligamentous fibres stretching from the trapezium and scaphoid over to the pisiform bone and the unciform process, and converting the palmar arch of the carpus into a ring for the transmission of the flexor tendons. Its upper margin is continuous with the anterior fascia of the forearm, and its lower with the deep palmar fascia and with the origins of many of the hand muscles.

C., annular ligament, posterior. (*F. ligament annulaire postérieure du carpe*.) The thickened lower part of the aponeurosis of the back of the forearm. It stretches from the outer border of the lower end of the radius to the inner part of the cuneiform and the pisiform bones; it is attached also to the longitudinal ridges on the posterior surface of the radius, converting them into canals for the extensor tendons.

C., ligaments of. See *Carpal ligaments*.

Carqueiranne. France; near Hyères. A somewhat primitive place, having the same advantages for a winter residence as Hyères, but less exposed to the mistral.

Carrageen moss. (*F. mousse perlée*, *mousse d'Irlande*; *G. Irlandisches Moos*, *Perlmoos*, *Knorpeltang*.) The *Chondrus crispus* dried and bleached in the sun, when it becomes of a yellowish-white colour, cartilaginous, and somewhat translucent. It swells, but does not dissolve, in cold water, but is soluble in boiling water, and gelatinises on cooling. It contains pectin (*carrageenin*), mucilage, some fatty matter, and small quantities of iodides and bromides. It consists of C. 21·8, H. 4·87, N. 21·36, S. 2·51, O. 49·46 per cent. It is nutritive and demulcent, and is easy of digestion. Used in chest affections, scrofula,

CARRAGEENIN—CARTHAMUS.

dysentery, diarrhoea, and urinary affections, as a decoction or jelly, flavoured with lemon or some spice. It is named after a place near Waterford, where it grows.

C. seaweed. Same as *Carrageen moss*.

Carrageen'in. The form of pectin found in *Carrageen moss*. It is distinguished from starch by not turning blue with iodine, and from gum by alcohol not precipitating it from its watery solution.

Carrara. Italy; Province of Massa-Carrara. Famed for the purity of its statuary marble.

C. marble. A pure form of marble obtained from Carrara.

C. water. Lime water made from lime, produced by calcining Carrara marble, and saturated under strong pressure with carbonic acid, so that the calcium carbonate first thrown down is dissolved. It contains 8—10 grs. of calcium carbonate in 10 oz.

Carratras ca. Spain; in the Province of Malaga, 500 feet above sea level. Mineral waters, temp. 19° C. (66·2° F.), having a slight mineralisation, and containing carbonic acid and hydrogen sulphide. Used in skin diseases and where sulphurous waters are useful.

Carraway. A varied spelling of *Caraway*.

Carron oil. (Because much used at the Carron Iron Works, in Scotland.) A liniment applied to burns, composed of equal parts of linseed oil and lime water; the *Linimentum calcis*, B. Ph.

Carrot. (*F. carotte*, from *L. carota*, a carrot. *L. carota*; *S. zanahoria*; *G. Möhre*.) The *Daucus carota*, var. *sativa*. See *C. root*.

C., can'dy. The *Daucus creticus*.

C., dead'ly. The *Thapsia aculeata*.

C. fruit. (*F. fruits de la carotte sauvage*; *G. Möhrenfrucht*.) The fruit of the wild carrot, *Daucus carota*. Brown, oval, flat on one side, convex, with five primary and four secondary longitudinal bristled ridges; has an aromatic odour and warm pungent taste. Yields a pale yellow volatile oil on distillation. Used as a diuretic in dropsy and chronic nephritic conditions; also in the strangury from blisters, and as an emmenagogue. Dose, 30 grains or more, in powder, or infusion.

C. ointment. Carrot root, grated, $\frac{1}{2}$ lb., wax 4 oz., lard 1 lb.; melt, evaporate, and strain. Used to ulcerated surfaces requiring gentle stimulation. (Procter.)

C. poultice. May be made of the boiled root well mashed; or of the raw root scraped; the former is emollient, the latter is slightly stimulating, and is used in sloughing or cancerous ulcerations.

C. root. (*F. racine de carotte*; *G. Möhr-rabe*.) The root of *Daucus carota*, var. *sativa*. A useful article of diet, but prone, from the quantity of sugar, to produce flatulence. It contains, in 100 parts, nitrogenous matter 1·3, starchy substance 8·4, sugar 6·1, fat ·2, mineral matter 1, and water 83. The colouring matter is *Carotin*. It is used to make *Carrot poultice* and *ointment*.

The juice of the root is used to relieve the itching of cutaneous disease.

C. seed. See *C. fruit*.

C., wild. The uncultivated *Daucus carota*. Also, the *Ammi visnaga*.

Carroval. A variety of curare.

Carroval'in. An alkaloid found in carroval.

Carthage'na. A town of New Granada on the Caribbean Sea.

C. bark. A variety of cinchona bark exported from the Northern Atlantic ports of South America. Formerly this bark was of inferior quality, but now many specimens are found inferior only to Calisaya bark. It is distinguished by a soft, easily removed, whitish epidermis, or by the traces which have been left of its removal, and it contains all the alkaloids of cinchona bark. Carthage'na bark was formerly divided into yellow, orange, red, and brown barks. The authors of the U.S. Dispensatory consider that the varieties may all be referred to the three following forms:

C. bark, s'brown. (*F. quinquina Carthagène spongiosa*.) Quills or half quills, with or without epidermis, of an ochreous yellow, an orange, or a red colour, a loose spongy texture, a splintered fracture, and a bitter or sometimes an insipid taste. The amount of alkaloids is sometimes very small. It is the product of the *Cinchona lancifolia* of Mutis.

C. bark, hard. (*F. quinquina de Carthagène jaune pale*.) Quills or flat pieces, of a pale, dull, brownish-yellow colour, a firm and compact texture, an abrupt fracture, and a bitter nauseous taste. It is the product of *Cinchona cordifolia*.

C. bark, hard Pitay'a. (*F. quinquina brum de Carthagène*.) Small, irregular pieces, of a yellowish or reddish-brown colour, a hard compact texture, a partly fibrous and partly smooth fracture, and a very bitter taste. It contains a large proportion of alkaloids and much resin. It is the product of the *Cinchona pitayensis*.

C. ipocacuanha. One of the grey varieties of ipocacuanha.

Cartham'ic acid. A synonym of *Carthamin*.

Carthamin. (*F. carthamincine*; *G. Safforoth*.) $C_{11}H_{15}O_7$. The red colouring matter of safflower, *Carthamus tinctorius*. Obtained by exhausting the flowers with cold water to remove a yellow substance, treating the residue with a dilute solution of sodium carbonate, and then precipitating the carthamine by acetic acid. It is an amorphous dark red powder, with a green metallic reflection, slightly soluble in water, more easily in alcohol and alkaline solutions. It is used as a dye, and mixed with powdered talc forms the cosmetic rouge.

Carthamus. U.S. Ph. (*F. safran batard*; *G. farber Safflor*.) The flowers of the *C. tinctorius*. A red mass, with yellow streaks of the filaments, having a rather aromatic and a slightly bitter taste. It contains a red colouring matter, *Carthamin*. Safflower is sometimes used to adulterate saffron, from which it is distinguished when moistened by its being manifestly a floret. It is said to be laxative and diuretic; and is used as a diaphoretic, like saffron, for the promotion of the eruption in exanthematous diseases.

Also, a Genus of the Suborder *Tubuliflorae*, Nat. Order *Compositae*.

C. corymb'osus, Linn. The *Cardopatum corymbosum*.

C. glauc'us, Bieb. (*L. glaucus*, bluish-grey.) Said to be a remedy for scorpion bites.

C. lanat'us, Linn. (*L. lanatus*, woolly.)

CARTHEGON—CARTILAGE.

F. chardon béni des Parisiens. A bitter plant, formerly accounted sudorific, febrifuge, and anthelmintic.

C. leucocaulon. (Λευκόε, white; καυλός, a stalk.) A species said to be an antidote to scorpion bites.

C. maculatus. Lamb. (*L. maculatus*, spotted.) The *Carduus marianus*.

C. officinarum. Bank. (*L. officina*, a workshop.) The *C. tinctorius*.

C. persicus. (*L. persicus*, Persian.) The fruits yield a nutritious oil, and the leaves are esculent; it is believed to increase the secretion of milk.

C. tinctorius. Linn. (*L. tinctorius*, belonging to a dyer. *F. carthame des teinturiers*, saffron; *I.* and *S. carthamo*; *G. Safflor*.) Safflower or dyers' saffron. Hab. India, Egypt. The seeds (*F. graines de perroquet*; *G. Safflor-körner*) are laxative and diuretic. An oil which the plant yields is used in India in rheumatism and paralysis. It supplies safflower, official in U.S. Ph. as *Carthamus*.

Carthegon. The seed of the box, *Buxus sempervirens*.

Carthusian. (*Cartusia*, the Latinised form of Chartreuse in France, Department of Isère.) Relating to an order of monks of that name, so called from the village where their first monastery was built.

C. powder. (*F. poudre des Chartreux*.) A name of Kermes mineral, in consequence of its successful use in a brother monk by a Carthusian in 1714.

Cartilage. (*L. cartilago*, perhaps from *charta*, a thin leaf. Gr. χάρτιος; *I. cartilagine*; *S. cartilago*; *G. Knorpel*.) Gristle. A dense, firm, opaque substance, pearly white or yellowish, highly elastic, easily cut, of sp. gr. 1.15. Cartilage is temporary or permanent. Temporary when it is to be ossified as growth proceeds, as the foetal skeleton; permanent when it remains such during life, as the articular, costal, and laryngeal cartilages. It is covered with a fibrous membrane, the perichondrium, except on the joint surfaces. It consists of a matrix of nearly homogeneous appearance, in which are cavities, chondroplasts, lined with a dense structure, cartilage capsules, which enclose nucleated cells, the cartilage corpuscles; in elastic cartilage and fibrocartilage fibrous tissue is intermixed. Cartilage contains no blood-vessels, except such as penetrate a short distance from neighbouring organs, and it is destitute of nerves. Ordinary permanent cartilage contains from 67 to 73 per cent. of water, 24 to 30 of organic matter, and 1.5 to 2 of mineral matter, 100 parts of which contain potassium sulphate 26.66, sodium sulphate 44.81, sodium chloride 6.11, sodium phosphate 8.42, calcium phosphate 7.88, and magnesium phosphate 4.65; it is also said to contain some sodium and calcium carbonate, as well as iron. It becomes transparent by drying, and by prolonged boiling it is resolved into chondrin, which gelatinises on cooling.

C., accidentalale. (*I. accido*, to happen. *I. cartilagine accidentalale*.) A synonym of *Enchondroma*.

C., aliehmold. (*L. ala*, a wing; ἤμος, a sieve.) That portion of the posterior part of the nasal capsule on each side, which is formed by the primordial skull, and which constitutes the roof and posterior part of the true olfactory region. It becomes ossified into the pars plana

of the ethmoid bone, which is the posterior part of the upper and middle turbinals. Each is perforated postero-medially by the olfactory nerve.

C., alima'sal. (*L. ala*, a wing; *nasus*, the nose.) A portion of cartilage constituting the foremost part of the nasal capsule, and which forms a conchoidal structure round the external nostril.

C., aliept'al. (*L. ala*, a wing; *septum*, a division.) This forms so much of the roof and wall of the nasal labyrinth as is united with the septum nasi in front of the perpendicular plate of the ethmoid. Growing round inside the maxillary it gives rise to a coiled outgrowth named the inferior turbinal. After this has ossified it coalesces, in most mammals, with the maxillary bone.

C., annular. (*L. annulus*, a ring. *F. cartilages annulaires*; *I. cartilagine anulare*.) The cricoid cartilage.

C., anonymous. (Αν, neg.; ὄνομα, a name. *F. cartilago anonyma*.) The cricoid cartilage.

C., artic'ular. (*L. articulus*, a joint. *F. cartilages articulaires*; *I. cartilagini articolari*, *c. d'incrostamento epidermichi*, *c. jalini*; *G. Gelenknorpel*.) The thin layer of cartilage which covers the joint-ends of bones. It is firmly attached to the osseous substance by a roughened surface; its free surface is smooth, and possesses no epithelium, except in the embryo. The matrix is finely granular, very seldom contains fibres, and rarely ossifies. The cells at the surface are flattened and parallel with it; oblong, and vertically arranged nearer the bone.

C., arytes'noid. See *Arytenoid cartilage*.

C., arytes'noid, small. The apex or head of the arytenoid cartilage.

C., atrophy of. (Α, neg.; τροφή, nourishment.) From pressure, the articular cartilage occasionally becomes absorbed; its place may be supplied by a hard, firm, grey substance, consolidated, probably, from a fibrinous exudation.

C., auric'ular. (*L. auricula*, the external ear. *G. Ohrknorpel*.) The cartilage of the pinna of the ear.

C. bone. A term applied to ossified patches which are found in cartilage in rickets.

C. bones. Bones developed by the metamorphosis of cartilage. A very large proportion of endo-skeletal bones are formed in this way. The ossification may take place both within (endostosis), as in the epiphysis of a long bone, or without (ectostosis), as in the commencing shaft.

C., calcifica'tion of. (*L. calx*, lime; *φο*, to become.) A deposit of salts of lime in the matrix of cartilage, commonly called ossification, but not consisting in the deposit of true bone, as sometimes happens. In the adult, this is a morbid condition, but is normal in the fœtus where persistent cartilage joins bone.

C., calcified. (Same etymon.) A term given to the structure of the exoskeleton of elasmobranchiate fishes. See *Placoid exoskeleton*.

C. callus. (*L. callus*, hardness.) The condition in which the callus developed between the fractured ends of bone does not ossify, but obtains a structure like cartilage.

C. cap'sules. (*L. capsula*, a little case. *F. capsules cartilagineuses*; *G. Knorpelkapseln*.) The lining of the cavities in cartilage, chondroplasts, which contain the cartilage cells.

CARTILAGE.

C. cells. (*F. cellules cartilagineuses*; *G. Knorpelzellen.*) The cells of cartilage are more or less oval, and consist of a cell-body, which is homogeneous or granular, containing a clear or a granular nucleus, with one or more nucleoli; they vary in size from 6μ to 30μ . The cells lie in a cavity of the matrix, the chondroplast, which is lined by a transparent capsule. They multiply by fission, and sometimes a double nucleus is seen in a cell; they are sometimes solitary, more often in groups of two or more; towards the surface they are flattened horizontally. Water, syrup, saline solutions, and acetic acid cause the corpuscle to be detached from the chondroplast, or this from the matrix in which it is embedded. Cartilage cells may undergo fatty degeneration, and they sometimes contain pigment.

C., cellular. A synonym of *C., parenchymatous*.

C., circumferential. See *Fibro-cartilage, circumferential*.

C. corpuscles. (*L. corpusculum*, a little body.) A synonym of *C. cells*.

C., cricoid. See *Cricoid cartilage*.

C., cuneiform. See *Cuneiform cartilage*.

C., dental. (*L. dens*, a tooth.) A synonym of the *Maxillary ridge*.

C., development of. Hyaline cartilage consists at first of ordinary embryonic cells. The contents of these gradually become clearer, so as to show more distinctly the nucleus, and a hyaline capsule is developed; by degrees, as the cells divide, amorphous matter is interposed between them, constituting the matrix; the mode in which the capsule is developed and the source of origin of the matrix are still unsettled.

C., elastic. (*F. cartilage elastique*; *G. elastische Knorpel.*) This variety is opaque, yellowish, very flexible, and not prone to ossification. The matrix is traversed in all directions by fibres of elastic tissue, except immediately around the cells, which are somewhat loosely confined in the capsules. It constitutes the structure of the epiglottis, the cornicula laryngis, the pinna, and the Eustachian tube.

C., ensiform. (*L. ensis*, a sword; *forma*, shape.) The metasternum or ensiform process of the *Sternum*.

C., epiglottic. The cartilaginous part of the *Epiglottis*.

C., erosion of. (*L. erodo*, to eat away.) A condition occurring in the articular cartilages of elderly people, especially when subject to pressure, in which larger or smaller pieces, after becoming yellow, softish, and flocculent, break down and disappear; the matrix having previously become fibrillated, and the cells showing signs of growth and proliferation, or of fatty degeneration.

C., ethmoidonasal. (*Ethmoid bone*; *L. nasus*, a nose.) The plate of cartilage from which the ethmoid and nasal bones are subsequently developed, together with the alioethmoid, alioseptal, and alioasal cartilages.

C., ethmo-præphenoid. (*Ethmoid bone*; *præ*, in front of; *sphenoid bone*.) A plate of cartilage which, in the primordial skull, rises up from the midline of the coalesced trabeculae. In front and below it sends out the prænasal cartilage, and at a later stage it presents two fenestrae.

C., Eustachian. See *Eustachian tube*.

C. fibres. The rigid, closely-lying, un-

branched parallel fibres which develop in the hyaline matrix of some cartilages, such as those of ribs and larynx, soon after birth.

C., fibrous. Same as *Fibro-cartilage*.

C. fishes. A synonym of the *Chondropterygidae*.

C., foetal. (*L. fœtus*, the young of an animal.) The appearance of the cartilage of the fœtus differs from that of the adult. The matrix is homogeneous and hyaline. The chondroplasts are narrow and long, fusiform, or triangular in section. Blood-vessels are only observed when ossification is about to commence.

C., hyaline. (*Υαλος*, glass. *F. cartilage hyaline*; *I. cartilagine jalina*, *c. vera*, *c. pura*; *G. hyaline Knorpel.*) The matrix in this, the typical form, is homogeneous and translucent. The articular, costal, and temporary foetal cartilages are hyaline.

C., hypertrophy of. (*Υπίρ*, in excess; *τροφή*, nutrition.) True hypertrophy perhaps hardly ever exists. What is usually called by this name consists of softening and swelling, with a tendency to break up into fibres.

C. in old age. In advanced life the cartilages are the seat of considerable change. The costal cartilages become ossified in stripes. The articular cartilages become fissured and wrinkled or assume a velvety appearance, especially in the knee- and hip-joints. This fissuring may extend into the chondroplasts, and so the cells may escape usually in a granular or fatty condition. The laryngeal and tracheal cartilages undergo calcareous degeneration.

C., incrusting. (*F. incrustrer*, from *L. incrusto*, to cover, as with a coat.) A synonym of *Articular cartilages*.

C., inflammation of. A rare condition in its completeness; but not infrequently processes, which may be looked upon as essentially inflammatory, occur. The cells may enlarge and become granular, and their nuclei may subdivide preparatory to a disintegration of the cell. According to Barwell, inflammatory diseases of the cartilage occur only when surrounding structures are inflamed.

C., innominate. (*L. in*, neg.; *nomen*, a name.) A synonym of the *Cricoid cartilage*.

C., interarticular. (*L. inter*, between; *articulus*, a joint.) Cartilages lying in the interior of a joint and between the bones, as the semilunar cartilages of the knee-joint. See *Fibro-cartilage, interarticular*.

C., interarticular, of hip. The interarticular or round ligament of the hip.

C., interarticular, of jaw. See *Temporomaxillary articulation*.

C., interarticular, of wrist. The triangular fibrocartilage of the inferior radio-ulnar articulation.

C., interosseous. See *Fibro-cartilage, interosseous*.

C., investing. (*L. in*, in; *vesto*, to clothe.) A synonym of *Articular cartilages*.

C., matrix of. (*L. matrix*, a source.) The intercellular substance, hyaline or fibrous in structure, which makes up the chief part of cartilage.

C., Meckel's. The cartilage of the third visceral arch. See *Meckel's cartilage*.

C., membrane of. Same as *Perichondrium*.

C., mucronate. (*L. mucronatus*, fur-

CARTILAGES.

ished with a sharp point.) The metasternum or uniforn process of the sternum.

C., nasal. (*L. nasalis*, belonging to the nose.) See *Nose*, cartilages of.

C., necrosis of. (*Nekpocis*, death.) Death of cartilage occurs most frequently in the larynx as a result of chronic inflammation, commonly tubercular or syphilitic. It produces serious and often fatal consequences.

C. of ear. The *Pinna*.

C. of pinna. See *Pinna*.

C. of ribs. See *Costal cartilages*.

C. of Weitbrecht. The interarticular fibrocartilage of the acromio-clavicular articulation.

C., ossification of. (*L. os*, a bone; *facio*, to make.) True bone becomes deposited in some cartilaginous structures as life advances. For the ossification of the cartilage in the fetus, see *Bone*, development of.

C., parenchymatous. (*Παριϕύμα*, anything poured in beside.) 1. *cartilagine cellularis*, or *parenchymatous*. A form of cartilage in which the matrix is wanting, the cells only being present. The embryonic chorda dorsalis contains cells in some tendons in the frog, and other structures have been referred to this form, the existence of which, however, is by no means certain.

C., permanent. (*L. perenne*, to continue.) (*L. perennans*, *durant*.) Those cartilages which naturally remain cartilages during the whole of life.

C., premaxial. (*L. pre*, in front of; *maxilla*, the bone.) This cartilage is an axillary outgrowth of the premaxillary skull, often much prolonged, forming a rostrum in front of the head. It is found mainly in Selachians, Birds, and Chelonians.

C., proliferation of cells of. (*L. proliferatio*, *to increase*.) In some diseased conditions of cartilage the cells multiply to such an extent, the exact value of the cartilage is thereby lost.

C., reticular. (*L. reticularis*, a net.) 1. *reticularis*. A synonym of *C. elastic*.

C., septal. (*L. septum*, a wall.) The cartilage between the septum nasi.

C., septal. A synonym of *C. elastic*.

C., supra-articular. (*L. supra*, above; *articularis*, *of the joint*.) A synonym of *C. elastic*.

C., sub-articular. (*L. sub*, below; *articularis*, *of the joint*.) A synonym of *C. elastic*.

C., sub-articular. (*L. sub*, below; *articularis*, *of the joint*.) A synonym of *C. elastic*.

C., sub-articular. (*L. sub*, below; *articularis*, *of the joint*.) A synonym of *C. elastic*.

C., sub-articular. (*L. sub*, below; *articularis*, *of the joint*.) A synonym of *C. elastic*.

C., sub-articular. (*L. sub*, below; *articularis*, *of the joint*.) A synonym of *C. elastic*.

C., sub-articular. (*L. sub*, below; *articularis*, *of the joint*.) A synonym of *C. elastic*.

C., sub-articular. (*L. sub*, below; *articularis*, *of the joint*.) A synonym of *C. elastic*.

C., sub-articular. (*L. sub*, below; *articularis*, *of the joint*.) A synonym of *C. elastic*.

C., sub-articular. (*L. sub*, below; *articularis*, *of the joint*.) A synonym of *C. elastic*.

C., sub-articular. (*L. sub*, below; *articularis*, *of the joint*.) A synonym of *C. elastic*.

C., true. A synonym of *C. hyaline*.

C., tumour. Same as *Enchondroma*.

C., ulceration of. In ulceration the cartilage cells increase in size, the nuclei multiply, and the matrix becomes soft and granular; a false membrane, furnished with blood-vessels and covered with nucleated cells, spreads over the ulcerated surface and dips into its substance; processes of vascular structure arise from the bone and often meet the projections of false membrane; the cartilage becomes disintegrated, and the chondroplasts open and discharge their cells. The diseased structure may be absorbed or may be broken up into fragments, or suppuration in the joint may result.

C., xiphoid. (*Ξίφος*, a sword; *αἶμα*, likeness.) The metasternum or ensiform process of the sternum.

C., yellow. A synonym of *Elastic cartilage*, from its colour.

Cartilages, accessory. (*L. accede*, to be added.) A synonym of the *Sesamoid fibrocartilages*.

C., accident'al. A synonym of *Enchondromata*.

C., alar. (*L. ala*, a wing.) The lateral cartilages of the *Nose*.

C., basket. Same as *Basket of lamprey*.

C., bronchial. (*Βρόγχος*, the windpipe.) The fibrocartilaginous rings of the bronchi and bronchial tubes.

C., connecting. (*L. part. connecto*, to tie together.) 1. *cartilagini fibrosi*. These cartilages are represented by the interarticular fibrocartilages, the circumferential cartilages, and the cartilages lining the sheaths of tendons. See *Fibrocartilages*.

C., costal. See *Costal cartilages*.

C., epiphyseal. (*Επιϕύσις*, an outgrowth. *F. cartilages epiphyseae*.) The intervening cartilage between the diaphyseal and the epiphyseal centre of ossification, in which growth continues to take place until the two centres meet.

C., interarticular, of knee. The semilunar cartilages of the knee-joint.

C., interarticular, of vertebrae. The *Intervertebral discs*.

C., intervertebral. The *Intervertebral discs*.

C., laryngeal. See *Laryngeal cartilages*.

C., loose. See *Joints*, loose bodies in.

C., obducent. (*L. obduco*, to lead towards.) A synonym of *Cartilage, articular*.

C. of ossification. The cartilaginous structures of the fetus which, in the natural course of development, will be converted into bone.

C. of Santorini. See *Santorini, cartilages of*.

C. of trachea. The fibro-cartilaginous rings of the trachea.

C. of Wrisberg. See *Wrisberg, cartilages of*.

C., primordial. (*L. primordialis*, original.) A synonym of *Cartilage, fetal*.

C., pyramidal. (*L. pyramidalis*, formed after the manner of a pyramid.) The *Artyemoid* cartilages, from their shape.

C., quadrato. (*L. quadratus*, square.) Small cartilaginous nodules or plates in the posterior side of the ala of the nose.

C., sesamoid. See *Sesamoid cartilages*.

C., sesamoid. See *Sesamoid fibrocartilages*.

425

CARTILAGIN—CARTILAGINOUS.

C., sig'moid. (Σ, the letter sigma; αἶδος, likeness.) A synonym of the *Semilunar cartilages*.

C., sutural. (L. *sutura*, a suture. I. *cartilagini suturali*; G. *Nathknorpel*.) The fibro-cartilage which forms an edging to the flat bones of the skull.

C., trian'gular. (L. *tres*, three; *angulus*, a corner.) A synonym of the upper lateral cartilages of the nose. See *Nasal cartilages*.

Cartilagin. A principle which was supposed to exist in cartilage, and which, by boiling in water, gives rise to chondrin.

Cartilagin'el. A synonym of *Chondropterygis*.

Cartilagin'eous. Same as *Cartilaginous*.

Cartilag'ines. Plural of *Cartilago*.

C. accessor'ies. (L. *accedo*, to be added.) A synonym of the *Sesamoid fibro-cartilages*.

C. a'lae na'si. (L. *ala*, a wing; *nasus*, the nose.) The lower labial cartilages of the nose.

C. a'lae na'si ma'jores. (L. *ala*, wing; *nasus*, nose; *major*, greater. G. *größer Nasenflügel Knorpel*.) The anterior or greater alar cartilages of the nose.

C. a'lae na'si minores. (L. *ala*; *nasus*; *minor*, lesser. G. *hinteren, or kleineren Nasenflügel Knorpel*.) The posterior or smaller alar cartilages of the nose.

C. ala'rae. (L. *ala*, a wing.) The lower lateral cartilages of the nose.

C. ala'rum mino'ra. (L. *minor*, less.) A synonym of the *Cartilages, quadrata*.

C. ala'rum na'si. (L. *nasus*, the nose.) The lower lateral cartilages of the nose.

C. opac'ities. (Ἐπακρίσις, adventitious. G. *Schaltnorpel*.) A synonym of the lesser cartilages of the nose.

C. falca'tae. (L. *falcatus*, scythe-shaped.) The semilunar cartilages of the knee-joint.

C. falci'form'es. (L. *falx*, a sickle; *forma*, likeness.) The semilunar cartilages of the knee-joint.

C. guttura'les. (L. *guttur*, the throat.) The arytenoid cartilages.

C. interarticula'res cos'to-vertebra'les. (L. *inter*, between; *articula*, joint; *costa*, rib; *vertebra*, the spine. G. *Zwischengelenkband*.) The interarticular ligament of the costo-vertebral articulation.

C. luna'tae. (L. *lunatus*, bent like the half moon.) The semilunar cartilages of the knee-joint.

C. menis'ci. (L. *meniscus*, a lens concave on one side, convex on the other.) The semilunar cartilages of the knee-joint.

C. mino'ra. (L. *minor*, less.) The *Sesamoid fibro-cartilages*.

C. mino'ra inferio'ra. (L. *minor*, less; *inferior*, lower.) The lower lateral cartilages of the nose.

C. mino'ra posterio'ra. (L. *minor*; *posterior*, hinder.) The quadrate cartilages of the nose.

C. na'si. (L. *nasus*, the nose.) The *Nasal cartilages*.

C. na'si accessor'ies. (L. *nasus*, the nose; *accessorius*, accessory. G. *Schaltnorpel*.) Three small cartilaginous plates situated in the posterior part of each ala of the nose. Same as *C. opac'ities*.

C. na'si inferio'ra. (L. *nasus*, nose; in-

ferus, that is beneath.) The same as *C. ala' nasi majores*.

C. na'si latera'les. (L. *nasus*, the nose; *lateralis*, belonging to the side.) The upper lateral cartilages of the nose.

C. na'si sesamoi'deae. (L. *nasus*, nose; σῖσάμων, the seed of the sesame tree.) The posterior or smaller cartilages of the ala of the nose. They are usually two or three in number.

C. na'si superio'ra. (L. *nasus*; *superus*, that which is above.) The lateral cartilages of the nose.

C. na'si trian'gula'rae. (L. *triangularis*, three-angled.) The lateral or superior cartilages of the nose. See *Cartilages, triangular*.

C. pinna'les. (Pinna.) The lower lateral cartilages of the nose.

C. posterio'ra na'si. (L. *posterus*, that is behind; *nasus*, the nose.) The posterior or small alar cartilages of the nose.

C. pyramida'les. (L. *pyramidalis*, pyramidal.) The arytenoid cartilages, from their shape.

C. quadra'tae. See *Cartilages, quadrate*.

C. semiluna'rae. The *Semilunar cartilages*.

C. sesamoi'deae. The *Sesamoid fibro-cartilages*.

C. sesamoi'deae anterio'rae laryn'gis. (Σῖσάμων, sesame seed; αἶδος, like; *anterior*, foremost; λάρυγξ, the upper part of the windpipe.) Small cartilages, one of which is found on each side of the larynx in the anterior part of the ligamentum thyroarytenoideum inferior.

C. sesamoi'deae na'si. (L. *nasus*, the nose.) Same as *C. nasi accessor'ies*.

C. sesamoi'deae posterio'rae laryn'gis. (L. *posterior*, that is behind.) Small masses of elastic cartilage sometimes found near the arytenoid cartilage on each side, to which, as well as to the cartilage of Santorini, they are attached by means of perichondrium.

C. sesamoi'deae tu'bae Eustachii. (Σῖσάμων, sesame seed; αἶδος, form; *tuba*, a tube; *Eustachius*, the anatomist of that name.) Small cartilages, formed partly of hyaline, partly of elastic cartilage, sometimes ossifying, which are found near the points of flexure of the cartilaginous part of the Eustachian tube.

C. sig'moi'deae. See *Cartilages, sigmoid*.

C. sternocosta'les interarticula'rae. (Στήριον, the chest; *costa*, rib; *inter*, between; *articulus*, a joint.) Fibro-cartilages found between the cartilages of the ribs and the sternum from the second to the fifth inclusive.

C. superio'ra latera'les. (L. *superior*, upper; *lateralis*, belonging to the side.) The upper lateral cartilages of the nose.

Cartilaginifica'tion. (L. *cartilago*; *facio*, to make.) The development of cartilage in a structure, whether normal or abnormal.

Cartilag'inis arytenoi'deae capitulum. (L. *cartilago*; *arytenoid* cartilage; *capitulum*, a little head.) The *Corniculum laryngis*.

Cartilag'inous. (L. *cartilago*. F. *cartilagineux*; I. and S. *cartilaginoso*; G. *knorpelig*.) Hard. Of the nature, or consistence, of cartilage.

Applied to leaves whose brim is furnished with a hard margin of different substance from the disc.

C. arcs. (L. *arcus*, a bow.) Rods of carti-

CARTILAGO—CARUNCULA.

lage found in some sharks, and supporting the outer border of the partitions which divide the branchial chamber.

C. bas'ket. See *Basket of lamprey*.

C. fish'es. (*F. poissons cartilagineux*; *G. Knorpelfische*.) A synonym of *Chondropterygii*.

C. tis'sue. The organisation peculiar to *Cartilage*.

C. tu'mour. Same as *Enchondroma*.

Cartila'go. See *Cartilage*.

C. annula'ris. (*L. annulus*, a ring.) The *Cricoid cartilage*.

C. anon'yma. (*Av*, neg.; *δνομα*, a name. *I. cartilagine anonima*.) The cricoid cartilage.

C. arytenoi'des. The *Arytenoid cartilages*.

C. auric'ulæ. (*L. auricula*, the outer ear.) The same as *C. auris*.

C. au'ris. (*L. auris*, the ear. *G. Ohrknorpel*.) The cartilage of the pinna of the ear.

C. clypea'lis. (*L. clypeus*, a shield.) The thyroid cartilage.

C. cornicula'ta. The *Corniculum laryngis*.

C. cricoi'des. The *Cricoid cartilage*.

C. cuneiform'is. The *Cuneiform cartilages*.

C. ensiform'is. (*L. ensis*, a sword; *forma*, shape.) The ensiform process of the sternum.

C. epiglott'ica. (*Ἐπι*, upon; *γλῶττα*, the tongue.) The cartilage entering into the formation of the epiglottis.

C. glandis. (*L. glans*, an acorn. *G. Scheidewand*.) The same as the *Septum glandis*.

C. innomina'ta. (*L. innominatus*, unnamed.) The cricoid cartilage.

C. interarytenoi'des. (*L. inter*, between; *ἀρτήρα*, a cup. *I. cartilagine interarytenoidea*.) A small cartilage found occasionally in the connective tissue uniting the apex of the cartilage of Santorini with the upper border of the cricoid cartilage.

C. intermedia ra'dii. (*L. intermedius*, between; *radius*, the bone of that name.) The interarticular fibro-cartilage of the wrist-joint.

C. lingua'lis. (*L. lingualis*, from *lingua*, the tongue.) The septum linguae.

C. mucrona'ta. (*L. mucronatus*, pointed.) The ensiform process of the sternum.

C. na'si media'na. (*L. nasus*, nose; *medianus*, that is in the middle.) The cartilage of the septum of the nose.

C. nic'titans. (*L. nicto*, to wink.) A cartilage sometimes found in the *Membrana nictitans*, like a tarsal cartilage.

C. pelta'lis. (*L. pelta*, a buckler.) The thyroid cartilage.

Also, the ensiform process of the sternum.

C. pelta'tus. (*L. pelta*.) The thyroid cartilage.

C. quadrangula'ris na'si. (*L. quadrangulus*, four angled.) The cartilage forming the septum naarium.

C. Santorini'na. The *Corniculum laryngis*, or *Santorini's cartilage*.

C. scutiform'is. (*L. scutum*, a shield; *forma*, shape.) The thyroid cartilage.

C. septi naarium. (*L. septum*, a wall; *naar*, a nostril.) The cartilage of the septum of the nose.

C. thyroidea. The *Thyroid cartilage*.

C. trique'tra car'pa. (*L. triquetrum*, three-cornered, *carpus*, the wrist.) The triangular fibro-cartilage of the wrist-joint.

C. trique'tra laryngis. (*L. triquetrum*, three-cornered.) The arytenoid cartilage, from its shape.

C. tritic'ea. (*L. triticum*, wheat. *G. Weizenkorn*.) An oblong cartilaginous nodule contained in the lateral thyro-hyoid ligament. Sometimes it is ossified.

C. u'vifer. (*L. uva*, grape; *fero*, to bear.) The uvula.

C. Wrisberg'ii. (*L. cartilagini bastonciniformi*, or *conicis*.) The cuneiform cartilages of the larynx.

C. xiphoi'des. (*Ξίφος*, a sword; *ειδος*, likeness.) The ensiform process of the sternum.

Cart'mel. Lancashire; on Morecombe Bay. Three miles from the town, at the foot of a limestone rock called Humphrey Head, is a chalybeate spring called Holy Well, which contains also sodium chloride.

Car'ul. The fruit of *Carum carui*. See *C. fructus*.

C. fruct'us. B. Ph. (*L. fructus*, fruit. *F. carvi*; *I. carvi*; *G. Kümmel*.) The dried fruit of *Carum carui*. The fruit consists of two halves .125" to .16" long, curved, tapering at each end, brown, having a rounded styloped above, five pale fine ridges, and four dark brown tubes containing oil tubes. Caraway seed has an agreeable aromatic odour and a spicy taste. Formerly used as a diuretic, now as a carminative.

Car'um. (*Κάρον*, caraway.) A Genus of the Nat. Order *Umbellifera*.

Also, the official name, U.S. Ph., of the caraway seed.

C. aj'owan. The *Ammi copticum*.

C. bulbocast'anum. The *Bunium bulbocastanum*.

C. car'ul. Linn. (*F. carvi*; *G. Kümmel*.) The caraway. Hab. Europe. Supplies caraway seeds, *Carui fructus*.

C. car'vi. The same as *C. carui*.

C. nig'rum. Hab. India. The fruit, called in Hindustani *Zira-siah*, does not differ, according to Dr. Waring, from the common caraway.

C. petroseli'num. Benth. (*Πέτρος*, rock; *σέλινον*, parsley.) Common parsley. See *Petroselinum*.

C. Roxburgia'num. The *Ptychotis Roxburgianum*.

Caruncle. (*L. caruncula*, dim. of *caro*, flesh. *Gr. σαρκίον*; *F. caruncle*; *I. and S. caruncula*; *G. Fleischwärtchen*.) A fleshy excrescence. Applied, in Anatomy, to certain natural formations.

In Pathology, it was formerly used to designate a stricture.

In Botany, the word has by no means an exact signification. Some authors use it as synonymous with strophole, to signify certain small projections found on the testa of the fertilised seed; others restrict the term to those projections which occur on the seed independently of the micropyle; and still others use the term to denote projections coming from the micropyle.

C., lach'rymal. See *Caruncula lachrymalis*.

C., ure'thral. A synonym of the vascular excrescence of the female urethra, which occasionally occurs.

Carun'cula. (*L. caruncula*.) A fleshy excrescence. See *Caruncle*.

C. lachryma'lis. (*L. lachryma*, a tear. *F. caruncule lacrymale*; *G. Thränenhügel*, *Thänen Karunkel*.) A reddish elevation of the

CARUNCULE—CARYOCAR.

conjunctiva in the inner canthus of the eye, occupied by a few very fine hairs, and the large sebaceous glands which open into their follicles.

C. major. (L. *major*, greater.) The same as *Papilla duodeni*.

C. mamilla'ris. (L. *mamilla*, a teat.) A synonym of *Tuber olfactorium*.

C. Morga'gni. The middle lobe of the prostate.

C. saliva'lis. (L. *saliva*, the saliva.) The same as *C. sublingualis*.

C. semina'lis. (L. *seminalis*, belonging to seed.) A synonym of the *Crest of the wreath*.

C. sublingua'lis. (L. *sub*, beneath; *lingua*, the tongue.) The small elevation on either side of the frenum linguae, at the apex of which is the aperture of the duct of the sub-maxillary gland.

Caruncula cuticula'rea. (L. *cutis*, the skin.) A synonym of the *Nymphæ*.

C. hymena'les. (Hymen.) The *C. myrtiformes*.

C. mamilla'rea. (L. *mamilla*, a teat.) A synonym of the ampullæ of the galactophorous ducts. See *Ampulla lactifera*.

Also, an old name for the olfactory bulb.

C. myrtiformes. (L. *myrtum*, a myrtle berry; *forma*, shape. F. *caroncules myrtiformes*; G. *Scheidenklappenwürchen*.) Three to six small projections of the mucous membrane near the orifice of the vagina, generally supposed to be remains of the hymen after its rupture; but they have been found consistent with integrity of the hymen; according to Schröder, they are the result of the passage of child through the vagina and the consequent rupture of the base of the hymen.

C. papilla'rea. (L. *papilla*, a nipple. F. *caroncules papillaires*; G. *Nierenwürchen*.) A synonym of the papillæ or summits of the pyramids of Malpighi in the kidney.

Carunculate. (L. *caruncula*. F. *carunculé*.) Having a caruncle.

Caruncule. (L. *caruncula*.) A small, irregular protuberance found on the testa of the seed near the hilum. Same as *Caruncle*.

Carunculous. (L. *caruncula*. F. *carunculoux*.) Of, or belonging to, a caruncle.

Caruon. The *Carum carui*, or caraway plant.

Carus. (Κάρος, heavy sleep.) An old term for profound sleep, with quiet respiration.

Also, for loss of sense and voluntary motion, respiration remaining unaffected.

Also, for a profound sleep without fever.

Also, variously by authors, but all to some form of coma.

Also, and especially, the fourth and extremest degree of insensibility, the others being sopor, coma, and lethargy.

Also (Κάρος), the *Carum carui*, or caraway plant.

C. ab insola'tione. (L. *ab*, from; *insola'tio*, a placing in the sun.) Sunstroke.

C. apoplex'ia. (Ἀποπληξία, apoplexy.) The heavy sleep of apoplexy, or apoplexia itself.

C. asphyx'ia. Same as *Asphyxia*.

C. cataleps'ia. Same as *Catalepsy*.

C. ecstasis. Same as *Ecstasy*.

C. hydroceph'alus. A synonym of *Hydrocephalus internus*.

C. lethargus. (L. *lethargus*, drowsiness.) A synonym of *Lethargy*.

C. lethargus cataphora. (Καταφορά, an oppression.) Somnolency.

C. lethargus veter'nus. (L. *veter'nus*, drowsiness.) A slight form of coma from which the patient may be roused, but into which he soon relapses.

C. lethargus vig'il. (L. *vigil*, awake.) That state of coma in which the patient may be roused and is delirious.

C. paraly'sis. (Παράλυσις, palsy.) The same as *Paralysis*.

C. paraly'sis paraple'gia. A synonym of *Paraplegia*.

C. veter'nus. Same as *C. lethargus veter'nus*.

Car'va. The *Cassia lignea*. (Quincy.)

Carvacrol. A viscid, oily substance, which solidifies at -25° C. (-13° F.) and boils about 234° C. (453.2° F.) It may be obtained by distilling oil of caraway with potash until the carvene has been expelled, and decomposing the residue by sulphuric acid.

Car'vone. $C_{10}H_{16}$. An almost tasteless and inodorous compound contained in oil of caraway, and boiling at 173° C. (343.4° F.)

Carvi. Caraway seeds. (Quincy.)

C. semen. (L. *semen*, seed.) Same as *Carui fructus*.

Carvol. $C_{10}H_{14}O$. A pleasant-smelling liquid contained in oil of caraway, which boils at 227° C. (440.6° F.)

Carvy seeds. A synonym of *Caraway seeds*.

Carya. (Κάρυα, the walnut tree.) A Genus of the Nat. Order *Corylaceæ*. Trees with aromatic leaves.

C. al'ba. (L. *albus*, white.) The common hickory. The fruit is edible. The leaves are aromatic and astringent; the bark is astringent and bitter. A tincture or infusion of the bark has been used with success in intermittent fever.

C. ama'ra. (L. *amarus*, bitter.) The seeds, combined with oil of camomile, have been used in colic.

C. basil'ica. (Βασιλικός, royal.) The *Juglans regia*.

C. gla'bra. (L. *glaber*, smooth.) Used as *C. alba*.

C. microcar'pa. (Μικρός, small; καρπός, fruit.) Used as *C. alba*.

C. olivæform'is. (L. *oliva*, an olive; *forma*, form.) The Pecan-nut. Fruit edible.

C. porc'ina. (L. *porcinus*, belonging to a pig.) Used as *C. alba*.

C. sulca'ta. (L. *sulcus*, a furrow.) Fruit edible.

C. tomento'sa. (L. *omentum*, a stuffing for cushions.) Fruit edible.

Caryd'ion. (Καρύδιον, a small nut.) The *Corylus avellana*.

Carydon. Same as *Caryedon*.

Carye'don. (Καρυήδιον, from κάρυον, a nut.) A fracture, where the bone is broken into small pieces like a shattered nut-shell.

C. catag'ma. (Κάταγμα, a breakage.) Same as *Caryedon*.

Caryobran'chiate. (Κάρυον, a nut; βράγχια, the branchiæ.) A synonym of *Nuclobran'chiata*.

Caryocar. A Genus of the Nat. Order *Rhizobolacæ*.

C. butyro'sum. Willd. (L. *butyrum*, butter.) Souari nut tree. Hab. Guinea. Kernel

CARYOCES—CARYOTA.

of the nut highly esteemed. They yield a pleasant edible oil or butter.

C. glabrum, Pers. (*L. glaber*, smooth.) Also supplies Sonari nuts and butter.

C. tomentosum, Willd. (*L. tomentosum*, a stuffing for cushions.) Guiana almond tree. Kernel of nut esculent.

Caryoces. A Portuguese name for the *Palma edy*.

Caryocostinus. (*Καρύφύλλον*, the clove tree; *κόστος*, the Arabian costus. An electuary into the composition of which costus and cloves entered.

Caryodaphne. A Genus of the Nat. Order *Lauraceae*.

C. densiflora, Blume. (*L. densa*, thick; *flor*, a flower.) Bark bitter and balsamic. Infusion of leaves used in colic and puerperal convulsions.

Caryon. (*Κάρυον*, a nut.) The walnut. Also, any nut.

Also, the kernel of stone-fruit.

C. ponticon. (*Ποντικός*, from Pontus.) The fruit of the *Corylus avellana*.

Caryophylla. Same as *Caryophyllata*.

Caryophyllaceae. (*Caryophyllus*.) A Nat. Order of thalamifloral Exogens of the Alliance *Sileneales*, having symmetrical flowers, a conspicuous corolla, amphitropal ovules, and opposite leaves without stipules; or a Family of the Order *Caryophyllineae*.

Caryophylla'ceous. (*Καρύφύλλον*, the clove tree. *F. caryophyllus*; *G. nelsoni*.) Belonging to, or resembling, the clove tree, or its flowers.

C. corolla. A corolla consisting of five petals, with long claws, enclosed in the tube of the calyx, and with their limbs generally placed at right angles to the claws.

Caryophyllata. (*Καρύφύλλον*. *G. Nelsoni*.) The *Geum urbanum*, because it has the odour of cloves; or because of the shape of its flower-buds being that of a clove.

C. aquatica. (*L. aquaticus*, living in water.) The *Geum rivale*.

C. cortex. See *Cortex caryophyllata*.

C. natans. (*L. natans*, part. of nato, to swim.) The *Geum rivale*.

C. urbana. The *Geum urbanum*.

C. vulgaris. (*L. vulgaris*, common.) The *Geum urbanum*.

Caryophyllat'ae ra'dix. (Same etymon.) The root of *Geum urbanum*.

Caryophyllate. A synonym of *Caryophyllaceous*.

Caryophyllos. Jussieu's term for *Caryophyllaceae*.

Caryophylli, G. Ph. Cloves. See *Caryophyllum*.

Caryophyll'ic acid. (Same etymon.) $C_{20}H_{30}O_6$. A substance obtained by the action of nitric acid on caryophyllin. It occurs in white needles, soluble in alcohol and ether, almost insoluble in water.

Also called *Eugenic acid*.

Caryophyllin. (*Καρύφύλλον*. *F. caryophyllus*; *L. cariofillina*; *S. cariofillina*.) $C_{20}H_{30}O_6$. A polymeric camphor contained in oil of cloves, consisting of colourless needles, insoluble in water, soluble in hot alcohol, and melting at 300° C. (572° F.) The stearoptene of the essential oil of the *Caryophyllus aromaticus*.

Caryophyllin'ea. Applied by Bartling to a Class including the *Chenopodeae*, *Amaran-*

thaceae, *Phytolaceae*, *Soleranthaceae*, *Paronychiaceae*, *Portulacaceae*, and *Alineae*.

Caryophyllin'ea. (*Caryophyllus*.) An Order of the Subclass *Eleutheropetalae*, having a simple perianth, or one composed of calyx and corolla, and a unilocular or multilocular ovary, containing one or more anatropous or campylotropous ovules on a basal placenta.

Caryophyll'oid. (*Καρύφύλλον*; *αἶδος*, resemblance.) Resembling the clove tree.

Caryophyll'oides cortex. (*Καρύφύλλον*; *αἶδος*; *L. cortex*, bark.) Name for *Cultivum*.

Caryophyllum. (*Καρύφύλλον*, the clove tree.) The *Caryophyllus aromaticus*.

Also (*Καρύφύλλον*. *F. girofle*, *clou de girofle*; *L. garofani*; *S. cloves de espina*; *G. Gewürznelken*), the official name, B. Ph., of cloves, the unexpanded dried flower buds of the *Caryophyllus aromaticus*. Cloves are nail-shaped, 6" long, dark reddish brown, having a cylindrical body, the tube of the calyx; a rounded head, the unexpanded corolla; and four teeth below it, the limb of the calyx. They have a strong fragrant smell and a hot, bitterish, pungent taste. Cloves contain a volatile oil, eugenin, caryophyllin, salicylic acid, a peculiar tannin, gum, extractive, and lignin. They are aromatic and stimulant. Used to relieve flatulence, and as an addition to other medicines. Dose, 6—10 grs.

C. rubrum. The *Dianthus caryophyllus*.

Caryophyllus. (*Καρύον*, a nut; *φύλλον*, a leaf; because it was supposed to be the leaf of the Indian nut plant.) A Genus of the Suborder *Myrt'ae*, Nat. Order *Myrtaceae*.

C. americana. Pimenta berries.

C. aromaticus, Linn. (*L. aromaticus*, fragrant. *F. giroflor*; *G. Gewürznelkenbaum*.) The clove tree. Hab. Moluccas, Zanzibar, West Indies. Supplies cloves. See *Caryophyllum*.

C. arvensis. (*L. arvens*, cultivated land.) The *Holosteum umbellatum*.

C. hortensis. (*L. hortensis*, belonging to a garden.) The *Dianthus caryophyllus*.

C. pimenta. The *Eugenia pimenta*.

C. pratensis. (*L. pratensis*, growing in meadows.) The *Dianthus armeria*.

C. ruber. (*L. ruber*, red.) The *Dianthus caryophyllus*.

C. vulgaris. (*L. vulgaris*, common.) The *Geum urbanum*.

Caryopsid'ium. Same etymon and meaning as *Caryopsis*.

Caryop'sis. (*Κάρυον*, a nut; *δύσις*, appearance. *F. caryopses*; *G. Schliessfrucht*, *Schließfrucht*.) A superior, one-celled, one-seeded, indehiscent fruit, with a thin, dry membranous pericarp inseparably united to the seed. It resembles the acheneum, but is distinguished by its adherence to the seed. The fruit of most grasses and cereals is a caryopsis.

Caryota. (*Καρύωτις*, a palm with walnut-like fruit.) A Genus of the Nat. Order *Palmaceae*. Many of the species supply a saccharine sap called toddy, from which a spirituous drink is obtained by fermentation.

C. zumphia'na, Mart. A species having the same uses as *C. urens*.

C. urens, Linn. (*L. urens*, part. of ure, to burn.) Bastard sago palm. A species from the sap of which sugar is obtained, and from the pith sago is prepared. The fresh sap, or toddy, is used as a laxative, and an excellent spirit is obtained from it by fermentation and distillation.

CARYOTI—CASEATION.

It obtains its specific name from the acidity of the thin yellow rind of the fruit.

Caryoti. (*Kaperoti.*) An old name used by Galen, *de Alim. Fac.* ii, 28, for dates, or the best fruits of the palm, which grow in Syria and Palestine.

Cassa Stronchi'no. Italy; in the Valley of Modigliano. A very strong sodium chloride water, containing a small quantity of potassium iodide.

Casamiccio'la d'Is'chia. See *Ischia*.

Cas'amum. The *Cyclamen europæum*.

Casamunar. Otherwise *Cassumunar*.

Casa'res. Spain; in the district of Málaga. A sulphur water.

Casca. The bark of the *Erythrophloeum guineense*. Used as an ordeal poison by the natives of the West Coast of Africa. If the suspected person drink of an infusion of it with a few grains of rice, and vomit all the rice and be not purged, he is innocent; if he be purged, he is guilty; or he is made to walk, stooping, under an avenue of arched boughs, when, if he stagger or stumble, he is guilty. Casca acts as a purgative and an emetic; it produces contraction of the minute blood-vessels, and retards the action of the heart; it also acts as a diuretic.

The name is also applied to the cinchona barks.

Also, it is a Spanish name of the *Rhamnus alaternus*.

C. d'an'ta. The bark of *Drimys granatensis* and *D. Winteri*.

Casca-de-effect. Same as *Avalanche effect*. See *Avalanche theory*.

Cascara. A Spanish name in Peru for cinchona bark, and especially that of the *Cinchona grandiflora*.

C. sagrada. (*S. sagrado*, sacred.) The bark of *Rhamnus purshiana*.

Cascarilla. (*S. dim. of cascara*, bark.) A new Genus of the Nat. Order *Cinchonaceæ*, separated from the true Cinchonas, and differing from them in the dehiscences of the capsules being from above downwards, and in the absence of cinchonine and quinine from the bark.

Also, the name of the bark of the *Croton eleuteria*.

C. acutifolia. Weddell. The *Cinchona acutifolia*, Ruiz and Pavon.

C. bark. See *Cascarilla cortex*.

C. bark, false. The bark of *Croton lucidum*. Also, called false sweet-wood bark.

C. bush. The *Croton eleuteria*.

C. carabay'a. The Peruvian name of the bark of the *Cinchona ovata*, var. *rustinervis*.

C. Colora'do. A name of the bark of the *Cinchona oblongifolia*.

C. macrocarpa. A false cinchona known as *Cinchona macrocarpa*, Vahl, and *Lodenbergia macrocarpa*.

C. magnifolia. Weddell. (*L. magnus*, great; *folium*, a leaf.) The *Cinchona oblongifolia*, Mutis, and the *C. caducifolia*, Humb.

C. rex'a. Another name of the bark of the *Cinchona oblongifolia*.

C. sebifera. The *Stillingia sebifera*.

C. tinctoria. (*L. tinctorius*, belonging to a dyer.) The *Crotophora tinctoria*.

Cascarilla cortex. (*Dim. of cascara*, the Spanish word for bark. *F. casarille*; *I. cascariglia*; *S. chacarilla*; *G. Cascarillenrinde*.) Cascarilla bark, obtained from the *Croton eleuteria*. Quills 2"—3" long, dull brown, more or

less coated with white lichens. It has an aromatic odour, and a warm, bitter taste. Burns with a fragrant smell. It contains albumen, tannin, cascarillin, colouring matter, fatty matter, wax, gum, resin, starch, pectic acid, salts, and a volatile oil. It is an aromatic tonic. Used in dyspepsia, dysentery, chronic diarrhoea, and torpid conditions of digestion. It is only a weak febrifuge. Supposed to increase the secretion of milk. Dose 20 to 30 grains twice a day.

C. infusum. One ounce to ten of water. Dose, 1—2 ounces.

C. tinctoria. Two and a half ounces to a pint of proof spirit. Dose, 1—2 drachms.

C., volatile oil of. Yielded to the amount of 1 per cent. It is greenish yellow, fragrant. Sp. gr. 938; and isomeric with oil of turpentine.

Cascarillin. $C_{15}H_{15}O_4$. Obtained by means of alcohol, from cascarilla bark, in colourless prisms, bitter, inodorous, slightly soluble in water and cold alcohol, more easily in boiling alcohol and ether, neutral, and destitute of nitrogen. It fuses at 205° C. (401° F.)

Cas'carin. A crystallisable alkaloid obtained from *Casca bark*.

Casche'u. A synonym of *Catechu*.

Caschu. A synonym of *Catechu*. (Quincy.)

Cascia'ni. Italy; district of Montajone. A mineral water containing sulphates, chlorides, and carbonates of sodium, calcium, and magnesium, with a little iron.

Casc. (*L. casus*, a fall, that which comes to pass.) The condition of disease in a person.

Also, a record of the progress of disease in an individual.

Also (*F. caisse*, from *L. capsa*, a box), a receptacle, an enclosing thing.

C. weed. The *Capsella bursa-pastoris*, from its case-like or purse-like capsules.

Casca'ria. A Genus of the Nat. Order *Samydaceæ*.

C. anavin'ga. Same as *C. canzuala*.

C. astringens. Mart. (*L. astringo*, to bind.) Hab. South America. Bark mucilaginous and somewhat acrid. Applied to foul ulcerations.

C. canzia'la. Wall. Hab. India. Bark bitter. Leaves used in baths; pulp of fruit diuretic, diaphoretic, and purgative.

C. esculenta. (*L. esculentus*, eatable.) Root bitter, purgative. Leaves and fruit esculent.

C. lin'gua. Hab. Brazil. A decoction of the leaves is used in inflammatory diseases, and as a tonic in malignant fevers.

C. ova'ta. Roxb. (*L. ovatus*, egg-shaped.) The *C. canzuala*.

C. ulmifolia. (*L. ulmus*, an elm; *folium*, a leaf.) Hab. South America. Leaves applied to wounds; juice used against snake-bites.

Cas'cate. (*L. cascus*, cheese.) A salt of caseic acid, now called lactio.

Caseation. (*L. cascum*, cheese.) The coagulation of milk, whereby the conversion into cheese is accomplished.

Also, a form of fatty degeneration of morbid products, as pus, tubercle, cancer, in which the structure becomes shrivelled and dried, and is converted into a soft, yellowish, cheesy material, containing shrivelled cells of the original deposit, fatty and other debris, and crystals of cholesterolin.

CASEIC ACID—CASSIA.

Ca'seic acid. (L. *caseus*, cheese.) A synonym of *Lactic acid*.

Ca'seiform. (L. *caseus*. F. *caseiforme*; G. *käseförmig*.) Cheese-like.

Ca'sein. (L. *caseus*, cheese. F. *caséine*; G. *Käsein*, *Käsestoff*.) A proteinous substance found in milk, and constituting the chief part of the curd which is separated by rennet. It is soluble in dilute acids and alkalis, and is reprecipitated on neutralisation. In its main reactions it behaves itself like alkali-albumin; indeed, by many they are believed to be identical. Casein is said to exist in the serum of blood and other fluids, in muscle and in grey nerve-substance; although, by many observers, globulin has been mistaken for it. It is also called natural alkali-albumin.

C., blood. A synonym of *Paraglobulin*.

C. of gla'ten. Same as *Paracasein*.

C. of sali'va. A synonym of *Ptyalin*.

C. of small intes'tine. The substance formerly so called is probably an albuminose.

C., veg'etable. A synonym of *Legumin*.

Ca'seous. (L. *caseus*. F. *caséus*; I. and S. *caseoso*; G. *käsig*, *käseartig*, *käsehaltig*.) Of, or belonging to, cheese.

C. infiltration of lung. Same as *Pneumonia, caseosa*.

C. matter. A synonym of *Casein*.

Also, a synonym of pus, which has undergone *Caseation*.

C. oxide. The name given by Proust to the substance now called leucine.

C. phthi'sis. See *Phthisis, caseosa*.

C. pneumo'nia. See *Pneumonia, caseosa*.

Ca'seum. A synonym of *Casein*.

Ca'seus. (L. *caseus*.) Cheese.

C. equi'nus. (L. *equus*, a horse.) Cheese made from mare's milk.

Cashew gum. A product of the *Anacardium occidentale*. Used as a substitute for gum arabic, and as a varnish to books, to keep off insects.

C. nut. The fruit of the *Anacardium occidentale*.

C. nut, Oriental. The *Anacardium orientale*, the fruit of *Semecarpus anacardium*.

C. nut tree. The *Anacardium occidentale*.

Cash'loberry bush. The *Viburnum cassinoides*.

Cashoo'. An aromatic drug of Hindostan, said to possess pectoral virtues.

Cashow. Catechu. (Quincy.)

Ca'sia. Same as *Cassia*.

Also, the bark of the *Daphne gnidium*.

Casimiro'a. A Genus of the Nat. Order *Aurantaceae*.

C. ed'ulis. (L. *edulis*, eatable.) Fruit delicious; said to be soporific.

Casino delle Curiglia'no. Same as *Pontedera*.

Casio'la. Italy; near the rise of the Magra in the Apennines. A mild sulphur water.

Casminar. Same as *Cassumunar*.

Casmonar. Otherwise *Cassumunar*.

Cas'que. (F. *casque*, from I. *casco*, a helmet.) A helmet.

In Botany, applied to the upper lip of the corolla of certain Labiate; and also to the upper division of the perigone of orchids.

Also, in Zoology, used to describe certain helmet-like structures, as the callosity on the head of the cassowary.

Ca'ssa. The thorax. Fallopius, *Expos. de Ossib.* tom. i, c. 18, p. 508.

Ca'ssa bark. One of the native names of the bark of *Erythrophloeum guineense*.

Cassa'da. The *Manihot utilisima*.

C., wild. The *Jatropha gossypifolia*.

Ca'ssarium. The fruit of the balsam tree. (Quincy.)

Ca'ssareop. A sauce made from the juice of the *Manihot utilisima*. It is a powerful antiseptic.

Cassa'va. The *Manihot utilisima*.

C. bitter. The *Manihot utilisima*.

C. bread. Made of *C. meal*, mixed with water and baked in thin cakes.

C. meal. (G. *Cassavemehl*.) The flour of the tubers of *Manihot utilisima*, obtained by grating them, expressing the juice, which is poisonous, drying the residue, and baking it.

C. starch. (G. *Cassavestärke*.) The produce of *Manihot utilisima*; also called Brazilian arrowroot. Obtained by washing *C. meal* with water; it consists of muller-shaped granules, of medium size, having a small variously-shaped nucleus and indistinct markings.

C., sweet. The *Manihot aipi*.

Cassa'vo. The *Manihot utilisima*.

Casse'na. The *Ilex vomitoria*.

Casser'ian. Relating to *Casserio, Giulio*.

C. ganglion. (Γάγγλιον, an enlargement of a nerve.) The ganglion of the larger root of the fifth nerve. It occupies a depression near the apex of the petrous portion of the temporal bone; it is flattened, crescentic, with its convexity in front, and striated on the surface. It receives on its inner surface filaments from the carotid plexus, and gives off from its posterior surface some branches to the dura mater of the middle lateral fossæ of the skull. From its convex anterior border proceed the ophthalmic, the superior maxillary, and the inferior maxillary divisions of the fifth nerve.

The ganglion is also often called the *Casserian ganglion*.

Casserio, Giulio. An Italian anatomist, born at Piacenza in 1545, died at Padua in 1616.

C., perforated muscle of. An old name of the coracobrachialis muscle.

Ca'ssia. (L. *cassia*; Gr. *κασία*; from Heb. *qets'ah*, from *qatsa'*, to cut; the bark being stripped from the tree.) A Genus of the Suborder *Casalpinea*, of the Nat. Order *Leguminosae*.

C. ab'sus. Linn. Hab. Egypt. The seeds are small, black, cordiform, very bitter, somewhat aromatic, and mucilaginous; they are pulverised with an equal quantity of sugar, and the inhabitants put a little of the powder under the eyelids at the commencement of their cases of ophthalmia; an extract of the seeds is used to purify the blood, and in mucous disorders. The seeds are called chichim.

C. acoca'lis. The *C. abrus*.

C. acutifo'lia. Nees. The *C. elongata*, Lém.

C. acutifo'lia. Delile. (L. *acutus*, sharp; *folium*, a leaf.) Legume flat, elliptical, membranous. Produces Alexandrian senna. Hab. Egypt, and other parts of Africa.

C. æthiop'ica. Guib. Legume 1" long, flat, smooth, rounded, 3 to 5-seeded. Hab. Nubia. The source of Tripoli senna.

C. ala'ta. Linn. (L. *alatus*, winged. F.

CASSIA.

dartrier; G. *Kassia gefugella*.) Ringworm shrub. Legumes long, with a broad crenulated wing on each side. Hab. Travancore. Juice of leaves, mixed with lime-juice, is used in ringworm and in herpes. The leaves are cathartic. The plant is used against poisonous bites.

C. alba. (L. *albus*, white.) A synonym of *Canella bark*.

C. alexandrina. The *C. fistula*.

C. angustifolia. Vahl. The *C. elongata*, Lemaire.

C. arborescens. Vahl. (L. *arboresco*, to grow to a tree.) The *C. glauca*.

C. auriculata. Linn. (Mod. L. *auriculatus*, ear-shaped.) Legumes compressed, straight. Hab. India. Bark is astringent, and used as a gargle and injection. Seeds are used in purulent ophthalmia.

C. bacillaris. Linn. fil. (L. *bacillus*, a small staff.) Legume yields a pulp like *C. fistula*.

C. Bonplandiana. The *C. fistula*.

C. bracteata. (L. *bracteatus*, clothed with bracts.) The *C. alata*.

C. brasiliensis. Lam. Hab. Brazil. Legume larger than that of *C. fistula*, flattened, woody on the exterior, rugose, marked with strong nervures. Pulp purgative, bitter, and disagreeable.

C. brevipes. De Cand. (L. *brevis*, short; *pes*, a foot.) Hab. Central America. Leaves with three veins running parallel from the base to the apex, which is blunt. Believed not to be purgative.

C. cana. (L. *canus*, grey.) The *C. obtusata*.

C. canella. Same as *Cassia bark*.

C. caryophyllata. Same as *Cortex caryophyllatus*.

C. cathartica. (Καθαρτική, purgative. Br. *sena do Campo*.) Hab. Brazil. Used as a substitute for senna.

C. chameacris. Linn. (Χαμαί, lowly; *L. cristata*, a crest.) Prairie senna. Hab. United States. Leaves aperient. A decoction was said to be efficacious against the poisonous effects of the nightshade.

C. chinensis. China cinnamon.

C. cinnamomea. (G. *Zimmtkassie*, *Kan-cel*.) A synonym of Chinese cinnamon; the bark of *Cinnamomum aromaticum*.

C. coctata. (L. *coctus*, part. of *coquo*, to cook.) A synonym of *Conserva cassiae*, Belg. Ph.

C. cuneophylla. (L. *cuneus*, a wedge; Gr. φύλλον, a leaf.) The *C. glauca*.

C. Ehrenbergii. Bisch. Furnishes Aleppo senna, with narrow leaves, and is often mixed with Mecca senna.

C. elongata. Lemaire. (L. *elongo*, to lengthen.) Legumes oblong, membranous, 2" to 3" long by 6" broad. Hab. Southern Arabia, India. Supplies Indian or Tinnevely senna, as well as some of the Mecca senna.

C. emarginata. Linn. (L. *emargino*, to deprive of its edge.) Hab. The Antilles. A source of cassia pulp; leaves purgative.

C. excel'sa. (L. *exce'l'sus*, lofty.) The *C. fistula*.

C. exigua. Roxb. (L. *exiguus*, short.) Hab. Bengal. The pounded seeds are used, like those of *C. obtusata*, in purulent ophthalmia.

C. fistula. Linn. (L. *fistula*, a pipe. F. *canefici'er*; G. *Rohrenkassie*.) Senna. Legumes woody, pendulous, smooth, cylindrical, inde-

hiscent, 1" to 2" long; seeds numerous, embedded in a soft, dark brown, sweet pulp. Hab. Upper Egypt, India, West Indies. Furnishes the pods from which cassia pulp is obtained.

C. fistularis. (Same etymon.) The *C. fistula*.

Also, the same as *C. lignea*.

C. glauca. Lam. (L. *glauca*, bluish-grey.) A tree of Coromandel and Malabar. The bark is used by the natives, with sugar and water, in diabetes; and as a decoction in gonorrhoea.

C. grandis. Linn. fil. (L. *grandis*, great.) The *C. brasiliensis*.

C. herpetica. Jacq. The *C. alata*.

C. javanica. The *C. brasiliensis*.

C. lanceolata. Nectoux. The *C. acutifolia*, Delile.

C. lanceolata. Wight and Arn. (L. *lanceolatus*, lance-shaped.) The *C. elongata*, Lém.

C. Latino-rum. (L. *Latinus*, Latin.) The *Oxyris alba*, or poet's cassia.

C. lenitiva. Bischoff. (L. *leno*, to make soft.) The *C. acutifolia*.

C. lignea. (L. *ligneus*, woody. G. *Holz-simmt*.) An inferior cinnamon obtained on the Malabar coast, probably from *Cinnamomum zeylanicum*, var. *cassia*.

Also, often used for Chinese cinnamon of all kinds.

C. lignea malabarica. The *C. lignea*.

C. ligustrina. (L. *ligustrum*, the privet.)

A species supplying senna at times.

C. marylandica. Linn. (F. *séné améri-cain*; G. *Amerikanisches Senna*.) American senna. Legumes pendulous, 2" to 4" long, linear, curved, swelling at the seeds, somewhat hairy, blackish. Hab. Southern United States. Less active than ordinary senna.

C. medica. (L. *medicus*, healing.) The *C. elongata*, Lém.

C. medicinalis. (L. *medicinalis*, medicinal.) The *C. elongata*, Lém.

C. mollis. Vahl. The *C. brasiliensis*.

C. monspeliensis. (L. *monspeliensis*, belonging to Mount Pelion in Thessaly.) The *Oxyris alba*, or poet's cassia.

C. moschata. H. B. K. (Μόσχος, musk.) The *C. fistula*.

C. nigra. (L. *niger*, black.) The *C. fistula*.

C. obovata. De Cand. (L. *ob*, towards; *ovatus*, egg-shaped.) Legumes compressed, curved, greenish brown. Hab. Egypt, West Indies. Yields Aleppo senna, and contributes to Alexandrian.

C. obtusa. Wallich. (L. *obtusus*, blunt.) The *C. obtusata*.

C. obtusata. Hayne. (Same etymon.) A variety of *C. obovata*, with obovate, truncated, emarginate leaflets.

C. obtusifolia. (L. *obtusus*; *folium*, a leaf.) Hab. Antilles. Used instead of ordinary senna. Perhaps same as *C. Tora*.

C. occidentalis. Linn. (L. *occidentalis*, western.) Leaves purgative, root diuretic. Used in India in skin diseases.

C. officinalis. (L. *officina*, a shop.) The *C. acutifolia*.

C. orientalis. (L. *orientalis*, eastern.) The *C. acutifolia*.

Also, the *C. lanceolata*.

CASSIA—CASSUMUNIAR.

C. ova'ta, Merr. (*L. ovestus*, egg-shaped.) The *C. ethiopica*.

C. platycarpa. (Πλατύς, broad; καρπός, fruit.) A variety of *C. obovata*, which supplies Senegal senna. Legumes large, incurved.

C. poetica. (*L. poeticus*, poetic.) The *Oxyris alba*, or poet's cassia.

C. preparata, Ind. Ph. The pods of *C. fistula*, bruised in a mortar, one pound; macerate, with occasional stirring, for one hour in water sufficient to cover; strain, and evaporate to the consistence of a confection.

C. pubescens, R. Brown. (*L. pubescens*, downy.) A species the leaves of which are occasionally found in Mecca senna.

C. puchella. The *C. chamaecrista*.
C. Royleana. (After Dr. Royle.) A variety of *C. acutifolia*.

C. Schimperii. The *C. pubescens*.
C. sem'na, Linn. A name under which Linnaeus included many of the varieties now reckoned as separate species; especially the *C. acutifolia* and *C. elongata*.

C. sem'na, β. Linn. The *C. acutifolia*, Delile.

C. sem'na italica. The *C. obovata*.
C. solutiva. (*L. solvo*, to loosen.) The *C. fistula*.

C. Sophera, Linn. Leaves used in India in skin diseases. Bark given in diabetes. Bruised leaves and bark applied to ringworm and ulcers.

C. sulphurea. (*L. sulphureus*, sulphur-coloured.) The *C. glauca*.

C. syrinx. (Σύριξ, a pipe.) Same as *C. lignea*.

C. Tagera. A variety of *C. Tora*.

C. tomentosa. (*L. tomentum*, cushion-stuffing.) The *C. obtusata*.

C. Tora, Linn. An annual. Legumes very long, sharp-pointed. Hab. India. Leaves are used as an aperient, as a cataplasm for boils, and fried in castor oil as an application to ulcers. They are also given in gout and sciatica. The seeds, mixed with butter-milk, are used to allay itching. The root, mixed with lemon-juice, is said to be a cure for ringworm.

C. turatten'sis. The *C. glauca*.

C. vera. (*L. verus*, true.) Cinnamon.

C. veterum spuria. (*L. veteres*, the ancients; *spurius*, false.) The *Oxyris alba*.

Cassia. (Same etymon.) A synonym of *Senna*.

Also, the same as *C. bark*.

C. bark. (*F. cannelle de chine*; *G. Chinazimmi*, *Zimmitcassia*.) The China cinnamon. The product of *Cinnamomum obtusifolium*, *C. pauciflorum*, *C. tamala*, *C. iners*, *C. cassia*, and other unascertained species. It is very like cinnamon, but larger, thicker, rougher, and darker red, and of a more pungent taste. The quills are single or double, .25" to 1" in diameter.

C. buds. Exported from China. Aromatic. Small pedicellate unripe fruits, the product probably of *Cinnamomum cassia*, and other species. They consist of the thick six-lobed perianth folded over the ovary. They taste like cinnamon, and contain a volatile oil and tannin. Used as cinnamon.

C. Egyptian. The *Cassia acutifolia*. Also, a synonym of *Senna alexandrina*.

C. flowers of. Same as *C. buds*.

C. horse. The *Cassia braziliana*, from its very active properties.

C. oil. Of the same composition as oil of cinnamon, but not so delicate in taste and smell.

C. pulp. See *Cassia pulpa*.

C. purging. The *Cassia fistula*.

C-stick tree. The *Cassia fistula*.

C. water. See *Agua cassia*.

Also, a synonym of *Cinnamomum water*.

Cassia artamentum. A synonym of *C. pulpa*.

C. flores. (*L. flos*, a flower.) The flowers of the *Cinnamomum zeylanicum*. Aromatic and stimulant.

C. pulpa. The pulp obtained from the pods of *Cassia fistula*. It is blackish brown, with a sticky small and sweet taste. It contains sugar, pectin, gum, a substance analogous to tannin, and a cathartic principle. Laxative in 1—2 dr. doses.

Cassida galericulata. (*L. cassida*, dim. of *cassia*, a helmet.) The *Scutellaria galericulata*.

Cassidæous. (*L. cassida*, dim. of *cassia*, a helmet.) Helmeted; having a helmet-shaped petal, as the aconitum.

Cassidony. (Contracted from *L. steechas*, French lavender; *sidonius*, from *Sidon*, whence it was obtained.) The *Lavandula steechas*.

Cassio. The perfume obtained from the flowers of *Acacia farnesiana*, and used to give a pleasant scent to ointments and other applications.

Cassin. A name given by Caventon to a bitter extract obtained from the *Cassia fistula*; soluble in water and alcohol.

Cassina. The *Ilex vomitoria*.

Cassinu. The *Ilex vomitoria*.

Also, a Genus of the Nat. Order *Aquifoliaceae*.

C. gouguba, Mart. The leaves possess similar stimulating properties to Paraguay tea, and are used as a substitute.

C. paragua. The *Ilex vomitoria*.

Cassiola. The *Hyssopus officinalis*.

Cassiri. A spirituous liquor obtained by fermenting a decoction of the root of *Manihot utilisima*.

Cassia. The *Ribes rubrum*.

Cassiterides. (Κασσίτερος, tin.) A Genus of simple bodies having tin for their type, and comprising also antimony, zinc, and cadmium. (Ampere.)

Cassiterus. (Κασσίτερος.) Tin.

Cassius, Andreas. An alchemical physician of the latter half of the seventeenth century; he was a native of Schleswig, and practised at Hamburg.

C's precipitate. The purple of Cassius.

C's purple. A brownish purple precipitate, formed when a mixture of stannous and stannic chlorides is added to dilute gold solutions. Used in enamel painting and as a staining material.

Cas'sob. (Arab.) An alkali or alkaline salt. (Quincy.)

Cassole'ta. A kind of moist fumigation.

Cassous. (*L. cassus*, empty. *G. leer*.) Empty, as when a nut contains no kernel, or an anther no pollen.

Cassuëjouis. France; Departement de l'Aveyron. Cold waters, containing a small quantity of carbonate of iron and much carbonic acid. A good chalybeate in anæmia.

Cassumuniar. (Supposed Ind.) The root of the *Zingiber scrubet* or the *Z. cassumuniar*. It is brought from the East Indies in

CASSUVIEÆ—CASTILLOA.

Irregularly cut pieces of various shapes; the cortical portion is marked with circles of a dusky brown, the inner part is paler and unequally yellow; it is warm, bitter, and aromatic in its qualities, and smells like ginger. Used in hysterical, epileptic, and paralytic affections.

Cassuvieæ. A synonym of *Anacardiaceæ*.

Cassuvium pomiferum, Lamk. (*L. pomum*, an apple; *fero*, to bear.) The *Anacardium occidentale*.

C. occidentale. The *Anacardium occidentale*.

Cassytha. A Genus of the Nat. Order *Cassythaceæ*.

C. filiformis. (*L. filum*, a thread; *forma*, shape.) Hab. Cape of Good Hope. A parasitic plant used as an insecticide and in tinea capitis, and chronic ulcers.

It is also used in syphilis and gonorrhœa.

Cassythaceæ. The Dodder laurels. A Nat. Order of monochlamydeous Exogens of the Alliance *Daphnales*, having anthers bursting by recurved valves, scales instead of leaves, and the fruit enclosed in a succulent permanent calyx.

Cassythæ. Same as *Cassythaceæ*.

Cast. (Dan. *kaste*, to throw. *F. moule*.) A mould of an interior, specially applied to casts of the urinary tubules in kidney disease, or of the respiratory tubes in croup or similar diseases.

C. of the eye. Same as *Strabismus*.

Castalia speciosa. (*L. Castalia*, a fountain on Parnassus, sacred to Apollo and the Muses; *speciosus*, beautiful.) The *Nymphaea alba*.

Castanea. (*Κάστανος*, from *Castania*, in Thessaly, where it was abundant. *F. chataigne*; *L. castagna*; *S. castana*; *G. Kastanis*.) A Genus of the Nat. Order *Corylaceæ*.

Also (*F. feuilles de châtaignier*; *G. Kastanienblätter*) the pharmacopœial name, U.S.A., of the leaves of *Castanea vesca*. They have little smell and a slightly bitter, astringent taste. An infusion or fluid extract is used in whooping-cough.

C. americana, Persoon. The *C. vesca*, growing in America.

C. edulis, Gärtn. The *C. vesca*.

C. equina. (*L. equinus*, belonging to a horse.) The *Æsculus hippocastanum*, or horse-chestnut tree.

C. porcina. (*L. porcinus*, belonging to swine.) The earth nut, *Lathyrus tuberosus*.

C. pumila, Willd. (*L. pumilus*, dwarfish.) Hab. United States. The bark is used under the name *Chinquapin*.

C. vesca, Linn. (*L. vescus*, small.) The Spanish or sweet chestnut. Nuts edible. The inner bark is used in dysentery. The mature leaves form *Castanea*.

C. vulgaris. (*L. vulgaris*, common.) The *C. vesca*.

Castanea-cœm. (*Castanea*.) A synonym, by Link, of *Sapindaceæ*.

Castan-cœm. A synonym of *Corylaceæ*.

Castan-cœus. (*Κάστανος*, chestnuts.) Of a chestnut or orange-brown colour.

Castanocarpous. (*Κάστανος*, chestnuts; *καρπός*, fruit.) Having fruit like that of the chestnut.

Castanopterous. (*Κάστανος*; *πτερον*, a wing.) Of a chestnut colour; applied to the elytra of beetles and the wings of birds.

Castanospermum. (*Κάστανος*, chest-

nuts; *σπίρα*, seed.) A Genus of the Tribe *Papilionaceæ*, Nat. Order *Leguminosæ*.

C. australe. (*L. australis*, southern.) The seeds, called Moreton Bay chestnuts, from the habitat of the tree, are roasted and eaten like chestnuts.

Casteljaloux. France; Département de Lot-et-Garonne. Mild chalybeate waters.

Castellama-re. Italy; on the Bay of Naples. It is situated on the lower slopes of the Monte Sant'Angelo, the ancient Mons Gaurus, and near the site of the old town, Stabie, at which the elder Pliny lost his life during the eruption of Vesuvius, which destroyed this place along with Pompeii and Herculaneum. It is a well-frequented sea-bathing place, and has several mineral-water springs. The climate is healthy and dry, except in winter, when it is damp.

The Acqua media contains sodium bicarbonate 2·4 grains, magnesium bicarbonate 1·9, calcium bicarbonate 1·1, sodium sulphate 6·7, calcium sulphate 2·3, sodium chloride 18·1, calcium chloride 7·5, calcium, magnesium, and iron silicates 1·1, and carbonic acid 1·36 cubic inches, in 16 oz., with small quantities of nitrogen and oxygen.

The Acqua sulfurica contains nearly three times as much sodium bicarbonate and twice as much sodium chloride, along with a little hydrogen sulphide.

The Acqua ferrate del Pazziello has much the same composition as the Acqua media, with the addition of a small quantity of iron, as also the Acqua ferrata nuova.

The Acqua acidula contains barely half the amount of solid contents of the Acqua media in about the same proportion.

The Acqua del Muraglione contains a large proportion of sodium bicarbonate and chloride.

They are used to excite scanty secretion and to remove deposits.

Castelletto Mascagni. Italy; in Tuscany; named after the celebrated anatomist Mascagni. A water containing magnesium and calcium sulphate, calcium, ammonium, and iron carbonate, with free carbonic acid and a little hydrogen sulphide.

Castéra-Verduzan. France; Département du Gers. Mild chalybeate waters containing a little hydrogen sulphide.

Castigant. (*L. castigo*, to set right.) A term used in the same sense as *Corrigent*.

Castiglione. Italy; near Casamiciola. Mineral waters, of a temp. of 77° C. (170·6° F.), containing sodium chloride 40 grains, and magnesium sulphate 11 grains, in 16 ounces.

Castiglione. (After L. Castiglione, a South American traveller.) A Genus of the Nat. Order *Euphorbiaceæ*.

C. lobata. (*Λοβός*, a lobe.) Hab. Peru. The fruit is eaten roasted. An incision in the stem causes a bright fluid to flow, which dries into a black, horny mass, and is a powerful caustic. (Dunglison.)

Castilhon, powder of. A synonym of *Arrowroot*.

Castille. (*S. castilla*, from *castillo*, fort.) An ancient kingdom of Spain, so called from the numerous forts on its frontiers.

C. soap. See *Soap, Castille*.

Castilloa. A Genus of the Nat. Order *Artocarpaceæ*.

C. elastica, Cav. Hab. Mexico. A species supplying india rubber.

CASTILLON'S POWDERS—CASTS.

Castillon's powders. Sago powdered, salep powdered, tragacanth, of each 8 parts, prepared oyster-shells 2, cochineal 1. A drachm boiled in a pint of milk is drunk in diarrhoea and dysentery.

Castin. A name given to a bitter crystallisable substance, soluble in alcohol and ether. Found in *Agnus castus*.

Castling hairs. Fine hairs springing from the surface of the inner epidermis, by the growth of which the outer skin is thrown off in Crustacea and Ophidia. The hairs are subsequently converted into striæ, warts, and other markings.

Castloe. A synonym of *Catechu*.

Castle-Connell. Ireland; County Limerick, nine miles to the north-east of Limerick. A pleasantly situated village on the east bank of the Shannon, having a chalybeate water.

Castor. (Κάστωρ, the beaver, from γαστήρ, the belly; from its large size in that animal.) A Genus of the Family *Castoridae*, Order *Rodentia*, Class *Mammalia*.

Also, the product of *C. fiber*. See *Castoreum*.

C. americanus. Cuv. Same as *C. fiber*. Supplies Canadian castor.

C. fiber. Linn. (*L. fiber*, a beaver. *F. castor*; *I. castoro*; *S. castor*; *G. Biber*.) The beaver. Hab. North America, Europe, and Asia. Produces official castor. See *Castoreum*.

C. oil. (The word castor here has by some been derived from *castoreum*; by others, it is thought to be a corruption of *castus*, inasmuch as the castor-oil plant was, among other names, formerly called *Agnus castus*.) The *Oleum ricini*.

C.-oil beans. The seeds of *Ricinus communis*. They are acrid and poisonous, and yield castor oil on expression.

C.-oil plant. The *Ricinus communis*.

Castoreum. B. Ph. (*L. castor*, the beaver. *F. castor*; *I. castorio*, *castoro*; *S. castoreo*; *G. Bibergeil*.) Castor. The dried preputial follicles and their secretion, of the beaver, *Castor fiber*, obtained from the Hudson's Bay Territory. Opening into the cloaca of both sexes, between the anus and the prepuce, are two pairs of membranous follicles, one pair of which contain oil and are not used, and the other pair are the castor sacs. They are pear-shaped and compressed, have a corrugated mucous lining covering a small brownish body, and contain an unctuous, yellowish-brown substance—castor. The dried follicles are imported attached to each other, 3" long, pear-shaped, firm, and brownish black, and containing the secretion which is strongly odoriferous, bitter and nauseous in taste, and reddish in colour. It is composed of volatile oil, resinous matter, albumen, a kind of osmazome, mucus, calcium urate, carbonate, benzoate, phosphate and sulphate, sodium acetate and chloride, potassium chloride, sulphate and benzoate, ammonium carbonate, castorin, salicine, and carbolic acid. Castor produces a frequent pulse, heat of skin, perspiration, determination to the head and giddiness, according to Richter. It is used as an antispasmodic and emmenagogue in hysteria, chorea, and epilepsy. Dose, 1—10 grs.; of the tincture, 1—4 drs.

C. americanum. Same as *Castoreum*, B. Ph.

C. anglicum. Same as *Castoreum*, B. Ph.

C. canadense. G. Ph. Same as *Castoreum*, B. Ph.

C. europæum. The *C. sibiricum*.

C. germanicum. German castor. Same as the *C. sibiricum*.

C. moscoviticum. Muscovite castor. Same as the *C. sibiricum*.

C. polonicum. Polish castor. Same as the *C. sibiricum*.

C. rossicum. Russian castor. Same as *C. sibiricum*.

C. sibiricum. Castor obtained from Siberia and Western Russia. Sacs more globular, less wrinkled and folded than the official castor. It is much rarer.

Castoric acid. An acid produced by the action of nitric acid on castorin.

Castoridæ. A Family of *Rodentia*, of which the *Castor*, or beaver, is the type; distinguished by having distinct clavicles, five toes to each foot, and usually webbed hind feet.

Castorin. (*F. castorin*; *I. and S. castorino*; *G. Bibergeilcampher*, *Castorin*.) Long, diaphanous, fasciculated prisms, having the smell of castor and a metallic taste. Obtained from castor by crystallisation from an alcoholic solution. Its composition is unknown.

Castorina. (Κάστωρ, the beaver.) Medicines containing castoreum.

Castrangula. The *Scrophularia aquatica*.

Castrate. (*L. castro*, to cut off. *G. verschnitten*.) Deprived of testicles. Having the male organ removed.

Also, to remove the testicles.

C. stamen. (*G. entmannte Staubfaden*.) A stamen which possesses no anther.

Castrated. (*L. castratio*. *F. châtré*; *I. castrato*; *G. verschnitten*.) Having the anther removed. Deprived of the testicles.

Castration. (*L. castratio*, from *castro*, to cut off. *Εὐνοχισμός*, *ἐκτομή*, *ὀρχοτομία*; *F. castration*; *I. castrazione*; *S. castracion*; *G. Hodenausschneidung*, *Verschneidung*, *Entmannung*.) The extirpation of one or both testicles. It is performed in the early stages of malignant disease and in some non-malignant diseases of the testicle. The scrotum having been drawn tense over the tumour, a longitudinal or a double elliptical incision is made on the anterior surface, the scrotal attachments are divided, and the tumour is removed by division of the cord; or the cord may be divided first. In either case care must be taken that the cord does not retract into the abdomen before the vessels have been secured.

The term has also been applied to removal of the ovaries. See *Oophorectomy*.

In Botany (*G. Ausputzen*, *Auslichten*), the word castration signifies the removal of the anthers or the pistil before fecundation has occurred.

C. female. The removal of the ovaries. See *Oophorectomy*.

C. inguinal. (*L. inguen*, the groin.) The operation for the removal of a testicle which has not descended and remains in the groin.

Castrocaro. Italy; nineteen leagues from Florence. Mineral waters, containing sodium chloride 303 grains, sodium iodide .88, sodium bromide .06, and sodium sulphate 15.9 grains, in 12 ounces. Used in scrofulous diseases and in tertiary syphilis, in rickets, and in obesity.

Casts. (*Ice. kasta*, to throw.) Moulds.

C., bronchial. See *Bronchitis, plastic*.

C., renal. (*L. ren*, the kidney.) Moulds

CASUARINA—CATACLESTIA.

of the urinary tubes found in the urine in kidney disease. See *Renal casts*.

C., urinary. (*L. urina*, urine.) Same as *Renal casts*.

Casuarina. A Genus of the Nat. Order *Casuarinaceae*, so called because of the resemblance of the leaves to the feathers of the cassowary.

C. equisetifolia. (*L. equisetum*, the horse tail; *folium*, a leaf.) The bark is astringent, a decoction of the leaves is used in colic, and the bruised fruits are employed as a cataplasm in headache.

C. litoræa. Rumph. (*L. litoræus*, belonging to the shore.) The *C. muricata*.

C. litoralis. (*L. litoralis*, belonging to the sea shore.) The *C. muricata*.

C. muricata. Roxb. (*L. muricatus*, pointed.) Tinian pine. The bark is used in chronic diarrhoea and dysentery. It has also been used as a nerve and tonic.

Casuarinacæ. Beefwoods; so called because the wood is of the colour of raw beef. A Nat. Order of monochlamydeous Exogens; described by Lindley as a mental Exogens with a one-celled ovary, one or two ascending ovules, and a superior radicle.

Casuarinæ. Mirbel's term for *Casuarinaceae*.

Also, a Family of the Order *Amentaceae*.

Casumuniar. See *Cassumuniar*.

Casus. (*L. cado*, to fall.) A fall, hap, or chance. Anciently used for symptom; also for an accident; for a present disease; for prolapsus; for an entire history of a disease or a case.

C. palpebræ superioris. (*L. palpebra*, the eyelid; *superior*, upper.) A synonym of *Ptoxis*.

C. u'vulæ. (*L. dim. of uva*, a grape.) Edema of the uvula.

Cat. (Etymology obscure. *F. chat*; *I. gatto*; *S. gato*; *G. Katze*.) The *Felis domesticus*. It is said to be good eating, and is used as food in China. The cat is infested by the fuke worms, *Amphistoma truncatum* and *Hemistoma cordatum*; by the tapeworms, *Tenia crassicolis*, perhaps *Tenia lineata*, *Bothriocephalus decipiens*; among the nematodes are *Trichostrongylus axei*, *Trichostrongylus colubriformis*, *Ostertagia circumcincta*, *Trichostrongylus axei*, *Ostertagia circumcincta*, *Ostertagia circumcincta*.

C.'s claw. The *Inga unguis-cati*.

C.'s ear, spotted. The *Achyrophorus maculatus*, or *Hypochæris maculata*.

C.'s eye. (*G. Katzenaugen*.) A name formerly given to those affections of the eye in which there is a glistening, yellowish reflection behind the pupil, having some resemblance to the reflection of the tapetum in the eye of a cat. Several distinct disorders were included under this term; among them, and distinguished by the epithet amaurotic, was glioma of the retina.

C.'s eye amaurosis. See *Amaurosis*, *cat's eye*.

C.'s foot. The *Antennaria dioica*, the *Gnaphalium polycephalum*, and also the *Nepeta glechoma*.

C.'s milk. The *Euphorbia helioscopia*.

C.'s purr. The *Fremissement cataire* of Laennec. A thrill felt over the region of the heart in certain cases of valvular disease of the heart.

C.'s tail. The *Typha latifolia*, and also *Phlæum pratense*.

C. thyme. The *Teucrium marum*; because cats are fond of it.

Ca'ta fam'bra. A vegetable product from Japan, analogous to Gambir.

Catabasis. (*Καταβαίνω*, to descend.) The descent of a humour or an organ.

Catabates. A synonym of *Truffles*.

Catabatic. (*Καταβαίνω*, to descend.) Descending or declining by degrees. Applied to a fever which gradually abates in severity till its termination.

Catablema. (*Κατάβαλλω*, to pack up.) An old term (*Gr. κατάβλημα*) used by Hippocrates, *de Artic.* ii, 32, for the outermost fillet by which the bandages are maintained in their proper situation.

Catabophyte. (*Καταβύπτω*, to plunge; *φυτόν*, a plant.) A plant which grows beneath the surface of water.

Catabythismomania. (*Καταβυθισμός*, making to sink; *μανία*, madness.) The drowning mania.

Catabythismus. (*Καταβυθίζω*, to make sink.) Voluntary drowning.

Catacasmus. (*Κατά*, down; *ἀκάζω*, obsolete present, from whence the particle *ἀκαχμίνος*, sharp-edged.) A term for cupping or scarification.

Catacauma. (*Κατακαίω*, to burn.) A former term (*Gr. κατάκαυμα*), used by Hippocrates, *Coac. Prænot.* i, 158, for a burn or scald.

Catacausis. (*Κατακαίω*, to burn.) A term applied by Young and Good to the phenomena called preternatural or spontaneous combustion.

C. ebrisæ. (*L. ebrius*, sottish.) The spontaneous combustion of a spirit drinker.

Catacaustic. (*Κατά*; *καυστικός*.) See *Caustic in optics*.

Catacomodermatitis. (*Κατάκειμαι*, to lie down; *δέρμα*, the skin.) Inflammation of the skin from bed-pressure.

Cataceras'ticus. (*Κατακεράννυμι*, to mix together.) Having power to neutralise, or dull the acrimony of, the humours by mixing with them.

Catachloos. (*Κατάχλοος*, from *κατά*, excess; *χλόη*, grass.) An old term signifying of a very green colour. (*Castellus*.)

Catachrisis. (*Καταχρίω*, to anoint.) Inunction, or an anointing.

Catachrisma. (*Καταχρίω*, to anoint.) An ointment.

Catachris-ton. (*Καταχρίω*, to anoint.) An old term (*κατάχριστον φάρμακον*), applied to a medicament used as an ointment. Hippocrates *de Morb. Mulier.* i, cxxiii, 16.

Catachyma. (*Κατάχυμα*.) An effusion of water.

Catachysis. (*Καταχύω*, to pour out.) Used (*Gr. κατάχυσις*) by Hippocrates, *Aph.* v, 21, for an effusion or pouring out, and for affusion of water.

Cataclasis. (*Κατακλάω*, to break.) A distortion of the eyelids. Also, a fracture of bone.

Catacleis. (*Κατά*, under; *κλείω*, the clavicle.) Old name (*Gr. κατακλείς*) used by Galen, *de Ossib.* c. 14, for the first rib, from its situation; also applied to the subclavicular portion of the thorax. Also, the sterno-clavicular fibro-cartilage.

Catacleisis. (*Κατάκλεισις*, a shutting up, from *κατακλείω*, to confine.) Unnatural union of the eyelids.

Catacleisia. (*Κατά*, downwards; *κλείω*, to shut up.) A monopermous indehiscent fruit

CATACLESISM—CATALPA.

with coriaceous pericarp, not ligneous, covered by the pericarp, which never becomes fleshy, as in the Chenopodiaceae.

Catacle'stium. See *Cataclesia*.

Cataclysm. (Κατακλυσμός, from κατακλύω, to inundate.) A Geological term for a violent deluge or inundation.

In Medicine, an effusion of water, or an enema.

Catacly'sma. (Κατακλυσμα, from κατακλύω, to wash.) An old name used by Hippocrates (κατακλυσμα) for a clyster, or for a purge.

Catacorolla. (Κατά, against; corolla.) An additional corolla, either inside or outside the natural one.

Catacoustics. (Κατά, downwards; ακούω, to hear. F. *catacoustique*.) That branch of acoustics which treats of reflected sounds, or the properties of echoes.

Catacrotous. (Κατά; κρότος, a striking.) A term applied to a dicrotic pulse, in which the dicrotism occurs in the descent of the blood-wave, and is shown in the downward stroke of the sphygmographic tracing.

Catacysta. (Κατά; κύστις, a bladder.) A term applied to the condition of some Echinoides, in which the anus opens on the ventral surface of the peristome.

Catadioptric. (Κατά, downwards; διαοπτικός, belonging to the use of the διαόπτρα, an optical instrument. F. *catadioptrique*.) Applied to certain telescopes because they unite the combined effects of reflection and refraction.

Cataonoe'sis. (Καταόννησις, a fomentation, from καταοννέω, to pour upon.) A fomentation or affusion.

Catagauna. A term for gamboge.

Cataglossum. (Κατά, downwards; γλῶσσα, the tongue. F. *cataglosses*.) An instrument for pressing down the tongue and lower jaw.

A synonym of the *Speculum oris*.

Catagma. (Κάταγμα, from κατάρω, to break.) An old name for a fracture. (Castellus.)

C. assura. (L. *Assura*, a cleft.) A fissure.

C. fractura. (L. *fractura*, from frango, to break.) A fracture.

Catagmatic. (Same etymon.) Of, or belonging to, a fracture. Applied to remedies necessary for the cure of fractures, that is, for the formation of callus.

Catagraphology. (Καταγράφω, to write down; λόγος, a discourse.) The doctrine of the writing of prescriptions.

Catagyno. Ancient name of gamboge.

Catalangans. Part of the mixed race of Irayan Malays inhabiting the eastern arm of the Rio de Ilagan.

Catalentia. A Paracelsian name for a kind of epilepsy.

Catalentia. Same as *Catalepsy*.

C. co'ra. (L. *corrus*, waxen.) Catalepsy with such passive rigidity that the limbs may be placed in any position and will retain it as if they were of soft wax.

C. spuria. (L. *spurius*, false.) A term for *Ectasy*.

Catalepsy. (Καταλαμβάνω, to seize or attack. F. *catalepsie*; L. *catalepsis*; S. *catalepsia*; G. *Sinnestäcke*.) A suspension of sensation and of consciousness, with rigidity of muscles to a greater or less extent, and without important

change in the condition of respiration and circulation. The attack commonly occurs in females, is usually sudden, and generally follows upon some great mental trouble or excitement. It may last hours or days. Catalepsy is a condition which is very frequently simulated.

Catalepsy, after repeated attacks, has terminated occasionally in death; but then there has been found other grave lesions, such as cerebral hæmorrhage, or congestion or softening of brain.

C., ac'cessory. (L. *accido*, to approach.) Catalepsy associated with hysteria, epilepsy, tetanus, mania, or other nervous affection.

C., arti'ficial. Catalepsy occurring during *Hypnotism*.

C., com'plete. The form in which there is entire loss of consciousness, with complete rigidity and fixation of the limbs, in any position in which they may be placed.

C., epi'demic. (Επιδήμιος, prevalent among a people.) Catalepsy propagated by irritation, in impressionable persons of a nervous temperament, under the influence of a present case and certain unfavorable hygienic and moral conditions.

C., idiopath'ic. (Ίδιος, peculiar; πάθος, affection.) Same as *C., complete*.

C., in'complete. The form in which there is rigidity of muscles, so that the limbs will easily take and retain any position; but the rigidity is imperfect or affects only one limb or one side of the body.

C., sec'ondary. Same as *C., accessory*.

C., true. Same as *C., complete*.

Cataleptic. (F. *cataleptique*; G. *kataleptisch*.) Of, or belonging to, catalepsy.

C. meth'od. See *Method, cataleptic*.

Cataleptoid. (Κατάληψις, catalepsy; είδος, likeness.) Resembling catalepsy.

Catalit'ia. Same as *Catalysis*.

Catalia'cta. (Καταλλάσσω, to change.) An Order of the Subkingdom *Protocoe*, according to Hæckel. Small ciliated spheres, living in the sea, formed of a great number of ciliated, pyriform cells, with the thin end central. When the sphere breaks up the cells lose their cilia, and move like an amoeba; subsequently they become encysted, divide and subdivide into a mass of cellules, which again obtain cilia, and, having broken their common envelope, escape as new ciliated spheres.

Catalonga. A name of St. Ignatius's bean.

Catalotic. (Καταλόω, to crush in pieces.) Having power to destroy or remove ugly cicatrices.

Catal'pa. (G. *Trompetenbaum*.) A Genus of the Nat. Order *Bignoniaceae*.

C. arbor'ea. (L. *arboræus*, tree-like.) The *C. bignonioides*.

C. arbor'es'cens. (L. *arborescens*, to grow to a tree.) The *C. syriacifolia*.

C. bignoni'ides. Walt. (*Bignonia*; είδος, likeness.) Hab. United States. Reputed poisonous. Decoction of the seeds used in Italy in asthma and in coughs. A similar species is used in Japan for the same purpose. The juice of the root is used in scrofulous ophthalmia.

C. cordifolia. (L. *cor*, the heart; *folium*, a leaf.) The *C. bignonioides*.

C. longi'stima. Sims. (L. *sup.* of *longus*, long. F. *cône noir d'Amérique*.) Used as *C. bignonioides*.

CATALYSIN WATERS—CATAPHORA.

C. syringifolia, Sims. (*Syringa*; *L. folium*, a leaf.) The *C. bignonioides*.

Catalysin waters. See *Gettysburg*.

Catalysis. (Κατάλυσις, to dissolve. *F. catalyse*; *I. catalisi*; *S. catalisa*; *G. Katalysis*.) The phenomena which occur when chemical alteration takes place in a substance by the mere presence of another body, which itself undergoes no recognisable change, as when potassium chlorate gives off oxygen when heated in the presence of manganese dioxide, or when starch is converted into grape sugar in the presence of diastase.

It was anciently applied to palsy, and to the exhaustion of impending dissolution.

C. acética. (*L. acetum*, vinegar. *I. catalisi acetica*.) The oxidation of alcohol in contact with spongy platinum, by which acetic acid is produced.

C. benzoica. (From *benzoin*, the gum of that name. *F. catalyse benzoique*; *I. catalisi benzoica*.) The same as *C. hippurica*.

C. benzoinica. (*L. benzoinum*, the gum of that name. *F. catalyse benzoïque*; *I. catalisi benzoica*.) In this kind of catalysis amygdalin, under the influence of emulsin or synaptase, is converted into essence of bitter almonds and hydrocyanic acid.

C. dextrinica. (*L. dexter*, the right side. *I. catalisi dextrinica*.) In this form of catalysis cane sugar, cellulose, and gum or starch, in contact with weak mineral acids, are first converted into dextrin, and then into glucose.

C. gallica. (*L. galla*, the gall-nut. *F. catalyse gallique*; *I. catalisi gallica*.) The substance undergoing catalysis is tannin, and the active agent is probably albumin. The products are gallic and ellagic acids, which, however, do not together quite represent the formula of tannin.

C. glucosalignica. (Γλυκύς, sweet; *L. salix*, a willow. *F. catalyse glucosalignique*; *I. catalisi glucosalignica*.) The decomposition of salicin under the influence of synaptase.

C. glucosica. (Γλυκύς, sweet. *I. catalisi glucosica*.) The same as *C. dextrinica*.

C. glyccocollica. (Γλυκύς, sweet; κόλλα, glue. *F. catalyse glyccocollique*; *I. catalisi glyccocollica*.) The same as *C. hippurica*.

C. hippurica. (ἵππος, a horse. *F. catalyse hippurique*; *I. catalisi ippurica*.) The body undergoing catalysis is hippuric acid, which, under the influence of mucus altered by the air, yields gelatin or glyccocol.

C. hydrlica. (ὕδωρ, water. *I. catalisi idrica*.) The combination induced between oxygen and hydrogen under the influence of contact with platinum, iridium, gold, silver, and other metals. With some metals the influence is exerted at a low temperature, but with others, as silver, a temperature of 300° C. (572° F.) is required.

C. lactica. (*L. lac*, milk. *I. catalisi lactica*.) The catalysed body is glucose, or sugar of milk, and the catalysing agent is casein, fresh gluten, or some other nitrogenised vegetable substance, which, however, must have been exposed for a time to the air.

C. nitrosa. (Νίτρον, saltpetre. *I. catalisi nitrosa*.) An oxidising catalysis in which ammonia, under the influence of spongy platinum, yields nitric acid.

C. peptica. (Πήκνυμι, to coagulate. *I. catalisi peptica*.) A form of catalysis in which pectin, parapectin, and metapeptin, in contact

with alkalies and alkaline earths, yield at first pectonic and then pectic acids.

Catalytic. (Same etymon.) Of, or belonging to, catalysis.

C. body. A term sometimes used to denote a ferment.

Catalytic. Same as *Catalytic*.

Catamenia. (Κατά, according to; μήν, the month. *F. menstrues, règles*; *G. Mondfluss*.) The monthly discharge from the uterus; the *Menses*.

C. alba. (*L. albus*, white.) A synonym of *Leucorrhœa*.

Catamenial. (Same etymon.) Pertaining to the catamenia or menses.

C. synovitis. See *Synovitis, catamenial*.

Catameniorum fluxus immodicus. (*Catamenia*; *L. fluxus*, a flow; *immodicus*, beyond bounds.) Immoderate flow of the menses; menorrhagia.

Catananthe. (Κατανάνθη.) A plant of the vetch tribe, mentioned by Dioscorides, either an *Ervum* or an *Astragalus*.

Also, a Genus of the Nat. Order *Compositæ*.

C. cœrulea, Linn. (*L. cœrulea*, sky-blue.) Used as a substitute for *Cichorium intybus*. It has been said to be an astringent and vulnerary.

Catangulus. The *Ruscus aculeatus*.

Catania. Sicily; a seaside town at the foot of the southern spur of Mount Etna, by which it is sheltered. A warm and sunny winter residence, having, except when the north wind blows, little daily variation of temperature, and a mean higher than that of the Riviera.

Catantlema. (Καταντλίω, to pour over.) A fomentation or affusion of warm water.

Catapasma. (Καταπάσσω, to sprinkle.) A former term (Gr. καταπάσμα), used by Paulus Ægineta, vii, 13, for any dry medicine in powder, which was sprinkled on ulcers. These applications were called *Smegmata*, and were distinguished into *Catapasmata*, *Diapasmata*, *Empasmata*, and *Sympasmata*, according to Gorreus.

Catapastum. Another term for *Catapasma*.

Catapausis. (Καταπαύω, to put to rest.) The effect of a sedative.

Catapopsis. (Κατά, downwards; πίψις, digestion.) Perfect digestion.

Catapetalous. (Κατά, downwards; πέταλον, a petal.) Applied by Linnæus to a corolla, which, being monopetalous, has its petals lightly adherent by their base to the androphorum, so that they do not fall separately after flourishing.

Cataphasia. (Κατάφασις, an affirmative proposition.) A morbid condition of the speech, in which the patient repeats for several times the same word in answer to a question, or spontaneously; frequently, if the word be of many syllables, the latter ones are gradually omitted until, perhaps, the first only is pronounced. It has only been observed as a condition accompanying extensive disease.

Cataphisma. A thick poultice made of meal and herbs.

Cataphonica. (Κατά, downwards; φωνή, sound.) That branch which treats of the reflection of sound.

Cataphora. (Καταφέρω, to fall down.) A term for coma. Also a very deep sleep.

CATAPHRACTA—CATAPLASMA.

C. coma. (Κόμα, drowsiness.) San-
guineous apoplexy.

C. hydrocephalica. (Υδωρ, water;
κεφαλή, the head.) Serous apoplexy.

C. magnetica. Same as *Mesmeric coma*.

Cataphracta. (Καταφράσσα, to for-
tify.) A breastplate or cuirass. Formerly applied
(Gr. καταφράκτης) by Galen, *de Fasciis*, c. vol.
xviii, part 1, p. 816, to a bandage for the chest
in fracture of the sternum or ribs, as shown by
Soulstetus, *ed. Amstel.* 1672, tab. ult.

Also, a synonym of *Chelonia*.

Cataphracted. (Same etymon.)
Covered with a horny skin, as with a scaly
cuirass.

Cataphracti. (Same etymon. G. *Pan-
serwangen*.) A family of acanthopterous fishes.
It includes *Gasterosteus*, *Trigla*, and other similar
forms.

Cataphylla. Same as *Cataphyllary
leaves*.

Cataphyllary leaves. (Κατά, down;
φύλλον, a leaf. G. *Niederblätter*.) Scales pro-
duced usually on underground shoots and
remaining buried in the earth, although they also
frequently occur above ground, especially as an
envelope to the winter buds of woody plants, as
the horse-chestnut.

Catap'esis. (Καταπίεσις, a keeping
down, from κατά, down; πίεσις, to crush.) De-
pression, as in a fracture.

Catapino'sis. (Καταπίνωσις, to drink
down, to absorb.) Absorption.

Cataplasia. (Κατάπλασις, a plastering,
from καταπλάσσω, to plaster over.) The appli-
cation of plaster.

Cataplasma. A poultice. See *Cataplasmata*.

Cataplasmata. (Καταπλάσματα, to overlay
with plaster. F. *cataplasme*; L. and S. *cataplasma*;
G. *Breiumschlag*.) A poultice. An application
to the external surface, of a soft pulpy consistence,
used for the purposes of supplying warmth and
moisture, with or without medicinal adjuncts.

C. aceti. (L. *acetum*, vinegar.) The
vinegar poultice. Made of vinegar and bread
crumb, or the like. Used for bruises and sprains.

C. aceto'sae. (*Acetosa*.) The sorrel
poultice. For scorbutic ulcers; the leaves beaten
into a pulp.

C. ad decub'itum. (L. *ad*, to; *decubitus*,
from *decumbo*, to lie down, is here used to signify
bed-sore.) The *Plumbum tannicum pulifforme*.

C. aeratum. (L. *aër*, air.) The *C. fer-
menti*.

C. altheae. The powdered root of marsh-
mallow, *Althea officinalis*, mixed with hot water
to a fit consistence; an emollient.

C. aluminis. Alum poultice. The whites
of two eggs and alum one drachm, shaken until
a coagulum is formed. Used, between muslin,
in chilblains, sore nipples, and purulent oph-
thalmia.

C. anodynum. (Αν, neg.; δόνην, pain.)
White poppy heads 25 parts, dried henbane leaves
50, boiled for a short time in 600 parts of water,
and made into a poultice, with 100 parts of an
emollient powder composed of equal parts of the
dried leaves of mallow, marshmallow, mullein,
and pellitory.

C. anthelminticum. (Αντί, against;
ἐλμιντ, a worm.) Aloes, oilbanum, assafetida,
gamboge, of each 2 parts, wormwood and tansy,
of each 90, linseed oil q. s.

C. antiarthriticum. (Αντί, αρθρίτις,

gout.) Extr. opii, extr. stramonii, of each 5
parts, bread crumb 1000, water and alcohol, of
each equal parts, to make a poultice, which is to
be sprinkled with powdered camphor 15 parts.
Applied tepid in gout.

C. antiscroer'sum. (Αντί; L. *scroer*,
the disease.) Arsenious acid 16 parts, camphor
30, vinegar 500, juice of carrots 1000, hemlock
powder sufficient to make a poultice. The arsenic
should be dissolved in the vinegar. Used in open
cancer.

C. antiophthalmicum. (Αντί; ὀφ-
θαλμία, inflammation of the eyes.) The yolks of
three eggs, saffron 2 parts, bread crumb 100.
Applied, between muslin, in acute ophthalmia.

C. antisepticum. (Αντί; σπυγίος,
putrefying.) Charcoal 30 parts, quinine 40, cam-
phor 4, linseed meal 250, claret sufficient to make
a poultice. Used in gangrene.

C. antispasmodicum. (Αντί; σπασ-
μός, spasm.) Poppy heads 125 parts, camphor 2,
opium 1, boiled in water, and used with infusion
of saffron to make a poultice with linseed
meal.

C. astrin'gens. (L. *stringo*, to draw
tight.) Iron sulphate 15 parts, white bole 30,
alum 15, vinegar 60, made into a poultice with
bread crumb and water.

C. asadirachtæ. Ind. Ph. Poultice of
nim leaves. Fresh leaves of nim, *Asadirachia
indica*, a sufficiency, bruise and moisten with
tepid water. A stimulant application in ill-con-
ditioned ulcers.

C. by'nes. (Bénn, malt.) The malt poultice.
For gangrene. Finely ground malt mixed
with yeast and applied warm.

C. carbo'nis. B. Ph. (L. *carbo*, charcoal.
F. *cataplasme au charbon*; G. *Kohlenumschlag*.)
Two ounces of bread crumb is macerated in ten
fluid ounces of boiling water for ten minutes, an
ounce and a half of linseed meal is then mixed
with it, and a quarter of an ounce of wood char-
coal; an equal quantity of charcoal is sprinkled
on the surface of the poultice. The charcoal
poultice. For correcting the fetor and state of
ill-conditioned ulcers.

C. cerevis'iae. (L. *cerevisia*, beer.) The
C. fermenti.

C. commun'is. (L. *communis*, common.)
The *C. lini*.

C. conif. B. Ph. (Κώνιον, hemlock. F.
cataplasme avec le ciguë; G. *Schierlingum-
schlag*.) The hemlock poultice. Hemlock leaves,
powdered, 1 oz., linseed meal 3 oz., mixed with
boiling water. For cancerous, scrofulous, and
other ill-conditioned ulcers.

C. contra anthracem. (L. *contra*,
against; *anthrax*, carbuncle.) Treacle 4 parts,
honey 45, burnt alum 4, the yolk of one egg,
flour of rye 3 parts, made into a poultice. Used
in carbuncle.

C. con'tra epididym'item. (L. *contra*,
against; *epididymitis*.) Linseed meal 120 parts,
tormentil, in powder, 120, mercurial ointment 30,
extract of belladonna 4, made into a poultice
with oil of hemp seed.

C. cumini. (L. *cuminum*, cumin.) A
poultice, formerly called *Theriaca londinensis*.
Used as an irritating antiseptic application to
gangrenous ulcers. Cumin seeds, bay berries,
and leaves of water germander, Virginian snake-
root, cloves, and honey.

C. data'ree. Ind. Ph. Fresh and bruised
leaves of *Datura alba* and flour equal parts; mix

CATALECTIC—CATAPTOSIS.

to the consistence of a poultice with water. An anodyne to nodes, rheumatic swellings, and piles.

C. dan'ci. (Δανκος.) The carrot poultice. For cancerous, scrofulous, and other unhealthy ulcers; the boiled roots bruised into a pulp.

C. digita'lis. The fox-glove poultice. For allaying pain in irritable sores. Linseed meal, oatmeal, or bread crumb mixed with a strong decoction of the leaves of *Digitalis purpurea*.

C. diureticum. (Διουρετιον, to pass urine.) Squilla, pulped, 100 parts, potassium nitrate 10; mixed and applied to the abdomen as a diuretic.

C. emollientia. (L. emollio, to soften.) The *C. lini*.

C. fœculse cerevis'ise. (L. fœx, grounds; cerevisia, beer.) Same as *C. fermenti*.

C. fœculo'sum. Fr. Codex. (Mod. L. *fœcula*, starch, from L. fœx, grounds. F. *cataplasme de fœcule*.) One part of potato starch is mixed with two parts of cold water, and then with eight parts of boiling water. In the same manner are prepared rice and starch cataplasms. Used as an emollient.

C. fermenti. B. Ph. (L. *fermentum*, yeast. F. *cataplasme de levure de biere*; G. *Hefenum-schlag*.) The yeast poultice. For sloughing and mortification. Beer yeast 6 oz., wheat flour 14 oz., water, at 100° F., 6 oz.; mixed and heated till it rises.

C. fu'ci. The sea-weed poultice. For scrofula, white swelling, and glandular tumours. Sea-tang or sea-weed, *Fucus vesiculosus*, bruised. When this is not procurable in a fresh state, sea-water and oatmeal have been substituted.

C. humuli. (*Humulus lupulus*, the hop.) Hops made into a poultice with boiling water. Used in gangrenous ulcers.

C. hydrocotyles. Ind. Ph. Hydrocotyle poultice. Fresh leaves of *Hydrocotyle asiatica*, bruised and moistened with water. A valuable stimulant application to syphilitic and other forms of ulceration.

C. lini. (L. *linum*, flax. F. *cataplasme de farine de lin*; G. *Leinsamenmischlag*.) The linseed-meal poultice. Used as emollient for all common cases. Linseed meal, gradually added to hot water, and quickly mixed together. The B. Ph. orders olive oil $\frac{1}{2}$ oz. to linseed meal 4 oz., and water 10 oz.

C. maturans. Fr. Codex. (L. *maturus*, to ripen. F. *cataplasme maturatif*.) Pulvis emollientis (q. v.) 100 parts, ung. basilici (q. v.) 20, water sufficient to make a poultice.

C. micæ panis. (L. mica, a crumb; panis, bread.) See *C. panis*.

C. narcoticum. (Ναρκοτικόν, making numb.) Hemlock, belladonna, black nightshade, linseed, of each 15 parts, made into a poultice with decoction of poppy heads. In cancers.

C. oryzae. Ind. Ph. (Ορυζα, rice. F. *cataplasme de riz*.) Rice flour is placed in an open vessel on the fire, and water is added, constantly stirring until the required consistency is obtained. An emollient and soothing application.

C. panis. (L. panis, bread.) The bread poultice. Stale bread crumb in milk or water, allowed to simmer over a fire till properly softened. A lighter poultice is made by pouring boiling water on to bread crumb, and then straining without pressure. Used as emollient in ordinary cases.

C. papaveris. (L. *papaver*, a poppy.)

Bread crumb made into a poultice with decoction of poppy heads.

C. plum'bi aceta'tis. The sugar of lead poultice. For cases of inflammation. Solution of acetate of lead, distilled water, and bread crumb.

C. quercus mari'ni. (L. *quercus*, the oak; *marinus*, belonging to the sea.) A name for the *C. fuci*.

C. resolutivum. (L. *resolvere*, to dissolve.) Bryony 90 parts, oil of hemlock 60, sal ammoniac 7, gum ammoniac 15, elder 30, digested in sufficient vinegar. Applied to scrofulous tumours.

C. roseæ. (L. *rosa*, a rose.) Alum half an ounce, confection of roses two ounces. An astringent.

C. rubefac'tiens. (L. *ruber*, red; *facio*, to make.) Black pepper and fennel seed, of each 15 parts, sprinkled on a poultice made of barley meal 125 parts, vinegar 30, the whites of three eggs, and water.

Also, the *C. sinapis*.

C. sinapis. B. Ph. (L. *sinapi*, mustard. F. *cataplasme de moutarde*; G. *Senfteig*.) The mustard poultice. Used as stimulant. Ground mustard seed and linseed meal, in equal parts, mixed with boiling water.

C. sodæ chlorat'æ. B. Ph. (F. *cataplasme chlorinée*; G. *Chlornatronumschlag*.) Solution of chlorinated soda 2 oz., linseed meal 4 oz., and boiling water 8 oz. Used in sloughing sores.

C. solani tuberosi. (*Solanum tuberosum*, the potato.) Skinned raw potatoes scraped to a pulp, and applied cold.

C. ulmi. The powdered bark of slippery elm, *Ulmus fulva*, made into a poultice with boiling water. Soothing.

C. vermifugum. (L. *vermis*, a worm; *fugio*, to fly.) Two cloves of garlic, bruised, assafoetida $\frac{1}{2}$ dr., triturated with camphorated oil, and made into a poultice with bread crumb, and applied to the abdomen.

Cataplectic. (Καταπλήσσω, to strike down.) Attacking suddenly.

Cataplex'is. (Καταπλήσις, to strike down.) Old term (Gr. *κατάπλησις*), used by Hippocrates, vii, *Epid.* 30, 8, for a sudden stupefaction, or deprivation of sensa'tion, in any organ or member.

Also (F. *agacement des dent*; G. *Stumpfsinn der Zähne*.) An old term for what is called setting-on-edge of the teeth.

Catap'osis. (Κατά, down; πόσις, a drinking; *κατάποσις* used by Galen, *de Us. Part.* vii, 16.) A descension of food, drink, or medicine by the gullet.

Catapot'ium. (Καταπότιον, a pill; from *καταπινω*, to swallow or drink down.) Old term for a pill.

Also, a term for deglutition.

Catapot'ra. (Καταπότρα.) The cardiac orifice of the stomach.

Catapsy'xis. (Καταψύχω, to refrigerate; *καταψύξις*, used by Galen, *de Rigor Trem.*) A considerable degree of chilliness, but without shivering. Hippocrates applies it to cold of the extremities, or a bad sign in fevers.

Catap'tosis. (Καταπίπτω, to fall down; *κατάπτωσις*, used by Galen, *de Tot. Morb. Temp.* c. 4, 5.) A sudden falling down of a person, as a symptom of epilepsy or of apoplexy; also the falling or paralytic seizure of any particular limb.

CATAPULTA VIRILIS—CATARACT.

Catapulta virilis. (*Kαταβόλη*, a catapult, from *καταβάλλω*, to shake down; *L. virilis*, manly.) The penis.

Catapulta rum a'qua. (*L. catapulta*, an engine of war; *aqua*, water.) A lotion for wounds.

Catapu'tia. (*L. catapotium*, a pill, because the seeds were swallowed like pills; or from *καταβόλη*, to make rotten, from its disagreeable taste.) A name applied to the following three plants:

C. major. (*L. major*, greater.) The *Ricinus communis*.

C. maxima. (*L. maximus*, greatest.) The *Ricinus americanus*.

C. minor. (*L. minor*, less.) The *Euphorbia lathyris*.

Cataract. (Low *L. cataracta*, from *καταβήτης*, down-rushing, from *καταβάσσω*, to fall down. *F. cataracts*; *I. cataracta*; *S.* and *Port. catarata*; *G. Staar*, *grauer Staar*.) Opacity of the crystalline lens, or of its capsule, or of both, producing more or less impairment of sight, but never complete blindness. The term was suggested by the idea of a veil falling over the eye, and formerly was made to include any pupillary opacity.

The term cataract is applied to many conditions, distinguished from each other by some prefix, as true, false, capsular, lenticular, senile, traumatic, but all agreeing in the circumstance that the passage of light to the retina is interfered with by an opaque substance occupying the pupil, and consisting either of the modified lens or capsule, or of some deposit in or on the lens and its capsule.

The causes of cataract are not perfectly known. As a rule, it is a disease of old age, but it is often associated with an enfeebled condition of the general health, as in diabetes, and may be caused by ergot or by eating bread made of diseased corn. It is sometimes congenital, occurring especially in children inheriting a syphilitic taint. It is produced also by all circumstances affecting the nutrition of the lens itself, such as an inflammatory or atrophic condition of the choroid coat, ciliary body, or uveal tract, and by any injury of the lens, permitting the entrance of aqueous humour into its substance, opacity being then apparent within a few hours.

Microscopical examination of the lens in cataract shows that there is often proliferation of the epithelium of the capsule. The lens fibres are at first but little altered, or present only a finely punctated aspect. They sometimes, when broken down in water, exude myelin drops and coils; at others, and more frequently, they appear to have undergone fatty degeneration. Tabular plates of cholesterol are of very common, if not of constant, occurrence. At a late period calcareous granules are deposited. Pus has been observed, and the tint of deep-coloured cataracts has been attributed to absorption of blood-coloured matter.

The symptoms are impairment of sight, usually increased in bright light; loss of definition in small objects, such as print; a circle of diffusion around the flame of a candle or other brilliantly illuminated object; diplopia or polyopia, the moon, for example, being doubled or trebled; muscæ; occasionally myopia. As a rule the index of refraction is increased, owing to the presence of a highly refracting body, cholesterol.

Formerly simple inspection, the statements and

attitude of the patient, and the catoptric test were relied on for the diagnosis, but its presence is now far more certainly ascertained by the use of the ophthalmoscope and of oblique illumination.

That cataract is really due to opacity of the lens was shown by Maitre Jan in 1707, by Brisseau in 1709, and by Heister in 1711. The last-named celebrated anatomist dissected, before many medical men, the cataractous eye of a soldier who died of a wound received in battle, and demonstrated that the crystalline lens itself was opaque.

C., adherent. (*L. adharæ*, to cleave to. *F. cataracts adhérents*; *G. comploirter*, or *angewachsener Staar*.) Cataract complicated by the adhesion of the iris to the capsule of the lens.

C., artificial. (*L. artificialis*, according to the rules of art.) The production of cataract in an animal, such as a frog, by the injection of a solution of sugar or other substance under the skin.

C., axial. (*L. axis*, an axle-tree. *G. Axenstaar*.) The same as *C., fusiform*.

Also, the same as *Cataracts centralis*.

C., black. (*F. cataracts noire*, *c. pigmentaire*; *I. cataracta nora*; *G. schwarzer Staar*.) A form of cataract in which the colour of the cataractous lens is very dark brown. It is believed by some that the tint is intensified by the absorption of the colouring matter of blood, but the evidence is unsatisfactory. Also, a synonym of *Anisurosis*.

C., break'ing up of. See *C., division of*.

C., calca'reous. (*L. calcarius*, pertaining to lime. *F. cataracts pierreux*.) Term applied to spontaneous or traumatic cataracts which have, in the course of time, undergone degeneration, and become the seat of the deposit of calcareous salts.

C., cap'sular. (*L. capsula*, a little case. *F. cataracts capsulaires*, *c. capsulaires phosphatiques*; *G. Kapselstaar*.) In this disease the capsule remains clear, but certain hyaline or fibrous structures are formed on its inner surface, owing to the proliferation and degeneration of the cells lining it, and to chalky granules and cholesterol scales being deposited in them. It is commonly associated with irido-choroiditis, but may be the result of proliferation of epithelial cells during intrauterine life.

C., cap'sular, ante'rior. (*F. c.ulaire antérieur*; *G. vorderer Kindenstaar*.) Term applied to opacity of the anterior cortical lamellæ of the lens, or to cretaceous deposit in hyaline or fibrous substance formed by the proliferation and degeneration of the intracapsular cells. Also, a condition often seen in cases of iritis, and then synonymous with false cataract.

C., cap'sular, ante'rior cen'tral. (*F. cataracts capsulaire phosphatique*.) A small white central spot situated on the front surface of or beneath the capsule of the lens, and due either to some defect of development, to the contact of the capsule with the swollen cornea in purulent ophthalmia, or to the occurrence of a perforating ulcer at the centre of the cornea. In this latter case the escape of the aqueous humour leads to the contact of the capsule with the inner margin of the ulcer, and to the deposit of some lymph upon the capsule after the closure of the ulcer. The resecretion of the aqueous restores the anterior chamber and separates the capsule from

CATARACT.

the cornea, but the lymph remains and becomes the seat of cretaceous deposit.

C., capsular, posterior. Term applied to opacity chiefly affecting the posterior cortical lamellae of the lens, or to deposits between the lens and the posterior layer of the capsule.

C., capsulo-lenticular. See *Cataracta capsulo-lenticularis*.

C., central. (G. *Central-Linsenstaar*.) The same as *C., nuclear*.

C., cheesy. (F. *cataracte caseuse*.) A term used when the opaque lens is of the consistence of cheese.

C., cholesterin. (G. *Cholesterinstaar*.) A cataract in which numerous cholesterol scales are imbedded in the more or less fluid cortical layers of the lens.

C., complete congenital. (L. *congenitus*, grown together with.) A condition occasionally found at birth, in which the whole of the lens is opaque.

C., complicated. (L. *complicatus*, to fold together. G. *complicirter Staar*.) Cataract accompanied by adhesions, amaurosis, or other disease.

C., concussion. (L. *concussio*, to shake.) Cataract resulting from shock to the system generally, or from contusion of the eye.

C., congenital. (L. *congenitus*, grown together with. F. *cataracte congénitale*; G. *angeborene Staar*.) Cataract appearing at, or shortly after, birth. It may present the zonular or laminated, anterior polar, pyramidal, posterior polar, or soft form of cataract.

C., cortical. (L. *cortex*, shell or bark. G. *Rindenstaar*.) Opacity affecting the outer or superficial layers of the lens. See *Cataracta corticæ anterior* and *posterior*.

C., couching of. (E. *couch*, to lay down; from F. *coucher*, to lay down; from L. *colloco*, to place with.) The same as *C., reclinatio* of.

C., cystic. (Kürris, a bladder. L. *cataracta bursata*; F. *cataracte cistique*.) Soft cataract, in which the cortical portion has undergone regressive changes. It frequently contains crystals of cholesterol.

C., cystic capsulo-lenticular. (Kürris, bladder; L. *capsula*, a small chest; *lenticula*, a lentil. F. *cataracte arido-siliqueuse*.) Cataract, arising either spontaneously or from injury, in which the subcortical substance of the lens undergoes absorption, a dense white cortical layer remaining adherent to the capsule and forming a kind of cyst, which contains the brown shrivelled nucleus of the lens.

C., depression of. (L. *depressio*, a pressing down. F. *abaissement de la cataracte*; G. *Dislocationsmethode, Niederdrückung, or Umliegung der Linse*.) The thrusting down into the vitreous of an opaque lens. At one time a needle, slightly bent at the point, was introduced through the sclerotic, as in the operation for *reclination*, but, instead of passing behind, was applied to the front of the lens, and pressed that body downwards till it had disappeared. In a modification suggested by Egerton the needle is straight, and is introduced as in *reclination*, but is made to penetrate the lens by a rotatory movement, and, when fairly engaged, is made to depress it into the vitreous, and is then carefully withdrawn.

C., diabetical. See *Cataracta diabetica*.

C., discission of. (L. *discindo*, to tear across. F. *discision*, *division*, or *broyement de la cataracte*; G. *Discisionsmethode, Zerschneidung,*

or *Zerstückelung des Staars*.) A mode of treating cataract in which, by the introduction of a needle through the capsule of the lens, the aqueous humour is allowed access to the lens substance, and its absorption effected. It is usually performed in the soft cataracts of young people. The needle may simply be introduced with a twisting movement, as in the drilling operation of Tyrrell; or the capsule may be more or less extensively divided or torn. The needle is usually introduced through the cornea—*keratonyxis*, but may be passed through the sclerotic—*scleronyxis*.

C., dislocation of, spontaneous. (L. *dis*, inseparable particle, meaning a part; *locus*, a place; *spontaneus*, of one's free will. F. *cataracte luxée*.) This may either be partial or complete. In partial dislocation the edge of the lens remains more or less visible in the pupil. In complete dislocation the whole lens falls out of sight behind the pupil in the vitreous, or enters the anterior chamber.

C., dislocation of, traumatic. (Траўма, a wound. F. *luxation traumatique*.) An event that sometimes occurs in cases of mature cataract, where, as the result of a blow on the head or eye, or from succussion of the body generally, the suspensory ligament is ruptured, and the lens enters the anterior chamber through the pupil or falls behind the iris.

C., displacement of. (F. *déplacement de cataracte*; G. *Luxation der kataraktöse Linse*.) Term synonymous with depression and with reclination. It appears to have been known as a means of removing cataract ages ago in India and in China. It was practised by Herophilus (300 A.C.) and Erasistratus (280 A.C.), and was well described by Celsus.

C., division of. See *C., discission of*.

C., extraction of. (L. *extraho*, to draw out. F. *extraction à lambeau*.) The removal of a cataract through a cut made in the cornea or sclerotic coat of the eye.

C., extraction of, Beer's. (F. *extraction à lambeau*; G. *Lappenschnitte, Extraction mit dem Bogenschnitte*.) The method of operating suggested by Beer was the formation of a flap of the lower half of the cornea by means of a triangular knife, the back of which was in a straight line with the handle; he lacerated the capsule by means of three or four vertical, and as many horizontal, incisions, and then pressed out the lens.

C., extraction of, by flap. (F. *extraction à grand lambeau, extraction de Daviel*; G. *Staarauziehung, extraction mittelst Lappenschnittes*.) This operation, which was suggested and practised by Daviel, and improved by Beer, is performed with the patient in a sitting posture. The eyelid is raised by an assistant, or by the operator, and the eye gently steadied by the fingers of the operator. A triangular-bladed cataract knife is then made to penetrate the margin of the cornea just above or just below the horizontal diameter, according to whether the flap is to be made upwards or downwards, and, by pushing the blade steadily forward, a semicircular flap is formed, the cut running parallel and close to the corneal border. A cystotome is introduced, the capsule freely lacerated, and the lens is then gently pressed out, assisted, if need be, with a curette. The edges of the wound are then adjusted, and a pad and bandage applied for several days.

C., extraction of, by linear peri-

CATARACT.

phoric section. See *C., extraction of, v. Gräfe's.*

C., extraction of, by modified linear method. See *C., extraction of, v. Gräfe's.*

C., extraction of, by spoon. The same as *C., extraction of, Waddow's.*

C., extraction of, by suction. (*L. sugo*, to suck. *F. aspiration*, or *suction*; *G. Aspirationsmethode, Suctionsmethode.*) In this operation, which is only applicable to soft cataracts, or to those in which the lens has been previously broken up by a needle, a small opening is made in the cornea with a broad needle, and the nozzle of a syringe is introduced into the substance of the lens. By raising the piston of the syringe, or by sucking through a piece of india-rubber tubing attached to a tubular curette, the greater part of the soft lens substance may be removed.

C., extraction of, Critchett's. (*G. Traktions methode.*) This method, adopted by Mr. Critchett, consists in making an incision with an iridectomy knife extending along one fourth of the sclero-corneal junction. An iridectomy is then performed, and, after laceration of the capsule, the lens is lifted from its bed with a peculiar kind of spoon. See *Critchett's spoon.*

C., extraction of, David's. (*G. Lap-penbildung.*) To David belongs the merit of being the first amongst the moderns to introduce, about 1745 or 1746, a method of removing a cataract by operation. He employed a straight lance-shaped instrument, which was introduced at the lower edge of the cornea; the wound was enlarged with a blunt-pointed knife and with two pairs of scissors, one curved to the right, the other to the left, the capsule was ruptured with a needle, and the exit of the lens assisted with his well-known spoon.

C., extraction of, Desmarres'. This method consists in performing a flap operation, but allowing a portion of the conjunctiva to remain undivided. The lens is pressed out after laceration of the capsule beneath the conjunctiva.

C., extraction of, Jacobson's. In 1863 Professor Jacobson, of Königsberg, adopting a suggestion previously thrown out by de Wecker, performed an iridectomy simultaneously with the flap operation after the removal of the lens. He made the section forming the flap of the cornea downwards through the extreme limit of the anterior chamber, and therefore through the sclerotic.

C., extraction of, Jäger's. Jäger (1829) made the section of the cornea upwards, but for some time employed a double triangular knife, one of the blades of which could be made to glide over the other, after translation by the thumb of the operator, and thus complete the section.

E. Jäger in 1866 recommended a lance-shaped knife, curved on the distal, which made a wound 10 mm. long.

C., extraction of, Kuchler's. The same as the simple linear extraction, except that the incision is oblique with the transverse or horizontal diameter of the cornea.

C., extraction of, Lebrun's. The puncture and counter-puncture are made with a linear knife, formed of 2 mm. but with the horizontal diameter of the cornea, and the knife is pushed so as to make a flap of 3 or 4 mm. high; no iridectomy is performed.

C., extraction of, Liebreich's. In this method the puncture and counter-puncture are made with a linear knife in the sclerotic, and the cornea is divided about midway between the horizontal diameter of the cornea and the inferior border. The capsule is lacerated and the lens pressed out. Iridectomy is not performed.

C., extraction of, Loebl's. A method adopted by Loebl, a Dutch oculist, in which the lens was extracted through an opening made in the sclerotic.

C., extraction of, Macnamara's. The special points of this operation are that a broad iridectomy or triangular knife is used. The cut is made to coincide with the sclero-corneal junction. No iridectomy is performed, and the lens is removed, if possible, with the capsule by means of a fenestrated scoop, which is passed behind it.

C., extraction of, Moore's. (*G. Ausstossung des Staars.*) Moore (1862), generalising a mode of operation adopted by v. Gräfe in some exceptional instances, recommended that an iridectomy should be performed some weeks before every flap operation, which he performed in the usual way.

C., extraction of, Pagenstecher's. Pagenstecher endeavours to extract the lens whilst still enclosed in the capsule. He makes a flap incision usually downwards and entirely through the sclerotic, leaving a small bridge of conjunctiva at the apex of the flap. He now makes a large iridectomy, and then completes the section of the conjunctiva. The lens enclosed in the capsule is now gently pressed or spooned out.

C., extraction of, Poyet's. M. Poyet proposed to pass a thread through the cornea by means of a cutting needle or narrow knife, perforated near its point. This thread, being disengaged from the hole through which it passed in the needle, he made use of to fix the cornea during its section, and also to suspend the flap when the capsule was lacerated. The operation otherwise was that of David.

C., extraction of, Richter's. Richter (1772) employed a straight, flat, sharp-pointed, lance-shaped instrument, which was introduced at the outer and inferior segment of the periphery of the cornea. In 1775 he recommended that the lens and capsule should be removed together.

C., extraction of, S. Sharp's. Mr. Sharp (1753) performed the whole operation with one instrument only, which was a small knife, a little convex on the back and concave on the edge. The point of this was entered on the outer edge of the cornea, and a flap of the lower half made the lens, and, if possible, the capsule with it, was removed by digital pressure.

C., extraction of, Schult's. The same as Waddow's—the name assumed by Schult.

C., extraction of, Siebel's. In this operation Siebel, *général*, using the triangular knife of Beer, paused when five sixths of the section had been executed, to give time to the patient to recover. The section was completed as the knife was withdrawn.

C., extraction of, simple linear. (*F. extraction linéaire simple; G. einfache Linear extraction.*) The term linear is applied to this operation because the incision is made in one of the chief planes of the eye, that is,

CATARACT.

in a plane passing through the centre of the eye. The pupil is widely dilated with atropine. The lids are separated with a speculum, the eye steadied with fixing forceps, and the cut made at or near the periphery of the cornea with a sharp-pointed lancet-shaped knife, broad enough to make, by its simple insertion, a wound sufficiently large to permit the lens to escape after laceration of the capsule with a cystotome. No iridectomy is performed.

C., extraction of, Taylor's. In this method a linear knife is introduced at the sclero-corneal junction, and an upper section of one third of the cornea made. The capsule is lacerated, and a portion of the periphery or attached border of the iris removed with scissors, the lens escapes through the gap, and a round pupil is left.

C., extraction of, v. Gräfe's. (*F. extraction linéaire périphérique*; *G. modifizierte Linear extraction*.) In this operation, suggested by v. Gräfe in 1865, the lids are separated by a spring speculum; the eye is fixed with a pair of toothed forceps. The point of a 32 mm. long, 2 mm. broad, straight, sharp-pointed knife is introduced into the sclerotic, 1.5 mm. from the outer edge of the cornea, and 2 mm. below the horizontal tangent of the upper border of the cornea. The point is at first directed downwards (about 8 mm.) and inwards into the anterior chamber, then elevated, and the counter-puncture made, the point reappearing 1.5 mm. from the edge of the cornea. The blade of the knife is then turned so as to form an angle of 20° with the plane of the iris, and made by a slight sawing movement to cut its way out. An iridectomy is then performed. A cystotome is introduced, the capsule ruptured, and the lens gently pressed out. The clearing away of the remains of the lens from the pupil and the coaptation of the edges of the wound are carefully attended to, a pad and bandage are applied, and the parts kept at rest. Various modifications of this operation have been adopted by different surgeons.

C., extraction of, vertico-lateral. An operation suggested by v. Gräfe, in which, the pupil being previously widely dilated with atropine, a straight lance-shaped knife was made to penetrate the cornea near the outer border, the capsule of the lens was then ruptured with a cystotome, and through the vertical wound thus made the opaque lens was extracted.

C., extraction of, Waldau's. (*G. Auslöfung*.) This method of operating is the same as the linear operation for cataract with iridectomy, except that Waldau made use of a curette, expanded at the extremity into a small spoon, with which he lifted the lens out of its place.

C., extraction of, Wenzel's. Wenzel's operation (1779) was almost the same as that of Richter, but he used a double-edged knife of oval form. He occasionally cut upwards, and before completing the section of the cornea, opened the capsule with the point of the knife.

C., false. (*G. falscher Staar*.) A deposit of lymph, blood, or other material in the pupil, obstructing sight.

C., fibrous. (*L. fibrum*, a fibre. *F. cataracte fibreuse*.) Same as *C., false*.

C., firm. Same as *C., hard*.

C., fixed. A cataract which remains steadily fixed behind the pupil.

C., fluid. (*L. fluidus*, flowing. *F. cata-*

racte liquide, *c. interstitielle*, or *c. sans noyau flottant*; *I. cataratta liquida*, or *facidropsia*; *G. Milchstaar*.) A form of cataract in which, owing to regressive changes, the lens is reduced to a fluid consistence. It is milky in aspect, of large size, causing the iris to project forwards, and diminishing the anterior chamber. It may be treated by rupturing the capsule with a needle, and allowing the contents to escape into the aqueous, where it undergoes absorption.

C., fusiform. (*L. fusus*, a spindle; *forma*, a form. *G. Spindelstaar*, *Axenstaar*.) Cataract in which a spindle-shaped opacity extends from the posterior surface of the anterior capsule to the anterior surface of the posterior capsule, dilating near the centre of the lens, so as to include the nucleus of the lens.

C., gen'ine. A term which includes all cataracts having the seat of the opacity in the lens or its capsule.

C., glasses. The glasses required by patients who have undergone the operation for the removal of cataract. They vary of course with the previous condition of the eye in regard to refraction. For the emmetropic eye the lens must be about 10 dioptres for near, and 14 dioptres for distant objects, or have a focal distance of 3.5 to 3 inches. The sharpness of vision can often be greatly improved by attention to such astigmatic conditions as may be present, and their correction by means of cylindrical glasses.

C., glauco'matous. See *Cataracta glaucomatosa*.

C., green. (*F. cataracte verte*.) The same as *Cataracta glaucomatosa*.

C., gyp'seous. (*Γύψος*, chalk.) A cataract with a chalky opacity.

C., hard. (*F. cataracte nucléaire dure*, *c. dure des vieillards*; *I. cataratta lenticolare dura*, or *facoscleroma*.) A cataract in which the lens is hard; phacoclerosis.

C., hy'aloid. (*Υαλος*, glass; *ειδος*, likeness. *I. cataratta ialoidia*.) Cataract supposed to be due to opacity of the anterior layers of the vitreous humour.

C., im'mature. (*L. immaturus*, unripe. *G. unreifer Staar*.) Cataract in its early stage. Incipient, unripe, or imperfectly developed cataract.

C., in'fantile. (*L. infantilis*, belonging to infants.) The same as *Congenital cataract*.

C., ju'venile. (*L. juvenis*, a youth.) Cataract occurring about the age of puberty. In one form the opacity commences near the nucleus, and gradually extends towards the periphery. In another form the stellate arrangement of the fibres of the lens is well marked; and in a third and more slowly developing form, the opacity is diffuse with radiations towards the periphery of the lens, and with white dots and patches distributed in it.

C., knife, Barth's. The same as Beer's knife, which was indeed first used by Barth.

C., knife, Beer's. This knife is made of two sizes; the longer one 34 mm. long, 10 mm. wide; small one 32 mm. long, 9 mm. wide. It is of triangular shape, with straight back, and oblique or slanting cutting edge; it gradually increases in thickness from the point to the handle. The back forms an angle of 180° with the cutting edge. The back is cutting for 1-10th of an inch from the point.

CATARACT.

C. knife, blunt-pointed. (*F. couteau moussé.*) The same as *C. knife, secondary*.

C. knife, Cooper's. Resembles Beer's, with the lower angle rounded off; length 28 mm., breadth 6 mm.

C. knife, Dixon's. Resembles Beer's knife; length 31 mm., breadth 8 mm.

C. knife, F. Jäger's. This consisted of a Beer's knife fixed to a handle, and of a smaller blade connected to the other by a button screw, so that it can be pushed forward upon it or withdrawn. This knife is introduced, carried across the eye, and through the cornea on the opposite side, in the same way as Beer's. By pressing on the button with the thumb the smaller blade is now pushed forward, so as to complete the section of the cornea, while the globe is kept steady by the fixed blade.

C. knife, Guthrie's. A knife similar to that of F. Jäger, except that one blade is of silver. In using it, the cornea was first penetrated by a Wenzel's knife; the double knife is then inserted, with the silver blade towards the iris, till the point touches the opposite of the cornea, when the cutting blade is pushed forwards.

C. knife, La Faye's. This knife was a little bent near its point on the flat side, which he thought would prevent injury to the iris in its passage to the opposite side of the cornea.

C. knife, linear. The same as *v. Gräfe's*.

C. knife, Ro'sas'. A double-edged triangular knife, cutting at the back as well as the front.

C. knife, Santarel's. A lance-shaped knife, 10 mm. broad, ground hollow on the under surface.

C. knife, secondary. There are two forms of this—the straight and the convex. In the latter the blade has a convex cutting edge. They are both round-pointed, 20 mm. long and 2 mm. wide. They are employed to enlarge the opening made in the first incision for cataract extraction, when it is found that the lens is too large to escape by it.

C. knife, St'chel's. Is of two sizes; the longer one is 40 mm. long, 10 mm. wide; the shorter is 36 mm. long, 8 mm. wide. Closely resembling Beer's knife.

C. knife, St'chel's (fl). A knife resembling *v. Gräfe's* linear knife, with the cutting border slightly convex.

C. knife, Tyrrell's. Is 35 mm. long, 10 wide. Closely resembles Beer's knife, but is shorter, so that the breadth increases more suddenly.

C. knife, v. Gräfe's. Is 32 mm. long, 2.5 mm. wide, central point, and straight back and edge.

C. knife, Walker's. A narrow triangular-pointed grooved knife, with blunt sides, 30 mm. long, and 2.5 wide. The cutting part is 3 mm. long. Used for removal of soft cataract.

C. knife, Walton's. Resembles that of Beer; is 26 mm. long, 9 mm. wide, and has the cutting edge forming a segment of a circle.

C. knife, Ware's. The same in form as Beer's knife.

C. knife, Weber's. This is lance-shaped, 10.25 mm. in length, and a breadth of 10 mm. at a distance of 6.5 mm. from the point. The posterior or inferior surface is hollowed out, the curve being of 10.719 mm. radius.

C. knife, Wenzel's. This knife is double-

edged, 35 mm. long, 7 mm. wide, with lancet-shaped blade, point not quite central, but rather inclined towards the back.

C., lamellar. (*L. lamella*, a small plate.) Same as *C., sonular*.

C., lamellar. (*L. lamina*, a thin plate.) A synonym of *C., sonular*.

C., laminated. (Same etymon.) A synonym of *C., sonular*.

C., lenticular. (*L. lenticle*, the shape of a lentil. *F. cataracte lentillaire*; *L. cataracta lenticularis*, or *cataracta crystallina*; *G. Linsenstaar*.) A cataract of which the opacity is in the lens.

C., lenticular, cortical. (*L. lenticle*; *cortex*, bark. *F. cataracte lentillaire corticale*; *G. Rindenstaar*.) Same as *C., cortical*.

C., lymphatic. (*Lympha*, water, from *λύπη*.) Opacity produced by effusion of lymph into the pupil.

C., mature. (*L. maturus*, mature, ripe. *F. cataracte mûre*, or *complète*; *G. reifer Staar*.) Complete or fully formed cataract. The term is usually applied to cataract when fit for operation.

C., membranous. (*L. membrana*, a membrane.) Same as *C., capsular*.

C., milky. (*F. cataracte lactée sedimentoire*; *G. Milchstaar*.) A cataract in which the opaque lens has the colour and consistence of milk.

C., Morgagnian. (*Morgagni*, an Italian physician. *G. Morgagnischer Staar*, *Milchstaar*.) That form of cataract in which the cells lying beneath the anterior capsule and the outer layers of the lens substance are fluid, whilst the nuclear portion of the lens is transparent.

C., nuclear. (*L. nucleus*, a kernel. *F. cataracte nucléaire*.) This is a cortical cataract, in which the greater part of the perinuclear substance of the lens has become affected with sclerosis. It occurs in advanced life, and is stated never to become perfectly ripe. Striae are few. The colour is sometimes deep, almost approaching to black. The size of the lens is not reduced, hence a large section is required for its removal.

C., nuclear stationary. (*L. stationarius*, belonging to a post; *nucleus*, a nut. *F. cataracta nucleare stationaria de giovanni*; *G. der stationäre Kernstaar*.) A form of laminar cataract in which there is a small, white, spherical, rather dense opacity in the nucleus. The remainder of the lens is often transparent. This is often associated with other forms of cataract. The eye is frequently microphthalmic and affected with nystagmus.

C., partial. (*L. pars*, a part. *F. cataracte partielle*.) Cataract in which only a portion of the lenticular system is opaque. The opacity may be anterior or posterior polar or axial, and is usually stationary.

C., perinuclear. The same as *C., laminar*.

C., pigmentous. See *Cataracta pigmentosa*.

C., polar. (*L. polus*, the end of an axis. *F. c. polaire*.) A term applied to a cataract in which the opacity is confined to a central spot on the lens in front or behind.

C., polar, anterior. (*L. polus*; *anterior*, that is before. *F. c. polaire antérieure*; *G. der vordere Polarstaar*.) A cataract in which beneath the anterior part of the capsule of the lens is a

CATARACT.

small white, and usually round, flat opacity. If it projects into the anterior chamber, it is termed pyramidal cataract, *Cataracta pyramidata*.

C., polar, posterior. (*L. polus*, a pole; *posterior*, behind. *F. cataracte polaire postérieure*; *G. hinterer Polarstaar*.) A rounded, well defined, white disc, usually situated on the outer or posterior surface of the posterior capsule. Its anterior surface is concave. It may sometimes be due to imperfect retrogression of the hyaloid artery. It is often associated with anterior capsular cataract, and with posterior cortical cataract.

C., primary. (*L. primus*, first.) An opacity, either of the lens, of the capsule, or of the lens and capsule, which is not the result of an operation, nor of the deposition of lymph in the area of the pupil. Also, a term applied synonymously with congenital cataract.

C., primitive. (*L. primitivus*, earliest of its kind.) Same as *C., primary*.

C., pyramidal. (*Πυραμίδας*, a pyramid.) See *Cataracta pyramidata*.

C., reclinat'ion of. (*L. reclino*, to bend backwards. *G. Umlegung, Dislocation durch den Spheralstich*.) An operation by which an opaque lens is removed from the pupil with a needle. The needle is fine, flattened, and slightly curved towards the point. The pupil is dilated with atropine. The lids being separated with a speculum, and the eye fixed by means of forceps, the point of the needle is made to penetrate the sclerotic, about one sixth of an inch from the margin of the cornea, and a little below the horizontal diameter, so as to avoid the ciliary processes, retina, and long ciliary artery. It is slowly pushed inwards behind the lens to the distance of one third of an inch, and the posterior capsule is freely divided. The needle is now partially withdrawn, and the point made to pass between the iris and the lens. When the lens is fairly embraced by the concavity of the needle applied to its upper part, it is pressed downwards and backwards and a little outwards, and is retained in this position for a short time. The needle is then freed from the lens by gentle rotation.

Reclination has also been accomplished by means of a needle introduced through the cornea (*G. Dislocation durch den Cornealstich*).

C., regressive. (*L. regredior*, to go back. *F. cataracte regressive*; *G. regressive Staar*.) A synonym of *C., soft*.

Also, the same as *Cataracta hypermatura*.

C., removal of, by absorption. The same as *C., dissection of*.

C., removal of, by drilling. A method, suggested by Tyrrell, in which a fine needle is introduced through the temporal edge of the cornea, and made to puncture the lens to the extent of 1-16th of an inch; it is then rotated two or three times and withdrawn. The operation requires to be repeated every three, four, or five weeks, the capsule being punctured in a new place on each occasion.

C., removal of, by needling. The same as *C., dissection of*.

C., removal of, by solution. See *C., dissection of*.

C., sanguineous. (*L. sanguis*, blood. *F. cataracte sanguine*.) A clot of blood in the pupillary aperture.

C., secondary. (*L. secundarius*, in the second rank. *F. cataracte secondaire*; *I. cata-*

ratta secundaria; *G. Nachstaar, häutiger Staar*.) Cataract forming after the removal of the lens by accident or operation. It is usually composed of the two surfaces of the capsule, separated only by epithelial cells and remains of the lens substance, which have become opaque.

C., secondary, adherent. (*L. adhæreo*, to stick together.) The adhesion of the iris to the membrane forming a secondary cataract, consequent on iritis.

C., secondary, complicated. (*L. secundarius*; *complico*, to fold. *F. c. secondaire compliquée*.) Secondary cataract, in which the opacity is in part produced by the exudation of lymph and inflammatory products, or in which irido-choroiditis, glaucoma, or other disease of the eye, exists.

C., secondary, membranous. The same as *Cataract, secondary*.

C., sedimentary. (*L. sedimentum*, a settling. *F. cataracte sédimentaire*.) Soft cataract in which the denser parts have subsided.

C., senile. (*L. senilis*, aged. *F. cataracte nucléolaire, c. sénile*; *G. Altersstaar, Greisenstaar*.) Cataract occurring in old persons. It is one of the most frequent forms of cataract, and is usually synonymous with hard or nuclear cataract.

C., siliculous. (*L. dim. of siliqua*, a pod.) The same as *Cataracta arido-siliquata*.

C., siliqueous. (*L. siliqua*, a pod.) Same as *Cataracta arido-siliquata*.

C., simple. (*L. simplex*, uncomplicated.) An uncomplicated cataract.

C., soft. (*F. cataracte molle, c. liquide regressive, phacohydropsie*; *I. cataratta molle, facomalacia*; *G. weicher Kernstaar*.) Cataract in which the lens substance is of soft consistence and milky aspect. It usually occurs in young subjects, in diabetic patients, and in cataracts which have undergone degeneration or regressive changes.

C., solid. (*L. solidus*, dense, firm.) The same as *Cataract, hard*.

C., spindle. Same as *C., fusiform*.

C., spurious. (*L. spurius*, of illegitimate birth.) Same as *C., false*.

C., stony. (*F. cataracte pierreuse*; *I. cataratta pietrosa*.) A cataract in which the lens is very hard.

C., stratified. (*F. cataracte stratifiée*.) The same as *Cataract, zonular*.

C., trabecular. Same as *Cataracta trabecularis*.

C., traumatic. (*Τραύμα*, a wound. *F. cataracte traumatique*; *I. cataratta traumatica*; *G. Wundstaar*.) Cataract resulting from contusion or penetrating wound of the eye, or from violent concussion of the head. The capsule is usually, but not always, ruptured.

C., true. Cataract caused by opacity of the crystalline lens or its capsule.

C., vacillating. (*L. vacillo*, to sway to and fro.) A term given to a cataract which is not steady behind the pupil, but moves and vibrates.

C., zonular. (*L. zonula*, a little girdle. *F. cataracte zonulaire, or stratifiée*; *I. cataratta zonulare, lamellare, stratificato*; *G. Schichtstaar*.) A form of cataract in which a portion of the lens substance becomes opaque, lying between the cortex and the nucleus, which remain transparent. The opaque part sometimes forms two or three layers. It is more opaque at the periphery than at the centre,

1. What is the purpose of the study?
 The purpose of the study is to investigate the effect of a new teaching method on student performance in mathematics.

2. What are the research questions?
 The research questions are:
 - Does the new teaching method improve student performance in mathematics?
 - Are there any differences in student performance between the new teaching method and the traditional method?

3. What is the significance of the study?
 The significance of the study is that it aims to provide evidence for the effectiveness of the new teaching method, which could be used to improve student performance in mathematics in other schools.

4. What are the limitations of the study?
 The limitations of the study are:
 - The study is limited to a small sample of students.
 - The study is limited to a short period of time.
 - The study is limited to a specific subject (mathematics).

5. What are the conclusions of the study?
 The conclusions of the study are:
 - The new teaching method has a positive effect on student performance in mathematics.
 - There are significant differences in student performance between the new teaching method and the traditional method.

CATARACTA.

through it, whilst still enclosed in the unruptured capsule.

C. dehis'cens. (L. *dehisco*, to split open.) Term applied by Sichel to that form of cortical cataract in which the opacity is chiefly marked in the direction of one or several meridians corresponding to the natural sectors.

C. dendrit'ica. (Δένδρον, a tree. G. *baumformiger Staar*.) A form of anterior capsular cataract in which the opacities present a branched or tree-like form.

Also, one of Beer's four species of spurious cataract caused by the detachment of the uveal pigment, and its adherence to the capsule of the lens in an irregular tree-like form.

C. diabe'tica. (Διά, through; βαίω, to walk. F. *cataracte diabétique*.) Cataract occurring in the course of diabetes. It is believed to be due to the augmented density of the blood causing an exosmosis of the watery constituents of the lens, followed by loss of transparency of the fibres, and a deposit of salts. The lens is usually soft and uniformly opaque. Both eyes are commonly affected. In consequence of other diseased conditions of the eye being often present, the question of operation should be very carefully weighed.

It has been artificially produced in frogs by injecting sugar into the blood.

C. dimidia'ta. (L. *dimidiatus*, part. of *dimidio*, to divide into halves.) A form of cataract in which a line of opacity divides the lens into two more or less unequal parts.

C. dissemina'ta. (L. *disseminatus*, part. of *dissemino*, to spread abroad. F. c. *disseminée*.) Term applied to a cataract in which the opacity appears to be due to a number of fine cloudy or opaque spots distributed over the surface or throughout the substance of the lens.

C. du'ra. (L. *durus*, hard.) See *Cataract, hard*.

C. elas'tica. (Mod. L. *elasticus*, from Gr. *ελασμα*, a metal plate.) Term applied to those forms of cystic or of secondary cataract in which the capsule becomes so firmly adherent to the adjoining parts as to resist repeated efforts to lacerate it in needle operations.

C. ergot'ica. (F. *ergot*, a spur. G. *Kriebelkrankheitsstaar*.) Cataract occurring in the course of ergotism.

C. fenestra'ta. (L. *fenestra*, a window. G. *gfensterter Staar*.) A form of cataract in which the opaque lines are so disposed as to present a kind of trellis-work pattern on the lens.

C. fibro'sa. (L. *fibra*, a fibre.) A term applied to old-standing cataracts, in which secondary metamorphoses have occurred, and a dense layer of connective tissue has formed on the inner side of the capsule. Occasionally the whole lens is converted into this kind of tissue.

C. flu'ida. (L. *fluidus*, fluid.) See *Cataract, fluid*.

C. flu'ido-du'ra. (L. *fluidus*; *durus*, hard.) A cataractous lens with a hard nucleus surrounded by soft or fluid cortex.

C. fusiform'is. (L. *fusus*, a spindle; *forma*, likeness.) See *Cataract, fusiform*.

C. gelatino'sa. (Gelatin.) A large, swollen cataract, having a gelatinous consistence. The opacity is chiefly cortical.

C. glau'ca. (Γλαυκός, bluish-grey.) A synonym of *Glaucoma*.

C. glaucomato'sa. (Γλαύκωμα, glau-

coma.) This form of cataract is hard and bulky. The degeneration commences at the centre, and extends peripherically. In glaucoma the lens often appears opaque by direct light, when the ophthalmoscope shows that it is capable of transmitting a large amount of light.

C. hæmorrhag'ica. (Αἱμορραγικός, liable to hæmorrhage.) A synonym of *C. nigra*.

C. heredita'ria. (L. *heres*, an heir. G. *angeborener Staar*.) The same as *Cataract, congenital*.

C. hypermatu'ra. (Υπερ, above; L. *matura*, to ripen. G. *überreifer Staar*; *regressiver Staar*.) Term applied to cataract which has usually been of long duration, and in which the lens is shrivelled, and its remains, blended with that of the capsule, are variously marked. The iris is often retracted and tremulous. The chances of success after an operation are considerably reduced in such cases.

C. ich'oreo te'neus. (Ιχώρα, serous matter; L. *tenens*, part. of *teneo*, to contain.) The same as *C. putrida*.

C. immatu'ra. (L. *immaturus*, unripe.) Incomplete opacity of the lens.

C. incip'iens. (L. *incipio*, to begin. G. *rudimentär Staar*.) Commencing opacity of the lens. The early or immature state of cataract.

C. interstitia'lis. (L. *interstitio*, to stand between. F. *cataracte interstitielle*.) The same as *Cataract, fluid*.

C. lac'tea. (L. *lacteus*, milky. G. *Milchstaar*.) Same as *Cataract, fluid*.

C. lactico'lor. (L. *lac*, milk; *color*, colour.) Same as *Cataract, milky*.

C. lapid'ea. (L. *lapis*, a stone.) A synonym of *C. ossæ*.

C. lenticula'ris. See *Cataract, lenticular*.

C. lenticula'ris cortica'lis. See *Cataract, lenticular, cortical*.

C. lenticula'ris nuclea'ris. Same as *C. nuclea'ris*.

C. lenticula'ris tota'lis. Same as *C. totalis*.

C. liq'uida. (L. *liquidus*, fluid.) See *Cataract, fluid*.

C. lymphat'ica. See *Cataract, lymphatic*.

C. marmora'cea. (L. *marmora*, marble. G. *marmorirter Staar*.) A form of cataract in which the opacity presented a marbled appearance.

C. matu'ra. (L. *maturus*, ripe. F. *cataracte mûre*.) Complete opacity of the lens. Advanced or developed cataract.

C. matures'cens. (L. *maturesco*, to ripen.) Cataract not yet mature.

C. membrana'cea. (L. *membrana*, a membrane. G. *hautiger Staar*.) Same as *C. arido-siliquata*.

Also, false cataract from effusion of lymph into the pupil.

C. mi'grans. (L. *migro*, to wander.) A dislocated and opaque lens which at times occupies its ordinary position, and at others shifts into the anterior chamber.

C. mix'ta. (L. *mixtus*, mingled.) A cataract with a hard nucleus and a softer periphery.

C. mol'lis. (L. *mollis*, soft.) See *Cataract, soft*.

C. Morga'gnian. See *Cataract, Morgagnian*.

C. na'tans. (L. *natans*, part. of *nato*, to

CATARACTA.

swim. *F. cataracts tremblants*; *G. Zitterstaar*, *Schwimmstaar*.) Swimming or floating cataract. A term applied to a cataractous lens when dislocated into the anterior chamber, or when, though still in its proper position, it moves with every movement of the head, owing to partial or complete rupture of the suspensory ligament.

Also, used synonymously with *C. cystica*.

C. nata'tilis. (*L. natatilis*, able to swim.) Same as *C. natans*.

C. ni'gra. (*L. niger*, black. *F. cataracts noire*; *G. schwarzer Graustaar*.) Black cataract. Cataract in which the lens is deeply stained. It is believed that this is sometimes due to the colouring matter of blood.

Also (*G. schwarzer Staar*), a synonym of *Amacrotis*.

C. nuclea'ria. (*L. nucleus*, a kernel. *G. Kernstaar*.) Opacity of the substance, and especially of the central portion, of the lens.

C. os'sea. (*L. osseus*, bony. *F. cataracts pierreuse*, or *plâtreuse*.) Bony cataract. A form of cataract resulting from the calcification of fibrous cataract.

C. partia'lis stationa'ria. (*L. stationarius*, belonging to a post.) The same as *C. pyramidata*.

Also, applied to other cataractous opacities which long remain unchanged in extent. See *Cataract, nuclear stationary*.

C. perinuclea'ria. (*Περὶ*, around; *L. nucleus*, a kernel.) Same as *Cataract, zonular*.

C. peripher'ica. (*Περὶφ'εραι*, to carry around. *F. c. périphérique*.) Cataract in which the opacity affects the external or marginal layers of the lens.

C. pigmento'sa. (*L. pigmentum*, paint. *F. cataracts pigmentieuses*, *c. uetone*.) A term for that form of opacity which depends upon the deposit of the black pigment of the uvea on the lens capsule.

C. pola'ris anterior. (*L. polus*, the end of an axis; *anterior*, foremost.) The same as *C. centralis anterior*.

C. pola'ris poste'rior. (*L. polus*; *posterior*, that which is behind.) The same as *C. centralis posterior*.

C. progressi'va. (*L. progredio*, to advance.) Cataract which more or less rapidly advances, which does not remain stationary.

C. pseudo-membrano'sa. (*Ψ'ευδος*, falsehood; *L. membranaceus*, of skin. *F. cataracts pseudomembraneux*.) A form of false cataract, consecutive upon iritis or upon iridocyclitis, and characterised by the presence of a sheet of false membrane covering the anterior surface of the lens, its thickness bearing a certain relation to the violence of the previous inflammation.

C. puncta'ta. (*L. punctatus*, pointed. *F. cataracts ponctués*; *G. Punktstaar*, *punctirtir Staar*.) A form of cataract in which the opacity presented a dotted aspect.

C. purulent'a. (*L. purulentus*, suppurating. *F. cataracts purulente*; *G. Eiterstaar*.) Suppuration of the lens which may follow injury, either with or without coincident iritis and cyclitis.

Also, one of Beer's four species of spurious cataract caused by pus in the anterior chamber of the eye (hypopyon).

C. pu'trida. (*L. putridus*, rotten. *F. cataracts fétide*.) In extremely rare cases an oily

fluid, sometimes of penetrating rancid odour, has been found to occupy a cavity in the substance of the lens, or between the lens and the posterior capsule, which has received the name of putrid cataract.

C. pyramida'tia. (*L. pyramis*, a pyramid.) Same as *C. pyramidata*.

C. pyramida'ta. (*L. pyramidalis*, in the form of a pyramid. *F. cataracts pyramidale*, *c. végétants*; *L. cataracta pyramidalis*; *G. Pyramidenstaar*, *verderer Centralkapselstaar*.) A minute, well-defined, white spot of conical form, the base placed on the lens substance, and the apex pointing forwards and covered by the capsule. The remainder of the lens is often quite clear. It is usually congenital, and is believed to be due to the abnormal contact of the capsule with the membrane of Descemet. Occasionally, remains of iritis and evidence of the previous occurrence of an ulcer of the cornea, in the form of a leucoma, may be observed. In these cases vision may be fairly good, but in the true congenital forms there is more or less nystagmus, with irregular astigmatism and indifferent vision.

C. rudera'ta. (*L. rudero*, to cover with rubbish.) The same as *C. incipiens*.

C. sanguinolenta'ta. (*L. sanguinolentus*, full of blood.) One of Beer's four species of spurious cataract caused by effusion of blood into the anterior chamber of the eye (hyphema).

C. scabro'sa. (*L. scabrous*, rough.) That form of cataract in which the cortical part of the lens is of a dense white and rough-looking aspect.

C. secunda'ria. See *Cataract, secondary*.

C. secunda'ria acro'ta. (*L. acroterius*, of the second class; *acrotes*, to grow.) The same as *Cataract, complicated*.

C. senil'is. (*L. senilis*, belonging to old people. *G. Greisenstaar*.) Cataract occurring in an old person.

C. siliqua'ta. (*L. siliqua*, a pod.) The same as *C. arido-siliquata*.

C. siliqua'ta ar'ida. See *C. arido-siliquata*.

C. siliquo'sa. (*L. siliqua*, a pod.) Same as *C. arido-siliquata*.

C. spu'ria. (*L. spurius*, false. *G. falseher Staar*.) Same as *Cataract, false*.

C. stella'ta. (*L. stella*, a star. *F. cataracts étoilée*; *G. Sternstaar*.) A form of cataract in which the opacity presents a star-like aspect.

C. stria'ta. (*L. strio*, to furrow. *F. cataracts striée*.) Streaked cataract. A form of anterior capsular cataract in which the opacities form lines.

C. tota'lis. (*L. totus*, all. *G. Totalstaar*.) Cataract affecting both the nuclear and the cortical substance of the lens.

C. trabecula'ria. (*L. trabecula*, a little beam. *F. cataracts barrée*.) A synonym of *C. striata*.

Also, a term for that condition of pupil in which there is a bar of lymph stretching across it.

C. traumati'ca. See *Cataract, traumatic*.

C. trem'u'lans. (*L. tremo*, to shake. *F. cataracts volants*; *I. cataracta tremula*; *G. Zitterstaar*.) Shaking cataract. Cataract in which there is partial or complete luxation of the lens, which so becomes unstable.

C. tumes'cens. (*L. tumesco*, to begin to swell.) That stage of developing cataract in which the lens is enlarged by the imbibition of water. It sometimes produces well-marked myopia.

CATARACTOCATAPIESIS—CATARRH.

C. variegata. (L. *variegata*, to make of various colours. G. *gefleckter Staar*.) The same as *C. marmoracea*.

C. vera. (L. *verus*, true.) True or genuine cataract, in opposition to false cataract.

C. zonularis. See *Cataract, zonular*.

Cataractocatapiesis. (*Cataract*; *καταπίεσις*, a keeping down.) Depression of a cataract.

Cataractous. (*Cataract*.) Afflicted with, or being of the nature of, cataract.

Cataria. (L. *catus*, a cat.) The *Nepeta cataria*, so called because cats like it.

Also, U.S. Ph., the official name of the leaves and tops of catnep, *Nepeta cataria*. It contains a volatile oil, and is stimulant and slightly tonic. It is used to relieve flatulent colic and toothache, and to promote menstruation.

C. vulgaris. (L. *vulgaris*, common.) The *Nepeta cataria*.

Catarrh. (*Κατάρρῃς*, catarrh; from *καταρπίω*, to flow down. L. *catarrhus*; F. *catarrhe*; I. and S. *catarro*; G. *Katarrh*, *Schleimfluss*.) Inflammation of a mucous membrane, usually restricted by English authors to that inflammation of the upper part of the respiratory mucous membrane which constitutes a cold, for which see *Coryza* and *Catarrh, bronchial*. The term was originally applied in consequence of the profuse discharge from the nose and eyes which generally accompanies a cold, and which was supposed to run down from the brain.

Catarrh is also used by some authors as synonym with *Catarrhal inflammation*.

C., alcoholic. A synonym of the gastritis produced by excessive drinking of alcoholic liquors.

C., alveolar. (L. *alveolus*, a small cavity.) A condition described as a form of inflammation of the lung, in which the organ is found after death of a mottled grey or slate-colour, solid, but not firmly and uniformly so, the consolidated portions being surrounded by greater or less areas of still crepitant lung; bronchial mucous membrane extensively and intensely congested, with much secretion; very often serous effusion into pleura, and generally dilated and thin right ventricle of the heart. Microscopically the lung presents numerous alveoli packed with corpuscular contents, as in catarrhal pneumonia, and also tracts of lines characteristic of the disorder, presenting unequally-filled alveoli with large epithelial cells budding from the walls. It occurs in the adult, and very commonly in children; it generally supervenes on chronic bronchial catarrh, and in children, on an acute attack of bronchitis in which there has been lobular collapse.

C., auricular. (L. *auricula*, the outer ear.) A synonym of *Otorrhœa*.

C., Bostock's. A synonym of *Hayasthma*, after J. Bostock, who wrote about it early in the nineteenth century.

C., bronchial. (*Βρόγχια*, the bronchial tubes.) A term applied to those cases of common cold in which the mucous membrane of the larger bronchial tubes is implicated, but not to such an extent, or with such severity, as to entitle the disorder to the term bronchitis. Aching of limbs, chilliness and heats, sneezing, nasal and lachrymal discharge, hoarseness, soreness under the sternum, loss of appetite, and quick pulse, usually

herald the attack; soon there is cough, more or less painful, and then expectoration.

C., chron'ic. Same as *Bronchitis, chronic*.

C., cystic. A synonym of *Cystitis*.

C., dry. (G. *Trockencatarrh*.) A term applied to cases of bronchitis in which the expectoration is absent, or very scanty and painful, and consisting of small, semitransparent, pearly masses.

C., epidem'ic. (*Επιδήμιος*, prevalent among a people.) A synonym of *Influenza*.

C., epithelial. (*Epithelium*.) Catarrhal inflammation of a mucous membrane in which epithelial cells predominate in the secretion.

C., gastr'ic. (*Γαστρίκ*, the stomach.) A synonym of *Gastritis*.

Also, see *Gastric catarrh*.

C., gastr'ic, chron'ic. A synonym of *Pyrosis*.

Also, see *Gastric catarrh, chronic*.

C., guttural. (L. *guttur*, the throat.) A synonym of *Laryngitis, catarrhal*.

C., hæmorrhag'ic. (*Αἱμορραγικός*, liable to hæmorrhage.) Bronchial catarrh in which there is bleeding from the bronchial mucous surface; or catarrhal inflammation of any mucous surface when there is blood in the secretion from it.

C., intest'inal. (L. *intestina*, the intestines.) A synonym of *Enteritis, catarrhal*.

C., larynge'al. A synonym of the catarrhal form of *Laryngitis*.

C., mycot'ic. (*Μύκης*, a fungus.) Bronchial and nasal catarrh, in which various fungoid forms—bacteria, vibrios, and micrococci—have been found, and have been supposed to be the cause of the disease.

C., na'sal. (L. *nasus*, the nose.) A synonym of *Coryza*.

C. of blad'der. A synonym of *Cystitis*.

C. of fau'ces. (L. *fauces*, the back of the throat.) A term applied to those cases of a common cold in which the faucial mucous membrane is specially affected, and which go by the name of a sore throat. With the ordinary symptoms of coryza there are redness and puffiness of the soft palate and the neighbourhood, a sense of dryness and itching or pain shooting towards the inner ear, some stiffness and soreness in swallowing, with a short dry cough.

C. of mid'dle ear. See *Tympanum, catarrh of*.

C. of skin. A term applied by some to the morbid condition of skin resulting in vesicles or pustules.

C. of stom'ach. Same as *Gastritis*.

C. of tubuli uriniferi. A term used to describe the condition of the tubuli uriniferi in degenerative nephritis.

C., pharynge'al. (*Φάρυγξ*, the gullet.) A term for pharyngitis of catarrhal origin.

C., post-na'sal. (L. *post*, behind; *nasus*, the nose.) Catarrh chiefly affecting the hinder part of the nasal cavities and the upper surface of the soft palate.

C., pul'monary. (L. *pulmo*, the lung.) A term applied to both bronchial catarrh and bronchitis.

C., pu'ulent. (L. *purulentus*, full of pus.) Catarrhal inflammation of a mucous surface in which pus-cells predominate in the secretion.

C., rose. A synonym of *Hayasthma*.

C., se'nile. (L. *senilis*, belonging to old

CATARRHYSIS—CATECHU.

Also, a synonym of *Senile catarrh*, or *Peripneumonia notha*.

C. ca'vi tym'pani. (L. *ca'vum*, a hollow; *tympanum*, a drum.) See *Tympanum*, *catarrh of*.

C. commun'is. (L. *communis*, common.) Ordinary catarrh.

C. epide'micus. ('Επιδήμιος, prevalent among a people.) Influenza.

C. genita'lium. (L. *genitale*, the genital member.) Leucorrhœa.

C. gonorrhœ'a. Gonorrhœa.

C. intestina'lis. (L. *intestina*, the intestines.) Mucous diarrhœa.

C. laryn'gis. (Λάρυγξ, the larynx.) Catarrhal laryngitis.

C. muco'sus. (L. *mucosus*, slimy.) Bronchial catarrh with free secretion.

C. pec'toris. (L. *pectus*, the chest.) Bronchial catarrh.

C. pharyn'gis. Pharyngeal catarrh.

C. pulmona'lis. (L. *pulmo*, the lung.) Bronchial catarrh.

C. pulmo'num. (L. *pulmo*.) Bronchitis.

C. senil'is. (L. *senilis*, belonging to old people.) Chronic bronchitis. See *Catarrh*, *senile*.

C. sic'cus. (L. *siccus*, dry.) Bronchial catarrh with scanty secretion or none.

C. suffoca'tivus. (L. *suffoco*, to choke.) Croup.

Also, a synonym of *Senile catarrh*, or *Peripneumonia notha*.

C. suffoca'tivus barbadens'is. Croup.

C. trachea'lis. (Τραχεία, the windpipe.) Croup.

C. urethra'lis. (Οὐρήθρα, the urethra.) Gleet, gonorrhœa.

C. u'teri. See *Uterine catarrh*.

C. vaginæ. (L. *vagina*, the vagina.) Leucorrhœa.

C. ventric'uli. (L. *ventriculus*, the stomach.) See *Stomach*, *catarrh of*.

C. vesicæ. (L. *vesica*, the bladder.) Cystitis.

Catarrh'ysis. (Καταρρίω, to flow down.) A defluxion, or voiding downwards.

Catart'is. Otherwise *Catartismus*.

Catartism'us. (Καταρτίζω, to replace a luxated bone; *καταρτίσμός*, used by Paulus Ægineta, l. vi.) The restoration of a dislocated bone to its place.

Catasar'ea. (Κατά, down; σάρξ, flesh.) Synonymous with *anasarca*.

Catascau'tis. (Κατασκευή, preparation, the constitution of a thing.) A term for structure.

Cataschas'mus. (Κατασχάω, to scarify, or open with a scalpel.) A scarification, or even the deeper incisions necessary in gangrenous or sphacelated parts. Dioscorides, vii. 1.

Catastas'mos. (Καταστάω, to distil.) An old term for distillation.

Applied to catarrh, according to Celsus, iv. 5; also to coryza, and especially to that form which chiefly attacked the fauces and chest.

Catastalg'mus. (Κατασταλῶ, to let fall in drops.) Coryza; nasal catarrh.

Catastalt'ic. (Κατά, downwards; σπῆλαι, to contract.) This term was originally employed to signify astringent.

Term applied by Dr. M. Hall, in his 'Diastaltic

Nervous System,' to the action of the vis nervosa from above downwards.

Catas'tasis. (Καθίστημι, to appoint.) Used by Hippocrates for the constitution, state, or condition of a thing.

The restoration of a bone or member to its own place; reduction of a dislocation, Hippocrates, *de Pract.* iii. 38.

Catata'sis. (Κατατάω, to extend.) Used by Hippocrates, as stated by Erotianus, *Onomast. fol.* 84, for the extension of a fractured or dislocated limb; also, to replacement or reduction.

Catath'esis. (Κατατίθημι, to lay down.) Deposition or depression.

Catathlipsis. (Κατά, down; θλίβω, to press.) Oppression.

Catat'ony. (Καταταίω, to stretch tight.) A name for a psychosis with motor tension symptoms, which on the motor side take the form of catalepsy, tetanus, and stupor, and on the psychical, the form of simple melancholy and melancholia attonita.

Catatropha. (Κατά, downwards; τροφή, food.) Diarrhœa.

Catavertebral elements. (Κατά, down; vertebra.) The portions forming the spinous process of the hæmal arch of a vertebra, being the hæmal spine.

Catawba tree. The *Catalpa syringifolia*.

Cataxis. (Κατάγω, to break.) A breaking; the progress of catagma.

Catch'fly. The *Apocynum androsaemifolium*, and also the *Silene virginica*.

C., Luteola. The *Silene armeria*.

C., red. The *Silene muscipula*.

C., red German. The *Lychnis viscaria*.

Catch'weed. The *Galium aparine*.

Cate. Old name for *Catechu*. (Quincy.)

Catechin. C₁₅H₁₀O₆. A substance found in catechu. It forms white silky needles, soluble in alcohol and ether, sparingly in cold water; the latter solution is coloured green by ferric salts.

Catechu. U.S. Ph. (Hind. *cato*, tree; *chu*, juice. F. *cachou*; L. *cacchu*; G. *Katschu*, *Kaschu*, *Kateschu*.) An extract prepared principally from the wood of *Acacia catechu*, originally known as *Terra japonica*. It is prepared by boiling the inner reddish-brown portion of the wood in water in unglazed earthen vessels until all the soluble matter is dissolved. It is evaporated, at first by artificial heat and then by the sun, till it has become thick; it is then spread upon a mat to dry, and while still soft it is divided by means of a string into square pieces. It is imported from Pegu, and is also made in Behar, Nepaul, and other parts of Northern India. It occurs in irregular masses of a blackish-brown to a yellowish-brown colour, enveloped in leaves, soluble in water, inodorous, with a bitterish sweet, very astringent taste; the fracture is sometimes rough, sometimes resinous and shining. It contains catechu-tannic acid, catechuic acid, and a little quercetin. Its properties are similar to those of *Catechu pallidum*. The B. Ph. does not recognise this form of catechu.

C., are'ca. See *Arce catechu*.

C., Bengal'. A term applied to the *C. pallidum*; and also to the produce of *Acacia catechu*.

C., Ceylon'. Probably the same as *Arce*

CATECHUIC ACID—CATHARETIC.

catechu; but often mixed with the husks of rice.

C., nigrum. (*L. niger*, black.) A synonym of *Catechu*, U.S. Ph.

C., pale. See *C., pallidum*, B. Ph.

C., pallidum. B. Ph. (*L. pallidus*, pale. *F. gambir cubique*; *G. Gambir-catechu*; Hind. *gambir*.) An extract of the leaves and young shoots of *Uncaria gambir*, prepared at Singapore and in other places in the Eastern Archipelago. It occurs in cubes or masses of coherent cubes, the former about an inch in diameter, light and porous, reddish brown externally, yellowish or brick red internally, breaking easily, with a dull earthy surface. Taste bitter, very astringent, and mucilaginous, succeeded by slight sweetness; entirely soluble in boiling water, partially in cold. It contains catechu-tannic and catechuic acids, with gum, a colouring matter, and lignin. *Catechu* is a powerful astringent and a tonic in diarrhoea and mucous discharges; it is used for tooth-powders, and injection in vaginal discharges and gonorrhoea, and a gargle in sore throat. It has also been used as an application to indolent ulcers, and in epistaxis. Dose, 10—30 grains.

C., Fogu. Large masses, obtained from Burmah, composed of flat cakes wrapped in leaves of the *Naucllea brunonis*. It is a good variety of the dark catechu.

C., plano-convex. A form obtained from India, in circular cakes, flat on one side and rounded on the other. It is probably the produce of the *Acacia catechu*; but it has sometimes been supposed to be obtained by re-solution and evaporation from catechu derived from other plants.

C., square. Same as *C., pallidum*, B. Ph.

Catechuic acid. A synonym of *Catechin*.

Catechu'retin. $C_{20}H_{20}O_{12}$. A product of the action of hydrochloric acid on catechin.

Catechutannic acid. (*G. Catechu-rubraure*.) $C_{20}H_{20}O_{12}$. The tannic acid of catechu; ferric salts colour it a dirty green.

Catecladion. (Dim. *κτεκλαδ*, a surgical knife or instrument.) Name for a long instrument, mentioned by Aretaeus, *de Cur. Morb. Chron.* i. 2, p. 297, ed. Kuhn, formerly introduced into the nostrils to induce hæmorrhage for relief of headache.

Catelectrotonic. Relating to *Catelectrotonus*.

C., area. The space in which the condition of catelectrotonus is manifested.

Catelectrotonus. (*Cathode*; *electra*, for electricity; *tonus*, tension.) The electrotonic condition of a nerve near to the cathode of a direct galvanic current; it is a condition of increased excitability. See *Electrotonus*.

Catellorum oleum. (*L. catellus*, a puppy; *oleum*, oil.) Olive oil in which whelps have been boiled with sweet herbs and afterwards strained.

Catellus cinereus. (*L. catellus*, a puppy; *cinereus*, resembling ashes.) Old term for a capel, which had a head resembling that of a dog. (Quincy.)

Catena. Italy; on the left bank of the Po, between Pisa and Florence. A weak salt water used, along with its mud, for bathing in rheumatic affections.

Catene musculus. (*L. catene*, a chain; *musculus*, a muscle.) The tracheal muscle.

Cateniferous. (*L. catena*; *fero*, to bear.) Applied to a body the surface of which is marked with coloured lines like chains.

Catenula. (Dim. of *L. catena*, a chain. *G. Ketten*.) The small twisted filaments found in the capsules of the Hepaticæ.

Catenulate. (Same etymon.) Chain-like; placed end to end.

Cateonosis. (*Καταιόνσις*, from *καταίονα*, to pour over.) A fomentation. Washing with warm water.

Caterpillar. (Old *F. chatepeleuse*, from *chate*, a she-cat; *pelouse*, hairy; from *L. pilosus*, hairy.) The larva of lepidopterous and other insects. Many species were formerly eaten; and the natives of Southern Africa esteem some species highly.

C., processionary. See *Bombyx processionæ*.

C., vegetable. The *Sphæria sinensis*.

Catesbæa. (*Catesby*.) A Genus of the Nat. Order *Cinchonaceæ*.

C. spinosa. Linn. (*L. spinosus*, thorny.) Hab. Antilles. Fruit acidulous, and pleasant to eat.

Catesby, Mark. An English botanist, born in 1680, died January 3, 1750.

Catevala. Common aloe. (Quincy.)

Catgut. (*F. corde a boyau*; *I. minugia*; *G. Darmseile*.) The intestines of sheep removed while warm, soaked in water, scraped to remove the mucous and peritoneal coats, treated in a weak solution of potash, and then passed through a polished hole in a piece of brass.

Also, the *Galega virginiana*.

C., carbollised. Catgut soaked for two months in an emulsion of one part of crystallised carbolic acid, dissolved in the smallest quantity of water and five parts of olive oil. It forms an excellent and reliable ligature for arteries.

Ca'tha. A Genus of the Nat. Order *Celastraceæ*.

C. edulis. Forskal. (*L. edulis*, eatable.) An infusion of the leaves, called khat or Abyssinian tea, is used as a beverage and an excitant, and to ward off infectious diseases; they are also eaten to prevent fatigue.

C. parviflora. Forsk. (*L. parvus*, small; *flor.*, a flower.) Produces wakefulness.

C. spinosa. Forsk. (*L. spinosus*, thorny.) Used as *C. edulis*.

Catharsis. (*Καθάρσις*, to destroy or waste; *καθαίρειν*, used by Hippocrates, *Epid.* vi. 1, 3, 1, 2.) A consumption or wasting of the body happening without any manifest evacuation; also, such loss as arises from purging or the like.

The thinning or depression produced by forced exercise.

The action of a cathartic.

Also, the action of a mild caustic or cathartic.

Cathartic. (Same etymon. *G. schreckend*.) Having power to destroy, waste, or consume, either by internal or external action. Applied to medicines which so act.

Cathartica. (*Καθάρσις*, to destroy.) Remedies which consume superfluous food. According to old authors, a division of caustics which includes the mild ones.

Also, medicines which produce *Catharsis*.

Catharanthus pusillus. The *Thapsia purshiana*.

Cathartic. Same as *Cathartic*.

CATHARISMUS—CATHETER.

Catharis'mus. (Καθαρισμός, a cleansing.) Depuration.

Catharization. (Καθαρίζω, to cleanse.) The process of thoroughly cleansing.

Cathar'ma. (Καθαίρω, to purge.) Fæces or excrement. Anything purged from the body naturally, or by art.

Cathar'mos. (Καθαίρω, to purge.) Purgation by medicines, also the cure of a disease by superstitious remedies. (Quincy.)

Cathar'sis. (Καθαίρω, to purge. *F. catharsis*; *G. Reinigung*.) A natural or artificial purgation of any passage of the body.

Cathart'ic. (Καθαρτικός, from καθαίρω, to purge. *F. cathartique*; *1. catartico*; *G. abführend, kathartisch*.) Sometimes used as synonymous with purgative, but generally employed to denote a medicine which is capable of producing the second grade of purgation, of which laxative is the first and drastic the third.

C. acid. (*F. acide cathartique*; *G. Cathartinsäure*.) $C_{10}H_{12}N_2SO_{12}$. The active purgative principle of senna. A black, colloid, uncrystallizable glucoside, in part found free in the leaves, in part combined with calcium and magnesium. Insoluble in ether, slightly only in alcohol and water; it is also dissolved by boiling with alkalis. It is decomposed by acids into grape-sugar and cathartogenic acid. It has a slightly astringent after-taste; it acts as a painful purgative in doses of 1.5 to 3 grains.

C. pota'to. The root of the *Ipomæa quamoclit*, or *Batatas pergrina*.

C. salt. A name for Epsom salt, magnesium sulphate; and Glauber's salt, sodium sulphate.

Catharticum aur'eum. (*L. catharticus*, purgative; *auræus*, golden.) Gamboge.

Cathar'tin. (Same etymon.) A principle found in senna leaves, formerly supposed to be the active purgative principle, now considered a mixture. It is a reddish-yellow uncrystallizable substance, having a bitter, nauseous taste; soluble in water and alcohol, insoluble in ether.

Cathartocarp'us. (Καθαίρω, to purge; *καρπός*, fruit.) A Genus of plants, taken from the *Linn. Genus Cassia*.

C. bacill'us. *Perr.* The *Cassia bacillaris*.

C. fistula. (*L. fistula*, a pipe.) The *Cassia fistula*.

C. moscha'tus. *Don.* The *Cassia moschata*.

Cathartogen'ic acid. (*G. Cathartogeninsäure*.) $C_{12}H_{16}N_2SO_{14}$. A product of the action of hydrochloric acid on cathartic acid; it is a yellowish-brown powder.

Cathartoman'ite. A crystalline sugar found in senna leaves; insusceptible of fermentation, and having no deoxidizing action on cupric suboxide.

Cath'edra. (Καθίδρα, a seat, the sitting part.) The anus.

Cathemer'inus. (Καθημερινός, daily, on this day.) Lasting a day. The same as *Quotidian*. (*Galen*.)

Cathemer'ius. (Καθημέριος, day by day.) Quotidian.

Cathert'ic. Otherwise *Cathartetic*.

Catheter. (Καθήριπ, anything let down into; from καθαίρω, to send down. *L. fistula ænea*; *F. algalia, sonde*; *1. catetera, algalia, sciringa*; *S. algalia, sonda*; *G. Katheter, Harnzapfer*.) A long tubular instrument, of metal or elastic gum, used for passing down the urethra into the bladder for

the purpose of removing the contained urine. Catheters are generally more or less curved at the end, and are made to contain a wire plug for the purpose of removing impediments; some use a straight catheter.

Also, a tube for introduction into other canals.

C. à boule. (*F. d. with; boule*, a ball.) A catheter having a narrow end, terminated by a larger or smaller bulbous enlargement.

C., A'mussat's. (*1. catetera rettilineo*.) This catheter is straight.

C., Ben'ique's. A form of catheter in which the shaft is at a right angle to the terminal part.

C., bent. The same as *C., coude*.

C., bi'coude. (*F. bis, twice; coude*, elbowed.) A doubly-bent catheter; the angles are very obtuse.

C., blood. An ordinary large catheter with large orifice and a stylet, which completely fills the channel of the instrument. Used for clearing out blood from the bladder.

C., Bro'die's. The curve of this catheter is straighter or more open than that of Liston's catheter.

C., con'ical. (*L. conus*, a cone.) A catheter which tapers more or less rapidly towards the extremity.

C., cou'dé. (*F. coude*, elbowed.) The same as *C., elbowed*.

C., doub'le-chan'nel. (*F. sonde à double courant*.) A catheter having a septum down the middle, so that fluids injected down one side escape, after entering the bladder, by the other.

C., el'bowed. (*Sax. elboge*, from *el*, a cubit; *boga*, a bow. *F. algalia d. coude*.) A catheter having a short bend about an inch from the extremity. Useful in enlarged prostate. It is usually made of elastic gum, the extremity being of firmer substance than the remainder.

C., Eusta'chian. A fine tube of silver or elastic gum, about six inches long, the outer end somewhat funnel-shaped, the distal end a little curved. It is used in the diagnosis and treatment of ear diseases; and is passed along the floor of the nasal fossa, close to the septum, to the mouth of the Eustachian tube, which it enters.

C., fe'male. The instrument used for the female is usually a short silver tube, sometimes telescopic, with a very slight curve at its extremity; but many prefer to use an ordinary elastic male catheter.

C., Ge'ly de Wantes. This catheter has a curve equal to one third of a circle of 12 centimeters in diameter.

C., Heur'teloup's. A catheter in which the curve is one fourth of a circle, having a diameter of 8 centimeters.

C., Molt's self-retain'ing. A vulcanised india-rubber catheter, having two wings, which fold down as they are pressed through the urethra, but open on entering the bladder.

C., Le'roy d'E'tiolle's. A catheter the curve of which is one fourth of a circle of 12 centimeters in diameter.

C., Lis'ton's. The curve of this catheter is a segment of a circle 4 inches in diameter.

C., Mer'cier's. The same as *C., elbowed*.

C., na'sal. (*L. nasus*, the nose.) Same as *C., Eustachian*.

C., Pe'tit's. A catheter of the form of an *S*.

C., pros'tate. A catheter of extra length and of greater and more extended curve than

CATHETERIS—CATIAS.

usual. Used in retention of urine from enlarged prostate.

C., railway. A straight, gum elastic catheter, with large terminal aperture. It is introduced over a catgut bougie or guide, which is passed through the stricture.

C., self-retaining. Catheters made of vulcanised india rubber, bent sharply at the point, so as to hook over the neck of the bladder.

C., Sims'. A short sigmoid or sinuous catheter, with a double curve, and perforated near the extremity with a series of fine holes. Used for retention in the bladder after the operation for vesico-vaginal fistula.

C., soft metal. Catheters which are used on account of their plasticity, retaining any bend that is impressed on them. They are made of an alloy of tin and lead.

C., taper. The same as *C., conical*.

C., Thompson's stricture. A catheter made of silver, with fine tapering point and an extra strong stem.

C., vertebrated. (*L. vertebra, a joint.*) An instrument, invented by Sayre, consisting of a series of hollow silver discs, which fit into each other end to end, and held together by a linked chain, which can be tightened at pleasure, so as to make the instrument a stiff rod to be used as a probe; or slackened, so that it may assume a curved shape, when it may be used as a catheter where the urethra is tortuous or the prostate is enlarged.

C., winged. An elastic catheter having a wing-like projection on each side near the distal end, with the object of self-retention in the bladder; the wings lie by the side of the instrument during introduction, and expand when in the bladder.

C., worm-ealed's. A silver catheter for prostatic diseases, made with flattened point.

C., Wright's self-retaining. A catheter made of vulcanised rubber, having a bow or loop on each side. It is introduced with a stylet.

Catheris. (*Kathēris.*) A catheter.

Catherise. (*Same etymon.*) To introduce a catheter.

Catherisis. (*Same etymon.*) Catheterism.

Catherism. (*Same etymon.*) *F. catheterism; L. and S. catheterismus; G. Katheterismus.* The operation of introducing the catheter, be it into the urethra, Eustachian tube, or other canal.

C., Eustachian. The introduction of the Eustachian catheter.

C., forcible. The introduction of a catheter into the bladder by means of force through a stricture or an enlarged prostate. A procedure not usually recommended now.

C., laryngeal. (*From larynx & larynx; G. Katheterismus der Larynx.*) The introduction of a metallic or an elastic tube through the larynx into the trachea, for the purpose of introducing artificial respiration, or as a support for the stricture of a laryngeal body, for the enlargement of a narrowing of the laryngeal passage, or for the application of remedies to the larynx or the trachea.

C., posterior. (*L. posterior, behind.*) The introduction of a catheter into the bladder from the rectum. It has been used in cases of stricture of the urethra, where the catheter, passing into the bladder and over the stricture, has been used to draw the stricture outwards, and has remained for the

purpose of ascertaining the exact site of the stricture, and cutting down upon it.

C., stomach'ic. (*Στόμαχος, the stomach. G. Catheterismus des Magens.*) The introduction of a tube into the stomach by the œsophagus, whilst the head of a patient is much lower than his pelvis, in order that the fluid contents may be evacuated.

C., tubar. (*L. tuba, a trumpet.*) The introduction of the Eustachian catheter.

C., ventricular. (*L. ventriculus, the stomach.*) Same as *C., stomachic*.

C., vesical. (*L. vesica, a bladder.*) The introduction of a catheter into the urinary bladder.

Catheterismus. (*Kathērismus.*) Catheterism; the introduction of a catheter.

Catheterization. (*Kathērisis.*) Catheterism.

Cathetometer. (*Kathētos, let down, perpendicular; μέτρον, a measure.*) An instrument intended to measure small vertical distances. It consists of a strong, finely-graduated vertical brass rod, on which moves a small telescope, accurately adjusted at a right angle, and provided with a finely-graduated vernier.

Cathidrysis. (*Kathēdrys, to put together.*) An old term for reduction of a fracture.

Cath'mia. Alchemical term variously applied: to a mineral vein out of which gold and silver are dug; to concretion in the furnace of gold or silver; to gold, litharge, and the smoke arising from burnt copper. (*Ruland.*)

Cath'mia. Same as *Cath'mia*.

Cathochites. An alchemical term for a substance said to be found in Corsica, which attracts flesh and binds the hands together, just as the magnet attracts iron or amber light objects.

Cathode. (*Katá, downwards; ὁδός, a way.*) The negative pole of a galvanic battery, so called because through it the electric current passes out of the electrolyte.

Cathodic. (*Katá, downwards; ὁδός, a way.*) Proceeding downwards. A term applied by Dr. M. Hall to the centrifugal or efferent course of the nervous influence.

Catholceus. (*Katholceus, from catholice, to draw down.* Old name, used by Galen, *de Fecula*, for an oblique bandage which was applied over another, called periceastrum, to keep it in its proper situation.

Catholici humores. (*L. catholici, from catholice, general.* Ancient, a fluid—old system for humors which existed through the whole body.

Catholicon. (*Katá, downwards; ὁδός, a way.*) A supposed universal medicine, capable of evacuating all humors.

Catholicum duplex. (*L. catholice, universal.* Ancient, a fluid—old name for a purgative electricity. *Electrostrum de rita compositione.* See *Cathode*.)

Catholomelas ma. (*Katá, downwards; ὁδός, a way.*) General or universal black spot. General or universal black spot.

Cathora sis. (*Katá, downwards; ὁδός, a way.*) Same as *Cathora sis*.

Cathypnia. (*Katá, downwards; ὁδός, a way.*) Same as *Cathypnia*.

Cathypno sis. (*Same etymon.*) The same as *Cathypnia*.

Catias. (*Katá, downwards.*) A knife used in ex-

CATILLIA—CATTLE.

tracting a dead fœtus, or in opening an abscess of the womb, according to Paulus Ægineta, vi, 73.

Catilla. A weight of nine ounces. (Quincy.)

Catillus. (L. dim. of *catinus*, a porringer.) A cupel. (Ruland and Johnson.)

Catinum alumen. (L. *catinus*, a dish; *alumen*, alum.) Old term for potash.

Catinus fusorius. (L. *catinus*; *fusorius*, molten.) A crucible. (Quincy.)

Cation. (Κατά, down; *ión*, part. of *αίμα*, to go.) A term employed to designate the body which, when separated in electrolysis, passes in the direction of the current of positive electricity to the negative pole or cathode; an electro-positive body.

Catischon. One who is costive, or not easily purged. (Quincy.)

Catkin. (Dim. of *E. cat.* *F. chaton*; *G. Kätzchen, Lämmerchen*.) A deciduous scaly spike of unisexual flowers; so called from its resemblance to a cat's tail. An amentum.

Catlin. Same as *Catling*.

Catling. A long, narrow, double-edged, sharp-pointed, straight knife for performing amputations.

Catma. *Limatura auri*, or gold filings. (Ruland and Johnson.)

Catmint. The *Nepeta cataria*.

Catnep. The *Nepeta cataria*.

Catocœnadelphus. (Κάτω, below; *κοινός*, common; *ἀδελφός*, a brother.) A cœnadelphous monster, the two bodies of which are united by their lower parts.

Catocathartic. (Κάτω, downwards; *καθαίρω*, to purge.) Having power to purge. Applied to purgative medicines in contradistinction to anacathartics or emetics. (Quincy.)

Catochê. (Κατοχή, detention, possession.) A former term, used by Galen, *de Loc. Aff.* iii, 5, for catalepsy. Used synonymously with *Catochus*.

C. Galeni. (Galen.) A synonym of *Catalepsy*.

Catocheilon. (Κάτω, below; *χείλος*, the lip.) An old term for the lower lip.

Also, a person with thick lips.

Catocheilum. See *Catocheilon*.

Catochus. (Κατοχή, from *κατίζω*, to detain.) An old term for catalepsy. Also, for an affection similar to catalepsy, but with rigidity of the limbs; also, for coma-vigil.

C. cervinus. (From *L. cervix*, the neck.) Tetanus particularly affecting the neck.

C. diurnus. (L. *diurnus*, daily.) Symptomatic tetanus. (Quincy.)

C. holotonicus. (ὅλος, whole; *τονικός*, belonging to stretching.) Tetanus.

C. infantum. (L. *infans*, an infant.) Induration of the cellular tissue. (Dunglison.)

Catocœlia. (Κάτω, downwards; *κοιλία*, the belly.) The lower belly.

Catode. Same as *Cathode*.

Catœdion. Same as *Catiædion*.

Catomismus. (Κάτω, below; *ἄσμος*, the shoulder; *κατωμισμός*, used by Hippocrates, *de Artic.* i, 13.) A mode of reducing a dislocation of the shoulder, by throwing the patient's arm over the shoulder of a strong man, so that his body was raised from the ground, and the reduction effected by his weight, with the operator's shoulder as a fulcrum.

Catopode. (Κάτω, below; *πούς*, a foot.) A term applied to fishes and other animals which

have fins or limbs on the under surface of the belly.

Catop'ter. (Κατοπτήρ, a speculum, from *κατοπτέω*, to spy out.) The Greek name for the speculum ani. (Galen.)

Catop'tric. (Κατοπτρικός, in a mirror; from *κατοπτρίζω*, to make images and reflections by means of a mirror.) Of, or belonging to, catoptrics.

C. examination of eye. See *C. test*.

C. test. A mode of diagnosis of cataract now seldom used. When a lighted candle is held before the eye, after dilatation of the pupil, three images are seen: an erect image due to reflection from the cornea, and one also erect from the anterior surface of the lens; the third is inverted, and is due to reflection from the concave posterior surface of the lens. The erect images move in the same direction with the candle, the inverted in the opposite direction. In cataract the third image is lost, and the second soon becomes obscure.

Catop'trics. (Same etymon. *F. catoptrique*; *I. catotrica*; *S. catoptrica*; *G. Katoptric, Reflexionslehre*.) That branch of optics which treats of the reflection of rays of light.

Catoptromancy. (Κάτοπτρον, a mirror; *μαντεύομαι*, to divine.) A species of divination by means of a mirror.

Catop'tron. (Κάτοπτρον, a mirror.) A speculum.

Catop'troscope. (Κάτοπτρον, a mirror; *σκοπία*, to see.) An apparatus for investigating the parts of the body by means of a mirror.

Catopus. (Κάτω, downwards; *πούς*, a foot.) Applied to the ventral fins corresponding to the pelvic limbs of other Vertebrata.

Catorchites. (Κατορχίτης, from *κατορχίζομαι*, to delight in dancing; from its exhilarating effects.) A demulcent wine prepared with figs. Used by the Greeks, and also called *sycites*.

Catoretic. (Κατώρης, from *κάτω ρίπον*, inclining downwards.) An old term for a purgative.

Catop'taphyte. (Κατότατος, inferior; *φυτόν*, a plant.) A plant the stamens of which are inserted at the base of the calyx or at the disc.

Catoteric. (Κατώτερος, inferior, because operating downwards.) An old term (Gr. *κατωτερικά*) applied by Galen, *Meth. Med.* vii, 13, to cathartic medicines.

Catō'tica. (Κατότατος, the lowest; from *κάτω*, down.) The second order of *Ecclitica* of Mason Good's classification of diseases; and defined as diseases affecting internal surfaces, and consisting in pravity of the fluids or emunctories that open into the internal surfaces of organs. It included *Hydrops, Emphysema, Paruria*, and *Lithia*.

Catoxys. (Κάτοξυς, very sharp, acute.) Very acute.

C. morbus. A very acute disease.

Catobill. Alchemical name for earth.

Catskill. See *New York, mineral waters of*.

Cattagauma. A synonym of *Gamboge*.

Cattena'ja. Italy; in Tuscany. A mineral water containing sodium, magnesium, and calcium carbonate, with a very little iron.

Cattiterus. (Καττίτερος. Attic for *κασσίτερος*, tin.) An old term for tin.

Cattle. (Old *F. catel*, goods; for *Low L.*

CATULOTIC—CAUDA.

capitale, property, especially herds and flocks.) Domestic animals, especially bulls and cows.

C. plague. (*F. peste des bœufs*; *G. Rinderpest*.) An infectious disease of cattle which arises originally in the steppes of Russia and Hungary. Its incubatory period is five or six days. An early symptom is running from the eyes, nose, and mouth, often with vesication of nostrils; there is intense salivation and excoriation of buccal mucous membrane, frequent shiverings, increase of temperature, cessation of rumination, great prostration, much abdominal pain, rapid emaciation, at first constipation, then diarrhoea, with fetid and bloody stools, and before death more or less general emphysema. There is found ulceration of the psalterium and abomasum, of the duodenum, and of the colon; in the duodenum vibices and arborescent blood spots, and in the colon many small blood clots, are seen. Numberless micrococci are found in the submucous tissue and in the blood-vessels of the intestines and in the epithelium, the blood-vessels and the lymphatics of the mucous covering of the mouth and tongue. At one time it was thought that certain spindle-shaped, oval, ciliated bodies, which were often found in the muscles and in the heart, were the cause of cattle plague; these are perospersms frequently found also in other animals and in other circumstances. They have been called *Rainey's bodies*.

Catulotic. (Κατωλότις, to bring about, or cover with a cicatrix.) Inducing or favouring cicatrization. Applied to medicines; this word, however, in the only ancient authority for its use, a Latin fragmentary book, *de Dynamidiis*, falsely ascribed to Galen, signifies (*Catulotica medicamenta*) "those medicines which equalise and smooth down rough cicatrices."

Catulus. (*L. catulus*, the young of all animals.) An old term for a catkin.

Caturus. (Κάρτα, a cat; οὐρά, a tail.) A Genus of the Nat. Order *Euphorbiaceæ*.

C. spiciflorus, Linn. (*E. spica*, from *F. ipicea*; *L. flos*, a flower.) Hab. India. Flowers used in decoction or con-serve in diarrhoea.

Caucalinææ. (*Caucalis*.) A Subfamily of campyloperous Umbelliferae having the secondary ridges of the fruit spinous.

Caucalis. (Καυκάλις, an umbelliferous herb.) A Genus of plants of the Nat. Order *Umbelliferae*.

C. anthriscus. The *Torilis anthriscus*.
C. aspera. (*L. asper*, rough.) The *Torilis anthriscus*.

C. carota. The *Daucus carota*,
C. daucoides, Linn. (Δαυκος, a carrot; εἶδος, likeness.) Used as a diuretic.

C. humilis, Jacq. (*L. humilis*, lowly.) The *C. leptophylla*.

C. leptophylla, Linn. (λεπτός, thin; φύλλον, a leaf.) Hab. Europe. A diuretic.

C. leptophylla, Lamb. The *C. daucoides*.

C. minor. (*L. minor*, less.) The *Torilis anthriscus*.

C. parvisora, Lamb. (*L. parrus*, small.) The *C. leptophylla*, Linn.

C. sanicula. The *Sanicula europæa*.

Caucaloides. (Καυκάλις.) Applied to the patella, from a supposed likeness to the flower of the *Caucalis*.

Caucasian. One of the varieties of man, according to Blumenbach; so called because it was believed that the Caucasus Mountains was

the centre from which the races sprang. The head is dolicocephalic; the colour varies; the hair is usually long, with a tendency to curl. The term is not now in use for purposes of classification, but is replaced by *Mediterranean races*.

Cauchemar. (*L. calco*, to tread; Old *G. mar*, an evil spirit.) The French name for nightmare.

Cauchuc. Otherwise *Caoutchouc*.
Cauchum. A synonym in Avicenna of *Chelidonium majus*.

Cauda. (*L. cauda*, a tail.) A tail. An old name for the os coccygis, which in tailed animals is the beginning of the tail. Bartholin, *de Ossib.* iv, c. 15, p. 737.

Also, the penis.
Also, the clitoris, particularly when unnaturally large. Waltherus, *Sylv. Med.* p. 1036.

In Botany, an appendage to a seed, like a tail. In Zoology, the tail of an animal.

C. cornu posterioris. (*L. cornu*, a horn; *posterior*, hindmost.) A solid cord of vascular neuroglia, about one third of an inch long, one third of an inch broad, and one fiftieth of an inch thick, found sometimes in the occipital lobe of the brain, and representing an obliterated process of the posterior horn of the lateral ventricle.

C. corporis striati. (*L. corpus*, body; *striatus*, part. *strio*, to furrow.) The thin pointed posterior extremity of the corpus striatum.

C. epididymidis. (Ἐπί, upon; ἰδύμιος, the testicles. *G. Schwanz des Nebenhodens*.) The globus minor or tail of the epididymis.

C. equina. (*L. equinus*, belonging to a horse. *F. queue de cheval*; *queue de la moëlle épinière*; *G. Pferdeschwanz*.) The bundle of lumbar and sacral nerves which run, in close contact with each other, from the lower end of the spinal cord to the lumbar intervertebral and sacral foramina.

It is a condition of adult life, the spinal cord extending to the end of the canal in the fetus up to the fourth month; it does so in most fishes, and nearly so in some reptiles.

Name for the horse-tail, *Equisetum maximum*.

C. equina minor. (*L. minor*, less.) The *Equisetum arvense*.

C. felis. (*L. felis*, a cat.) The *Caturus spiciflorus*, from the shape of its flowers.

C. felis agrestis. (*L. felis*; *agrestis*, belonging to the fields.) The *Acalypha betulina*.

C. helicis. (*L. helix*, a tendril of a creeping plant.) The free posterior extremity of the helix, which is prolonged downwards.

C. muris. (*L. mus*, a mouse.) A species of *Ranunculus*.

C. musculi. (*L. musculus*, a muscle.) That extremity of a muscle which is connected with the movable point; the part forming the insertion of a muscle.

C. pancreatis. (Πᾶν, all; κρέας, flesh.) The left or smaller extremity of the pancreas.

C. porcinæ. (*L. porcinus*, belonging to a pig.) The *Peucedanum officinale*, or hog's fennel.

C. pudendi. (*L. pudenda*, the privy parts.) Polypus of the uterus.

C. sa lax. (*L. salax*, lustful.) The penis.

C. seminis. (*L. semen*, seed.) The elongated and usually feathery appendage to a seed, formed of the persistent style; it is simple, hairy, or geniculate.

CAUDAL—CAULINICOLOUS.

C. vul'pis rubicun'dl. (L. *vulpis*, a fox; *rubicundus*, ruddy.) Alchemical name for red lead. (Ruland.)

Caud'al. (L. *cauda*, a tail.) Of, or belonging to, the tail, as the caudal vertebræ or caudal fins.

C. feet. (G. *Caudalfüsse*.) The pleopodes of certain of the lower Crustacea.

C. hood. See *Hood, caudal*.

C. ligament. The filum terminale of central ligament of the spinal cord.

C. ver'tebræ. See *Vertebræ, caudal*.

Cauda'ta. (L. *cauda*.) An Order of Amphibia synonymous with *Urodela*.

Caudate. (L. *cauda*. F. *caudé*; G. *geschwânzt*.) Having a tail, or some appendage like one.

C. lobe of liver. See *Lobus caudatus*.

C. nu'cleus. See *Nucleus caudatus*.

Cauda'tio. (L. *cauda*, a tail. F. *caudation*; I. *caudazione*; S. *caudacion*.) Term used by Blasius, *Med. Univers.* p. 334, for an elongation of the clitoris.

Caud'ex. (L. *caudex*, the trunk of a tree. F. *caudex*; I. *caudice*; G. *Stock, Stamm*.) The stem or stipe of a fern, in tropical climates rising to a height of 30 or 40 feet.

Some authors give it the signification of axis, whether above or below the ground, and apply it to all plants and trees.

C. ascend'ens. (L. *ascendo*, to mount up.) The part of the stem which is above the ground.

C. cer'ebrî. (L. *cerebrum*, the brain.) The medullary mass of the brain which is continuous with the crura cerebrî below, and which, spreading out in a fan-like form, ascends to the interior of the central hemispheres above.

Also, same as *Crura cerebrî*.

C. descend'ens. (L. *descendo*, to descend.) A synonym of *Rhizoma* or *Root*.

C. interme'dius. (L. *inter*, between; *medius*, the middle.) The point of divergence of stem and root.

Caudic'iform. (L. *caudex*; *forma*, likeness. G. *stockartig*.) A stem that is not ramified.

Caul'icle. (Dim. *caudex*.) The stalk or process which supports the pollen masses, or pollinea, of the Orchidaceæ.

Caudiferous. (L. *cauda*; *fero*, to bear. F. *caudifère*; I. *schwanztragend*.) Having, or bearing, a tail.

Caudigerous. (L. *cauda*; *gero*, to bear.) Same as *Caudiferous*.

Caudima'nous. (L. *cauda*; *manus*, the hand.) Applied to animals that employ their tail like a hand to seize objects, as the apes.

Caudis'ona duris'sa. (L. *cauda*; *sono*, to sound; *durus*, hard.) The rattlesnake, *Crotalus horridus*.

Caul'de. (Old F. *caudel*, from late L. *caldus*, for *calidus*, hot. F. *chaudeau*; G. *Kraftsuppe*.) A form of gruel, with stimulants, formerly given to women after labour. There are various forms given somewhat similar to the following: Half a pint of gruel is mixed with two tablespoonfuls of cream or an egg beaten up, a wineglass of cherry, some lemon peel, nutmeg, and sugar.

Caudotibial'is. (L. *cauda*, a tail; *tibia*, the bone of that name.) A muscle in seals which arises from the upper caudal vertebra and is inserted into the tibia.

Caud'ula. (Dim. of L. *cauda*, a tail.) The

filiform or setaceous organs about the anus of the Lepisma.

Caul. (Welsh *caul*, a covering for the bowels. F. *coiffe*; I. *cuffia*; S. *cofia*; G. *Haube*.) The epiploon or omentum.

Also, the amnion, which sometimes being torn off by the child's head passing from the uterus, comes away with it, quite separated from the placenta, and is vulgarly supposed to be of good omen.

Caul'e'don. (Καυλῆδόν, in the manner of a stem or stalk; from *καυλός*, a stem. F. *cauledon*; I. *cauledon*; G. *Querbruch*.) Applied to a transverse fracture, or that of a bone broken across, as of a stalk or stem of a plant. Galen, *Meth. Med.* vi, 5.

Caulerpi'dæ. A Tribe of the Suborder *Siphonæ*, Nat. Order *Conserveæ*, having a monosiphonous frond, continuous and irregularly branched.

Caul'es dulcama'ræ. (L. *caulis*, a stalk.) The tops of the woody nightshade, *Solanum dulcamara*.

Caul'es cent. (L. *caulesco*, to grow to a stem. F. *caulescent*; G. *bestengelt*.) Having, or growing on, a stem.

Caul'icle. Same as *Caulicule*.

Caulic'olous. (L. *caulis*; *colo*, to inhabit.) Applied to parasitical phanerogamous plants that draw their nourishment by means of lateral suckers on their stems, as the *Cuscuta*.

Caul'icule. (Dim. of L. *caulis*. F. *caulicule*.) The point of union of the base of the plumule with the radicle and the base of the cotyledons in a germinating seed.

Also, each of numerous stems proceeding from but one root.

Caulic'ulus. Same as *Caulicle*.

Caulifo'rous. (L. *caulis*; *flos*, a flower.) Having flowers on the stem.

Caul'iflower. (Mod. E. *cole*, a cabbage; *flower*; from F. *chou*, cabbage; *fleur*, flowering. F. *choufleur*; I. *cavol flore*; S. *coliflor*; G. *Blumenkohl*.) The *Brassica florida*.

C. exores'cence. (L. *exeresco*, to grow out. G. *Blumenkohlgewächs*.) Originally employed to designate what is now known as epithelial cancer of the cervix uteri.

Doubtless this term has been applied at times to non-malignant villous tumours.

C. growth. A term which has been used to describe all growths, natural or morbid, which are developed in the form of a stem, with branches and branchlets all closely applied to each other or crowded; such are acinous glands, papillomata of the skin, villous tumours, and such like.

Caul'iform. (*Caulis*; *forma*, likeness.) Having the appearance of a stem.

Caul'in. (L. *caula*.) The colouring matter of red cabbage and broccoli.

Caulinary. Same as *Cauline*.

C. stip'ules. Stipules which persist in a leaf-like fashion, and are not attached to the petiole but to the stem.

Caul'ine. (L. *caulis*, a stem. F. *caulinnaire*; G. *stengelständig, stielständig*.) Of, or belonging to, a stalk or stem.

C. bun'dles. In Botany, applied to fibrovascular bundles, formed in the stem, having no connection with the leaves.

C. leaves. (F. *feuilles caulinaires*.) Leaves arising from the main stem.

Caulinic'olous. Same as *Cauliculous*.

CAULIRHIZOUS—CAUSA.

Caulirhizous. (Καυλός, the stalk; ρίζα, a root.) Applied to plants the stems of which send forth roots.

Caulis. (Καυλός, a stalk.) An old term for the penis.

Also, for the neck of the uterus.

Also, the stalk or stem of herbaceous plants.

Also, any kind of herb, especially pot-herbs.

C. floridus. (L. *floridus*, flowery. F. *chou-fleur*.) The cauliflower.

C. procumbens. (L. *procumbis*, to fall forward.) A trailing stem.

C. ruber. The *Brassica rubra*, or red cabbage.

C. scandens. (L. *scando*, to climb.) A stalk climbing with the aid of tendrils.

C. tinctoria. The Indian drug *Gulancha*, the stem of *Tinospora cordifolia*.

C. uteri. The *Cervix uteri*.

C. volubilis. (L. *volubilis*, that which is turned round.) A twining stem. A stem climbing without the aid of tendrils.

Caulobulb. (Καυλός, a stem; βολβός, a bulb.) A leaf-bearing or floriferous stem swollen at the base, as in *Ranunculus bulbosus*, and many orchids.

Caulocarpous. (Καυλός; καρπός, fruit. G. *stengelfruchtig*.) Applied to vegetables the stems of which persist and bear fruit many times.

Cauloma. (L. *caulis*, a stem.) A term applied in Botany to all parts which bear leaves.

Also, to the stem of a palm which is unbranched and bears leaves only on the top.

Caulome. Same as *Cauloma*.

Caulophyllin. A resinous material precipitated by water from the tincture of the *Caulophyllum thalictroides*. It is believed to be composed of an alkaloid with some saponine. Used as an emmenagogue and an oxytocic.

Caulophyllum. (Καυλός, a stalk; φύλλον, a leaf.) A Genus of the Nat. Order *Berberidaceae*.

Also, the official name, U.S. Ph., of the rhizome of *C. thalictroides*. It contains saponin and caulophyllin.

C. thalictroides, Michx. (Θάλυτρον, the thalictum; είδος, likeness.) The blue cohosh. Hab. United States. A perennial herbaceous plant, 2 feet high, with matted, knotty rhizomes, a naked stem to the summit, whence springs a compound triternate leaf and a panicle of greenish-yellow flowers. The root is sweetish and pungent. It is used as a diaphoretic and an emmenagogue and oxytocic.

Cauloplegia. (Καυλίς, the penis; πλέγη, a stroke.) Paralysis of the penis.

Caulorrhagia. (Καυλός; ρήγμα, to break forth.) Hemorrhage from the penis, either accompanied or not by erection.

C. ejaculatoria. (L. *ejaculo*, to eject.) Hemorrhage from the penis during ejaculation of semen.

C. stillatitia. (L. *stillo*, to drop.) Hemorrhage from the urethra.

Caulorrhoea. (Καυλός, a stalk; ροή, to flow.) A flow of mucus from the male urethra.

C. benigna. (L. *benignus*, mild.) Simple gonorrhoea.

Caulosarc. (Καυλός, a stalk; σάρξ, flesh.) Same as *Cauloma*.

Caulus. (Καυλός, a stalk, the penis.) The penis.

Cauma. (Καύμα, burning heat, from *καίω*, to burn.) The heat of the atmosphere. Applied to the burning heat of fever.

C. bronchitis. (Βρόγχα, the bronchial tubes.) Croup.

C. corditis. (Καρδία, the heart.) Inflammation of the heart.

C. enteritis. (Εντέρον, the intestine.) Inflammation of the bowels.

C. gastritis. (Γαστήρ, the stomach.) Inflammation of the stomach.

C. hæmorrhagæum. (Αἱμορραγία, liable to hæmorrhage.) Active hæmorrhage.

C. hepatitis. (Ήπαρ, the liver.) Inflammation of the liver.

C. ophthalmitis. (Ὀφθαλμός, the eye.) Inflammation of the structures of the eye.

C. peritonitis. (Περιτόναιος, stretched over.) Inflammation of the peritoneum.

C. phrenitis. (Φρενίς, the mind.) Inflammation of the brain.

C. pleuritis. (Πλευρά, the side.) Inflammation of the pleura.

C. podagricum. (Πόδαγμα, gout in the feet.) Gout.

C. rheumatismus. (Ρευματισμός, a defluxion.) Acute rheumatism.

Caumatic. (Καύμα, burning heat.) Relating to the burning heat of fever.

Caumato-dos. (Καυματώδης, feverish.) Burning hot.

C. febris. (L. *febris*, a fever.) An inflammatory fever.

Caunga. The areca nut.

Caurus. Alchemical term for the north-west.

Causa. (L. *causa*, a cause.) That by means of, on account of, or through which, a thing is done or takes place; a cause or reason.

C. abditæ. (L. *abdo*, to hide.) The hidden or remote cause.

C. actus. (L. *ago*, to drive.) The immediate cause.

C. antecedens. (L. *ante*, before; *cedo*, to go.) The antecedent cause. Another term for the exciting cause. See *C. excitans*.

C. conjuncta. (L. *con*, together; *jungo*, to join.) The proximate cause. See *C. proxima*.

C. continua. (L. *con*, together; *tenes*, to hold.) The joining or continuing cause. Another term for the proximate cause. See *C. proxima*.

C. disponsa. (L. *dispono*, to dispose.) The disposing or predisposing cause. A term for a state of the system which makes it liable to assume any particular disease when the exciting cause is applied. Also called *C. prægignens*.

C. excitans. (L. *ex*, out of; *cito*, to summon.) The exciting cause; or that which immediately produces the disease. Also called *C. antecedens*, *excitatoria*, or *provocatrix*.

C. facti. (L. *facio*, a deed.) The cause or motive of a deed, especially of a crime.

C. occasionalis. (L. *occasio*, opportunity; from *oc*, and *cedo*, to fall.) The occasional or accidental cause. Another term for the exciting cause. See *C. excitans*.

C. præcursiva. (L. *præ*, before; *curio*, to begin.) The exciting cause; that which immediately precedes.

C. præcursiva. (L. *præ*, before; *curio*, to begin.)

CAUSALGIA—CAUSTIC.

κίω, to be fully sufficient.) The preceding cause. Another term for the exciting cause. See *C. excitans*.

C. proe'g'mena. (*Προηγούμενα*, to go first.) The foregoing or precedent cause. Another term for the predisposing cause. See *C. disponens*.

C. prox'ima. (*L. proximus*, nearest.) The proximate cause; or that deranged action from which all the symptoms arise; being really but another name for the disease itself. Also called *C. continens*.

Causal'gia. (*Καῦσος*, burning heat; *ἄλγος*, pain.) Acute burning pain, such as is often produced by gunshot wounds.

Also, neuralgia with a sensation as of burning.

Causality. (*L. causa*, a cause. *F. causalité*; *I. causalità*; *G. Kausalität*.) The quality or power of tracing effects to a cause. A phrenological term for a faculty peculiar to man (its organ in the upper part of the forehead, on each side of *Comparison*), giving perception of the dependence of phenomena, furnishing the idea of causation as forming an invisible bond of connection between cause and effect, impressing with an irresistible conviction that every phenomenon or change in nature is caused by something, and so leading by successive steps to the great cause of all. In regarding the actions of men, it leads to consider the motives or moving causes from which they proceed.

Cause. (*L. causa*, that by means of, on account of, or through which, a thing is done or takes place. *Altria, αίτιον*; *F. cause*; *I. and S. causa*; *G. Ursache*.) That which produces an effect.

C., ac'cessory. (*L. accedo*, to approach. *F. cause accessoire*.) An incidental, assisting, non-essential cause of disease.

C., acci'dental. (*L. accido*, to happen. *F. cause accidentelle*.) An occasional cause; that which does not always have the effect of producing the same disease; one which does not act unless under certain given conditions.

C., com'mon. The same as *C., acci'dental*.

C., endopath'ic. (*Ἐνδον*, within; *πάθος*, a disease.) An exciting cause of disease which originates within the body.

C., essen'tial. (*L. essentia*, the essence of a thing. *F. cause essentielle*.) An exciting cause which produces a special disease.

C., exci'ting. (*L. excito*, to summon forth. *F. cause excitante*.) A cause which immediately produces or excites disease.

C., exopath'ic. (*Ἐξω*, outward; *πάθος*, a disease.) An exciting cause of disease which originates outside the body.

C., exter'nal. (*L. externus*, outward.) A cause of disease which originates and acts from without the body.

C., hid'den. An undiscoverable cause.

C., imme'diate. (*L. immediatus*, with nothing standing in the middle.) A cause which directly produces a disease.

C., inter'nal. (*L. internus*, inward.) A cause which produces disease and originates within the body.

C., mechan'ical. (*Μηχανικός*, belonging to mechanics. *F. cause mécanique*.) An obstruction of some duct, or a pressure on some organ, or a bruise or laceration of some structure, or other mechanical damage by which disease is produced.

C., neg'ative. (*L. negatīvus*, from *nego*, to deny.) A cause of disease which is an abstraction or removal of anything necessary for the well-being of the part or of the individual.

C., obscu're. (*L. obscurus*, dark.) A cause not definitely known.

C., occa'sional. (*L. occasio*, an opportunity. *F. cause occasionelle*.) A cause which directly occasions disease.

C., oc'cult. (*L. occultus*, hidden.) A cause not definitely known.

C., phys'ical. (*L. physicus*, belonging to natural philosophy.) A cause which produces disease by means of its physical influence.

C., physiolog'ical. (*Φύσις*, nature; *λόγος*, an account.) A cause which acts in virtue of its power of altering the functions of living organs.

C., predispo'nent. The same as *C., predisposing*.

C., predispo'ing. (*L. præ*, before; *dispono*, to arrange. *F. cause predisposante*.) A cause which, whilst not producing disease itself, renders more effective, or is necessary for the action of, the exciting cause. It may be either a natural or an acquired condition of the body, or a circumstance of its surroundings.

C., prin'cipal. (*L. principalis*, first.) The chief and most important cause of disease.

C., procata're'tic. See *Causa procataretica*.

C., prox'imate. (*L. proximus*, nearest.) This term is used by some in the sense of the disease itself; by others, as meaning those morbid processes which the exciting cause induces; by others, as denoting the morbid cause itself.

C., remo'te. (*L. remotus*, distant; part. of *remoto*, to move back.) The same as *C., predisposing*.

C., spec'if'ic. (*L. specificus*, forming a particular kind.) A cause which, when acting, produces the same special disease.

C., vi'tal. (*L. vitalis*, belonging to life.) The specific thing by which infectious or contagious diseases are produced, and which itself is supposed to be living.

Caus'is. (*Καῦσις*, a burning.) A term which has been variously used to denote a burn, the act of boiling, fermentation, the intense burning of fever, and cauterisation.

Causo'des. (*Καυσώδης*, burning.) Having an ardent burning sensation. Inflammation. Applied to an ardent fever, which is also called *Causus*.

Causo'ma. (*Καύσωμα*, from *καῦσος*, burning heat.) Inflammatory swelling.

Caust'ic. (*Καυστικός*, capable of burning, from *καίω*, to burn. *F. caustique*; *I. caustico*; *G. ätzmittel*.) A substance which produces the death and disorganisation of a living tissue when brought in contact with it. A caustic may act chemically, as zinc chloride; or mechanically, as the actual cautery.

Also (*F. caustique*; *I. caustico*; *G. ätzend*), having the destructive action of a caustic.

Also, in *Optics*, a term applied to a curve produced in space by the successive intersections of parallel rays by the successive rays of light when reflected from a concave surface; this is the caustic by reflection or catacaustic curve.

The caustic by refraction is a similar curve obtained from a refracting surface; also called diacaustic curve.

C. al'cohols. A term applied to sodium

CAUSTICA ADUSTIO—CAUSUS.

and potassium ethylates, in consequence of their caustic action on living tissue.

C. alkali. A pure alkaline oxide free from water. Usually applied to *Potassa fusa*.

C. arrows. Conical sticks of some firmish farinaceous or other material containing a caustic, such as zinc chloride, and which, being inserted into a puncture made in a tumour or other structure to be destroyed, produce death of the surrounding structures.

C. barley. See *Barley, caustic*.

C., black. Strong sulphuric acid made into a paste with saffron. Used as a caustic in cancer.

C., Canquoin's. See *Canquoin's paste*.

C., com'mon. A synonym of silver nitrate, *Argenti nitras*.

C., Du'bois'. Arsenious acid 1 part, red sulphuret of mercury 16, dragon's blood 8 parts.

C., Frère Côme's. Arsenious acid 1 part, red sulphuret of mercury 5, burnt sponge 2.

C., gold'en. Six grains of gold trichloride dissolved in an ounce of nitromuriatic acid.

C., Gon'dret's. The *Unguentum ammoniacale*, Belg. Ph.

C., i'odine. One part each of iodine and potassium iodide dissolved in two parts of water.

C., Landolt's. Equal parts of the chlorides of bromine, gold, zinc, and antimony, mixed with the same weight of flour.

C., lu'nar. The *Argenti nitras*.

C., mercurial. The acid nitrate of mercury.

C., mitigated. (*L. mitigo*, to soften.) Term applied to silver nitrate rendered less active by the admixture of an equal quantity, or with a still larger proportion, of potassium nitrate.

C. of Fil'hos. The *Custicum Viennense fusum Filhos*.

C. paste. Chloride of zinc mixed into a paste with wheaten flour or starch and alcohol, and used to destroy cancerous or other tumours.

C. pot'ash. See *Potassa caustica*.

C., Becam'ier's. Same as *C. golden*.

C., Rousselot's. Same as *C., Frère Côme's*.

C. so'da. See *Soda caustica*.

C. stron'tia. Same as *Strontium monoxide*.

C., sulphuric. Strong sulphuric acid made into a paste with plaster of Paris, saffron, or lint.

C., Vien'na. Same as *Vienna paste*.

C. volatile alkali. *L. liquor ammoniac*.

C., zinc. Chloride of zinc mixed with flour or starch, in the proportion of one to two or three or more of the latter.

Caustica adustio. (*L. causticus*, caustic; *adustio*, a burning.) A synonym of *Cantharisation*.

Causticity. (*L. causticus*, caustic; *F. ausen*, to burn; *L. causticus*, *S. causticity*; *G. causticity*, *causticity*.) The quality which distinguishes caustic substances, that of having so strong a tendency to combine with organised bodies or substances as to destroy their texture.

Causticophorum. (*Xanthoxanthum*, capable of burning, *phorum*, to burn; *F. xanthoxanthum*, *G. xanthoxanthum*.) An instrument for carrying caustic.

Caustica. A corrosive, or other of burning effect. Same as *Cantharica*.

Causticum. Same as *Caustica*.

C. ethiopicum. (*L. ethiopicus*, an Ethiopian, or a black.) Same as *Caustic, black*.

C. alkali'num. The *Potassa fusa*.

C. america'num. The *Veratrum sabadilla*.

C. ammoniacale Gon'dret. The *Unguentum ammoniacale*, Belg. Ph.

C. antimonial'e. The *Antimonii chloridum*.

C. arsenical'e. Arsenical caustic. A caustic used in the treatment of cancer, composed of two parts of white arsenic to one of levigated antimony, melted together in a crucible.

C. chirurgo'rum. (*L. chirurgus*, a surgeon.) An old name of nitrate of silver.

C. commu'ne. (*L. communis*, common.) A synonym of *Potassa fusa*.

Also, a term applied to a mixture of equal parts of quicklime and black soap. Used as a caustic.

C. commu'ne acer'rimum. (*L. communis*; *acer'rimus*, very violent.) The *Potassa fusa*.

C. commu'ne fort'is. (*L. communis*, common; *fortis*, strong.) A term for *Potassa cum calce*.

C. commu'ne mit'is. (*L. comp.* of *mitis*, mild.) Caustic potash dissolved in thrice its weight of water, and mixed with quicklime to the consistence of a paste.

Also, equal parts of quicklime and soft soap.

C. cum chlorure'to zin'cio, Fr. Codex. (*F. caustique avec le chlorure de zinc*.) Same as *Canquoin's paste*.

C. cum kali hy'drico cum cal'ce. The *C. Viennense fusum Filhos*.

C. cum potas'sa et cal'ce, Fr. Codex. Same as *C. Viennense fusum Filhos*.

C. luna're. (*L. Luna*, the moon, a name of silver.) The *Argenti nitras*.

C. nigrum. (*L. niger*, black.) Same as *Caustic, black*.

C. nitricum. Nitric acid dropped on to cotton wool or lint until it is gelatinised. Used in the removal of cancer.

C. odontalgicum. (*O'dontalgia*, the toothache.) One part of morphia dissolved in twenty of dilute nitric acid. Applied with cotton wool to a carious tooth for the relief of pain.

C. potentiale. (*L. potentia*, power.) *Potassa fusa*.

C. salinum. (*L. sal*, salt.) *Potassa fusa*.

C. Viennense fusum Fil'hos. (*L. fusus*, poured out.) Equal parts of quicklime and caustic potash (which, mixed with spirit, forms Vienna paste) melted by means of heat and run into moulds; so called after its proposer.

Caustocyclus. (*Kaustocyclos*, caustic; *cyclus*, a circle.) The caustic ring, in which was fixed the nitrate of mercury, for cauterising the eye.

Caustodermitis. (*Kaustodermis*, burnt; *derma*, the skin.) Inflammation of the skin from burning.

Causus. (*Kausos*, from *kaio*, to burn.) An old term, used by Paracelsus, *I. x. Parag.*, 13, for ardent fever, which was characterised by pungent heat internally, great heat of breath, desire of cold air, dryness of the tongue, lips, and skin, coldness of the extremities, the urine loaded with bile, watchfulness, quick small and weak pulse, eyes clear shining and red, with good state of the complexion; it has been considered the same with the variety of malignant remitt-

CAUTER—CAVA.

tent of hot climates, called ardent or burning remittent fever; this, however, is only conjecture.

Also, applied to those cases of febrile disturbance supposed to be caused by the direct rays of the sun, combined with excessive exertion, which are also called *Fever, thermic*.

C. endemialis. (Έν, among; δῆμος, a people.) A synonym of yellow fever.

Cauter. (Καυτήρ, a burner.) An instrument for applying the actual cautery.

Also, a liniment or application of a caustic character.

Cauterant. (Καυτήριον, a branding iron.) Relating to a cautery or to caustic, or having the properties of either.

Cauteretic. (Καυτήρ, a branding-iron.) Caustic.

Cauterets. France; Département des Hautes-Pyrénées. Indifferent or mild sulphurated mineral waters, from fourteen sources, of a temperature varying from 30° C. to 49° C. (86° F. to 120·2° F.) Cauterets is 3200 feet above sea-level, the climate is mild, and, being situated at the extremity of a valley enclosed by high mountains, it is moist and somewhat variable. The Raillères spring, the most renowned, contains only 0·1459 grain of sodium sulphuret in 16 ounces; it also contains sodium chloride and sulphide, silica, and baryne. The other springs are of more or less similar character. They are used in chronic bronchial catarrh, in rheumatism, gout, syphilis, and disorders of menstruation. Horres with catarrhal affections are often treated, and successfully.

Cauterisamus. Same as *Cauterisation*.

Cauterisatio. See *Cauterisation*.

Cauterisation. (Καυτηρίαζω, to cauterise. *F. cauterisation*; *I. cauterizzazione*; *S. cauterisacion*; *G. ätzen, Brennen*.) The act or process of applying the cautery or a caustic.

C. by contact. Cauterisation accomplished by the direct application of the hot iron to the part to be destroyed.

C. by points. The application of the point of a conical cautery, at equal distances on the skin, so as to destroy at each place the whole thickness.

C. distant. Cauterisation accomplished by holding a hot iron at some little distance from the part to be destroyed.

C. en arêtes. (*F. en, in; Niche, an arrow*.) A form in which chloride of zinc or other caustic is made into a paste, with flour or other material, cut into pointed strips and dried. These are inserted into punctures made around, or into the substance of, the part to be destroyed.

C., inherent. (*L. inherere, to be firmly fixed in*.) The application of the actual cautery so as to produce complete and deep destruction.

C., Neapolitan. The application of the actual cautery to the subjacent structures after an incision has been made through the skin.

C., objective. (*L. objicere, to throw before*.) A milder cauterization, effected by holding a red-hot iron or a burning coal at a little distance from the diseased part.

C., slow. The application of the *Moza*.

C., transcurrent. (*L. transcurro, to run across*.) The rapid application of the actual cautery to the skin so as not to destroy the whole thickness.

Cauterise. (Καυτηρίαζω.) To apply the cautery, or a caustic.

Cauterium. (Καυτήριον, a branding iron.) A cautery.

C. actuale. (*L. actualis, active*.) The actual cautery, or red-hot iron.

C. potentiale. (*L. potentia, power*.) The potential cautery, or chemical caustic, as zinc chloride or caustic potash.

Cautery. (Καυτήριον, a branding iron. *L. cauterium*; *F. cautère*; *I. and S. cauterio*; *G. Brennmittel, ätzmittel, Beizmittel*.) An agent whereby disorganisation and death of organic tissue, to a greater or less extent, may be produced; the destroyed part being called an eschar. These agents are divided into *actual* and *potential*; but practically the term cautery is confined to the first form, the actual; in other words, a heated metallic instrument.

C., actual. (*L. actualis, active. F. cautère actuel*; *G. Brenneisen, Brandeisen*.) An instrument of metal of various shapes, which, being heated, is applied to the structures of the body, for the purpose of producing destruction of the tissue, or any minor degree of alteration between this and rubefaction. The metal usually employed is steel, in consequence of its capacity for heat, its readiness to give it up, its unlikelihood to break when plunged while hot into cold water, and its change of appearance when heated to different degrees of temperature; as, black heat (*F. rouge-obscur*), when the metal is heated only to the extent of not changing colour; red heat (*F. rouge-cerise*); and white heat (*F. rouge-blanc*). The instrument consists of a handle of wood or ivory, and a stem, which at its extremity is bent at about a right angle, and terminated by the cauterising surface; this latter may be circular and flat, conical, wedge-shaped, or otherwise. It is employed to destroy morbid surfaces and growths, to produce counter-irritation, and to arrest hæmorrhage.

C., button. Same as *Corrigan's cautery*.

C., electric. Same as *C., galvanic*.

C., galvanic. (*F. galvanocautère*.) See *Galvano-cautery*.

C., gas. (*F. cautère à gaz*.) An apparatus consisting of an india-rubber bag to contain the gas, which may be hydrogen or common coal gas, and an elastic tube connecting it to the burner, which is generally protected by a surrounding wire netting. The heat that can be obtained is very great. See also *Thermo-cautery*.

C., potential. (*L. potentia, power*.) A term used formerly to include all caustics except the hot iron.

Cautiousness. (*L. caveo, to take heed of*.) A mental faculty, according to phrenologists, producing the emotion of fear and wariness in general, and prompting its possessor to take care. It is situated in that part of the brain which lies beneath the parietal protuberance.

Cauvalat. France; Département du Gard. Mild sulphur water containing lime. Used in skin diseases and catarrhal affections of the larynx, bronchi, kidneys, and bladder.

Ca'va. The name of the intoxicating liquor made in the South Sea Islands from the rhizome of the *Macropiper methysticum*.

Ca'va. (*L. cavus, hollow*.) A term applied to the vulva.

C. herbariorum. (*L. herbarius, a botanist*.) The *Fumaria bulbosa*.

C. ve'na. See *Vena cava*.

CAVAL—CAVERNOUS.

Ca'val. (L. *cavus*, hollow.) Of, or belonging to, the vena cava.

Cavalam. The *Sterculia balanghas*.

Cavallium urens. The *Sterculia urens*.

Cavalry. (F. *cavalerie*, horseman; from I. *cavaleria*, from *cavallo*, a horse.) Horse soldiers.

C. bone. A bony deposit in the adductor muscles of the thigh in horse soldiers, the result of inflammation produced by pressure.

Cava'tio. (L. *cavatio*, a cavern.) A cavity.

Ca've. Italy; in the district of Vico Pisano. A mineral water containing calcium carbonate and sodium chloride.

Ca'vea. (L. *cavea*, a hollow place.) A cavity.

C. na'rium. (L. *naris*, the nostril.) The cavity of the nose.

Cavendish, Henry. An English chemist, born at Nice on October 10, 1731; died on February 24, 1810.

Cavern. (L. *caverna*, a hollow. F. *caverne*; I. *caverna*; S. *caverna*; G. *Höhle*, *Höhlung*.) A hollow or excavation in the lung or elsewhere from destruction of tissue or emptying of an abscess.

Also, sometimes applied to the cavity of a dilated bronchus.

Caverna. (L. *caverna*, a hollow, from *cavus*, hollow. F. *caverne*; G. *Höhle*.) A cavity. Also, a synonym of the *Vulva*.

C. na'rium. (L. *naris*, the nostril.) The cavity of the nose.

Cavernæ. Plural of *Caverna*.

C. denti'um. (L. *dens*, a tooth.) The alveoli.

C. front'is. (L. *frons*, the forehead.) The frontal sinuses.

Cavernar'ious. (L. *caverna*.) Growing in caverns or other subterranean places.

Caverni'tis. (L. *caverna*.) Inflammation of the corpora cavernosa of the penis.

Cavernoma. A synonym of *Angioma*, *cavernous*.

Cavernous. (L. *caverna*, a hollow. F. *caverneux*; G. *voll Höhlen*.) Full of, or having, cells and hollows.

C. angelo'ma. See *Angioma*, *cavernous*.

C. arter'ies. A condition of arteries occurring but seldom. The carotid gland of the frog is an example in which filaments containing muscle cells spring from the arterial wall, and, interlacing with each other, form a network. Similar structures are found in the pulmonary arteries and aorta of some Chelonæ. See *C. blood-vessels*.

C. artery. See *Corpus cavernosum*, *artery of*.

C. blood-ves'sels. A condition in which the lumen of the vessel is in part or whole traversed by trabeculae, so that it assumes a spongy character; the same condition also results from frequent and close anastomosis of blood-vessels of various sizes. See *C. arteries*, *C. capillaries*, and *C. veins*.

C. bod'ies. The corpora cavernosa of the penis; and also of the clitoris.

C. body of penis. See *Corpus cavernosum penis*.

C. body of the vag'ina. The erectile tissue lying close to the bulbi vestibuli of the vagina.

C. brea'thing. A term applied to bronchial breathing having a hollow sound, produced by the reverberation of a cavity, either a largely dilated bronchial tube, or a tubercular, or other cavity; the characters are the more pronounced the freer the communication with the air passages, the firmer the surrounding lung tissue, and the emptier the cavity. Very occasionally cavernous breathing is heard where there is only induration.

C. cap'illaries. In these the trabeculae consist of fine homogeneous connective tissue. See *C. blood-vessels*.

C. cough. The cough as heard by auscultation, when it is hollow and has a metallic character.

C. frem'itus. See *Fremitus*, *cavernous*.

C. gan'glion. A synonym of the *Carotid ganglion*.

C. groove. (F. *gouttière caverneuse*.) A broad, sinuous groove on the upper surface of the sphenoid bone at each side of the body, which lodges the cavernous sinus and the internal carotid artery.

C. lymph-tu'mours. Same as *Lymph-angioma*, *cavernous*.

C. metamorph'osis. (Μεταμόρφωσις, a transformation.) The mode of production of the cavernous or erectile tumour called cavernous angioma.

C. næ'vi. See *Nævus*, *cavernous*.

C. nerves of pe'nis. See *Corpus cavernosum*, *nerves of*.

C. plex'us. (L. *plexus*, a plaiting. F. *plexus caverneux*; G. *Zellblutleitergeflecht*.) A sympathetic plexus lying in the cavernous sinus below and towards the inner side of the carotid artery at the sella turcica. It gives branches to the carotid artery, and communicates with the third, fourth, ophthalmic division of the fifth, and the sixth nerves, and with the ophthalmic ganglion.

C. râle. (F. *râle*, a rattle in the throat.) Same as *Rhonchus*, *cavernous*.

C. respira'tion. (L. *respiro*, to breathe back.) Same as *C. breathing*.

C. rhonch'us. See *Rhonchus*, *cavernous*.

C. si'nus. (F. *sinus caverneux*; G. *Zellblutleiter*.) A large irregular sinus, situate at the side of the body of the sphenoid, receiving the ophthalmic vein in front, and extending from the sphenoidal fissure to the apex of the petrous bone, where it joins the petrosal sinus; on its inner side it communicates with the circular and the transverse sinuses. In its inner wall run the internal carotid artery, the sixth nerve and filaments of the carotid plexus, and in its outer wall are found the third, the fourth, and the ophthalmic division of the fifth, nerves. The cavity of the sinus is intersected by filaments of fibrous tissue. The inferior anterior cerebral veins join this sinus.

C. texture. A synonym of *Erectile tissue*.

C. tis'sue. A synonym of *Erectile tissue*.

C. tu'mour. (G. *cavernöse Geschwulst*.) Same as *Angioma*, *cavernous*.

C. veins. The trabeculae sometimes consist only of connective tissue, but in others they contain blood-vessels and muscular bundles, as in the corpora cavernosa. See *C. blood-vessels*.

Also, the *Corpora cavernosa*, *veins of*.

C. voice. The condition of the voice in *Pectoriloquy*.

CAVITIES—CAVUM.

named.) The unnamed cavities; the auricles of the heart.

C. interscapula'res. (L. *inter*, between; *scapula*, the blade-bone.) The space between the base of the scapula and the spinous processes of the adjacent vertebrae.

Cavities. (L. *cavus*, hollow.) Hollows.

C., aërial. (L. *aër*, air.) Same as *Air cavities of plants*; and also, a synonym of *Air sacs of birds*.

C., areolar. See *Areolar cavities*.

C., nasal. See *Nasal fossae*.

C. of reserve. (G. *Reservehöhlen*.) The offshoot or recess behind each milk tooth follicle, which in the course of growth becomes a closed cavity containing epithelium from the enamel germ, in each of which is developed a permanent tooth.

C. of reserve, posterior. (G. *hintere Reservehöhlen*.) The successive extensions of the dental groove and enamel germ from which the three last permanent teeth, the molars, are developed.

C., respiratory. (L. *respiro*, to breathe back.) A synonym of the air passages or lobular passages of the lung.

Also, the cavities of the body which contain the respiratory organs.

C., splanchnic. (Σπλάνχνα, the viscera.) The visceral cavities; those of the cranium, the thorax, and the abdomen.

Cavity. (L. *cavus*, a hollow place. F. *cavité*; I. *cavità*; S. *cavidad*; G. *Höhlung*.) Any hollow place or depression. A cell.

C., ankyroid. (Ἀγκυρά, an anchor; *allos*, likeness.) The posterior cornu of the lateral ventricle of the brain; so called from its curved shape.

C., blastoderm'ic. (Βλαστός, a bud; *derma*, the skin.) Same as *Segmentation-cavity*.

C., buccal. (L. *bucca*, the cheek.) The cavity of the mouth.

C., cotyloid. (Κοτύλη, a small cup; *allos*, likeness.) The acetabulum.

C., cranial. See *Cranial cavity*.

C., dig'ital. (L. *digitus*, a finger.) A term applied to the posterior cornu of the lateral ventricle of the brain, from its shape.

C., epiplo'ic. (Επίπλοον, the omentum.) The peritoneal cavity.

C., germ'inative. (G. *germino*, to bud.) A synonym of *C., blastodermic*.

C., glen'oid. See *Glenoid cavity*.

C., innom'inate. (L. *innominatus*, unnamed.) The part of the space existing between the somato-pleural and the splanchno-pleural layers of the blastoderm when somewhat developed, which lies outside the umbilical contraction.

C. of Arantius. (Arantzi.) The *Ventricle of Arantius*.

C. of pel'vis. See *Pelvis, cavity of*.

C., pleuro-peritone'al. The part of the space existing between the somato-pleural and the splanchno-pleural layers of the blastoderm, when somewhat developed, which lies within the umbilical contraction.

C., segmen'tation. See *Segmentation-cavity*.

C., semlin'ar, of ra'di'um. See *Radius, semilunar cavity of*.

C., sig'moid, great'er- See *Sigmoid cavity, greater*.

C., sig'moid, less'er. See *Sigmoid cavity, lesser*.

Ca'vum. (L. *cavum*, a hollow.) A cavity.

C. abdom'inis. (L. *abdomen*, the belly. G. *Bauchhöhle*.) The cavity of the abdomen.

C. arachnoid'eum. (Ἀράχνη, a spider's web; *allos*, likeness.) The *Arachnoid cavity*.

C. arterie'sum. (Ἀρτηρία, an artery.) The left side of the ventricle of the heart of those Reptilia in which this organ is more or less completely divided by a septum.

C. cran'ial. (Κρανίον, the skull.) The cavity of the skull.

C. dent'al. (L. *dens*, a tooth.) The cavity of a tooth; the pulp cavity.

C. Douglas's'i latera'le. (Douglas, the name of an anatomist; *latus*, the side.) A narrow slit-like space on either side of the fœma recto-uterina. It lies between the posterior surface of the ligamentum uteri latum and the posterior internal wall of the pelvis.

C. fauc'um. (L. *fauces*, the throat.) The hollow of the fauces. The part bounded by the tongue and soft palate, below and above, and the tonsils and the pillars of fauces on each side.

C. laryng'is. (L. *larynx*, the upper portion of the windpipe. G. *Höhle des Kehlkopfes*.) The space situated between the inferior surface of the epiglottis above and the vocal cords below.

C. mediast'ni. (L. *mediastinus*, standing in the middle.) The somewhat triangular space bounded by the sternum in front, and the reflections of the pleura on each side.

C. mediast'ni ant'ic. (L. *anterior*, that which is in front.) The *Mediastinum, anterior*.

C. mediast'ni post'ic. (L. *posticus*, that which is behind.) The *Mediastinum, posterior*.

C. na'r'ium. (L. *nares*, the nostril.) The cavity of the nostrils; the nasal fossae.

C. na'sal. (L. *nasus*, the nose. G. *Nasenhöhle*.) The general cavity of the nose into which various secondary cavities, as those of the antrum, ethmoidal, and sphenoidal sinuses open.

C. ora'. (L. *os*, the mouth.) The cavity of the mouth.

C. pericard'ial. (Περικάρδιον, the membrane round the heart.) The cavity of the pericardium; the space between the two surfaces of the membrane.

C. pharyngo-nasa'le. (Φάρυγξ, the pharynx; *nasus*, the nose.) That part of the pharynx which, when the soft palate is in the horizontal position, is situated above the plane of the palate.

C. pharyngo-ora'le. (Φάρυγξ, pharynx; L. *oralis*, from *os*, the mouth.) That part of the pharynx which, when the soft palate is horizontal, lies between it and the plane of the dorsum of the tongue.

C. pharyngo-larynge'um. (Φάρυγξ, pharynx; λάρυγξ, larynx.) That part of the pharynx which lies below the plane of the dorsum of the tongue.

C. præperitonea'le Ret'zi. (L. *præ*, before; *peritoneus*, to stretch all over; *Retzius*, the name of a naturalist.) The space between the lower part of the fascia transversalis and the posterior surface of the linea alba and recti muscles. When the bladder is greatly distended it rises into this space.

C. pulmona'le. (L. *pulmo*, the lung.) Same as *C. venosum*.

CAVY—CECUTIENCY.

C. pulvina're. (L. *pulvinus*, a cushion.) The central cavity in the tongue of certain Gastropods.

C. subarachnoidea'le. (L. *sub*, beneath; *ἀράχνη*, a spider's web; *ἴδος*, form; G. *Subarachnoidealraum*.) A space existing between the inner surface of the arachnoid membrane of the brain and spinal cord and the pia mater; it contains a little fluid termed arachnoidal fluid.

C. subdura'le. (L. *sub*, beneath; *durus*, hard. G. *Subduralraum*.) A lacuniform or fissure-like space situated between the dura mater externally and the arachnoid internally.

C. thora'cis. (L. *θώραξ*, the chest.) The cavity of the chest; the thorax.

C. tym'pani. (Τύμπανον, a drum.) The cavity of the tympanum of the ear.

C. tympanicum superius. (L. *tympanum*, the drum of the ear; *superior*, that which is above.) A large ellipsoidal cavity constantly present in the mastoid process of the temporal bone, situate above and behind the tympanic cavity anteriorly; it is in close relation with the auditory canal. It is sometimes called the antrum Valsalvæ.

C. u'teri. (L. *uterus*, the womb. G. *Bärmutterhöhle*.) The cavity of the uterus.

C. veno'sum. (L. *vena*, a vein.) The right side of the ventricle of the heart of those Reptilia, in which this organ is more or less completely divided by a septum.

Ca'vy. See *Cavia*.

Ca'yan. The *Phascelus creticus*.

Cayapo'nia. A Genus of the Nat. Order *Cucurbitacea*.

C. globulo'sa. (L. *globulus*, a little ball.) Fruit a drastic purgative.

Cayapo'nia. The active purgative principle of *Cayaponia globulosa*.

Caya'pos. An isolated tribe of Brazil inhabiting the upper Araguay.

Cayen'ne. The name of an island, a river, and a seaport town, which is the capital of French Guiana.

C. cin'namon. The produce of *Cinnamomum zeylanicum*.

C. pepper. (F. *poivre d'Inde*, p. de Guinée; I. *peperone*; S. *pimenton*; G. *Spanischer Pfeffer*.) The ground pods and seeds of the *Capsicum annuum*. Also called Guinea pepper. See *Capsici fructus*.

Cay'la. France; Département de l'Aveyron. Weak carbonated iron waters, with much carbonic acid.

Cay'uput. Same as *Cajuput*.

Cajupu'ti. Same as *Cajuput*.

Caz de Bag'ni. Italy; in the Masino Valley, 3300 feet above sea level. Mineral waters, of temperature 35° C. (95° F.), containing sodium chloride and sulphate.

Cazabi. The *Jatropha manihot*.

Ceano'thus. (Κεανόθος, a kind of thorn.) Old name for the *Serratula arvensis*.

Also, a Genus of plants of the Nat. Order *Rhamnaceæ*.

C. america'nus. Linn. (G. *Seckelstrauch*.) The leaves are called New Jersey tea, and are used in some parts of North America as tea. The root is in long fragments, having slight odour, and slightly astringent taste; the epidermis is thin and greyish, the woody part reddish; and yields a cinnamon-coloured dye. It is used in gonorrhœa, dysentery, and scrofula, as a gargle in ulcerated sore throat, and locally in cancer.

C. asu'reus. Deaf. (Pers. *lazīr*, the lapis lazuli.) The *C. cæruleus*.

C. bengalen'sis. De Cand. A species used in Senegal in dysentery.

C. cæru'leus. Lagasca. (L. *cæruleus*, sky-blue.) Hab. Mexico. A reputed febrifuge.

C. ova'lis. Bigeton. (L. *ovalis*, egg-shaped.) Used as *C. americanus*.

C. reclina'tus. L'Herit. (L. *reclino*, to bend backwards.) The *Colubrina reclinata*, Rich.

C. triner'vis. (L. *tres*, three; *nervus*, a nerve.) A synonym of *C. americanus*.

Ce'ar. (Κίαρ, for κήρ.) The heart.

Ceasma. (Κίασμα, from καίω, to cleave.) Old term, used by Hippocrates, de *Morb. Mul.* xxxiv, 10, for a fissure or fragment.

Cebadilla. Same as *Cevadilla*.

Ceber. Arabic for the *Aloës wood*.

Ce'bi galli'næ. (L. *gallina*, a hen.) Old term for a hen's liver roasted. Paulus Bagellus, de *Morb. Pueror.*

Cebidæ. (Κήβος, a long-tailed monkey.) Spider monkeys. A Family of platyrrhine Quadrumana, having hairy prehensile tails and broad caudal vertebrae.

Ceboceph'alus. (Κήβος, a kind of monkey; κεφαλή, the head. F. *cebocéphale*.) A monstrosity, with two distinct eyes, very close together, and a very rudimentary nose.

Cebyp'ira. A large Brazilian tree, the bark of which is used in decoction for baths and fomentations in rheumatism of the limbs and cutaneous diseases.

Ce'cal. See *Cecal*.

Cecidodaph'ne. A synonym of *Cinnamomum*.

Cecidomy'ia. (Κηκίς, a gall nut; *μυία*, a fly.) A Genus of the Suborder *Nemocera*, Order *Diptera*, Class *Insecta*, the larvae of which live in plants, and often do much damage.

C. destruc'tor. Gay. (L. *destructor*, a destroyer. G. *Getreideverwüster*.) Hessian fly. Larva lives in the haulm of wheat, to which it is very destructive.

Cecinella. Italy; Tuscany, between Monte Beochieri and Palaja. A mineral water, containing small quantities of sodium chloride, magnesium chloride, and sulphate and iron carbonate, with much free carbonic acid.

Ce'cia. (Κηκίς, a gall-nut.) An oak-gall.

Ce'city. (L. *cæcitas*, blindness. Gr. τυφλότης; F. *cécité*; I. *cecità*; S. *ceguedad*; G. *Blindheit*.) Blindness.

Cecropia. A Genus of the Nat. Order *Artocarpacæ*.

C. pelta'ta. Linn. (L. *peltatus*, furnished with a shield.) Trumpet tree. Hab. South America. Properties similar to digitalis. The ashes of the wood are used to mix with coca as a masticatory. The juice is astringent, and used as a vulnerary; the inner bark and the root are astringent; and an infusion of the leaves is used in the diarrhœa of cattle. The wood, from its porosity, is used instead of amadou.

Cecryph'alon. (Κεκρύφαλος, the net with which women confine their hair.) Term used by Hippocrates, de *Steril.* xi, 6, 8, for the reticulum or second stomach of the *Ruminantia*.

Cecryph'alos. Same as *Cecryphalon*.

Ce'cum. See *Cecum*.

Cecutiency. (L. *cæcutio*, to be blind.) Dimness of vision.

CEDAR—CEDRUS.

Ce'dar. (*L. cedrus*, from *κείδρον*, the cedar tree.) A name of several coniferous trees.

C., Marba'dees. The *Cedrela odorata*.

C., bastard. The *Guassuma tomentosa*.

C., berry-bearing. A synonym of the *Juniperus oxycedrus* and the *J. sabina*.

C., Carolina. The wood of *Juniperus virginiana*.

C. of Leb'anon. The *Cedrus libani*.

C., oil of. This term appears to have been applied to the liquid resin of the *Cedrus libani*; and also by a variation in spelling to the *Huile de cedrat*, or essential oil of bergamot.

C., red. (*G. roths Cedar*.) The *Juniperus virginiana*.

C. tree. Chiefly applied to the *Cedrus libani*.

C. tree, dwarf. The *Artemisia santonica*.

C., white. The *Cupressus thyoides*.

Ced'e'a. (*Κηδεία*, care of the dead.) Embalming.

Ced'eri man'na. Manna obtained from the *Cedrus libani*.

Ced'mata. (*Κείματα*, an obscure word applied by Hippocrates to certain affections which he attributed to the excessive horse exercise of the Scythians; it may also mean aneurysmal or varicose diseases; in Aretæus the word means dilatations of the vena cava when ending in rupture and sudden death.) Old name for chronic pains of the joints, particularly the hip-joint.

Also, applied to a similar affection in the genital parts, according to Fossius and Keuchenius.

Ced'matoid. (*Κείματα*; *είδος*, likeness.) Resembling cedmata, or chronic pains in the joints.

Cedmatophthal'mia. (*Κείματα*; *οφθαλμία*.) Inflammation of the eye from catarrhal, rheumatic, gouty, and other causes.

Ced'matous. (*Κείματα*.) Having, or full of, cedmata.

Ced'ra, essen'tia de. (*L. essentia*, the essence; *de*, from.) The essence of bergamot.

Ced'rat. The citron, *Citrus medica*.

Ced'rela. Linn. (*Κείδος*, the cedar.) A Genus of the Nat. Order *Cedrelaceæ*.

C. febrifuga. Blume. (*L. febris*, fever; *fugo*, to drive away.) A synonym of *C. toona*.

According to others, a distinct species. Used in Java as a febrifuge.

C. odora'ta. Linn. (*L. odoratus*, fragrant. *F. cedrel odorant*.) Wood balsam. Used in rheumatism.

C. rosmari'nus. (*L. rosmarinus*, rosemary.) The *C. odorata*.

C. toon'a. Roxb. Hab. India. The resinous bark is used as a tonic and astringent in fever and dysentery.

Ced'rela'ces. (*Cedrela*.) A Nat. Order of thalamifloral Exogens, described by Lindley as rural Exogens, with consolidated capsular fruit, deeply monodelphous or free stamens, and numerous winged seeds.

Ced'relads. The plants of the Nat. Order *Cedrelaceæ*.

Ced'rels'um. (*Κείρδαλον*, from *κείδος*, cedar tree; *δαλον*, oil. *F. cedrélon*; *G. -ρίλ*.) Old term for the liquid resin of the *C. libani*, the cedar of Lebanon; sometimes *ad* from the cone.

dre'less. A Tribe of the Nat. Order

Cedrelaceæ, having the stamens distinct, and the inflorescence convolute.

Ced'rene. *C₂₀H₃₀*. A liquid hydrocarbon found in the liquid resin of the cedar of Lebanon.

Ced'ria. (*Κείρία*, resin from the cedar tree. *G. Cedarhara*.) A name applied sometimes to the oil of cedar, sometimes to the pitch or resin; but it is properly the crude tears of the cedar. It was employed by the Egyptians in the process of embalment.

Ced'rin. The crystalline active principle of *Cedron seeds*.

Ced'rine. (*L. cedrus*, the cedar tree.) Of, or belonging to, the cedar tree.

Cedrinum oleum. See *Oleum cedrinum*.

C. lignum. (*L. lignum*, wood.) The wood of the *Cedrus libani*, the cedar of Lebanon.

C. vinum. (*L. vinum*, wine.) Old term for wine in which the resin of the cedar tree has been steeped. Formerly used as vermifuge.

Ced'ris. (*Κείρις*.) Name for the fruit or cone of the cedar of Lebanon.

Ced'rites. The same as *Cedrinum vinum*.

Ced'rium. According to some authors, the term cedrium was applied to pyroligneous acid, which was employed in the process of embalming.

Also, the same as *Cedria*.

Ced'ro. The citron.

Cedromela. (*Κείδος*, the cedar; *μήλον*, an apple.) The fruit of the *Citrus bergamia*.

Cedromelon. The same as *Cedromela*.

Ced'ron seeds. (*F. semences de cedron*.) The fruit of the *Simaba cedron*. They resemble a large bean, enclosed in a matty, thick, ovoid drupe of the size of a lemon; they are employed as a remedy for the bites of serpents, for hydrophobia, and for intermittent fevers; when fresh they contain an oily matter, and the whitish farina obtained from them is extremely bitter, this bitterness being very lasting and disagreeable. It is used as a substitute for quinine.

Also called Quassia and Aruba cedron.

Cedronella. A synonym of the *Melissa officinalis*.

C. mexica'na. Bth. A stimulant and antispasmodic.

C. triphyl'la. The *Dracocephalum mol-davicum*.

Cedrost'is. (*Κείρωστις*.) A name for the *Bryonia dioica*, or white bryony.

Cedro'ta longifolia. (*L. longus*, long; *folium*, a leaf.) The *Aniba guyanensis*.

Ced'rule. (*Dim. cedrus*, the cedar tree.) The *Juniperus oxycedrus*, or berry-bearing cedar.

Ced'rus. (*Κείδος*, from Heb. *keder*.) The cedar tree. A Genus of the Nat. Order *Conifera*.

C. america'na. The American cedar. The *Thuja occidentalis*.

C. baocif'era. (*L. bacca*, a berry; *fero*, to bear.) The *Juniperus oxycedrus*, or berry-bearing cedar.

Also, the *Juniperus sabina*.

C. deoda'ra. Lond. (*L. Deus*, God; *do*, to give.) The deodar. The wood is used in India as a carminative, diaphoretic, and diuretic in flatulence, fever, dropsy, and urinary diseases. The turpentine is valued in skin diseases.

C. lib'ani. (*Libanus*, the mountain of that name.) The cedar of Lebanon. It yields a peculiar kind of manna.

CEDUON—CELL

C. mahogani. The *Suietenia mahogani*.
Ced'oun. Ancient name for the truffe.

Cef'alu. Sicily; near Scalfuni, on the sea coast. A mineral water, temp. 65° C. (131° F.), containing magnesium sulphate and carbonate, calcium carbonate, and a trace of iron.

Cel'ria. (Κελρία, to waste.) An old name for the tenia, or tapeworm (κερία); used by Galen, *Metb. Med.* iv, 17.

Cel'andine. (F. *chélidoine*; from Gr. χελιδόνιον, from χελιδών, a swallow. G. *Schwalbennurzwur*, *Schellkraut*.) The *Chelidonium majus*, so called because of a very old idea that it is used by the parent swallows to restore the sight of their young when their eyes were put out.

Also, a name given to the *Impatiens fulva* and *I. pallida*.

C., common. The *Chelidonium majus*.

C., greater. The *Chelidonium majus*.

C., lesser. (F. *herbe aux hémmorrhoides*, *petite éclairie*; G. *Feigwarzenkraut*, *kleines Schellkraut*.) The *Ranunculus ficaria*, or pilewort.

C., pop'py. The *Stylophorum diphyllum*.

Celastra'ceæ. A Natural Order of perigynous calcifloral Exogens, or a Family of the Order *Frangulina*, described by Lindley as rhymal Exogens, with polypetalous flowers, an imbricated calyx, and five, or some multiple of five, distinct stamens. It includes the *Euonymus* and *Elæodendrea*.

Celastrin. A non-nitrogenous bitter principle found in the leaves of *Celastrus obscurus*.

Celastrin'ææ. Same as *Celastraceæ*.

Celastrus. (Κήλαστρον, the privet, or the holly.) Old name of a plant, supposed to be the *Rhamnus alaternus*.

A Genus of the Nat. Order *Celastraceæ*.

C. america'nus. The *Ceanothus americanus*.

C. edu'lis. Vahl. The *Catha edulis*.

C. macrocar'pus. De Cand. (Μακρός, long; καρπός, fruit.) Seeds contain a useful oil.

C. mayte'nus. The *Maytenus chilensis*.

C. nu'tans. Roxb. (L. *nuto*, to nod.) A synonym of *C. paniculatus*.

C. obscu'rus. (L. *obscurus*, dark.) Hab. Abyssinia. Used as a tonic. Leaves yield an oil similar to eucalyptus oil.

C. panicu'lat'us. Willd. (L. *panicula*, a tuft. Tam. *Valulucy*; Tel. *Bavungis*; Hind. *Malkunganez*.) Staff tree. Hab. Neilgherries. A climbing shrub. The seeds afford an empyreumatic, deep scarlet oil, of acrid taste, which is burnt. It is a diaphoretic and tonic, and has been used in beriberi, paralysis, and rheumatism.

C. parvifo'ra. The *Catha parviflora*.

C. scan'dens. Linn. (L. *scando*, to climb.) Climbing staff tree. Hab. United States of America. The root-bark is said to be purgative, emetic, and antisyphilitic.

C. senegalen'sis. A species having the same properties as *C. scandens*.

C. venena'tus. (L. *venenatus*, furnished with poison.) A species the spines of which are said to inflict very painful wounds.

Celation. (L. *celo*, to conceal. F. *celation*; G. *Verheimlichung*.) The concealment of pregnancy or of parturition.

Celauri'tis. Alchemical name for lithargyrous, or litharge.

Celë. (Κηλή, a tumour. F. *tumeur*; G.

Geschwulst.) A word formerly used for hernia or rupture, and which, with the last letter mute, added to another to form a compound term, signifies a tumour caused by the protrusion of some soft part or parts, the nature of which is denoted by the first portion of the compound term, as *Enterocèle*, *Epiplocele*.

It is also, in like manner, used to signify the swelling or increased size of a part, as *Sarcocele*.

Also, its enlargement by the presence of fluid, as *Hydrocele*.

Celeomorph'æ. (Κελός, the green woodpecker; μορφή, form.) A synonym of *Pici*.

Celerigra'di. (L. *celer*, quick; *gradior*, to walk.) An Order of the *Mammifera*, comprehending the *Bodentia*, most of which are remarkable for the rapidity of their movements.

Cel'ery. (F. *céleri*, from Prov. I. *seleri*, from L. *selinum*, from Gr. σέλινον. I. *sedano*; S. *apio*; G. *Sellerie*.) The *Apium graveolens*. Cultivation and blanching by earthing up the plant as it grows destroy its original acidity, and it is commonly used in soups and stews, or eaten raw; in the latter state it is probably not easy of digestion. The seeds are also used for flavouring.

C. salt. A culinary article composed of the oil of celery seeds and common salt. Used for flavouring.

C., wild. The *Bubon galbanum*.

Celes'tine. A synonym of *Strontium sulphate*.

Cel'etes. (Κηλότης, from κηλη, a hernia. G. *ein Bruchkrankheit*.) One who has a hernia.

Celia. An old term for yeast.

Celiac. See *Celiac*.

Celibacy. (L. *caelibatus*, from *celo*, unmarried. Gr. ἀζυγία, ἀγαμία; F. *celibat*; I. *celibato*; S. *celibato*; G. *Ehelosigkeit*.) A life without marriage or sexual connection. Celibacy is believed to conduce very materially to insanity, either religious, erotic, or hysteric; and more frequently in women than in men.

Celibate. (Same etymon.) One who conforms to *Celibacy*.

Celis. (Κηλίς, a stain, a spot.) Old term for macula.

Also, an ulcer, or a cicatrix. See *Kelis*.

Cell. (L. *cella*, a chamber; from *celo*, to conceal. F. *cellule*; I. *cellotta*; S. *celdilla*; G. *Zelle*.) A small cavity. Applied to larger or smaller hollows in bone or other structure, as the frontal and mastoid cells, the cells of the spongy bones, and such like.

In Biology, the term cell is applied to certain more or less spherical elementary structures having origin in the primary cell from which the animal or plant sprang, and constituting a large part of most of the important organs and fluids of the body. A typical cell consists of a central body, the nucleus, which often contains one or more highly refracting spots, nucleoli, surrounded by more or less granular protoplasm, and the whole enclosed in a membranous investment, the cell wall. The cell wall is absent in some animal cells, such as those of blood, and pus, and embryonic cells; the nucleus is absent in some of the lowest animal and vegetable forms; so that it would appear that the protoplasm only is the essential part of the cell. The shape of cells varies; originally they are spherical, but they assume more or less regular polygonal shapes from pressure, and they may send out offshoots or

CELL.

processes of varying length. Cells undergo multiplication by segmentation or fission, when the nucleus undergoes division, the parts separate from each other, the cell contents collect about each, a furrow is formed between them, which gradually deepens, and finally completes the separation. They also multiply by gemmation or budding, by free formation, and by endogenous multiplication. See *Cytogenesis*.

Cells form the chief part of many morbid structures; these live and grow and die in the same fashion as those of healthy organs.

Also, the space between the nerves of the wings of insects.

Also, applied to the cavity of the anther lobe which contains the pollen.

Also, each cavity of an ovary or pericarp containing one or more ovules.

Also, a cavity hollowed out of, or built up upon, a slip of glass called a slide, for the purpose of receiving an object for microscopical examination or for preservation.

C., animal. There is little perceptible difference between an animal and a vegetable cell in the earliest stage of development; both are masses of protoplasm destitute of cell wall, possessing the power of movement, and capable of self-nutrition, but subsequently they differ in the circumstances that the animal cell never has the character of a shut sac containing cellulose, which is very characteristic of the vegetable cell.

C., apoplectic. The *Apoplectic focus*.

C., built-up. A cell made by cementing four pieces of glass, of the desired height and size, on to a glass slide for the microscope.

C. cavity. (*L. cavitas*, a hollow.) The interior of a cell; the space enclosed by the cell wall.

C., cement. A cell made by forming a more or less thick ring of varnish or other microscopic cement on a glass slide, by means of a turn-table.

C., central. (*L. centrum*, a centre. *G. Centralzelle*.) The larger lower division of the secondary embryo-sacs of gymnosperms which develops into an oosphere.

Also, a term applied to a large cell near the base of the archegonium of the Hepaticae, into which the canal cells, after absorption of the septa, open.

C. clusters. (*Sax. clyster*, or *cluster*, a bunch.) A term applied to aggregations of small corpuscles composed of nuclei, with a surrounding of protoplasm and an investing capsule of connective tissue, found in the sympathetic of the frog in connection with the nerve trunks.

C. contents. (*L. continuo*, to contain. *G. Zellinhalt*.) The material within the cell wall, being protoplasm, nucleus, nucleolus, fat, pigment, calcareous matter, special secretions, and such like, in an animal cell; and protoplasm, nucleus, cell sap, pigment, starch, raphides, aleurone grains, resin, and other matters in a vegetable cell.

C., daughter. (*F. cellule fille*.) A term applied to a secondary cell produced by fission or endogenous growth in a cell.

C. district. (*Old F. district*, or *destroict*, from *Low L. districtus*, a part where a lord may exercise authority; from *L. distringo*, to draw asunder.) Same as *C. territory*.

C. divis'ion. (*L. divido*, to part asunder. *G. Zelltheilung*.) That process by which a cell

divides into two or more segments called daughter cells. New centres of formation may arise in a cell, around each of which a portion of the protoplasm of the mother cell gathers till all is used up, except, if it be present, the cell wall. The new cells acquire new nuclei and sometimes new cell walls, and by growth burst through the mother cell.

C. doc'trine. (*L. doctrina*, teaching.) See *Cell theory*.

C., elementary. (*L. elementa*, the first principles of things.) The ultimate cell structure of the tissues and organs of the body.

C. family. A collection of cells originating from a mother cell.

C. fibres. (*L. fibra*, a thread.) A term formerly applied to pathological products consisting of fibres which originate from cells.

C. fluid. (*G. Zellflüssigkeit*.) A term applied formerly to the contents of a vegetable cell, exclusive of the nucleus; it was considered to be composed of a watery fluid, the cell sap, and the more consistent protoplasm.

C. force. (*Low L. fortis*, strength, from *L. fortis*, strong.) The power of assimilation and growth existing in a cell.

C. formation. (*L. forma*, to shape. *G. Zellbildung*.) The progressive development of cells one from another in the growth of an organ or structure.

Also, applied to a structure which consists mainly of cells.

Also, see *Cytogenesis*.

C. fu'sions. A term applied in Botany to canals or shorter tubes formed by the coalescence of cells and the absorption of the adjoining septa or walls; such are the true vessels of plants and the laticiferous vessels.

C. gen'esis. (*F. generatio*, generation.) See *Cytogenesis*.

C., germ. (*L. germen*, a sprout.) The germinal vesicle of the ovum.

C. germ. (*L. germen*, a sprout.) The molecule, or part of a nucleus, of a parent cell from which every cell springs.

C., germinal. (*L. germen*.) The germinal vesicle of the ovum.

C., growing. Same as *Growing slide*.

C. life. A term applied to the supposed innate life of the ultimate cell on which the well being of the structure depends.

C. mass, interme'diate. A mass of cells found in the two days' old embryo of the fowl and other vertebrata lying between the proto-vertebra and the point where the mesoblast divides into somatopleure and splanchnopleure. At a very early period this cell mass becomes intimately connected with the proto-vertebra, and from it, in all probability, the Wolffian duct takes its origin.

C. membrane. Same as *C. wall*.

C., moth'er. (*F. cellule mère*.) A term given to a cell which is giving rise to other cells.

C., mo'tor. (*L. moveo*, to move.) A ganglion cell in connection with a motor nerve filament.

C. movement. The capacity which some animal and plant cells have of changing place; such as the amoeboid movement of a leucocyte, the vibratile movement, of a ciliated epithelial cell, the contractile movement of a muscle cell, and the migratory motion of a spermatozoon.

C. multiplication. See *Cytogenesis*.

CELLA—CELLS.

C. nests. Also called "concentric globes," or "epithelial nests," are the concentrically arranged groups of epithelial cells met with wherever squamous epithelium is undergoing rapid growth. The cell nests are characteristic, though not distinctive, of epithelioma.

C., nucleated. (*L. nucleatus*, provided with a kernel. *F. cellule à noyau*.) A cell which possesses a nucleus.

C. nucleus. (*L. nucleus*, a kernel. *F. noyau de cellule*; *G. Zellkern*.) A spherical corpuscle, semisolid or containing liquid, with numerous decussating protoplasmic fibrils, occupying the centre or, more rarely, the periphery of a cell, and composed of nitrogenous material like condensed protoplasm. Occasionally there are more than one in a cell, and frequently the nucleus contains one or more nucleoli. It is by many believed to be the physiologically active part of the cell; but it may be absent, as in some Cryptogams and in low animal forms.

C., parent. A cell undergoing fission or other mode of development of other cells.

C., plant. See *C., vegetable*.

C., primary. (*L. primarius*, chief.) Same as *C., elementary*.

C., primordial. A mass of protoplasm destitute of cell wall.

Also, used in the sense of *C., elementary*.

C. process. (*G. Zellenfortsatz, Zellausläufer*.) A ramification or offshoot of the protoplasm and wall of a cell.

C. proliferation. (*L. proles*, offspring; *fero*, to bear.) The development of cells from a parent cell; the multiplication of cells by endogenous development or by fission.

C. protoplasm. See *Protoplasm*.

C. sap. (*Low G. sapp*, juice. *G. Zellsaft*.) In a wide sense, the whole of the fluid with which the cell wall, protoplasm, and all other organised structures of the cell are saturated. In a more restricted sense, it is applied to the fluids contained in the vacuoli of the protoplasm. It probably varies much in composition. It contains the materials ministering to the growth of the cell and to the production of the special products of the cell.

C. spaces. (*L. spatium*, space. *G. Raumzellen*.) The spaces in the ground substance of areolar tissue which more or less accurately enclose the connective-tissue corpuscles.

C. territory. (*L. territorium*, a district. *F. territoire cellulaire*.) A term used by Virchow to designate that range of extracellular substance in which he supposes each individual cell exercises an influence.

C. theory. (*ἑνωπία*, a looking at. *F. thëorie cellulaire*.) An hypothesis according to which the essential element of each of the tissues of the body is a cell, however much in the course of development it may have been altered. The whole series of cells and derivatives of cells having arisen from the primary embryonic or germ cell, and by modification of growth having been differentiated into organs and tissues, and still retaining a federated unity, as it were, have each an individual existence and power, sufficient not only for its own individual life and well-being, but potent over a certain district outside itself.

C., thin-glass. A cell made by fixing with marine glue a piece of thin glass, perforated to the required size, on a glass slide for microscopic purposes.

C., vacuolated. (*L. vacuo*, to make empty.) A cell containing one or more empty spaces. See *Vacuolation*.

C., vegetable. (*L. vegeto*. *F. cellule végétale*.) A mass of protoplasm sometimes containing a nucleus, and provided with a cell wall or investing membrane. After a time a fluid appears in vacuoles of the protoplasm, pressing the protoplasm towards the periphery of the cell, but often leaving bands or anastomosing processes. The protoplasm is the seat of the active changes of assimilation and dissimilation, which lead to the formation and deposit of cellulose, chlorophyll grains, starch grains, oil drops, resinous particles, and other bodies found in plants. See *Nucleolo-nucleolus*.

C. wall. The external membranous investment of a cell. In plants, it consists of cellulose and inorganic substances; in animals, when present, it is albuminous, consisting of modified protoplasm; and when hard, as in the epidermic cells, it is called *Keratin*.

Cella. (*L. cella*, a chamber.) A cell.

C. lateralis. (*L. lateralis*, lateral.) The lateral ventricle of the brain.

C. media. (*L. medius*, middle.) The central part or body of the lateral ventricle of the brain.

C. turcica. The *Sella turcica*.

Cellæ. (*L. cella*, a chamber.) Name given by Batsch to the perithecia of Spheria.

Celles. France; Département de l'Ardèche. Carbonated alkaline chalybeate springs; temp. 15° to 20° C. (59° to 68° F.) Recommended in dyspepsia, phthisis, scrofula, and cancer.

Celliculous. (*L. cella*; *colo*, to inhabit.) Living in cells or cavities.

Celliferous. (*L. cella*; *fero*, to bear.) Bearing or producing cells.

Celloid. (*L. cella*; *eidos*, form.) Cell-like.

Cells. See, for etymon, *Cell*.

C., adelmorphous. See *Adelmorphous*.

C., adipose. (*L. adipo*, fat.) See *Fat cells*.

C., air, of lung. (*F. vésicule pulmonaire*; *G. Luftbläschen, Luftzellen*.) The vesicles clustered around and opening into the lobular passages of the lung. They vary in size from 1-150° to 1-70°, and are largest at the thin edges and the apex, smallest in the interior of the lung. Their walls consist of faintly marked connective tissue, with a few corpuscles and some yellow elastic fibres, especially at the mouth; according to some, there are also muscular fibre cells. They are lined with a fine layer of pavement epithelium, and they often contain amoeboid granular cells and particles of carbon.

C., amoeboid. (*Amœba*; *eidos*, likeness.) Organic cells having the movements of an amoeba.

C., angioplastic. (*Ἀγγίον*, a vessel; *πλασσω*, to form. *F. cellules angioplastiques*.) The branching nucleated cells of connective tissue, from which capillaries arise in the embryo.

C., annular. (*L. annulus*, a ring. *G. Ringfaservellen*.) Fibrous plant cells in which the fibre is broken and arranged in rings around the cell.

C., antipodal. (*Ἀντι*, against; *ποῦς*, a foot. *F. cellules antipodes*.) Two or more distinctly nucleated cells which make their appearance, after the fecundation of a plant seed, near the chalaza.

C., auditory. (*L. audio*, to hear. *F. cellules auditives*; *G. Hörzellen*.) A synonym of *C., hair, external* and *C., hair, internal*.

CELLS.

C. bast. Same as *Liber cells*.
C., beak'er. Same as *C., goblet*.
C., blastoderm'ic. (F. *cellules blastodermique*; G. *Keimhautzellen*.) See *Blastodermic cells*.
C., blood. The red and the white corpuscles of the blood.
C., bone. The lacunae of bone.
C., bronch'ic. (Bράρχια, the bronchial tubes.) The air cells of the lungs.
C., calcig'erous. See *Calcigerous cells*.
C., calyc'iform. (L. *calyx*, a flower-cup; forma, shape. F. *cellules calyciformes*; G. *Kelchzellen*.) Same as *C., goblet*.
C., can'cer. Cancer cells vary in size and shape; they range from .08" to .025"; they may be round, oval, polyhedral, fusiform, caudate, or with irregular hollows and projections; they may contain one or more large, round or oval, distinct, highly refracting nuclei, with nucleoli; their other contents are granular, and often fatty, frequently with vacuoles, empty spaces called by Virohow physaliphores. The cell-wall is not distinct. There is no form of cell peculiar to any of the forms of cancer.
C., cart'ilage. See *Cartilage cells*.
C., caud'ate. (L. *cauda*, a tail.) Cells having a prolongation from one surface.
C., chal'ice. (F. *calice*, from κύλιξ, a drinking-cup.) Same as *C., goblet*.
C., cili'ated. (L. *cilium*, an eyelash. F. *cellules ciliées*, *cellules vibratiles*; G. *Wimperzellen*, *Flimmerzellen*.) Cells furnished at the free extremity with numerous fine vibratile hairs, as occurs in the ciliated epithelium of the air passages and other parts.
C., cleav'age. (Sax. *cleofan*, to split asunder.) Cells arising by the fission, segmentation, or division of a pre-existing cell. Hence applied to the masses marked out by lines in the earliest stages of development of the ovum.
C., colos'sal. A synonym of *C., giant*.
C., colos'trum. See *Colostrum*.
C., colum'nar. (L. *columna*, a pillar.) Epithelial cells of a prismatic shape attached by one end.
C., concent'ric. (L. *con*, for *cum*, together; *centrum*, a centre. F. *cellules concentriques*.) Cells which contain another cell.
C., conduct'ing. (L. *conduco*, to collect. F. *cellules conductrices*.) A term given by Caspary to fusiform spiral cells of some length found in certain plants.
C., connect'ive-tis'sue. See *Connective-tissue corpuscles*.
C., contract'ile. (L. *contraho*, to draw together. F. *cellules contractiles*; G. *contractile Zellen*.) A synonym of *Fibre-cells*, *contractile*.
C., cor'neal. See *Corneal corpuscles*.
C., Cor'tis. The external hair cells of the organ of Corti.
C., cov'er. Same as *C., investing*.
C., crys'tal. See under *Cinchona bark*.
C., cup. (L. *cuppa*, a vat.) Same as *C., goblet*.
C., Dent'ary. See *Dentary cells of*.
C., delom'erous. (L. *delom'erous*, conspicuous; μορφή, form; *cellules de rochers*.) Same as *C., septia*.
C., der'm'ic. Same as *C., epithelial*.
C., d'ent'ine. A synonym of *Odontoblasts*.
C., dor'ted. (F. *cellules ponctuées*.) Same as *C., pitted*.
C., element'ary. (L. *elementa*, the first principles of things.) The original cleavage cells of the yolk.
C., embryon'ic. (Εμβρυόν, the embryo. F. *cellules embryonnaires*.) Same as *Blastodermic cells*.
 The term has also been applied to certain cells found in growing pathological products. They are small, roundish masses of protoplasm, about 1-1800th" to 1-2500th" in diameter, with no cell wall, and having a soft, faintly granular intercellular bed. It has been supposed, and hence the name, that these cells are developed from unused original embryonic cells. They are also called indifferent cells.
C., embryoplas'tic. See *Embryoplastic cells*.
C., enam'el. See *Enamel cells*.
C., endothe'ial. The cells of the *Endothelium*.
C., epiderm'ic. The cells of the *Epidermis*.
C., epiderm'oid. (Επιδερμ'ις, the outer skin; εἶδος, likeness.) Cells resembling those of the epidermis.
C., epithe'ial. The cells of the *Epithelium*.
C., ethmoid'al. See *Ethmoidal cells*.
C., exuda'tion. See *Exudation corpuscles*.
C., fat. See *Fat cells*.
C., f'ibre. See *Fibre cells*.
 Also, the fusiform cells seen growing into fibres in a granulation of a healing wound.
 Also, the same as *Cell fibres*.
C., fibrillated. (L. *fibrilla*, dim. of *fiber*, a fibre. F. *cellules en araignée*.) Flattened, branched, hyaline, nucleated cells found in the neuroglia, and specially abundant in the gelatinous substance of the posterior cornua of the spinal cord.
C., fibroplas'tic. (L. *fiber*, a fibre; Gr. *πλάσσω*, to mould. F. *cellules fibroplastiques*.) A synonym of *Connective-tissue cells*.
 Also, the same as *C., plastic*.
C., f'ibrous. Plant cells in which the secondary thickening takes the form of fibres, arranged in a more or less spiral fashion.
C., fork'ed. (L. *furca*, a fork.) Cells found on the gustatory discs of the tongue of some Amphibia.
C., fus'iform. (L. *fusius*, a spindle; forma, shape. F. *cellule fusiforme*; G. *Spindelzellen*.) Cells which bulge in the middle, and have two opposite more or less finely elongated poles.
C., ganglion'ic. (Γάγγλιον, an enlargement of a nerve. F. *cellules ganglionnaires*; G. *Ganglienzellen*.) The cells of a ganglion, and of the grey matter of the brain.
C., g'iant. (F. *myeloplaxes*; G. *Riesenzellen*.) Large protoplasmic masses, of irregular outline, without cell wall, and containing many roundish nuclei, each possessing a bright nucleolus; sometimes they are attached to smaller masses of the same nature, at others they give off branched processes. They take origin from connective-tissue cells, from epithelium, or from the wall of blood-vessels or lymphatics, and in tubercle.
 - applied to certain large ganglionic cells of the frontal and the ascending ends of the brain.

C., dent'ine. A synonym of *Odontoblasts*.
C., dor'ted. (F. *cellules ponctuées*.) Same as *C., pitted*.
C., element'ary. (L. *elementa*, the first principles of things.) The original cleavage cells of the yolk.
C., embryon'ic. (Εμβρυόν, the embryo. F. *cellules embryonnaires*.) Same as *Blastodermic cells*.
 The term has also been applied to certain cells found in growing pathological products. They are small, roundish masses of protoplasm, about 1-1800th" to 1-2500th" in diameter, with no cell wall, and having a soft, faintly granular intercellular bed. It has been supposed, and hence the name, that these cells are developed from unused original embryonic cells. They are also called indifferent cells.
C., embryoplas'tic. See *Embryoplastic cells*.
C., enam'el. See *Enamel cells*.
C., endothe'ial. The cells of the *Endothelium*.
C., epiderm'ic. The cells of the *Epidermis*.
C., epiderm'oid. (Επιδερμ'ις, the outer skin; εἶδος, likeness.) Cells resembling those of the epidermis.
C., epithe'ial. The cells of the *Epithelium*.
C., ethmoid'al. See *Ethmoidal cells*.
C., exuda'tion. See *Exudation corpuscles*.
C., fat. See *Fat cells*.
C., f'ibre. See *Fibre cells*.
 Also, the fusiform cells seen growing into fibres in a granulation of a healing wound.
 Also, the same as *Cell fibres*.
C., fibrillated. (L. *fibrilla*, dim. of *fiber*, a fibre. F. *cellules en araignée*.) Flattened, branched, hyaline, nucleated cells found in the neuroglia, and specially abundant in the gelatinous substance of the posterior cornua of the spinal cord.
C., fibroplas'tic. (L. *fiber*, a fibre; Gr. *πλάσσω*, to mould. F. *cellules fibroplastiques*.) A synonym of *Connective-tissue cells*.
 Also, the same as *C., plastic*.
C., f'ibrous. Plant cells in which the secondary thickening takes the form of fibres, arranged in a more or less spiral fashion.
C., fork'ed. (L. *furca*, a fork.) Cells found on the gustatory discs of the tongue of some Amphibia.
C., fus'iform. (L. *fusius*, a spindle; forma, shape. F. *cellule fusiforme*; G. *Spindelzellen*.) Cells which bulge in the middle, and have two opposite more or less finely elongated poles.
C., ganglion'ic. (Γάγγλιον, an enlargement of a nerve. F. *cellules ganglionnaires*; G. *Ganglienzellen*.) The cells of a ganglion, and of the grey matter of the brain.
C., g'iant. (F. *myeloplaxes*; G. *Riesenzellen*.) Large protoplasmic masses, of irregular outline, without cell wall, and containing many roundish nuclei, each possessing a bright nucleolus; sometimes they are attached to smaller masses of the same nature, at others they give off branched processes. They take origin from connective-tissue cells, from epithelium, or from the wall of blood-vessels or lymphatics, and in tubercle.
 - applied to certain large ganglionic cells of the frontal and the ascending ends of the brain.

CELLULOFIBROUS—CEMENT.

not artificially let out, through the conjunctiva.

C., pel'vic. See *Pelvic cellulitis*.

C., periu'terine. (*Uteri*, around; *L. uterinus*, the womb.) The same as *Pelvic cellulitis*.

C., pus'tular. A synonym of *Malignant pustule*.

C. venena'ta. (*L. venenatus*, poisoned.) Inflammation of areolar tissue from introduction of poisonous matter through a wound.

Cellulof'fibrous. Same as *Fibro-cellular*.

Cellulose. (*L. cellula*, a little cell. *G. Cellulose, Holzasser.*) $C_6H_{10}O_5$, probably $C_{12}H_{20}O_{10}$. The chief constituent of vegetable tissue, and having the same relative constitution as starch. It is amorphous, tasteless, inodorous, insoluble in water, alcohol, ether, dilute acids, and alkalis, soluble in an ammoniacal solution of cupric oxide, and unalterable by iodine. Strong cold sulphuric acid converts it into an adhesive substance, soluble in water, and having the characters of dextrin.

It is found also in the animal body, as in the corpora amylacea of the brain, in the mantle of some Mollusca, and the testa of Tunicata.

C., animal. A term applied to glycogen and to tannin.

C. degenera'tion. A synonym of *Amyloid degeneration*.

C. mem'brane. (*G. Cellulosehaut*.) A term for the cell wall of a vegetable cell.

Cellulos'ity. (Same etymon.) The condition of a structure containing cells, as the spongy tissue of bone or the areolar tissue.

Cellulous. (*L. cellula*, a small cell. *F. celluleux*; *G. zellig, zellenformig*.) Cellular, or containing cells.

C. tis'sue. The cancellous tissue of bone.

Celocolica. (*Kήλη*, a tumour; *καλκός*, having the colic. *G. Bruchkolik*.) Hernious colic, or that caused by strangulated hernia.

Celodyspnoea. (*Kήλη*, a tumour, *δυσπνοία*.) Hernious dyspnoea.

Celoides. (*Kήλη*, a tumour.) Keloid.

Celology. (*Kήλη*, a tumour; *λογία*, a discourse. *G. Bruchlehre*.) A treatise on hernia.

Celopa. A name of *Salpa*.

Celorrhaphia. (*Kήλη*, a tumour; *ρᾶσις*, a suture. *G. Bruchnaht*.) A hernial suture.

Celosia. A Genus of the Nat. Order *Amaranthaceae*.

C. adoēs'tis. A species used in Abyssinia as a vermifuge.

C. crista'ta. (*L. cristata*, a crest.) The *Cockscomb*.

C. nitida. *Val.* (*L. nitidus*, shining.) The *C. paniculata*.

C. panicula'ta. *Linn.* (*L. panicula*, a tuft.) *Hab. Jamaica.* An astringent used in diarrhoea, dysentery, and hæmorrhages.

C. populifolia. (*L. populus*, the poplar; *folium*, a leaf.) A species producing *Belbetta*.

C. trigyna. (*Τρίσις*, three; *γυνή*, female.) One of the species affording *Belbetta*.

Celosia. A Tribe of the Nat. Order *Amaranthaceae*, having the ovary multiovulate and the anthers bilocular.

Celosome. (*Kήλη*; *σώμα*, the body.) A member in which the abdominal wall is deficient, and there is eversion of the viscera, with a suture or fissure of the sternum, and hernial displacement of the heart.

Celosomian. (Same etymon. *P. celosomian*.) Having the condition of a *Celosoma*.

Celotome. (*Kήλη*, a hernia

cutting. *G. Bruchschneider*.) The knife or instrument for performing celotomy.

Celotomy. (*Kήλη*, a tumour, also hernia; *τομή*, to cut. *G. Bruchschnitt*.) A term for the operation for strangulated hernia by cutting down and dividing the stricture.

Also, a synonym of *Castration*.

Cel'sa. An old fanciful term for what was called "musculus vite," or a pulse or beating wandering through every part of the body, according to Ruland. Paracelsus intended by this, a status or vapour, or a certain spurious and wild spirit lurking under the integuments and seeking to escape, as causing or inducing some species of cutaneous affection.

Cel'sia. A Genus of the Nat. Order *Scrophulariaceae*.

C. coromandeliana. *Vahl.* *Kukshima.* *Hab. India.* A common weed. Inspissated juice used in dysentery.

Cel'sius. A Swedish physicist, who invented the centigrade thermometer.

C.'s thermom'eter. A thermometer, graduated so that a hundred degrees separate the freezing and boiling points of water. Same as *Centigrade thermometer*.

Cel'sus. A Roman physician of the first century of the Christian era.

C., meth'od of. The mode of performing lithotomy known as the *Apparatus minor*.

Cel'teæ. A Tribe of the Nat. Order *Ulmaceae*, having a one-celled ovary and amphitropal ovules.

Celtid'æ. A synonym of *Ulmaceae*.

Cel'tis. (*G. Zuger*.) A Genus of the Nat. Order *Ulmaceae*.

C. australis. *Willd.* (*L. australis*, southern.) Fruit sweetish, rather astringent; seeds yield an oil; a decoction of the branches is used in dysentery and gleet.

C. occidentalis. (*L. occidentalis*, western.) *Hab. United States.* Nettie tree, sugar berry. The drupes are used in dysentery.

C. orientalis. (*L. orientalis*, eastern.) *Hab. Asia.* The root, bark, and leaves are aromatic, and are used in epilepsy.

Celts. (*G. Kellen*.) A dolichocephalic orthognathic race. Speech Gaelic and Cymric. The Gaels are represented by the natives of Scotland, Isle of Man, and Ireland; the Kymri by the natives of Brittany and Wales.

Cem'bra. The *Pinus cembra*.

C. nuts. The seeds of the *Pinus cembra*. They are esculent, and yield an oil.

Cement. (*L. cementum*, from *cado*, to cut or divide, because made of minute pieces of broken stone, sand, clay, or the like, mixed with lime.) Originally applied to rubbish, sherds, unhewn stones; mortar.

Term for any substance used for the purpose of uniting or cementing together pieces of what may have been broken, as lute, glue, solder.

Also, a term for a composition by which metals are covered, and then subjected to heat without fusion, and are thereby changed in their qualities, or purified, a process which is termed cementation.

Also (*G. Zahnhute*), a layer of true bone covering the fang of a tooth. It contains lacunae and canaliculi, and is red, when thick, vascular and porous. Some of the canaliculi of the enamel extend for a distance of the tooth, and

CENTAUREUM—CENTIPEDAL.

Libanus, and its root is bitter, and is considered a nervine tonic.

C. benedicta. The *Oniscus benedictus*.

C. calcitrapa. Linn. (*Calcitrapa* is a Latinised form of *Caltrop*, an iron with four points, so made that one is always uppermost, and formerly used to throw down before and so impede and damage cavalry; it is derived from *L. calx*, the heel, and *Mod. L. trappa*, a snare, and has reference to the spring flower-heads of the plant. *F. centaurea etolica*, *pignerole*; *G. Sternbutel*.) The common star-thistle, or star knapweed. The juice, extract, or infusion, is said to cure intermittent fever, the bark of the root and the seeds are recommended in nephritic complaints and in dyspepsia.

C. centaurium. Linn. (*F. grande centauria*.) The greater centaur. The root was formerly used as a tonic and vulnerary.

C. cerinthofo'lia. Sibth. (*L. cerinthus*, the plant so called; *folium*, a leaf.) The *C. beken*.

C. cyaneus. Linn. (*Kyaneos*, dark blue. *F. blaville*, *bluet*, *L. cyano*, *floralis*; *G. blaue Kornblume*.) The systematic name of the blue-bottle, or corn-flower plant; also called hartshuckle. The flowers were formerly used as antiphlogistic, antispasmodic, cordial, aperient, diuretic.

C. jacea. Linn. (*K. jacee des pres*.) Root bitter and slightly astringent. Used as a detensive gargle.

C. montana. Linn. (*L. montana*, belonging to a mountain.) Great blue-bottle, mountain knapweed. Infusion of flowers used to weak eyes.

C. sicula. (*L. siculus*, Sicilian.) The *C. solstitialis*.

C. solstitialis. Linn. (*L. solstitialis*, belonging to midsummer.) St. Barnaby's thistle. Formerly used as an antiseptic, antiepileptic, and lithontriptic; it is only slightly tonic.

C. stœdê. Linn. (*Στρούδη*, a shrubby plant used to stuff cushions.) Flowers cooling, astringent.

C. stella'ta. (*L. stellatus*, starry.) The *C. calcitrapa*.

C. sulfurea. (*L. sulfurea*, like sulphur.) Leaves used as a local application to wounds to promote healing.

Centaur'eum. The *Erythraea centaurium*.

Centaur'ii cacu'mina. (*L. cacumen*, the extremity of a thing.) The tops of the *Erythraea centaurium*, or official centaur. Directed for use by the L. and E. Ph.

Centaurin. The bitter principle of the juice of *Erythraea centaurium*. It is slightly purgative.

Centauris. (*Κενταυρίς*.) The *Erythraea centaurium*, or lesser centaur.

Centaur'ium. (*Κενταύριον*, from *κένταυρος*, a centaur; because Chiron, the centaur, is fabled to have cured, by its use, his foot which he had wounded by accident with a poisoned arrow. *F. centaurea petita*; *G. Tauerndguldenskraut*.) The pharmacopœial name (E.) of the common centaur, *Erythraea centaurium*. A bitter stomachic, with, perhaps, some action on the bowels.

C. magnu. (*L. magnus*, great.) The *Centauris centaurium*.

C. ma'ius. (*L. majus*, greater.) Same as *C. centaurium*.

C. mi'nus. (*L. minus*.) The *Erythraea centaurium*.

C. mi'na vulgar'e. (*L. vulgaris*, common.) The *Erythraea centaurium*.

C. officina'le. (*L. officina*, a workshop.) The *Centauris centaurium*.

C. par'vum. (*L. parvum*, small.) Same as *C. minus*.

Cent'aur'y. See *Centaures*, *Centaurium*, and *Erythraea centaurium*.

C., American. The *Sabbales*, or *Chironia angularis*.

C., Europe'an. The *Erythraea centaurium*.

C., great'er. The *Centauris centaurium*; also, the *Chlora perfoliata*.

C., les'ser. The *Erythraea centaurium*.

C., yel'low. The *Chlora perfoliata*.

Center'ia. (*Κεντρία*.) A name for the *Hypericum androsaemum*, or St. Peter's wort.

Center'ing. (*L. centrum*, the middle point of a circle.) Term applied to such placing of a system of lenses that they have a common axis.

Centesis. (*Κέντησις*, a pricking. *G. Stechen*, *Durchstechen*.) Puncture.

Cent'iare. (*L. centum*, a hundred, *F. are*; from *L. area*, a space.) A French metrical measure, being a square meter, or the hundredth part of an are, 0.01, equal to 10.7642993 English square feet.

Centifidous. (*L. centum*; *Ando*, to cleave. *G. hundertheilig*.) Hundred-cleft, many-cleft.

Centifolious. (*L. centum*; *folium*, a leaf. *G. hundertblätterig*.) Hundred-leaved, many-leaved.

Centigrade. (*L. centum*, a hundred; *gradus*, a step, degree, or grade.) Having a hundred steps or degrees.

C. thermom'eter. (*Θέρμω, heat*; *μέτρον*, measure.) A thermometer, divided into a hundred parts or degrees between the freezing and the boiling points of water, the former being 0°; also, called Celsius's thermometer.

The formula for the reduction of the degrees of centigrade to those of Fahrenheit is $[C. \times 32 = F. \times 9]$; that for the reduction of centigrade to Reaumur is $[R. \times 5 = C. \times 4]$.

Cent'igramme. (*L. centum*; *gramma*, a gramme.) Old term for the twenty-fourth part of an ounce.

A French weight, the hundredth of a gramme, or 0.01, equal to 0.164323 of a grain avoirdupois, or one sixth of a grain troy.

Cent'ilitre. (*L. centum*; *F. litre*.) A French metrical measure, the one hundredth part of a litre, it is equal to ten cubic centimetres or the measure of ten grammes of water; equal to 0.6102 of an English cubic inch.

Centimetre. (*L. centum*, *F. mètre*.) A French measure, the one hundredth part, or 0.01, of a metre; equal to 0.39371 or two fifths of an English inch.

Centimor'bia. (*L. centum*; *morbis*, a disease.) A name for the *Lysimachia nummularia*, or money wort, from its efficacy in curing many diseases.

Centinerv'ia. (*L. centum*; *nervus*, a nerve.) A name for the *Plantago major*, or broad-leaved plantain.

Centinod'ia. (*L. centum*; *nodus*, a knot.) A name for the *Polygonum aciculare*, or knot grass, from its numerous knots or joints.

Cent'ipede. (*L. centum*; *pes*, a foot.)

CENTIPEDE—CENTRE.

G. hundertfüßig.) Having a hundred or many feet. Hundred-footed.

Centipede. (*L. centum*; *pes*, a foot.) The different Species of *Scolopendra* and other Genera of the Order *Chilopoda*. The bite of many of the kinds is very painful; it is accomplished by means of curved perforated fangs connected with the mandibles; the existence of a poison-gland is doubtful.

Centro virginialis. (*L. cento*, a garment of several pieces; *virginalis*, belonging to a maiden.) The hymen.

Centoculous. (*L. centum*; *oculus*, an eye. *G. hundertäugig.*) Having a hundred or many eyes.

Centrad. A term applied by Dr. Barclay the same as *Central* used adverbially.

Centradiaphanæ. (*Κίτρον*, a centre; *a*, neg.; *διαφανής*, transparent.) Central opacity of the crystalline lens.

Central. (*L. centrum*, the centre. *F. central*; *l. centrale*; *S. central*; *G. mittelpunktständig.*) Of, or belonging to, the centre.

Applied by Dr. Barclay, of Edinburgh, in his Nomenclature, when treating of the aspect common to the body and organs generally, as meaning towards the centre.

C. artery of retina. See *Arteria centralis retinae*.

C. aspect. The face of an organ, or structure, which is towards the centre of the body, or of a limb.

C. canal. See *Canal, central, of spinal cord*.

C. capsule. (*L. capsula*, a small case.) The chitinous envelope of the endosarc of the *Radiolaria*; it is pierced by five pores.

C. cell. See *Cell, central*.

C. embryo. (*Εμβρυον*. *F. embryo central*.) In Botany, an embryo which is placed in the centre of the perisperm.

C. flower. The flower terminating the axis in certain cymæ.

C. galvanisation. See *Galvanisation, central*.

C. ligament. The *Filum terminale* of the spinal cord.

C. neuritis. See *Neuritis, central*.

C. perineal rupture. See *Perineal laceration, central*.

C. perisperm. (*Περὶ*, around; *σπίρμα*, a seed. *F. perisperm central*.) A perisperm which is enveloped by the embryo.

C. placenta. (*F. placenta central*.) In Botany, applied to a placenta situated in the centre of the ovary and directly continuous with the axis, to which the floral leaves are attached. It is termed a free central placenta when it has no connection with the carpellary leaves which form the walls of the ovary.

C. skel'eton. Same as *Endoskeleton*.

Also (*G. Achsenskelet*), restricted by some to the spinal column and the cranium.

C. spot. Same as *Focus centralis*.

C. tendon of diaphragm. See *Diaphragm*.

Centralis. See *Os centrale*.

Central'ity. (*L. centrum*. *F. centralité*.) A term applied to describe the inherent action of the nervous centres as distinct from those of the peripheric nerves; it is used in contradistinction to conductivity.

Centranthus. (*Κίτρον*, a sharp point; *ἄθος*, a flower. *G. Spornblume*.) A Genus of the Nat. Order *Valerianaceæ*.

C. latifolius, Dufr. (*L. latus*, broad; *folium*, a leaf.) The *C. ruber*.

C. maritimus, Gray. (*L. maritimus*, belonging to the sea-shore.) The *C. ruber*.

C. ruber, De Cand. (*L. ruber*, red.) *Spur valerian*, red valerian. Young shoots eaten as salad.

Centra'tio. (*L. centrum*, a centre.) Old term, used by Paracelsus, *l. iv, Chirurg. de Ulcer.* c. 3, for the change of a saline principle into a corrosive and ulcerating quality, whence *Centrum salis* is called the principle of ulcers.

Centre. (*Κίτρον*, the centre around which a circle is formed. *F. centre*; *l. centro*; *G. Mittelpunkt*.) The middle point of a body.

C., accelerating, of heart. The same as *C., cardio-accelerating*.

C., acoustic. (*Ἀκούω*, to hear.) Same as *C., auditory*.

C., ano-spinal. (*L. anus*, the fundament; *spina*, the spine. *F. centre ano-spinal*; *G. Centrum für Kohlenföhrung*.) A direct centre in the lower part of the spinal cord, which, when stimulated, produces contraction of the sphincter ani.

The afferent nerves run in the hæmorrhoidal plexus and the inferior mesenteric plexus. The centre is situated opposite the fifth lumbar vertebra in the dog, and between the sixth and seventh in the rabbit; the efferent nerves are contained in the pudendal plexus, and are distributed to the sphincters. The action of the centre is subordinate to the brain. After section of the cord it acts rhythmically.

C., arm-move'ment. (*F. centre du membre supérieur*.) A cortical centre in the fissure of Rolandi, divisible into two or into three distinct centres, according to some.

C., arrest of heart. Same as *C., cardio-inhibitory*.

C., artic'ulate language. See *C., speech*.

C., aud'itory. (*L. audio*, to hear. *F. centre auditif*.) See *Auditory centre*.

C., blad'der, u'rinary. Same as *C., vesico-spinal*.

C., cardio-accelerating. (*Καρδιά*, the heart; *L. accelero*, to hasten. *F. centre accélérateur du cœur*, centre cardiaque; *G. das centrum der beschleunigenden Herzerren.*) A direct centre believed to exist in the medulla oblongata, which, when excited, stimulates the activity of the heart. The accelerating fibres descend in the spinal cord, and, issuing by the rami communicantes of the lower cervical and upper dorsal nerves, enter the sympathetic and reach its first dorsal ganglion, from which they pass to the cardiac plexus. Some fibres also appear to run in the vagus.

C., cardio-inhib'itory. (*Καρδιά*, the heart; *L. inhibeo*, to restrain. *F. centre d'arrêt du cœur*; *G. centrum der Hemmungsnerren*.) A direct centre believed to be situated in the medulla oblongata. When stimulated, it inhibits the action of the heart. It may be excited directly or reflexively; directly by the sudden production of anæmia of the medulla oblongata, or of venous hyperæmia, or by the mere increase of carbonic acid gas in the blood, by increased arterial blood pressure in the vessels of the head; reflexively by stimulation of all sensory nerves, by stimulation of the vagus itself, by a blow on the stomach. It is easily exhausted.

C., cil'io-spinal. (*L. cilium*, an eyelid;

CENTRE.

spina, the spine. **F. centre cilio-spinal**; *G. Centrum für Pupillenerweiterung*.) A direct centre situated in the cat in the spinal cord, opposite the lower cervical and upper dorsal vertebrae; here, according to F. Franck, the nerve-fibres which cause contraction of the pupil take their origin, and, emerging by the four lower cervical and two upper dorsal nerves, enter the cervical sympathetic cord, or pass directly to the first thoracic ganglion. Then, ascending by the anterior branch of the loop of Vieussens, they reach the inferior cervical ganglion, and, becoming isolated, run up to the ganglion Gasseri, and accompany the ophthalmic branch of the fifth to the iris. A distinct set of dilator fibres for the iris have been shown by Vulpian to have a cerebral origin, and to enter the Gasserian ganglion. Salkowski places the cilio-spinal centre in the medulla oblongata. It governs the smooth muscles of the eyeball. Stimulation of it by electricity is followed by dilatation of the pupils. The centre is also excited by the absence of light during wakefulness. The centre for the constriction of the pupil is situated at the root of the third and sixth nerve.

C., convulsion. The same as *C., convulsion, general*.

C., convulsion, general. (*F. centre convulsif*; *G. centrum der Krampfbeugung*.) A centre situated in the medulla oblongata, stimulation of which produces general convulsions. It is excited by rapidly increasing vascosity of the blood, and by sudden anaemia of the medulla, however produced.

C., co-ordinating. (*L. co-ordinatio, an arranging with*. *F. centre de co-ordination des reflexes*.) Any centre which, by communicating branches with other ganglia or centres, governs, controls, and modifies the action of the latter. The term has been specially applied to a centre situated about 7 mm. below the calamus scriptorius in the rabbit.

C., cortical. (*L. cortex, bark*.) That part of the periphery of the central nervous system which, by means of its connection with the direct centre of a nerve, is supposed by some to be the cerebral instrument for the manifestation of its functions.

C., coughing. (*G. Centrum des Hustens*.) A direct centre believed to be situated in the medulla oblongata, a little above the inspiratory centre. The afferent fibres are the sensory fibres of the vagus distributed to the larynx and trachea; the efferent nerves are the nerves of expiration and the constrictors of the glottis.

C., deglutition. (*L. deglutio, to swallow down*. *F. centre des mouvements de déglutition*; *G. Centrum des Schlingens, C. für den Schlingact*.) A direct centre situated in the medulla oblongata; the afferent fibres are branches of the second and third division of the fifth and of the glossopharyngeal and vagus nerves, distributed to the mouth, gums, and pharynx; the motor fibres are contained in the nerves forming the pharyngeal plexus.

C., diabetic. (*Diabetes*. *F. centre diabétique, c. glycogénique*.) A centre situated in the medulla oblongata, and nearly corresponding in area with the chief vaso-motor centre.

C., direct. (*L. directus, straight*.) The grey nervous tissue in immediate connection with, or constituting, the direct origin of a nerve.

C., ejaculation. (*L. ejaculo, to shoot out*. *G. das centrum für Ejaculation*.) A direct

centre is situated in the cord opposite the fourth lumbar vertebra in the rabbit; the afferent fibres are the sensory nerves of the penis. The motor fibres of the vesiculæ seminales and ducts issue with the fourth and fifth lumbar vertebrae, and enter the sympathetic. The motor fibres of the accelerator urinæ lie in the third and fourth sacral nerves, and join the perineal nerves.

C., epigastric. (*Ἐπιδαστρικός*, the region of the stomach.) The solar plexus.

Also, the central tendon of the diaphragm.

C., erect posture. (*F. centre de la station*.) A centre situated, in part, at least, in the pons Varolii, but partly also in the cerebellum, the function of which is to co-ordinate the muscles engaged in maintaining the erect posture in man.

C., erection. (*L. erigo, to raise up*. *G. das Centrum für die Erektion*.) A direct centre situated in the lumbar region of the cord; the afferent fibres are the sensory nerves of the penis; the efferent are the vaso-inhibitory fibres distributed to the pudic artery, which pass out between the first and third sacral nerve, called by Eckhard the *nervi erigentes*; and the motor nerves issuing with the third and fourth sacral nerves for the erector penis and transversus perinei muscles. These fibres can be voluntarily excited to action.

C., expiratory. See *C., respiration*.

C., eyelid movement. (*F. centre des paupières*.) A centre supposed to exist in the pons Varolii.

C., eye-movements. (*F. centre des mouvements des yeux*.) The grey matter at the roots of the motor nerves of the eye in the pons Varolii is the direct centre.

The cortical centre is by Ferrier placed with the head-movement centre, by others at the hinder part of the parietal lobe.

C., fa'cial movements. (*L. facies, the face*. *F. centre moteur de la face*.) This centre is believed to be situated in the pons Varolii.

C., fa'cial movements, lower. A centre lying above the speech centre, at the lower part of the convolutions bounding the fissure of Rolando.

C., genitospinal. (*L. genitus, a begetting*; *spina, the spine*. *F. centre genitospinal*; *I. centro genitospinale*.) This centre is situated in the lumbar region of the cord. It is now subdivided into the erection centre, the ejaculatory centre, and the parturition centre.

C., glycogenic. (*Γλυκός, sweet*; *γεννάω, to produce*.) Same as *C., diabetic*.

C., gustatory. (*L. gusto, to taste*. *F. centre gustatif*.) A cortical centre said by Ferrier to be situated along with the olfactory centre at the summit of the temporosphenoidal lobe.

C., head-and-neck movement. A cortical centre supposed to be on the first or second frontal convolution in front of the arm-movement centre.

C., inhibiting, of heart. The same as *C., cardio-inhibitory*.

C., inhibitory, of reflex movements. (*L. inhibeo, to restrain*.) A centre which is supposed to exist in the optic lobes, which restrains the reflex actions of the spinal cord.

C., inspiratory. See *C., respiration*.

C., leg-movement. (*F. centre de membre inférieure*.) A cortical centre situated behind the arm-movement centre; according to Charcot,

CENTRE.

it occupies the paracentral lobule, the upper third of the ascending frontal convolution, and the upper two thirds of the ascending parietal convolution.

C., limb-movement. The grey centres at and below the pons Varolii.

C., locomotion. (L. *locus*, a place; *motus*, motion. F. *centre de la locomotion*.) A centre situated either in the pons Varolii or cerebellum, and co-ordinating the muscles used in locomotion.

C., mastication. (L. *mastico*, to chew. F. *centre de la mâchoire inférieure*; G. *Centrum für Kaubewegungen*.) A centre believed to be situated in the medulla oblongata; the afferent and efferent nerves are the same as those connected with the suction centre. See *C., sucking*.

C., mimetic. (Μίμῃσις, imitation. F. *centre de la mimique et de l'expression faciale*.) A centre co-ordinating the muscles employed in facial expression. It is believed to be situated in the pons Varolii.

C. of action. The chief organ, or part, by which a process or procedure, whether of health or disease, is accomplished, or in which it originates.

C. of fluxion. (L. *fluxus*, a flow.) An old term for an irritated part or organ of the body, inasmuch as to it the fluids are attracted.

C. of gravity. (L. *gravitas*, weight. F. *centre de gravité*; G. *Schwerpunkt*.) That point in a body about which it will balance; or, in other words, through which the resultant of the lines of attraction between the earth and its several molecules passes.

C. of gravity of body. According to Weber, the centre of gravity of the male human body is at the level of the sacral promontory; according to Meyer, in the canal of the second sacral vertebra; according to Harless, at a distance of 414 parts from the vertex, if the measure of the whole body be taken at 1000. In females it is a little lower, in children a little higher.

C. of ossification. (L. *os*, a bone; *facio*, to make. F. *centre d'ossification*; G. *Ossificationspunkt*.) The point in each immature bone where deposit of bone salts first takes place.

C. of rotation of eye. (L. *roto*, to turn round. F. *centre de rotation de l'œil*.) The centre of rotation of the eye is a little behind the middle of the optic axis; in myopic eyes it is behind, and in hypermetropic eyes in front of, the normal centre.

C., olfactory. (L. *olfacio*, to smell at. F. *centre olfactif*; G. *Riechcenter*.) According to Ferrier, this centre is situated in conjunction with the gustatory centre at the summit of the temporo-sphenoidal lobe; according to Munk, it is situated in the hippocampus major.

C., optic. See *Optic centre*, and *C., visual*.

C., orbicularis palpebrarum. (L. *orbicularis*, circular; *palpebra*, an eyelid. G. *Centrum der Lidabschluss*.) A centre situated in the medulla oblongata. The afferent fibres are those of the fifth nerve, distributed to the cornea, conjunctiva, and lids. The efferent are contained in the facial, and supply the orbicularis palpebrarum muscle.

C., o'val. See *Centrum orale*.

C., parturition. (L. *parturio*, to bring forth. G. *das Centrum für den Gebärt*.) This

centre is situated in the spinal cord, opposite the first and second lumbar vertebra. The afferent fibres proceed from the uterus and uterine plexus, and the efferent fibres are contained in the same plexus.

C., phona'tion. (Φωνή, voice. F. *Centre de la phonation*.) The centre for the movements for articulate speech is to be found in the medulla oblongata, and some have located it specially in the olivary bodies. See *C., speech*.

C., pho'nic. (Φωνή, the voice. F. *centre phonique*.) The place whence sound is derived, whether it be in a person speaking, or a body emitting or producing sound.

C., phonocamp'tic. (Φωνή; κάμπτω, to bend.) The focus of reflected sounds; in other words, the spot where reflected sounds can be heard.

C., phren'ic. (Φρήν, the diaphragm.) The tendinous centre of the diaphragm.

C., pu'pil-la'ting. This centre is probably higher than the cilio spinal centre, and in the medulla oblongata.

C., recoil'. (F. *reculer*, to draw back. F. *centre de recul*.) A centre supposed by Lussana and Lemoigne to be situated in the cerebellum.

C., respira'tion. (L. *respiro*, to breathe again. G. *Athmungszentrum*.) A centre situated in the medulla oblongata on each side of the middle line, close to the posterior extremity of the floor of the fourth ventricle, and near the point of emergence of the vagus. Each centre consists of two parts, an inspiration and an expiration centre. The compound centre is automatic, continuing to act when all afferent nerves have been divided, and being then excited partly by the absence of oxygen and partly by the presence of carbonic acid gas in the blood. It may be excited to activity, and also inhibited, by reflex action.

C., salivary. (L. *saliva*, spittle. F. *centre salivaire*.) A centre in the floor of the fourth ventricle at the level of the origin of the facial nerve.

C., secre'tory. (L. *seerno*, to separate. F. *centre sécrétoire*.) Any nerve centre, the efferent fibres of which are distributed to a gland, and excite it to activity.

C., sneez'ing. (G. *Centrum des Niesens*.) A centre believed to be situated in the medulla oblongata. The afferent fibres are the branches of the first and second divisions of the fifth, and perhaps those of the olfactory. The efferent fibres are those of the olfactory nerve.

C., speech. (F. *centre du langage articulé*; G. *Sprachzentrum*.) A cortical centre situated in the region of the posterior extremity of the third left frontal convolution, where it abuts on the fissure of Sylvius, and overlaps the island of Reil. In some men it is localised in the right hemisphere of the brain. Its destruction produces aphasia.

C., spleen. A centre situated in the dog between the first and fourth cervical vertebra.

C., suck'ing. (L. *sugo*, to suck. F. *centre de la succion*; G. *Saugzentrum*.) A centre believed to be situated in the medulla oblongata. The afferent fibres are the sensory fibres supplying the lips and oral cavity derived from the fifth and glossopharyngeal nerves; the efferent fibres are contained in the facial, hypoglossus, and third division of the fifth, and the branches of the cervical plexus supplying the depressor of the lower jaw.

CENTRES.

C., sweet. (*F. centre odoripare. G. Schewienstrum.*) A centre situated in the medulla oblongata on each side of the middle line. It may be excited by curia, nicotin, and picrotoxin.

C., temperature-regulating. (*F. centre thermique.*) A centre situated in the medulla oblongata, probably identical with the vasomotor centre. Some locate the centre in the cerebrum, corresponding to the leg-and-arm-movement centres. It is excited by stimulation of sensory nerves.

C., tonâdious, of diaphragm. See *Diaphragm, central tendon of.*

C., upright ear-rings. (*F. centre de la station.*) The same as *C., erect posture.*

C., vas-o-dila'tor. (*L. vas, a vessel; dilator, an extender.*) A nerve centre, the efferent branches of which have the power of causing the walls of the vessels they supply to yield to the blood pressure, and become larger.

C., vas-o-mo'tor. (*L. vas, a vessel; motus, motion. F. centre vaso-moteur; G. Gefâssnervecentrum.*) A centre, the efferent fibres of which have the power of causing the vessels to contract. Many such centres are distributed through the whole length of the spinal axis, but the chief one is situated in the medulla oblongata. According to Orsjanikow, it is bilateral. Its lower limit on each side is a horizontal line, 4 or 5 mm. above the point of the calamus scriptorius, and the upper limit about 4 mm. higher up, that is, 1 or 2 mm. below the corpora quadrigemina. Dittmar confines it to a small prismatic space in the forward prolongation of the lateral columns, after they have given off their fibres to the descending pyramids. Stimulation, whether direct or reflex, of this centre increases blood pressure.

C., vesic-o-sph'nal. (*L. vesica, a bladder; spina, the spine. F. centre de la vessie; c. vesico-spinal; G. das centrum der Harnentleerung.*) The centre for the sphincter vesicæ is situated, in the dog, opposite the fifth, and in the rabbit, opposite the seventh, lumbar vertebra. The centre for the muscular tissue of the bladder generally, the detrusor urinæ, is placed a little higher in the cord. It is controlled by the brain.

C., vis'ion. (*L. visus, sight. F. centre visuel.*) According to Ferrier, the cortical centre for vision is in the gyrus angularis in the monkey, and in the parietal end of the second frontal convolution in the dog and cat; according to Luciani and Tamburini, it extends along the whole of the second frontal lobe in the latter animals, and in the monkey it includes, as well as the gyrus angularis, the neighbouring part of the occipital lobe. Munk places it a little further back than Ferrier. The few facts observed in man point to the anterior part of the occipital lobe.

C., vis'nal. (*L. video, to see.*) A centre described by Ferrier as situated in the angular gyrus. Destruction of this centre on one side causes complete, but temporary, blindness of the opposite eye. Destruction of it on both sides causes complete and persistent blindness of both eyes.

C., vom'iting. (*F. centre du vomissement; G. Centrum des Erbrechen.*) A centre situated in the medulla oblongata.

C., walk'ing. (*F. centre du déplacement.*) A centre believed to be situated in the pons Varolii.

Centron. See *Centre.*

C., cortical mo'tion. (*L. cortex, the rind; motus, a motion.*) Centres which, according to Ferrier, are situated in the convolutions which bound the fissure of Rolando in monkeys, and the stimulation of which gives rise to definite and constant movements of the hands, arms, legs, facial muscles, mouth, and tongue.

C., emo'tional. Little is known of the existence of such centres. Ferrier has suggested that in the occipital lobe is the centre of visceral sensations, and that in it is placed the centre for pleasurable or painful emotions.

C., gland'ular. The presence of centres of stimulation and inhibition of gland action is uncertain, although some isolated observations have been made.

C., inhib'iting. (*L. inhibeo, to restrain.*) A term applied to such parts of the nervous system as control, moderate, or arrest the movements or actions of other parts or organs.

C., intra-card'iac. (*L. intra, within; card'ia, the heart.*) Term applied to the ganglionic cells, connected together by nerve fibres, which are lodged in the muscular substance of the heart. In the frog, one, named Romak's ganglion, is situated in the wall of the sinus venosus, and another, named Bidder's ganglion, is situated in the auriculo-ventricular furrow.

C., mo'tor. (*L. motus, motion.*) The mass of grey nervous tissue at the roots of motor nerves.

C., mo'tor, cort'ical. The centres in the surface of the cerebral hemispheres for the movements of the different parts of the body.

C., nerv'ous. A term for the brain, spinal cord, and sympathetic ganglia.

C., ner'vous, of heart. A term applied to the cardiac ganglia and to the cardio-accelerating and cardio-inhibiting centres.

C. of arrest. Same as *C., inhibiting.*

C. of moderation. Same as *C., inhibiting.*

C., op'tic. (*Opticus, for sight.*) The *Corpora quadrigemina.*

C., psych'ical. (*Ψυχικός, belonging to the soul. F. centres psychiques.*) The intellectual activity has its centre, according to some, in the anterior part of the frontal lobes; according to others, there is no distinct centre, but the whole cerebral superficies is involved in the operations of the mind.

C., psychomo'tor. (*Ψυχή, spirit; L. movere, to move. F. centres psychomoteurs.*) Term applied to certain regions of the cortex of the brain, which are supposed to be the centres from which the mandates of the will for the performance of definite movements emanate. The co-ordination of the muscles required to perform the movements in question is effected by lower centres. The more important psychomotor centres are the centre of the muscles of the neck, and those for the extensors and adductors of the fore limb, for the flexors and rotators of the fore limb, for the muscles of the hind limb, the muscles of the face, the muscles of the tail, of retraction and extension of the fore limb, the elevation of the shoulder, and for the movements of the eyes, eyelids, and pupils.

C., sensibility, gen'eral. Ferrier locates in the region of the hippocampus major the centres of tactile and general sensibility. Munk believes that these centres extend over the whole cerebral convolutions, with the exception of the occipital

CENTRIC—CENTRUM.

and temporo-sphenoidal lobes; the surface he calls the *Sensitive sphere*.

C., vascular. (L. *vas*, a vessel. F. *centres vasculaires*.) The *Vaso-motor* and *Vaso-dilator centres*.

Centric. (L. *centrum*, a centre.) Of, or belonging to, a centre. Used in medicine chiefly in relation to nervous diseases, in order to express the origin of the disease in the central nervous system, as contradistinguished from the periphery.

Centrifugal. (L. *centrum*, the centre; *fugio*, to fly. F. *centrifuge*; I. *centrifugo*; G. *centrifugal*.) Flying, or receding, or tending to go away, from the centre.

C. current. A term applied to that arrangement of a battery, in galvanising an animal body, in which the positive pole is nearer to the centre, and the negative nearer the periphery, of the nervous system.

C. force. (F. *force centrifuge*; G. *Centrifugalkraft*.) That by which a body moving in a circular, or curvilinear, orbit strives to fall off from its motion in a tangent to the orbit.

C. inflorescence. A synonym of *Inflorescence, definite*.

C. nerve fibres. A synonym of motor nerve-fibres and vaso-motor fibres.

C. pressure. A term which has been used in relation to such conditions of disease as hydrothorax to indicate pressure which produces external bulging.

Centripetal. (L. *centrum*; *pelo*, to seek. F. *centripète*; I. *centripeto*; G. *centripetal*.) Tending to, or seeking, the centre.

C. current. A term applied to that arrangement of a battery, during galvanisation of an animal body, when the negative pole is nearer to the centre and the positive pole nearer to the periphery of the nervous system.

C. force. (F. *force centripète*; G. *Centripetalkraft*.) That by which a body moving round another tends to seek, or is impelled to, the centre.

C. inflorescence. The same as *Inflorescence, indefinite*.

C. nerve fibres. A synonym of afferent, excitator, or sensory fibres.

C. pressure. A term which has been used to express the pressure from disease, as that of aneurism on internal organs, towards the axis of the body.

Centrisperme. (Κέντρον, the centre from which a circle is described; σπέρμα, a seed. F. *centrispermé*.) Applied by Agardh to a Class of phanerocotyledonous, complete, hypogynous, polypetalous plants, which have their seeds fixed to the centre of their fruit, as the Caryophyllææ, Linææ, Oxalidææ, and Hypericinéæ.

Centrium. (Κέντρον, from κέντρον, to prick.) Old name for a certain plaster for stitch in the side; mentioned by Galen, de C. M. per Gen. i, 10.

Centrocataracta. (L. *centrum*, a centre; *cataract*. G. *Centralstaar*.) Central cataract.

Centrodontous. (Κέντρον, a sharp point; δόντις, a tooth.) Having sharp and subulated teeth.

Centrolepidææ. A synonym of *Desmisiacææ*.

Centrolobium. (L. *centrum*; *lobus*, a lobe.) A Genus of the Tribe *Dalbergiæ*, Nat. Order *Leguminosææ*.

C. robustum. (L. *robustus*, hard.) A species to which, according to Martius, the name *araroba* is given.

C. tomentosum. (L. *tomentum*, a stuffing.) Also called *araroba*.

Centromyrsinè. (Κέντρομυρσίνη.) The butcher's broom, *Ruscus aculeatus*.

Centrophygadopsoriasis. (Κέντρον, the centre from which a circle is described; φυγάς, a fugitive; *ψωρίασις*, a being mangy.) Psoriasis which spreads in all directions from a central point.

Centrosperma. (L. *centrum*, a centre; *sperma*, seed.) An Order of *Helobia*, including *Lemnaceææ* and *Naiadeææ*.

Also, a Group of *Dicotyledons*, including *Caryophyllinææ*, *Umbelliflorææ*, and *Saxifraginææ*.

Also, a Group of *Euleutheropetalææ*, having a superior ovary, with a single central ovule, or a central placenta, and seed containing endosperm. It includes *Polygoninææ* and *Caryophyllinææ*.

Centrostalic. (Κέντρον, the centre; σταλτικός, contracting.) Term applied by Dr. M. Hall, in his 'Diastaltic Nervous System,' to the action of the vis nervosa in the spinal centre.

Centrosteosclerosis. (L. *centrum*; *osteosclerosis*.) Central osteosclerosis, or a filling of the cavity of cylindrical bones with osseous substance.

Centrostomatous. (Κέντρον, a centre; στόμα, a mouth. F. *centrostome*; G. *centrummundig*.) Having the mouth perfectly central.

Centrosyphilolepis. (L. *centrum*; *syphilolepis*.) Central, ulcerating syphilolepis.

Centrum. (Κέντρον, the stationary point of a pair of compasses, from κέντρον, to prick or pierce. F. *centre*; G. *Mittelpunkt*.) The centre or fixed point round which a circle may be drawn; the middle point of a part.

Applied by Professor Owen to the body of a vertebra and its homologues.

The centre, residence, or foundation, of matter.

C. commune. (L. *communis*, common.)

A term for the solar plexus.

C. gravitatis. See *Centre of gravity*.

C. nervæum. (L. *nervus*, a tendon.) An old term for the tendinous portion in the middle of the diaphragm.

C. opticum. See *Optic centre*.

C. ovale. (L. *ovalis*, egg-shaped. F. *centre ovale*.) The large white mass of medullary substance displayed on removing both cerebral hemispheres, at the level of the corpus callosum.

C. ovale majus. (L. *major*, greater.) The *C. ovale*.

C. ovale minus. (L. *ovalis*; *minor*, less.) The *C. ovale of Vicq d'Azyr*.

C. ovale of Vicq d'Azyr. The white central mass of medullary substance displayed on section of one of the cerebral hemispheres.

C. ovale of Vieussens. Same as *C. ovale*.

C. ovi. (L. *ovum*, an egg.) The yolk of the egg.

C. phrenicum. (Φρήν, the midriff.) The same as *C. tendinosum diaphragmaticæ*.

C. semicirculare geminum. (L. *semicircularis*, a half circle; *geminus*, twin-born.) Name given by Vieussens to the small band of medullary substance in the brain, otherwise termed *Tenia semicircularis*.

C. semiovale of Vieussens. (L. *semi*,

CENTRY—CEPHALALGIA.

half; *ovalis*, egg-shaped.) Same as *C. ovale* of *Vieg. d'Asyr.*

C. tendinosum diaphragmatis. (*Ti-vos*, a tendon, *διαφραγμα*, a partition-wall.) The central tendon of the diaphragm. It is trilobate in form, the middle lobe being largest, the left the smallest. Near the posterior border of the right lobe is a quadrangular opening for the passage of the inferior vena cava.

C. vitale. (*L. vitalis*, belonging to life.) Same as *Vital point*.

Centry. The *Chirona angularis*.
Centum. (*L. centum*, a hundred.) A hundred.

C. capita. (*L. caput*, a head.) The *Eryngium cympestre*.

Centumodia. (*L. centum*; *nodus*, a knot.) The *Polygonum aviculare*, from its many nodes.

Centunculus. (*L. dim.* of *cento*, a coarse coverlet made of shreds and bits. *G. Kleinlung*.) A name for the Genus *Filago*, from its ragged appearance. Also, for *Gnaphalium*.

Century. (*L. centum*, a hundred. *F. circle*, *century*; *I. secolo*, *centuria*; *S. siglo*, *centuria*, *G. Jahrhundert*.) A period of a hundred years.

C. plant. The *Agave americana*, so called because of its supposed period of flowering, once in a hundred years.

Cenurus. See *Cenurus*.
Cepa. (Etymology doubtful; perhaps from *σπρος*, a garden. *F. oignon*, *G. Zwiebel*.) The onion. See *Allium cepa*.

C. ascalonica. (*L. ascalonium*, of Ascalon.) The shallot, *Allium ascalonicum*.

C. marina. (*L. marinus*, belonging to the sea.) The squill, *Scilla maritima*.

C. porci. (*L. porcus*, a pig.) The squill. (*Ruland*.)

C. scutilla. (*L. scutula*, cleft. *G. Schmitt-zweibel*.) The shallot, *Allium ascalonicum*, so called from its compound bulblets.

C. victorialis. A synonym of *Allium victoriale*.

C. vulgaris. (*L. vulgaris*, common.) The onion. *Allium cepa*.

Cepaceous. (*L. cepa*, an onion. *F. cepace*, *G. zwiebelnlich*.) Having the odour of the onion or of garlic, or the form of the onion.

Cepaea. (*κηραία*.) Name of a species of the Linn. Genus *Lidum*. Also, of the *Veronica beccabunga*.

Cepatelli. The *Boletus edulis*.

Cepeous. (*L. cepa*, an onion. *G. Zwiebelnlich*.) Having the characters of an onion.

Cephaelin. (*Cephaelis*.) A synonym of *Emetin*.

Cephaelis. Swartz. (*Κεφαλή*, the head; *αίμα*, to pack close.) A Genus of the Nat. Order *Cinchonaceae*.

C. emetica. Pers. The *Psychotria emetica*, Mutis.

C. specacuanha. A. Richard. (*Port. l.*, small, *pe*, on the roadside, *cau*, plant; *guene*, emetic. *F. Breckwurzel*, *I.* and *S. specacuanha*; *G. Breckwurzel*.) Hab. Brazil. The root is *Specacuanha*.

C. muscosa. Swartz. (*L. muscosus*, mossy.) An emetic species.

C. punicea. Willd. (*L. puniceus*, purple red.) An emetic species.

C. reniformis. The *Cephaelis* *reniformis*.

C. ruellifolia. (*L. ruellia*, the plant of that name, *folium*, a leaf.) A poisonous species, used to kill rats and mice.

Cephalacanthus. (*Κεφαλή*, the head; *ἀκανθα*, a spine.) Having spines on the head.

Cephalacanthus. (*Κεφαλή*, the head; *ἀκανθα*, a spine.) A larval form of a nematode worm.

C. monacanthus. (*Μόνος*, single; *ἀκανθα*.) Found in the gastric cavity of the *Tenebrio molitor*.

C. triacanthus. (*Τρίς*, three; *ἀκανθα*, a spine.) Found in the intestine of *Geotrupes stercorarius*.

Cephalæa. (*Κεφαλαία*, *F. céphalée*; *G. eingewurzelter Kopfschmerz*.) An inveterate kind of headache.

In Mason Good's classification, a Genus of the Class *Neurætica*, consisting of aching pain in the head, intolerance of light and sound, and difficulty of bending the mind to mental operations.

C. arthritica. (*Ἀρθριτικός*, gouty.) Gout in the head.

C. gravans. (*L. gravans*, part of *gravo*, to weigh down.) Stupid headache, pain obtuse, with a sense of heaviness extending over the whole head, sometimes intermittent.

C. hemisphaera. (*Ἡμισφαῖον*, an inseparable prefix meaning half; *σφαῖρον*, the skull.) Migraine. Pain vehement, confined to the forehead, or one side of the head, often periodical.

C. intensa. (*L. intensus*, violent.) Chronic headache. Pain vehement, with a sense of tension over the whole head, periodic, often chronic.

C. juvenum. (*L. juvenis*, a youth.) The headache that occurs about puberty.

C. nauseosa. (*L. nauseosus*, producing nausea.) Sick headache.

C. pulsatilis. (*L. pulsus*, to beat.) Throbbing headache. Pain pulsatory, chiefly at the temples, often with sleeplessness, and a sense of drumming in the ears.

C. spasmodica. (*Σπασμικός*, a convulsion, a spasm.) A synonym of migraine, or sick headache, when characterised by spasmodic pain, as described by Dr Fothergill.

Cephalæmatocela. See *Cephalæmatocela*.

Cephalæmatoma. See *Cephalæmatoma*.

Cephalæmia. (*Κεφαλή*, the head, *αἷμα*, blood. *F. cephalæmie*, *G. blutüberfüllung des Kopfes*.) Hyperæmia, or fullness of blood in the head.

Cephalagogue. (*Κεφαλή*, the head, *ἀγω*, to lead. *F. cephalagogus*, *G. Geburtszange*, *Kopfschmerz*.) Name for the force used in extracting the head of the child in difficult labour.

Cephalagra. (*Κεφαλή*, the head, *ἀγρα*, a seizure. *F. cephalagra*, *G. Schwindel*.) A seizure of the head, or a fainting fit.

Cephalagraphia. (*Κεφαλή*, the head, *γράφω*, to write. *A. cephalographia*.) A disease of the head.

Cephalalgia. (*Κεφαλή*, the head, *ἀλγία*, pain. *F. cephalalgia*, *G. Kopfschmerz*.) Headache.

CEPHALICA—CEPHALOLOXIA.

muscles, and lies upon branches of the internal cutaneous nerve.

C. version. See *Version*, *cephalic*.

Cephalica. (Κεφαλικά. *F. cephaliques*; *G. Kopfstärkende Mittel, Hauptmittel.*) Remedies which are used against nervous headaches and similar affections; in general they are antispasmodics. Some restrict the term to remedies which act through the sense of smell.

C. pollicis. (*L. pollex*, the thumb.) The radial-cutaneous vein.

C. vena. See *Cephalic vein*.

Cephalici. (Κεφαλί, the head.) Diseases of the brain.

Cephalidia. (Κεφαλίδιον, a little head.) Applied to a series of animals, without vertebrae, which have a small head, or of which the part so called bears improperly that denomination.

Cephalidium. (Same etymon.) A small head; applied to those of bones.

Cephalinē. (Κεφαλήνη.) An old name for that part of the tongue nearest the fauces, the head or root of the tongue, where the sense of taste is most perfect. (*Gortzeus.*)

Cephalitis. (Κεφαλή. *G. Gehirnentzündung.*) A term used for inflammation of the brain and its membranes, or all inflammatory conditions of the central nervous system.

Cephalium. (Κεφαλή. *G. Kopfschen.*) The head of a small bone.

Cephalobranchia'ta. (Κεφαλή; βράγχια, the gills.) An Order of the Class *Annelida*. Worm-like marine animals, generally possessing an external protecting tube; branchia nearly always present, filamentous, attached to, or near the head.

Cephalocathartic. (Κεφαλή; καθαρτικός, purgative. *F. cephalocathartique*; *G. kopfpurgierend, hauptreinigend.*) Purging the head; applied to medicines supposed to possess this quality.

Cephalocele. (Κεφαλή; κήλη, a tumour.) Same as *Cephalocephalocele*.

Also, a synonym of hernia of the brain, or *Encephalocele*.

Cephalocentesis. (Κεφαλή; κέντησις, a pricking. *F. cephalocentese*; *G. das Anstechen des Kopfs.*) Puncture of the head, especially for hydrocephalus.

Cephalocholosis. (Κεφαλή; χόλος, bile. *F. cephalocholose*; *G. ein Gallenleiden des Hirns.*) An old term, said to mean bilious disorder of the brain.

Cephalochorda. (Κεφαλή; χορδή, a chord.) A term by Lankester for the Division *Acrania* of Haeckel; so named because the notochord extends to the anterior extremity of the head.

Cephalocotyleum. (Κεφαλή, the head; κοτύλη, a cup.) A sexually mature parasitic cestoid worm, species of which are found in the stomach, intestine, or abdominal cavity of *Columbus septentrionalis*, *Cypselus affinis*, *Delphinus delphis*, *Muraena conger*, *Myxales moschata*, and *Pleuronectes solea*, of various species of Rays and Sharks, and in the Torpedo and Trigla.

Cephalocysts. (Κεφαλή; κύστις, a bladder.) An old name for *Cestoda*. (Littre and Robin.)

Cephalodea. (Κεφαλή; είδος, likeness.) An Order of *Spermatozoa*, according to Czermak, consisting of round, orbicular, or oval spheres, without any trace of a tail; such are the spermatozoa of fishes, and many Annelids.

Cephalodesmium. (Κεφαλή; δεισμός,

a band. *F. cephalodesmium*; *G. Kopfbinde.*) Name of a bandage for the head.

Cephalodia. (Κεφαλή, head; ίδος, form. *F. cephalodie*; *G. Kopfschen.*) Special organs found constantly in many gonidic lichens, either in the form of small scattered protuberances on the thallus, or of small masses concealed in the interior of the thallus. Their form differs with each species, and, speaking generally, their anatomical structure resembles that of a gonimic thallus, with the aspect of small parasitic sterile lichens, like *Pannaria* in miniature. They are divided into *Cephalodia epigyna*, *C. hypogyna*, and *C. rudogyna*, according to their position. Their function is unknown.

Cephalodine. (Κεφαλή, head.) Forming a head.

Cephaloductor. (Κεφαλή; *L. ductor*, a drawer.) Same as *Cephalagogue*.

Cephalodymia. (Κεφαλή; δύμι, to enter.) The condition of double monstrosity, in which the heads are united.

Cephalodyn'ia. (Κεφαλή; δόνη, pain.) Same as *Cephalalgia*.

Cephaloedema. (Κεφαλή; οίδημα, a swelling. *F. cephaloedeme*; *G. die oedematöse Kopfschwellung.*) Edema of the head.

Cephalogenesis. (Κεφαλή; γένεσις, generation. *F. cephalogenie*; *G. Kopfbildung.*) The formation of the head.

Cephalograph. (Κεφαλή; γράφω, to write.) An instrument by which the contour of the head may be reproduced on paper.

Cephalography. (Κεφαλή; γράφω, to write.) A description of the head.

Cephalohæmato'ma. The same as *Cephalohæmatoma*.

Cephalohæmia. The same as *Cephaloemia*.

Cephalohæmom'eter. (Κεφαλή; έιμα, blood; μέτρον, a measure.) An instrument for determining variations in the amount of intracranial pressure, devised by Dr. Hammond. It consists of a brass or iron nickel-plated tube, which is inserted into a round hole, made by a trephine, in the skull of an animal. Into the upper end of this tube is screwed another brass or iron tube, the lower opening of which is closed by thin sheet india rubber, and the upper opening by a brass cap, into which is fastened a glass tube. This inner arrangement contains coloured water, and to the glass tube a scale is affixed. The second tube is screwed into the first till the thin india rubber presses upon the dura mater, and the level of the coloured water stands at 0°, which is in the middle of the scale. When the quantity of blood in the brain increases, the liquid rises, when it diminishes, it falls.

Cephalohumeral'is. (Κεφαλή; *L. humerus*, the arm.) The analogue in the horse of the cleido-mastoid part of the sterno-cleido-mastoid muscle of man, which, in the absence of a clavicle, is inserted into the humerus.

Cephaloid. (Κεφαλή; είδος, likeness. *F. cephaloide*; *G. kopfsähnlich, kopfsartig.*) Resembling the head.

Also, a synonym of *Encephaloid*.

Also, in Botany, having the appearance of a *Capitulum*.

Cephalology. (Κεφαλή; λόγος, a discourse. *F. cephalologie*; *G. die Lehre vom Kopfe.*) A treatise on the head.

Cephalolox'ia. (Κεφαλή; λοξύς, slanting.) Wry neck.

CEPHALOMA—CEPHALOT.

Cephalo'ma. (Κεφαλή.) A synonym of *Encephaloid*.

Cephalom'elus. (Κεφαλή; μέλος, a limb.) A monster having one or more limbs attached to the head.

Cephalome'nia. (Κεφαλή; μήν, a month.) Aberration of the catamenia to the head.

Cephalomening'itis. (Κεφαλή; μήνιγξ, a membrane.) Inflammation of the membranes of the brain.

Cephalom'eter. (Κεφαλή, the head; μέτρον, a measure. *F. céphalomètre*; *G. Kopfmesser*.) An instrument formerly used for ascertaining the size of the fetal head during parturition.

Also, an instrument used in the measurement of the different angles of the skull. It consists of a circle of copper, which can be fixed horizontally round the head, and a semicircular arm, which moves on it.

Cephalomy'i'tis. (Κεφαλή; μύς, a muscle. *F. céphalomyite*; *G. Entzündung der Kopfmuskeln*.) Inflammation of the muscles of the head.

Cephalomyodyn'ia. (Κεφαλή; μύς; δόνη, pain. *F. céphalomyodynîe*; *G. Kopfmuskelschmerz*.) Pain in the muscles of the head.

Cephalo'nia. (Κεφαλή.) Increase of size of the head with hypertrophy of the brain.

Cephalon'osia. (Κεφαλή, the head; νόσος, a disease. *F. cephalonose*; *G. Kopfkrankheit*.) A name for cephalic fever, or fever in which the brain is particularly involved. Applied by some to the *Febris hungarica*, according to Joh. Conrad Rhumel, in *Prophylaxis epidemica*.

Cephalo-orb'ital. (Κεφαλή; *L. orbita*, an orbit.) Relating to the cavity of the skull and the orbits.

C. in'dex. (*L. index*, a discoverer.) The relation of the cubic capacity of both orbits as compared with that of the skull, about 27 to 100; the extremes, according to Mantegazza, being 22·7 and 36·5.

Cephalopa'ges. (Κεφαλή; πήγνυμι, to make fast.) A double monstrosity, united only by some part of the head.

Cephalopag'otome. (Κεφαλή, the head; πάγη, a thing that holds fast; τέμνω, to cut.) An instrument intended to subvert the double purpose of dividing the head and exerting traction upon it in difficult labour.

Cephalopharynge'al. (Κεφαλή; φάρυγξ, the pharynx.) Relating to the head and pharynx.

C. aponeuro'sis. The *Pharyngeal aponeurosis*.

Cephalo-pharyn'geus. (Κεφαλή; φάρυγξ, the pharynx.) A name for the *Constrictor pharyngis superior* muscle.

Also, an occasional muscle which arises from the vaginal process of the temporal bone, or the angle of the petrous bone, or the spine of the sphenoid, and loses itself in the inferior constrictor of the pharynx; it is separated from the stylopharyngeus by the glossopharyngeal nerve, and by some is described as a part of this muscle.

Cephaloph'ora. (Κεφαλή; φέρω, to bear.) Applied to a Class of the *Mollusca*, having the head distinct from the rest of the body.

Cephaloph'orum. (Same etymon. *F. céphalophore*; *G. Kopfträger*.) Name by Nees

von Esenbeck for the base or pedicle of ventricose and filiform mushrooms.

Cephalophrag'ma. (Κεφαλή; φράγμα, a fence.) A name by Kirby for the partition which, in insects, divides interiorly the head into two chambers, the anterior and posterior.

Cephalophy'ma. (Κεφαλή; φῦμα, a tumour. *F. céphalophyme*; *G. Kopfgeschwulst*.) Swelling, or tumour, of the head, especially a *Cephalhæmatoma*.

Cephalop'oda. (Κεφαλή, the head; πούς, a foot. *F. céphalopodes*; *G. Kopffüssler*.) A class of the Subkingdom *Mollusca*. Free oceanic dioecious molluscs with a distinct head, large eyes, two long beak-like jaws, a corona of long arms round the mouth, a foot which forms a funnel, and a sacciform body.

Cephalopon'ia. (Κεφαλή, the head; πόνος, pain. *F. céphaloponie*; *G. Kopfleid*.) A term for a heavy pain in the head. The same as *Cephalalgia*, according to Forestus.

Cephalopsy'cter. (Κεφαλή; ψυκτήρ, a wine-cooler. *F. céphalopsycère*; *G. Kopfkälter*.) A refrigerator of the head.

Cephalopt'erosus. (Κεφαλή; πτέρον, a wing. *F. céphaloptère*; *G. kopfgeflügel*.) Having a winged or feathered head.

Cephalopy'o'sis. (Κεφαλή; πύωσις, suppuration. *F. céphalopyose*; *G. Kopfseiterung*.) Abscess in the head.

Cephalorhachid'ian. (Κεφαλή; ράχις, the spine.) Belonging to the head and the spine.

C. en'velopes. Same as *C. membranes*.

C. in'id. The cerebro-spinal fluid.

C. membranes. The dura mater, arachnoid, and pia mater.

Cephalorrheu'ma. (Κεφαλή; ρεύμα. *F. céphalorrhume*; *G. Kopfrheumatismus*.) Rheumatic affection of the head.

Cephalorrh'izous. (Κεφαλή; ῥίζα, a root.) Having knotted head-shaped roots.

Cephalose'i'sis. (Κεφαλή; σεισις, a shaking. *F. céphaloseisis*; *G. Erschütterung des Kopfes*.) Shaking of the head.

Cephalosomatody'mia. (Κεφαλή; σῶμα, a body; δύω, to enter.) A double monstrosity, in which the heads and trunks are united to each other.

Cephaloso'matous. (Κεφαλή; σῶμα, a body. *F. céphalosome*; *G. kopfskörperig*.) Having the body large anteriorly, and the head voluminous.

Cephalosp'inal. (Κεφαλή; *L. spina*, the spine.) Belonging to the head and the spine.

C. in'id. Same as *Cerebrospinal fluid*.

C. in'dex. (*L. index*, a discoverer.) The numerical proportion between the area of the occipital foramen and the capacity of the cranium.

Cephalostat. (Κεφαλή; στατός, standing.) A head rest; an instrument for fixing the head during an operation.

Cephalos'tegite. (Κεφαλή; στέγω, to cover closely.) A term applied to the anterior division of the large calcified dorsal shield of *Podophthalmia*.

Cephalostyle. (Κεφαλή; στύλος, a pencil.) The bony sheath of the notochord of the embryo of vertebrates.

Cephalot. (Κεφαλή, the head.) Name given to a distinct fat supposed to exist in the brain, and to contain phosphorus and sulphur.

CEPHALOTRYP—CERA.

It is believed to be a mixture of cerebrates of sodium and potassium, with olein and oleo-phosphoric acid.

Cephalotom. A Nat. Order allied to the *Ranunculaceae*, constructed for the purpose of incising the single genus *Cephalotom*.

Cephalotom. (*Κεφαλοτόμος*, having a head.) Having a large head.

Cephalotheca. (*Κεφαλή*; *θήκη*, a box or chest. *F. cephalotheca*; *G. Kopfkasten*.) Name by Kirby for the anterior extremity of the chrysalis which covers and protects the head.

Cephalothia'sia. (*Κεφαλή*; *θλάση*, to crush.) A synonym of *Cephalotripsy*.

Cephalothlast. (Same etymon.) A synonym of the *Cephalotribe*.

Cephalothlibe. (*Κεφαλή*, the head; *θλίβω*, to compress. *F. cephalothlibe*; *G. Kopf-schmalzer*.) A crusher of the head. Same as *Cephalotribe*.

Cephalothoracoosternomenos. (*Κεφαλή*; *θώραξ*, the chest; *στέρνισ*, to deprive.) A monstrosity having neither head nor thorax.

Cephalothorax. (*Κεφαλή*; *θώραξ*, the chest. *F. cephalothorax*.) The anterior division of the body, in certain Arachnida and Crustacea, which consists of the coalesced head and thorax.

Cephalotome. (*Κεφαλή*, the head; *τομή*, section, from *τομή*, to cut.) An instrument for cutting or breaking down the head of the fetus in the operation of embryotomy. See *Cephalotribe*.

Cephalotomia. (*Κεφαλή*; *τομή*, a cutting, from *τομή*, to cut. *F. cephalotomia*.) The dissection of the head.

Also (*G. Kopfzerlegung*), the excerebration of the fetus to reduce its size in difficult labour.

C., internal. A synonym of *Sphenotripsy*.

Cephalotractor. (*Κεφαλή*; *L. trahere*, to draw.) A term for midwifery forceps.

Cephalotribe. (*Κεφαλή*, the head; *τριβω*, to break down.) An instrument, originally invented by Baudelouque, consisting of a forceps, with solid blades and a powerful screw, by which they are brought together forcibly so as to crush anything that is between them. It is used for the purpose of breaking down the fetal skull in the operation of cephalotripsy. The head having been perforated, the blades are applied to the base of the skull, and pressure made by turning the screw; by this means the bones are broken up, and delivery may be effected by using the instrument as an extractor. A second crushing in an opposite direction may be necessary. Its advantages are said to be that it crushes the base of the skull, and that crushing it within the integument the sharp fragments of the broken bones remain covered, and do not in the delivery lacerate the vaginal walls.

Cephalotridymus. (*Κεφαλή*; *τρι-δυμος*, threefold.) A monster with three heads.

Cephalotripsy. (*Κεφαλή*; *τριβω*.) The operation of breaking down the fetal head by means of the *Cephalotribe*, when the pelvis is so distorted as to prevent delivery. Dr. Barnes is of opinion that this operation is quite practicable with a pelvis measuring an inch and a half in conjugate diameter.

Cephalotrotus. (*Κεφαλή*, the head; *τροπή*, to wound.) Wounded in the head. A term anciently used.

Cephalotrypsia. (*Κεφαλή*; *τριβω*.)

one, a boring.) The operation of trephining the skull.

Cephalotryp'tor. (*Κεφαλή*; *τροπή*, to bore.) An instrument for perforating the skull.

Cephalozo'a. (*Κεφαλή*; *ζωον*, an animal. *F. cephalozoon*; *G. Kopfbier*.) Applied to animals having a distinctly apparent head.

Cephalotrus. (*Κεφαλή*, the head; *τροπή*, to draw. *F. cephalotrus*; *G. Kopfschaber*.) An instrument for extracting the head of the fetus in labour, such as the whalebone fillet.

Cephaluroidea. (*Κεφαλή*; *οὐρά*, the tail; *ειδω*, likeness. *F. cephaluroidea*.) The third Order of *Spermatozoa*, according to Cuvier, being those which have a spherical or head-shaped extremity, with a fine tail-like appendage; they are found in all mammals, and most insects.

Cepitum. (Dim. of *L. cepa*, an onion.) A small bulb.

Cepinl. Old name for vinegar. (Quincy.)

Cepophagus. (*Κεφαλή*; *φαγω*, to eat.) A Genus of the Order *Aceridae*.

C. echinops. Ch. Robin. (*Εχίνος*, a hedgehog; *ψω*, a foot. *F. cepophagus echinops*.) An scarus found on lilaceous bulbs, on potatoes, on dry flowers, and other dead vegetable matter.

Cepula. Old term for large myrobala.

(Quincy.)

Cepulla. (Dim. of *L. cepa*, an onion.) The garlic, *Allium sativum*.

Cera. (*Κερί*, wax. *L. cera*; *F. cire*; *L. cera*; *G. Wachs*.) Wax, a solid, somewhat unctuous, tenacious substance, obtained from the honeycomb of the bee, *Apis mellifica*. It is secreted by glands on the sides of the ventral rings of the insect. See *Wax*.

Also, same as *Cere*.

C. alba. (*L. albus*, white. *F. cire blanche*; *G. weisses Wachs*.) White wax. The pharmacopoeial name of yellow beeswax, bleached by exposure to moisture, air, and light.

C. arboræa. (*L. arboræus*, pertaining to a tree. *G. Baumwachs*.) A synonym of *Ceratum resinae*.

Also, a synonym of vegetable wax.

C. carbolica. One part of carbolic acid melted with ten of yellow wax. Used for the impregnation of silk ligatures, or of lint and other materials, for the dressing of wounds.

C. chinensis. (*China*.) See *Wax, Chinese*.

C. citrina. (*L. citrus*, the citron tree.) Same as *C. flora*.

C. flava. (*L. flavus*, yellow. *F. cire jaune*; *G. gelbes Wachs*.) The prepared honeycomb of the hive bee, *Apis mellifica*. It is obtained by draining off the honey from the comb, which is then expressed, melted in water, allowed to subside, and then run into moulds. It is a yellowish solid, with a slight lustre, a peculiar aromatic odour, and a granular fracture. Its sp. gr. is about .955; it fuses at 62° C. to 53° C. (143.6° F. to 145.4° F.) It is insoluble in water and cold alcohol, soluble in oil of turpentine. It contains cerin, cerolein, myricin, aromatic and odourless matters. It is used externally as a protective, and internally in diarrhoea. It enters into the composition of many plasters and ointments.

C. japonica. See *Wax, Japanese*.

C. myrica. Myrtle wax from the *Myrica cerifera*.

CERACEOUS—CERASUS.

C. pal'mæ. (L. *palma*, a palm.) Same as *Carnauba*.

C. vegetab'ilis. See *Wax, vegetable*.

C. vir'idis. (L. *viridis*, green.) The *Ceratium eruginis*, or *Emplastrum eruginis*.

Cera'ceous. (L. *cera*. F. *ceracé*; G. *wachsartig*.) Of the consistence or appearance of wax.

Cerad'ia. A Genus of the Nat. Order *Compositæ*.

C. furca'ta. (L. *furcatus*, forked.) One of the species said to supply African bdellium.

Ceræ's. (Κερατῆς, from *keras*, a horn.) Old term for the cornua or horns of the uterus, according to Gorræus and Lindennus.

Cerain. (L. *cera*, wax.) Name given to a body, the oxide of a radicle, which acts the part of base in beeswax.

Ceramia'ceæ. Rose tangles. An Order of Lindley's Alliance *Algae*, being cellular or tubular unsymmetrical bodies, multiplied by tetraspores.

Ceram'icæ. (Κεραμῖς, to form or make of earth.) Old term for potter's clay or argil.

Ceramid'ium. (Κεραμίδιον, dim. of *κεραμῖς*, a roof-tile; or of *κεράμιον*, a jar.) A term applied to the pear-shaped capsule of some Algæ, which has a terminal opening and a tuft of spores springing from the base.

Ceram'itis. Same as *Ceramicæ*.

Ceram'ium. Name of a Greek measure of nine gallons.

Also (Gr. *κεράμιον*, a jar), a Genus of the Family *Ceramiaceæ*, Order *Florideæ*, Class *Carposporeæ*, so called from its pear-shaped capsules.

C. helminthochortus. (Ελμινθ, a worm; χορτος, grass, fodder.) The *Aloidium helminthochorton*.

C. rubrum. Ag. (L. *ruber*, red.) A species often found mixed with Carrageen moss, *Chondrus crispus*.

Ceramur'ia. (Κεραμῖς, potter's earth; οὐρον, urine.) A term given to the condition in which there is a deposit of phosphates in the urine.

Ceran'ites. (Κεραυνίτις, to mix.) Old name for a pastil or troche, made of iris, birthwort, orpiment, alum, galls, &c., said to have been of extensive uses. Galen, de *C. M. per Gen.* v, 12.

Ceranoid. (Κεράς; εἶδος, likeness.) Having branches arranged like horns.

Ceranthemus. (Κηρός, wax; άνθεμον, a flower.) A synonym of *Propolis*.

Ceras. (Κεράς, a horn; from its shape.) A name for the wild parsnip.

Also, a term for a horn.

Also, a term for the cornea.

Cerasa. (L. pl. of *cerasum*, a cherry.) Cherries, the fruit of *Prunus cerasus* and other species.

C. anglica. The fruit of *Prunus cerasus*.

C. nigra. (L. *niger*, black.) Black cherries, the fruit of *Prunus avium*.

Cerasia'tum. (L. *cerasium*, from *cerasum*, a cherry.) Old name for a purging medicine of which cherries formed an ingredient, according to Libavius, *Synt. Arc. Ch.* viii, 12.

Cerasin. (*Prunus cerasus*, the common cherry tree; because found in the gum which exudes from it.) A term applied to certain gummy substances which are soluble in boiling water, and swell, but do not readily dissolve in cold water, of which gum tragacanth is an example; also named *Adraganthin* and *Prunin*.

Cera'sios. (Κεράσιον, a cherry.) Old name for an ointment. There was a greater and a lesser *cerasios*, according to Mesuen, in *Oper. fol.* 159.

Ceras'ium. (Κεράσιον.) A cherry.

Also, cherry-tree gum.

Ceras'ma. (Κέρασμα, a mixture.) A mixture of hot and cold water. (Dunglison.)

Ceraspho'rium. (Κεράς, a horn; φέρω, to bear.) Applied by Illiger to a short apophysis of the frontal bone in certain mammals, which bears a solid horn at the extremity.

Ceras'tes. (Κεράστης, horned.) A Genus of the Family *Viperidæ*, Suborder *Solenoglypha*, Order *Ophidia*. Poisonous snakes.

C. ægypti'acus. Duméril. The horned viper of Egypt. It is of nocturnal habits, and its bite is very dangerous.

C. lophophrys. Cuv. (Δόφος, a crest; όφρυς, the eyebrow.) A poisonous species inhabiting South Africa.

C. persicus. Duméril. The Persian horned viper. Poisonous.

Cerast'ium. (Κεράς, horn. G. *Hornkraut*.) A Genus of the Nat. Order *Caryophyllaceæ*.

C. aquat'icum. Linn. The *Stellaria aquatica*.

C. arven'se. Linn. (L. *arvense*, a field.) An antiscorbatic.

C. triviale. Link. (L. *triviale*, belonging to the cross roads, common.) An antiscorbatic.

C. visco'sum. Linn. (L. *viscosus*, sticky.) The *C. triviale*.

Cerasum. (Κεράσιον. F. *cérise*; G. *Kirsche*.) A cherry.

Also, a cherry tree.

Cerasus. (L. *cerasus*, so called because brought to Rome by Lucullus, from Cerasus, a city in Pontus, where it greatly abounded. F. *cérinier*; G. *Kirschbaum*.) The cherry tree. See *Prunus cerasus*.

C. acida. Gärt. (L. *acidus*, sour. F. *griottier*.) The *Prunus cerasus*.

C. as'pera. The *Prunus aspera*.

C. a'vium. The *Prunus avium*.

C. capol'lin. De Cand. Hab. Mexico. Bark used as a febrifuge.

C. capric'ida. (L. *caper*, a goat; *cædo*, to kill.) The *C. undulata*.

C. caprom'ia. De Cand. (F. *griottier*.) The official name, Fr. Codex, of the morello cherry.

C. dulcis. Gärt. (L. *dulcis*, sweet. F. *merisier*.) The *Prunus avium*.

C. durac'ina. De Cand. (L. *duracinus*, firm. F. *bigarreaudier*.) The common cherry, *Prunus cerasus*, var.

C. hortens'is. (L. *hortensis*, belonging to a garden.) The cultivated varieties of *Prunus cerasus*.

C. jamaicen'sis. The *Malpighia glabra*.

C. julia'na. (F. *guignier*.) A cultivated variety of *Prunus cerasus*.

C. laurocer'asus. Loiseleur. The *Prunus laurocerasus*.

C. pa'dus. The *Prunus padus*.

C. racem'osus sylves'tris. (L. *racemosus*, full of clusters; *sylvestris*, belonging to a wood.) The *Prunus padus*.

C. ru'bra. (L. *ruber*, red.) The *Prunus cerasus*.

C. sero'tina. Ehrh. (L. *serotinus*, late, ripe.) The *Prunus virginiana*.

CERATE—CERATOÏDES.

C. undulata, Ser. (*L. undulatus*, wavy.) Hab. India. Leaves and fruit said to be poisonous.

C. virginiana, Mich. The *Prunus virginiana*.

C. vulgaris. (*L. vulgaris*, common.) The *Prunus cerasus*.

Cerate. See *Ceratum*.

C., Melville's. The *Unguentum hydragryi ozidi rubri*.

C., blistering. The *Unguentum*, and also the *Emplastrum, oeniharidis*.

C., Goulard's. The *Unguentum plumbi subacetatis compositum*.

C., Eufeland's. Simple cerate 16 parts, oxide of zinc and lycopodium powder, of each 1 part. Used in ulceration of the eyelids.

C. of lard. The *Ceratum*, U.S. Ph.

C. of lead. The *Unguentum plumbi subacetatis compositum*.

C., Turner's. The *Ceratum zinci carbonatis*.

Ceratotomy. (*Kίpas*, a horn; *ικτομή*, a cutting out. *F. cératotomie*; *G. Hornhautschnitt*.) Term for a section of the cornea.

Cerated. (*L. cera*.) Covered, or infiltrated, with wax.

Cerathæce. (*Kίpas*, a horn; *θήκη*, a chest or box. *F. céraihèque*; *G. Hornkasten*.) Name for that part of the chrysalis which lodges the antennæ.

Ceratia. (*Kίparia*.) A name given to the *Ceratonia siliqua*, and several other plants.

Ceratiæsis. See *Ceratiæsis*.

Ceraticthyosis. (*Kίpas*, a horn; *ichthyosis*. *F. cératichthyosis*; *G. Fischechuppenausschlag der Hornhaut*.) Ichthyosis of the cornea.

Ceratin. See *Keratin*.

Ceration. (*Κηρός*, wax.) Alechemical term for the act of covering anything with wax, or of softening a hard substance or juice not capable of being liquefied; also, the fixation of mercury.

Ceratitis. (*Kίpas*, horn.) Inflammation of the cornea. Same as *Corneitis*.

C., dotted. A synonym of *Aquocapsulitis*.

C. punctata. (*L. punctatus*, part. of *pungo*, to prick, or dot.) A synonym of *Aquocapsulitis*.

C. suppurans. (*L. suppurare*, to suppurate.) Same as *Corneitis, suppurative*.

Ceratum. The same as *Ceratia*.

Also, an ancient weight of four grains.

Also, a term for a siliquiform multiovular capsule, having two placentæ, which are alternate with the lobes of the stigma, such as that of *Corydalis*.

Cerato-. (*Kίpas*, a horn.) This word, used as a prefix in compound names, as of muscles, denotes connection with, or relation to, a cornu, as of the hyoid bone, or to the cornea.

Ceratobranchia. (*Kίpas*, a horn; *βράγχια*, the gills.) A Subsection of nudibranchiate Gastropoda, having cylindrical, fusiform, or club-shaped branchiæ.

Ceratobranchial. (Same etymon.) One of the main portions of ossified or permanent branchial cartilage in fishes and Amphibia. Where there are only two segments, as in Urodeles, the lowest is the ceratobranchial, the upper being the epibranchial; but, in fishes, there are four segments, the uppermost being the

pharyngobranchial, and the lowermost the hypobranchial, which last thus intervenes between the ceratobranchial and the median single element, or basibranchial. This part is fibrous in man, the little cornu minor being the hypophyal.

Ceratocœle. (*Kίpas*, a horn; *κῆλη*, a tumour. *F. cératocèle*; *G. Hornhautbruch*.) A hernia of the cornea of the eye, consisting in the protrusion of the posterior elastic lamina, and often of some of the deeper layers of the cornea, by the pressure of the aqueous humour, at some point where the outer corneal layers are destroyed by ulceration.

Ceratocœl'cold muscle. See *Keratocœl'cold muscle*.

Ceratode. (*Kίpas*.) The horny substance of sponges.

Ceratoderm'itis. See *Keratoderm'itis*.

Ceratodeocœle. (*Kίparocœle*, like horn, and so the cornea; *κῆλη*, a tumour.) Same as *Ceratocœle*.

Ceratodeconyx'is. Same as *Keratonyxis*.

Ceratoderm'ia. (*Kίpas*; *δέρμα*, the skin.) De Blainville's term for *Echinodermata*.

Ceratodes. (*Kίparocœl'is*, horn-like. *F. cératous*; *G. hornartig*.) Having, or pertaining to, horn.

C. membr'na. The cornea.

Ceratogen'esis. (*Kίpas*, horn; *γένεσις*, generation. *F. cératogénésie*; *G. Hornbildung*.) The formation of horn, or of a *Keratoma*.

Ceratoglob'us. See *Keratoglob'us*.

Ceratogloss'us. (*Kίpas*, a horn; *γλῶσσα*, the tongue. *I. cerato-glossa*.) A name given to that part of the hyoglossus muscle which arises from the cornu of the hyoid bone.

Ceratohyal. (*Kίpas*, a horn; *hýoides*, hyoid.) The part of the hyoid arch in mammals below the styloid process. The lesser cornu or corniculum of the hyoid bone in man is, properly speaking, only the hypophyal segment. In man it is merely a short conical process arising from the upper surface of the hyoid at its junction with the thyrohyal, to which it is attached by a synovial sac and sometimes by bone; it gives attachment to the stylohyoid ligaments.

Occasionally, as in some apes, the ceratohyal is absent; in other animals, as the dog, it is very long, and divided into three segments, the ceratohyal proper at the base, the epihyal and the stylohyal at the apex.

It is the distal portion of the hyoid arch on each side, which is primarily divided into two, the upper segment being the epihyal. Each of these may again subdivide. In Teleostei, in which the hyoid is at its greatest development, the ceratohyal is the infero-internal bar, which carries the branchiostegals; it is ossified by two centres. It is attached above to the synchondrosis between the hyomandibular and symplectic bones, by a separate interhyal bone; below it and the basal piece (glossohyal) is a short cartilage, the hypophyal, ossified also by two centres.

Ceratohyolde'us. (*Kίpas*, horn; *hýoides*, hyoid. *I. cerato-hýoideo*.) A small fasciculus of muscular fibres, extending from the styloid bone to the upper border of the thyroid cartnu found in Solipedes and in fishes. It connects the hyoidæan and the branchial arches; sometimes there is an external and an internal muscle.

Ceratol'des. (*Kίpas*, a horn; *ἰδος*, like-

CERATOLEUCOMA—CERATUM.

ness) Resembling a horn; horn-like. A term for the cornea.

Ceratoleuco'ma. Same as *Leucoma*.

Cerato'ma. See *Keratomy*.

Ceratomala'cia. (Κίρας; μαλακία, softness. *F. ceratomalacie*; *G. Erweichung der Hornhaut*.) Softening of the cornea, the result of inflammation, or of innutrition.

Ceratomalag'ma. (Κηρός, wax; μάλαγμα, a poultice. *G. Wachsöl*.) Old term (*Gr. κηρατομάλαγμα*), according to Galen, *de C. M. per Gen.* vii, 11, for a cerate.

Ceratomandib'ular. (Κίρας, a horn; *L. mandibula*, the lower jaw.) A muscle occurring in some mammals, arising from the cornu of the hyoid bone and passing to the lower jaw.

Ceratomeningitis. (Κίρας; μηνιγξ, a membrane.) Same as *Ceratitis*.

Ceratomeninx. (Κίρας; μηνιγξ, a membrane. *F. ceratoménine*; *G. Hornhaut*.) The cornea.

Ceratometaphyte'ia. (Κίρας; μεταφυτεύω, to transplant. *F. transplantation de corne*; *G. Überpflanzung der Hornhaut*.) Transplantation of the cornea.

Cerato'nia. (Κερατώνια, the locust-tree; from *κίρας*, a horn, which its pod somewhat resembles.) A Genus of the Suborder *Cæsalpinee*, Nat. Order *Leguminosæ*.

C. sil'iqua. (*L. siliqua*, a pod. *F. caroubier*; *I. carubo*; *G. Johannisbrodbaum*.) The carob tree, or St. John's bread, a native of Europe and Asia. The sweet pods are used as food and as a demulcent to improve the voice. The seeds are called *Algaroba beans*.

Cerato'nia fructus. (*L. ceratonia*; *fructus*, fruit. *G. Johannisbrod*.) The fruit of *Ceratonia siliqua*. See *Algaroba bean*.

Ceraton'osus. (Κίρας, a horn; νόσος, a disease. *F. mal de corne*; *G. Hornhautkrankheit*.) Disease of the cornea.

Ceratonyx'is. See *Keratonyx*.

Ceratopharyng'eus. (Κίρας; φάρυγξ, the pharynx. *I. cerato-pharyngien*; *G. Zungenbeinhornschlundmuskel*.) The part of the middle constrictor of the pharynx which arises from the cornu of the hyoid bone.

Ceratophthal'ma. (Κίρας; ὀφθαλμός, the eye.) A synonym of *Phyllopadia*.

Ceratophylla'cese. (Κίρας; φύλλον, a leaf.) A Natural Order of monoclamydeous Exogens, or of the Alliance *Urticales*, or a Family of the Order *Urticinae*, having an inferior radicle, exalbuminous embryo, and many-leaved, large plumule.

Ceratophyllous. (Κίρας; φύλλον, a leaf. *F. ceratophylle*; *G. hornblättrig*.) Having simple, linear, subulated leaves; horn-leaved.

Ceratophyte. (Κίρας; φυτόν, a plant. *F. ceratophyte*; *G. Hornpflanze*.) A term for a polyp, the internal axis of which has the appearance of wood or horn.

Ceratoplasty. (Κίρας; πλάσσω, to form. *F. ceratoplastique*; *G. die künstliche Hornhautbildung*.) The artificial restoration of the cornea.

Ceratopter'ides. (Κίρας; πτερίς, fern. *F. ceratopterides*.) Name for the Equisetaceæ, from the general form of the plants of which it is constituted.

Ceratorrhex'is. (Κίρας; ρήξις, a bursting. *F. ceratorrhexis*; *G. Zerreißen der Hornhaut*.) Rupture of the cornea.

Cer'atose. (Κίρας.) Horny, horn-like.

Cerato'sis. (Κερατώσις, to harden into horn. *F. cératose*; *G. Hornbildung*.) The formation of horn.

Cerato'staphyl'us. (Κίρας, a horn; σταφυλή, the uvula when swollen at its tip like a grape.) A part of the *Thyreostaphylinus* muscle of Winslow, being some occasional fibres running between the cornu of the hyoid bone and the uvula.

Cer'atostome. (Κίρας; στόμα, a mouth.) A perithecium with an elongated and firm-walled neck.

Cerato'stro'ma. (Κίρας; στρώμα, anything spread out. *F. cératostrome*; *G. Ceratostrom*.) An occurrence of horny scales on the skin.

Cerato'stro'sis. (Κίρας; στρώσις, a spreading. *F. cératostrose*.) The progress of ceratostroma.

Ceratosyphilol'epis. (Κίρας; syphilolepis.) Horny syphilolepis, or syphilitic scaly eruptions of the hand.

Cer'atome. (Κίρας, a horn; τίμνω, to cut. *F. cératome*; *I. cheratome*; *G. Keratom*, *Staar-messer*.) A knife for dividing the cornea. See *Cataract knife*.

Ceratom'ia. (Κίρας; τομή, a section. *F. cératomie*; *G. Hornhautschnitt*.) Term for a section of the cornea.

Cer'atous. (Κίρας.) Horn-like, horny.

Cera'tum. (*L. cera*, wax. *F. cérat*; *G. Wachsöl*, *Wachspflaster*.) A kind of stiff compound ointment, in which wax predominates as an ingredient. That which is official in the U.S. Ph. is composed of eight ounces of lard and four ounces of white wax, melted together and stirred till cold.

C. ad fontic'ulos. (*L. fonticulus*, a little spring.) Issue plaster. Yellow wax 6 oz., suet 2 oz., lard, turpentine, of each 1.5 oz., red lead 4 oz. Melt and mix. Used to keep issues open.

C. adipis. (*L. adeps*, fat.) The *Ceratum*, U.S. Ph.

C. ærug'inis. *G. Ph.* (*L. ærugo*, verdigris. *G. grünes Wachs*, *Grünspancerat*.) Yellow wax 12 parts, resin 6, turpentine 4; melted together, and mixed with one part of finely powdered verdigris.

C. al'bum. (*L. albus*, white.) The *Un-quentum cetacei*.

Also, a synonym of cold cream, *Ceratum Galeni*.

C. ammoniaca'le de Ro'choux. *Cerate* 32 grammes, carbonate of ammonia 4. *Mix.*

C. amyla'ceum. (*L. amylicus*, starchy.) Starch 19 parts, cold cream 30. *Mix.*

C. belladonna'e. *Fr. Codex.* (*F. cérat belladonné*; *I. cerato di belladonna*.) Extract of belladonna 10 parts, simple cerate 90. *Mix.*

C. calami'ne. *Calamine*, yellow wax, of each 3 oz., lard a pound. Melt and mix. An old preparation, for which the *Ceratum zinci carbonatis*, U.S. Ph., is now substituted.

C. camphora'tum. *Belg. Ph.* *Cerate* 9 parts, camphor 1.

C. canthar'idis. *U.S. Ph.* (*F. emplâtre vesicatoire*; *G. Blasenpflaster*.) Cantharides, in fine powder, 12 troy oz., yellow wax, resin, of each 7 oz., lard 10 oz. Used as a blistering agent.

A synonym of *Emplastrum cantharidis*, *B. Ph.*

C. carbol'icum. One part of carbolic acid and 5 of simple cerate.

C. ceta'cel. *U.S. Ph.* (*F. cérat de baleine*; *I. cerato di bianco di balena*; *G. Wal-*

CERATUM.

retinor.) Spermaceti 1 troy ounce, white wax 3 oz., olive oil 5 oz. Melt and stir till cool. An emollient application to blisters and sores.

In G. Ph., white wax, spermaceti, of each 2 parts, expressed oil of almonds 3 parts.

C. cetracod ru'brum. G. Ph. (*L. ruber*, red. *G. rothe Lippenpomade*.) Almond oil 90 parts, in which alkanet root 4 parts has been digested, white wax 60, spermaceti 10, are melted together, and 1 part each of oil of bergamot and of lemon is added.

C. cet'i. (*L. cetus*, a whale.) The *C. cetaci*.

C. cicutæ. (*L. cicutæ*, the hemlock.) The *C. conii*.

C. citrinum. (*L. citrus*, the lemon.) The *C. resinae pini*, G. Ph., so called from its colour.

C. coenanthæ. Belg. Ph. White wax 25 parts, olive oil 75.

C. conii. (*Kérior*, the hemlock.) Unguentum conii a pound, spermaceti 2 oz., white wax 3 oz. An application to cancerous sores.

C. cum acetate plumbi. Belg. Ph. Same as *C. plumbi subacetatis*.

C. cum aqua. Belg. Ph. (*L. cum*; *aqua*, water.) Ceratum 5 parts, almond oil 2, rose water 3.

C. cum laudano. Belg. Ph. Cerate 9 parts, laudanum 1.

C. cum opio. Belg. Ph. Cerate 97 parts, water 2, extract of opium 1.

C. cum subacetate plumbi. Belg. Ph. The *C. plumbi subacetatis*, U.S. Ph.

C. de althæa. (*L. althæa*, the marsh-mallow.) The *Unguentum farum*, G. Ph.

C. de cerussa. The *Unguentum plumbi carbonatis*.

C. de minio ru'brum. The *Emplastrum minii rubrum*, G. Ph.

C. epuleticum. (*Επουλετικός*, promoting cicatrization.) The *C. calamine*.

C. extracti cantharidis. U.S. Ph. Five ounces of powdered cantharides are percolated with stronger alcohol 2½ pints, or until the liquid passes nearly colourless; the fluid is filtered, evaporated, by means of a water bath, to the consistence of a soft extract, mixed with resin 3 oz., yellow wax 6 oz., lard 7 oz., previously melted together, then filtered, and stirred till cool. A blistering agent.

C. flavum. Fr. Codex. (*F. cérat jaune*.) Yellow wax 100 parts, oil of sweet almonds 350, water 250.

C. Gale'ni. (*L. cerato bianco, cerato di Galeno*.) Cold cream. The *Unguentum aqua rose*, U.S. Ph., and the *C. cum aqua*, Belg. Ph.

In Fr. Codex (*F. cérat de Galien*), almond oil 400 parts, white wax 100, distilled rose water 300.

C. hydrargyri compos'itum. Compound mercury cerate. Unguentum hydrargyri, ceratum saponis compos'itum, of each 6 oz., camphor 1—5 oz. Mix. Used as a discutient application to indolent tumours.

C. hydrargyros'um. Fr. Codex. (*F. cérat mercuriel*.) Pomatum hydrargyros'um 100 parts, ceratum Galeni 100.

C. labiale al'bum. (*L. labialis*, belonging to the lips; *albus*, white.) The *C. cetaci*.

C. labiale ru'brum. (*L. labialis*, belonging to the lips; *ruber*, red.) White wax 9 parts, oil 16 parts, alkanet root to colour. Melt and mix. An emollient application.

C. lapidis calcaminis. (*L. lapis*, a stone.) The *C. calamine*.

C. laudanianum. Fr. Codex. (*F. cérat laudanien*.) Laudanum of Sydenham 10 parts, ceratum Galeni 90.

C. lithargyri acetati compos'itum. The *C. plumbi subacetatis*.

C. lytta. (*Lytta*, a worm under a dog's tongue, said to cause rabies, and an old name of cantharides.) The *C. cantharidis*.

C. mercurialis. The *Unguentum hydrargyri*.

C. myristicum. G. Ph. (*G. Muskatbal-sam*.) Nutmeg cerate. Yellow wax 1 part, olive oil 2, expressed oil of nutmeg 6. Melt and pour into paper capsules.

C. neutralis. (*L. neutralis*, neutral.) Kirkland's neutral cerate. Lead plaster 8 oz., olive oil 4 oz., prepared chalk 4 oz., distilled vinegar 4 oz., Goulard's extract of lead ½ oz. Melt the plaster and oil, add the chalk, and then the lead mixed with the vinegar. An astringent application to burns and freely granulating sores.

C. nigrum. (*L. niger*, black. *I. cerato nero*.) White wax 12 grammes, olive oil 36, carbon from burnt sugar 6, sulphur 3, carbon bisulphide 3. In great repute for tinea.

C. picatum. (*L. picatus*, pitchy.) Same as *Piceolum*.

C. piceæ. (*L. pice*, pitch.) The *C. resinae pini*.

C. plumbi compos'itum. The *C. plumbi subacetatis*, U.S. Ph., and the *Unguentum plumbi subacetatis compos'itum*, B. Ph.

C. plumbi subacetatis. U.S. Ph. Solution of subacetate of lead 2—5 oz., white wax 4 oz., olive oil 8 oz., camphor 30 grains. An astringent application to sores.

C. plumbi superacetatis. Acetate of lead 2 drachms, white wax 2 oz., olive oil half a pound. Melt and mix. Cooling and astringent.

C. pro tactu. (*L. pro*, for; *tactus*, a touching. *F. cérat pour le toucher*.) Spermaceti, yellow wax, of each 1 part, are dissolved in 16 parts of olive oil, and then 1 part of caustic soda added. Formerly used to anoint the finger previous to making a vaginal examination in some lying-in hospitals. Other similar formulae without the alkali have been used. Latterly a carbolic cerate has been recommended.

C. refrigerans Gale'ni. (*L. refrigerro*, to make cool.) The *Unguentum aqua rose*, U.S. Ph.

C. resinae. U.S. Ph. (*G. Harzerat*.) Resin cerate. Resin 10 oz., yellow wax 4 oz., lard 16 oz. Melt, strain, and stir till cold. Used as an application to burns and indolent sores. Also called Basilicon ointment.

Also, a synonym of *Unguentum resinae*, B. Ph.

C. resinae burgund'ice. The *C. resinae pini*.

C. resinae compos'itum. U.S. Ph. Compound resin cerate, Deschler's salve. Resin, suet, yellow wax, of each 12 oz., turpentine 6 oz., flax-seed oil 7 oz. Melt, strain, and stir till cool. A stimulating application to indolent or unhealthy sores.

C. resinae pini. G. Ph. (*L. resina*, resin; *pinus*, the pine tree. *G. gelbes Cerat*.) Yellow wax 4 parts, Burgundy pitch 2, suet and turpentine, of each 1 part. Melt together.

C. rosa'tum. Fr. Codex. (*L. rosa*, a rose. *F. cérat à la rose, pommade pour les lèvres*.)

CERAUNIARGYRUS—CERCARIA.

Almond oil 200 parts, white wax 100, carmine and volatile oil of roses of each 1 part.

C. sabinae, U.S. Ph. (*G. Sadebaumsalbe.*) Fluid extract of savin 3 oz., ceratum resinæ 12 oz. Mix at a moderate heat. Used to keep up the discharge from issues and blisters.

Also, a synonym of *Unguentum sabinae*, B. Ph.

C. saponis, U.S. Ph. (*F. céral de savon*; *G. Seifencerat.*) Soap plaster 2 oz., yellow wax 2–6 oz., olive oil 4 oz. Melt, mix, and stir till cool. Spread on linen, or other tissue, it is used to give support and pressure to sprained or swollen joints, and as an application in tumours and glandular swellings.

C. saturni (L. *Saturnus*, Saturn, an old name for lead.) The *C. plumbi subacetatis*.

C. simplex (L. *simplex*, simple. *F. céral simple.*) Same as *Ceratum*.

Also (*Fr. Codex, céral simple, céral sans eau*), oil of sweet almonds 300 parts, white wax 100.

C. simplex amygdali-num (L. *amygdala*, almond.) The *C. simplex*, Belg. Ph.

C. spermacei (L. *Cetacei*.)

C. subaceta'ti plum'bi medica'tum (L. *medicatus*, healing.) The *C. plumbi subacetatis*.

C. sulphura'tum, *Fr. Codex*. (*F. céral souffré.*) Sublimed sulphur 20 parts, almond oil 10, cerate of Galen 100.

C. tetrapharmacum (Τέτρα, in compound words for *τέσσαρα*, four; *φάρμακον*, a drug.) A synonym of *Pisselæum*.

C. viride (L. *viridis*, green.) Subacetate of copper 1 drachm, simple ointment 15 drachms. Melt, mix, and stir till cold. A detergent and escharotic.

Also, the *C. æruginis*, G. Ph.

C. zin'ci carbona'tis, U.S. Ph. Precipitated carbonate of zinc 2 oz., ointment 10 oz. Mix. An astringent application to excoriations and burns.

Cerauniar'gyrus. (Κεραυνός, thunder; ἀργυρος, silver. *F. cérauniargyre*; *G. Knallsilber.*) Fulminating silver.

Cerauniochry'sos. (Κεραυνός, thunder; χρυσός, gold.) An old term for fulminating gold; also called *Chrysoceraunius*. See *Aurum fulminans*.

Ceraun'ion. (Κεραυνιον, from κεραυνός, a thunderbolt.) A stone supposed to be formed during a thunderstorm. It was believed to be a soporific, and to disperse swellings of the breast, knee, and other parts, when rubbed on them.

Also, a kind of truffle supposed to be generated by a thunderstorm.

Ceraun'drarg'yrum. (Κεραυνός, a thunderbolt; ὑδράργυρος, quicklime. *F. céraun'drargyre*; *G. Knallquecksilber.*) Fulminating mercury.

Cerbera. (Κίρβηρος, the dog which guards the gate of the nether world. *G. Schellenbaum.*) A Genus of the Nat. Order *Apocynaceæ*.

C. ahou'al, Linn. A species with poisonous seeds. The milky sap is emetic and narcotic.

C. man'ghas, Linn. Bark and milky sap purgative; seeds emetic, poisonous.

C. odol'am, Gärtn. Leaves and milky juice emetic and purgative.

C. peruviana. The *C. thevetia*.

C. tanghin. The *Tanghinia reneferia*.

C. thevetia, Linn. Milk sap poisonous, bark bitter, cathartic, febrifuge. Also called *Thevetia neriifolia*.

C. thevetiol'des, H. B. K. The *Thevetia yecotli*, De Cand.

C. venenifera. The *Tanghinia reneferia*.

Cerberus. (Κίρβηρος, the fifty-headed, or later three-headed, watch-dog who guards the gate of the infernal regions.) An old name for compound powder of scammony; so called because it contained three ingredients, each of which possesses very active powers; it was composed of equal parts of scammony, tartrate of potash, and antimonium diaphoreticum. Used as a cathartic in cutaneous diseases. Dose $\frac{1}{2}$ –1 dr. Also called *Pulvis cornachini*.

Also, a triple mercurial preparation of salt, mercury, and vitriol, according to Libavius, *Synt. Arc. Chym.* vii, 10.

C. mitiga'tus. (L. *mitigo*, to render mild.) Calomel.

C. tri'ceps. (L. *triceps*, three-headed.) The same as *Pulvis cornachini*.

Cercæ. Same as *Cerci*.

Cercaria. (Κίρκος, the tail.) A term applied to a larval form of certain Entozoa of the Suborder *Digenæa*, Order *Trematoda*. Cercariæ appear as small, oval, internal buds, within a sporocyst or a redia, also larval forms, from which they in time escape; they possess a movable, sometimes a forked tail, two suckers, the foremost developing into a pharynx and intestinal canal, and after a time a water-vascular system. All the forms, and upwards of forty are known, are stages in the life history of particular parasitic worms, and develop into one or other of the species of *Distoma*. The egg of a *Distoma* develops into an embryo, which migrates into some fresh or salt water mollusc, as *Limnea*, *Unio*, *Anodonta*, or *Ostrea*, and penetrating the liver or other viscous forms a redia and sporocysts or tube-like structures, from the inner granular and vesicular lining of which the Cercariæ develop as buds asexually. The Cercariæ escape by the expulsion-tube of the redia, enter the water and swim about for several days, then, penetrating the body of small fresh-water animals, especially molluscs, they discard their tail, encyst themselves, become surrounded by a membranous bag, derived from the tissue of the organ in which they are embedded, and pass into a pupa state, which may last for two years, during which period they gradually develop into young *Distomata*. They and their intermediate host being now eaten by some (usually) vertebrate animal, the cyst is digested, and the *Distomas* are set free in a sexually ripe condition. Pagenstecher fed ducks with the encysted Cercariæ of *Paludina rivipara*, and in fifteen days obtained sexually-mature specimens of *Distoma echinatum* from their intestines. Other Cercariæ encyst themselves, not in animals, but in water plants. It is believed that one of the most dreaded of these pests, the *Distoma hepaticum* of the sheep, which occasionally occurs in man, is derived from the Cercaria found in *Planorbis marginatus*, which occurs in marshy ground usually avoided by sheep. The following is an alphabetical list of the Cercariæ at present known, with the animals in which they have been found.

The term was at one time very loosely applied, and included species of Infusoria, Rotifera, Vermes, and Spermatozoa; it is now applied also to the larval forms of some Ascidians.

C. ag'ilis. (L. *agilis*, nimble.) In *Limnea stagnalis*.

C. arma'ta. (L. *armatus*, armed.) The

CERCARIAEUM—CERCOSIS.

larval form of *Distoma endolebum*, found in *Limnaea stagnalis*.

C. brachyura. (Βραχύς, short; ὑπὲρ, the tail.) In *Planorbis nitidus*.

C. brunnea. (Mod. L. *brunneus*, brown.) In *Limnaea stagnalis*.

C. buccini mutabilis. In *Buccinum mutabilis*.

C. chlorotica. (Χλωρίς, greenness.) In *Vivipara vera*.

C. corona'ta. (L. *corona*, a crown.) In *Limnaea stagnalis*.

C. cotyla'ra. (Κοτύλη, a cup; ὑπὲρ, a tail.) In *Trochus cinereus*.

C. cymbula'tia. (L. *cymbula*, a small boat.) In *Cymbulia Peronii*.

C. cystophora. (Κίστις; φέρω, to carry.) In *Planorbis marginatus*.

C. diplocoty'ea. (Διπλοῦς, double; κοτύλη, a small cup.) The larva of *Amphistoma subulatum*.

C. dis'tomi retu'si. (L. *retundo*, to blunt.) In *Limnaea stagnalis*.

C. echina'ta. (Ἐχίνος, a hedgehog.) In *Vivipara vera* and *Limnaea ovata*.

C. echinotides. (Ἐχίνος, a hedgehog; ἰδος, form.) In *Vivipara fasciata*.

C. fallax. (L. *fallax*, deceitful.) In *Vivipara vera* and *Limnaea stagnalis*.

C. fascicula'ria. (L. *fasciculus*, a small bundle.) In *Nassa reticulata*.

C. fascicu'la. (L. *fido*, to split; *cauda*, a tail.) In *Valvata piscinalis*.

C. gib'ba. (L. *gibbus*, hunched, crooked.) In *Limnaea peregra*.

C. grac'ilis. (L. *gracilis*, slender.) In *Planorbis cornuus*.

C. hel'icis vivip'ara. (L. *viviparus*, that brings forth its young alive.) In *Vivipara vera*.

C. hymenoc'er'a. (Ἵμην, a thin skin; κερκίς, a rod.) In *Calyptrea sinensis*.

C. la'ta. (L. *latus*, broad.) In *Venus decussata*.

C. linea'ris. (L. *linearis*, belonging to lines.) In *Littorina litorea*.

C. macrocer'ca. (Μακρός, great; κερκίς, a rod.) In *Pisidium sp.* and *Cyclas cornea*.

C. mag'na. (L. *magnus*, great.) In *Vivipara vera*.

C. megacoty'la. (Μίγας, great; κοτύλη, a cup.) In *Anodonta cygnea*.

C. micracanth'a. (Μικρός, small; ἀκανθός, a spine.) In *Limnaea palustris*.

C. microcoty'la. (Μικρός, small; κοτύλη, a cup.) In *Vivipara fasciata*.

C. micru'ra. (Μικρός, small; ὑπὲρ, a tail.) In *Bythinia tentaculata*.

C. neglect'a. (L. *neglectus*, part. *negligo*, to disregard.) In *Bythinia tentaculata*.

C. nodulo'sa. (L. *nodulus*, a little knot.) In *Bythinia tentaculata*.

C. odontocoty'la. (Ὀδούς, a tooth; κοτύλη, a cup.) In *Limnaea stagnalis*.

C. orna'ta. (L. *ornatus*, adorned.) The larval form of *Distoma clavigerum*, found in *Limnaea stagnalis*.

C. pachycer'ca. (Παχύς, thick; κερκίς, a rod.) In *Trochus cinereus*.

C. planorb'is carina'ta. (L. *carinatus*, keeled.) In *Planorbis carinatus*.

C. prox'ima. (L. *proximus*, nearest.) In *Littorina litorea*.

C. rena'tis. (L. *ren*, the kidney.) In *Helix aspera*.

C. sagitta'ta. (L. *sagitta*, an arrow.) In *Nassa reticulata*.

C. spinif'era. (L. *spinifer*, thorny.) In *Planorbis cornuus*.

C. stylo'sa. (L. *stylus*, a pointed writing instrument.) In *Planorbis vortex*.

C. su'bulo. (L. *subulo*, a flute player.) In *Vivipara vera*.

C. thaumant'ia. (L. *Thaumas*, the father of Iris.) In *Eucopa sp.*

C. trigonoc'er'sa. (Τρίγωνος, three-cornered; κερκίς, a tail.) In *Limax cinereus*.

C. triflo'ba. (Τριφλοβος, three-lobed.) In *Limnaea stagnalis*.

C. tubercula'ta. (L. *tuberculum*, a small swelling.) In *Bythinia tentaculata*.

C. vesiculif'era. (L. *vesicula*, a blister; *fero*, to bear.) In *Vivipara vera*.

C. vesiculo'sa. (L. *vesiculosus*, full of blisters.) In *Vivipara vera*.

C. vir'gula. (L. *virgula*, a rod.) In *Bythinia tentaculata*.

Cercariae'um. (Κίρκος, the tail.) Larval forms of Trematode worms. About 23 varieties are known, chiefly inhabiting Gasteropoda, as Paludina and Planorbis.

Cercar'iform. (Cercaria; L. *forma*, shape.) Having the shape of a cercaria; tadpole-like. Applied to the larval forms of Tunicata.

Cerchnas'mus. Same as *Cerchnus*.

Cerchnus. (Κίρκων, hoarseness, from κίρκω, to render hoarse.) Hoarseness of voice.

Cer'ci. (Κερκίς, a tail.) Hair-like projections from the posterior segment of the abdomen of some orthopterous insects, as the cockroach.

Ceroid'ium. (Κερκίδιον, dim. of κερκίς, a rod.) The rod-like mycelium of certain fungi.

Cer'cis. (Κερκίς, an upright rod.) An old name for the radius, a bone of the forearm, from its form.

Also, an old name for a pestle.

Also, a Genus of the Nat. Order Leguminosae.

C. siliquas'trum. Linn. The Judas tree. Hab. South Europe. Flowers antiscorbutic.

Cercodia'cese. Jussieu's term for *Haloragaceae*.

Cercomon'as. (Κερκός, a tail; μονάς, a unit. F. *monade a queue*; G. *Schwanmonade*.) A Genus of flagellate Protozoa, characterised by an oval body with a filiform tail and a long flagelliform cilium; by means of the caudal prolongation they can become fixed temporarily.

C. hom'inis. Davaine. (L. *homo*, a man.) A species found in ordinary and in cholera evacuations. It is pear-shaped, bright, colourless, and very contractile. There are two varieties, a larger and a smaller. The body of the one is from .018 to .021 mm.; of the other, .008 to .01 mm. in length.

C. intestina'tis. Lambl. (L. *intestina*, the gut.) A species found in the alvine evacuations; probably the same as *C. hominis*.

C. sal'tans. Ehr. (L. *salto*, to leap.) A species found in certain ulcers; it is rounded in front, bristle-shaped behind, and 1-1000" to 1-2000" in length.

C. urina'rius. (L. *urina*, urine.) A doubtful species found in the urine of cholera patients; it is 1-1800" in length, 1-3000" in breadth. Also called *Bodo urinarius*.

Cerco'sis. (Κερκίς, a tail.) Old name for polypus of the womb.

Also, for enlargement of the clitoris, according to Sennertus, l. iv, M. B. part 1, s. i, c. 2.

Also, a name of the clitoris.

CERDAC—CEREBELLUM.

C. clitor'idis. (Κλειτορίς, the clitoris.) Masturbation in the female.

C. exter'na. (L. *externus*, outward.) Masturbation in the female.

Cerdao. (Arab.) An old name for mercury. (Kuland.)

Cerde'la. Spain; near Fitero. Cold sulphur waters, used in atonic dyspepsia and skin diseases.

Cere. (L. *cera*, wax; so called from its waxy appearance.) A term for a membrane in birds which covers the base of the beak, and in which the nostrils are pierced; it is probably used as a tactile organ.

Cere'a. (L. *cera*, wax. F. *cerumen*; G. *Ohrschmalz*.) Old name for cerumen, or wax of the ear.

Cere'al. (L. *Ceres*, the goddess of corn and tillage. F. *céréal*.) Pertaining to, or of the nature of, corn. Applied to all kinds of corn of which bread or other similarly nutritious substance is made. Arranged in order, according to the quantities of proteids they contain, they stand—wheat, barley, rye, oats, maize, buckwheat, and rice—wheat containing 13·5 parts per cent., and rice 5 per cent.

C. dust. The dust arising from the moving about of heaps of corn and other cereals. It contains many siliceous particles, and is productive of bronchial and other chest affections in those exposed to it.

Cere'al'ia. (Same etymon. F. *les céréales*; G. *Kornfrüchte*.) A term which includes the graminaceous plants which are used as food; and also, by many, leguminous plants having a similar use.

Cere'al'in. (Same etymon.) An albuminoid principle of cereals, soluble in water, which acquires the qualities of a ferment by a slight modification, due perhaps to contact with the air, and determines the transformation of starch into dextrine, sugar, and lactic acid. It is largely contained in the external cells of the perisperm.

Cerebella ur'ina. (L. *cerebellum*; *urina*, urine.) Old term, used by Paracelsus, for urine of a colour like the brain, and from which it was pretended to judge of the disorders of that organ.

Cerebellar. (L. *cerebellum*.) Relating to the cerebellum.

C. artery, ante'rior infe'rior. (F. *artère cérébelleuse inférieure et antérieure*; G. *vordere untere Kleinhirnarterie*.) A branch arising about the middle of the basilar artery, one on each side, and passing backwards to the anterior part of the inferior surface of the cerebellum; it anastomoses with the inferior cerebellar artery.

C. artery, poste'rior infe'rior. (F. *artère cérébelleuse inférieure et postérieure*; G. *hintere untere Kleinhirnarterie*.) A branch of the vertebral artery, or sometimes of the basilar, rising near the pons Varolii. It passes between the hypoglossal and vagus nerves, backwards and outwards over the restiform body to the under surface of the cerebellum, and between the inferior vermiform process and the hemisphere it divides into two branches, one of which continues its course between the two hemispheres of the cerebellum, and the other runs outwards to the outer border of the under surface of the cerebellum, when it joins the branches of the superior cerebellar artery. It supplies the cerebellar

hemisphere and the vermiform process, and gives branches to the choroid plexus of the fourth ventricle.

C. artery, supe'rior. (F. *artère cérébelleuse supérieure*; G. *obere Kleinhirnarterie*.) A branch of the basilar, near its bifurcation, which runs backwards and outwards behind the third nerve, round the crus cerebri, to the upper surface of the cerebellum, where it anastomoses with the branches of the inferior cerebellar arteries. It supplies the superior part of the cerebellar hemisphere, the vermiform process, the valve of Vieussens, and in part the velum interpositum.

C. lobes. See *Cerebellum, lobes of*.

C. pro'cess. The superior peduncles of the cerebellum or processus cerebelli ad testes.

C. vein. (G. *Blutadern des kleinen Gehirns*.) A series of veins occupying the surface of the cerebellum; the upper ones terminate in the straight sinus, and the veins of the lower in the lateral and occipital sinuses, and the outer in the superior petrosal sinus.

Cerebelli cap'sula. (L. *capsula*, dim. of *capsa*, a bag.) The layer of white medullary substance surrounding the nucleus dentatum in the cerebellum.

C. nu'clei cap'sula. (L. *nucleus*, a kernel; *capsula*, dim. of *capsa*, a bag.) The same as *C. capsula*.

Cerebelli'tis. (L. *cerebellum*. F. *cérbellite*.) Inflammation of the cerebellum.

Cerebellous. Same etymon and meaning as *Cerebellar*.

C. apoplexy. Apoplexy of the cerebellum.

C., gan'gion of. (Γάγγλιον, an enlargement of a nerve.) The nucleus or corpus dentatum of the cerebellum.

Cerebellum. (L. *cerebellum*, dim. of *cerebrum*, brain. F. *cervellet*; I. *cervelletto*; S. *cerebeto*; Port. *cerebello*; G. *Kleinhirn*, *kleine Gehirn*.) The hind brain; the part of the encephalon which lies behind the cerebrum and above the pons Varolii.

The cerebellum occupies the inferior fossæ of the occipital bone, and is covered by the tentorium. It is composed of two lateral parts or hemispheres, between which is the vermiform process. Each hemisphere is connected with the root of the brain by three processes, one ascending to the testes, one transverse to the pons, and one descending to the medulla oblongata. The surface of the hemisphere is deeply furrowed, dividing it into lobes and laminae, which, on section, present a tree-like appearance—the arbor vitæ, owing to the alternate arrangement of the grey matter, which is superficial, and the white medullary substance, which is internal. The cerebellum is supplied by branches from the vertebral and basilar arteries, named the inferior and the anterior and posterior superior cerebellar. In man it is ellipsoidal in form, and flattened from above downwards; the transverse measurement is 115 mm., the sagittal in the middle line 41 mm., on either side of the median line 68 mm.; the thickness of hemispheres 64 mm. Its volume is 162 c.c.; its average weight is 169 grammes; sp. gr. 1·0415; the sp. gr. of grey matter 1·0308, of white 1·0321. It is developed from the secondary hind brain or metencephalon.

The grey substance of the cerebellum is divisible into three parts—the cortex cerebelli, the nucleus dentatus, and the nucleus tegmenti.

CEREBRAL.

The cortex cerebelli presents a superficial layer, composed of neuroglia, in which lie triangular or quadrangular cells, with fine processes; a middle layer, composed of a single series of large cells of Purkinje, which resemble motor cells, and give off radiating processes to the surface and an axis-cylinder process inwards, and a deep layer, containing numerous small granules. The nucleus dentatus lies in the medullary substance of the hemispheres. The nucleus tegmenti of Stilling is situated in the medullary substance of the vermiform process.

Physiologically, the cerebellum may be regarded as the centre of equilibration, and of the co-ordination of movements.

In fishes, Amphibia, and reptiles, the median lobe or vermiform process is alone present, forming a smooth band or mass. In birds there are, in addition, two small lateral appendages. In the lower mammals similar lateral masses exist, apparently corresponding to the flocculi of the higher mammals. The cerebellum, and especially the hemispheres, increases in size through the Rodents, Ruminants, Carnivores, and Quadrumana to man, in whom it attains its highest development.

C., crura of. (*L. crus*, the leg.) Same as *C., peduncles of.*

C., fissures of. See *Fissures of cerebellum.*

C., folia of. (*L. folium*, a leaf.) Same as *C., lamina of.*

C. hæmorrhage. Bleeding into the substance, or on the surface, of the cerebellum from rupture of a blood-vessel. The signs are obscure and uncertain; vomiting is said to be the most constant symptom.

C., hemispheres of. (*Ἡμ.* insep. prefix meaning half; *σφαῖρα*, a sphere. *F. Hémisphères de cervelet*; *G. Hemisphären des Kleinhirns.*) The two chief portions of the cerebellum, one on each side; they are separated behind by a deep notch, and joined below and in the middle by the inferior and superior vermiform processes. The upper surface is more or less flattened, the lower is convex and separated by the vallicula. The hemispheres are divided into several lobes.

C., lamellæ of. (*L. lamella*, a small plate.) Same as *C., lamina of.*

C., laminae of. (*L. lamina*, a thin plate. *F. lamelles de cervelet*; *G. Markblättchen.*) The narrow, almost parallel, folds of the cerebellum, separated by sulci or furrows, and analogous to the convolutions of the cerebrum. There are ten or twelve primary laminae, which, as they proceed outwards, give off secondary laminae, and these again tertiary laminae. They consist of white nervous tissue, covered with a layer of grey nerve matter. The latter consists of an outer layer, having a fine neuroglia containing delicate fibres from the cells of Purkinje, larger connective-tissue fibres connected with the pia mater, small granule-like bodies, and larger corpuscles enclosed in protoplasm, and giving out processes; a middle layer, consisting of the cells of Purkinje, and an inner or granular layer, consisting of small bodies, 1-4000th to 1-2500th in diameter, round or angular in shape, enclosed in branched protoplasm, and lying in a gelatinous matrix, which contains a plexus of fine nerve fibres.

C., lobes of. (*G. Lappen.*) The following are the named lobes of the cerebellum:

Lobus inferior posterior, or semilunar lobe (*G. unterer halbmondförmiger Lappen.*)

Lobus inferior anterior, or cuneiform, or digastric, or biventral (*G. vorderer unterer, or keilförmiger Lappen.*)

Lobus inferior medius gracilis, or slender lobe (*G. schlanker, or mittlerer Unterlappen.*)

Lobus inferior interior, amygdala or tonail (*F. l'amygdale, lobule tonillaire du bulbe rachidien*; *G. Mandel oder der innere Unterlappen.*)

Lobus subpeduncularis, or flocculus (*F. lobule du pneumogastrique*; *G. die Flocke.*)

Vermis (*F. lobe moyen du Cervelet*; *G. der Wurm*), divided into vermis superior (*F. eminences vermiciformes*; *G. der obere Wurm*) and the vermis inferior (*F. vermicules inférieurs*; *G. Unterwurm*). The vermis superior presents the lobulus centralis (*F. lobule median*; *G. medianes Centralappenchen*); the monticulus (*G. der Berg*), consisting of the cacumen or culmen (*G. Gipfel*), and the declivity (*G. Abdachung*); the folium cacuminis (*G. Gipfelblatt*); the lingula (*G. Züngelchen*).

The vermis inferior presents the pyramid (*G. Pyramide*); the uvuli cerebelli (*G. das Zapfenchen*); and the nodulus (*G. das Knötchen*). See also under these several names.

C., peduncles of. (*L. pedunculus*, for *pediculus*, a small foot. *F. pédicules cérébelleux, ouïsses de la moëlle allongée*; *G. Kleinhirnstiele, Kleinhirnschenkel.*) The peduncles or crura of the cerebellum consist of three pairs of strands; the upper pair, *crura ad cerebrum*, connect it with the brain; the lower, *crura ad medullam*, pass to the spinal cord; and the middle pair, *crura ad pontem*, unite the two hemispheres by the cerebellum itself.

Cerebral. (*L. cerebrum*, the brain. *F. cérébral*; *I. cerebrale*; *S. cerebral*; *G. cerebral.*) Relating to the brain proper, or to the encephalon.

C. ab'scess. (*L. abcessus*, from *abcedo*, to separate. *F. abcès cérébral*; *G. Hirnabcess.*) A collection of pus in the substance of the brain. It may be the result of simple cerebritis, of extension of the inflammation of internal otitis to the membranes, and then to the substance of the brain, of pyæmia, or of injury. Cerebral abscess is sometimes encysted, often the walls are composed of the infiltrated and softening down brain tissue; the contained pus is thick, glairy, and often offensive; it frequently undergoes retrogressive changes, which destroy the pus cells and leave only fatty matter and brain debris in the fluid. It may open into the arachnoid cavity, into one of the ventricles, or externally through the ear or the nose; most commonly it ends in death.

C. albu'min. A synonym of Blainville's *Neurin*.

C. anæ'mia. (*Ἀν.* neg.; *αἷμα*, blood. *F. anémie cérébrale*; *G. Hirnanämie.*) The condition in which there is a deficient amount of blood in the brain, evidenced in more or less impairment of sensibility, of muscular power, and of consciousness. The condition may vary in amount and in extension; it may affect the whole brain, either slowly, as from general causes, or suddenly, as from rapid loss of blood; and it may disturb a part only, as when an artery is blocked.

C. apoph'ysis. (*Ἀπόφύσις*, an offshoot.) The pineal gland.

CEREBRAL.

C. apoplexy. The disease ordinarily called *Apoplexy*.

C. artery, anterior. (*F. artère cérébrale antérieure*; *G. Balkenschlagader*.) A branch of the internal carotid at the inner end of the fissure of Sylvius; it passes forwards to reach the longitudinal fissure, when, by means of the anterior communicating artery, it joins its fellow, and, lying close to it, turns round the anterior border of the corpus callosum, and running backwards on its upper surface, anastomoses at its hinder edge with the posterior cerebral arteries. It supplies the olfactory lobes, the optic nerves, the under surface of the anterior cerebral lobes, the third ventricle, the anterior perforated space, the corpus callosum, and the inner surface of the cerebral hemispheres. Sometimes the two arteries unite into one trunk to again divide.

C. artery, middle. (*F. artère cérébrale moyenne*; *G. mittlere Gehirnschlagader*.) One of the two terminal branches of the internal carotid; it runs obliquely outwards along the fissure of Sylvius to the island of Reil, where it divides into four branches, one supplying the orbital part of the anterior cerebral lobe and the inferior frontal convolution; the second supplies the posterior part of the middle frontal and the ascending frontal convolution; the third runs along the fissure of Rolando to the ascending frontal and the ascending parietal convolution and the anterior part of the superior parietal lobule; the fourth, lying in the posterior ramus of the Sylvian fissure, supplies the inferior parietal lobule and the superior temporo-sphenoidal convolution. Small branches given off early enter the locus perforatus anticus, and pass to the corpus striatum.

C. artery, posterior. (*F. artère cérébrale postérieure*; *G. hintere Gehirnarterie*.) The terminal branch, with its fellow, of the basilar artery opposite the anterior border of the pons Varolii; it curves round the crus cerebri to the under surface of the posterior lobe of the cerebrum, and divides into many branches, which supply the crura cerebri, the tubercula quadrigemina, the hinder portion of the optic thalamus, and the posterior and inferior parts of the occipital lobe of the cerebrum; branches enter the posterior perforated space, and one, the posterior choroid, supplies the choroid plexus.

Occasionally the posterior cerebral artery is a branch of the internal carotid.

C. atrophy. See *Brain, atrophy of*.

C. circulation. See *Brain, circulation in*.

C. commissures. See *Commissures, cerebral*.

C. congestion. Same as *C. hyperæmia*.

C. convulsions. See *Convulsions, cerebral*.

C. croup. A synonym of *Laryngismus stridulus*.

C. drop'sy. Same as *Hydrocephalus*.

C. embolism. See *Brain, embolism of*.

C. exhaustion. A term applied to the aggregate of symptoms caused by over-work and over-worry of brain.

C. fat. (*F. graisse cérébrale*.) A synonym of *Cerebrin*.

C. fever. An old term for cases in which fever is associated with much mental disturbance. Lately it is occasionally employed to designate cases of inflammation of the membranes or substance of the brain to whatever cause the inflammation may be due; in this sense it has been

applied, among other affections, to tubercular meningitis, acute hydrocephalus, encephalitis, and abscess of the brain.

C. hæmorrhage. (*Aluoppayia*. *F. hæmorrhagie cérébrale*; *G. Hirnapoplexie, Hirnschlagfluss*.) Bleeding on to the surface, or into the substance, or into a cavity of the cerebrum, usually the result of rupture of a blood-vessel, and constituting, when idiopathic, the condition formerly known as sanguineous apoplexy. It is most commonly the result of chronic degenerative changes of the arteries, but it may be dependent on an altered condition of the blood, as in scurvy and certain forms of acute specific fevers, and it may be caused by the giving way of an aneurysm of one of the larger vessels, or by direct violence or by inflammation of the membranes of the brain. The vascular changes which lead to rupture are fatty degeneration, atheroma, the structural alterations accompanying Bright's disease, and miliary aneurysm. It is essentially an affection of advanced life. Cerebral hæmorrhage may destroy life immediately, or after a longer or shorter period, or recovery may take place. The symptoms vary with the amount of the hæmorrhage and its locality. See also *Apoplexy*.

C. hemispheres. (*Ημισφαίριον*, a hemisphere. *F. hémisphères cérébraux*; *G. Hirnhalbkugel, Hemisphären des Gehirns*.) The two halves of the cerebrum separated throughout their chief extent by the great longitudinal fissure, and united by the corpus callosum in the middle third of their lower surface. The outer and upper surface is convex, the inner surface is flattened and touches its fellow, and the under surface is somewhat irregular; all are marked by deep, winding furrows, and the resulting convolutions.

The average length of the hemispheres from before backwards is 162—172 mm., the width of the two together 123—142 mm.; height 102—108 mm.; volume in man 1185 c.c., in woman 1072 c.c.; weight in man 1228 grammes, in woman 1111; sp. gr. of the whole 1·0361, of the grey substance aver. 1·0313, of the white 1·0363.

C. hernia. See *Hernia cerebri*.

C. hyperæmia. (*Υπέρ, in excess; alua, blood*. *F. hyperémie cérébrale*; *G. Bluthüberfüllung des Gehirns*.) The condition of excess of the amount of the blood in the vessels of the brain, evidencing itself in symptoms indicative of more or less irritation of, and more or less pressure on, the encephalic structures. The condition is described as being acute or chronic, æsthenic or asthenic.

C. hypertrophy. See *Brain, hypertrophy of*.

C. irritation. (*L. irrito, to provoke*.) A term applied to irregular expressions of cerebral function, such as headache, undue sensitiveness to external impressions, restlessness, twitching or convulsions, peevishness or delirium, produced by inflammatory or other diseases of the brain, and occurring also in some disturbed conditions of the body generally.

C. localisation. (*L. localis, belonging to a place*.) The doctrine of the restriction of certain limited parts of the cerebral hemispheres to the regulation or exercise of special and not interchangeable functions.

C. macula. (*L. macula, a spot*. *F. tache cérébrale*.) A term applied by Trousseau to the bright red colouration which appears when the

CEREBRALGIA—CEREBRITIS.

skin is gently rubbed or pressed with a hard body, as the nail, and which persists for ten or twelve minutes. According to him, although occasionally present in other febrile affections, it is specially distinctive of inflammatory affections of the membranes and substance of the brain.

C. membranes. (F. *membranes cérébrales*; G. *Gehirnhäute*.) The thin membranous coverings of the brain; the *Dura mater*, the *Pia mater*, and the *Arachnoid*.

C. meningitis. See *Meningitis, cerebral*.

C. nerves. Same as *Cranial nerves*.

C. oedema. See *Brain, oedema of*.

C. pachymeningitis. See *Pachymeningitis, cerebral*.

C. paralysis. See *Paralysis, cerebral*.

C. paraplegia. (Παραπληγία, Ionic for παραπληγία, a stroke on one side.) A term proposed for *Ataxy, locomotor*.

C. pneumonia. Inflammation of the lungs, in which convulsion, stupor, delirium, or other brain symptom, masks the chest disease; in this form the apex is the part most commonly affected.

C. protuberance. (L. *protubero*, to swell out.) The *Pons Varolii*.

C. pulp. The white matter of the brain.

C. respiration. A term applied to the quick, uneven, short, or sighing breathing, which often accompanies brain-mischief, especially in children. See also *Cheyne-Stokes' respiration*.

C. rheumatism. A term for meningitis occurring during the progress of acute rheumatism. See *Meningitis, rheumatic*.

C. sclerosis. See *Brain, sclerosis of, and Sclerosis*.

C. sinuses. See *Sinuses of brain*.

C. softening. See *Brain, softening of*.

C. spot. Same as *C. macula*.

C. surprise. (F. *surprise cérébrale*.) A term used by Trousseau to express the instantaneous, but temporary, stupor which is caused by grave and sudden lesion of the brain.

C. system. Term which includes the cerebrum, the nerves of special sense, as the olfactory, the optic, and auditory, and those nerves which convey volition, together with the intraspinal or intravertebral chord of cerebral nerves, according to Dr. M. Hall. This system is insensible and inexcitable—that is, there is no pain or muscular movements induced on irritating or lacerating the brain, or the nerves of special sense, with a probe. It connects the body with the external world mentally.

C. thermometry. See *Thermometry, cerebral*.

C. trigone. (Τρίγῃ, three; γωνία, an angle. F. *trigone cérébral*.) Chausssier's name for the fornix.

C. tubercle. See *Brain, tubercle of*.

C. vesicles. (L. *vesicula*, a small bladder.) The encephalic vesicles.

Cerebralgia. (L. *cerebrum*; ἄλγος, Neuralgic pain in the head of cerebral

ate. (L. *cerebrum*.) A term applied to compounds of cerebrie acid

with cerebrine, with soda or lime.

(F. *cerebrum*.) A term

of the cere-

tion.

ious opera-

uch as may

occur during sleep, or whilst the attention is distracted or occupied in some other direction.

Cerebria. (L. *cerebrum*, the brain. F. *cérébrie*; G. *Geistesstörung*.) Term by Scip. Pinel for mental derangement or disordered brain.

C. acuta. (L. *acutus*, severe. F. *cérébrie aiguë*.) Mania.

C. chronica. (Χρονικός, relating to time. F. *cérébrie chronique*.) Imbecility.

C. partialis. (F. *partial*, from L. *pars*, a part. F. *cérébrie partielle*.) Monomania.

C. sympathica. (Συμπάθεια, community of feeling.) Hypochondria, hysteria.

Cerebric. (L. *cerebrum*, the brain.) Belonging to the cerebrum or brain.

C. acid. A term applied formerly to what was called impure *Cerebrin*. It was supposed by Fremy to be capable of forming salts with bases. It is a mixture of a phosphorised matter, Thudichum's myelin, and of the cerebrian bodies, phrenosin, kersin, and cerebrie acid.

Cerebriform. (L. *cerebrum*; forma, likeness. F. *cérébriforme*.) Like to the form, or the substance, of the brain.

C. cancer. See *Cancer, cerebriform*.

Cerebrifugal. (L. *cerebrum*; fugio, to flee away.) Applied to nerve fibres which run from the brain to the spinal cord, and serve for the transfer of cerebral impulses outwards.

Cerebrin. (L. *cerebrum*. F. *cérébrine*; G. *Hirnsfett*.) $C_{37}H_{53}NO_9$, Müller. A light, white hygroscopic powder, obtained by the action of baryta and heat on brain tissue, pus-corpuscles, and other complex matters. It is tasteless and odourless, soluble in boiling alcohol and ether, insoluble, but swelling up, in water. Heated with dilute mineral acids it was said to yield a levo-rotatory sugar-like body, incapable of fermentation, but this is doubtful. Its exact nature is not settled, and even its existence as a definite principle has been doubted. By some, it is classed as a complex non-phosphorised fat, and by others, as a glucoside; it is very near in composition to sphingosin, which is a strong alkaloid. Müller's cerebrin has been said to be a mixture of cerebrin, lecithin, and cholesterol, but erroneously; Geoghegan's formula $C_{37}H_{53}N_2O_{23}$ is an error. The name has been applied to a lamellar stearin obtained from the brain, which is only cholesterol; to lecithin and to the cerebrie acid of Fremy, and to an uncertain substance by Goble.

Cerebrinic acid. (Same etymon.) $C_{39}H_{53}NO_9$, probably; a little known body.

Cerebrins. (Same etymon.) A term applied by Thudichum to a series of nitrogenous bodies, free from phosphorus, which he finds in the brain. They include *Phrenosin, Kersin*, and *Cerebrinic acid*.

Cerebripetal. (L. *cerebrum*; peto, to seek.) Applied to nerve fibres which run from the spinal cord to the cerebrum, and serve for the transmission of sensations from the outer parts to the brain.

Cerebritis. (L. *cerebrum*. F. *cérébrite*; G. *Gehirnentzündung*.) A term for inflammation of the substance of the brain. Although occasionally occurring alone, it is most usually the sequel or accompaniment of meningitis, and may be caused by direct injury to the head, by pyæmia, by the irritation of a foreign body, or it may, very rarely, arise idiopathically. It may affect the greater part of the organ, but more usually it is limited in extent, and may be

CEREBRO—CEREBRUM.

confined to either the grey or the white nervous tissue, and in this form may result in abscess or in red softening.

C., lo'cal. (*L. localis*, belonging to a place.) A synonym of red softening of the brain, and also of abscess of the brain.

Cerebro. (*L. cerebrum*.) This word used as a prefix in compound terms denotes association or connection with the cerebrum or brain.

Cerebrocard'iac. (*L. cerebrum*; *καρδία*, the heart.) Relating to the brain and heart.

C. neurop'athy. See *Neuropathy*, *cerebrocardiac*.

Cerebromala'cia. (*L. cerebrum*; *μαλακία*, softness.) A term for softening of the brain.

Cerebro'lein. (*L. cerebrum*; *oleum*, oil.) A yellow, oily liquid, found in connection with lecithin in the brain; probably olein.

Cerebro'p'athy. (*L. cerebrum*; *πάθος*, disease.) The series of hypochondriacal and other symptoms of like nature accompanying overwork of the brain.

Cerebropsycho'ses. (*L. cerebrum*; *ψύχη*, spirit.) Those forms of mental disturbance which result from disease of the psychic centres, such as mania and dementia paralytica.

Cerebrorachid'ian. (*L. cerebrum*; *ράχις*, the spine.) Same as *Cerebrospinal*.

Cerebrosclo'rosis. Same as *Brain sclerosis* of.

Cerebroscopy. (*L. cerebrum*; *σκοπέω*, to examine.) A term applied to designate the use of the ophthalmoscope in cerebral affections, for the purpose of determining the state of the retina and its circulation, in order that the condition of the brain may be deduced therefrom.

Cerebrose. (*L. cerebrum*, the brain.) $C_6H_{12}O_6$. A sugar obtained by Thudichum, by chemolysis of the nitrogenised, non-phosphorised educts of the brain, phrenosin, kersin, and cerebrinic acid. It is characterised by its crystallisation, its optical power (its specific or limited rotation being to the right +70° 40'), and its reducing power over cupropotassic tartrate.

Cerebro'sio ac'id. (*L. cerebrum*.) $C_6H_{10}(H_2)O_6$. An acid obtained by Thudichum from phrenosin, by means of the chemolytic process; it has the composition of a carbohydrate, is probably isomeric with cerebrose, and its barium salt leads to the inference that it is dibasic.

Cerebro'sis. (*L. cerebrum*.) A term applied variously to inflammation and to irritation of the brain.

Cerebrosp'inal. (*L. cerebrum*; *spina*, the spine.) Relating to both brain and spinal cord.

Also, the same as *Cerebrospinal*.

C. ax'is. (*L. axis*, an axle-tree.) The entire nerve centres; cerebrum, cerebellum, medulla oblongata, and spinal cord.

C. fe'ver. (*F. cephalgie épidémique, méningite cerebro-rachidienne, méningite purulente épidémique*; *I. febbre soporosa-convulsiva, tifo apoplettico-letarico*; *G. Genickkrampf, Genickstarre*; *Swed. Nacksjucka*.) Spotted fever. A disease occurring epidemically, and generally in children, often fatal; most common in winter and spring; more frequent in males than in females; perhaps contagious, but the nature of the infecting agent is unknown. The charac-

teristic morbid changes found after death occur in connection with the cerebral and spinal membranes; the pia mater is engorged, there is exudation, often purulent, into the subarachnoid space, and the dura mater is congested, and it may be dotted with hæmorrhagic spots; these conditions are often general, but frequently they are confined to the base of the brain. The brain itself is either hyperæmic or pale and œdematous, the ventricles containing much serum, generally purulent, and the neighbouring cerebral substance softened. The spinal cord is generally engorged and softened, and the central canal has been found dilated with purulent fluid. Hyperæmia of the lungs, bronchial catarrh, lobar and lobular pneumonia are seen, with inflammatory conditions and ecchymosis of various parts, as of the pericardium, endocardium, mucous membrane of stomach and intestines or bladder, and the synovial membrane of joints. Prodromata generally present, and consisting of general discomfort and chilliness, more or less marked, and lasting for hours or days, but often the access is sudden. Temperature not very high, 39° to 39.5° C. (102.2° F. to 103.1° F.), with exacerbations that are not periodic; pulse and respiration rising with the temperature. Often between the third and sixth day a bilateral attack of herpes facialis or symmetrical eruption of roseola, erythema, or sudamina; conjunctiva congested; the urine often albuminous or saccharine; bowels confined; loss of appetite; severe headache, increased by pressure; fainting and vomiting. The excitability of the whole nervous system is greatly increased in the first stage, shown by photophobia, acute perception of sound, and singular cramp of the muscles of the back of the neck, producing orthotonos or opisthotonos; death follows, attended with convulsions or coma. If life is preserved deafness or deaf-mutism often follows in children. In acute cases death occurs in a few hours; in severe cases after two or three weeks. The fatality in 15,632 cases 37 per cent.; it varies much in different epidemics, as much as from 20 to 80 per cent. Some have believed it to be a form of typhus.

C. flu'id. (*F. liquide cérébrospinal*; *G. Subarachnoidalflüssigkeit*.) A limpid serous fluid occupying the subarachnoid space; it has a saltish taste, has an alkaline reaction, and contains only 1.5 per cent. of solid matter. Its amount has been estimated at from two drachms to two ounces, but the quantity is very variable, and it is quickly reproduced.

It becomes opalescent on boiling, and a flocculent precipitate falls on the addition of acetic acid; a substance resembling sugar, and giving the same reactions, is said to be present; the salts are largely potassium salts.

C. mening'itis. Meningitis affecting the membranes of both brain and spinal cord. See *C. fever*.

C. sys'tem. The cerebrum, cerebellum, medulla oblongata, and spinal cord.

Cerebro-spina'lia. (*L. cerebrum*; *spina*, the spine.) Medicinal agents which influence the brain and spinal cord.

Cerebrosp'inal. (Same etymon.) A term applied to a remedy which exerts an influence over one or more of the functions of the central nervous system.

Cerebrot. A synonym of impure *Cerebrin*.

Cerebrum. (*L. cerebrum*, the brain;

CERECLOTH—CEREVISIA.

akin to Gr. *kápa*, the head; and Sans. *ciras*. F. *cerveau*; I. *cerebro*, *cervello*; S. *cerebro*, *celebro*; G. *Gehirn*.) The brain proper. In man, the largest and highest of the four parts into which the encephalic mass is usually divided; it occupies the whole of the cavity of the cranium, with the exception of the middle and hinder basal portions, in which lie the other three divisions, the pons Varolii, the cerebellum, and the medulla oblongata. It varies in weight in the human species, the average being in the human male 43 os. 164 dra., and in the female 38 os. 12 dra., according to Reid; according to Weisbach's observations, the average male brain weighs 1164·97 grammes, and bears a relation to the whole encephalon of 87·86 per cent.; and the female brain weighs 1038·90 grammes, and its percentage is 88·03. It is of ovoid shape, the small end foremost, flattened on its under surface, and divided into two symmetrical halves or hemispheres by the great longitudinal fissure, except in the middle third of the lower surface, where they are united by the corpus callosum; smaller fissures divide it into five lobes, the frontal, parietal, temporo-sphenoidal, occipital, and central; and still shallower clefts or furrows, the sulci, separate from each other the convolutions or gyri. It is closely invested by the pia mater, which transmits the blood-vessels, and is covered by the arachnoid epithelium. In the interior of each hemisphere is a branched flattened cavity, the lateral ventricle, with its three cornua, communicating towards the anterior part of the body of the ventricle, by the foramen of Monro, with the third ventricle which lies centrally between the optic thalami, and which at its posterior extremity is connected by means of the aqueductus Sylvii with the fourth ventricle, a spear-shaped cavity lying between the medulla oblongata in front and the cerebellum behind. The cerebrum is composed of grey and white nervous tissue, the latter forming the main bulk of its interior, and arranged in groups of fibres, the former covering the exterior and collected into nodules of greater or less size in the substance of the white matter at the base. For further detail, see *Brain*; *B.*, *development of*, and the several parts of the cerebrum under their special names.

C. abdominalis. (L. *abdominalis*, belonging to the abdomen.) The solar plexus.

C., development of. See *Brain, development of*.

C. elongatum. (L. *elongo*, to lengthen.) A term for the *Medulla oblongata*.

C., fibres of. See *Fibres, cerebral*.

C., fissures of. See *Fissures of cerebrum*.

C., lobes of. (Λοβός, a lobe. F. *lobes du cerveau*; G. *Hirnlappen*.) The subdivisions of each hemisphere of the brain. They have been variously named; according to some they are three, anterior, middle, and posterior, or frontal, temporo-sphenoidal, and occipital; according to others, they are four, anterior, upper, lower, and the island of Reil; according to others they are five, frontal, parietal, occipital, temporo-sphenoidal, and central. For further detail, see the several sections of *Lobe*.

C. parvum. (L. *parvus*, small.) The cerebellum.

C., peduncles of. (L. *pedunculus*, a little foot.) The *Crura cerebri*.

C. posterior. (L. *posterior*, hinder.) The cerebellum.

C., ventricles of. See *Ventricles of cerebrum*.

Cerecloth. (L. *cero*, to cover with wax; Sax. *clath*, a garment.) A linen or other cloth infiltrated with wax.

C., antiseptic. (Ἀντί, against; σπυγνός, putrefying.) Calico or other material soaked in paraffin, wax, and carbolic acid, or other disinfectant. Used in the dressing of wounds.

Cerectomy. Same as *Ceratomy*.

Cerefolium. (Corrupted from *Cherophyllum*.) The *Anthriscus cerefolium*.

C. hispanicum. (L. *Hispania*, Spain.) A name for the *Myrrhis odorata*, or sweet cicely.

C. sylvestre. The *Anthriscus sylvestris*.

Cereiform. (L. *cereus*, a wax taper; forma, shape.) Tapering, slender.

Cereleum. (Κηρός, wax; ἔλαιον, oil.) Old name (Gr. κηρδαίον), used by Galen, *de C. M. per Gen.* 7, 2, for a cerate or liniment made of wax and oil; also called *Oleum cera* and *Butyrum cera*.

Cerecephalot. (Κηρός, wax; ἐγκέφαλος, the brain.) A synonym of *Cephalot*.

Cereoli. (L. *cera*, wax; oleum, oil. G. *Wachskerzen*.) Bougies made by rolling strips of linen, soaked in wax and oil, into a pipe shape.

C., antiseptic. (Ἀντί, against; σπυγνός, putrefying.) Same as *C. carbolic*.

C. atropina. Cereoli simplices, to each of which is added .01 to .02 gramme of atropin. Used for introduction into a mucous canal, such as the urethra, in painful affections.

C. carbolic. Four parts of ceratum carbolicum and one part of paraffin melted together and made into bougies, with a strip of linen, for insertion into the orifices of abscesses and into fistulous canals where there is a fetid discharge.

C. cum acido tannico. Belg. Ph. Prepared with tannin, as *C. cum opio*.

C. cum opio. Belg. Ph. (L. *cera*, wax; oleum, oil.) Extract of opium 20 centigrammes dissolved in 125 centigrammes of syrup, and gum acacia 300 centigrammes added. To be made into four suppositories.

C. plumbi. (L. *plumbum*, lead. G. *Bleikerzen*.) Yellow wax 48 parts, spermaceti 1·5, and solution of basic acetate of lead 1 part; melted together, and made into a bougie with cotton wool.

C. simplices. (L. *simplex*, simple.) Strips of linen soaked in a melted mixture of six parts of yellow wax and one of olive oil, and made into the form of a bougie. Used for exploration and dilatation.

Cereolus. (L. dim. of *cereus*, a wax bougie.) A small wax bougie.

Cereous. (L. *cera*.) Wax-like, made of wax.

Cereris'ia. Same as *Cerevisia*.

Cer'etrin. A term believed to be intended for *cetrarin*.

Cereus. (L. *cera*, wax; because made of wax. F. *bougie*; G. *Wachstock*.) A wax bougie.

C. medicatus. (L. *medicatus*, medicinal. F. *bougie medicamentouse*.) A medicated wax bougie.

Cereus. A Genus of the Nat. Order *Cactaceæ*.

C., night-bloom'ing. The *Cactus grandiflora*.

Cerevis'ia. A Gallic word; or, according

CEREVISIÆ FERMENTUM—CEROPLASTY.

to some, as if *Cereris vis in aqua*, the strength of corn in water.) Term for any liquor brewed from corn; ale, beer.

C. ab'ietis. (*L. abies*, a fir tree.) Spruce beer.

C. ama'ra. Belg. Ph. (*L. amarus*, bitter.) Four parts each of wormwood and gentian root, and 10 parts of pine buds; macerate for three days in 1000 parts of beer and filter.

C. antiscorbu'tica. Fr. Codex. (*Avri*, against; *scorbutus*, scurvy. F. *bière antiscorbutique*, *sapinette*.) See *Beer*, *antiscorbutic*.

C. antiscorbu'tica Sydenham'i. Belg. Ph. Watercress, fresh, 560 parts, mentha crisp and salvia officinalis, of each 41, orange peel 83, nutmegs 7, alcohol 500, water sufficient. Distill 1000 parts.

C. terra'ta. (*L. ferrum*, iron.) Liq. ferri et sodæ pyrophosph. 5 parts, strong ale 500. Dose, a glass two or three times daily.

C. martia'ta. (*L. Mars*, a name of iron.) Same as *C. ferrata*.

C. medica'ta. (*L. medicatus*, healing. G. *Kräuterbier*.) Beer containing herbs for medicinal purposes.

C. ni'gra. (*L. niger*, black.) A synonym of *Beer*, *Swiss vulnerary*.

Also, *Beer*, *spruce*.

C. stomach'ica. Stomachic beer. Gentian root, sliced, 15 parts, fresh lemon peel 10, cinnamon 1, strong ale 1000; macerate for four days, and filter.

Cerevisiæ fermentum, B. Ph. (*F. levere*; *I. fermentio*; *S. levadura de ceteza*; *G. Barme*, *Bierhefen*.) The ferment of beer. Yeast or barm, the well-known substance which forms on the surface of beer during the process of fermentation. It is a viscid, semifluid, frothy liquid, containing the cells of *Saccharomyces cerevisiæ*. It has been used as a nutrient, as an antiseptic in typhus fever, and to convert starch directly into alcohol in diabetes. Locally it is used in phagedænic and sloughing sores.

Ceria. (*L. cereus*, soft.) Old name for a kind of flat worm bred in the intestines, perhaps a tenia.

Cerio. (*L. cera*, wax.) Relating to wax. Also, a term for those cerium salts which correspond to cerium dioxide.

C. acid. (*F. acide cérrique*.) A doubtful product of the action of nitric acid on cerin.

Cerides. Name by Ampère for a Family of simple bodies, including cerium and magnesium.

Ceriferous. (*L. cera*; *fero*, to bear.) Bearing, or producing, wax.

Cerigerous. (*L. cera*; *gero*, to bear. *F. cerigero*; *G. wachhauftragend*.) Applied to the beak of a bird when furnished with a cere.

Cerri bromidum. Bromide of cerium. A sweet, chocolate-coloured astringent substance, obtained by dissolving cerous carbonate in hydrobromic acid; it is soluble in alcohol. Has been used as *C. oxalas*.

C. carbonas. Same as *Cerous carbonate*.

C. ni'tras. Same as *Cerous nitrate*.

C. oxalas. B. Ph. (*F. oxalate de cerium*; *G. Ceriumoxalat*.) $\text{CeC}_2\text{O}_4 \cdot 3\text{H}_2\text{O}$. Oxalate of cerium, obtained by adding solution of oxalate of ammonia to a soluble salt of cerium; it is a white granular powder, insoluble in water. A gastric nerve sedative used in reflex vomiting, especially that of pregnancy. Dose, 1—5 grains or more.

Cerin. (*L. cera*, wax.) The portion of beeswax which is soluble in boiling alcohol; it is not a definite compound, but impure *Cerotic acid*.

Cerinous. (*L. cera*.) Of the colour of yellow wax.

Cerinth'. A Genus of the Nat. Order *Boraginaceæ*.

C. as'pera. Roth. (*L. asper*, rough.) Formerly used as an astringent and vulnerary, especially in eye affections.

C. ma'jor. Linn. (*L. major*, greater.) The *C. aspera*.

Cerion. (*Κηρίον*, honeycomb.) A synonym of *Tinea favosa*.

Also, a synonym of *Caryopsis*.

Ceriscus malabaricus, Gärtn. The *Randia dumetorum*.

Cerite. The natural siliceous protoxide of cerium, from which this metal is obtained.

Cerium. (From the planet Ceres.) Symbol Ce. Atomic weight 141.2. A metal having the colour and lustre of iron, tarnishing in moist air. It forms two oxides, a sesquioxide, Ce_2O_3 , and a dioxide, CeO_2 .

C. bromide. See *Cerii bromidum*.

C. ni'tricum. Same as *Cerous nitrate*.

C. oxalate. See *Cerii oxalas*.

C. oxalicum. Same as *Cerii oxalas*.

Cernula'tio. (*L. cernulo*, to throw head foremost.) A violent cough produced by acrid or foreign bodies in the larynx.

Cernuous. (*L. cernuo*, to bow downward. *G. gebückt*.) Nodding; hanging its head; bent.

Ceroco'ma. (*Κέρα*, horn; *κόμη*, the hair.) A Genus of heteromorous coleopterous insects possessing vesicant properties analogous to those of cantharides.

Ceroë'në. (Low *L. ceroneum*, from *κηρός*, wax. *F. emplâtre céroëne*.) The *Emplastrum ceroneum*, Fr. Codex.

Ceroï'des. (*Κηρός*, wax; *αἶδος*, likeness. *F. céroïde*; *G. wachähnlich*.) Resembling wax.

Cerolein. A fatty substance existing in small quantity in beeswax; it is a doubtful substance.

Ceroleum. (*L. cera*, wax; *oleum*, oil.) The same as *Cerate*.

Cero'ma. (*Κέρμα*, from *κηρός*, wax.) Name formerly used for cerate or ointment, according to Hippocrates, *de Rat. Vict. in Acut.* iv, 78.

Also, applied to organs which are the subject of amyloid degeneration, in consequence of their waxy appearance.

Ceromel. (*L. cera*, wax; *mel*, honey. *G. Honigwachs*.) A mixture of one part of yellow wax and two or four parts of honey. Used as an application to wounds and ulcers in hot climates, where ointments soon turn rancid.

Ceroneum. Same as *Ceroma*.

Ceronia. (*Κερωνία*.) The St. John's bread, or carob tree, *Ceratonia siliqua*.

Cerope'gia. Linn. A Genus of the Nat. Order *Asclepiadaceæ*, the tuberous roots of some species of which are esculent.

C. edu'lis. (*L. edulis*, eatable.) An esculent species.

Ceropis'sus. (*Κηρός*, wax; *πίσσα*, pitch. *F. céropisse*.) Old term for a cerate, or plaster formed of wax and pitch. Used as a depilatory.

Ceroplasty. (*Κηρός*, wax; *πλάσσω*, to

CEROSIA—CERVICAL.

form.) The making of anatomical models in wax.

Cero'sia. Same as *Cerosin*.

Cer'sin. (F. *cérosin*.) A waxy substance obtained by scraping the epidermis of the sugarcane.

Cerosi'na. Same as *Cerosin*.

Cero'sis. (Κηρός, wax.) Term for a diseased condition of tunics, membranes, or epithelium, consisting in wax-like scales.

Cerostroma. The disease, or condition, *Cerostrosis*.

Cerostro'sis. (Κίρας, horn; στρώσις, a spreading.) A deposit of horny material on the epidermis.

Cerotic acid. (Κηρός, wax.) $C_{27}H_{54}O_2$. Obtained from beeswax by heating in alcohol, and also in the dry distillation of Chinese wax. It is in small granular crystals, melting at $78^{\circ} C.$ ($172.4^{\circ} F.$)

C. alcohol. Same as *Ceryl alcohol*.

Cerotalmag'ma. See *Ceratoma-lagma*.

Cer'otum. (Κηρωτόν.) A cerate.

Cer'otyl. Same as *Ceryl*.

Cerous carbonate. $Ca_3(CO_3)_2$. Obtained by precipitating cerous sulphate with carbonate of ammonia. It crystallises with nine equivalents of water in silky needles. Proposed to be used as *Cerii ozalas*.

C. bromide. $2CeBr_3 + 3H_2O$. See *Cerri bromidum*.

C. nitrate. $Ce(NO_3)_3 + 6H_2O$. A crystalline substance, soluble in water and alcohol, used as *Cerii ozalas*.

Cerox'ylin. The wax of the *Ceroxylin andicola*. It has been used in the manufacture of bougies.

Cerox'ylon. (Κηρός, wax; Ξύλον, wood.) A Genus of the Nat. Order *Palmaceæ*. The species supply vegetable wax.

C. andicola. Hamb. A species of which the trunk and the axils of the leaves supply wax.

Cerulein. See *Cerulein*.

Cerumen. (L. *cera*, wax. F. *cérumen*; I. *cerume*; G. *Ohrenschmalz*.) The wax-like secretion of the ear which is given out by the follicles, ranged along the inner surface of the meatus auditorius externus; ear wax. It consists of fat molecules and colouring particles, with epithelial scales and hairs.

It is composed, according to Schmidt, of palmitin, with traces of cholesterin, butyric, valerianic, and caproic acids, albuminoid matters, and salts of calcium, sodium, and potassium.

Ceruminous. (Same etymon. F. *cérumineux*; G. *ohrenschmalzartig*.) Of, or belonging to, the cerumen or wax of the ear.

C. glands. (F. *glandes cérumineuses*; G. *Ohrenschmalzdrüsen*.) The numerous small oval glands situated between the cutaneous lining and the cartilage of the meatus auditorius externus, or external auditory canal. They have the same structure as sweat glands.

C. humour. Same as *Cerumen*.

C. plug. (Old Dut. *pluggje*; from Celtic *plóc*, or *pluc*.) A concretion in the meatus auditorius externus formed of dried cerumen.

Cerus. (Κηρός, wax.) Wax.

Ceruse. Same as *Cerussa*.

Cerussa. (Said to be from κηρός, the genitive of κηρ, a plug, death, or poison; from

its poisonous qualities.) Term for the subcarbonate of lead; white lead.

C. aceta'ta. A name for the *Plumbi acetat*, or acetate of lead.

C. al'ba hispanica. (L. *albus*, white; *hispanicus*, Spanish.) *Plumbi carbonas*.

C. al'ba norica. (L. *norica*, Norican.) Carbonate of lead.

C. antime'tal. Old term for a preparation of regulus of antimony and nitre, thrown successively into a crucible heated to a white heat, the result of which is an oxide of antimony, used as a diaphoretic.

C. ni'gra. (L. *niger*, black.) A synonym of *Graphite*.

C. palmamyl'hion. (Ψαμμίδιον, white lead.) Carbonate of lead.

C. serpenta'ria. Starch from the *Arum maculatum*, which was formerly called *Serpentaria minor*.

C. usta. Name for cerussa burnt till it becomes red like the sandarach of the Greeks, or realgar.

C. sin'ed. Oxide of zinc.

Cerusse. Same as *Cerussa*.

Cerussa ur'ina. (L. *cerussa*; *urina*, urine.) A Paracelsian term for urine of the colour of, or having a deposit like, cerussa.

Cer'va. The *Ricinus communis*.

Cervaria al'ba. (L. *cervarius*, pertaining to deer; *albus*, white.) The *Lacortium latifolium*.

Cervi bole'tus. (L. *cervus*, a stag; *bole'tus*, a kind of mushroom.) The *Elaphomyces granulatus*.

C. elaphi cor'nu. Same as *Cornu cervi*; the burnt horn of the *Cervus elaphus*.

Cerv'ical. (L. *cervix*, the neck. F. *cervical*; G. *zum Nacken gehörig*.) Of, or belonging to, the neck.

C. adenit'is. (Ἀδὴν, a gland.) Inflammation of the cervical lymphatic glands.

C. artery, ascend'ing. (F. *artère cervicale ascendente*; G. *aufsteigende Nackenschlagader*.) A branch of the inferior thyroid artery at the point where it turns inward behind the common carotid. It runs up the neck between the scalenus anticus and the rectus anticus major muscles, to which it sends branches which communicate with branches of the vertebral artery; its spinal branches enter the intervertebral foramina, and are distributed to the bodies of the vertebrae, the spinal cord, and its membranes. It is occasionally derived from the subclavian, or the transverse cervical, or the suprascapular arteries.

C. artery, deep. (F. *artère cervicale profonde*; G. *tiefe Nackenschlagader*.) Generally arises from the superior intercostal, sometimes from the subclavian or the posterior scapular. It passes backwards between the transverse process of the last cervical vertebra and the first rib, and ascends the neck in the interspace of the transverse and spinous processes between the complexus and semispinalis colli muscles; it gives off muscular twigs, and anastomoses with the princeps cervicis artery.

C. artery of occip'ital. Same as *Princeps cervicis*.

C. artery, poste'rior. The *C. artery, deep*.

C. artery, profound'. (L. *profundus*, deep.) Same as *C. artery, deep*.

C. artery, super'ficial. (F. *artère cer-*

CERVICAL.

vicale superficielle; G. *oberflächliche Nackenschlagader*.) A branch of the transverse cervical artery, or the sole trunk, when the posterior scapular arises from the subclavian. It arises near the anterior border of the trapezius and, ascending, gives branches to that muscle, to the levator anguli scapulae and the sterno-mastoid, and to the cervical glands, and anastomoses with the superficial branch of the princeps cervicis artery.

Also, a synonym of *C. artery, ascending*.

C. artery, superior. The *C. artery, ascending*.

C. artery, transverse. (F. *artère cervicale transverse*.) The third branch of the thyroid axis; it passes outwards across the upper part of the subclavian triangle to the anterior margin of the trapezius, where it divides into the superficial cervical and the posterior scapular arteries. When the latter arises from the subclavian direct this artery is called the superficial cervical. Sometimes it arises from the subclavian, and occasionally gives off the ascending cervical.

C. curve. (G. *Nackenkrümmung*.) Cervical incurvation of the embryonic brain at the transition of the medulla oblongata into the spinal cord.

C. eminence. (L. *eminens*, standing out. G. *Nackenhöcker*.) The projection of the vertebra prominens in the neck.

C. endometritis. See *Endometritis, cervical*.

C. enlargement. (F. *renflement cervical*; G. *Halsauschoellung*.) An enlargement of the spinal cord extending from the third cervical to the first dorsal vertebra, and flattened in the antero-posterior direction; it commences in the fœtus with the development of the limbs, and, growing with their growth, is doubtless connected with the amount of the nerve supply to the anterior limbs or arms.

C. fascia, deep. (L. *fascia*, a band.) A strong fibrous investment of the muscles of the neck attached posteriorly to the ligamentum nuchæ and the spines of the cervical vertebrae, from whence it extends to the sterno-mastoid, which it invests by splitting and reuniting, and so to the middle line, where it is attached to the hyoid bone above, and by two layers to the sternum and the interclavicular ligament below, and in the middle it blends with that of the opposite side. Its superficial part is continuous with the masseteric and the parotid fascia; and its deeper part invests the muscles, joins the sheath of the vessels, and forms the prevertebral fascia.

C. fascia, superficial. (L. *fascia*.) The thin aponeurotic layer found with difficulty underneath the skin of the neck and above the platysma myoides and the external jugular vein. The superficial part of the deep cervical fascia is also thus called when the term deep cervical fascia is confined to the part called prevertebral.

C. fistula. (L. *fistula*, a pipe. G. *Nackenfistel*, *Halsfistel*.) Same as *Branchial fistula*.

C. ganglia. (Γάγγλιον, a tumour under the skin.) A term applied to the lymphatic glands of the neck, especially when somewhat enlarged.

See also *C. ganglion*.

C. ganglion, inferior. (Γάγγλιον, a swelling of a nerve. F. *ganglion cervical inférieur*; G. *unterer Halsknoten*.) The lowest cervical ganglion; it is irregular in shape, and is often partially united to the first thoracic ganglion. Its superior branches join those

of the middle cervical ganglion. Its inferior branches are the lower cardiac nerve, and branches, some forming loops, the *Ansa Vieussensii*, on the subclavian artery, to join the first thoracic ganglion. Its external branches communicate with the seventh and eighth spinal nerves, and, after forming a plexus on the vertebral artery, with the fourth, fifth, and sixth.

C. ganglion, lower. The *C. ganglion, inferior*.

C. ganglion, middle. (F. *ganglion cervical moyen*; G. *mittlerer Halsknoten*.) The smallest of the three cervical ganglia; it is placed on or near the inferior thyroid artery, opposite the fifth cervical vertebra. Its superior branches communicate with those of the superior cervical ganglion. Its inferior branches communicate with the inferior cervical ganglion. Its external branches, when present, join the fifth and sixth spinal nerves. Its internal branches consist of the middle cardiac nerve and thyroid branches which join the recurrent laryngeal, external laryngeal, and middle cardiac nerves.

C. ganglion of the uterus. A close-meshed plexus of nerve fibres situated at the posterior and lateral part of the cervix uteri. It is from 13 mm. to 19 mm. in length, and is a continuation of the *Plexus uterinus posterior*.

C. ganglion, superior. (F. *ganglion cervical supérieur*; G. *oberer Halsknoten*.) The largest of the three cervical ganglia of the sympathetic, situated opposite the second, third, or fourth cervical vertebra; it is reddish-grey, broad, fusiform, sometimes constricted in places. Its continuation upwards, or ascending branch, follows the course of the carotid artery, and in the carotid canal divides into two branches, the outer of which gives filaments to the artery and to the inner branch, and then forms the carotid plexus; the inner also supplies the artery, and then forms the cavernous plexus. The descending branch joins the middle cervical ganglion. The external branches communicate with the first four spinal nerves, with the second ganglion of the pneumogastric, with the ninth nerve, with the petrosal ganglion of the glosso-pharyngeal, and with the ganglion of the root of the pneumogastric. The internal branches are pharyngeal which join the pharyngeal plexus, laryngeal joining the superior laryngeal nerve, and the superior cardiac nerve. The anterior branches form a plexus, with small ganglia round the external carotid artery and its branches, and communicate with the digastric branch of the facial, and with the submaxillary, optic, and the external petrosal ganglia.

C. ganglion, upper. The *C. ganglion, superior*.

C. gland. (G. *Halsdrüse*.) The tonsil.

C. labour. (G. *Cervicalgebur*.) That period of a natural labour, from its commencement to the complete dilatation and disappearance of the cervix uteri.

C. ligament, anterior. (L. *anterior*, in front.) A synonym of the accessory or superficial anterior occipito-atlantal ligament.

C. ligament, posterior. (L. *posterior*, hinder. G. *hinterer Nackenband*.) The *Ligamentum nuchæ*.

C. lymphatic glands, deep. (G. *tieferer Halsdrüsen*.) A chain of large glands lying along the carotid sheath, and extending from the base of the skull to the thorax.

C. lymphatic glands, superficial. (G. *oberflächliche Halsdrüsen*.) A series of glands

CERVICALIS ASCENDENS—CERVICO-FACIAL.

under the horizontal ramus of the lower jaw, following the course of the external carotid artery beneath the platysma myoides; numerous above the clavicle, and jugular joins the subclavian

superficial. (*F. nervi cervicali* *berächtigter Halsnerve.*) A plexus proceeding from the second and third cervical nerves, its anterior border of the sternomastoid, perforates the cervical sheath beneath the platysma myoides and descending branches.

transverse. Same as *C. superficialis*.

C. nerves. (*F. nervi cervicæ*; *G. Nackenerven*.) The first eight pairs of spinal nerves. The common trunk, formed by the union of the two roots, is separated into two divisions, anterior and posterior. The first cervical is the suboccipital nerve; the posterior division of the remaining nerves divides into external branches, which supply the splenius, cervicalis ascendens, transversalis colli, trachelo-mastoid and complexus muscles; and internal branches, that of the second is the great occipital nerve; those of the third, fourth, and fifth nerves run beneath the complexus, forming the posterior cervical plexus, to the vertebral spines, and then running outwards supply the integument over the trapezius; those of the sixth, seventh and eighth supply muscles only.

The anterior divisions of the four upper cervical nerves form the cervical plexus, those of the lower cervical nerves form, together with that of the first dorsal, the brachial plexus.

C. plexus. (*L. plexus*, a plaiting *F. Nervus cervical*; *G. Nackengeflecht, Halsgeflecht.*) A nervous network formed by the interlacement of the anterior divisions of the first four cervical nerves. It lies opposite the first four cervical vertebrae on the scalenus medius and the levator anguli scapulae muscles, and underneath the sternomastoid. The branches are superficial and deep. The former are the superficialis colli, the auricularis magnus, the occipitalis minor, and the supraclavicular; these supply the integument. The deep branches are communicating twigs with the pneumogastric, hypoglossal, and sympathetic nerves, a branch to the rectus anterior and rectus lateralis muscles, one to the sterno-mastoid, one to the trapezius, the phrenic nerve, a branch to the angularis scapulae, and one to the rhomboidei muscles, the two latter sometimes proceed from the brachial plexus.

C. plexus, posterior. The intercommunication of the internal branches of the posterior divisions of the third, fourth, and cervical nerves beneath the complexus muscle.

C. triangles. See *Triangles of neck*.

C. vein, deep. (*G. tiefe Nackenblutader*.) The branches of this vein accompany those of the artery of the same name, and open into the vertebral vein.

C. veins, ascending. The branches accompany those of the corresponding artery, and form a trunk which opens into the vertebral vein.

C. vertebrae. (*L. vertebra*, a spine bone. *F. vertebrae cervicales*, *G. Halswirbel, Nackenwirbel.*) The first seven vertebrae of the spine, the two upper of which are exceptional, the atlas and axis. The body is small, widest from side to side, the upper surfaces concave in the same direction, the lower concave from before to behind.

The laminae are long and flat, the upper notches the deeper. The neural canal is triangular and large. The spinous process is short and bifid, but that of the seventh is long. The transverse processes are short and bifid, they spring by two roots, the anterior corresponding to a rib or its articulating capitular process, the posterior to a transverse process, they unite at their extremities and form the vertebral canal. The articular processes are large and flat. The last cervical vertebra is the *Vertebra prominens*.

C. zone. (*L. zona*, a girdle.) A term applied by Barnes to the part of the inner surface of the pregnant uterus which lies beneath an imaginary latitudinal circle drawn round the uterus at about a fourth of its height, it is the zone of dangerous placental attachment.

Cervicalis ascendens. (*L. cervix*, the neck; *ascendo*, to mount up. *F. faisceau de renforcement de la partie supérieure du sacro-lombaire*; *G. aufsteigender Nackenmuskel.*) One of the outer columns of the erector spinae muscle, being a continuation upwards of the musculus accessorius. It arises by slips from the angles of four or five upper ribs, and is inserted into the posterior tubercles of the transverse processes of the fourth, fifth, and sixth cervical vertebrae.

C. descendens. (*L. descendo*, to go down.) A synonym of *C. ascendens*, on the supposition that the upper attachment of the muscle is its origin.

Also, a synonym of the *Descendens noni* nerve.

Cervicaria. (*L. cervix*, the neck.) The *Campanula trachelium*, great throat-worm; because believed to be efficacious in diseases of the throat and neck.

Cervicitis. (*L. cervix*.) Inflammation of the cervix uteri.

Cervicoacromialis. (*L. cervix*; *acromion*.) The anterior part of the trapezius muscle, including its attachment to the acromion.

Cervico-brachial. (*L. cervix*; *brachium*, the arm.) Belonging to the neck and arm.

C. brachial enlargement. Same as *Cervical enlargement*.

C. brachial neuralgia. (*Νεύρον*, a nerve; *ἄλγος*, pain.) Neuralgia of the brachial plexus and of the posterior branches of the lower part of the cervical plexus, manifesting itself in severe pains in the scapular and axillary regions, which shoot down the arms, hands, and back of the neck, there is often acute cutaneous hyperaesthesia also; the nerves most affected are branches usually of the ulnar, radial, or musculocutaneous nerves. It may be caused by cold, pressure, or a tumour, or wound.

C. triangle. See *Triangle, cervico-brachial*.

Cervicodynia. (*L. cervix*; *ὀδύνη*, pain.) Pain in the neck; stiff neck; muscular rheumatism of the neck.

Cervico-brachial. (*L. cervix*, *brachia*, the arms.) Belonging to the brachia and the neck.

C. fistula. (*G. Halsknochenfistel*.) Same as *Branchial fistula*.

Cervico-facial. (*L. cervix*; *facies*, the face.) Belonging to the neck and face.

C. nerve. The lower of the two branches of the facial nerve, into which it divides, behind the ramus of the lower jaw; it subdivides

CERVICO-MASTOIDEUS—CESSATIO MENSIIUM.

into buccal, supramaxillary and inframaxillary branches.

Cervico-mastoidæus. (L. *cervix*; *μαστός*, the breast; *εἶδος*, likeness.) The splenius capitis, from its attachment to the cervical vertebrae and the mastoid process of the temporal bone.

Cervico-occipital. (L. *cervix*; *occiput*, the back of the head.) Relating to the neck and the hinder part of the head.

C.-occipital neuralgia. (Νεύρον, a nerve; ἄλγος, pain.) Neuralgia of the posterior branches of the upper cervical nerves, consisting in pain below the occiput, behind the ear, and sometimes below the lower jaw. It may be paroxysmal or constant, and accompanied by hyperæsthesia, or anæsthesia, and cramps.

Cervico-orificial placenta. (L. *cervix*; *orificium*, an opening.) A term applied by Barnes to designate a placenta which occupies entirely the cervical zone of the uterus and covers the internal os.

Cervico-scapular. (L. *cervix*; *scapula*, the blade-bone.) Relating to the neck and the shoulder-bone.

C.-scapular artery. The transverse cervical artery.

Cervicose. (L. *cervix*. G. *hartnäckig*.) Having a hard, strong neck.

Cervicula. (Dim. of L. *cervix*.) A short neck; also, a term for goitre.

Cerviculus spiritus. (L. *cervus*, a stag.) Ruland's term for a spirit obtained from the bone of a stag's heart. (Parr.)

Cerviculate. (Dim. of L. *cervix*.) Having a little, or a short, neck. Also, having a goitre.

Cervidæ. (L. *cervus*, a stag.) A family of artiodactylous ruminants having deciduous solid horns. Example, the stag, *Cervus elaphus*.

Cervina spina. (L. *cervinus*, belonging to a deer; *spina*, a thorn.) The buckthorn, *Rhamnus catharticus*.

Cervisia. Same as *Cerevisia*.

Cervispina. (L. *cervus*, a stag; *spina*, a thorn.) Buckthorn, *Rhamnus catharticus*.

C.cathartica. The *Rhamnus catharticus*.

Cervix. (L. *cervix*, from *cer*, the head; Sans. *ceras*; *echo*, to carry. F. *col*, *cow*; G. *Hals*.) That portion of the body which is between the head and the shoulders; the neck, but more particularly the back part of the neck.

Also, applied generally to those parts of organs that are narrowed, and so somewhat like a neck.

C. cornu posterioris. (L. *cornu*, a horn; *posterior*, hinder.) The narrow basal portion of the posterior horn of the grey matter of the spinal cord.

C. corporis restiformis. The upper contracted portion of the *Restiform body*.

C. dentis. (L. *dens*, a tooth.) The part of the tooth where the enamel and the crusta petrosa meet on the dentine; it corresponds to the free margin of the gum.

C. femoris. (L. *femur*, the thigh.) The neck of the thigh-bone.

C. glandis. (L. *glans*, an acorn. G. *Ruthenhals*.) The neck or collum of the glans penis. The constriction immediately behind the glans at the line of reflection of the prepuce.

C. obstipa. (L. *obstipus*, bent.) Wry-neck.

C. rigida. (L. *rigidus*, stiff.) Wry-neck, stiff neck.

C. uteri. (L. *uterus*, the womb. F. *col uterin*; G. *Gebärmutterhals*.) The neck of the womb; the lower and narrower end of the uterus. It is a little less than an inch in length, and projects into the vagina; its upper end opens into the body of the uterus by the *os internum*, its lower into the vagina by the *os externum*; the canal connecting the two is flattened from front to back, and is somewhat dilated in the middle; along the middle of the anterior and posterior walls of the cell runs a ridge, from which side ridges, with an upward inclination, arise, forming the *arbor vitæ uterina*. The vagina is inserted into its upper circumference.

C. uteri, conical. A condition of imperfect development of the neck of the womb, in which it assumes a conical shape; sometimes it is long and sometimes curved; the canal is generally very small. It is said to be a cause of sterility and menstrual troubles.

C. uteri, granular degeneration of. A common condition, consisting in a red, granular condition of the outer surface of the neck of the womb and the os, which is bathed in a purulent secretion, and has a velvety, uneven feel. It is the condition called also abrasion, erosion, and granular ulcer.

C. uteri, hypertrophy of. (Υπέρ, above; τροφή, nourishment.) A condition in which the neck of the womb takes on increased growth; it sometimes attains a very large size; occasionally one lip only is affected.

C. vesicæ. (L. *vesica*, the bladder. G. *Blasenhal*.) The slightly constricted part of the bladder which leads to the internal orifice of the urethra.

Cervus. (Κέρας, a horn; from its large antlers. F. *cerf*; G. *Hirsch*.) The hart or stag. A genus of artiodactylous ruminants. The flesh of all the following species is used as food.

C. alces. (F. *Élan*; G. *Elendthier*.) The elk, or moose deer. The hoof was considered antiepileptic.

C. axis. The spotted Indian deer.

C. canadensis. The Wapiti deer.

C. capreolus. (F. *chevreuil*; G. *Rehbock*.) The European roebuck.

C. dama. (L. *dama*, a fallow deer.) The fallow deer.

C. elaphus. (Ελαφος, a deer. F. *cerf commun*; G. *Edelhirsch*.) The stag, the horns of which were burnt to form *Cornu cervi*; and when fresh the shavings make a nutritive jelly. The penis dried and powdered was used as an aphrodisiac.

C. muntjac. The Indian roebuck.

C. tarandus. (L. *tarandus*, the reindeer. F. *renne*; G. *Reinthier*.) The reindeer.

C. virginianus. The Virginian deer.

Ceryl. (L. *cera*, wax.) A hypothetical radical.

C. alcohol. C₂₇H₅₆O. An alcohol obtained from Chinese wax. It is a waxy substance, melting at 79° C. (174.2° F.)

C. co'rotate. Chinese wax.

Cesalpino. Italy; near Arezzo, in the Chiano Valley. A chalybeate water, springing from the clay slate, at a temp. of 17° C. (62.6° F.) It contains sodium carbonate 7.7 grains, calcium carbonate 4.2, magnesium carbonate 7, and iron carbonate .53, in 16 ounces, with free carbonic acid.

Ces'pitose. Same as *Cespitose*.

Cessatio mensium. (L. *cessatio*,

CESSPOOL—CETONIA.

from *cesso*, to cease from; *meness*, the menses.) A stoppage of the menstrual flow.

Cess'pool. (Etymon suggested by Skeat, is from provincial Eng. *uss*, or *oss*, hogwash, a dirty mess; and this connected with Gael. *sugh*, and W. *sug*, moisture; whence Prov. Eng. *soggy*, wet; *soch*, the drainage of a farmyard; Webster gives it as from Sax. *session*, to settle; *pool*, from Sax. *pól*, a hole, a pit.) A receptacle for sewage matter, including human feces.

C., air of. Generally there is a diminution of oxygen in the air of a cesspool, and it contains hydrogen sulphide, ammonium sulphide, carburetted hydrogen, and the very important, fœtid, undetermined organic matter.

Cesto'da. (Κεστός, a studded girdle; εἶδος, likeness.) An Order of the Class *Platyelmintha*, Subkingdom *Vermes*. Internal bandlike, segmented, hermaphrodite parasites, having no digestive or vascular system, and nourished by osmosis. The first segment is called the *scolex*, each of the remaining segments a *proglottis*; the proglottides all develop a reproductive system, and the whole are connected by a water-vascular system, and sometimes by a nervous system; the series of connected proglottides is a *strobila*. When the fecundated ova are received into the stomach of an animal, the testa falls off and the embryo is liberated; it is called a *proscœlex*; from thence it finds its way into the tissues of a host or into the circulation, is arrested in some convenient spot, develops into an embryo scolex, is received into the alimentary canal of some other animal, and there develops its proglottides. Example: *Tenia*.

Cesto'dea. Same as *Cestoda*.

Cesto'na. Spain; Province of Guipuzcoa, on the bank of the river Urola. Two springs of water, of a temperature of 35° C. to 38° C. (95° F. to 100·4° F.), and containing, in 12 ounces, sodium chloride 36 grains, sodium sulphate 9·6, and a little calcium chloride. Used in gout, vesical catarrh, scrofula and lymphatic affections. The water is slightly purgative.

Cestra'ceæ. A synonym of *Solanaceæ*.

Cest'riform. (L. *cestrum*, a graving tool; *forma*, shape.) Slender, straight, and pointed, as a bristle.

Cestrites vi'num. (Κέστρον, the herb betony.) Old term for a wine in which betony has been steeped. (Quincy.)

Cest'rum. (Κέστρον.) The wood betony, *Betonica officinalis*.

Also, a Genus of the Nat. Order *Solanaceæ*. Low shrubs, bearing poisonous berries.

C. auricula'tum. L'Herit. (L. *auricula*, the outer ear.) Hab. Peru. Has been used as a febrifuge, and externally to relieve the pains of hæmorrhoids.

C. laurifo'lium. L'Herit. Hab. Tropical America. Berries poisonous.

C. macrophy'llum. Vent. (Μακρός, large; φύλλον, a leaf.) Hab. Antilles. A poisonous species.

C. nocturn'um. Linn. (L. *nocturnus*, belonging to the night.) Hab. Tropical America. The berries contain a poisonous juice; the extract of them has been used in chorea.

C. par'qui. L'Herit. A decoction of the plant is used in tinea.

C. venena'tum. Lam. (L. *venenatus*, poisonous.) The *C. laurifolium*.

C. venena'tum. Thunb. The *Acocanthera venenata*, G. Don.

Ceta'cea. (L. *cetus*, a whale; from Gr. κῆτος, a sea-monster. G. *Wallthiere*.) An Order of the Class *Mammalia*. Fish-like animals, usually of large size, with no visible hind limbs, fin-like, nailless fore limbs, a horizontally flattened tail, and often a triangular dorsal fin; the sacrum is absent; the nostrils are on the top of the head, and there are no external ears; the stomach consists of four or more compartments; the gall-bladder is absent; there are large arterial plexuses in the spinal canal, over the heads of the ribs, and on the sides of dorsal vertebrae; the placenta line is diffuse. Example: the whale.

Ceta'ceous. (L. *cetus*, a whale. F. *cétacé*; G. *wallfischartig*.) Of, or belonging to, the whale, or to spermaceti.

Ceta'ceum. B. Ph. (L. *cetus*, a whale; because it is obtained from a species of the whale kind. F. *spermaceti*; G. *Walrath*.) A concrete, crystalline, pearly-white, glistening, semi-transparent matter, with little taste or odour, obtained from the cavity of the cranium of several species of whale, but chiefly the spermaceti whale, or *Physeter macrocephalus*. It consists of nearly pure cetin, or cetyl palmitate, with a small quantity of sperm oil, has a specific gravity of ·943, and fuses at about 45° C. (113° F.) It is used as a demulcent with yolk of egg in intestinal and urinary irritation, and in powder with sugar in sore throat.

C. cum sac'charo. (L. *cum*, with.) The *C. saccharatum*.

C. præpara'tum. (L. *præparatus*, prepared.) The *C. saccharatum*.

C. sacchar'a'tum. G. Ph. (Σάκχαρον, sugar. F. *blanc de baleine saccharé*; G. *Walrathzucker*.) Spermaceti one part, finely powdered sugar three parts.

Ce'tene. An oily liquid obtained from spermaceti, boiling at 275° C. (527° F.)

Ceterach. (Arabic name *Chetherac*.) The spleenwort, *Asplenium ceterach*.

C. officina'lis. (L. *officina*, a shop.) The spleenwort, *Asplenium ceterach*.

Ce'tic. (L. *cetus*, a whale. F. *cétique*.) Of, or belonging to, the whale, or to spermaceti.

C. ac'id. A name given to what was supposed to be a peculiar acid resulting from the saponification of cetin, but has been found to be only a mixture of margaric acid and cetin.

Ce'tin. (L. *cetus*, a whale.) A name given to spermaceti.

Also, $C_{39}H_{84}O_2$, according to Chevreul, the principle constituent of spermaceti, now called *Cetyl palmitate*.

Cetodont'a. (Κῆτος, a sea monster, a whale; ὀδούς, a tooth.) A term applied to those genera of Cetacea which have no fins and possess permanent teeth; such are the cachalot and the grampus.

Ce'tol. A synonym of *Ethol*.

Ceto'nia. A Genus of pentamerous lamellicorn Coleoptera living on vegetables.

C. aur'a'ta. (L. *auratus*, gold-coloured. F. *cétoine dorée*.) In Russia it is a popular remedy for rabies; and it has been proposed for the treatment of epilepsy.
